No. 24,040. JOHN MCDIARMID, of Brooklyn, N.Y., for an "Improved machine for sawing beveled surfaces."

"I claim the employment of the oscillating frame B, B, in combination with the centre wheel *o*, central flange N (Figure II.), and saw T, or cutters (*t*, Figure 5,) when the same shall be constructed in the manner described, and for the purpose specified."

No. 24,041. CHAS. A. MCEVOY, of Richmond, Va., for an "Improvement in metallic seals."

"But what I do claim is, the use of a paper label, or its equivalent, in combination with a metallic seal, substantially as and for the purpose specified."

No. 24,042. CHAS. MESSENGER, of Warren, Ohio, for an "Improvement in seeding machines."

"I claim the lever *b*, arm *c*, levers *e*, and spring *h*, when arranged substantially as described, and in combination with a combined seeding machines and ground roller; I also claim the studs E, E^1, and F, F^1, rods I, I^1, and shaft J, in combination with the cams D, D^1, substantially as set forth, and when used in connection with the seeding machine and ground roller combined."

No. 24,043. RICHD. MONTGOMERY, of New York, N.Y., for an "Improvement in screw excavator."

"I claim, first, making the cylinder *a*, *b*, which encloses the screw a^1 in a conical form, for the purpose of rendering the ascent and discharge of the earth more free and perfect, as set forth. Second, supporting the cylinder and screw by means of the hinged frame, *u*, *s*, s^1, substantially as and for the purposes set forth. Third, driving the cylinder *a*, *b*, and screw a^1, by means of the gearing *y*, *x*, *e*, *d*, arranged and combined as described. Fourth, supporting and adjusting the front of the excavator, by means of the friction ring *g*, and chain or rope *n*, as above described. Fifth, the curved swinging standard or derrick *p*, for elevating the front end of the excavator, without unfastening the chain *n*, when desired as described. Sixth, the combination of the cylinder *a*, *b*, and screw a^1, with the swinging frame *u*, *s*, s^1, derrick *p*, and carriage K, substantially as herein set forth."

No. 24,044. JOEL MOULTON, of Boston, Mass., for an "Extension ladder."

"I claim the improved extension ladder hose carrier, constructed substantially in manner and with its parts arranged and applied together as described, viz., with a series of single ladder bars A, B, C, connected together and provided with pins or handles, and having not only an extension line and sheaves connected with and arranged in them (the said bars), as explained, but a supporting platform and guide braces arranged at the upper part of the upper bar, as described. I also claim the combination and arrangement of the water conduit, or hose pipe director, and its guiding lines, with the extension ladder, constructed essentially in manner and to operate substantially as described."

No. 24,045. JACOB MURPHY, of Half Moon, Pa., for an "Improvement in metal drills."

"I claim the shoulders on the drill *d*, in combination with the braces *b*, *b*, and pin *p*, upon the sliding frame B, B, substantially as and for the purposes set forth."

No. 24,046. THOS. H. MURPHY, of New Orleans, La., for an "Improvement in machines for rolling and measuring cotton bagging."

"I claim the within-described machine, or combination for simultaneously rolling and measuring bagging, consisting of an adjustable guide bar F, sliding shaft D, fitting into driver B, the windlass and cord E (*b*), adjustable pressure roller G, carrying cam (*i*), lever J, indicating wheel L, arm K, pawl (*l*), and spring M, when all said parts are arranged and combined substantially as herein shown and set forth, for the purpose specified."

No. 24,047. JACOB NAEHER, of North Orange, N. J., for an "Improvement in machines for husking corn."

"I claim the reciprocating troughs C, C, one or more, provided with pincers I, in connection with the toothed plates or stripping combs *o*, *o*, *o*, *p*, and with or without the retaining plate *q*, the whole being arranged to operate substantially as and for the purpose set forth."

No. 24,048. CHAS. NEER, of Albany, N. Y., for an "Improvement in metallic frames for window blinds."

"What I claim is, constructing frames for blinds of sheet metal bent in a U form, and connected together substantially as specified. I also claim the bent or folded strips *f*, *f*, provided with holes receiving the ends or tenons of the slats, as set forth."

No. 24,049. H. NORTON and J. S. B. NORTON, of Farmington, Me., for an "Improved mop handle."

"We claim attaching the mop cloth or yarn B to the handle A and to a slide C fitted on the handle, and arranged substantially as and for the purpose set forth."

No. 24,050. NELSON PARMETER, of Gardner, Mass., for an "Improvement in manufacture of bricks."

"What I claim is, a fire-proof brick or lining composed of the above-named ingredients, in the proportions set forth, and in the manner substantially as described."

No. 24,051. CHAS. PAGE, of West Meriden, Conn., for an "Improved signal door bolt."

"But I do claim passing the pin which moves the bolt through the door, and permanently fixing to the projecting extremity thereof a segmental plate, so as to overlay the fixed symbol plate, and in the manner set forth communicate the desired intelligence."

No. 24,052. H. D. J. PRATT, of Washington, D. C., for an "Improved machine for planing or shaving ice."

"What I claim is, the machine or implement for cutting or reducing ice to small particles herein-before described, the same consisting of the arrangement in a hopper, of suitable size and shape of rotating cutters, with or without a presser, the whole constructed and operating substantially in the manner described, and applied to the purpose specified."

No. 24,053. ASA PRESTON, of Unionville, Ohio, for an "Improvement in cultivators."

"I claim the construction of a combined plow cultivator, having the several parts so arranged that they can be easily attached or detached, as herein described, when said plow has the hinged wings W, mould board H, bars L, M, and blades J, K, arranged and operated, substantially as set forth."

No. 24,054. REUBEN RICH, of Albion, N. Y., for an "Improvement in water wheels."

"I claim constructing the penstock A, dadoed joints L, and bolts I, in combination with gates G and G^2, and centre scroll plate B, and wheel C, when constructed and operated in the manner and for the purposes herein-before specified."

No. 24,055. SYLVANUS RICHARDSON, of Jericho, Vt., for an "Improved water wheel."

"What I do claim is, the float with hinges, as shown at point marked *a*, in Figures No. 2 and 4, and the spiral or curved form of the lower part of the float, as shown in Figures 2, 3, and 4, of said drawings, at points marked *b*, combined with the extension downwards of the case, below the scroll case *e*, and with draft tube *h*, shown in Figure 1, of said drawings, substantially in the manner and for the purposes above set forth."

No. 24,056. JOHN R. ROGERS, of Sacramento, Wis., for an "Improved washing machine."

"I claim the combination in the cylinder B, of the diagonal slats *c*, *c*, *e*, *c*, with the two heads of the cylinder, when said heads are provided with holes of such a shape and form that they will collect and force the water in and empty it at alternate ends of the cylinder, as the direction of its revolution are changed, substantially as is herein fully set forth."

No. 24,057. TIMOTHY ROSE, of Cortlandtville, N.Y., for an "Improved water wheel."

"I do claim, forming the buckets B of four parts, *a*, *b*, *c*, *d*, arranged or disposed relatively with each other, the hub A, and annular plate *e*, and with a scroll C, specifically as herein shown and described, and for the purpose set forth."

No. 24,058. JOHN RUSSELL, of Troy, N. Y., for an "Improvement in cast-iron grinding mills."

"What I claim is, first, the combination of the breaker B, and internally-armed hopper A, with the upper grinder I,

and lower grinder H, all aranged and operating together, as herein set forth, for the purpose of feeding into the mill and grinding large substances, such as corn on the cob. And I also claim making the armed portion of the hopper of separate rings N, provided with internal projections *b*, and arranged and secured together in the mill, as and for the purpose herein set forth. And I also claim making the lower grinder of separate toothed rings C, arranged and secured together upon the supporting plate E, as and for the purpose herein described. And I also claim making the upper grinder of separate toothed rings J, arranged and secured together, in and to the supporting plate K, as and for the purpose herein set forth."

No. 24,059. Thos. Short, of Danville, Ill., for an "Improvement in seeding machines."

"I claim the swinging frame D, when provided with a seed distributing device actuated by a wheel H, and cutting furrow shares I, and fitted within a mounted frame A, substantially as for the purpose set forth."

No. 24,060. Christian Shunk, of Canton, Ohio, for an "Improvement in refining iron in the hearth of a blast furnace."

"I claim the employment of an auxilliary tuyer pipe within the hearth of the common blast furnace, when charged with molten iron, at such an angle as that the blast of air entering the iron, may strike the circular wall of the hearth as nearly as possible at a tangent to its circumference, so as to cause the blast of air to pass round in the metal, giving the whole mass in the hearth a spiral motion immediately before the tapping of the furnace, for the manufacture of pig iron from the ore."

No. 24,061. James C. Spencer, of Phelps, N. Y., for an "Improvement in sewing machines."

"I claim the construction of a feeder and needle bar in one piece, or connected together, and the combination of the excentric (D) and pin (F) with the needle bar by means of the slot (S), for the purposes herein specified."

No. 24,062. W. S. Stetson, of Baltimore, Md., for an "Improvement in harvesting machines."

"I claim, first, connecting the finger bar to the frame of the machine by means of the saddle and its support, constructed and arranged substantially as herein described. Second, in combination with the saddle *d*, I claim the swiveling guide and swiveling lever *k*, as set forth. Third, I claim throwing the cutters in and out of gear, by means of the shifting bar *t*, constructed and operated, substantially in the manner set forth."

No. 29,063. W. S. Stetson, and R. F. Maynard, of Baltimore, Md., for an "Improvement in harvesting machines."

"We claim the double hinge joint at the end of the finger bar, consisting of the hinge *p*, shaft *r*, collar *s*, and brace *t*, arranged and operating in the manner described for the purpose specified. 2d, we claim the compound connecting rod *m*, constructed and operated as set forth. 3d, we claim so constructing or forming the upper part of the obtuse angle-iron tooth bar, and the base of the finger or tooth, that said base shall bear upon two plane faces of the said angle iron, in the manner and for the purposes set forth."

No. 24,064. Frederick S. Stoddard, of Litchfield, Conn., for an "Improvement in foot-power machine."

"What I claim, is: first, is a two throw-crank, operated by one pitman, in combination with a lever and spring, or their equivalents, as described. Second, the mode of attaching the spring to the foot piece, to operate on the pitman crank, in connection with the set screws for adjusting and reversing the motion, as set forth."

No. 24,065. J. C. Stoddard, of Worcester, Mass., for an "Improvement in potato planter."

"1st, I claim the combination of the compound cam K, hooked lever I, and sliding cross-head (O), with cutter (*p*) attached, the whole arranged and operating substantially as and for the purpose herein shown and described. 2nd, I claim arranging the plow shares L and covering shares M on parallel rock shaft (*j*, *k*), so that a lateral and vertical adjustment can be given to the same, substantially as herein set forth."

No. 24,066. Worden E. Stoddard, of Horicon, N. Y., for an "Improved stop-gauge for weather boarding, &c."

"I claim the use of the bar A, forming a stop or support for boards and mouldings, and the knob C, the spur D, and the adjustable slide B, substantially as here shown, for the purposes set forth."

No. 24,067. John Thompson, and M. L. Doty, of Chariton, Iowa, for an "Improved paddle-wheel."

"We claim the buckets of a paddle wheel, arranged in combination with the segments *b*, the weighted pinions F, and the dogs H, or their equivalents, to operate substantially as and for the purpose specified. And in combination with the above named parts, we also claim the arrangement of the spur *j*, or their equivalents, for the purpose of retaining the buckets in the proper position while the wheel is backing, substantially as described."

No. 24,068. L. E. Truesdell, of Warren, Mass., for an "Improvement in connecting together the braces of truss bridges."

"I claim the method herein described of constructing and interlocking the diagonal braces, for the purposes set forth."

No. 24,069. Chas. R. M. Wall, of New York, N. Y., for an "Improved propeller."

"I claim, 1st, an apron G arranged in such relation to a wheel A that it operates to propel a vessel, substantially as described. 2d, the arrangement of the rollers E, E^1, in combination with the apron G, whereby the wheel is made to work at any dip, substantially as specified. 3rd, the springs *g*, or their equivalent, arranged in combination with the rollers E^1 and with the apron G, for the purpose of regulating the strain on the apron, substantially as set forth."

No. 24,070. Calvin D. Wheeler, of New York, N. Y., for an "Improved needle-case and index."

"I claim a needle case and index combined for sewing machines, as described, whereby the appropriate sizes of the thread and needles to properly work together is always determined and shown."

No. 24,071. Nicholas Whitehall, of Newtown, Ind., for an "Improvement in seeding cultivators."

"I claim the combination of the stirrups O, O, with the notched handles N, N, eye bolt D, and hooks F, F, by which I am enabled to raise and secure the plow at any desired height, substantially as set forth."

No. 24,072. J. Carpenter Worth, of Little Britain Township, Lancaster Co., Pa., for an "Improvement in cements for roofing."

"I claim the composition for roofing made up in the manner and of the ingredients proportioned and mixed, as herein set forth."

No. 24,073. John H. Young, of St. Louis, Mo., for an "Improved pump."

"I claim, first, dividing the pump cylinder into two chambers *a*, a^1, by the division valve seat plate *b*, with its valves opening upwards, and uniting them by the water-way E, substantially as herein described, and for the purpose set forth. I also claim the poppet valves *m*, *n*, connected to and operating with the buckets K, L, in the two chambers, so that whilst they move with said buckets they shall have action independent of them, as set forth. I also claim, in combination with the hollow piston and stem passing through it, the causing of the upper valve *m* to close upwards against its bucket, substantially as herein described."

No. 24,074. Jacob Youngman, of Sunbury, Pa., for an "Improvement in railroad switch."

"What I do claim is, the arrangement of two guards 4, 4, so that a space 5 exists between them at the point where the cars take an oblique direction to the switch rails, in order to run upon the lower portion of the main track on a frog plate, which has stationary frogs 1, 2, and a rail 3 arranged on it, substantially as and for the purposes set forth."

No. 24,075. Orson Billings, of La Grange, Ohio, assignor to himself and Morris Traver, of Clinton Hollow, N. Y., for an "Improved lock."

"I claim the combination of the guards or plates E, F, H, constructed and arranged relatively with each other and the bolt B, to operate as and for the purpose set forth. I also claim the spring stops *c* when applied to the guard or plate E, and the latter is used in connection with its fellow guards F, H, for the purpose described."

No. 24,076. Tyrannus P. Butterfield, of Indianapolis, Ind., assignor to Abijah Taylor, of Morgan Co., Ind., and R. Stevenson, of same place, for an "Improved hand planing machine."

"What I claim is, the combination and arrangement of the frame A, knife D, feed roller F, spring H, and screw I, when the whole is arranged, constructed, and operated in manner substantially as and for the purpose set forth."

No. 24,077. Sumner Cooper, of Windsor, Conn., assignor to himself, Thos. Denham, and Joseph W. Briggs, of Cleveland, Ohio, for an "Improvement in window sash supporter."

"What I claim is, the combination and employment of the spring pinion pulley C, with the rack or perforated plate L, tube or box I, pin J, key K, latch H, substantially in the manner as and for the purpose described."

No. 24,078. C. B. Cottrell, of Westerly, R. I., assignor to himself and Nathan Babcock, of same place, for an "Improved feeding device for planing machines."

"I claim the combination of the anti-friction and feed rollers ', L, applied to the class of planing machines described, and driven from one and the same shaft H, by gearing, arranged as shown, to admit of a separate lateral adjustment of each, for the purpose set forth."

No. 24,079. Harry H. Evarts, of Chicago, Ill., assignor to himself and P. E. Merrihew, of same place, for an "Improved machine for sawing staves from the bolt."

"I do claim, 1st, the employment or use of the reciprocating saws F, F, in connection with the swinging bolt frames G, G, operated by the wiper wheels *s*, or their equivalents, substantially as and for the purpose set forth. 2nd, the employment or use of the segment racks *k*, operated substantially as shown, and connected by the pinions *g*, with the right and left screw rods H, having jaws *f*, *f*, placed thereon for the purpose of dogging and undogging the bolts at the proper time, as described."

No. 24,080. Henry Howson, of Philadelphia, Pa., assignor to Andrew Harris and John W. Harris, of same place, for an "Improvement in valves for dry gas meters."

"I claim, first, a pin E, or its equivalent, fitted loosely to the valve, and intervening between the valve and the driver, substantially as herein set forth for the purpose specified. Second, constructing the driver in the form of an inverted cup D, with driving pins in the inside, said cup being so arranged in respect to the annular flanch *e* of the valve as to serve the double purpose of maintaining the latter in its proper position and of preventing the access of tar to the driving pins."

No. 24,081. Warren Millar, of Chicago, Ill., assignor to himself and John Nutt, of same place, for an "Improvement in sewing machines."

"But what I claim is, 1st, the hook *h*, when constructed and operated substantially as described, in combination with an eye-pointed needle and the spool case *c*, for the purpose specified. 2d, the combination of the flange *b*, and space *x*, or their equivalents, of the spool case *c*, when constructed as and for the purposes described. 3d, the sliding supports *s*, *s*, or equivalents therefor, when constructed, arranged, and operating in the manner substantially as described, for the purpose specified. 4th, I claim imparting to the spool case *c*, the tipping or rocking motion, to receive the loop of needle thread from the hook *h*, or its equivalent, in the manner and for the purpose described."

No. 24,082. Wm. Sailor, of Philadelphia, Pa., assignor to himself, Wm. L. Boyer, and H. K. Boyer, of same place, for an "Improvement in corn and cob mills."

"I claim, first, the plates *i*, *i*, with their saw teeth, when the said plates are secure obliquely on the spindle, and adjacent to the burr, and when both the burr and plates are arranged, in respect to the shell, substantially as set forth. Second, forming the burr in three or more separate pieces, adapted and secured to each other, and to the spindle, substantially as specified."

No. 24,083. Geo. W. Simmons and Geo. H. Simmons, of Bennington, Vt., assignors to themselves and Norman Millington, of Shaftesbury, Vt., for an "Improved vinegar cruet or bottle."

"What we claim as a new article of manufacture is, a bottle, cruet, or other similar vessel, for containing liquid for table, culinery, or household purposes, provided with the tubes A and B, made and fitted to them, in the manner and for the purposes herein described and represented."

Re-issues.

John R. Moffitt, of Piqua, Ohio, for an "Improvement in grain separators."—Patented 30th November, 1852.—Re-issued 23rd March, 1858.—Again re-issued 17th May, 1859.

"I claim as new, and of my invention herein, the endless chains *d*, composed of metallic links provided with protuberances or depressions, when used in combination with suitable driving chain gears to impart a positive motion to the straw carrier of a threshing and seperating machine as explained."

John R. Moffitt, of Piqua, Ohio, for an "Improvement in grain separators."—Patented 30th November, 1852.—Re-issued 23rd March, 1858.—Again re-issued 17th May, 1859.

"I claim as new, and of my invention herein, in combination with a receptacle in which the tailings are deposited by the winnowing apparatus; the arrangement of the screw elevator O, in relation to the threshing cylinder for the purpose of returning the tailings to be rethreshed, as set forth."

John R. Moffitt, of Piqua, Ohio, for an "Improvement in grain separators."—Patented 30th November, 1852.—Re-issued 23rd March, 1858.—Again re-issued 17th May, 1859.

"I claim the reversible screw (k^2), and delivery spout l^2 m^2, arranged, adapted, and constructed, substantially in the manner described, with and to the discharging spout of the 'fanning mill' or 'shoe' of a threshing machine, so as to be isolated from the winnowing arrangement, and made to deliver at either one side or the other of the machine, as set forth."

John R. Moffitt, of Piqua, Ohio, for an "Improvement in grain separators."—Patented 1st December, 1857.—Re-issued 17th May, 1859.

"I claim as new, and as of my invention herein, the construction and arrangement (substantially as described) of the rotary beater A, within the apron, in combination with the falling sections B^{111}, operating in the manner and for purposes set forth."

John R. Moffitt, of Piqua, Ohio, for an "Improvement in grain separators."—Patented 1st December, 1857.—Re-issued 17th May, 1859.

"I claim as new, and of my invention herein, the arrangement of disconnected shafts H, H^1, carrying pinion chain gears E, *e*, E^1, e^1, rotated at equal speeds from a single shaft or driver, and acting to drive the endless apron from its lower end, while permitting the escape of the straw through the lower openings of the apron, as set forth."

William Gardner, of New York, N. Y., for an "Improvement in machinery for preparing oval picture frames."—Patented 17th August, 1858.—Re-issued 15th March, 1859.—Again re-issued 17th May, 1859.

"I claim, the combination of a scraper adapted to the form of the molding with the revolving face plate of a lathe, when the said scraper is arranged to be self-adjusting laterally to the said molding, for the purpose herein set forth."

C. Aultman and Co., of Canton, Ohio, assignees of Philo Sylla and Augusta Adams, of Elgin, Ill., for an "Improvement in grain and grass harvesters." Patented 20th September, 1853.—Re-issued 17th May, 1859.

"I claim, first, an elevated binding table, in combination with the platform for receiving the grain as it is cut, substantially as set forth. Second, the combination with the binding table of one or more binder's stands, on a lower level than that of the table, substantially as set forth. Third, the combination of a binding table with a binder's stand, having

an elevated side for the binder to rest his legs against, and thereby steady himself without the aid of his arms, both of which are thus left at liberty to do the binding, substantially as set forth. Fourth, the arrangement of the rakers and binder's stands, substantially as herein set forth, so that the grain may be raked from the platform, and delivered upon the binder's table before the several binders' stands, in the manner substantially as set forth. Fifth, the arrangement of the dumping tray with the rakers and binders' stands, substantially as set forth."

C. Aultman and Co., of Canton, Ohio, assignees of Philo Sylla and Augustus Adams, of Elgin, Ill., for an "Improvement in grain and grass harvesters." —Patented 20th September, 1853.—Re-issued 17th May, 1859.

"I claim, first, the combination of the finger beam and the main frame with a yielding coupling arm J, whereby the progressive movement of the finger beam over the ground will be controlled by the main frame, and its upward and downward movements by the undulations of the ground over which it is drawn, substantially as herein set forth. Second, the combination of a yielding coupling arm (J), and a yielding brace bar (k), with the finger beam and main frame, substantially as herein set forth. Third, the combination of the yielding bars J, K, and k^1, and the removable bolts L^1, L^2, or the equivalent thereof, with the finger beam and main frame, whereby the finger beam may be allowed to slide loosely on the ground, to adapt the machine to mowing, or be held firmly above the ground, to adapt the machine to reaping, substantially as herein set forth."

C. Aultman and Co., of Canton, Ohio, assignees of Philo Sylla and Augustus Adams, of Elgin, Ill., for an "Improvement in grain and grass harvesters." —Patented 20th September, 1853.—Re-issued 17th May, 1859.

"Claim.—The short finger beam in combination with the yielding connection with the main frame or its equivalent, substantially as herein set forth."

C. Aultman and Co., of Canton, Ohio, assignees of Philo Sylla and Augustus Adams, of Elgin, Ill., for an "Improvement in grain and grass harvesters." —Patented 20th September, 1853.—Re-issued 17th May, 1859.

"Claim.—The combination of the finger beam with the hinges by which it is drawn, arranged above the plane of the cutter, substantially as herein set forth."

C. Aultman and Co., of Canton, Ohio, assignees of Philo Sylla and Augustus Adams, of Elgin, Ill., for an "Improvement in grain and grass harvesters." —Patented 20th September, 1853.—Re-issued 17th May, 1859.

"Claim.—The combination of a counterpoise weight, or the equivalent thereof, with that end of the finger beam next the main frame, to equalize its pressure upon the ground, substantially as set forth. Also the combination of a counterpoise weight or the equivalent thereof, with each or either end of the finger beam, to diminish its pressure upon the ground, substantially as set forth."

C. Aultman and Co., of Canton, Ohio, assignees of Philo Sylla and Augustus Adams, of Elgin, Ill., for an "Improvement in grain and grass harvesters." —Patented 20th September, 1853.—Re-issued 17th May, 1859.

"Claim.—The combination of a stop with the mechanism for connecting the finger beam with the main frame and allowing it to rise and fall, substantially as herein set forth."

Design.

David Hathaway, of Troy, N.Y., assignor to Fuller Warren and Co., of Troy, N.Y., for a "Design for a door or plate of a stove."

"Claim.—The ornamental design for a door or plate of a stove, as herein described and shown in the annexed photographic drawing."

Additional Improvements.

Samuel F. Hodge, of Detroit, Mich., for an "Improvement in "Ore crushing machines."—Patented 26th May, 1857.—Additional Improvement dated 17th May, 1859.

"Claim.—The alternate lifting and dropping of a stamper or hammer by means of the combination of the vertical rod with two or more clamping rollers, the peripheries of which are not complete circles."

Samuel B. Spaulding, of Brandon, Vt., for an "Improvement in cooking stoves."—Patented 22nd June, 1858.—Additional Improvement dated 17th May, 1859.

"I claim the extension of the flues under the hearth, substantially as described for the purposes set forth."

Extension.

Nelson Goodyear, late of Newtown, Conn. (Henry B. Goodyear, administrator), for an "Improvement in the manufacture of india rubber fabrics." —Patented 13th May, 1845.

"I claim the intermingling and combining fibrous substances with the gum in forming india-rubber fabrics, solid and firm in the body with a smooth surface resembling leather."

THE ALPHABETICAL INDEX of APPLICATIONS for PATENTS and PATENTS GRANTED, from the 1st January to the 31st December, 1858. Price 8*s*.

COLONIAL PATENTS.—Information as to the Mode of obtaining Protection for Inventions in the Colonies; contained in Communications from the Governors, &c. of the different British Colonies in answer to the Application of Mr. W. J. Curtis for a Patent. Price 1*s*.

PATENT RIGHTS in the COLONIES.—Abstract of Replies to the Secretary of State's Circular Despatch of July 11, 1856, calling for Information as to the Form of the Application to be made by Persons desirous of obtaining Patent Rights in the Colonies, and the Expenses attendant on the Grant of such Patent Rights. Price 2*s*. 6*d*.

The above, and all other works published by the Commissioners of Patents, are now on sale at the Great Seal Patent Office, 25, Southampton Buildings, Holborn.

This Journal is published on the evenings of Tuesday and Friday, and will be forwarded, post free, to Subscribers.—Terms, 30*s*. per annum.—Subscriptions received at the Great Seal Patent Office, where also single copies, at twopence each, may be obtained.

No. 566. TUESDAY, JUNE 7, 1859. Price 2d.

Notices to Proceed.

NOTICE is hereby given, that

214. JOHN SMITH and WILLIAM HENRY SMITH, of 8, Upper Fountain Place, City Road, in the county of Middlesex, Manufacturers, have given notice at the Office of the Commissioners of their intention to proceed with their application for Letters Patent for the invention of "Certain improvements in manufacturing paper, and in producing watermarks, patterns, figures, letters, and devices thereon, and in the construction of the mechanism employed therein."

215. And JOHN SAVORY, of 143, New Bond Street, Chemist and Druggist, and WILLIAM ROBERT BARKER, of the same place, Chemist, have given the like notice in respect of the invention of "Improvements in bottles for medicines and poisons."

As set forth in their respective petitions, both recorded in the said office on the 24th day of January, 1859.

---

244. And WILSON AGER, of Rhorsburg, in the county of Columbia, state of Pennsylvania, United States of America, has given the like notice in respect of the invention of "An improvement in machinery for cleaning rice."

245. And THOMAS HARTSHORNE, of West Bromwich, in the county of Stafford, Brass Founder, has given the like notice in respect of the invention of "An improved metal to be used for making journey brasses for mills, rollers, forges, and all kinds of shafts and machinery, and also for shipping and for bearings for shafts and journey brasses in general."

246. And ELIJAH DIXON, of Preston, in the county of Lancaster, Mechanic, and HENRY WHITTAKER, of the same place, Mechanic, have given the like notice in respect of the invention of "Improvements in apparatus used in weaving textile fabrics."

As set forth in their respective petitions, all recorded in the said office on the 27th day of January, 1859.

255. And IGNAZIO ZACHERONI (native of Italy), residing at Liverpool, in the county of Lancaster, Artist, has given the like notice in respect of the invention of "An improved mode or method of preventing the escape of smoke into the atmosphere, and in the construction of 'chimney pots' or 'tops' for curing smoky chimneys."

256. And WILLIAM ROBERTSON, of the city of Manchester, in the county of Lancaster, Mechanician, has given the like notice in respect of the invention of "A new apparatus for propelling boats on canals, rivers, and lakes of moderate depth."

259. And FREDERIC PRINCE, of 138, New Bond Street, in the county of Middlesex, Gun Maker, has given the like notice in respect of the invention of "A new breech-loading gun."

As set forth in their respective petitions, all recorded in the said office on the 28th day of January, 1859.

---

272. And THOMAS PLUNKETT SMITH, of Stanmore, in the county of Middlesex, Schoolmaster, has given the like notice in respect of the invention of "An apparatus for guiding or directing the pen or pencil writing or drawing."

274. And JOHN RAYWOOD, Engineer, of Wentworth, in the county of York, has given the like notice in respect of the invention of "Certain improvements in the construction and method of working sewing machines."

276. And JAMES ROBERTSON, of Glasgow, in the county of Lanark, North Britain, Engineer, has given the like notice in respect of the invention of "Improvements in details by which motive force is transmitted in machinery."

As set forth in their respective petitions, all recorded in the said office on the 31st day of January, 1859.

---

283. And SAMUEL BIRCHALL EVELEIGH, of Salford, in the county of Lancaster, Hat Manufacturer, has given the like notice in respect of the

invention of "An improved form or construction of hats or covering for the head."
As set forth in his petition, recorded in the said office on the 1st day of February, 1859.

297. And EDWARD WILKINS, of No. 7, Addington Place, Camberwell, in the county of Surrey, Gentleman, has given the like notice in respect of the invention of "Improvements in drain pipes and tiles for draining and liquid manuring land."

301. And SAMUEL TEARNE, of Birmingham, in the county of Warwick, Japanner, has given the like notice in respect of the invention of "Improvements in ornamenting surfaces."
As set forth in their respective petitions, both recorded in the said office on the 2nd day of February, 1859.

307. And THOMAS STORER, of Birmingham, in the county of Warwick, Undertaker and Funeral Carriage Proprietor, has given the like notice in respect of the invention of "A new or improved funeral carriage."
As set forth in his petition, recorded in the said office on the 3rd day of February, 1859.

330. And WILLIAM CLARK, of 53, Chancery Lane, in the county of Middlesex, Engineer and Patent Agent, has given the like notice in respect of the invention of "Improvements in the means or apparatus of preserving grain, flour, eggs, and other vegetable and animal substances."—A communication from abroad by Louis Jacques Chateau, of Paris, Notary.
As set forth in his petition, recorded in the said office on the 4th day of February, 1859.

335. And THOMAS SYKES, of Cleckheaton, in the county of York, Manufacturing Chemist, and BENJAMIN CLIFFORD SYKES, of the same place, M.D., have given the like notice in respect of the invention of "Improvements in obtaining or separating oily, fatty, greasy, tarry, waxy, and resinous substances from oleaginous seeds, nuts and fruits, wool, silk, hair, cotton, flax, line, hemp, furs, skins, leather, bones, fish and other animal matters and refuse, woollen and cotton waste and refuse, also textile fabrics and refuse, grease produced in various branches of industry, indigo lac, lac dye, and other dyes."

336. And THOMAS RUSSELL AYERST, of Newenden, in the county of Kent, Book Keeper, has given the like notice in respect of the invention of "Improvements in breach loading guns and other fire arms."—A communication from abroad by James Hunter Sears, of Brantford, in the county of Brant, Upper Canada.
As set forth in their respective petitions, both recorded in the said office on the 5th day of February, 1859.

347. And JOHN WILSON, of 55, John Street, Sunderland, has given the like notice in respect of the invention of "Improvements in ventilating mines, and in combining apparatus used for such purpose."
As set forth in his petition, recorded in the said office on the 7th day of February, 1859.

349. And EDWARD THOMAS HUGHES, of the firm of Hughes and Son, Patent Agents, 123, Chancery Lane, London, W.C., has given the like notice in respect of the invention of "Improvements in machinery or apparatus for sorting and numbering the threads or filaments of silk, or other fibrous materials."—A communication from Fabius Mainardi, Merchant, of Lyons, in the empire of France.

359. And THOMAS STOKES CRESSEY, of High Street, Homerton, in the county of Middlesex, has given the like notice in respect of the invention of "Improvements in machinery used in the manufacture of casks."
As set forth in their respective petitions, both recorded in the said office on the 8th day of February, 1859.

431. And WILLIAM EDWARD NEWTON, of the Office for Patents, No. 66, Chancery Lane, in the county of Middlesex, Civil Engineer, has given the like notice in respect of the invention of "An improved mowing machine or grass harvester." — A communication from abroad, by John Peter Adriance, of the United States of America.
As set forth in his petition, recorded in the said office on the 16th day of February, 1859.

499. And JOHN ROBINSON, of Lower House, near Burnley, in the county of Lancaster, Manager, has given the like notice in respect of the invention of "Improvements in machinery and apparatus applicable to machines for spinning and doubling."
As set forth in his petition, recorded in the said office on the 24th day of February, 1859.

511. And THOMAS CALLENDAR HINDE, of Dudley, in the county of Worcester, Iron Merchant, and GEORGE JAMES HINDE, of Wolverhampton, in the county of Stafford, Merchant, have given the like notice in respect of the invention of "Improvements in coating iron with copper or alloys of copper."
As set forth in their petition, recorded in the said office on the 25th day of February, 1859.

556. And WILLIAM EDWARD NEWTON, of the Office for Patents, No. 66, Chancery Lane, in the county of Middlesex, Civil Engineer, has given the like notice in respect of the invention of "Improvements in the construction of barometers, or instruments to indicate pressure."—A communication from Mr. Alfred Nobel, of Paris, a foreigner residing abroad.
As set forth in his petition, recorded in the said office on the 2nd day of March, 1859.

702. And JAMES HOWDEN and ALEXANDER MORTON, of Glasgow, in the county of Lanark, North Britain, Engineers, have given the like notice in respect of the invention of "Improvements in apparatus for obtaining and regulating motive power."
As set forth in their petition, recorded in the said office on the 19th day of March, 1859.

886. And THOMAS SPENCER, of 192, Euston Road, Euston Square, London, Analytical and Consulting Chemist, has given the like notice in respect of the invention of "Improvements in the economical treatment of refuse or waste matter containing sulphur."
As set forth in his petition, recorded in the said office on the 9th day of April, 1859.

927. And James Apperly, Cloth Manufacturer, and William Clissold, Engineer, both of Dudbridge, in the county of Gloucester, have given the like notice in respect of the invention of "An improved construction of fulling machine."
As set forth in their petition, recorded in the said office on the 13th day of April, 1859.

978. And Joseph Morton and Henry Shaw Morton, trading under the style or firm of Morton and Son, of Sheffield, in the county of York, Stove Grate Manufacturers, have given the like notice in respect of the invention of "Improvements in hearth-plates or ash-pans."
As set forth in their petition, recorded in the said office on the 18th day of April, 1859.

998. And James Apperly, Cloth Manufacturer, and William Clissold, Engineer, both of Dudbridge, in the county of Gloucester, have given the like notice in respect of the invention of "Improved apparatus for oiling wool."
As set forth in their petition, recorded in the said office on the 20th day of April, 1859.

1004. And John Davies, of Tetbury, in the county of Gloucester, Machinist, has given the like notice in respect of the invention of "A new or improved apparatus for ringing door bells, and a bolt to be used with the said apparatus, and for other purposes to which the said bolt is or may be applicable."
As set forth in his petition, recorded in the said office on the 21st day of April, 1859.

1055. And Henry Richardson Fanshawe, late of Messrs. Silver and Company's Works, North Woolwich, now of 13, Russell Place, Old Kent Road, in the county of Surrey, India Rubber Manufacturer, has given the like notice in respect of the invention of "Improved apparatus or mechanism for drawing-off, filtering, and guaging liquids in butts, barrels, casks, and such like vessels, preserving the contents from deterioration from contact with atmospheric air."
As set forth in his petition, recorded in the said office on the 27th day of April, 1859.

1132. And Richard Archibald Brooman, of 166, Fleet Street, in the city of London, E.C., Patent Agent, has given the like notice in respect of the invention of "Improvements in cannon and other fire arms, and in projectiles, wads, and cartridges to be used therewith."—A communication from abroad by John Webster Cochran, of New York.
As set forth in his petition, recorded in the said office on the 5th day of May, 1859.

1160. And Frederick Vernon Hadlow, of 8, Prince Albert Street, Brighton, in the county of Sussex, Engraver, has given the like notice in respect of the invention of "An improved stamp for marking linen and other wearing apparel."

1163. And Alexander Morton, of Morton Place, Kilmarnock, county of Ayr, has given the like notice in respect of the invention of "Improvements in means or apparatus employed in the weaving of figured fabrics."
As set forth in their respective petitions, both recorded in the said office on the 9th day of May, 1859.

1171. And John Norman, of Glasgow, in the county of Lanark, North Britain, Engineer, has given the like notice in respect of the invention of "Improvements in furnaces."

1172. And Robert Thomson, of Glasgow, in the county of Lanark, North Britain, Manager, has given the like notice in respect of the invention of "Improvements in shuttles."
As set forth in their respective petitions, both recorded in the said office on the 10th day of May, 1859.

1201. And Thomas Vicars, senior, Thomas Vicars, junior, and Thomas Ashmore, of Liverpool, Engineers, and James Smith, of the same place, in the county palatine of Lancaster, Baker, have given the like notice in respect of the invention of "Improvements in the manufacture of bread, biscuits, and like articles, and in the machinery and apparatus connected therewith."
As set forth in their petition, recorded in the said office on the 13th day of May, 1859.

1216. And William Midworth, of the firm of Messrs. John Midworth and William Midworth, of Newark-upon-Trent, in the county of Nottingham, Engineers, Iron Founders and Ironmongers, have given the like notice in respect of the invention of "An improved iron for the use of laundries, tailors, or other purposes."

1218. And John Clark, of Glasgow, in the county of Lanark, North Britain, Wholesale Stationer, has given the like notice in respect of the invention of "Improvements in envelopes, and in machinery or apparatus for gumming, embossing, folding, counting, and otherwise treating the same, and in part applicable in the treatment of note and other writing paper."
As set forth in their respective petitions, both recorded in the said office on the 16th day of May, 1859.

1226. And Amédée Etienne Charles Joseph Reynaud de Trets, of Marseilles, in the French empire, Gentleman, has given the like notice in respect of the invention of "An improved composition for splitting rock."

1228. And Charles Law, of Wolverhampton, in the county of Stafford, Lockmaker, has given the like notice in respect of the invention of "Improvements in the construction of locks."
As set forth in their respective petitions, both recorded in the said office on the 17th day of May, 1859.

1249. And George Robinson Sampson, of the state of Massachusetts, of the United States of America, has given the like notice in respect of the invention of "A new and useful improvement in propelling navigable vessels through water."—A communication from John Taggart, a resident of Roxbury, of the state of Massachusetts, of the United States of America.
As set forth in his petition, recorded in the said office on the 20th day of May, 1859.

1265. And John Hutchinson Mason, of the town and county of the town of Nottingham, Lace Manufacturer, and George Lee Baxter, also of the said town and county of the town of Nottingham, Dyer, have given the like notice in respect of the invention of "Ornamenting lace or other twisted fabrics."

1273. And ANDREW BARCLAY, of Kilmarnock, in the county of Ayr, North Britain, Engineer, has given the like notice in respect of the invention of "Improvements in steam hammers."

As set forth in their respective petitions, both recorded in the said office on the 23rd day of May, 1859.

1289. And RICHARD ATWOOD GLASS, of 115, Leadenhall Street, in the city of London, Submarine Telegraph Cable and Wire Rope Manufacturer, has given the like notice in respect of the invention of "Improvements in submarine electric telegraph cables."

As set forth in his petition, recorded in the said office on the 25th day of May, 1859.

And notice is hereby further given, that all persons having an interest in opposing any one of such applications are at liberty to leave particulars in writing of their objections to such application, at the said Office of the Commissioners, within twenty-one days next after the date of the Gazette [and of the Journal] in which this notice is issued.

Patents Sealed.

List of LETTERS PATENT which passed the Great Seal on the

7th June, 1859.

2797. JAMES EDWARD BOYD, of Hither Green, Lewisham, in the county of Kent, Gentleman, for an invention of "Improvements in the construction of taps, valves, cocks, spiggotts, or other apparatus or instruments for guaging or for drawing off the liquid or fluid contents of any cask, butt, vat, barrel, or other vessel."—Dated 7th December, 1858.

2810. GEORGE FREDERIC CHANTRELL, of Liverpool, in the county of Lancaster, Furnace Engineer, for an invention of "Improvements in apparatus applicable to the manufacture and revivification of animal or vegetable charcoal."—Dated 8th December, 1858.

2815. ANDREW LAMB and WILLIAM ALLTOFT SUMMERS, both of Southampton, in the county of Hants, Engineers, for an invention of "Improved arrangements of apparatus for superheating steam."—Dated 8th December, 1858.

2819. ROBERT LLOYD BURROWES, of St. Helen's, in the county of Lancaster, Professor of Music, and JOHN KNOWLES, junior, of the same place, Mine Surveyor, for an invention of "Certain improvements in the construction of piano-fortes and organs."—Dated 9th December, 1858.

2820. JOHN BARROW, junior, of the city of Manchester, in the county of Lancaster, Manufacturing Chemist, for an invention of "Improvements in the treatment of coal gas tar, and of the oils obtained by the distillation of the same, and for the application of substances obtained thereby."—Dated 9th December, 1858.

2822. JOSEPH ECCLES, of Blackburn, in the county of Lancaster, Cotton Manufacturer, for an invention of "Improvements in arrangements and machinery for preparing for manufacture and for manufacturing clay, and other plastic earths into bricks, tiles, pipes, and other articles formed of such materials."—Dated 9th December, 1858.

2825. JOHN ELDER, of Glasgow, Engineer, for an invention of "Improvements in paddle wheels."—Dated 9th December, 1858.

2826. JAMES STEWART, of 69, Tottenham Court Road, in the county of Middlesex, for an invention of "Improvements in the construction of the action of pianofortes."—Dated 9th December, 1858.

2827. THOMAS ALLEN, of Clifton, Bristol, Ironmonger, for an invention of "Improvements in folding bedsteads."—Dated 9th December, 1858.

2829. HENRY WILSON, of Norton, in the county of Durham, Brass Finisher, for an invention of "Improvements in the construction of pumps."—Dated 9th December, 1858.

2830. ETIENNE LÉON PENSUETE, of Dunkirk, in the empire of France, for an invention of "Improvements in apparatus for driving or for drawing up piles by steam."—Dated 9th December, 1858.

2843. STEPHEN DUDGEON, of Sheffield, in the county of York, for an invention of "An improved gas regulator."—Dated 11th December, 1858.

2869. HENRY BRIDGES, of Bridgewater, in the county of Somerset, Railway Carriage Builder, for an invention of "Improvements in the means of working breaks on carriages on railways."—Dated 15th December, 1858.

13. WILLIAM ECCLES, of Thirty-four, Surry Street, Strand, Westminster, in the county of Middlesex, and of the University of Cambridge, Master of Arts, for an invention of "Improving the machinery or apparatus for regulating the tension of the twist threads or warp whilst it is weaving in power looms into cloth."—Dated 1st January, 1859.

104. CHARLES NEALE MAY, of Devizes, in the county of Wiltshire, Engineer, for an invention of "An improved heat indicator."—Dated 13th January, 1859.

159. WILLIAM AUGUSTUS FREDERICK POWELL, of Bristol, in the county of Somersetshire, Potter, for an invention of "Improvements in stopping or closing jars and bottles."—Dated 19th January, 1859.

647. THOMAS PATSTONE, of Birmingham, in the county of Warwick, Warehouse Clerk, for an invention of "Improvements in shades or glasses for gas and other lamps, and in the supports of the said shades or glasses." — Dated 14th March, 1859.

Patents on which the Stamp Duty of £50 has been Paid.

(*To 4th June,* 1859, *inclusive.*)

2nd June.

1424. JOSEPH DAVIS, of Birmingham, in the county of Warwick, Manufacturer, for an invention of "A new or improved method of manufacturing the small coke commonly called breezes, which said method of manufacture economises heat and effects suppression or partial suppression of smoke."—Dated 17th June, 1856.

3rd June.

1314. GEORGE JOSIAH MACKELCAN, of Islington, in the county of Middlesex, Engineer, for an invention of "Improvements in the manufacture of rollers adapted to calico and other printing."—Dated 3rd June, 1856.

1333. DUNCAN MORRISON, of Bordesley Works, Birmingham, for an invention of "Improvements in the manufacture of articles from malleable cast iron."—Dated 4th June, 1856.

4th June.

1363. Charles William Siemens, of 7, John Street, Adelphi, in the county of Middlesex, for an invention of "Improvements in engines wherein super-heated steam is used."—Dated 9th June, 1856.

1419. William Henry Barlow, of Derby, Civil Engineer, and William Henry Woodhouse, of Parliament Street, Westminster, Civil Engineer, for an invention of "Improvements in connecting and securing the ends of rails of railways."—Dated 16th June, 1856.

1531. Ebenezer Rogers, of Abercarn, in the county of Monmouth, and Herbert Mackworth, of Clifton, in the county of Gloucester, for an invention of "Improvements in coking and in apparatus for that purpose."—Partly a communication.—Dated 30th June, 1856.

Notices of Application for Leave to enter a Disclaimer, &c.

In the matters of Letters Patent for Great Britain, dated 11th October, 1853, granted to James Hall Nalder, of Alvescott, in the county of Oxford, Farmer, and John Thomas Knapp, of Clanfield, in the same county, Machinist, for their invention for "Improvements in winnowing or dressing corn."

Notice is hereby given, that James Hall Nalder has applied by Petition to the Commissioners of Patents, according to the Statute in that case made and provided, for leave to enter a Disclaimer and Memorandum of Alteration of parts of the Specification of the said Letters Patent.

W. and J. H. Johnson,
47, Lincoln's Inn Fields,
London, W.C.,
June 2, 1859. Agents for the Patentees.

In the matter of Letters Patent granted to Edmund Alfred Pontifex, of the firm of Pontifex and Wood, of Shoe Lane, in the city of London, Chemical Manufacturers, for "Improvements in the manufacture of tartaric and citric acids, and tartrate of potash and soda."—Dated 12th March, 1856, No. 598.

Notice is hereby given, that the said Edmund Alfred Pontifex has applied by Petition to the Commissioners of Patents, according to the Statute in that case made and provided, for leave to enter a Disclaimer of certain parts of the Specification of the said Letters Patent.

R. A. Brooman,
166, Fleet Street, London,
Agent for the Patentee.

Errata in Journal of 3rd June.

1263. For "Thomliebank" read "Thornliebank."
1275. After "United States" add "of America."

List of Specifications published during the week ending 3rd June, 1859.

No.	Price.	Subject-Matter.
		(*Disclaimer*, 1857.)
571	9*d.*	Manufacture of cast-iron pipes.
		1859.
2379	1*s.* 1*d.*	Power looms for weaving.
2391	6*d.*	Pocket stereoscopes.
2394	3*d.*	Substitute for gutta percha, caoutchouc, &c.
2398	1*s.* 4*d.*	Furnaces for the combustion of smoke.
2399	9*d.*	India-rubber pouches for tobacco, &c.
2400	3*d.*	Picker for looms.
2404	10*d.*	Carding engines, &c.
2405	6*d.*	Apparatus for the manufacture of cap or bonnet fronts.
2406	1*s.* 4*d.*	Machinery or apparatus for suspending paper or woven fabrics to be dried.
2407	3*d.*	Lubricating the slide valves and pistons of steam engines, &c.
2408	6*d.*	Spinning and doubling machinery.
2410	5*d.*	Hats and coverings for the head.
2411	1*s.* 10*d.*	Electric telegraph cables, &c.
2412	5*d.*	Manufacture of cocks.
2413	4*d.*	Compounds or substitutes for hard wood, metal, leather, or felting, &c.
2414	3*d.*	Cocks, taps, or valves.
2415	6*d.*	Manufacture of anvils.
2417	3*d.*	Manufacture of steel.
2418	6*d.*	Machinery to be used as a new motive power.
2419	9*d.*	Arranging magneto-electric machines for medical and other purposes.
2421	3*d.*	Obtaining motive power.
2422	11*d.*	Hooks and eyes, &c.
2423	9*d.*	Manufacture of rollers or cylinders for printing fabrics.
2424	10*d.*	Reaping and mowing machines.
2425	3*d.*	Photography.
2426	3*d.*	Apparatus for turning over the leaves of books.
2427	7*d.*	Railway signals.
2428	8*d.*	Coupling for railway carriages, &c.
2430	7*d.*	Manufacture of hats and other coverings for the head, &c.
2431	3*d.*	Manufacture of starch.
2432	3*d.*	Manufacture of bird-cages.
2433	1*s.*	Safety switch box and gear.
2434	6*d.*	Submarine telegraph cables.
2435	6*d.*	Disconnecting boats from davit blocks, &c.
2436	7*d.*	Fire-arms.
2437	3*d.*	Sleeve links.
2440	3*d.*	Respirators
2441	8*d.*	Buttons, &c.
2442	7*d.*	Buoy.
2443	3*d.*	Machinery for driving and curbing horses.
2444	3*d.*	Cartridges.
2445	3*d.*	Electro-magnetic telegraphs.
2446	3*d.*	Boots and shoes.
2447	3*d.*	Railway carriage brakes.
2448	3*d.*	Reservoirs, tanks, culverts, &c.
2449	3*d.*	Treating waste vulcanized india rubber.
2450	3*d.*	Manufacture of moreens, &c.
2451	3*d.*	Manure.

List of Specifications—*continued.*

No.	Price.	Subject-Matter.
2452	3*d.*	Application of mineral powder for disinfecting, preserving, &c.
2457	3*d.*	Application of substances for sizing paper.
2458	1*s.* 4*d.*	Application of motive power to ploughs and other agricultural implements.
2459	3*d.*	Breech-loading fire-arms.
2486	4*d.*	Manufacture of steel wire.
2509	3*d.*	Apparatus for ginning and cleaning cotton.
2561	3*d.*	Manufacture of yellow pigment.

*** Specifications will be forwarded by post on receipt of the amount of price and postage. Sums exceeding 5*s.* must be remitted by Post Office Order, made payable at the Post Office, High Holborn, to Mr. Bennet Woodcroft, Great Seal Patent Office.

ALL FOREIGN and COLONIAL PATENT LAWS and RULES, being translations or copies of Official Communications, may be found in the following Numbers of this Journal, published at 2*d.* each, or 3*d.* free by post:—

PATENT LAW AMENDMENT ACT, 1852.—All Specifications, Indexes, &c., printed by order of the Commissioners of Patents, are sold at the Great Seal Patent Office, 25, Southampton Buildings, Holborn.

THE PATENT LAW AMENDMENT ACTS (15 & 16 Vict., cap. 83; 16 Vict., cap. 5; and 16 & 17 Vict., cap. 115); with the Rules and Regulations made by the Commissioners of Patents for Inventions, and by the Lord Chancellor and the Master of the Rolls, under the Acts 15 and 16 Vict., c. 83, and 16 & 17 Vict., c. 115, accompanied by Specimen Forms of the Provisional Documents printed on sheets of the prescribed size. Price 6*d.*

THE CHRONOLOGICAL INDEX of PATENTS of INVENTION, from March 2, 1617 (14 James I.), to September 30, 1852 (16 Vict.), 2 vols. Price 30*s.*

THE ALPHABETICAL INDEX of PATENTEES of Inventions for the above period. Price 20*s.*

THE SUBJECT-MATTER INDEX of PATENTS for the same period—*Second Edition*—to which is prefixed a Key of Terms and Phrases. 2 vols. Price 2*l.* 16*s.*

A Key to the *First Edition* of the above work is also published separately, and may be had on application.

THE CHRONOLOGICAL INDEXES of APPLICATIONS for PATENTS and PATENTS GRANTED from the 1st October to the 31st December, 1852, and from the 1st January to the 31st December, 1853, in one volume. Price 11*s.*

THE ALPHABETICAL INDEXES for the above periods, in one volume. Price 13*s.*

THE SUBJECT-MATTER INDEX, from 1st October to 31st December, 1852. Price 9*s.*

THE SUBJECT-MATTER INDEX, from 1st January to 31st December, 1853. Price 16*s.*

THE CHRONOLOGICAL INDEX of APPLICATIONS for PATENTS and PATENTS GRANTED from the 1st January to the 31st December, 1854. Price 6*s.*

THE ALPHABETICAL INDEX for the above period. Price 7*s.*

THE SUBJECT-MATTER INDEX for the above period. Price 16*s.* 6*d.*

THE CHRONOLOGICAL INDEX of APPLICATIONS for PATENTS and PATENTS GRANTED from the 1st January to the 31st December, 1855. Price 6*s.* 6*d.*

THE ALPHABETICAL INDEX for the above period. Price 7*s.* 6*d.*

THE SUBJECT-MATTER INDEX for the above period. Price 17*s.*

THE CHRONOLOGICAL INDEX of APPLICATIONS for PATENTS and PATENTS GRANTED from the 1st January to the 31st December, 1856. Price 6*s.* 6*d.*

THE ALPHABETICAL INDEX for the above period. Price 8*s.*

THE SUBJECT-MATTER INDEX for the above period. Price 18*s.* 6*d.*

THE ALPHABETICAL INDEX of APPLICATIONS for PATENTS and PATENTS GRANTED from the 1st January to the 31st December, 1857. Price 8*s.*

THE CHRONOLOGICAL INDEX for the above period. Price 6*s.* 6*d.*

THE SUBJECT-MATTER INDEX for the above period. Price 19*s.* 6*d.*

THE ALPHABETICAL INDEX of APPLICATIONS for PATENTS and PATENTS GRANTED, from the 1st January to the 31st December, 1858. Price 8*s.*

Museum of Patents, South Kensington.

NUMBER of VISITORS for the Week ending 4th June, 1859.

Mornings	922
Evenings	901
Total	1823

Since the opening of the Museum Free Daily (May 12, 1858,)—103,840.

THIS Museum is open to the public daily, free of charge. The hours of admission are from 10 A.M. to 6 P.M., and in the evenings of Monday, Tuesday, and Wednesday from 7 to 10 P.M.

All communications on the subject of the Museum to be addressed to the Superintendent,

B. WOODCROFT.

Great Seal Patent Office,
Southampton Buildings.

GALLERY OF PORTRAITS OF INVENTORS, DISCOVERERS, AND INTRODUCERS OF USEFUL ARTS.—This Collection, formed by Mr. Woodcroft, and first opened to public view in the Great Seal Patent Office in 1853, now constitutes a portion of the Patent Museum at South Kensington.

Presentations of original Portraits, Medallions, Busts, and Statues, in augmentation of the Collection, are hereby invited, and will on receipt be acknowledged in this Journal, and duly recorded in the next published Catalogue.

THE REFERENCE INDEX of PATENTS, pointing out the Office in which each enrolled Specification of a Patent may be consulted; the Books in which Specifications, Law Proceedings, and other subjects connected with Inventions have been noticed; also such of the Specifications of Patents granted under the Act of 21 James I. as have been published by the authority of the Commissioners. Price 30*s*.

AN APPENDIX to the REFERENCE INDEX of PATENTS of INVENTION, containing Abstracts from such of the early Patents and Signet Bills as describe the nature of the invention, and which Patents have no enrolled Specifications. Price 4*s*.

COLONIAL PATENTS.—Information as to the Mode of obtaining Protection for Inventions in the Colonies; contained in Communications from the Governors, &c. of the different British Colonies in answer to the Application of Mr. W. J. CURTIS for a Patent. Price 1*s*.

PATENT RIGHTS in the COLONIES.—Abstract of Replies to the Secretary of State's Circular Despatch of July 11, 1856, calling for Information as to the Form of the Application to be made by Persons desirous of obtaining Patent Rights in the Colonies, and the Expenses attendant on the Grant of such Patent Rights. Price 2*s*. 6*d*.

In course of Publication, by Order of the Commissioners of Patents.

ABRIDGMENTS (in Classes, and Chronologically arranged) of all SPECIFICATIONS of PATENTED INVENTIONS, from the earliest enrolled to those published under the Act of 1852.

These books are of 12mo size, and as each is limited to inventions of one class only, they can be sold at prices sufficiently moderate to enable the humblest inventor to examine for himself whether his discovery has been previously patented or not.

At the foot of each abstract are given references to notices of the inventions in scientific and other works, and to the reports of law proceedings for infringements, &c. &c. &c.

The classes already published are,—

1. DRAIN TILES AND PIPES, price 6*d*.
2. SEWING AND EMBROIDERING, price 6*d*.
3. MANURE, price 6*d*.
4. PRESERVATION OF FOOD, price 6*d*.
5. MARINE PROPULSION, price 4*s*.
6. MANUFACTURE OF IRON AND STEEL, price 5*s*.
7. AIDS TO LOCOMOTION, price 1*s*.
8. STEAM CULTURE, price 2*s*.
9. WATCHES, CLOCKS, AND OTHER TIME-KEEPERS, price 1*s*. 6*d*.
10. FIRE-ARMS AND OTHER WEAPONS, AMMUNITION, AND ACCOUTREMENTS, price 6*s*. 6*d*.
11. PAPER.—PART I. MANUFACTURE OF PAPER, PASTEBOARD, AND PAPIER MÂCHÉ, price 3*s*.

The following are in the press:—

PAPER.—PART II. CUTTING, FOLDING, AND ORNAMENTING; INCLUDING ENVELOPES, CARDS, PAPER-HANGINGS, &c.
ELECTRICITY AND MAGNETISM: THEIR GENERATION AND APPLICATIONS.
TYPOGRAPHIC, LITHOGRAPHIC, AND PLATE PRINTING.
BLEACHING, DYEING, AND PRINTING YARNS AND FABRICS.
PREPARATION OF FUEL, AND APPARATUS FOR ITS COMBUSTION.
MANUFACTURE AND APPLICATIONS OF INDIA RUBBER, GUTTA PERCHA, &c.; INCLUDING AIR, FIRE, AND WATER PROOFING.
PRODUCTION AND APPLICATIONS OF GAS.
STEAM ENGINES.

B. WOODCROFT.

The above, and all other works published by the Commissioners of Patents, are now on sale at the Great Seal Patent Office, 25, Southampton Buildings, Holborn.

This Journal is published on the evenings of Tuesday and Friday, and will be forwarded, post free, to Subscribers.—Terms, 30*s*. per annum.—Subscriptions received at the Great Seal Patent Office, where also single copies, at twopence each, may be obtained.

THE

COMMISSIONERS OF PATENTS' JOURNAL.

By Authority.

(*Registered for transmission abroad.*)

No. 567. FRIDAY, JUNE 10, 1859. Price 2d.

Grants of Provisional Protection for Six Months.

NOTICE is hereby given that Provisional Protection has been allowed

1234. To JOHN BRENNAND, of Manchester, in the county of Lancaster, Calico Printer, for the invention of "Certain improvements in the construction of carriages for the conveyance of passengers, goods, and minerals, and also in the apparatus for propelling the same."

On his petition, recorded in the Office of the Commissioners on the 18th day of May, 1859.

1258. To THOMAS STOKES CRESSEY, of Burton-upon-Trent, for the invention of "Improvements in machinery for cutting staves for casks."

On his petition, recorded in the Office of the Commissioners on the 21st day of May, 1859.

Patents Sealed.

LIST of LETTERS PATENT which passed the Great Seal on the

10th June, 1859.

2836. ANDREW BARCLAY, of Kilmarnock, in the county of Ayr, North Britain, Engineer, for an invention of "Improvements in obtaining motive power by means of electricity, magnetism, and electro-magnetism."—Dated 10th December, 1858.

2837. CHARLES HODGSON, of Ballard Rathdrum, in the county of Wicklow, Ireland, Esquire, for an invention of "Improvements in the manufacture of fuel from peat, and in apparatus employed therein, part of which is also applicable to the moulding of bricks, tiles, and other plastic materials."—Dated 10th December, 1858.

2849. ALEXANDER ROLLASON, of Birmingham, in the county of Warwick, Chemist, for an invention of "Improvements in the manufacture of waterproof tissues, and in applying such waterproof material to woven fabrics and manufactured fibrous goods."—Dated 11th December, 1858.

2850. JOHN ANDERTON CARRUTHERS, Reed Maker, and THOMAS BLACKBURN, Mechanic, both of Blackburn, in the county of Lancaster, for an invention of "Improvements in apparatus for guiding and regulating the warp threads in the operations of warping, tape-sizing, looming, and weaving."—Dated 13th December, 1858.

2851. ROBERT WHITTAM, of Accrington, in the county of Lancaster, Engraver to Calico Printers, for an invention of "Improvements in machinery or apparatus for tracing designs from an engraved roller, or from an engraver's sketch upon steel or other metallic surfaces used as dies by engravers to calico printers."—Dated 13th December, 1858.

2854. JAMES EDWARD BOYD, of Hither Green, Lewisham, in the county of Kent, Gentleman, for an invention of "Improvements in candlesticks, lamps, and lanthorns."—Dated 13th December, 1858.

2855. RICHARD ARCHIBALD BROOMAN, of 166, Fleet Street, in the city of London, E.C., Patent Agent, for an invention of "Improvements in twisting and otherwise operating upon threads, twine, or cords, and in apparatus for performing the same."—A communication from Messieurs Edmond Empis and Co., residing at Wazemines, near Lille, France.—Dated 13th December, 1858.

2864. RICHARD ARCHIBALD BROOMAN, of 166, Fleet Street, in the city of London, E.C., Editor of the Mechanics' Magazine, and Patent Agent, for an invention of "An improvement in transmitting electric telegraph signals."—A communication from T. A. M. Sortais, residing at Lisieux France.—Dated 14th December, 1858.

2866. Ferdinand Jossa, of Bishop Auckland, in the county of Durham, Chemist, for an invention of "Improvements in furnaces for generating steam, and other purposes."—Dated 14th December, 1858.

2867. John Pendlebury, of Crumpsall, in the county of Lancaster, Bleacher, for an invention of "Certain improvements in machinery or apparatus for bleaching or cleansing textile fabrics or materials."—Dated 15th December, 1858.

2876. Jonathan Wardill, of Commercial Road East, in the county of Middlesex, Engineer, for an invention of "An improved stopper or controller to stop and control the running out of chains and ropes."—Dated 15th December, 1858.

2880. Robert Wilson, senr., and Robert Wilson, junr., of Livesy Street, Manchester, in the county of Lancaster, for an invention of "Certain improvements in the preparation of leather in combination with india rubber and other materials for the manufacturing of hose, pipes, and other purposes where leather is required to be impervious to water, steam, or frost."—Dated 16th December, 1858.

2882. Abel Stokes, of Birmingham, in the county of Warwick, Manufacturer, and Frederick Joseph Stokes, of Birmingham aforesaid, Manufacturer, for an invention of "New or improved machinery for the manufacture of screws."—Dated 16th December, 1858.

2886. John Walter Friend, of Freemantle, Southampton, Watch and Clock Maker, for an invention of "Improved apparatus for ascertaining and registering the depth and flow of liquids, and the distances run by ships at sea."—Dated 16th December, 1858.

2929. Frederick Ransome, of Ipswich, for an invention of "Improvements in the manufacture of grinding and rubbing surfaces."—Dated 22nd December, 1858.

2937. Andrew Barclay, of Kilmarnock, in the county of Ayr, North Britain, Engineer, for an invention of "Improvements in obtaining and distributing or applying electricity and magnetism, and in obtaining motive power therefrom."—Dated 23rd December, 1858.

2946. John Railton, of Blackburn, in the county of Lancaster, Machine Maker, and Seth Lang, of the same place, Mechanic, for an invention of "Improvements in looms."—Dated 24th December, 1858.

2956. Joseph Smethurst, of the firm of Messieurs Martin and Smethurst, of Guide Bridge, in the county of Lancaster, Engineers, for an invention of "Certain improvements in metallic pistons."—Dated 27th December, 1858.

3003. John Lees, of Park Bridge, near Ashton-under-Lyne, in the county of Lancaster, Roller Maker, and William Heap, of Ashton-under-Lyne aforesaid, Tool Maker, for an invention of "Improvements in machinery for punching square holes in the ends of rollers and other articles."—Dated 31st December, 1858.

55. George Kennedy Geyelin, Civil Engineer, of London, for an invention of "Regulating gas burners, which he calls the universal gas burners regulator.—Dated 7th January, 1859.

242. James Kerr, of 17, Bedford Terrace, Trinity Square, Southwark, in the county of Surrey, Engineer, for an invention of "Improvements in the construction of revolving fire-arms."—Dated 26th January, 1859.

434. William H. Horstmann, of the city of New York, in the county of New York, and the state of New York, U.S.A., for an invention of "Telegraphic cables, and the mode of constructing the same and laying them down."—Dated 16th February, 1859.

651. George Bell Galloway, of Newcastle on Tyne, in the county of Northumberland, for an invention of "Improvements upon and in connection with my former patents, and in the manufacture of fuel, and working steam engines more economically.—Dated 15th March, 1859.

761. George Haseltine, Gentleman, of Washington, in the district of Columbia, United States of America, now of 37, King Street, in the city of London, for an invention of "Improvements in the manufacture of small metallic chains."—A communication by Edwin H. Perry, of Rhode Island, United States.—Dated 26th March, 1859.

858. Francis Maltby Crichton, of Stoke Abbey, Stoke Bishop, in the parish of Westbury upon Frym, in the county of Gloucester, Gentleman, for an invention of "Improvements in clocks or timekeepers."—Dated 5th April 1859.

916. Philip Hill, of Manchester, in the county of Lancaster, Weaver, and John Moore, of Salford, in the same county, Small Ware Manufacturer, for an invention of "Improvements in weaving double-pile fabrics."—Dated 12th April, 1859.

919. James Crossdale, of Rotherfield Street, Lower Islington, in the county of Middlesex, Boot and Shoe Maker, for an invention of "Certain improvements in boots and shoes."—Dated 12th April, 1859.

Patents on which the Stamp Duty of £50 has been Paid.

(*To 7th June*, 1859, *inclusive.*)

6th June.

1358. William Edward Wiley, of 34, Great Hampton Street, Birmingham, Pen and Pencil Manufacturer, for an invention of "Improvements in the manufacture of metallic pens and penholders."—Dated 7th June, 1856.

7th June.

1375. Richard Archibald Brooman, of 166, Fleet Street, in the city of London, Patent Agent, for an invention of "Improvements in printing shawls and other fabrics, and in the machinery employed therein."—A communication from Monsieur Herrmann.—Dated 10th June, 1856.

1381. Alfred Vincent Newton, of the Office for Patents, 66, Chancery Lane, in the county of Middlesex, Mechanical Draughtsman, for an invention of "An improvement in projectiles for ordnance."—A communication.—Dated 10th June, 1856.

1387. James Combe, of Belfast, in the kingdom of Ireland, Machine Maker, for an invention of "Improvements in machinery for carding and roving tow and other fibrous substances, part of which improvements is applicable for transmitting motion in other mechanism."—Dated 11th June, 1856.

FOREIGN PATENTS.

BELGIUM.*

List of Patents of Invention Delivered on the 26th May, 1859.†

(*Communicated by the Belgian Government.*)

(For previous List, see No. 563 of this Journal.)

7281. H. F. Forbes, represented by L. Duru, of Brussels, for an imported invention of "Copying presses."—Dated 27th March, 1859.—(French Patent, 7th March, 1859.)

7430. A. J. Pauchenne, of Saint-Remi, for "Hinged lever revolvers."—Dated 20th April, 1859.

7431. Gourmont Brothers and Co., of Dinant, for "A system of boilers for breweries."—Dated 21st April, 1859.

7460. J. Badot, of Liége, for "A system of double optometers, applicable to all eye-glasses."—Dated 23rd April, 1859.

7552. J. F. Persoz, represented by H. Biebuyck, of Brussels, for an imported invention of "Improvements in oxydizing bodies and roasting sulphurous ores."—Dated 14th May, 1859.—(French Patent, 9th May, 1859.)

7553. J. Leslie, represented by A. Anoul, Ixelles, for an imported invention of "Improvements in the manufacture of lighting gas."—Dated 14th May, 1859.—(English Patent, 18th November, 1858.)

7554. A. P. Rochette, represented by A. Anoul, of Ixelles, for an imported invention of "Improvements in the manufacture of soft soap."—Dated 14th May, 1859.—(English Patent, 12th May, 1859.)

7555. J. B. Van Gindertaelen, of Brussels, a Patent of Improvement for "Pumps for acid liquids."—Dated 16th May, 1859.—(Original Patent, 6th August, 1857.)

7556. W. B. Nathall, represented by J. Piddington, of Brussels, for an imported invention of "Improvements in fire-arms and projectiles."—Dated 16th May, 1859.—(English Patent, 10th May, 1859.)

7557. L. Serbat, represented by F. Mahieu, of Brussels, for "Using old leather for preventing the incrustation of boilers."—Dated 16th May, 1859.

7558. A. Van Godtsenhoven, of Louvain, for "Manufacture of economical manure, called 'Belgian guano."—Dated 17th May, 1859.

7559. J. M. Paillard, represented by A. Hennelle, of St. Josse-ten-Noode, for "A horse-gin for thrashing, winnowing, and grinding corn."—Dated 18th May, 1859.

7560. A. Gatte, represented by A. Hennelle, of Brussels, for an imported invention of "A mode of advertizing called 'the traveller's friend.'"—Dated 18th May, 1859.—(French Patent, 12th May, 1859.)

7561. L. Maudoy, represented by A. Hennelle, of St. Josse-ten-Noode, for "An apparatus for making sand-moulds for casting metals."—Dated 18th May, 1859.—(French Patent, 13th May, 1859.)

7562. L. W. Broadwell, represented by D. de Vos-Verraert, of Brussels, for "A method of cutting millstones."—Dated 18th May, 1859.

7563. E. Gonou, of Brussels, for an imported invention of "A system of hydraulic clocks called 'gonometers.'"—Dated 18th May, 1859.—(French Patent, 18th April, 1859.)

7564. C. F. Thibaut, represented by J. Trantweire, for an imported invention of "A water gauge in steam-generators."—Dated 17th May, 1859.—(French Patent, 7th April, 1859.)

7565. L. Marque, represented by A. Depuichault, Schaerbeek, for an imported invention of "A musrole for horses."—Dated 17th May, 1859.—(French Patent, 4th December, 1858.)

7566. Parent, represented by A. Depuichault, Schaerbeck, for an imported invention of "Manufacture of manure from animal and fuel substances."—Dated 17th May, 1859.—(French Patent, 2nd February, 1859.)

7567. Pirotte and Co., represented by D. Tassin, Liége, for "A mode of superheating cylinders of steam engines and especially of draining machines."—Dated 18th May, 1859.

7568. D. Everaert, represented by C. L. de Wilde, Lokeren, for "An apparatus for cutting fodder."—Dated 17th May, 1859.

7569. Ad. Rouart, of Liege, for an imported invention of "A key for removing at once cartridges from breech-loading guns."—Dated 19th May, 1859.—(French Patent, 14th May, 1859.)

7570. G. Haseltine, represented by F. Anthoine, Brussels, for an imported invention of "Improvements in sewing machines."—Dated 19th May, 1859.—(English Patent, 5th April, 1859.)

7571. J. Oxley, represented by X. Raclot, Brussels, for an imported invention of "Improvements in the construction of carriages."—Dated 19th May, 1859.—(English Patent, 4th November, 1858.)

* For the Belgian Patent Law, see Nos. 292 and 348 of this Journal.

† All Specifications of Patents which have been in force not less than six months, may be inspected or translations of them be had at the Library of the Great Seal Patent Office, where also translated Indexes may be consulted.

7572. A. Bourdin, represented by H. Biebuyck, Brussels, a Patent of Improvement for "Using steam for boiling and preserving food."—Dated 20th May, 1859.—(Original Patent, 30th April, 1859.)

7573. H. Hofer, represented by H. Biebuyck, Brussels, a Patent of Improvement for "An apparatus for regulating spinning."—Dated 20th May, 1859.—(Original Patent, 7th November, 1856.)

7574. W. E. Robson, represented by H. Biebuyck, of Brussels, for an imported invention of "Manufacture of various compounds for joints, coatings, and other purposes."—Dated 20th May, 1859.—(French Patent, 16th May, 1859.)

7575. L. Maurissen, of Brussels, for "A measuring instrument."—Dated 20th May, 1859.

7576. H. Eckhorn, represented by D. de Vos-Verraert, of Brussels, for an imported invention of "Improvement in gas and oil-burners."—Dated 20th May, 1859.—(English Patent, 13th April, 1859.)

7577. Danion and Co., represented by J. Pidding' ton, of Brussels, for an imported invention of "An oscillating Roman balance."—Dated 21st May, 1859.—(French Patent, 24th March, 1859.)

7578. Danion and Co., represented by J. Pidding-ton, of Brussels, for an imported invention of "An oscillating Roman balance with scales."—Dated 21st May, 1859.—(French Patent, 24th May, 1859.)

7579. J. B. P. Dauzon and L. A. P. Rolland, represented by H. Biebuyck, of Brussels, for an imported invention of ""Manufacture of cigaret-paper."—Dated 21st May, 1859.—(French Patent, 12th February, 1859.

7580. P. J. Wergifosse, of Brussels, for "A roller for ironing, folding, and lustring linen."—Dated 21st May, 1859.

7581. A. B. Delannoy, represented by F. P. Bazas, of Spy, for "A system of lubrication applicable to all kinds of wheels and transmission of movement."—Dated 21st May, 1859.

UNITED STATES OF AMERICA.

(Communicated by the Commissioner of Patents.)

List of Patents, with Claims annexed, issued from the United States Patent Office, for the week ending 24th May, 1859, and each bearing that date.

No. 24,084. Hiram Aldridge, of Michigan City, Ind., for an "Improved shoe for grain separators."

"I claim the endless incline elevator belt C, C, with its lags or cross slats I, in combination with the incline sieve or board F, and incline extension board R, arranged in th manner and for the purpose set forth."

No. 24,085. Geo. W. Baker, of Cochranton, Pa., for an "Improved bedstead fastening."

"I claim the box E, the hook D, and the rack F, when the same are used and combined, substantially in the manner described, and for the purposes set forth."

No. 24,086. E. Barnhart, of Shippensburgh, Pa., for an "Improvement in smut machines."

"I claim the disk D, arranged with the fluted shell E, and with the wings *c*, to operate in combination with the fluted cylinder F, which is provided with a spout *e*, substantially as and for the purpose specified."

No. 24,087. Daniel Barnum, of New York, N.Y., for an "Improvement in surface condensers."

"I claim the method substantially as specified of making yielding joints between the tubes and tube sheets in the condensing water compartments of surface condensers, and of thus compensating the expansions and contractions in the tubes by the means of leaving a portion of india rubber, or other elastic packing, immediately surrounding each tube free, so that its elasticity can yield longitudinally with the tubes, and compensate for their varying lengths without causing the packing to slip on the metal, substantially as and for the purposes specified. I claim, also, the combination of a relief valve, with yielding joints (without followers), in the condensing water compartments of surface condensers for the purpose of preventing the blowing out of the packing, and thus preserving the joints, substantially as specified."

No. 24,088. Daniel Barnum, of Jersey City, N.J., and S. G. Tyler, of Quincy, Ill., for an "Improvement in hemming guides for sewing machines."

"We claim the manner substantially as specified and shown in the drawings, Fig. 2, of arranging and constructing a hollow conical U shaped tube, and a slot *j*, in combination with a horizontally acting spring plate *c*, or its equivalent, bearing against the slot *j*, and tending to press the edge of the flexible material, when the same is placed within the slot into the tube *b*, and against the lower side of the concave surface thereof, for the purpose of aiding the hand in turning the hem on the under side and leaving the fair stitch upon the upper or right side of the garment, as specified."

No. 24,089. John W. and Leonard Batson, of Clarksville, Md., for an "Improvement in cultivators."

"We claim the arrangement of the reversible concave shovel point H, reversible shovel point F, and the cutter G, with beam A, and standards C and D, the whole being constructed and applied in the manner described, for the purpose specified."

No. 24,090. Thos. Bell, of New York, N. Y., for an "Improved rig for vessels."

"I claim the arrangement and combination of the mast C, spar B, and revolving forked mast bench A, substantially as and for the purpose herein shown and described."

No. 24,091. Ezra R. Benton, of Cleveland, Ohio, for an "Improved spring bed bottom."

"I claim the construction of a bed bottom or spring couch, consisting of a series of double springs B, B^1, and C, C^1, the the longitudinal pieces G, G^1, and the transverse slats A, A, &c., either with or without the flexible band I, when arranged as herein set forth, and operating in the manner and for the purpose specified."

No. 24,092. John Boyd, of Philadelphia, Pa., for an "Improvement in carding engines."

"I claim the combination of the rollers B and C, and scrapers D and E, for stripping the ordinary doffing cylinder of a carding engine, the whole being constructed and arranged, substantially as above described."

No. 24,093. Cornelius R. Brinkerhoff, of Batavia, N. Y., for an "Improvement in harvesting machines."

"I claim, 1st, the combination of the crank operated by the main shaft, with the rake and sweep post, to which it is attached, and the eighth arm, when arranged in the manner described. 2d, the open work divider, to divide the grain falling upon the platform from the gavel being removed therefrom by the rake, when arranged upon the rake

head, in the manner and for the purpose specified. 3d, the spring catch marked *c*, and dog marked *a*, in combination, and the location of said catch to break the forward motion of the rake, and aid its return by the spring, arranged substantially as described. 4th, the projection on the lower side of the slot or notch in the dog to arrest the catch with certainty, in the manner described. 5th, the application and arrangement of the toothed rack connected with the spring, by which the rake is caught and held after its descent upon the gavel, the rebound thereof is prevented and the gavel removed with greater certainty. 6th, the placing of a rake (having spring teeth) in the rear of the machine, for the purpose of gleaning and contracting the gavel into sheaf form, substantially as described. 7th, the combination of the cam attached to the main shaft with the arm of the rear rake, to cause it to pass over the gavels at the proper time. 8th, the ratchet cam I and lever in combination, substantially as described, for throwing both rakes into or out of action, as set forth."

No. 24,094. JOHN T. BROOKS, of New Albany, Ind., for an "Improved apparatus for heating feed water of steam boilers."

"I claim the described relative arrangement of the force pump *e*, water supply-pipe *b*, heater *d*, and steam pipe *f*, conveying steam from the upper part of the boiler or steam dome to the heater, the whole operating together in the manner set forth, to heat feed water on its passage between the pump and the boiler by means of living steam, and inject it into the lower region of the boiler."

No. 24,095. BOBT. W. BUCKLES, of Grayville, Ill., for an "Improvement in harrows."

"What I do claim is, two harrows hung to one frame, independent of each other, with two vertical toothed wheels D, D, also working independently of each other, and connected to the horizontal wheels C, C, which are actuated by means of pinions E, E, as described, for the purposes set forth."

No. 24,096. WASHINGTON BURNHAM, of Essex, Mass., for an "Improvement in ox yokes."

"I claim the mode of applying the pole ring to the yoke, viz., by means of the staple rack and the ring carrier, made so as to be capable of sliding on the rack, and with a pin passage arranged with respect to the notches of the staple rack, substantially in manner as described, the whole being for the purpose explained."

No. 24,097. J. F. CALHOUN, of Wolcottville, Conn., for an "Improved curtain rack."

"I claim the combination of tightening screw *e*, collar *g*, pulley *h*, and button *i*, for effecting the required tension on the cord, substantially in the manner and for the purposes herein above set forth."

No. 24,098. PETER S. CARHART, of Collamer, N.Y., for an "Improvement in sewing machines."

"What I claim, is, feeding the cloth by the combined action of the needle and friction pad, when the said needle and pad operate jointly and in unison, to propel the cloth, as the needle descends there through, the cloth being held in its required position by the needle during the intervals of feed, while the pad is retreating, to take a fresh feeding gripe on the cloth, essentially as specified."

No. 24,099. JOSEPH CARRIER, of Marlborough, Conn., for an "Improved bread knife."

"What I claim, therefore, and desire to secure by Letters Patent, is, the employment of the roller F, the adjustable studs D, with the collars C and thumb nuts E, substantially as and for the purpose described."

No. 24,100. M. C. CHAMBERLIN, of Johnsonburgh, N. Y., for an "Improvement in stove pipes."

"What I claim is, 1st, the employment of the spring tube B in connection with the pipe A, when the same is used in the manner and for the purpose herein specified. 2nd, the arrangement of pipe C, provided with pin *d*, with pipe A, provided with slot *a* and spring tube B, substantially in the manner, and for the purpose specified."

No. 24,101. ALBERT B. COLTON, of Athens, Geo., for an "Improvement in horse-power machines."

"What I claim is, 1st, the stationary wheel J and its hub L, when the same are placed centrally with the large driving wheel M, for giving motion to the pinions U, V, and gear wheels R, S, revolving with the driving wheel M, so as to impart a rapid rotary motion to the horizontal shaft E, having its bearings in the axes of both driving wheel M and stationary wheel J, all arranged in the manner and for the purpose herein specified. 2nd, I claim the sectional yoke G, as herein described, in combination with the annular collar N and set screws C, arranged in the manner and for the purposes herein shown."

No. 24,102. JOHN E. CRYER, of Peoria, Ill., for an "Improved joiner's bench."

"What I claim is, 1st, the movable jaw (B), constructed and arranged with reference to the permanent jaw (*b*) in such manner as to secure properly the lumber to be wrought, and at the same time to form a track or guide for the plane during the operation of jointing and squaring lumber, as herein set forth. 2nd, operating the jaw (B) by means of guides (*e*, *e*^{1}), rod (*f*), lever (*g*), and dog (*l*), substantially as herein described. 3rd, the gauge (*p*), adjustable vertically with reference to the jaws (B, *b*), in combination with the scale (*m*), substantially as and for the purposes set forth."

No. 24,103. HENRY DAVIS, of Bethlehem, Conn., for an "Improved carpet sweeper."

"I claim the arrangement of the rollers E, E^1, to operate in combination with the yielding brush B and with the scraper G, substantially in the manner and for the purpose herein specified."

No. 24,104. WM. DAVIS, of Middleburg, Md., for an "Improvement in hominy machines."

"I claim providing the outer cylinder A with apertures *a*, *a*, gauged to such a size as, while serving to discharge the hulls, also to perform the additional function of discharging the hominy as soon as reduced to the desired degree of fineness, in combination with the inner cylinder B, when the same is driven at the specific speeds, as herein described, for the purposes specified."

No. 24,105. JAMES M. DAY and E. H. A. OAKLEY, of Aiken, S. C., for an "Improvement in compositions for roofing."

"We claim the ingredients in the proportions set forth in the above specification."

No. 24,106. M. DE CAMP, of South Bend, Ind., for an "Improved millstone bush."

"I claim, 1st, the adjustable followers F, provided with convex sides and backs fitted within an oil box A, and arranged in relation with the collar D of the spindle, to operate as and for the purpose set forth. 2nd, the serrated or notched wheels *i*^{1} attached to the outer ends of the screws *i*, when used in connection with the stops *j* attached to the plates *k*, substantially as and for the purpose specified."

No. 24,107. CHAS. DOUGLAS, of Hebron, Conn., for an "Improvement in chimney caps."

"I claim, first, the valves C and D, and the manner and position in which they are suspended, as described, and for the purposes set forth. Second, the arrangement of the neck B, the top E, G, and the standards F, F, F, in combination with the valve D, or its equivalent, substantially as and for the purposes herein specified."

No. 24,108. SAML. DOWN, of New York, N. Y., for an "Improvement in dry gas meters."

"I claim constructing or arranging the mouths *a*^{1}, *b*^{1}, of the channels of communication *a*, *b*, between the inlet and outlet pipes, and the measuring chambers and valve chamber of a dry gas meter, to dip down in the wells below the said pipes, substantially as and for the purpose herein set forth."

No. 24,109. CHRISTIAN H. EISENBRANDT, of Baltimore, Md., for an "Improvement in rail road car couplings."

"I claim the plates *a*, *a*, *a*, *a*, with the springs *a*^{2}, *a*^{2}, *a*^{2}, *a*^{3}, the prong clasping grippers *b*, *c*, *c* 2, *d*, *e*, *e* 2, with the spring latch *f*, *g*, *h*, *i*, constructed, arranged, and operated, substantially as set forth. I also claim the hitching pin or bolt K, K, provided with the chain and button or ring L, L, *m*, *m*, when arranged, operated, and used in combination with the clasping prong grippers *b*, *c*, *c* 2, *d*, *e*, *e* 2, and brake lever *q*, *q*, *q*. *r*, substantially as set forth and described. I also claim the combination and arrangement of the sliding bolts *n*, *o*, *p*, with the prong clasping grippers *b*, *c*, *c* 2, *d*, *e*, *e* 2, substantially as set forth and described."

No. 24,110. JOHN A. ENGGREN, of Brooklyn, N.Y., for an "Improved device for securing lightning rods."

"I claim an insulator for lightning rods composed of a glass standard A, a spring clasp C, having shanks (*i*) and shoulders (*j*), and otherwise made as herein shown and described."

No. 24,111. CASSON EREEMAN, of Fond du Lac, Wis., for an "Improved device for clamping the bolts in circular sawing shingle machines."

"I claim the arrangement of the sliding or adjustable bar K, with weights *s* attached, or their equivalents, when used in connection with the sliding jaws D, for the purpose specified."

No. 24,112. EDWD. GARRETT, of New Orleans, La., for an "Improvement in ties for cotton bales."

"I claim the combination of the two plates *a*, &c., when made and arranged as, or substantially as has been set forth, to form a tie for iron bands for baling cotton, or for similar purposes."

No. 24,113. E. L. GAYLORD, of Terrysville, Conn., for an "Improved trunk lock."

"I claim the arrangement of the bolt B, with the springs *c*, *c*, *d*, D, and tumbler C, to operate substantially as and for the purpose herein set forth."

No. 24,114. ELISHA GEIGER, of Lancaster, Pa., for an "Improvement in horse rakes."

"I claim the arrangement of the cross bar (K), having the flat springs and heads (J), and provided with arms for actuating the supporting bar (F) with and in relation to the clearing rocker shaft, the whole being constructed and operated as herein set forth."

No. 24,115. HENRY GLOSSER, of New York, N.Y., for an "Improvement in cases for stereoscopic pictures."

"I claim, 1st, the arrangement of two or more pairs of eye glasses on the same side of a stereoscopic case, so that several persons can look at the pictures at one and the same time, substantially in the manner herein specified. 2nd, the picture frames D, arranged with cogs *i*, or their equivalent, at their lower edges, in combination with the cams *j*, j^1, j^{11}, and j^{111}, or their equivalents, whereby the same are made to travel from one pair of eye glasses to the other, substantially as herein described. 3rd, giving a double motion to the picture frames, first in a direction transversely through the case by the action of the cam *g*, or its equivalent, on the endless belt E, and, second, in a longitudinal direction by the action of the cams *j*, substantially as and for the purpose set forth. 4th, the arrangement and combination of the endless belts E and E^1, to operate in relation to the chaunel G, substantially as and for the purpose described. 5th, the cams *g* and g^{111}, arranged in combination with the cams j^1, j^1, &c., or their equivalents, in such a manner that the produce the within-described motion of the picture frames, at alternate intervals, substantially as and for the purpose specified."

No. 24,116. ARTHUR GRAY, of Naples, Maine, for an "Improved washing machine."

"I claim the improved washing machine, as made with a set of fluted rollers, and a fluted presser or bucking board, arranged, constructed, and applied to the reservoir, substantially as described, in order to enable the clothes to be both rolled and beaten, as specified, during the operation of washing the same."

No. 24,117. BENJN. L. GRIFFITH, of Hazeltownship, Pa., for an "Improvement in steam boilers."

"I claim the combination of the single smoke stack N, single chamber F, and double series of flues M, M, with the hollow hinged doors U, U, and diaphragms K, K, arranged and constructed substantially as and for the purpose set forth."

No. 24,118. A. HADLEY, of Lynn, Mass., for an "Improved machine for filing saws."

"I claim, first, determining the bevel of the teeth of a straight saw by means of pivoting the frame *g* (which supports the rail *e* and saw plate *a*) at *h*, and hinging rods *f*, f^1, to said frame *g*, as seen at g^1, g^1, and confining these rods in their relative position by set screws h^1, h^1, constructed and arranged substantially as above described. Second, determining the bevel of the teeth of a circular saw, by arranging the shaft z^{11} of the saw between two points *l* and *m*, one of the points *m* being adjustable by means of a grooved piece *p*, block *n*, and set screw O, the whole being constructed and combined substantially as above described. Third, determining the bevel of the straight and circular saws by combining the frame v^1, with grooves x^{11}, forming arcs of a circle, in combination with clamp screws s^{11}, and slotted plates z^{111}, substantially as above described. Fourth, holding the file by clamps r^{11}, r^{11}, set screws o^{11}, o^{11}, in combination with sha t n^{11}, set serew p^{11}, and bracket m^{11}, constructed and operating substantially in the manner and for the purpose set forth. Fifth, the combination of the movable table O^1 with the mechanism for supporting and moving the saws, constructed and arranged thereon, as shown and described, whereby the same machine can be quickly adapted for filing, either straight or circular saws, as set forth Sixth, the combination of the mechanism for supporting and moving the saws with the mechanism for supporting and operating the file, constructed, arranged, and combined as above described, and for the purposes set forth."

No. 24,119. NAPOLEON J. HAINES, of New York, N.Y., for an "Improvement in piano-forte actions."

"I claim the cross-shaped or four-armed fly F, applied in combination with the jack, the key and the hammer butt, to operate substantially as herein set forth."

No. 24,120. LUTHER T. HAZEN, of Coventry, N. Y., for an "Improvement in hubs for carriage wheels."

"What I claim is, enclosing wood hubs for carriage wheels or other vehicle, with metal cases which form the pipe box and bands, in the manner described, and for the purposes set forth."

No. 24,121. WM. HENNEY, of Wapello, Ill., for an "Improvement in machine for raising R. R. track."

"I claim the balance H, arranged with the arms I, and with the extensions J to operate in combination with the piston E, the serrated bar L, the pawl M, and with the eccentric disk C, substantially in the manner and for the purpose herein described."

No. 24,122. JOHN F. HOFFMEISTER, of Alton, Ill., for an "Improvement in ovens."

"I claim the arrangement of the flues F, F^1, which terminate in the chamber H, in combination with the additional flue J, to operate in combination with the rotary platform B, substantially as and for the purpose specified."

No. 24,123. C. R. HURLBUT, of Yorkshire, N. Y., for an "Improved clothes' dryer."

"I claim the within-described article of manufacture, constructed as described, to wit: the arrangement of standards (C, C), side rails (E, E) and (G, G), cross rails F, F, D, and I, I, and sash B, B, provided on their under side with buttons (*k*, *k*), the whole being jointed, and the several parts acting conjointly, substantially in the manner and for the purpose specified."

No. 24,124. CHAS. JONES, of Brooklyn, N. Y., for an "Improvement in coolers for beer."

"I claim the shell D, arranged in the cooler, so as to form the two compartments *a* and *b*, to operate in combination with the coil E, as and for the purpose herein described."

No. 24,125. ALFRED FAUVIN JALOUREAU, of Paris, France, for an "Improvement in manufacture of waterproof cement pipes."—Patented in France, 30th December, 1857.

"I claim the manufacture of air and water tight tubes or pipes by the process set forth."

No. 24,126. G. P. JORDAN, of Burlington, Iowa, for an "Improvement in separators for smut machines."

"I claim, 1st, the combination and arrangement of the scourer I, with the spout D, chamber C, and box B, provided with the blast chambers *b*, *b*, spout H, fan F, and screens *u*, *v*, substantially as and for the purpose set forth. 2nd, the employment or use of the valves c^1, placed in the partition plates *a*, *a*, when used in combination with the fan F, chamber C, spout D, and scourer I, and arranged relatively therewith, as and for the purpose set forth."

No. 24,127. Wm. Kelly, of Hastings, Mich., for an "Improved churn."

"I claim the combination of the dashers E, E, with the slide partition D, and connecting rods F, F, as described, the parts being so connected to the frame that the oscillations of the churn shall operate the dashers E, E, and force the cream against and through the slide partition, substantially as set forth; not intending to claim the operation of the dasher, or dashers, by the oscillations of the churn, but only the combination and arrangement of the vibrating dashers with the movable partition and concomitant parts, as described for the purposes set forth."

No. 24,128. Jesse Little, of Chambersburgh, Pa., for "Improvement in harvesting machines."

"I claim the arrangement of the sliding brace A, in combination with the tongue *p*, and bar B, constructed and operating in the manner described for the purpose specified. 2, the combination and arrangement of the caster plate *c*, *c*, jaws I, I, and segments G, G, in the manner and for the purpose herein described."

No. 24,129. Murdick Lytle, of Alleghany, Pa., for an "Improved propelling and steering apparatus."

"I claim, 1st, the shaft *b*, with a supporting arm or arms *g*, and bearing recess *v*, in combination with the propeller or paddle wheel shaft K, the whole being arranged in the manner and for the purposes set forth. 2nd, the tubular shaft *c*, with gear wheels at the upper and lower ends, in combination with the shaft *b*, and propeller shaft K, the whole being constructed and arranged in the manner and for the purposes set forth."

No. 24,130. Levi H. Markley, of Line Lexington, Pa., for an "Improved propeller."

"What I claim is, the arrangement and combination of the peculiarly acting paddle blades, or fliers, F, pivoted frame E, rods G, hooks J, sliding block H, and reversing and bracing bar L, as and for the purpose herein shown and described."

No. 24,131. Geo. W. Matthews, of York, Pa., for an "Improved method of forming plow handles."

"I claim the arrangement and combination of the carriage C, provided with the patterns or curved surfaces *f*, the adjustable rotating cutter head I, belt H, adjustable shaft D, provided with pinion *c*, and the rack *b*, attached to carriage C, substantially as and for the purpose set forth."

No. 24,132. W. S. Mayo, of New York, N. Y., for an "Improved metallic pipe."

"I claim the application of longitudinal strips B, to the surface of a metallic pipe, in combination with the coiled wire covering C, whereby I am enabled to insure great strength with a less thickness of metal, substantially as herein above specified."

No. 24,133. Wm. P. Maxson, of Albion, Wis., for an "Improvement in bag fastener."

"I claim the employment of the oblong grooved-faced plate A, or its equivalent, having two segments of its middle portion punched out, so as to admit the string and fasten it to the bag, in combination with the string B, and ring E, when constructed to operate upon the principle of the wedge, substantially as and for the purpose set forth."

No. 24,134. Thos. McBean, of Fowlerville, N.Y., for an "Improved egg beater.

"I claim the double spiral dasher A, in combination with a square box, when the same are arranged substantially as above specified."

No. 24,135. John McKown, of Geardstown, Va., for an "Improvement in seed planters."

"I claim the arrangement for united operation of the horizontally moving hand lever K, vertical shaft J, horizontal elbow lever I, horizontal slides H, H, divided hopper G, seed tube F, and vacuum plate L, substantially as and for the purposes set forth."

No. 24,136. Thos. E. McNeill, of Philadelphia, Pa., for an "Improvement in seats and couches for sleeping cars."

"I claim two adjacent seats, each seat having detachable cushioned boards G and E, and each having a permanent end frame D, and a rear frame F, with upper and lower ledges *i* and *h*, in combination with the swing bracket H, and rib I, or their equivalents, the whole being arranged substantially as herein set forth, so that the cushioned boards G of the two adjacent seats may form one couch, and the boards E of the same seats another couch, and so that when the said boards are arranged as couches there may a space between them and the permanent end frames D, for the purpose specified. Second, constructing and arranging the end frames D of four seats, substantially in the manner herein set forth, so that they may serve as supports for the cushioned platforms which form the two intermediate berths."

No. 24,137. John Miller, of Bucyrus, Ohio, for an "Improvement in attaching thills to axles."

"I claim the adjusting and securing the hook *s* on the pin *i* by means of the circular face *b*, *c*, on the jaws D, D, and the shoulders *r*, *r*, on the iron E, substantially as and for the purpose set forth."

No. 24,138. John R. Moffitt, of Piqua, Ohio, for an "Improvement in threshing machines."

"I claim the described arrangement of fixed bearings *t*, set screws *e* (in the line of adjustment), and hinged concave heads *c*, *d*, the whole operating together to set and rigidly retain the toothed portion of the concave at any desired proximity to the threshing cylinder, while at the side at which the unthreshed grain enters its distance is substantially unchanged."

No. 24,139. Timothy Newhall, of Lynn, Mass., for an "Improved machine for dressing kid-skins."

"I claim the rotary brush F, in connection with the reciprocating bed or carriage C, connected with its guide rods B, B, the springs D, D, the parts being arranged to operate substantially as and for the purpose set forth."

No. 24,140. T. A. Noble and Erastus Coy, of Akron, Ohio, and James B. Angell, of Alleghany, Pa, for an "Improvement in smut machines."

"We claim, 1st, the adjustable hoop C, in connection with the increase chamber *f*, to regulate the blast passing up through the circular opening N, also the adjustable ring D, to regulate the blast coming up through the circular opening E, the operation in both cases being to increase or diminish the blast, as may be required, substantially as set forth. 2. The chamber G, in combination with arm F and spout L, when said chamber is placed above the revolving chamber H, to catch the screenings, substantially as set forth. 3d. The revolving chamber H, provided with sides *h* and rim h^1 for distributing the wheat evenly as it falls over the edge of the rim h^1, so as to be more effectually operated upon by the blast passing up the opening E, and also the flange M upon cylinder L, for the similar distribution of the wheat to the second blast rising through opening N, as set forth. 4th, making the conical scourer O adjustable perpendicularly both independently of the shaft A and disc L, and in connection with said shaft and disc, substantially as set forth."

No. 24,141. John Smith Shattuck, of Malden, Mass., for an "Improvement in machines for cutting soles."

"What I claim is, the alternating or vibrating segment, carrying the two cutters, having the toe and heel in opposite directions. I claim the yielding table which supports the leather as it is fed forward, and the yielding gauge by which the leather is brought to the right position to be operated upon by the cutters. I also claim the projecting knife edge at the heel and toe of the cutter, by which the scraps are detached from the strip of leather."

No. 24,142. L. K. Selden, of Haddam, Conn., for an "Improved folding cradle."

"I claim, 1st, the rockers A of a cradle, arranged with slots *a*, or their equivalents, and operating in combination with the bottom braces B, the upright cross bars C, the longitudinal bars D, and the top bars E, substantially in the manner and for the purpose herein specified. 2nd, the arrangement of the slides *b*, in combination with the bottom braces B, and with the upright cross bars C, to operate substantially as and for the purpose described."

No. 24,143. Elnathan Sampson, of St. Johnsbury, Vt., for an "Improvement in platform scales."

"I claim attaching the rails A, A of the platform, direct to sleepers B, which are connected at each end by links *m*, to yokes H, fitted on levers E, the lower ends of said levers at each side of the platform being connected together and to the shaft G, of the scale beam, by rods *g*, substantially as and

for the purpose set forth. I also claim the employment or use of the adjustable rods F, attached to the levers E, to permit of the compensation of the same, for the purpose specified."

No. 24,144. Geo. Roushe, of Lima, Ohio, for an "Improvement in straw cutters."

"I claim the relative arrangement for united operation in a straw cutter of the reciprocating cutting knife C, when arranged in a circularly moving frame, reciprocating feeding rake E, and rising and falling pivoted press board G^1, said parts being connected together and operated in the manner set forth."

No. 24,145. Adolph Roesler, of Warsaw, Ill, for an "Improvement in buckles."

"I claim the tug plates A, A, the trace plate D, having one or more knobs *o*, the fork-shaped hame hook *g*, and screw rod *h*, all arranged substantially as described, and for the purpose specified."

No. 24,146. Richd. Rickkon, of Rochester, N. Y., for an "Improvement in car couplings."

"I claim constructing self-adjusting car couplings with a series of grooves *g*, as above specified, so as to admit of the coupling (with self-couplers) of cars of unequal hights, for the purpose set forth."

No. 24,147. Robt Ramsay, of Philadelphia, Pa., for an "Improvement in burners for vapour lamps."

"I claim the combination of the wick tube B, the gas chamber C, C, the tube D, and jet E, arranged and operating substantially as above described."

No. 24,148. Richd. B. Pullan, of Cincinnati, O., for an "Improvement in stoves."

"I claim a rotating vessel, provided with two grates, and a central row of grate bars arranged within stoves, in such manner as to form two fire chambers, one above the other, and which may be used alternately, substantially in the manner and for the purposes set forth."

No. 24,149. Luther E. Porter, of Lake Mills, Wis., for an "Improvement in machine for stripping and cutting sugar cane for grinding."

"I claim the divided clasp (H, H, *i*, *i*, *k*, *k*), arranged substantially as herein described. Second, in combination with the above, I claim the spring cutters (*m*, *m*), all constructed, arranged and operating substantially as herein described, for the purposes set forth."

No. 24,150. Jonah Platt and Myron D. Brooks, of Akron, Ohio, for an "Improvement in metallic shields for boots and shoes."

"We claim the construction of boot and shoe shields having an opening in front to prevent water or sand from being entrapped between the shield and the leather, substantially as described."

No. 24,151. Chas. Perley, of New York, N. Y., for an "Improved seats for churches, schools, &c."

"I claim the combination of the swinging bracket *q* with the turning seat *d*, connected and acting in the manner and for the purposes specified."

No. 24,152. Richd. Nuttall and John Kirkpatrick, of Alleghany, Pa., for an "Improved chuck for screw cutting."

"We claim, first, the ring (*d*), having a portion of the inside cut away or recessed for the purpose of making room for the outer end of the cutting dies, said ring being furnished with cams (*e*) on the inside and with a spring catch (*h*), lever (*g*), cam (*k*), and locking stud (*l*) on the outside, as herein described, and for the purpose set forth. Second, the cam chamber (*w*) in the die box (*b*), when used in connection with the cams (*e*) and ring (*d*), as herein described, and for the purpose set forth. Third, the regulating stud, when made in three parts, as herein represented, and used in connection with the die box (*b*), ring (*d*), and spring catch (*h*), as herein described, and for the purpose set forth. Fourth, the combination and arrangement of the die box (*b*), cutting dies (*f*), and cap (*c*), with the ring (*d*), the whole being combined, arranged, constructed, and operated as herein described, and for the purpose set forth. Fifth, the eccentric lever (*j*) on the face plate (*a*), when used in combination with the lever (*g*), cam (*k*), locking stud (*l*), and spring catch (*h*), as herein described, and for the purpose set forth."

No. 24,153. Richd. Nuttall and John Kirkpatrick, of Alleghany, Pa., for an "Improved machine for cutting screws."

"We claim, first, the combination and arrangement of the levers (*m*) and (*n*), rods (*k*) and (*l*), stops (*o*) and (*p*), and springs (2), with the holding or sliding head (*d*) and eccentric lever (*r*), the whole being combined, arranged, and constructed in the manner described, and for the purpose set forth. Second, the use of the sliding or holding head (*d*) and eccentric lever (*r*), when used for the purpose of opening and closing cutting dies in chucks for screw cutting."

No. 24,154. F. H. Smith, of Plainville, Conn., for an "Improvement in spring balance for window sash."

"What I claim is, the manner of securing the pulleys in the head jamb of the window frame, as described; the manner of winding up and adjusting the two pulleys through one orifice, for the purpose described."

No. 24,155. Jasper Snell and John R. Deihm, of Pottsville, Pa., for an "Improved coal screen."

"We claim the arrangement of the plates or blades C in parallel planes with spaces between their edges, so as to slope lengthwise of the screen and crosswise from the centre of the screen, substantially in the manner and for the purpose herein-before specified and set forth."

No. 24,156. Edwd. Spaulding, of Westborough, Mass., for an "Improvement in friction pulleys."

"I claim the combination of the tubular rest D^1, with the driving pulley A, the hanger E, or its equivalent, and the shaft C of the driving pulley B, the pulleys being arranged and made to operate with respect to one another, essentially as specified."

No. 24,157. A. Washington Stewart, of Cambridge, Md., for an "Improvement in sails for fore-and-aft rigged vessels."

"What I claim as my improvement in foresails, is the clue sale *b*, of the form specified, united to the after leach of the fore sail, and managed by sheets *e*, e^1, as herein set forth."

No. 24,158. Stephen L. Stockstill, of Medway, Ohio, for an "Improvement in seed planters."

"I claim the described arrangement of the open notches *l*, *l*, *l*, pivot *m*, drag bar K, and pin *p*, the whole being constructed in the manner and for the purpose set forth."

No. 24,159. James A. Stoddard, of Milford, Mass., for an "Improvement in mechanism for varying speed."

"What I claim is, graduating or varying speed by means of pulleys, or their equivalents, operated in connection with surface wheels, or their equivalents, in such a manner as to receive and transmit the motion, at variable distances from their centers, when constructed and operating substantially in the manner above set forth and described."

No. 24,160. Henry Stowell and Lorenzo Spencer, of Placerville, Cal., for an "Improvement in portable wagon jacks."

"We claim the peculiar arrangement, combination, and adaptation, for the purpose of raising the axles of wagons and other heavy bodies, to which the foregoing invention may be adapted."

No. 24,161. Francis M. Strong and Thos. Ross, of Brandon, Vt., for an "Improvement in weighing scales."

"We claim the employment of an auxilliary frame, substantially such as described, in combination with and interposed between the platform and levers, substantially as described and for the purpose specified. We also claim constructing such intermediate frame in two parts, connected by movable joints at the angles, substantially as and for the purpose specified. We also claim the manner of constructing and inserting the bearing blocks that rest on the knife edges, substantially as and for the purpose specified. And we also claim bringing the ends of the arms immediately one above the other in combination with the mode of connecting the two with the beam by single and double connecting rods, substantially as described and for the purpose set forth."

No. 24,162. Francis M. Strong and Thos. Ross, of Brandon, Vt., for an "Improvement in platform scales."

"We claim arranging the series of rocking levers which sustain the platform, with their shafts all parallel, and with the arms of all of them in the same line, except those constituting the inner section which are inclined, substantially as described, in combination with the transmitting lever above which connects with the scale beam to the short arms of which they are all suspended at equal distances from the axis of vibration, substantially as and for the purpose described. We also claim the method of connecting the several sections of the shaft of the transmitting lever, by means of projections and links, substantially as described, for the purpose of enabling it to yield freely to inequalities or variations in the supports, that it may vibrate freely and without binding, and thereby transmit the weight accurately to the scale beam, as described. We also claim suspending the bearing blocks by two links, in manner substantially as described, so that any swing motion of the levers will not cause the blocks to vibrate on the knife-edges, by which means we are enabled the better to preserve fine knife-edges, so essential to accurate weighing. We also claim constructing the bearing pieces with a convex face and projecting tenon, substantially as described, whereby they are rendered self adjusting, that the knife edges may bear without binding, as set forth. And we also claim, in combination with the nose iron, adjustable by a screw in the end of the transmitting lever, the employment of a spring bearing against the end of the adjusting screws, substantially as described, and for the purpose set forth."

No. 24,163. Isaac P. Tice, of Baltimore, Md., for an "Improved machine for cutting irregular forms."

"I claim the employment or use of the vibratory bed B, with fence or gauge E, and feed or pressure rollers F, G, attached in connection with the rotary cutter head H, fitted in stationary bearings on the platform or table, the whole being arranged to operate substantially as and for the purpose set forth."

No. 24,164. Robt. R. Taylor, of Reading, Pa., for an "Improvement in sugar cane harvesters."

"I claim the two sets of rotating cutters, one set being situated above and in advance of the other set, in combination with the reel *n*, and shield L, the whole being arranged substantially as and for the purpose herein set forth."

No. 24,165. John Thompson, of Marblehead, Mass., for an "Improved machine for cutting soles."

"What I claim, is, the arrangement and application of entire sole cutters K, L (viz., such as are capable of cutting out an entire sole, finished on its sides, toe, and heel), on opposite sides of a rotary shaft G, so that after each semi-revolution of such shaft, and during each descent of it, an entire sole; with heel and toe complete, may be cut from the piece of leather, by one of such sole cutters acting thereon, and while the piece of leather is supported on the bed or block under such shaft. I claim the application of the catch cams to the pinion, and a spring slider applied to the shaft G, and so as to operate therewith, substantially as specified. I claim in connection with the entire sole cutters K, L, applied to opposite sides of the shaft G, and operated as described, a gauge V, and mechanism to operate it in such manner as first to move it up to the path of the cutter, and carry it away therefrom sufficiently to enable the sole that may have been cut, to be discharged from the supporting bed, as described."

No. 24,166. Thos. H. Tatlow, jr., of Palmyra, Mo., for an "Improved rocking chair."

"I claim a rocking chair, having its arms extending down to the rockers, and its back arranged and operated as herein specified."

No. 24,167. James L. Townsend, of Newburyport. Mass., for an "Improvement in reefing fore-and-aft sails."

"I claim the application of the gaff C, to the mast A, so as to be capable of being dropped downward on either side of the sail, into or about into parallelism with the mast, as specified, in combination with the application of one or two head reefing lines L, L^1, to the gaff and the sail, so as to enable the slack of the leach and upper part of the sail to be taken up, and also the lower end of the gaff to be secured, in order to effect the reefing of the sail as specified. I also claim, in combination with the said means of reefing the head and producing the lap of the sail one or more buntlines, or lap securing lines, M, M^1, N, N^1, applied to the leach and the body of the sail, substantially in manner, and to operate as described."

No. 24,168. Chapman Warner, of New York, N.Y., for an "Improved moulding machine."

"I claim, 1st, the method of packing the sand by dropping it from any given height, substantially in the manner herein described. 2nd, the mode of obtaining the same result by means of revolving bladed shafts, substantially as herein described. 3rd, the double hinged flask, constructed and secured by plates and pins, substantially as herein described. 4th, the table, constructed substantially as herein described, under and independent of the moulding board, capable only of a vertical motion communicated to it by the arrangement herein described, or any one equivalent thereto, and working in connection with the moulding board, through which latter the patterns which are fastened on the table protrude. 5th, the mode substantially as herein described, of supporting the moulding board from beneath and through the table. 6th, I claim the combination of apparatus for packing the sand, with the mode of hinging and securing the flask by plates and pins, and with the vertically working table apparatus, for withdrawing the patterns from the sand through the moulding board, supported as above described, and the whole operating substantially as herein described."

No. 24,169. Joseph W. Wattles, of Canton' Mass., for an "Improvement in ring traveler spinning frame."

"I claim the improved arrangement of the ring flanches by which the traveler is supported, and on which it slides, the same consisting in arranging them with reference to the ring or its axis, substantially as shown in Figure 3 of the accompanying drawings."

No. 24,170. Jesse Whitehead, of Manchester, Va., for an "Improvement in harvesting machines."

"I claim as new, 1st, the supplemental discharging rake O, arranged with its actuating mechanism substantially as shown and described, so as to operate automatically and conjointly with the platform rake K, for the purpose specified. 2nd, attaching or suspending the rake head J to the shaft H by means of the pulley *d*, rod I, oblique bars *f*, *f*, and pulley *h*, substantially as shown and described, whereby the head J is allowed to vibrate, and is properly guided or retained on the shaft H."

No. 24,171. W. I. Wilson, of Franklin, Ind., for an "Improvement in cultivators."

"I claim the arrangement of axles A and E, wheels B levers C, C, shanks D, D, plows *a*, *a*, cross-piece I, guides F, F and arms *d*, *d*, for operating conjointly in the manner and for the purpose herein set forth."

No. 24,172. Solon Wood, of White Pine, Pa., for an "Improved saw filer."

"I claim the arrangement of the cutters C on an arbor B, the bearings of which are so arranged that the cutters are subjected to the action of adjustable spiral springs, or their equivalent, substantially in the manner and for the purpose herein specified. And I also claim the additional arm *e*, which is hinged to the bar *a*, in combination with the sliding pieces *g*, for the purpose of allowing the cutters to follow the action of the springs *h* in two directions, substantially as herein described."

No. 24,173. Isaac F. Woodward, of Philadelphia, Pa., for an "Improved gong or bell for signals."

"I claim the escapement bar B, constructed substantially as described, in combination with the end J, and pin K, of the hammer or striking arm C, the whole arranged substantially as described, and for the purpose set forth."

No. 24,174. Henry Aregood, of Mansfield Township, N. J., and Stephen Ustick, of Philadelphia, Pa., assignors to John L. MacKnight, of Bordentown, N. J., for an "Improvement in machines for making clay pipes."

"What we claim is, first, the annular ring q^1 upon the core pin H (which is also provided with a foot), in combination with a flange upon the inside of the outer front end of the mould G, to retain the core pin in place while forming the bell end of the pipe, operated in the manner and for the purposes specified. Second, the cam wheel L in combination with the piston J, trough B, and its connections, mould G, and core pin H, for making the bell end and straight part of the pipe at one operation. Third, the combination of the rock shafts O and O^1, with the two halves of the mould C, the former being operated by the cam wheel M and shaft N, for the purposes above described. Fourth, the slide D, rod

R, and cam strip Q, arranged as described, for the purpose above set forth. Fifth, the arrangement and combination of the cam U, rock shaft T, and levers W and V, for operating the knife I, in the manner and for the purpose specified."

No. 24,175. Henry I. Behrens, of New York, N. Y., assignor to Chas. S. Pomeroy, of same place, for an "Improved wrench."

"What I claim is, providing the socket C of the screw with a pivot or hinge, substantially in the manner and for the purpose specified."

No. 24,176. Wm. G. Budlong, of Hartford, Conn., assignor to Hamilton W. Conklin and James W. Corning, of same place, for an "Improved carpet sweeper."

"I claim, in combination with the gear wheel D and pinion *f*, at either end of the case, the lever C and screw *h*, by which the height of the brush is adjusted, and the pinion is engaged with the driving gear, arranged substantially as and for the purpose specified."

No. 24,177. John G. Clark, of Augusta, Geo., assignor to himself and Saml. W. Hatch, of same place, for a "Burglar's alarm."

"I claim, 1st, the employment of one or more cap nipples C on a suspended gravitating breech piece or plate to receive a percussion cap or caps, when said breech piece forms part of a burglar alarm, substantially as and for the purpose set forth. 2nd, providing said suspended breech piece or plate with a vertical stem, and arranging to slide over said stem a tubular weight, so that when the alarm detaches from the door and strikes the floor, the percussive force of the breech piece and weight will explode the cap or caps, and produce the desired alarm, substantially as set forth. 3rd, arranging the spring on the stem of the breech piece between the breech piece and weight, so that the same shall be held far enough apart, to allow the necessary movement of the same toward each other, to explode the cap or caps, when the alarm strikes the floor, substantially as set forth. 4th, providing serrations on the underside of the suspending bracket, so that said bracket shall move with the door until it clears the framing, substantially as and for the purposes set forth."

No. 24,178. H. W. Horton, of Wheaton, Ill., assignor to Oliver H. Horton, of Chicago, Ill., and Roswell E. Adams, of Wheaton aforesaid, for an "Improved apparatus for cooking by steam."

"I claim the within-described arrangement of a steam boiler C, in combination with a steam chamber E, which communicates with the boiler by means of a slide *e*, or its equivalent, and one end of which contains the oven G, the whole being arranged substantially as and for the purpose specified."

No. 24,179. N. N. McLeod, of St. Louis, Mo., assignor to Carroll E. Gray, of same place, for an "Improvement in hose coupling."

"What I claim is, making the lip *c* around the conical end D, so as to leave a cavity to receive the end of the pipe B, and the screw nut A, when the said lip *c* is a part and portion of the same piece that the cone D is, as shown and described."

No. 24,180. John W. Smith, of Washington, D. C., assignor to himself and Walter W. Berry, of Baltimore, Md., for an "Improved waterproof sole."

"What I claim as a new article of manufacture is, the water-proof inside sole, when constructed of the compound above described, placed between two sheets of paper, in the manner herein set forth."

No. 24,181. John W. Wheeler, of Cleveland, Ohio, assignor to Alden B. Stockwell, of same place, for an "Improved splint broom."

"What I claim is, the formation of brooms, composed of separate wrought splints, when constructed in the manner herein described and set forth, as a new article of manufacture."

No. 24,182. Martin Wesson, of Springfield, Mass., assignor to himself and D. B. Wesson, of same place, for an "Improved machine for channeling and edging soles of boots and shoes."

"I claim, 1st, the combination of the feed rolls E, F, adjustable knives *b*, b^1, and the guide R, when constructed and operating substantially in the manner and for the purpose above set forth. 2nd, the combination of lever L, sliding pieces *h*, h^1, and knives *b*, b^1, when arranged and operating as described, and forming a knife holding arrangement, for the purpose specified."

No. 24,183. Stephen G. Tyler, of Quincy, Ill., assignor to himself, G. I. Saage, and I. W. Barnum, of same place, for an "Improvement in circular clamps for sewing machines."

"What I claim is, the combination of a central disk *e*, with the convex clamping disk *d*, and the flat sustaining disk *f*, substantially in the manner described, for the purpose of dividing the crown and quarters of circular sewing, and presenting the edge of the fabric to the needle, in the manner set forth."

Re-issues.

Horace H. Day, of New York, N. Y., assignee of Henry George Tyer, and John Helm, of New Brunswick, N. J., for an "Improvement in manufacture of india rubber goods by means of zinc compounds."—Patented 30th January, 1849.—Re-issued 7th August, 1849.—Again re-issued, 24th May, 1859.

"I claim india rubber fabrics made by the combination of caoutchouc in its several varieties with the sulphuret of zinc or the bi-sulphuret of zinc, or the hyposulphite of zinc or the sulphite of zinc, and also with zinc compounds in their several forms as herein set forth, and sulphur, and in combination with these in either case, the submitting said compound to the action of steam at a high temperature, the whole being combined and manufactured substantially as above described."

William T. Barnes, of Buffalo, N. Y., for an "Improvement in apparatus for raising water."—Patented 20th March, 1849.—Re-issued 24th May, 1859.

"I claim,—First, the combination of casing, whose sides slope outward from the induction opening with a revolving piston, the edge of whose blades conform to and run near to the sloping sides of the casing or the spiral rib, substantially as described for the purpose set forth. Second, in combination with a casing whose sides slope outward from the eduction openings, I claim a rotating piston with fixed blades inclined upon the face to the axis of the piston rod for the purpose set forth. Third, dividing the stream of liquid as it enters the casing contain the rotating piston, by causing it to pass through two or more induction openings, arranged substantially as described, so that the blades of the piston pass over these openings."

Thomas Robjohn, of New York, N. Y., for an "Improvement in ink-stands."—Patented 25th August, 1857.—Re-issued 24th May, 1859.

"What I claim as new, and desire to secure by Letters Patent, is,—1st, the arrangement for flexing the elastic diaphragm by attaching a mechanism in connection with the cover for the ink cup, that the opening and closing thereof shall effect the raising or discharge of the ink or other fluid into or from said cup as specified. 2nd, the cover arranged and operating as above set forth, in combination with the elastic or flexible diaphragm and a non-corrosive fountain or ink cup, when operating as and for the purposes herein above specified. 3rd, the combination and arrangement of cam lever *d*, and plunger *i*, or the equivalents thereof for effecting the raising or discharge of the ink by raising or closing the cover of the non-corrosive fountain cup substantially as specified. 4th, arranging the cam centres in such relation to each other that by raising the cover, the requisite depression of the diaphragm will be produced to obtain the required result as specified."

Design.

Richard Barry, of Boston, Mass., for a "Design for sepulchral monuments."

"I claim the ornamental design for the shaft or faces of the obelisk as represented and described."

Freedon Monroe, of Romeo, Mich., for an "Improvement in bow whiffle trees."—Patented 24th August, 1858.—Additional improvement dated 24th May, 1859.

"What I claim as my invention, and desire to secure by Letters Patent, is, the bearing bar, the chain and braces attached thereto, and the padded swivel joint to be used in combination with my improvement in harness, disclaiming the original invention heretofore patented.

A Free Library and Reading Room, in connection with the Office of the Commissioners of Patents, is open to the Public daily from 10 till 4 o'clock.

In addition to the Printed Specifications, Indexes, and other publications of the Commissioners, the Library includes a Collection of the leading British and Foreign Scientific Journals, and text-books in the various departments of science and art. A printed Catalogue of the Library is on sale.

Note.—The Commissioners' publications may be consulted daily in the Library of the British Museum; in the Library of the Society of Arts; and in the Free Libraries of the following Towns and Cities:—

Aberdeen (*Public Library Town House*).
Accrington (*Mechanics' Institution, Bank Street*).
Belfast (*Harbour Office, Corporation Square*).
Beverley (*Guildhall*).
Birmingham (*Birmingham and Midland Institute, Cannon Street*).
Bolton-le-Moors (*Public Library, Exchange Buildings*).
Bradford, Yorkshire (*Borough Accountant's Office, Corporation Buildings, Swain Street*).
Brighton (*Town Hall*).
Bristol (*City Library, King Street*).
Burnley (*Office of the Burnley Improvement Commissioners*).
Cambridge (*Free Library, Jesus Lane*).
Canterbury (*Municipal Museum, Guildhall Street*).
Carlisle (*Free Library, Police Office*).
Chester (*Town Hall, Northgate Street*).
Cork (*Royal Cork Institution, Nelson Place*).
Crewe (*Railway Station*).
Darlington (*Mechanics' Institute, Skinnergate*).
Dorchester.
Drogheda.
Dublin (*Royal Dublin Society, Kildare Street*).
Dundalk.
Falmouth (*Public Library, Church Street*).
Gateshead (*Mechanics' Institute*).
Gorton (*Railway Station*).
Glasgow (*Stirling's Library, Miller Street*).
Grimsby, Great (*Mechanics' Institution, Victoria Street*).
Hanley, Staffordshire Potteries (*Town Hall*).
Hartlepool, West (*Literary and Mechanics' Institution, Church Street*).
Hertford (*Public Library, Town Hall*).
Huddersfield (*Commissioners' Offices, No. 1, South Parade*).
Hull (*Mechanics' Institute, George Street*).
Ipswich (*Museum Library, Museum Street*).
Keighley (*Mechanics' Institute, North Street*).
Kidderminster (*Public Free Library, Public Buildings, Vicar Street*).
Kings' Lynn, Norfolk (*Stanley Library, Athenæum*).
Lancaster (*Mechanics' Institute, Market Street*).

PATENT LAW AMENDMENT ACT, 1852.—All Specifications, Indexes, &c., printed by order of the Commissioners of Patents, are sold at the Great Seal Patent Office, 25, Southampton Buildings, Holborn.

THE PATENT LAW AMENDMENT ACTS (15 & 16 Vict., cap. 83; 16 Vict., cap. 5; and 16 & 17 Vict., cap. 115); with the Rules and Regulations made by the Commissioners of Patents for Inventions, and by the Lord Chancellor and the Master of the Rolls, under the Acts 15 and 16 Vict., c. 83, and 16 & 17 Vict., c. 115, accompanied by Specimen Forms of the Provisional Documents printed on sheets of the prescribed size. Price 6*d*.

THE CHRONOLOGICAL INDEX of PATENTS of INVENTION, from March 2, 1617 (14 James I.), to September 30, 1852 (16 Vict.), 2 vols. Price 30*s.*

THE ALPHABETICAL INDEX of PATENTEES of Inventions for the above period. Price 20*s.*

THE SUBJECT-MATTER INDEX of PATENTS for the same period — *Second Edition*—to which is prefixed a Key of Terms and Phrases. 2 vols. Price 2*l.* 16*s.*

A Key to the *First Edition* of the above work is also published separately, and may be had on application.

THE CHRONOLOGICAL INDEXES of APPLICATIONS for PATENTS and PATENTS GRANTED from the 1st October to the 31st December, 1852, and from the 1st January to the 31st December, 1853, in one volume. Price 11*s.*

THE ALPHABETICAL INDEXES for the above periods, in one volume. Price 13*s.*

THE SUBJECT-MATTER INDEX, from 1st October to 31st December, 1852. Price 9*s.*

THE SUBJECT-MATTER INDEX, from 1st January to 31st December, 1853. Price 16*s.*

THE CHRONOLOGICAL INDEX of APPLICATIONS for PATENTS and PATENTS GRANTED from the 1st January to the 31st December, 1854. Price 6*s.*

THE ALPHABETICAL INDEX for the above period. Price 7*s.*

THE SUBJECT-MATTER INDEX for the above period. Price 16*s.* 6*d.*

THE CHRONOLOGICAL INDEX of APPLICATIONS for PATENTS and PATENTS GRANTED from the 1st January to the 31st December, 1855. Price 6*s.* 6*d.*

THE ALPHABETICAL INDEX for the above period. Price 7*s.* 6*d.*

THE SUBJECT-MATTER INDEX for the above period. Price 17*s.*

THE CHRONOLOGICAL INDEX of APPLICATIONS for PATENTS and PATENTS GRANTED from the 1st January to the 31st December, 1856. Price 6*s.* 6*d.*

THE ALPHABETICAL INDEX for the above period. Price 8*s.*

THE SUBJECT-MATTER INDEX for the above period. Price 18*s.* 6*d.*

THE ALPHABETICAL INDEX of APPLICATIONS for PATENTS and PATENTS GRANTED from the 1st January to the 31st December, 1857. Price 8*s.*

THE CHRONOLOGICAL INDEX for the above period. Price 6*s.* 6*d.*

THE SUBJECT-MATTER INDEX for the above period. Price 19*s.* 6*d.*

THE ALPHABETICAL INDEX of APPLICATIONS for PATENTS and PATENTS GRANTED, from the 1st January to the 31st December, 1858. Price 8*s.*

In course of Publication, by Order of the Commissioners of Patents.

ABRIDGMENTS (in Classes, and Chronologically arranged) of all SPECIFICATIONS of PATENTED INVENTIONS, from the earliest enrolled to those published under the Act of 1852.

These books are of 12mo size, and as each is limited to inventions of one class only, they can be sold at prices sufficiently moderate to enable the humblest inventor to examine for himself whether his discovery has been previously patented or not.

At the foot of each abstract are given references to notices of the inventions in scientific and other works, and to the reports of law proceedings for infringements, &c. &c. &c.

The classes already published are,—

1. DRAIN TILES AND PIPES, price 6*d.*
2. SEWING AND EMBROIDERING, price 6*d.*
3. MANURE, price 6*d.*
4. PRESERVATION OF FOOD, price 6*d.*
5. MARINE PROPULSION, price 4*s.*
6. MANUFACTURE OF IRON AND STEEL, price 5*s.*
7. AIDS TO LOCOMOTION, price 1*s.*
8. STEAM CULTURE, price 2*s.*
9. WATCHES, CLOCKS, AND OTHER TIME-KEEPERS, price 1*s.* 6*d.*
10. FIRE-ARMS AND OTHER WEAPONS, AMMUNITION, AND ACCOUTREMENTS, price 6*s.* 6*d.*
11. PAPER.—PART I. MANUFACTURE OF PAPER, PASTEBOARD, AND PAPIER MÂCHÉ, price 3*s.*

The following are in the press:—

PAPER.—PART II. CUTTING, FOLDING, AND ORNAMENTING; INCLUDING ENVELOPES, CARDS, PAPER-HANGINGS, &c.

ELECTRICITY AND MAGNETISM: THEIR GENERATION AND APPLICATIONS.

TYPOGRAPHIC, LITHOGRAPHIC, AND PLATE PRINTING.

BLEACHING, DYEING, AND PRINTING YARNS AND FABRICS.

PREPARATION OF FUEL, AND APPARATUS FOR ITS COMBUSTION.

MANUFACTURE AND APPLICATIONS OF INDIA RUBBER, GUTTA PERCHA, &c.; INCLUDING AIR, FIRE, AND WATER PROOFING.

PRODUCTION AND APPLICATIONS OF GAS.

STEAM ENGINES.

B. WOODCROFT.

The above, and all other works published by the Commissioners of Patents, are now on sale at the Great Seal Patent Office, 25, Southampton Buildings, Holborn.

This Journal is published on the evenings of Tuesday and Friday, and will be forwarded, post free, to Subscribers. — Terms, 30*s.* per annum. — Subscriptions received at the Great Seal Patent Office, where also single copies, at twopence each, may be obtained.

No. 568. TUESDAY, JUNE 14, 1859. Price 2d.

Notices to Proceed.

NOTICE is hereby given, that

287. ROBERT GORMULLY, of 13, Grafton Street, Fitzroy Square, parish of St. Pancras, Middlesex, has given notice at the Office of the Commissioners of his intention to proceed with his application for Letters Patent for the invention of "An improvement of piano-fortes with upright frames."

As set forth in his petition, recorded in the said office on the 1st day of February, 1859.

296. And EDWARD ELLIS ALLEN, of Brompton Row, in the county of Middlesex, Engineer, has given the like notice in respect of the invention of "Improvements in stereoscopic apparatuses."

305. And GEORGE LEACH, of Leeds, in the county of York, Yarn Spinner and Cloth Manufacturer, has given the like notice in respect of the invention of "Improvements in leashing yarn or thread in the hank, and in machinery for winding off the same."

As set forth in their respective petitions, both recorded in the said office on the 2nd day of February, 1859.

311. And JOHN PETRIE, junior, of Rochdale, in the county of Lancaster, Machinist, and THOMAS WRIGLEY, of Heap Bridge, in the said county, Paper Manufacturer, have given the like notice in respect of the invention of "Improvements in machinery or apparatus for washing rags and other materials for the manufacture of paper."

As set forth in their petition, recorded in the said office on the 3rd day of February, 1859.

316. And WARREN THOMPSON, of 2, Rue Sainte Appoline, Paris, France, and of 45, Essex Street, Strand, London, has given the like notice in respect of the invention of "An improved printing telegraph."

321. And RICHARD ARCHIBALD BROOMAN, of 166, Fleet Street, in the city of London, E.C., Editor of the Mechanics' Magazine and Patent Agent, has given the like notice in respect of the invention of "Improvements in shirts."—A communication from L. Levy Neyman, residing in Paris.

323. And FREDERICK HERBERT MABERLY, of Stowmarket, in the county of Suffolk, Master of Arts, has given the like notice in respect of the invention of "Improvements in obtaining spring power, and in its application to various purposes."

327. And WILLIAM ROBERT JUSTICE PACKER, of No. 4, Leinster Street, in the parish of St. Mark's, and county of the city of Dublin, Dyer and Scourer, has given the like notice in respect of the invention of "Improvements in the plough or plough share, for the purpose of more effectually pulverizing, breaking up, or cutting into small particles, the earth or sod separated from the ground by the plough share."

As set forth in their respective petitions, all recorded in the said office on the 4th day of February 1859.

331. And FREDERICK HERBERT MABERLY, of Stowmarket, in the county of Suffolk, Master of Arts, has given the like notice in respect of the invention of "Improvements in apparatus for corking, for drawing corks in taps, in the necks of bottles, in the bung holes of barrels, and in similar articles."

As set forth in his petition, recorded in the said office on the 5th day of February, 1859.

338. And GEORGE FREDERIC CHANTRELL, of Liverpool, in the county of Lancaster, Furnace Engineer, has given the like notice in respect of the invention of "Improvements in the treatment of charcoal after its manufacture or revivification."

341. And WILLIAM HENRY CRISPIN, of Marsh Gate Lane, Stratford, in the county of Essex, Copper Smelter, has given the like notice in respect

of the invention of "An improved atmospheric and hydraulic engine for sailing and steam vessels."

343. And Joseph Lee, of 18, Monson Street, Lincoln, has given the like notice in respect of the invention of "Improvements in the manufacture of cranks for steam engines and other purposes."

As set forth in their respective petitions, all recorded in the said office on the 7th day of February, 1859.

---

356. And John Baldry Redman, of New Palace Yard, in the city of Westminster, Civil Engineer, has given the like notice in respect of the invention of "An improvement in the construction of carriage ways."

As set forth in his petition, recorded in the said office on the 8th day of February, 1859.

---

361. And Edward Wilkins, of No. 7, Addington Place, Camberwell Road, in the county of Surrey, Gentleman, has given the like notice in respect of the invention of "Improvements in flower vases."

370. And William Edward Newton, of the Office for Patents, 66, Chancery Lane, in the county of Middlesex, Civil Engineer, has given the like notice in respect of the invention of "An improved mode of bleaching and purifying or refining sugar and vegetable juices or extracts."—A communication from abroad by Emile Rousseau, of Paris, in the empire of France.

371. And Edward Herring, of the Heath, Weybridge, in the county of Surrey, has given the like notice in respect of the invention of "Improvements in the mashing and fermenting of grain for the production of alcohol."

As set forth in their respective petitions, all recorded in the said office on the 9th day of February, 1859.

---

375. And John George Taylor, of Paris, and of Glasgow, in the county of Lanark, Merchant, has given the like notice in respect of the invention of "Improvements in writing materials and the manufacture thereof."

376. And William Adolphe Covert, of Long Island, New York, in the United States of America, has given the like notice in respect of the invention of "An improved self-acting railway switch."—A communication from Charles L. Spencer, residing at Rhode Island, U. S. A.

378. And George Louis Stocks, of Bridge Road, Poplar, in the county of Middlesex, Ship Chandler, has given the like notice in respect of the invention of "Improvements in steering apparatuses."

As set forth in their respective petitions, all recorded in the said office on the 10th day of February, 1859.

---

388. And Robert Cogan, of Red Lion Square, in the county of Middlesex, Glass Dealer, has given the like notice in respect of the invention of "Improved instruments for crushing and mixing solid and liquid substances."

As set forth in his petition, recorded in the said office on the 11th day of February, 1859.

---

393. And Gayland Hadwen, of Audenshaw, in the county of Lancaster, and John Wadsworth, of Droylsden, in the said county, have given the like notice in respect of the invention of "Improvements in jacquard apparatus applicable to power looms."

395. And Thomas Willis and George Chell, both of Longsight, near the city of Manchester, Machine Makers, have given the like notice in respect of the invention of "Improvements in machinery for spinning, twisting, doubling, and winding yarns and threads."

398. And Samuel Hazard Huntley, of Upper Baker Street, in the county of Middlesex, has given the like notice in respect of the invention of "Improvements in cooking apparatus."

399. And Thomas White, of Portsmouth, in the county of Southampton, Ship Builder, and George Jenkins, of the same place, Engineer, have given the like notice in respect of the invention of "Improvements in apparatus for raising and lowering ships along inclined slips."

407. And William Edward Newton, of the Office for Patents, 66, Chancery Lane, in the county of Middlesex, Civil Engineer, has given the like notice in respect of the invention of "Improvements in sewing machines."—A communication from abroad by James Stebbings Moody, of the United States of America.

As set forth in their respective petitions, all recorded in the said office on the 12th day of February, 1859.

---

408. And James Parkinson, of Manchester, in the county of Lancaster, Dentist, has given the like notice in respect of the invention of "Certain improvements in coffins."

As set forth in his petition, recorded in the said office on the 14th day of February, 1859.

---

451. And Charles Garton, of the city and county of Bristol, Brewer, has given the like notice in respect of the invention of "An improved method of treating cane sugar in order to render it fitter to be employed in brewing, distilling, and wine and vinegar making."

As set forth in his petition, recorded in the said office on the 18th day of February, 1859.

---

461. And William Clay, of Liverpool, in the county of Lancaster, Iron and Steel Manufacturer, has given the like notice in respect of the invention of "Improvements in the manufacture of deck and other beams, and of angular and other bars of various forms."

462. And William Basford, of Burslem, in the county of Stafford, Brick and Tile Manufacturer, has given the like notice in respect of the invention of "Improvements in the method of and means for drying bricks and tiles preparatory to their being burnt, and also in the construction of kilns or ovens for burning such bricks, tiles, pipes, pottery, or earthenware, and in the mode of charging or placing these said articles therein to be burnt or fired, and also in certain appliances for regulating the heat therein."

As set forth in their respective petitions, both recorded in the said office on the 19th day of February, 1859.

---

529. And John Henry Johnson, of 47, Lincoln's Inn Fields, in the county of Middlesex, and of 166, Buchanan Street, in the city of Glasgow, North Britain, Gentleman, has given the like notice in respect of the invention of "Improvements in apparatus for stopping horses."—A communi-

cation from Madame Achet, residing at Paris, in the empire of France.
As set forth in his petition, recorded in the said office on the 28th day of February, 1859.

547. And Peter Currie, General Brass-Founder, of Birmingham, in the county of Warwick, has given the like notice in respect of the invention of "Certain improvements in spindles for locks, latches, and other door fastenings."
As set forth in his petition, recorded in the said office on the 2nd day of March, 1859.

617. And Alfred Vincent Newton, of the Office for Patents, No. 66, Chancery Lane, in the county of Middlesex, Mechanical Draughtsman, has given the like notice in respect of the invention of "Improved machinery for rolling horse-shoe iron."—A communication from William Watkin Lewis, residing in the United States of America.
As set forth in his petition, recorded in the said office on the 9th day of March, 1859.

742. And George Neal, Gas Chandelier and Fitting Manufacturer, of Great Charles Street, Birmingham, in the county of Warwick, has given the like notice in respect of the invention of "Certain improvements in apparatus or fittings connected with the burning of gas for regulating and economising its consumption."

744. And John Henry Johnson, of No. 47, Lincoln's Inn Fields, in the county of Middlesex, and of No. 166, Buchanan Street, in the city of Glasgow, North Britain, Gentleman, has given the like notice in respect of the invention of "Improvements in machinery or apparatus for the manufacture of sheet tin."—A communication from abroad by Monsieur Masson, of Paris, in the empire of France.
As set forth in their respective petitions, both recorded in the said office on the 23rd day of March, 1859.

833. And Thomas Richardson, of Hartlepool, in the county of Durham, Engineer, and George William Jaffrey, of the same place, Engineer, have given the like notice in respect of the invention of "Improvements in the arrangement and construction of harbours of refuge, breakwaters, sea walls or barriers, and other like structures."
As set forth in their petition, recorded in the said office on the 2nd day of April, 1859.

848. And Andrew Shanks, Engineer, 6, Robert Street, Adelphi, Westminster, has given the like notice in respect of the invention of "Improvements in machinery for forging and stamping metals,"

851. And Leonard Brierley, of Birmingham, in the county of Warwick, Manufacturer, and Henry Geering, of Birmingham aforesaid, Manufacturer, have given the like notice in respect of the invention of "A new or improved method of ornamenting metallic bedsteads and other articles of metallic furniture."
As set forth in their respective petitions, both recorded in the said office on the 5th day of April, 1859.

1030. And James Higgin, of the city of Manchester, in the county of Lancaster, Manufacturing Chemist, has given the like notice in respect of the invention of "Improvements in treating madder and plants of the same family, and preparations therefrom."
As set forth in his petition, recorded in the said office on the 25th day of April, 1859.

1095. And William Bayliss, of the firm of W. M. Bayliss and Co., Flat and Chain Cable and Iron Hurdle and Fencing Manufacturers, of Monmore Green, Wolverhampton, in the county of Stafford, has given the like notice in respect of the invention of "Improvements in the manufacture of iron-hurdles and fencing."
As set forth in his petition, recorded in the said office on the 2nd day of May, 1859.

1200. And Robert Gourlay, of the firm of Alston and Gourlay, of Glasgow, in the county of Lanark, North Britain, Iron Founders, has given the like notice in respect of the invention of "Improvements in making moulds for casting."
As set forth in his petition, recorded in the said office on the 13th day of May, 1859.

1250. And James Palmer Budd, of Ystalyfera, near Swansea, has given the like notice in respect of the invention of "Improvements in the manufacture of tin and terne plates."
As set forth in his petition, recorded in the said office on the 20th day of May, 1859.

1263. And Walter Crum, of Thornliebank, in the county of Renfrew, Bleacher and Calico Printer, has given the like notice in respect of the invention of "Improvements in printing and dyeing textile fibres and fabrics,"

1275. And Alfred Vincent Newton, of the Office for Patents, 66, Chancery Lane, in the county of Middlesex, Mechanical Draughtsman, has given the like notice in respect of the invention of "An improved construction of washing machine."—A communication from abroad by David Parker, of Shaker Village, New Hampshire, in the United States of America.
As set forth in their respective petitions, both recorded in the said office on the 23rd day of May, 1859.

And notice is hereby further given, that all persons having an interest in opposing any one of such applications are at liberty to leave particulars in writing of their objections to such application, at the said Office of the Commissioners, within twenty-one days next after the date of the Gazette [and of the Journal] in which this notice is issued.

Patents Sealed.

List of Letters Patent which passed the Great Seal on the

14*th June*, 1859.

2874. Charles Fréderic Vasserot, of 45, Essex Street, Strand, London, Patent Agent, for an invention of "An improved pendulum governor for regulating the supply of steam to the cylinders of marine engines."—A communication from Mr. Billotet, residing at Marseilles, in the empire of France.—Dated 15th December, 1858.

2884. Jasper Henry Selwyn, of Woodland Crag, Grasmere, in the county of Westmoreland, Captain in the Royal Navy, for an invention of "A novel apparatus for paying out or laying down submarine telegraph cables or wires, and for raising the same after they have been laid down."—Dated 16th December, 1858.

2885. John William Edge, of Manchester, in the county of Lancaster, Gun Maker, for an invention of "A certain improvement in balls, bullets, or other projectiles to be employed in fire arms or ordnance."—Dated 16th December, 1858.

2888. Joseph Jean Marçais, of Paris, France, Civil Engineer, for an invention of "Improvements in galvanic batteries."—Dated 16th December, 1858.

2890. Richard Archibald Brooman, of 166, Fleet Street, in the city of London, E.C., Editor of the Mechanics' Magazine and Patent Agent, for an invention of "An improvement in plating and gilding forks, spoons, and other metal articles."—A communication from Messieurs de Sauvigny, residing at Paris.—Dated 16th December, 1858.

2893. William Beckett Johnson, Manager for Messrs. Ormerod and Son, of Manchester, in the county of Lancaster, Engineers, for an invention of "Improvements in machinery or apparatus for preparing for joining the rails of railways."—Dated 17th December, 1858.

2975. William Taylor, of Nursling, in the county of Southampton, Gentleman, and William Dakin Grimshaw, of the town and county of the town of Southampton, Engineer, for an invention of "Regulating the admission of natural atmospheric air and eduction of rarefied air or gasses from hothouses or any other place or premises, and for supporting a required temperature."—Dated 29th December, 1858.

3001. Matthew Digby Wyatt, of Guildford Street, Russell Square, in the county of Middlesex, Architect, for an invention of "Improvements in tiles and tessaræ and other wall coverings, and in the means of securing the same to walls and buildings."—Dated 31st December, 1858.

101. Robert Mushet, of Coleford, in the county of Gloucester, Metallurgist, for an invention of "An improvement or improvements in the manufacture of cast steel."—Dated 12th January, 1859.

121. Thomas Sampson, of Calle Cartaños, No. 8, Barcelona, Spain, for an invention of "Improvements in apparatus for feeding steam boilers with water."—Dated 13th January, 1859.

133. William Betts, of Wharf Road, City Road, in the county of Middlesex, Capsule Manufacturer, for an invention of "Improvements in the manufacture of capsules, and in the apparatus to be employed therein."—Dated 15th January, 1859.

141. William Edward Newton, of the Office for Patents, 66, Chancery Lane, in the county of Middlesex, Civil Engineer, for an invention of "An improvement in sewing machines."—A communication from Elias Howe, junior, of Brooklyn, in the United States of America.—Dated 17th January, 1859.

961. John Sidebottom, of Broadbottom, near Mottram, in the county of Chester, Cotton Spinner and Manufacturer, for an invention of "Improvements in the construction of tubes and partial tubes, and in machinery or apparatus for placing them on the spindles of machines used in spinning, doubling, winding, and warping, also improvements in machinery for making such tubes and partial tubes."—Dated 16th April, 1859.

997. Lucius Phelps Porter, of New York, for an invention of "Improvements in knitting machinery.—A communication from abroad by Joseph R. Kilbourn and Edward E. Kilbourn, of Norfolk, in the county of Litchfield, and state of Connecticut."—Dated 20th April, 1859.

1017. James Gillies, of Glasgow, in the county of Lanark, North Britain, Wood Turner, for an invention of "Improvements in branding or marking wood for casks, barrels, and other purposes."—Dated 23rd April, 1859.

1023. William Gibson, of St. Leonard's Road, in the county of Middlesex, Engineer, for an invention of "Improvements in steering apparatus."—Dated 23rd April, 1859.

1047. William Marshall, of Leith Walk, in the county of Mid-Lothian, North Britain, Engineer, for an invention of "Improvements in steam engines."—Dated 26th April, 1859.

1111. Lyman Reed Blake, of the State of Massachusetts, of the United States of America, for an invention of "A new and useful or improved machine for sewing a sole on a boot or shoe."—Dated 3rd May, 1859.

Patents on which the Stamp Duty of £50 has been Paid.

(*To 11th June, 1859, inclusive.*)

9th June.

1373. Thomas Skaife, at present residing at Vanbrugh House, Greenwich, in the county of Kent, for an invention of "Spring folding camera shutters for the more speedy and convenient mode of taking photographic pictures than has been hitherto adopted."—Dated 10th June, 1856.

1390. James Eives, of 17, Cornhill, London, for an invention of "Improved machinery for extracting oil from oleaginous seeds."—A communication.—Dated 12th June, 1856.

1425. Henry Holland, of Birmingham, in the county of Warwick, Manufacturer, for an invention of "Improvements in the manufacture of umbrellas and parasols."—Dated 17th June, 1856.

1427. Arthur George Baylis, of Redditch, in the county of Worcester, Manufacturer, for an invention of "An improvement or improvements in needles."—Dated 17th June, 1856.

10th June.

1388. Alfred Vincent Newton, of the Office for Patents, 66, Chancery Lane, in the county of Middlesex, Mechanical Draughtsman, for an invention of "Improvements in breech-loading fire-arms."—A communication.—Dated 11th June, 1856.

1399. William Massey, of the city of Manchester, in the county of Lancaster, Manager, for an invention of "Improvements in looms for weaving."—Dated 13th June, 1856.

11th June.

1392. Philip Unwin and John Unwin, of the firm of Unwin & Rodgers, of 124, Rockingham Street, Sheffield, in the county of York, Cutlery Manufacturers, for an invention of "Improvements in the manufacture of pen and pocket knifes."——Dated 12th June, 1856.

1400. Constant Jouffroy Duméry, of Paris, in the empire of France, Civil Engineer, for an invention of "Improvements in machinery to be used for manufacturing shoes and boots."—Dated 13th June, 1856.

FOREIGN PATENTS.

PRUSSIA.*

List of Patents Granted and Cancelled between the 16th April and 31st May, 1859.

(*Communicated by the Minister of Commerce and Public Works.*)

1. Patents Granted.

1. Eduard Schröder, of Berlin, for "An apparatus for controlling drivers of public carriages."—5 years.—Dated 10th May, 1859.

2. J. H. F. Prillwitz, of Berlin, for an imported invention of "A machine for boring stone."—5 years.—Dated 10th May, 1859.

3. Prof. Fink, of Berlin, for "A regulator of horizontal water wheels."—5 years.—Dated 22nd May, 1859.

2. Patents Cancelled.

1. J. H. F. Prillwitz, of Berlin, for "A gas meter."—Dated 4th March, 1858; Cancelled 30th April, 1859.

2. J. H. F. Prillwitz, of Berlin, for an imported invention of "An apparatus in presses for obtaining leaden pipes, which are tinned inside."—Dated 1st December, 1858; Cancelled 4th May, 1859.

* For the Prussian Patent Law, see Nos. 313 and 329 of this Journal.

List of Specifications published during the week ending 10th June, 1859.

No.	Price.	Subject-Matter.
		(*Disclaimer*, 1857.)
2435	3*d.*	Preparation of food for cattle.
		1858.
2258	1*s.* 1*d.*	Apparatus for working signals on railways.
2429	2*s.* 9*d.*	Machinery for weaving velvets and other pile fabrics.
2453	10*d.*	Billiard tables, &c.
2454	3*d.*	Brushes or brooms.
2455	3*d.*	Tanning hides and skins.
2456	3*d.*	Machinery for drying yarns, &c.
2460	7*d.*	Preserving the form of cops.
2461	1*s.* 2*d.*	Carriages.
2462	3*d.*	Driving machinery for thrashing grain.
2463	3*d.*	Gun stocks.
2464	3*d.*	Obtaining motive power.
2465	3*d.*	Drying yarns.
2466	3*d.*	Printing and dyeing woven fabrics.
2467	6*d.*	Treating air and gases for obtaining motive power.
2468	3*d.*	Telegraphing by electricity.
2469	3*d.*	Bracelets, necklets, and rings.
2470	3*d.*	Furnace bars.
2471	9*d.*	Machinery for making nails, &c.
2472	6*d.*	Preparing wood for substituting curled hair in the manufacture of mattresses, &c.
2473	3*d.*	Gun carriages and apparatus for lessening recoil.
2474	3*d.*	Steam engines, &c.
2475	3*d.*	Machinery for drying yarn, &c.
2476	3*d.*	Pianoforte action.
2477	10*d.*	Machinery for boring rocks and minerals for blasting, &c.
2478	3*d.*	Blasting powder.
2479	1*s.*	Apparatus for ascertaining the variation of ships' compasses.
2480	3*d.*	Parasols.
2581	1*s.* 1*d.*	Machinery for tunnelling, &c.
2482	6*d.*	Supplying tenders and boilers with water.
2483	3*d.*	Ships' block.
2484	3*d.*	Harness trace coupling.
2485	9*d.*	Kilns for burning earthenware.
2488	3*d*	Steam boilers and furnaces, &c.
2489	1*s.* 2*d.*	Manufacture of strips or bands of steel, &c.
2490	9*d.*	Machinery for preparing, spinning, and doubling cotton, &c.
2491	6*d.*	Fluid meter.
2492	3*d.*	Ornamenting fenders, stove grates, &c.
2493	9*d.*	Treating materials for the manufacture of paper, &c.
2494	10*d.*	Breakwaters, &c.
2495	5*d.*	Purchases.
2496	6*d.*	Steering apparatus.
2497	7*d.*	Rockets.
2498	6*d.*	Apparatus for supporting the hauling ropes of steam ploughs, &c.
2499	3*d.*	Drums.
2500	3*d.*	Manufacture of tubular iron.
2501	3*d.*	Manufacture of elastic fabrics.
2502	1*s.* 7*d.*	Machinery for working the propellers of vessels.
2503	7*d.*	Machinery for cultivating land, &c.
2504	6*d.*	Railway chairs, &c.
2505	4*d.*	Manufacture of paper.

List of Specifications—*continued.*

No.	Price.	Subject-Matter.
2506	7*d.*	Manufacture of locks and fastenings, &c.
2507	9*d.*	Vessels, and application of rudders thereto.
2508	5*d.*	Casters for furniture, &c.
2510	10*d.*	Signals for railways, &c.
2511	3*d.*	Fulling machines.
2512	3*d.*	Stairs.
2513	7*d.*	Apparatus for obtaining extracts or decoctions.
2514	3*d.*	Electric telegraphs.
2515	4*d.*	Electric telegraphing.
2516	1*s.* 11*d.*	Railways.
2521	3*d.*	Core bars.
2522	1*s.* 4*d.*	Steam engines and boilers.
2523	3*d.*	Manufacture of cast-iron pipes.
2525	3*d.*	Ladles for casting metals.

*** Specifications will be forwarded by post on receipt of the amount of price and postage. Sums exceeding 5*s.* must be remitted by Post Office Order, made payable at the Post Office, High Holborn, to Mr. Bennet Woodcroft, Great Seal Patent Office.

A Free Library and Reading Room, in connection with the Office of the Commissioners of Patents, is open to the Public daily from 10 till 4 o'clock.

In addition to the Printed Specifications, Indexes, and other publications of the Commissioners, the Library includes a Collection of the leading British and Foreign Scientific Journals, and text-books in the various departments of science and art. A printed Catalogue of the Library is on sale.

Note.—The Commissioners' publications may be consulted daily in the Library of the British Museum; in the Library of the Society of Arts; and in the Free Libraries of the following Towns and Cities:—

Aberdeen (*Public Library Town House*).
Accrington (*Mechanics' Institution, Bank Street*).
Belfast (*Harbour Office, Corporation Square*).
Beverley (*Guildhall*).
Birmingham (*Birmingham and Midland Institute, Cannon Street*).
Bolton-le-Moors (*Public Library, Exchange Buildings*).
Bradford, Yorkshire (*Borough Accountant's Office, Corporation Buildings, Swain Street*).
Brighton (*Town Hall*).
Bristol (*City Library, King Street*).
Burnley (*Office of the Burnley Improvement Commissioners*).
Cambridge (*Free Library, Jesus Lane*).
Canterbury (*Municipal Museum, Guildhall Street*).
Carlisle (*Free Library, Police Office*).

PATENT LAW AMENDMENT ACT, 1852.—All Specifications, Indexes, &c., printed by order of the Commissioners of Patents, are sold at the Great Seal Patent Office, 25, Southampton Buildings, Holborn.

THE PATENT LAW AMENDMENT ACTS (15 & 16 Vict., cap. 83; 16 Vict., cap. 5; and 16 & 17 Vict., cap. 115); with the Rules and Regulations made by the Commissioners of Patents for Inventions, and by the Lord Chancellor and the Master of the Rolls, under the Acts 15 and 16 Vict., c. 83, and 16 & 17 Vict., c. 115, accompanied by Specimen Forms of the Provisional Documents printed on sheets of the prescribed size. Price 6*d.*

THE CHRONOLOGICAL INDEX of PATENTS of INVENTION, from March 2, 1617 (14 James I.), to September 30, 1852 (16 Vict.), 2 vols. Price 30*s.*

THE ALPHABETICAL INDEX of PATENTEES of Inventions for the above period. Price 20*s.*

THE SUBJECT-MATTER INDEX of PATENTS for the same period—*Second Edition*—to which is prefixed a Key of Terms and Phrases. 2 vols. Price 2*l.* 16*s.*

A Key to the *First Edition* of the above work is also published separately, and may be had on application.

THE CHRONOLOGICAL INDEXES of APPLICATIONS for PATENTS and PATENTS GRANTED from the 1st October to the 31st December, 1852, and from the 1st January to the 31st December, 1853, in one volume. Price 11*s.*

THE ALPHABETICAL INDEXES for the above periods, in one volume. Price 13*s.*

THE SUBJECT-MATTER INDEX, from 1st October to 31st December, 1852. Price 9*s.*

THE SUBJECT-MATTER INDEX, from 1st January to 31st December, 1853. Price 16*s.*

THE CHRONOLOGICAL INDEX of APPLICATIONS for PATENTS and PATENTS GRANTED from the 1st January to the 31st December, 1854. Price 6*s.*

THE ALPHABETICAL INDEX for the above period. Price 7*s.*

THE SUBJECT-MATTER INDEX for the above period. Price 16*s.* 6*d.*

THE CHRONOLOGICAL INDEX of APPLICATIONS for PATENTS and PATENTS GRANTED from the 1st January to the 31st December, 1855. Price 6*s.* 6*d.*

THE ALPHABETICAL INDEX for the above period. Price 7*s.* 6*d.*

THE SUBJECT-MATTER INDEX for the above period. Price 17*s.*

THE CHRONOLOGICAL INDEX of APPLICATIONS for PATENTS and PATENTS GRANTED from the 1st January to the 31st December, 1856. Price 6*s.* 6*d.*

THE ALPHABETICAL INDEX for the above period. Price 8*s.*

THE SUBJECT-MATTER INDEX for the above period. Price 18*s.* 6*d.*

THE ALPHABETICAL INDEX of APPLICATIONS for PATENTS and PATENTS GRANTED from the 1st January to the 31st December, 1857. Price 8*s.*

THE CHRONOLOGICAL INDEX for the above period. Price 6*s.* 6*d.*

THE SUBJECT-MATTER INDEX for the above period. Price 19*s.* 6*d.*

THE ALPHABETICAL INDEX of APPLICATIONS for PATENTS and PATENTS GRANTED, from the 1st January to the 31st December, 1858. Price 8*s.*

Museum of Patents, South Kensington.

NUMBER of VISITORS for the Week ending 11th June, 1859.

Mornings - - - -	880
Evenings - - - -	890
Total - - -	1770

Since the opening of the Museum Free Daily (May 12, 1858,)—105,610.

THIS Museum is open to the public daily, free of charge. The hours of admission are from 10 A.M. to 6 P.M., and in the evenings of Monday, Tuesday, and Wednesday from 7 to 10 P.M.

All communications on the subject of the Museum to be addressed to the Superintendent,

B. WOODCROFT.

Great Seal Patent Office,
Southampton Buildings.

GALLERY OF PORTRAITS OF INVENTORS, DISCOVERERS, AND INTRODUCERS OF USEFUL ARTS.—This Collection, formed by Mr. Woodcroft, and first opened to public view in the Great Seal Patent Office in 1853, now constitutes a portion of the Patent Museum at South Kensington.

Presentations of original Portraits, Medallions, Busts, and Statues, in augmentation of the Collection, are hereby invited, and will on receipt be acknowledged in this Journal, and duly recorded in the next published Catalogue.

THE REFERENCE INDEX of PATENTS, pointing out the Office in which each enrolled Specification of a Patent may be consulted; the Books in which Specifications, Law Proceedings, and other subjects connected with Inventions have been noticed; also such of the Specifications of Patents granted under the Act of 21 James I. as have been published by the authority of the Commissioners. Price 30*s*.

AN APPENDIX to the REFERENCE INDEX of PATENTS of INVENTION, containing Abstracts from such of the early Patents and Signet Bills as describe the nature of the invention, and which Patents have no enrolled Specifications. Price 4*s*.

COLONIAL PATENTS.—Information as to the Mode of obtaining Protection for Inventions in the Colonies; contained in Communications from the Governors, &c. of the different British Colonies in answer to the Application of Mr. W. J. CURTIS for a Patent. Price 1*s*.

PATENT RIGHTS in the COLONIES.—Abstract of Replies to the Secretary of State's Circular Despatch of July 11, 1856, calling for Information as to the Form of the Application to be made by Persons desirous of obtaining Patent Rights in the Colonies, and the Expenses attendant on the Grant of such Patent Rights. Price 2*s*. 6*d*.

In course of Publication, by Order of the Commissioners of Patents.

ABRIDGMENTS (in Classes, and Chronologically arranged) of all SPECIFICATIONS of PATENTED INVENTIONS, from the earliest enrolled to those published under the Act of 1852.

These books are of 12mo size, and as each is limited to inventions of one class only, they can be sold at prices sufficiently moderate to enable the humblest inventor to examine for himself whether his discovery has been previously patented or not.

At the foot of each abstract are given references to notices of the inventions in scientific and other works, and to the reports of law proceedings for infringements, &c. &c. &c.

The classes already published are,—

1. DRAIN TILES AND PIPES, price 6*d*.
2. SEWING AND EMBROIDERING, price 6*d*.
3. MANURE, price 6*d*.
4. PRESERVATION OF FOOD, price 6*d*.
5. MARINE PROPULSION, price 4*s*.
6. MANUFACTURE OF IRON AND STEEL, price 5*s*.
7. AIDS TO LOCOMOTION, price 1*s*.
8. STEAM CULTURE, price 2*s*.
9. WATCHES, CLOCKS, AND OTHER TIME-KEEPERS, price 1*s*. 6*d*.
10. FIRE-ARMS AND OTHER WEAPONS, AMMUNITION, AND ACCOUTREMENTS, price 6*s*. 6*d*.
11. PAPER.—PART I. MANUFACTURE OF PAPER, PASTEBOARD, AND PAPIER MÂCHÉ, price 3*s*.
12. TYPOGRAPHIC, LITHOGRAPHIC, AND PLATE PRINTING, price 7*s*.
13. BLEACHING, DYEING, AND PRINTING YARNS AND FABRICS, price 9*s*. 6*d*.

The following are in the press:—

PAPER.—PART II. CUTTING, FOLDING, AND ORNAMENTING; INCLUDING ENVELOPES, CARDS, PAPER-HANGINGS, &c.
ELECTRICITY AND MAGNETISM: THEIR GENERATION AND APPLICATIONS.
PREPARATION OF FUEL, AND APPARATUS FOR ITS COMBUSTION.
MANUFACTURE AND APPLICATIONS OF INDIA RUBBER, GUTTA PERCHA, &c.; INCLUDING AIR, FIRE, AND WATER PROOFING.
PRODUCTION AND APPLICATIONS OF GAS.
STEAM ENGINES.

B. WOODCROFT.

The above, and all other works published by the Commissioners of Patents, are now on sale at the Great Seal Patent Office, 25, Southampton Buildings, Holborn.

This Journal is published on the evenings of Tuesday and Friday, and will be forwarded, post free, to Subscribers.—Terms, 30*s*. per annum.—Subscriptions received at the Great Seal Patent Office, where also single copies, at twopence each, may be obtained.

THE

COMMISSIONERS OF PATENTS' JOURNAL.

By Authority.

(*Registered for transmission abroad.*)

No. 569. FRIDAY, JUNE 17, 1859. Price 2d.

Grants of Provisional Protection for Six Months.

NOTICE is hereby given that Provisional Protection has been allowed

474. To PETER SPENCE, of Pendleton, in the county of Lancaster, Manufacturing Chemist, for the invention of "Improvements in the manufacture of alum, and in the mode of, and apparatus for, condensing or destroying gases arising therefrom."

On his petition, recorded in the Office of the Commissioners on the 21st day of February, 1859.

626. To ROBERT HELLARD, Ironmonger, Taunton, Somerset, for the invention of "Improvements in reaping and mowing machines."

On his petition, recorded in the Office of the Commissioners on the 11th day of March, 1859.

688. To ROBERT CLEGG, of Islington, in the county of Middlesex, and RICHARD FELL, of Saint Ann's Place, Limehouse, in the county of Middlesex, for the invention of "Improved apparatus for obtaining aerated fresh water from salt water."

On their petition, recorded in the Office of the Commissioners on the 18th day of March, 1859.

730. To THOMAS MANLOVE, of Radford Grove, Lace Manufacturer, and WILLIAM HODGKINSON, of New Lenton, Draughtsman, both in the county of Nottingham, for the invention of "A new method of manufacturing plain, figured, striped, and plaited textile fabrics in imitation of loom-made fabrics."

On their petition, recorded in the Office of the Commissioners on the 22nd day of March, 1859.

852. To FREDERICK COLLIER BAKEWELL, of No. 6, Haverstock Terrace, Hampstead, in the county of Middlesex, for the invention of "Improvements in open fire places."—A communication from abroad, by Calvin Dodge, of Pittsburgh, North America.

On his petition, recorded in the Office of the Commissioners on the 5th day of April, 1859.

946. To GERMAIN ABEILLOU, of Toulouse, a town of France, Joiner's Tool Manufacturer, for the invention of "An extensible arching plane."

On his petition, recorded in the Office of the Commissioners on the 15th day of April, 1859.

1082. To WILLIAM WINSTANLEY and JOSEPH KELLY, of Liverpool, in the county of Lancaster, Hydraulic Engineers, for the invention of "Improvements in pumps, and gearing and appliances for working the same."

On their petition, recorded in the Office of the Commissioners on the 30th day of April, 1859.

1106. To THOMAS WILLIAM MILLER, of Her Majesty's Dockyard, in the parish of Portsea, in the county of Southampton, for the invention of "Improvements in apparatus for and mode of generating steam and economising fuel."

1108. And to WILLIAM SELLERS, of Philadelphia, in the state of Pennsylvania, United States of America, Engineer and Machinist, for the invention of "Improvements in couplings for shafting."—Partly a communication from Coleman Sellers, resident at Philadelphia aforesaid.

On both their petitions, recorded in the Office of the Commissioners on the 3rd day of May, 1859.

1176. To WILLIAM OLAND BOURNE, of the city and state of New York, United States of America, for the invention of "Improvements in the means of and apparatus for separating metals, ores, and other substances of different specific gravities."

On his petition, recorded in the Office of the Commissioners on the 10th day of May, 1859.

194. To WILLIAM WARNE, JOHN AMERICUS FANSHAWE, JAMES ARCHIBALD JAQUES, and THOMAS GALPIN, all of Tottenham, in the county of Middlesex, India Rubber Manufacturers, for the invention of "An improved compound or preparation of materials for, and mode of, and apparatus for, covering and insulating wires or conductors used for telegraphic or electrical purposes."

On their petition, recorded in the Office of the Commissioners on the 12th day of May, 1859.

1230. To ALEXANDER ROBERT TERRY, Civil Engineer, of No. 24, Great George Street, Westminster, for the invention of "Improvements in apparatus for sawing and cutting up loaf sugar."

On his petition, recorded in the Office of the Commissioners on the 18th day of May, 1859.

1244. To GEORGE JOHN PARFITT, of the city of Bath, in the county of Somerset, City Surveyor, for the invention of "Improvements in gas burners."

On his petition, recorded in the Office of the Commissioners on the 20th day of May, 1859.

1252. To ALEXANDER LEPETIT TAYLOR, of 16, Ludgate Hill, in the city of London, for the invention of "An improved form of harmonican pianoforte."

On his petition, recorded in the Office of the Commissioners on the 21st day of May, 1859.

1260. To JOHN HENRY BRIERLEY, Manufacturer, Stannary Works, Halifax, and GEORGE OLD, Warehouseman, of Temple Street, Birmingham, for the invention of "A brace buckle."

1262. To ROBERT VALENTINE LEACH, of Briton Ferry, in the county of Glamorgan, and of Devizes, in the county of Wilts, Tin Plate Manufacturer, and THOMAS WILLIAM WILLETT, of Pont-Neath-Vaughan, in the county of Brecon, Civil Engineer, for the invention of "Improvements in the manufacture of tin plates and terne or leaded plates, and in the apparatus connected therewith."

264. To GEORGE BURNELL, of East Hoathly, in the county of Sussex, Gentleman, for the invention of "An improved preparation or medicine for the cure of ague."

1266. To HARRY ARTHUR COOKE, of Chancery Lane, in the county of Middlesex, for the invention of "Improvements in omnibuses."

1268. To CHARLES PETERS MOODY, of Corton Denham, in the county of Somerset, Gentleman, for the invention of "Improvements in machinery for the manufacture of matting or fabric from straw and other vegetable fibres, and rods or bars of wood and metal."

1270. To FREDERICK JOSEPH BRAMWELL, of Great George Street, Westminster, in the county of Middlesex, for the invention of "Improvements in apparatus for raising ships and vessels out of the water."—Partly a communication from abroad by Messieurs Miers Brothers and Naylor, of Rio de Janeiro.

1272. To NATHANIEL SHATSWELL DODGE, of 44, St. Paul's Churchyard, in the city of London, Merchant and Manufacturer, for the invention of "Improvements in treating waste vulcanized india rubber."—A communication from abroad by Hiram Lyman Hall, of Beverley, Massachusetts, United States of America.

1274. And to NATHANIEL SHATSWELL DODGE, of 44, St. Paul's Churchyard, in the city of London, Merchant and Manufacturer, for the invention of "Improvements in finishing, coloring, and varnishing india rubber goods, and similar manufactures."—A communication from abroad, by Hiram Lyman Hall, of Beverley, Massachusetts, United States of America.

On their several petitions, recorded in the Office of the Commissioners on the 23rd day of May, 1859.

1276. To JAMES STANSFIELD, of Batley, in the county of York, Woollen Spinner, for the invention of "Improvements in the permanent way of railways."

1278. To JAMES CRAIG FISHER, of No. 51, Cathedral Street, Glasgow, Manager of Cook's Patent Composition Company, for the invention of "Improvements in preparing paints and varnishes."

1280. To JOSEPH GIBBS, of Brentford, in the county of Middlesex, Civil Engineer, for the invention of "A method of treating coal, shale, lignites, and peat, in order to manufacture manure."

1282. To GEORGE HADFIELD, of Carlisle, in the county of Cumberland, Varnish Manufacturer, for the invention of "An improved arrangement of heating and evaporating apparatus."

1284. And to ANTOINE JOSEPH SAX, trading under the firm of Adolphe Sax, of Paris, France, Musical Instrument Maker, for the invention of "Improvements in wind musical instruments."

On their several petitions, recorded in the Office of the Commissioners on the 24th day of May, 1859.

1288. To DAVID SIMPSON PRICE, of No. 7, Green Street, Grosvenor Square, in the county of Middlesex, Analytical Chemist, for the invention of "Improvements in the production of colors for dyeing and printing."

1290. To EDWIN MAW, of the Doncaster Ironworks, Yorkshire, for the invention of "Improvements in the construction of metallic bedsteads and other furniture."

1292. To ALEXANDER PRINCE, of the Office for Patents, No. 4, Trafalgar Square, Charing Cross, in the county of Middlesex, for the invention of "Improvements in screw propellors."—A communication from abroad by Hermann Hirsch, resident at Berlin, in the kingdom of Prussia.

1294. To JOHN MALLET, of Barnstaple, in the county of Devon, Watch Manufacturer, Silversmith, and Jeweller, for the invention of "An improved regulator for watches, portable clocks, and time-pieces."

1296. And to JAMES HOWARD, of Bedford, Agricultural Implement Maker, for the invention of "An improved construction of horse-rake."

On their several petitions, recorded in the Office of the Commissioners on the 25th day of May, 1859.

1298. To JAMES WEBSTER, of Birmingham, in the county of Warwick, Engineer, for the invention of "An improvement or improvements in pressure and vacuum guages."

1299. To Joseph Reynolds, of No. 11, Carthusian Street, Charterhouse Square, London, Gentleman, for the invention of "Improvements in propelling vessels."

1300. To Hugh William Patrick, of No. 4, Mill Hill Terrace, Acton, in the county of Middlesex, for the invention of "A new substance or material to be used in lieu of ivory and other like substances."

1301. To Charles Dorn, of Stuttgart, in the kingdom of Wurttemburg, but now residing at Birmingham, in the county of Warwick, Mining Engineer, for the invention of "Improvements in kilns for baking or burning China earthenware and bricks, and for other like purposes."

1302. To John Young, of Wolverhampton, in the county of Stafford, Manufacturer, for the invention of "Improvements in locks, and in the manufacture of knobs for locks and latches, and also in apparatus for preventing draughts and keeping out wet from doors and windows."

1303. To Peter Effertz, of Manchester, in the county of Lancaster, Mechanical Engineer, for the invention of "Certain improvements in machinery or apparatus for cutting paper, pasteboard, cardboard, and also for cutting or slicing wood into thin scaleboard or veneers, or for similarly cutting other articles."

1304. To George Frederic Chantrell, of Liverpool, in the county of Lancaster, Furnace Engineer, for the invention of "Improvements in the construction of charcoal kilns, and in the manufacture of coolers for charcoal kilns."

1305. To William Henry Nevill, of Llanelly, in the county of Carmarthen, Manufacturer, for the invention of "Improvements in the manufacture of steel and wrought iron."

1306. To John Draper, of 5, Little Tower Street, in the city of London, for the invention of "Improvements in applying indices to account and other books."

1307. To Michael Michaelis, of Manchester, in the county of Lancaster, Clerk, and Robert Kershaw, of Heywood, in the said county, Manufacturer, for the invention of "Improvements in the manufacture of velvets and other piled fabrics."

1308. To James Corn Bent, of Birmingham, in the county of Warwick, Gas Meter Manufacturer, for the invention of "Improvements in gas-meters."

1309. And to William Wright, of Deptford, in the county of Kent, for the invention of "Improvements in fastening shirts, collars, and other articles of wearing apparel."

On their several petitions, recorded in the Office of the Commissioners on the 26th day of May, 1859.

1311. To William Weild, of the city of Manchester, in the county of Lancaster, Machinist, for the invention of "Improvements in looms for weaving pile fabrics."

1312. To Marc Antoine François Mennons of the British and Foreign Patent Offices, 39, Rue de l'Echiquier, Paris, in the empire of France, for the invention of "An improved mode of advertising."—A communication from Albano Gatte, a foreigner, residing in Paris.

1313. To Patrick Aitchison, Brass Founder, and Thomas Binks, Plumber, both of Sheffield, in the county of York, for the invention of "Improvements in self-acting and other water closets, and in flushing apparatus connected therewith."

1314. To Leon Farrenc, Gentleman, and Bernard Subra, Professor of Mathematics, both of Paris, France, for the invention of "Improvements in gas lighting by means of direct carburators."

1315. To Hilary Nicholas Nissen, of Mark Lane, in the city of London, Stationer and Printer, for the invention of "An improvement in book indexes."

1316. And to George Hadfield, of Carlisle, in the county of Cumberland, Varnish Manufacturer, for the invention of "Improvements in the mode of and apparatus for forming casks or barrels."

On their several petitions, recorded in the Office of the Commissioners on the 27th day of May, 1859.

1317. To Bernhard Samuelson, of Banbury, in the county of Oxford, for the invention of "Improvements in machines for cutting roots and other vegetables."

1318. To Thomas Wilson, of Birmingham, in the county of Warwick, Engineer, for the invention of "Improvements in breech-loading fire-arms and ordnance."

1319. To Walter Crum, of Thornliebank, in the county of Renfrew, Bleacher and Calico Printer, for the invention of "Improvements in printing and dyeing textile fibres and fabrics."

1320. To William Henry Graveley, of Upper East Smithfield, in the county of Middlesex, Engineer, for the invention of "Improvements in apparatuses for purifying and aërating sea water, parts of which may be employed for cooking and baking purposes."

1321. To Richard Archibald Brooman, of 166, Fleet Street, in the city of London, E.C., Patent Agent, for the invention of "Improvements in machinery for cleaning, grinding, and bolting corn and other grain."—A communication from abroad by Jean Baptiste Falguière, of Marseilles.

1322. To Joseph Oldbury, Gun and Pistol Maker, of Summer Row, Handsworth, in the county of Stafford, for the invention of "Improvements in breech-loading fire-arms, applicable to pistols, muskets, carbines, and birding or other guns."

1323. And to John Bapty, of Leeds, in the county of York, Foreman, for the invention of "An improved mode of, and apparatus for, manufacturing felted cloth.'

On their several petitions, recorded in the Office of the Commissioners on the 28th day of May, 1859.

1324. To Marcus Davis, of 5, Lyon's Inn, Strand, in the city of Westminster, Caoutchouc Wheel Manufacturer, for the invention of "Improvements in the construction of wheels, axles, and boxes for carriages."

1325. To Archibald Smith, Engineer, of 69, Princes Street, Leicester Square, London, for the invention of "Improvements in machinery for

making lines, ropes, and cables, for telegraphic and other purposes."

1326. To WESTON GRIMSHAW, of Bowdon, in the county of Chester, Gentleman, for the invention of "Certain improvements in machinery for compressing bricks, tiles, artificial fuel, and other similar articles."

1327. To EDGAR BREFFIT, of 61, King William Street, in the city of London, Glass Manufacturer, for the invention of "Improvements in machinery or apparatus for the manufacture of hollow corks."

1328. To JOHN BRUCE, of Tiddington, near Stratford-on-Avon, in the county of Warwick, Agricultural Implement Maker, for the invention of "An improvement in agricultural drills."

1329. To WILLIAM GOSSAGE, of Widnes, in the county of Lancaster, Chemist, for the invention of "Improvements in the manufacture of iron and steel."

1330. To JAMES FRY, of Wrotham, Sevenoaks, in the county of Kent, Miller, for the invention of "An improvement in mills for grinding."

1331. To OLIVER MAGGS, of Bourton, in the county of Dorset, for the invention of "Improvements in harrows."

1332. To WILLIAM GREEN, of Victoria Works, Dod Street, Limehouse, in the county of Middlesex, for the invention of "Improvements in washing or purifying and treating sugar."

1333. To ISAAC BLACKBURN and ROBERT BLACKBURN, both of Long Eaton, in the county of Derby, Engineers, for the invention of "Improvements in locomotive or traction engines, and in implements connected therewith for cultivating the soil."

1334. To JAMES LEE NORTON, of Belle Sauvage Yard, Ludgate Hill, in the city of London, for the invention of "Improvements in machines for stretching and drying fabrics, and in drying wool and other fibres."

1335. To ARTHUR MICKELTHWATE, JOSEPH PEACE, and SAMUEL JOHNSTONE HOBSON, all of Sheffield, in the county of York, for the invention of "Improvements in the coating and covering of metallic springs, steel, iron, and other metal bands for the use of any kind of machinery, driving bands, or straps, ribs suitable for umbrellas and parasols, staybusks, and ribs for stays, hats, bonnets, reeds, and crinoline, and articles of dress, and ohter useful purposes."

1336. To ENOCH LEESON, of No. 13, Traffic Street, Derby, in the county of Derby, Lace Manufacturer, for the invention of "Improvements in machinery for the manufacture of ornamental chenille fringes and braids or other fabrics."

1337. To WILLIAM CLARK, of 53, Chancery Lane, in the county of Middlesex, Engineer and Patent Agent, for the invention of "Certain improved means of reefing and shortening sail in ships and other vessels."—A communication from abroad by Enoch Erastus Mulliner, of New York, in the United States of America, Mariner.

1338. And to WILLIAM CLARK, of 53, Chancery Lane, in the county of Middlesex, Engineer and Patent Agent, for the invention of "A new manufacture of leaven."—A communication from abroad by Frederic Ludewig, Manufacturing Chemist, Paris.

On their several petitions, recorded in the Office of the Commissioners on the 30th day of May, 1859.

1340. To JAMES SEPTIMUS COCKINGS, Civil Engineer, of Ann Street, Birmingham, in the county of Warwick, for the invention of "Certain improvements in the construction of self-adjusting cases for holding and carrying cartridges of various sizes or guages, parts of which improvements are also applicable to cartridge-carriers now in use."

1341. To SAMUEL CARR and GEORGE BUTTERWORTH, of the firm of Carr and Butterworth, of Leeds, in the county of York, Manufacturers, for the invention of "Improvements in the manufacture of felted cloth, and in the machinery or apparatus employed in such manufacture."

1342. To EDWIN ARCHER WOOD, of Victoria Terrace, Notting Hill, in the county of Middlesex, of the Peninsular and Oriental Steam Navigation Company, and MARTIN DADD ROGERS, of Bromley, in the county of Middlesex, Shipwright, for the invention of "Improved apparatus for raising and lowering boats."

1343. To JAMES WANSBROUGH, of Bridge Street, in the borough of Southwark, Gentleman, for the invention of "Improvements in the construction of stereoscopes."—A communication from abroad by Egbert Moxham, of Bruges, in the kingdom of Belgium.

1344. To GEORGE HENRY SMITH, of the city of Manchester, in the county of Lancaster, for the invention of "Improvements in sewing machines."

1345. To PHILIPPE GAMBARDELLA, of Naples, Engineer, at present temporarily residing at the Office for Patents, 123, Chancery Lane, London, for the invention of "Improvements in obtaining motive power, and in machinery or apparatus connected therewith."

1346. To JOHN JAMES LUNDY, of the city of Manchester, in the county of Lancaster, and of Leith, North Britain, Colour and Varnish Manufacturer, for the invention of "Improvements in cartridges and gun-wads, for facilitating the loading and lubricating of fire-arms."

1347. To ALFRED SUTER, of 65, Fenchurch Street, in the city of London, for the invention of "A furniture castor, to be used upon the feet of tables, seats, and all descriptions of furniture or other things."

1348. And to FREDERICK ROBERTS, of Maiden Newton, and ALEXANDER ROBERTS, of Frome, Vanchurch, both in the county of Dorset, for the invention of "Improvements in apparatus employed for ploughing, tilling, or cultivating land, when steam power is employed."

On their several petitions, recorded in the Office of the Commissioners on the 31st day of May, 1859.

1349. To JEAN FELIX MIQUEL, of Paris, France, Physician, for the invention of "Improvements in trusses."

On his petition, recorded in the Office of the Commissioners on the 1st day of June, 1859.

1351. To FRANCIS WALTER SALTONSTALL, of Northumberland Street, Strand, in the county of

Middlesex, and ALFRED BUSH, of Hanover Cottage, Park Road, St. John's Wood, in the county of Middlesex aforesaid, for the invention of "An improved machine or apparatus for dredging and excavating."

1352. To MYRON HOLLEY CHAPIN, of 4, Gresham Street, in the city of London, and of Murray Street, New York, United States of America, Merchant, for the invention of "Improvements in galloons, tapes, or ribbons, for supporting steel and other hoops used for distending ladies' dresses."

1353. To ROBERT KAY WHITEHEAD, of Elton, near Bury, in the county of Lancaster, Bleacher, Dyer, and Printer, for the invention of "Improvements in apparatus to be used in bleaching, dyeing, and extracting the colouring matter from dye materials."

1354. To SAMUEL WOOD and JOHN WOOD, both of the city of Manchester, Embroiderers, and PHILLIP BILLINGTON, of Rusholme, near the city of Manchester, Mechanic, for the invention of "Certain improvements in and applicable to machines for embroidering."

1355. To ALEXANDER SMITH and WILLIAM SMITH, both of Glasgow, in the county of Lanark, North Britain, Engineers, for the invention of "Improvements in machinery for curing sugar, and for separating solid and liquid substances by centrifugal force."

1356. To SAMUEL BURY, of Manchester, in the county of Lancaster, Manager, for the invention of "Certain improvements in machinery or apparatus for embossing and finishing textile fabrics or other like surfaces."

1357. To SAMUEL BURY, of Manchester, in the county of Lancaster, Manager, for the invention of "Certain improvements in machinery or apparatus for embossing and finishing textile fabrics or other like surfaces."

1358. To WILLIAM HENRY PARKES, of Birmingham, in the county of Warwick, Manufacturer, and WILLIAM BAGNALL, of Birmingham aforesaid, Plater, for the invention of "A new or improved ventilator for hats and other head coverings, and also for carriages."

1359. To TIMOTHY WHITBY, of Millbank Street, Westminster, and WILLIAM DEMPSEY, of Great George Street, Westminster, in the county of Middlesex, Civil Engineers, for the invention of "Improvements in, and applicable to, ordnance and fire arms, and in the projectiles to be used therewith."

1360. And to JEAN BAPTISTE PASCAL, of Paris, in the empire of France, Civil Engineer, for the invention of "Improvements in hot-air engines."

On their several petitions recorded in the Office of the Commissioners, on the 2nd day of June, 1859.

1361. To JOHN WILSON, of St. Helens, in the county of Lancaster, Manufacturing Chemist, for the invention of "Improvements in the manufacture of carbonate of soda."

1362. To JOHN EDWARDS, of 77, Aldermanbury, in the city of London, for the invention of "Improvements in the manufacture of anchors."

1363. To ROBERT WILLIAM SIEVIER, of Upper Holloway, in the county of Middlesex, but now residing in Hull, in the county of Yorkshire, in the kingdom of Great Britain, for the invention of "Improvements in smelting and purifying of iron and other ores."

1364. To JOSEPH ONIONS, of Darlaston, in the county of Stafford, Engineer, for the invention of "A new or improved steam boiler."

1365. To ROBERT MUSHET, of Coleford, in the county of Gloucester, Metallurgist, for the invention of "An improvement or improvements in the manufacture of iron and steel."

1366. To HERBERT NEWTON PENRICE, of Witton House, near Norwich, for the invention of "Improvements in machinery for propelling vessels."

1367. To JOHN KYLE, of Liverpool, in the county of Lancaster, Pointsman, for the invention of "Improvements in points for railways and chairs for the same."

1368. To JOHN HENRY JOHNSON, of 47, Lincoln's Inn Fields, in the county of Middlesex, and of 166, Buchanan Street, in the city of Glasgow, North Britain, Gentleman, for the invention of "Improvements in reducing solid substances to powder, and in the machinery or apparatus employed therein."—A communication from abroad by William James Cantelo, of Burlington, Burlington county, state of New Jersey.

1369. To JEAN JOSEPH BARANOWSKI, of Paris, in the empire of France, Gentleman, for the invention of "Improvements in railway signal apparatuses."

1370. To ALEXANDER ROBERTSON ARROTT, of Saint Helen's, in the county of Lancaster, Chemist, for the invention of "Improvements in the manufacture of soda."

1371. To JAMES BURROW, of Ashford Parsonage, Bakewell, in the county of Derby, Clerk in Holy Orders, and WILLIAM NEWTON WILSON, of 144, High Holborn, in the county of Middlesex, for the invention of "An improved floor scrubber and sweeper for carpets, floors, lawns, and other such like useful purposes."

1372. And to ALFRED VINCENT NEWTON, of the Office for Patents, No. 66, Chancery Lane, in the county of Middlesex, Mechanical Draughtsman, for the invention of "An improvement in balancing millstones."—A communication from abroad by John Fairclough, of Louisville, in the county of Jefferson, and state of Kentucky, United States of America.

On their several petitions, recorded in the Office of the Commissioners on the 3rd day of June, 1859.

1373. To HENRY CROSSLEY, of Failsworth, near Manchester, in the county of Lancaster, for the invention of "Improvements in Jacquard machines."

1374. To RICHARD CHRIMES, of Rotherham, in the county of York, Brass and Iron Founder, for the invention of "Improvements in apparatus for supplying water to, and discharging the contents from, urinals, wash hand basins, and other similar articles."

1375. To EDWARD GILL, of the Elms, St. Ann's Road, Wandsworth Common, in the county of Surrey, Distiller, for the invention of "Improvements in producing spirit from rice, maize, and other descriptions of grain,"

1376. To JAMES NUTTALL, of Old Accrington, Beerseller, GEORGE RIDING, of Clayton-le-Moors, Medical Botanist, and WILLIAM COULTHURST, of Old Accrington, Chemist, all in the county of Lancaster, for the invention of "An improved size powder, to be used in sizeing cotton, linen, or other warps for weaving."

1377. To GEORGE DAVIES, of No. 1, Serle Street, Lincoln's Inn, in the county of Middlesex, and No. 28, Enoch Square, in the city of Glasgow, Civil Engineer and Patent Agent, for the invention of "An improvement in wearing apparel."—A communication from abroad by Gabriel Jean Julien Laury, of Paris, in the empire of France.

1378. To JAMES WOOD and WILLIAM WOOD, both of the town and county of the town of Nottingham, Lace Manufacturers, for the invention of "A peculiar mode or method of dying lace or other fabrics, and making the same into bonnet and cap fronts, or other articles."

1379. And to CHRISTOPHER JAMES, of Mountain Ash, Aberdare, in the county of Glamorgan, Agent, for the invention of "An improvement in the manufacture of railway chairs."

On their several petitions, recorded in the Office of the Commissioners on the 4th day of June, 1859.

1382. To GEORGE DAVIES, of No. 1, Serle Street, Lincoln's Inn, in the county of Middlesex, and No. 28, St. Enoch Square, in the city of Glasgow, Civil Engineer and Patent Agent, for the invention of "Improvements in paddle wheels and screw propellers for steam vessels."—A communication from abroad by Auguste Jouan, of San Francisco, California.

1384. And to WILLOUGHBY GREEN, of No. 2, Victoria Street, in the city of London, and of Leeds, in the county of York, for the invention of "Improvements in mowing machines."

On both their petitions, recorded in the Office of the Commissioners on the 6th day of June, 1859.

1386. To KENNETH HENRY CORNISH, of 5, Essex Court, Middle Temple, Surgeon, M.R.C.S., F.M.S., for the invention of "Improvements in bedsteads, sofas, couches, and chairs, applicable to other seats or reclining surfaces."

1388. To WILLIAM BRYER NATION, of Union Row, Union Bridge, Rotherhithe, London, Analytical Chemist, for the invention of "Improvements in the manufactnre of superphosphate of lime."

1390. To ROBERT BARCLAY, of Bucklersbury, in the city of London, for the invention of "Improvements in the manufacture of paper from which writing or other inks cannot be expunged or extracted without detection."

1392. And to ROBERT RIDDELL FAIRGRIEVE, of Boston, in the United States of America, Machinist, and SIMEON BATHGATE, of the town and county of Selkirk, North Britain, Engineer, for the invention of "Improvements in machinery or apparatus for winding yarns or thread."

On their several petitions, recorded in the Office of the Commissioners on the 7th day of June, 1859.

1394. To JOHN HENDERSON, WILLIAM HENDERSON, and THOMAS BAGLEY, of the city of Durham, Carpet Manufacturers, and SAMUEL HOLDSWORTH, of the same place, Engineer to Messrs. Henderson and Company, for the invention of "Improvements in looms for weaving, some of which improvements are applicable to other purposes."

1396. To JOSEPH BENNETT HOWELL, of Sheffield, in the county of York, Steel Manufacturer, JOHN HICK, of Great Bolton, in the county of Lancaster, Iron Founder, and WILLIAM HARGREAVES, of the same place, Ironfounder, for the invention of "Improvements in apparatus for applying heat to steam or other boilers or vessels, and for facilitating the combustion of gases and smoke."

1398. To JEAN BAPTISTE MOLOZAY, of No. 68, Rue d'Angoulême du Temple, in the city of Paris, Gentleman, for the invention of "New means of manufacturing velvet."

1400. And to ALFRED VINCENT NEWTON, of the Office for Patents, 66, Chancery Lane, in the county of Middlesex, Mechanical Draughtsman, for the invention of "Improvements in gas meters."—A communication from abroad by William Richards, of Barcelona, in the kingdom of Spain.

On their several petitions, recorded in the Office of the Commissioners on the 8th day of June, 1859.

Patents Sealed.

LIST of LETTERS PATENT which passed the Great Seal on the

17th June, 1859.

2900. JAMES MACKENZIE, Manager to William Strode, of Saint Martin's le Grand, in the city of London, Gas Engineer, for an invention of "Improvements in those gas burners known as ventilating sun burners." — Dated 18th December, 1858.

2902. JAMES TAYLOR, of Birkenhead, Engineer, for an invention of "Improvements in the construction of pumps or engines for lifting and discharging water."—Dated 18th December, 1858.

2908. SAMUEL HUNTER, of Newcastle-upon-Tyne, Gentleman, for an invention of "Improvements in the construction of anchors."—Dated 20th December, 1858.

2910. JAMES RONALD, of Liverpool, in the county of Lancaster, Merchant, for an invention of "An improved machine for the direct spinning of hemp, flax, and other like fibrous materials."—Dated 20th December, 1858.

2914. WILLIAM ELBERT DANDO, of the state of Pennsylvania, in the United States of America, at present residing in Manchester, in the county of Lancaster, Clerk, for an invention of "Improvements in apparatus for lowering boats from ships or vessels, and also for raising the same as required."—Dated 21st December, 1858.

2924. Michael Kenney, of Queen Street, Dublin, Mechanical Engineer, for an invention of "Improvements in bridges."—Dated 22nd December, 1858.

2933. James Ronald, of Liverpool, in the county of Lancaster, Merchant, for an invention of "Improvements in and machinery for the manufacture of 'hard-topped' and 'soft laid' twine, 'mill banding,' strands for ropes and other purposes and cordage generally from hemp, flax, cotton, and other like fibrous materials."—Dated 23rd December, 1858.

2958. William Armand Gilbee, of No. 4, South Street, Finsbury, London, Patent Agent, for an invention of "Improvements in treating fatty bodies, and in the apparatus employed therein."—A communication from a Foreigner residing abroad.—Dated 27th December, 1858.

2961. Claude Mamès Augustin Marion, of Paris, in the empire of France, Manufacturer, for an invention of "An improved box or case for containing and preserving sensitive photographic paper, called 'Marion's box.'"—Dated 27th December, 1858.

2997. John Wallace Duncan, of Grove End Road, St. John's Wood, in the county of Middlesex, Gentleman, for an invention of "Improvements in or connected with appliances for transmitting or conducting signals or action by electricity or magnetism, and in the method of testing insulating materials, combinations, or structures for conducting electricity, and in treating malconstructed or invalid electric telegraph cables, and in utilizing parts of certain cables, or the application otherwise of such structures, and in certain insulating compounds, and in the apparatus and machinery used in connection therewith."—Dated 30th December, 1858.

30. Jacob Furnival, of Leamington, in the county of Warwick, Thomas Furnival, of Colridge, John Derbyshire, of Longton, and Francis Joseph Emery, of Burslem, all in the county of Stafford, for an invention of "Improvements in apparatus for supporting articles of china and earthenware in kilns and ovens."—Dated 3rd January, 1859.

40. Robert Rumney, of Manchester, in the county of Lancaster, Manufacturing Chemist, and William Stevenson Macdonald, of the same place, Mechanic, for an invention of "Improvements in printing and dyeing woven fabrics and yarns or threads."—Dated 5th January, 1859.

82. Benjamin Robbin, of Yarmouth, Nova Scotia, Master Mariner, for an invention of "Improvements in the machinery for working pumps."—Dated 11th January, 1859.

100. Robert Mushet, of Coleford, in the county of Gloucester, Metallurgist, for an invention of "A new or improved metallic alloy."—Dated 12th January, 1859.

132. Robert Mushet, of Coleford, in the county of Gloucester, Metallurgist, for an invention of "Improvements in the manufacture of cast steel."—Dated 15th January, 1859.

134. Robert Mushet, of Coleford, in the county of Gloucester, Metallurgist, for an invention of "An improvement or improvements in the manufacture of cast steel."—Dated 15th January, 1859.

234. William Edward Newton, of the Office for Patents, 66, Chancery Lane, in the county of Middlesex, Civil Engineer, for an invention of "An improvement in life preserving vests."—A communication from T. A. Delano, residing in the United States of America.—Dated 25th January, 1859.

310. Henry Constantine Jennings, of 8, Great Tower Street, in the city of London, Practical Chemist, for an invention of "Improvements in the manufacture of paper and artificial parchment, and of gelatine, applicable to the sizeing of the same and other purposes."—Dated 3rd February, 1859.

860. Isaac Adams, of the state of Massachusetts, of the United States of America, for an invention of "An improved tubular chain cable guide for vessels bulwarks."—A communication from Alfred S. Phillips, a resident of Boston, of the said state of Massachusetts.—Dated 6th April, 1859.

988. Alexander William Williamson, of University College, London, for an invention of "Improvements in making extracts from liquorice root."—Dated 19th April, 1859.

1110. Jedediah Morse, of the state of Massachusetts, of the United States of America, for an invention of "An improved power printing press." Dated 3rd May, 1859.

Patents on which the Stamp Duty of £50 has been Paid.

(*To 15th June, 1859, inclusive.*)

13th June.

1418. Edouard Guérin, of Paris, in the empire of France, Civil Engineer, for an invention of "A self-acting apparatus for working railway breaks."—Dated 16th June, 1856.

14th June.

1336. William Smith, of 82, Margaret Street, Cavendish Square, in the county of Middlesex, Engineer, for an invention of "Improvements in apparatus for regulating the supply of air to furnaces."—Dated 4th June, 1856.

15th June.

1453. James Bullough, of Accrington, in the county of Lancaster, Manufacturer, for an invention of "Improvements in looms."—Dated 20th June, 1856.

DELIVERY OF LETTERS.—For the Great Seal Patent Office the initials are W. C., the District being the Western Central. In the direction of a Letter, these initials should be legibly written in a separate line, and should in all cases end the address, thus:—

The Commissioners of Patents,
Great Seal Patent Office,
25, Southampton Buildings,
London,
W.C.

FOREIGN PATENTS.

AUSTRIA.*

List of Patents which were Granted, Prolonged, or became Void during the Month of March, 1859.†

(*Communicated by the Austrian Government.*)

1. Patents Granted.

1. Lorenz Nemelka, of Fischamend, for "Improvements in machines for grinding and cleaning corn and for rolling barley."—1 year.—(Secret.)—Dated 3rd March, 1859.

2. M. A. Franz Mennons, of Paris, represented by A. Martin, Vienna, for "A peculiar apparatus for preventing incrustations of steam boilers."—1 year.—(Secret.)—Dated 3rd March, 1859.

3. Alois Görlich, of Vienna, for "A peculiar method of plastering streets."—1 year.—(Secret.)—Dated 4th March, 1859.

4. Friedrich Rödiger, of Vienna, for "Improvements in apparatus for preserving timber."—1 year.—(Secret.)—Dated 4th March, 1859.

5. Dollfuss, Mieg and Co., of Mulhouse, France, represented by Georg Märkl, Vienna, for "A peculiar application in calico-printing."—1 year.—(Secret.)—Dated 4th March, 1859.

6. Carl and Joseph Koppitz, Louise and Pauline Paltauf, of Vienna, for "Improvements in sewing machines, whereby the chief parts are totally altered and partly superseded by new ones."—1 year.—(Secret.)—Dated 4th March, 1859.

7. Sommereyer and Co., Emil Baars and Carl Keck, of Vienna, for "Manufacture of fire-proof safes in all shapes."—1 year.—(Secret.)—Dated 4th March, 1859.

8. William Sellers, of Philadelphia, U.S., represented by Dr. C. W. Tremel, Vienna, for "Improvements in vertical boring and turning machines for removing the usual vibration therein, for rendering those machines complete by themselves, and for rendering the axis of the disk independent from the stone or brick foundation."—1 year.—(Public.)—Dated 4th March, 1859.—(American Patent, 23rd June, 1857.)

9. Adolph Steinberger, of Vienna, for "Elastic expansive spring garments for ladies."—1 year.—(Secret.)—Dated 7th March, 1859.

10. Rudolph Wappenstein, of Manchester, represented by Friedrich Paget, Vienna, for "Improvements in the manufacture of artificial whalebone."—3 years.—(Public.)—Dated 7th March, 1859.

11. W. H. Sleeboom, of Hamburg, represented by Dr. Julius Cölestin Serdl, Vienna, for "A peculiar construction of keels for preventing the drifting of vessels."—1 year.—(Secret.)—Dated 7th March, 1859.

12. Ignaz Strassenreiter, of Pesth, for "Improvements in the manufacture of soap for softening the skin by applying vegetable substances thereto."—1 year.—(Secret.)—Dated 7th March, 1859.

13. Daniel Heindörffer, of Hervatö, Hungary, for "An expeditious and cheap mode of obtaining artificial manure from vegetable ingredients by applying heat and dampness."—1 year.—(Secret.) Dated 7th March, 1859.

14. Alexander Kapper, of Prague, for "Fastening ladies' mantles and cloaks without using buttons and hooks."—3 years.—(Secret.)—Dated 7th March, 1859.

15. Franz Stiehler, of Vienna, for "An improved system of suspension-bridges."—1 year.—(Public.)—Dated 7th March, 1859.

16. Ignaz Prasch, of Wiener, Neustadt, for "A peculiar construction of a self-acting cooling apparatus applicable to all corn mills for obtaining fine and cheap flour."—3 years.—(Public.)—Dated 7th March, 1859.

17. Rudolph Dittmar, of Vienna, for "A peculiar construction of lamps for burning strong mineral oils (solar oil) without causing smoke or smell.—1 year.—(Secret.)—Dated 7th March, 1859.

18. Bernhard Oblat, of Vienna, for "A peculiar one-horse carriage, or travelling public closet."—1 year.—(Secret.)—Dated 7th March, 1859.

19. William Stettinus Clark, of London, represented by S. M. Krohn, Vienna, for "A peculiar construction of harvesting and mowing machines."—3 years.—(Secret.)—Dated 7th March, 1859.—(English Patent, 5th April, 1858.)

20. Johann Weber, of Wiener, Neustadt, for "Improvements in the construction of nibbling mills and hand mills."—2 years.—(Secret.)—Dated 11th March, 1859.

21. Friedrich Rödiger, of Vienna, for "An apparatus in bridles for stopping fiery horses at once."—1 year.—(Secret.)—Dated 11th March, 1859.

22. Sebastian Grandis, of Turin, represented by G. Märkl, Vienna, for "A peculiar system of railway splints or wedges placed underneath."—1 year—(Public.)—Dated 11th March, 1859.

23. Marcus Anton Franz Mennons, of Paris, represented by A. Martin, Vienna, for "A composition for preventing incrustations in steam boilers."—1 year.—(Secret.)—Dated 11th March, 1859.

* For the Austrian Patent Law, see No. 291 of this Journal.

† In the case of inventions patented in other states as well as in Austria, the Specifications (whether described as "public" or not) may in most cases be consulted, or translations of them be had, at the Library of the Commissioners' Office.

24. Heinrich Meyer, of Bubendorf, represented by August Schmidt, Vienna, for "Improvements in power-looms."—5 years.—(Secret.)—Dated 11th March, 1859.

25. Heinrich Wilhelm Wimshurst and Franz Truemann, of London, represented by Eduard Schmidt, Vienna, for "Improvements in the manufacture of metal sheets and plates to be used as lead and tin foils."—5 years.—(Secret.)—Dated 14th March, 1859.

26. Carl Hahn, of Rustendorf, near Vienna, for "Manufacture of pasteboard and paper from the waste of leather."—1 year.—(Secret.)—Dated 15th March, 1859.

27. Friedrich Paget, of Vienna, for "Improved springs for carrying weights and moderating concussion."—5 years.—(Public.)—Dated 15th March, 1859.

28. Adrian Stokar, of Laibach, for "An economical method of manufacturing nuts."—1 year.—(Public.)—Dated 15th March, 1859.

29. Julius Spitzer, of Pesth, for "Improvements in ladies' dresses by means of a peculiar lining."—1 year.—(Secret.)—Dated 15th March, 1859.

30. Leopold Platschick, of Verona, for "An improved aromatic tooth paste which does not dry."—5 years.—(Secret.)—Dated 16th March, 1859.

31. Leopold Platschick, of Verona, for "An improved aromatic liquid for improving the mouth."—5 years.—(Secret.)—Dated 16th March, 1859.

32. Heinrich Gerner, of New York, represented by Johann Baptist Kuffner, Vienna, for "An economical apparatus for purifying gas."—1 year.—(Secret.)—Dated 16th March, 1859.

33. Ferdinand Sallegg, of Gratz, for "Improvements in the manufacture of impervious galoshes of calf or lambskin for ladies and gentlemen."—1 year.—(Public.)—Dated 17th March, 1859.

34. Penney Youngs, of New York, represented by Dr. C. W. Tremel, Vienna, for "Improvements in sawing machines."—1 year.—(Public.)—Dated 17th March, 1859.—(American Patent, 30th January, 1855.)

35. Wilhelm Sellers, of Philadelphia, represented by Dr. C. W. Tremel, Vienna, for "Improvements in screw-cutting machines."—1 year.—(Public.)—Dated 17th March, 1859.—(American Patent, 1st December, 1857.)

36. Tallachini Brothers, of Milan, for "A machine for reeling Chinese raw silk."—5 years.—(Secret.)—Dated 17th March, 1859.

37. Theodor Dosch, of Vienna, for "Carriage steps for controlling passengers."—1 year.—(Secret.)—Dated 18th March, 1859.

38. Clayton, Shuttleworth, and Co., of Vienna, for "Improvements in machines for removing the grain from maize stalks."—5 years.—(Public.)—Dated 18th March, 1859.

39. Ferdinand Troll, of Vienna, for "Chimney-tops for preventing smoke arising from gushes of wind."—2 years.—(Secret.)—Dated 19th March, 1859.

40. Leopold Jellinek, of Vienna, for "An apparatus in closets for keeping the seats clean and preventing bad smell."—1 year.—(Public.)—Dated 19th March, 1859.

41. Ludwig Häcker and Mathias Humbel, of Ungarisch Altenburg, for "A peculiar machine for cleaning malt."—1 year.—(Secret.)—Dated 19th March, 1859.

42. Anton Louis Adolph Favier, of Paris, represented by Georg Märkl, Vienna, for "Improvements in expeditious tanning."—1 year.—(Secret.)—Dated 19th March, 1859.

43. Peter Joseph Bruno Elias Cabanes, of Bordeaux, represented by Cornelius Kasper, Vienna, for "Improved mechanical sieves for sieving grain, flour, bran, &c."—1 year.—(Secret.)—Dated 20th March, 1859.

44. Eduard Lackner, of Vienna, for "A peculiar mode of manufacturing metal buttons for uniforms and liveries."—1 year.—(Public.)—Dated 20th March, 1859.

45. Peter Konorig, of Pesth, for "Improvements in suspending men's dresses."—1 year.—(Secret.)—Dated 20th March, 1859.

46. Carl Tharesig, of Vienna, for "A so-called 'vegetable essence' for cleaning and preserving the teeth and mouth."—1 year.—(Secret.)—Dated 21st March, 1859.

47. Carl Schan, of Vienna, for "Improvements in apparatus for obtaining hot feed water for all kinds of steam boilers."—2 years.—(Public.)—Dated 21st March, 1859.

48. Franz Bierenz, of Vienna for "A composition called 'indestructible universal composition,' for polishing and grinding."—1 year.—(Secret.)—Dated 21st March, 1859.

49. Sigmund Landauer, of Vienna, for "Carbonizing and compressing peat and other fuel by a wet process."—1 year.—(Secret.)—Dated 21st March, 1859.

50. Jacob Barth, of Krems, for "Improvements in the construction of iron bedsteads."—1 year.—(Public.)—Dated 21st March, 1859.

51. Emanuel Ritter and James Mellinger, of Pesth, for "Rendering button-holes more durable by the application of strings of gum elastic."—1 year.—(Secret.)—Dated 23rd March, 1859.

52. Michael Loup, of Givors, France, Louis Franz Clemens Breguet, and August Franz Koch, of Paris, represented by Cornelius Kasper, Vienna, for "A counter worked by magnets for ascertaining the flow of water, the speed of vessels, &c."—1 year.—(Secret.)—Dated 23rd March, 1859.

53. Juda Wiltschek, of Penzing, near Vienna, for "Improvements in soap which cleans well in little time."—1 year.—(Secret.)—Dated 23rd May, 1859.

54. Israel Weiss, of Ofen, for "Improvements in the treatment of animal skins in tanning, whereby the grease is removed therefrom and the fibres are strengthened."—3 years.—(Secret.)—Dated 26th March, 1859.

55. Sigmund Reinitz, of Pesth, for "Improvements in lining hats for preventing the effects of

perspiration."—3 years.—(Secret.) — Dated 26th March, 1859.

56. Eduard Strengsmann, of Vienna, for "Improvements in oil-lights for candelabra, being equal to gas lights."—1 year.—(Secret.)—Dated 26th March, 1859.

57. Perelis and Pollak, of Prague, for "Machines and manipulation for sorting, purifying, bleaching, and disinfecting feathers for beds."—1 year.—(Secret.)—Dated 26th March, 1859.

58. Friedrich Krüger, of Sudenburg Magdeburg, Bernhard Schäffer, of Magdeburg, and Christian Friedrich Budenberg, of Magdeburg, represented by O. E. Hörner, Vienna, for "A means of removing lime from sugar-juice, and of clarifying sacchariferous liquids."—2 years.—(Public.)—Dated 28th March, 1859.—(Prussian Patent, 25th August, 1858.)

59. Gustav Fritsche, of Biala, for "Obtaining soda from kitchen salt without using sulphuric acid."—1 year.—(Secret.) — Dated 28th March, 1859.

60. Carl Hoffmann, of Vienna, for "Manufacture of light, compendious, and durable cylinder-blasts with a double action from iron, zinc, or other metal sheets."—1 year.—(Secret.)—Dated 28th March, 1859.

61. Johann Stanitz, of Vienna, for "Making portmanteaux of sheet iron with double pasteboard and leather."—1 year.—(Public.) — Dated 28th March, 1859.

62. Leopold Liebscher, of Vienna, for "A machine for cutting pencils."—1 year.—(Public.)—Dated 28th March, 1859.

63. Adolph Mandl, of Ofen, for "Improvements in pockets and other slits of men's dresses."—1 year.—(Secret.)—Dated 28th March, 1859.

64. Pierre Amable de St. Simon Sicard, of Paris, represented by Georg Märkl, Vienna, for "A chemical mechanical process for converting pig iron into steel."—1 year.—(Public.)—Dated 28th March, 1859.

65. Anton Duke of Litta, Visconte Arese, of Milan, for "Improvements in apparatus for heating or drying buildings, workshops, &c., by means of hot air, and for drying yarns, wool, cotton, tissues, &c."—5 years.— (Secret.) — Dated 29th March, 1859.

66. Alois Bing, of Pesth, for "Improvements in the manufacture of durable men's and ladies' dresses."—1 year.—(Secret.)—Dated 29th March, 1859.

67. Julius von Mannstein, of Vienna, for "A two-wheeled carriage, in which the draught animal is placed between the two wheels."—1 year.—(Secret.)—Dated 29th March, 1859.

68. Franz Hirsch, of Vienna, for "Improvements in his composition for washing wool, whereby it may be used for cleaning other objects."—1 year.—(Public.)—Dated 29th March, 1859.

69. Franz Leumötzer, of Wimpassing, Lower Austria, for "A machine for making all kinds of gun-stocks." — 1 year. — (Secret.) — Dated 30th March, 1859.

70. Jacob Malenchini, of Milan, for "Improvements in the manufacture of mineral and metallic asphalt."—1 year.—(Secret.)—Dated 31st March, 1859.

71. August Lenz, of Vienna, for "A peculiar construction of forge hammers and other hammers."—2 years.—(Public.)—Dated 31st March, 1859.

72. Stephen Vidats, of Pesth, for "Improvements in ploughs of wrought iron with a wooden mould-board and moveable fore-train." — 2 years. — (Public.)—Dated 31st March, 1859.

73. Nathan Bichler, of Alt Ofen, for "Improvements in the manufacture of fabrics printed and dyed with blue colours."—1 year.—(Secret.)—Dated 31st March, 1859.

74. Felix Joseph Foncou, of Paris, represented by Georg Märkl, Vienna, for "A smoke-consuming apparatus applicable to the fire-places of fixed and moveable engines, locomotives, steam boats,&c."—1 year.—(Secret.)—Dated 31st March, 1859.

---

2. Patents Prolonged.

1. Joseph Rohrbacher, for "Improvements in mail omnibuses."—9th year. — (Public.) —Dated 28th February, 1851.

2. Rudolph Weinhold, for "Improvements in the manufacture of pasteboard for covering houses."—6th year.—(Secret.) — Dated 26th February, 1854.

3. Mathias Schwell, for "Manufacture of several kinds of mineral colours from gold satinober."—3rd year.—(Secret.)—Dated 18th Februa ry, 1857

4. Joseph Rubesch, for "Smelting plutonic rock-stones into a paste fit for casting, rolling, or pressing."—3rd year.—(Secret.)—Dated 20th February, 1857.

5. Joachim Klatscher, for "Improvements in the manufacture of mens' dresses by using human hair instead of sewing silk."—2nd year.—(Secret.) —Dated 22nd February, 1858.

6. Stephan Peter Proust, for "An apparatus for oiling axles and other rotary machinery."—4th year.—(Public.)—Dated 6th March, 1856.

7. Alois Johann Metzger (Friedrich Schilling, assignee), for "New means of manufacturing boots and shoes."—8th year.—(Public.) — Dated 25th February, 1852.

8. Leopold Zoder, for "A peculiar mode of fixing all kinds of boilers, pans, and other fire-places."—5th year.—(Secret.)—Dated 27th February, 1855.

9. Joseph Mayer, for "Constructing of furniture so as to protect it from vermin."—3rd year.—(Secret.)—Dated 27th March, 1857.

10. Ernst Ziegler, for "A substitute for animal charcoal." — 2nd year. — (Secret.) — Dated 22nd February, 1858.

11. Joseph Ferstl von Förstenau (Joseph Boschan's Sons, assignees), for "Ungreasing and scouring wool."—2nd–4th year.—(Public.)—Dated 24th March, 1858.

12. Ignaz Schoffer, Ferdinand Lehner, and Julius Georg Ellenberger, for "Improvements in the manufacture of fire and waterproof fibrous substances."—5th year.—(Secret.)—Dated 28th February, 1855.

13. Carl Gustav Kern, for "Improvements in his statuary pasteboard."—4th year.—(Secret.)—Dated 15th March, 1856.

14. Carl Heing, for "Cleaning wool and waste wool in a closed sieve by means of metal sticks."—2nd and 3rd year.—(Secret.)—Dated 16th March, 1858.

15. Johann Baptist Mauss, for "Improvements in a method of extracting and fixing the aroma of all kinds of plants, fruit, &c., and for using the same for perfumery articles."—5th year.—(Secret.)—Dated 28th February, 1855.

16. Rudolph Mahler, for "Rendering men's dresses impervious to perspiration and must."—2nd year.—(Secret.)—Dated 15th March, 1858.

17. Franz Swaty and Carl Kirchhof, for "Improvements in their apparatus for preserving substances liable to be damaged by the influence of the atmospheric air."—4th year.—(Secret.)—Dated 1st March, 1856.

18. Anton Strobel, for "Improvements in meerschaum and composition pipes and mouth pieces."—Dated 4th year.—(Public.)—Dated 1st March, 1856.

19. August Klein, for "Improvements in portemonnaies, cigar-cases, and similar articles."—4th year.—(Secret.)—Dated 4th March, 1856.

20. Georg Schwab, for "Making windows, doors, skylights, show-windows, &c., of hollow forged iron tubes or of solid tubes."—4th year.—(Secret.)—Dated 31st March, 1856.

21. Wenzel and Franz Skriwan, for "Improvements in the manufacture of silk and felt hats."—3rd, 4th, and 5th year.—(Secret.)—Dated 25th March, 1857.

22. M. Rolans Peter Joseph Lescrue, for "An embroidering machine."—3rd year.—(Public.)—Dated 22nd April, 1857.

23. Anton von Sibrik, for "A mowing machine."—2nd year.—(Secret.)—Dated 9th March, 1858.

24. Friedrich Wiese, for "Improvements in the manufacture of kitchen vessels."—2nd year.—(Public.)—Dated 9th March, 1858.

25. J. A. Matthäus Chaufoux, for "A system of journals and boxes of axles and cylinders."—2nd year.—(Secret.)—Dated 23rd April, 1858.

26. Wilhelm Eisenmann, for "Improvements in fire-places."—5th year.—(Secret.)—Dated 18th March, 1855.

27. Franz Loret-Vermeersch, for "A mechanical hand-weaving loom."—3rd year.—(Public.)—Dated 4th March, 1857.

28. Bland William Croker, for "Construction of self-lubricating axle-journals of locomotives, tenders, railway carriages."—2nd—6th years.—(Public.)—Dated 8th April, 1858.

29. Angelo Felino Lue, for "A peculiar kind of rails for railways."—2nd year.—(Public.)—Dated 17th June, 1858.

30. Johann Wawra, for "Manufacture of umbrellas and parasols."—5th year.—(Secret.)—Dated 14th March, 1855.

31. Johann Giergel, for "Improvements in playing cards."—4th year.—(Secret.)—Dated 15th April, 1856.

32. Bernhard Schäffer and C. F. Budenberg, for "A new construction of manometers for measuring high and low pressure of steam, water, and air."—8th year.—(Public.)—Dated 22nd March, 1852.

33. Alois Johann Metzger, for "Grease for leather."—3rd year.—(Secret.)—Dated 8th June, 1857.

34. Johann Bertin, for "Improvements in the manufacture of silk and machine-made hats."—2nd year.—(Secret.)—Dated 19th May, 1858.

35. Joseph Pohlmann, for "So-called 'cosmetic liquid for the mouth.'"—5th–10th year.—(Secret.)—Dated 19th January, 1857.

36. Ignaz Martin Guggenberger, for "Improvements in constructing and preserving roads, streets, and railways."—3rd year.—(Secret.)—Dated 9th March, 1857.

37. Leon Pujol, for "A process for manufacturing and purifying water-gas."—3rd year.—(Public.)—Dated 10th March, 1857.

38. Florentin Garand, for "An apparatus in machines for transmitting and preserving motion."—3rd year.—(Public.)—Dated 29th March, 1857.

39. Johann Randnitz, for "So-called 'Pinabin vegetable pomatum.'"—2nd year.—(Secret.)—Dated 11th March, 1858.

40. Michael Lamarche, for "Improvements in tiles."—6th and 7th years.—(Secret.)—Dated 7th March, 1854.

41. Michael Lamarche, for "Improvements in his tiles, as patented 7th March, 1854."—5th and 6th years.—(Secret.)—Dated 9th June, 1855.

42. Ignaz Schoffer and Ferdinand Lehner, for "Refining fat substances, such as rape-oil, linseed-oil, salad-oil, liver-oil, &c., by means of a new substance."—4th year.—(Secret.)—Dated 25th March, 1856.

43. J. C. Stelzl, for "Blacking."—2nd year.—(Secret.)—Dated 11th March, 1858.

---

3. Patents which have become Void.*

1. Carl Exter, for "Treatment of peat."—Dated 28th January, 1857.—Annulled 2nd March, 1859, in consequence of not being worked.

2. Franz Weiss (Peter Paul Fritsch, assignee), for "An oval drum washing machine."—Dated 26th November, 1855; expired 26th November, 1858.

3. Ferdinand Hallmann and Johann Swenoha, for "Converting Bramah locks of fireproof iron chests from rim-locks into slide locks."—Dated 2nd December, 1857; expired 2nd December, 1858.

4. Anton Ignaz Krebs, for "Combining knives or other edge tools with pencil cutters."—Dated 26th December, 1857; expired 26th December, 1858.

5. Max Krauss, for "Improvements in fastening ladies' dresses."—Dated 5th September, 1853: expired 5th September, 1858.

---

* The Specifications of these Patents may be consulted in the original language, or translations be had at the Public Free Library.

6. Gustav Hirsch, for "Improvements in metal catch-springs with metal cylinders."—Dated 7th September, 1853; expired 7th September, 1858.

7. J. F. H. Hemberger, for "Improvements in the construction of looms for obtaining various and peculiar kinds of fabrics."—Dated 12th September, 1853; expired 12th September, 1858.

8. Anton Wedl and Leopold Müller, for "A process for printing woven fabrics by the lithochromic process, and of obtaining lithochromic prints on wood, leather, and sheet-iron."—Dated 29th September, 1853; expired 29th September, 1858.

9. Franz Lengzel, Johann Weiss, and M. Lobmayer, for "Economical kitchen ranges."—Dated 5th September, 1855; expired 5th September, 1858.

10. Wenzel Saidan, for "Improvements in the manufacture of seals of names."—Dated 29th September, 1855; expired 29th September, 1858.

11. Ludwig Rappacioli, for "A new process for manufacturing mirrors."—Dated 30th September, 1855; expired 30th September, 1858.

12. Gustav Fritsche, for "A peculiar mode of decomposing kitchen salt for the manufacture of soda, and chemicals related thereto."—Dated 17th September, 1856; expired 17th September, 1858.

13. Johann Baptist de Lorenzi, for "Improvements in the phonochromic system of organs."—Dated 18th September, 1856; expired 18th September, 1858.

14. Arnaud and Co., for "A rotary apparatus worked by steam, or any other fluid."—Dated 20th September, 1856; expired 20th September, 1858.

15. Alexander Lindner, for "Improvements in screw-breaks of railway carriages."—Dated 24th September, 1856; expired 24th September, 1858.

16. Peter Dugué, for "A root-cutter."—Dated 1st September, 1857; expired 1st September, 1858.

17. Friedrich Russ, for "Improvements in oil reservoirs of oil lamps."—Dated 2nd September, 1857; expired 2nd September, 1858.

18. Friedrich Russ, for "Improvements in burners of oil lamps."—Dated 2nd September, 1857; expired 2nd September, 1858.

19. Peter Tiget, for "A process for burning bricks and pottery by means of a clay substance."—Dated 2nd September, 1857; expired 2nd September, 1858.

20. C. Stengle and P. Catraro, for "A kiln for obtaining fat and hydraulic lime."—Dated 2nd September, 1857; expired 2nd September, 1858.

21. Salomon Wallerstein, for "A machine for taking self-measurement for dresses."—Dated 2nd September, 1857; expired 2nd September, 1858.

22. Georg Gleischner, for "Improvements in Krems vine scissors."—Dated 3rd September, 1857; expired 3rd September, 1858.

23. Jacob Lemberger, for "A peculiar mode of combining two kinds of silk fabrics for making parasols."—Dated 3rd September, 1857; expired 3rd September, 1858.

24. Schmitz and Marx, for "Improvements in mountings of cotton cards."—Dated 3rd September, 1857; expired 3rd September, 1858.

25. Anton Bartholomäus Kleinert, for "Improvements in travelling-beds, furniture, and travelling-chairs of wood, iron, and hollow wrought iron, which may be taken to pieces."—Dated 16th September, 1857; expired 16th September, 1858.

26. Joseph Köhrer, for "Improvements in making silk hats."—Dated 16th September, 1857; expired 16th September, 1858.

27. Ludwig Franz Devisne, for "Revolving pistols with forced balls."—Dated 20th September, 1857; expired 20th September, 1858.

28. Andreas Ignaz Kunowitsch, for "A folding lighting apparatus, combined with a cigar cutter."—Dated 22nd September, 1857; expired 22nd September, 1858.

29. Saloman Fischer, for "Improvements in the interior construction of steam engines and water mills for grinding corn."—Dated 24th September, 1857; expired 24th September, 1858.

30. Julius Hiller, for "Applying caoutchouc valves to steam and water pipes."—Dated 28th September, 1857; expired 28th September, 1858.

31. Heinrich Servait, for "A silver colour for cleaning silver and other metal objects."—Dated 28th September, 1857; expired 28th September, 1858.

32. Theophil Weisse, for "Improvements in broad cast sowing machines."—Dated 30th September, 1857; expired 30th September, 1858.

33. Paul Toth, for "A perpetuum mobile obtained by turbines with a vacuum for working mills, workshops, &c."—Dated 30th September, 1857; expired 30th September, 1858.

34. Carl Zwilling, for "Manufacture of durable waterproof articles of leather, wood, linen, and other substances."—Dated 23rd February, 1857; annulled 28th January, 1859, in consequence of not being worked.

35. Joseph Adensamer, for "A quick motion in ribbon looms."—Dated 12th October, 1852; expired 12th October, 1858.

36. Louis Leo Wolf, for "Improvements in portable universal mills with a peculiar grinding apparatus and eccentric motion."—Dated 30th October, 1856; expired 30th October, 1858.

37. Alois Egger, for "A new kind of grease for lubricating carriages, machines and works."—Dated 4th October, 1847; expired 8th October, 1858.

38. Johann Georg Bodmer, for "Improvements in locomotives and railway carriages whereby they may travel on curves and carry greater weights."—Dated 31st October, 1850; expired 31st October, 1858.

39. JOHANN GEORG BODMER, for "Improvements in regulators of steam engines, hydraulic wheels, turbines, &c."—Dated 31st October, 1850; expired 31st October, 1858.

40. JOHN PIERREPONT HUMASTON, for "Improvements in apparatus used in the composition and transmission of telegraphic messages."—Dated 9th November, 1856; expired 9th November, 1858.

41. STEPHAN STERLINGREE, for "Improvements in expeditious tanning."—Dated 9th November, 1856; expired 9th November, 1858.

42. JOHN WALLACE DUNCAN, for "Improvements in apparatus for generating steam."—Dated 17th November, 1856; expired 17th November, 1858.

43. PETER PHILIPP CÖLESTIN BARRAT and JOHANN BAPTIST BARRAT, for "A steam engine for breaking up and ploughing lands."—Dated 10th December, 1856; expired 10th December, 1858.

44. AUGUSTIN VRAIN ADRIEN LAUGÈRE, for "An horizontal windmill."—Dated 15th December, 1857; expired 15th December, 1858.

45. LOUIS BEANCHÉ, for "A mechanical apparatus for the expeditious manufacture of cigars."—Dated 24th December, 1856; expired 24th December, 1858.

46. JULIUS HIPPOLYT CLEMENT, for "A break for stopping the rotary motion of all kinds of wheels and cylindrical bodies."—Dated 2nd January, 1858; expired 2nd January, 1859.

47. GERMAIN CANOUIL, for "Improvements in the composition of friction matches."—Dated 13th January, 1858; expired 13th January, 1859.

48. CARL WILHELM SIEMENS, for "A peculiar steam engine, in which the working cylinders utilize repeatedly the same steam by means of reciprocal motion, with a third cylinder (regenerator)."—Dated 6th November, 1855; expired 6th November, 1858.

49. M. ROLANS SAINTARD, for "A peculiar break for railway carriages and common carriages."—Dated 2nd October, 1857; expired 2nd October, 1858.

50. JOHANN DUPONY-LANGA, for "A composition for keeping varnished leather in a smooth and brilliant state."—Dated 1st November, 1857; expired 1st November, 1858.

51. JÉRÔME NAPOLEON MOURET, for "An apparatus for establishing a close connection between the different carriages of a railway train, whereby the tail motion is obviated."—Dated 1st December, 1857; expired 1st December, 1858.

52. D. BRIX, for "A machine for making drains with grooved ends."—Dated 30th November, 1857; expired 30th November, 1858.

UNITED STATES OF AMERICA.

(Communicated by the Commissioner of Patents.)

LIST of PATENTS, with Claims annexed, issued from the United States Patent Office, for the week ending 31st May, 1859, and each bearing that date.

No. 24,184. GEO. M. ALSOP, of Philadelphia, Pa., for an "Improvement in air springs for railroad cars."

"What I claim, 1st, is the method or arrangement of enclosing an elastic air-tight vessel filled with air, in a box or chamber with a flexible waterproof cover, or diaphragm, and surrounding the air vessel with water, or some other suitable fluid, substantially as herein-before described, and for the purpose set forth. 2d, I claim the arrangement of the convex steel plates B^{11}, which are divided into radiating leaves, or segments, connected together at the centre, whose outer edges or periphery rest upon and slide on the metal ring or plate *b*, and in the recess in the bottom of the top A^1, the whole being arranged as herein-before described, for the purpose of forming a flexible metallic support or covering to the diaphragm, to prevent its being strained or ruptured, substantially as set forth. 3d, I claim the combination and arrangement of the piston D, with its elastic cushion E, the flexible steel plate or plates B^{11}, the metal plate or rings *b*, *b*, and the diaphragm B, B^1, the whole being arranged and combined, substantially as described, and for the purpose set forth."

No. 24,185. C. F. ANDERSON, of Charlestown, N.H., for an "Improvement in seed planters."

"I claim the ratchet-shaped projections *d*, *e*, in the hub H of wheel B, and on the disk K of the tube J, in connection with the tube L, provided with the spiral and straight grooves *f*, *g*, in which the projection *h* of the tube J is fitted. The tube L having the side lever M attached, and also the catch *i*, the whole being combined and arranged to operate, as and for the purpose set forth."

No. 24,186. ENSIGN BAKER, of Fredonia, N. Y., for an "Improvement in straw cutters."

"What I do claim is, 1st, the employment or use of the leger knife J, provided with the hook a^*, actuated by the cam F, and used in connection with the knives E, E, attached to the wheel D, and provided with the hooks G, G, to operate substantially as and for the purpose herein set forth. 2d, the arrangement of the crank H, spring L, with rack *d* attached, and the ratchet *c*, on the shaft of the feed roller K, substantially as shown, to feed the stuff intermittently to the knives, as described."

No. 24,187. JOHN A. BAWSEL, of Powhatan Court House, Va., for an "Improvement in tobacco presses."

"I claim, 1st, the use of the follower B^1, fitting into the groove of the opposite roller, substantially as set forth. 2, I claim the springs S, as constructed and operated for guiding the tobacco and straightening the leaves as they pass between the rollers, substantially as described. 3, I claim the use of the treadle H, in combination with the springs S, and with the rollers B and C, operating substantially as described, for separating the springs S, and also for separating the rollers, as set forth. 4, I claim the oil cup O and roller V, in connection with grove *r*, for oiling the groove and the tobacco, substantially as described."

No. 24,188. ALBERT BETTELEY, of Boston, Mass., for an "Improvement in elevators for hoisting goods in warehouses, &c."

"I claim so arranging and combining a rider (*t*), with a brake, by the means described, or their equivalents, as to

operate upon a driven pulley to check or prevent its rotation whenever the driving belt breaks, or is removed."

No. 24,189. Joseph D. Billings, of Rutland, Vt., for an "Improvement in frieght cars."

"I claim placing a metal shoe, single, or continuous, between the studs or sheathing boards and sills of railroad cars, for excluding the water and thereby preventing the rapid decay of the same, substantially as herein-above set forth."

No. 24,190. John W. Brewster, of Stamford, N.Y., for an "Improved wrench."

"I claim as a new article of manufacture, a wrench, having a six-sided handle A, stationary jaw B, and sliding jaw C, with apertures (c) of the precise form shown, and the article being otherwise made as herein set forth."

No. 24,191. Jay H. Brown, of Grand Ledge, Mich., for an "Improved machine for punching metal."

"But what I do claim is, the application and use of the bars I, I, in combination with the lever L, punching bar E, frusto-conical rollers *o*, *o*, *o*, *o*, &c., rod G, and spiral (or equivalent) spring *s*, for the purposes specified, the whole being constructed and arranged substantially in the manner as herein described and set forth."

No. 24,192. Frederick Bucher, of Columbia, Pa., for an "Improvement in stoves."

"What I claim is, in combination with the fire cylinder the double radiators *h*, each enclosing an interior chamber and register, so that the draft may be direct or checked at pleasure in its passage through the stove, by which means I obtain much radiating surface and economize much fuel, the whole being arranged substantially as herein represented."

No. 24,193. John P. Carr, of Mattapoisett, Mass., for an "Improved pump gearing."

"But what I do claim, and to what I do confine myself, is, the device, as herein set forth and described, for operating pumps on board of ships and in other places, where said invention may be useful."

No. 24,194. John Clackson, of Milford, Pa., for an "Improved joiners' clamp."

"I claim the clamp formed of the bar A, with the jaws D, F, constructed, arranged, and fitted on it, substantially as described, to form a new and improved article of manufacture."

No. 24,195. E. P. Clark, of Holyoke, Mass., for an "Improvement in composition for pencils."

"I claim the composition for pencils for indelible writing, made by combining nitrate of silver with the several other ingredients herein specified, substantially in the manner, and in about the proportions herein set forth."

No. 24,196. Wm. Clemson, of East Woburn, Mass., for an "Improved machine for grinding saws."

"I claim the elliptical bearings *a*, *a*, lever L, and double gearing F, F, and G, G, in combination with the adjustable bearing plates D, D, when all are arranged substantially as and for the purposes herein-above specified."

No. 24,197. Jacob Closs, of Decatur, Ind., for an "Improved churn."

"I claim the use of the screw dashers D, E, constructed and operated as set forth, in connection with the wings F, F, as specified."

No. 24,198. T. B. Coursey, of Fredrica, Del., for an "Improvement in corn crushers."

"I claim the employment or use of the serrated flanches F, F, placed obliquely and eccentrically on the shaft B, in combination with the crushing heads C, D, and shell A, substantially as and for the purpose set forth."

No. 24,199. E. Hall Covel, of New York, N. Y, for an "Improvement in gas regulators."

"What I claim is, 1st, the combining of the rotary pump or air forcer with the air receiver and its fluid valve arrangements, in the manner herein set forth, whereby the one controls the action of the other, and through their joint action the charging apparatus is controlled, substantially as described. 2d, I claim connecting the commingling chamber of the charging apparatus with the air receiver, for the purposes set forth."

No. 24,200. E. Hall Covel, of New York, N. Y., for an "Improvement in hydro-carbon vapor apparatus."

"What I claim is, 1st, constructing the apparatus for th e purposes herein set forth, of detachable parts or chambers, substantially as described. 2d, I claim the arrangement of the feed pipes or tubes and outlet pipes, whereby I am enabled to pass in the material to any one of the chambers, or to let out material, and to examine the interior while the apparatus is in operation and the process of charging going on, as herein set forth."

No. 24,201. G. F. Decker, of Scranton, Pa., for an "Improvement in railroad car trucks."

"I claim the axles B of a track, in separate or inde pendent frames *b*, *b*, attached to the bed piece *a*, as shown and connected by a spring or flexible plate *e*, and used in connection with the spring C, arranged substantially as and for the purpose set forth."

No. 24,202. Edwd. J. Durant, of Lebanon, N.H., for an "Improvement in hand lever."

"I claim combining the forked shaft *a*, with the sliding head piece *b*, the intermediate lever *c*, and the hand lever *d*, in such a manner as to form a compound leverage car mover, that can be operated substantially as herein set, forth."

No. 24,203. Celestin Eastburn, of Spencer County, Ky., for an "Improvement in cultivators."

"What I claim is the arrangement of the plows D, wheel F block J, spring I, and rake H, as set forth and described, for the purposes specified."

No. 24,204. Frederick Ebeling, of New York, N. Y., for an "Improvement in machinery for crushing and mixing sugar."

"What I claim is, first, the reciprocating plunger *p*, acting on the sugar loaf, in combination with the revolving cutter head *e*, in the manner and for the purposes substantially as specified. Second, I claim the support *r*, and latch *s*, actuated as set forth, and acting to drop one loaf of sugar at a time from the hopper, so as to be pressed forward by the plunger *p*, as set forth. Third, I claim the sliding bar c^1, fitted with the incline 15, in combination with the pins 10, on the wheel *m*, and the weight o^2, or its equivalent, for drawing back the plungers *p*, *p*, in the manner and for the purposes specified. Fourth, I claim the revolving mixers *y*, y^1, constructed with slats *z*, *z*, between the heads, in the manner and for the purposes set forth."

No. 24,205. Jeremiah Essex, of North Bennington, Vt., for an "Improvement in machines for drying fibrous substances."

"What I claim is the manner herein specified, of guiding and ascending and descending endless apron by the pulley *d*, *d*, or their equivalents, acting on the edges of said endless apron, in the manner and for the purposes specified."

No. 24,206. Merrill A. Furbush and Geo. Crompton, of Worcester, Mass., for an "Improvement in looms for weaving plaids, &c."

"What we claim, is, the employment of two sets of ratchet wheels and appendages, each set consisting of reversed ratchets, substantially as described, in combination with two sets of cams and two series of shuttle boxes, substantially as and for the purpose specified. And we also claim the two sets of reversible ratchets and appendages, the two sets of cams, and two series of shuttle boxes, substantially as described, in combination with one pattern chain of cylinder, in manner substantially as and for the purpose specified."

No. 24,207. Geo. Geer, of Uniontown, Ill., for an "Improved washing machine."

"I claim a washing machine, provided with a lever I, cylinder of rollers F, clutch (*j*), endless belt B, adjustable levers C, C, made as set forth, and otherwise constructed as shown, so that by shifting the lever I the motion of the belt will cease and hold the clothes at rest beneath the rotating cylinder of rollers F, and so that the belt B may be loosened or tightened, when desired, by shifting the levers C, C, as herein specified."

No. 24,208. Jacob Gove, of Milford, N. H., for an "Improvement in tanning leather."

"What I claim is, giving to the liquor or tanning fluid in the vat, a rapid motion, commencing across the bottom of the vat, and under the suspended hides, for the purpose set forth."

No. 24,209. John Hassell, jr., of Newark, N. J., for an "Improvement in construction of pins for securing artifical teeth."

"What I claim is the split pin, used double, or single, half round, or flat, for the purposes set forth, and substantially as herein described."

No. 24,210. Henry Havell, of Newark, N. J., for an "Improved meat cutter."

"What I claim as my invention, is, 1st, the hook-pointed rotary knives, E, *e*, arranged in the described relation to the hopper F, for the purpose explained. 2nd, the combined arrangement of the stationary curved knives C, C¹, latitudinal grooves *d*, and rotary knives E, substantially as and for the purposes set forth."

No. 24,211. Robt. W. Hazlett and John H. Hobbs, of Wheeling, Va., for an "Improvement in retorts for distilling coal oils."

"We claim, 1st, constructing the horizontal retort with a pan or flat-shaped base A, and inclined upper sides or top B, B, and with open conduits or gutters *b*, *b*, running from end to end of the retort, and arranged on the inner side thereof, and set inclining and emptying into the neck of the retort the whole for united operation, substantially as and for the purpose herein set forth. 2nd, the drawer or charger D, when open at top, and in no way or at any time attached as a fixture to the retort, and yet serving during the distilling process as a part of the generating chamber, and being kept elevated above the bottom of the generating chamber, and allowed to slide in and out without the necessity of removing or disconnecting any portions of the retort or generator, substantially as and for the purpose herein set forth."

No. 24,212. J. E. Holmes, of Newark, O., for an "Improvement in retorts for distilling oil from coal."

"I claim the employment in a retort for distilling oil from coal of a central perforated tube P, suspended from the mouthpiece A¹, an open space being also left below the bottom of tube P, for the removal of the coke residuum through the mouth C, substantially as herein shown and described."

No. 24,213. Henry Hooton, of Boston, Mass., and Jos. G. Bicknell, of Cambridgeport, Mass., for an "Improvement in wheel jack for carriages, &c."

"We claim, first, the combination of the hollow box *a* with the lever D, the front jointed pawl C, the back pawl C, and the notched shaft B, operating substantially as described. Second, the combination of the button E, the spring F, the catch G, the button H, and the jointed connecting rod K, operating substantially as described."

No. 24,214. Mark Howland, of Waterbury, Conn., for an "Improved door latch."

"I claim the within-specified relative arrangement for united operation of the latch C with female screw threaded socket *s*, latch guide plate *u*, with square opening *v*, latch shank or rod B, with male screw thread *t* on its front end, stationary slotted guide case *A*, *b*, *a*, *a*, shoulder *w*, on the latch shank or rod B, spiral spring D, sliding connecting link or plate E, with cross heads *d*, *d*, and double-acting knob tumbler F, *c*, *c*, all for the purpose herein set forth."

No. 24,215. Robt. W. Huston, of Calais, Maine, for an "Improved mode of securing corks in bottles."

"I claim the within-described fastener, which consists of the metallic pieces 3, 3, which are hinged on a wire secured below the enlargement on the bottle neck, and which are provided with teeth 5, 5, 5, with the strips 6, 6, and with the wire 2, and clasp 11, the several parts being arranged substantially in the manner and for the purpose herein specified."

No. 24,216. A. B. Irving, of Terre Haute, Ind., for an "Improvement in sewing machines."

"What I claim is, the arrangement relatively to one another of the following parts, to wit: the upper and lower feeding arms D, D¹, upper and lower rock shafts E, E¹, actuating cam C, combining and regulating projection J, and slotted adjustable spring holding down bar I, for the purposes set forth."

No. 24,217. Wm. G. W. Jaeger, of Baltimore, Md., for an "Improvement in retorts for distilling oil from coal."

"1st, what I claim is, the side channels *d*, *d*, and the trap openings or discharge pipes *e*, *e*, for the heavy oils, as set forth. 2d, in combination with said side channels I claim the double inclination or arched form of the bottom of the retort. 3d, in combination with the coal oil retort, constructed substantially as above set forth, I claim the opening *g*, for the purposes set forth."

No. 24,218. Mathaus Kaefer, of New York, N. Y., for an "Improvement in machinery for transmitting motion."

"But what I do claim is, the arrangement of the carriage C, and fly wheel E, in such relation to the crank F that the weight of the carriage and of the fly wheel acts on the crank, substantially in the manner herein specified."

No. 24,219. Geo. Lindley, of Chicago, Ill., for an "Improvement in field rollers."

"I claim the vibrating scrapers, constructed and arranged so that the driver can operate them, to clear the rollers of the earth adhering to them when the machine is drawn in either direction, substantially as described. I claim constructing and arranging the platform, so that the ends which support it may vibrate freely under it, substantially as described, when the rollers pass over uneven ground."

No. 24,220. Tindal A. Madison, of Terre Haute, Ind., for an "Improvement in the mode of connecting and disconnecting machinery by means of a belt."

"I claim, 1st, the combination of the shifting bar K with the belt D, D, D, the driving pulley A, and the series of dead rollers H, H, H, or their equivalents, for the purpose described. 2d, the combination of the shifting bar K, and box M, M, with the gate or pawl N, or their equivalents, for the purposes described. 3d, the guide plate S, with its slot U, U, in combination with the friction roller *h*, or their equivalents, for the purpose of giving both forward and lateral motion to the belt D, D, D, when moved from a state of rest, as described. 4th, the series of dead rollers H, H, H, for the purposes and arranged in the manner set forth. 5th, the lever J, in combination with the slots *d* and *e*, the stud *f*, and connecting rod R, for the purpose of operating the gate or pawl N, in the manner described."

No. 24,221. Thos. J. Mayall, of Roxbury, Mass., for an "Improved water-tight sink."

"What I claim is, the production as a new article of manufacture of water-tight sinks, formed from vulcanized india rubber or gutta percha, substantially in the manner and for the purposes above set forth."

No. 24,222. Chas. McBurney, of Roxbury Mass., for an "Improved suction hose."

"What I claim is, the rings B, operating in the manner substantially as set forth."

No. 24,223. W. H. McClintock, of Frankfort, Ohio, for an "Improved churn."

"What I claim as my invention is, the employment of the within-specified peculiarly-constructed circularly-vibrating suction and force pump, in combinatian with a churn, constructed with a perforated partition, substantially as and for the purpose set forth."

No. 24,224. Robt. McKenna, of Rossville, Tenn., for an "Improved device for operating the index of time registers."

"What I claim is, the moving of the pencil, in the manner described."

No. 24,225. Thos. E. McNeill, of Philadelphia, Pa., for an "Improvement in seats and couches for railway cars."

"I claim, first, the end frame D of the seat, with its slotted top, and the slotted plate secured to the side of the car, in combination with the back F, and its pins or bolts, when the several parts are adapted to and arranged in respect

to each other, substantially as set forth. Second, the arms *d*, so hinged to the inside of the end frame as to be folded down under the seat during the day, and elevated so as to form supports for the couches during the night, in the manner specified. Third, the vertical frames N, hinged to the side of the car, and furnished with ledges to support two couches. Fourth, the board R, its rods *p*, and the hangers *n*, when arranged as and for the purpose herein set forth."

No. 24,226. JOHN MCPHERSON, of Pennington, N. J., for an "Improvement in harvesting machines."

"What I claim as my invention is, 1st, the curved slatted flexible apron K, when constructed in the manner and for the purposes set forth. 2nd, the combination of the endless apron I, with the curved slatted flexible apron K; the whole being constructed and arranged in the manner and for the purposes set forth."

No. 24,227. REUBEN M. MELTON, of Criglersville, Va., for an "Improvement in cultivators."

"What I claim therein, as new, is, first, the combination of the adjustable links with the adjustable slide, arranged substantially as described, for the purpose of adjusting the distance between the ploughs. Second, in combination with the curved plough beam, I claim the coulter constructed and arranged substantially as described, whereby the draught of the side ploughs is regulated by sliding the coulter on the beam, and firm support given to the coulter, in passing through compact soil."

No. 24,228. JAMES R. MOCK, of Elizabethtown, Ky., for an "Improvement in lock for repeating fire-arms."

"I claim the use of the coiled spring F, in combination with the sliding lock, catch No. 6, the catch spring No. 7, and grooved barrel, and grooved breech pin, substantially as described."

No. 24,229. RICHD. MONTGOMERY, of New York, N.Y., for an "Improvement in manufacture of corrugated beams."

"What I claim, is, the roller A, with its peculiarly-formed projections and recesses, in combination with the roller B, with its peculiarly formed projections and recesses, arranged and operating in relation to each other, substantially as and for the purposes set forth. I also claim the rollers A and B in combination with the former C, said parts being constructed, arranged, and operating in relation to each other substantially as and for the purposes described."

No. 24,230. MORDECAI R. MOORE, of Philadelphia, Pa., for an "Improvement in apparatus for seasoning lumber."

"What I claim, is, the combined arrangement of the track rails C and C^1, or their equivalents, with a steaming and drying chamber or vessel A, fitted with steam pipes and stop-cocks or valves substantially as described, so as to operate therewith substantially in the manner and for the purposes specified."

No. 24,231. D. J. OWEN, of Springville, Lynn, Pa., for an "Improved broom."

"I claim as an improved article of manufacture, a broom provided with a leather bag A, spring C, and otherwise made as herein shown and described."

No. 24,232. GEO. W. PARKER, of Fitzwilliam, N.H., for an "Improvement in cross cut sawing machines."

"I claim the cross head and the several parts attached to it, whether arranged as shown in figures 1 and 2, or as in figure 3, together with the piece X, or its equivalent, to work the arms V and N, to raise the saw and the handle *h*, to hold the saw when raised."

No. 24,233. JAMES ROY PARKER, of Sing Sing, N.Y., for an "Improved churn."

"What I claim, is, the combination of the rotating faces of the disk C, with the stationary faces B, B, in the manner and for the purposes set forth."

No. 24,234. JOHN F. PEABODY, of Salem, Mass., for an "Improvement in chairs for railways."

"What I claim, is, my improvement thereon, or the arrangement and application of rail bearers *b*, *b*, with respect to the elastic bearing E, its cap plate F, the base plate *a*, and under the rails A, B, of the railway chair, substantially as described, and particularly with the elastic bearing and cap plate arranged and protected by a recess essentially as explained."

No. 24,235. ALEXR. E. PIRKEY, of Bradford, Ill., for an "Improvement in mills."

"What I claim, is, the within described arrangement of the adjustable slides *d*, and the corner pieces *b*, to operate in combination with the piston B, which receives its motion by means of a lever E, and wheels H and I, substantially in the manner and for the purpose specified."

No. 24,236. ALBERT P. PITKIN, of Hartford, Conn., for an "Improvement in screw dies."

"What I claim, is, making a screw plate A, with both top and bottom parts P, P^1, which hold the die N, cast or made on to the screw plate A, in the manner and for the purpose described. I further claim the making the inlet for the introduction of the die N into its chamber between the parts P, P^1, through the outside edge of the screw plate A, as and for the purpose described."

No. 24,237. CHRISTIAN REIF, of Hartleton, Lewis Township, Pa., for an "Improvement in clover hullers."

"I claim the projections at different angles on the concave, in combination with the spiral rows of projections on the cylinder substantially as and for the purpose set forth."

No. 24,238. EZRA RIPLEY, of Troy, N.Y., for an "Improved nut cracker."

"What I claim, is, the above described nut cracker or implement, consisting essentially of the fixed jaw A, with its standard *e*, the movable jaw B, with its slide *g*, and the eccentric or cam C, with its handle *d*, and flange *k*, all constructed and arranged in combination for conjoint operation substantially as herein described."

No. 24,239. JOSEPH ROSENCRANS, of Avoca, N.Y., for an "Improvement in self-acting wagon brake."

"What I claim, is, the arrangement of means herein set forth for operating the brake by the holding back of the team."

No. 24,240. ANDW. C. ROSS, of Almont, Mich., for an "Improved sawing machine for resawing boards."

"What I claim is, 1st, the arrangement of circular saw K, stationary divider L, in connection with a permanent horizontal bed, in resawing machines, for the purposes set forth. 2nd, the bell-shaped flanges or sockets *z*, of the saws, constructed and employed substantially as and for the purpose herein described."

No. 24,241. GEO. H. RUSSELL, of Baltimore, Md., for an "Improvement in stoves."

"What I claim is, the combination with the inner fire drum A of the cold air base D, vertical side pipes E, E^1, and elbow *e*, with their dampers *g*, *g*, cylindrical cover or top drum F, with its chambers *f*, f^1, f^2, f^3, and connecting tube f^4, horizontal air space G, and outlet *i*, outer air drums I, K, passage *j*, *j*, front vertical register pipes J, J, foot warmer connecting pipes *k*, *k*, and foot warmer L, with its register *l*, ventilating registers R, R, double smoke pipes N, *n*, P, *p*, with dampers set as described, and divided outer smoke drum O, with its passage or passages, substantially as and for the purposes set forth."

No. 24,242. ALBERT M. SMITH, of New York, N.Y., for an "Improved carpet fastener."

"What I claim is, the combination and arrangement of the point '*a*,' lips '*b*, *b*,' slot '*c*,' bearing '*d*,' lips '*e*, *e*,' point '*f*,' hook '*g*,' lips '*h*, *h*,' bearings '*i*, *i*,' substantially as and for the purpose herein specified."

No. 24,243. CHAS. E. SMITH, of Philadelphia, Pa., for an "Improvement in manufacture of belting."

"What I claim is, the manufacture of continuous belting or bands, by uniting pieces of band iron, by lapping and riveting two beveled ends, so as to produce a rhomboidal joint, in the manner and for the purpose substantially as described."

No. 24,244. GEO. STEPHENSON, of Northfield, Ind., for an "Improvement in cordage machinery."

"What I claim is, the employment of a series of movable bearing cross bars (*i*), with side pivots or gudgeons (*k*), the

ends of the cross bars being supported by longitudinal slots or grooves (*h*), in the flyer bars (*a*), and connected to each other by elastic straps or thongs (*l*), whereby the cross bars are made to press gently upon the ends of the spools (which are mounted upon the side pivots *k*), to resist, slightly, the rotary motion thereof, and also admit of the occasional removal of one or more of the spools, without disarranging others of the series, the cross bars, spools, and elastic straps, being arranged in the manner and for the purpose herein described."

No. 24,245. LEVI STEVENS, of Fitchburgh, Mass., for an "Improvement in axle box for railroad cars."

"What I claim is, a box made of anti-friction metal, and backed with a casing of bronze, the bronze passing through the anti-friction metal, and resting upon the axle, for the purpose described."

No. 24,246. JOHN SUTTON, of New York, N. Y., assignor to himself and De Witt C. Van Tuyl, of same place, for an "Improvement in condensing steam engines."

"I claim, 1st, the arrangement of the combined air pump and condenser piston K, to act independently of the walking beam of the engine, so that a portion of the exhaust steam, while the piston F is just completing and commencing a stroke, shall impart a full stroke to the piston K, as herein shown and described. 2d, the arrangement and combination of the forked levers Q, S, the crank E, lever R, and piston rod K^1, so that by the action of the piston K, the crank E, will be assisted in passing the dead points, but during other portions of the crank movement, the parts above named will be disconnected from the crank E, all substantially as herein shown and described."

No. 24,247. GEO. C. TAFT, of Worcester, Mass., for an "Improvement in the manufacture of wrenches."

"What I claim is, the above described peculiar mode of constructing the head and shank of screw wrenches, viz.: by first forming or constructing the head *c* and shank or bar *a* separately, as shown and described, and then uniting the head and shank after the shank *a* has been inserted into the depression *d*, first made in the head *c* by welding, the whole operation being substantially as above described, and for the purposes set forth."

No. 24,248. THOS. H. TATLOW, jr., of Palmyra, Mo., for an "Improvement in seeding machines."

"I claim, 1st, the employment or use of the covering hoe G, operated from the supporting wheel C, through the medium of the rollers *g*, *g*, bar J, and the bars F, I, connected by the rod H, substantially as described. 2nd, the share O, provided with the curved bars j^1, j^1, in connection with the shares M, N, and hoe G, the whole being arranged for joint operation, substantially as and for the purpose set forth."

No. 24,249. JOSHUA W. TAYLOR, of Philadelphia, Pa., for an "Improvement in corn mills."

"What I claim is, the application and arrangement of the oblique projections *c* to the shell or concave *a*, operating in the manner and for the purpose set forth and specified."

No. 24,250. JOSEPH W. THORP, of Hillsboro', N.H., for an "Improvement in tailors' pressing machine."

"I claim raising the heater from the bottom of the hollow goose, either by means of the projections formed on the bottom of the heater, or by adjusting screws, or their equivalents."

No. 24,251. SIMON H. WALKER, of Somerville, Tenn., for an "Improvement in bee hives."

"What I claim is, the moth decoy entrances *c*, *f*, provided with the jutting lips or ledges *b*, *d*, and arranged just within the bee entrance *a*, across its entire extent, both above and below, substantially in the manner and for the purpose herein specified. I also claim the construction and arrangement of the cross bars *r*, *r*, attached to a supporting cross-piece P, and with open spaces *s*, *s*, around their ends, substantially in the manner and for the purpose herein set forth."

No. 24,252. JOHN WAUGH, of Elmira, N.Y., for an "Improved boring machine."

"What I claim is, the arrangement of those mechanical appliances in a peculiar manner, for a new and useful purpose, as substantially set forth."

No. 24,253. DAVID WHEELER, of Fairfield, Conn., and ISAAC LITTLE, of Bridgeport, Conn., for an "Improvement in gas regulators."

"What we claim is, the combination of a self-acting discharge pipe, or siphon S, T, with the chamber (*c*) of a gas regulator, substantially as and for the purposes herein shown and described."

No. 24,254. E. D. WILLIAMS, of Philadelphia, Pa., for an "Improvement in friction spring for supporting window sash."

"What I claim is, providing with friction springs having sharpened projections or spurs, for cutting their own grooves, substantially as above set forth."

No. 24,255. THOS. S. WILLIAMS, of Enterprise, Miss., for an "Improved musquito bar."

"What I claim is, the folding musquito net, or bar, constructed substantially as described."

No. 24,256. SAMSON WOLF, of Vicksburgh, Miss., for an "Improvement in cotton and hay presses."

"What I claim is, the combination of a conical spiral wheel or pinion, with an inclined rack, when the latter is set oblique to the axis of the pinion, substantially in the manner and for the purpose herein described."

No. 24,257. THEODORE T. WOODRUFF, of Philadelphia, Pa., for an "Improvement in seats and couches for railroad cars."

"What I claim is, the combination and arrangement of the two frames with each other and with the supports therefor, connected with each compartment of a car; the said frame is, when spread out forming couches for two persons, on the same level with the seats, and when transformed, one of the said frames forming seats and the other the back for such seats, substantially as described. I also claim connecting the frame which forms the seats with the frame which forms the backs by means of links connected with one of the said frames by means of hinged joints, and with the other of the said frames by means of sliding hinged joints, substantially as and for the purpose specified. I also claim, in combination with the frame for the main seats, the auxilliary seats, which slide under the frame for the main seats, substantially as and for the purpose described. And I also claim the frame for an elevated couch, when combined with the car by means of sliding hinged joints, substantially as and for the purpose specified. I also claim, in combination with the elevated couch next to the side of the car, or the equivalent therefor, the front elevated couch, so connected with the car, substantially as described, as to admit of being let down to form part of a double couch, and thrown up towards the roof of the car when not wanted as a couch, as set forth."

No. 24,258. LESTER L. BOND, of Chicago, Ill., assignor to himself and Giles B. Williams, of New York, N. Y., for an "Improvement in self-acting presses."

"But what I claim is, first, the arrangement for connecting the press beam B with the levers D, D, by the connecting bars E, E, whereby the press is made to operate from above and below. Second, the socket shoe I and the ratchet plate H, or their mechanical equivalents, for altering and gauging the power of the press, substantially as set forth and specified."

No. 24,259. C. A. YOUNG and S. W. YOUNG, of Providence, R. I., for an "Improvement in machines for making upholstery springs."

"What we claim is, 1st, the cutters *v*, *r*, attached to the machine and arranged relatively with the rolls D, D, I, and bar J, when the movable cutter *r* is actuated automatically by suitable mechanism to cut the springs as formed from the continuous wire T. 2nd, the bar J attached to the lever H, or other part of the machine or framing when provided with a bend *l* to project over the uppermost roller D, for the purpose of guiding and ensuring the turning or bending of the wire T, as set forth. 3rd, the plates *n*, *p*, when used in connection with the shears *o*, *r*, for the purpose of cutting off the springs and bending the ends thereof, simultaneously and substantially as described."

No. 24,260. JOHN W. DRUMMOND, of New York, N. Y., assignor to Horace H. Day, of same place, for an "Improvement in machines for measuring cloth."

"What I claim is, the combination of the measuring wheel, substantially as described, in combination with the spring

block, or the equivalent thereof, for holding the cloth to the periphery of the wheel, and for stopping the said wheel the moment the cloth has passed off, substantially as described."

No. 24,261. D. G. Fletcher, of Racine, Wis., assignor to himself and HenryWeiskopf, of same place, for an "Improvement in coffee pots."

"I claim the box-like strainer D, arranged with a hinged top *c*, so that access can be had to the same from the inside as well as from the outside, and that the same can easily be cleaned, substantially as described."

No. 24,262. Wm. H. Lazelle, of Boston, Mass., assignor to himself and Elbridge B. Lazelle, of same place, for an "Improved refrigerator."

"I claim the combination and arrangement of the siphon pipe I, water space F, and ice box C, open and beveled at one end, substantially as set forth, and for the purposes described."

No. 24,263. Hugh Logue, of Philadelphia, Pa., assignor to himself and Daniel P. Vandergrift, of same place, for an "Improvement in dry gas meters."

"I claim so constructing one of the partitions between two of the chambers of a dry gas meter, that it may afford a passage for the gas from the inlet pipe to the central opening of the valve seat, substantially as and for the purpose set forth."

No. 24,264. Henry F. Mann, of Laporte, Ind., assignor to himself and Wm. J. Walker, of same place, for an "Improved hemp brake."

"What I claim is, first, the combination of the adjustable cams or arms (*c*) with the breaker, as constructed, the whole being arranged and operated substantially as described. 2dly, the adjustable spring (*h*), as arranged and operated for the purposes set forth."

No. 24,265. Henry Messer, of Roxbury, Mass., assignor to Chas. Rice, of Boston, Mass., for an "Improved machine for cutting india rubber into threads."

"What I claim is, the arrangement and combination of the rotating table D, and the adjustable cutters (*o*), (*s*), substantially as and for the purposes herein shown and described."

No. 24,266. A. Orvis, of Niagara, N. Y., assignor to himself and Downs and Co., of Seneca Falls, N. Y., for an "Improvement in grinding mills."

"What I claim as my invention is, 1st, the construction and arrangement of cylinder D, and concave F, with supplementary cylinder G, whereby the rhomboidal teeth *f* and *g* serve to adjust the parts to efficient action, by means of the longitudinal movement of the collar *e* on the shaft B, substantially as set forth. I also claim the peculiar conformation of the grinding surfaces of the cast-iron cylinder E, and concave H, consisting of the alternate intersection of the raised and depressed corrugations thereof, in the manner and for the purpose shown and described. I claim the combination and arrangement of the two concaves F and G, spout *j*, and divided winged partition R, or its equivalent, whereby the operation of cracking and grinding in said concaves may be conjoint or separate, substantially in the manner and for the purposes shown and described. I claim the automatic rapper *v*, arranged and operated substantially as described, for the purpose of keeping the bolt free from obstructions, and rendering its action efficient, as set forth."

No. 24,267. Wm. H. Tendler, of Cambridge, Mass., assignor to himself and John F. Moeschlin, of same place, for an "Improved sofa bedstead."

"I claim the improved sofa bed, constructed not only with each of its arm rests formed in two parts and hinged together, arranged and applied to the back *b* and bed frame *a*, as described, but with its seat hinged to the bed frame, so as to be capable of being moved with respect to it and the arm rests, as specified. I also claim the combination of the pillow and foot rests *l*, *m*, E, and F, with the arm rests and seat frame or seat applied to the frame A, the whole being made to operate together, essentially as explained."

No. 24,268. Ferdinand Walters, of Covington, Ky., assignor to C. F. Walters and S. H. Stout, of same place, for an "Improvement in mill drivers."

"I claim the driver (*d*, d^1,) constructed and arranged with reference to the shaft (C) and cap (*c*), substantially as and for the purposes set forth."

No. 24,269. Alfred B. Wilton, of Dorchester, Mass., assignor to himself and Chas. Adams, of same place, for an "Improved heel for boots and shoes."

"I claim the improvement of the dished or concave elastic heel, as made with the air channel *b*, leading out of the concavity *a*, and arranged substantially as described."

Re-issues.

John McCollum, of New York, N. Y., for an "Improvement in cracker machines."—Patented 23rd March, 1852.—Re-issued 31 May, 1859.

"What I claim is, the combination of adjustable springs with a cracker cutter, and its resisting surface or bed, substantially as herein-before described, and substantially for the purposes herein-before set forth."

Adolph Stempel, of New York, N. Y., for "Machine for creasing and blacking leather for harness."—Patented 2nd November, 1858.—Re-issued 31st May, 1859.

"What I claim is, 1st, the pressure roller F, and the creasing and embossing rollers *i*, in combination with the color fountains K and L, and felt rolls M, M, arranged to operate as and for the purpose set forth. 2nd, the arrangement of the embossing rollers *i* with thin projecting flanges i^1, to operate in combination with the guides *d*, d^1, substantially in the manner and for the purpose specified."

David Stuart and Richard Peterson, of Philadelphia, Pa., assignees (through mesne assignment) of John B. Chollar, of Albany, N. Y., for an "Improvement in plates for boiler holes and tops of stoves."—Patented 6th February, 1849.—Re-issued 31st May, 1859.

"What I claim is, constructing a cross piece for cooking stoves and ranges, with a hollow chamber, and with the openings *e*, *e*, to allow air to pass into the said chamber, substantially as set forth."

James Dodge, of Waterford, N. Y., assignor to himself and David Blak, of Albany, N. Y., for an "Improvement in grinding and polishing knives."—Patented 12th October, 1858.—Re-issued 31st May, 1859.

"What I claim as my invention, is, grinding and polishing articles, and forming their surfaces upon or against the periphery of a grindstone or polishing wheel, or other analogous reducing surface, by attaching them to the periphery of a revolving drum or cylinder, substantially as herein set forth. I also claim making matrices in the periphery of a wheel, to which a series of articles to be ground are attached, said matrices being adapted to give the required shape to the articles to be ground, so as to grind, polish, and shape such articles in a uniform manner, substantially as and upon the principle herein set forth. I also claim, in combination with said matrices, attaching and supporting the articles to be ground upon the cylinder, in such manner as to allow them to rock or accommodate themselves thereon, whereby their surfaces may be shaped either convex, flat, or concave, substantially as herein set forth."

George H. Bechtel, of Philadelphia, Pa., assignee (through mesne assignment) of Horatio G. Sickels, of said Philadelphia, for an "Improvement in gas lamps."—Patented 7th August, 1849.—Re-issued 31st May, 1859.

"What I claim is, first, forming a valve within the adjustable gas chamber P, and a seat for the said valve on the tube which contains the wick *t*, so as to regulate and extinguish the light, when required, whether the said valve be made and arranged in the manner described, or other modes substantially the same, by which similar results may be produced. Second, the employment of the safety valve C, D, E, in combination with the guard T, constructed substantially as described. Third, I also claim the guard T, in combination

with the combined burner and generator, arranged and operating in the manner and for the purpose set forth. Fourth, I likewise claim combining the generator Q, R, burner P, ring U, and guard T, in a single piece, made to ascend and descend simultaneously, in the manner and for the purpose substantially as herein set forth."

ADDITIONAL IMPROVEMENT.

LYMAN P. HARRIS, of Mansfield, Ohio, for "Improvement in apparatus for evaporating saccharine juices."—Patented 18th January, 1859.—Additional Improvement, dated 31st May, 1859.

"What I claim is, 1st, I claim the application of one or more dampers 'H' to the movable furnace 'A,' also the cooling surface on the evaporator connected therewith for the purposes set forth. 2nd, I claim the movable flue 'I,' as described. 3rd, I claim the broad hook, or supporter 'K,' or its equivalent, as set forth."

PATENT LAW AMENDMENT ACT, 1852.—All Specifications, Indexes, &c., printed by order of the Commissioners of Patents, are sold at the Great Seal Patent Office, 25, Southampton Buildings, Holborn.

THE PATENT LAW AMENDMENT ACTS (15 & 16 Vict., cap. 83; 16 Vict., cap. 5; and 16 & 17 Vict., cap. 115); with the Rules and Regulations made by the Commissioners of Patents for Inventions, and by the Lord Chancellor and the Master of the Rolls, under the Acts 15 and 16 Vict., c. 83, and 16 & 17 Vict., c. 115, accompanied by Specimen Forms of the Provisional Documents printed on sheets of the prescribed size. Price 6*d.*

THE CHRONOLOGICAL INDEX of PATENTS of INVENTION, from March 2, 1617 (14 James I.), to September 30, 1852 (16 Vict.), 2 vols. Price 30*s.*

THE ALPHABETICAL INDEX of PATENTEES of Inventions for the above period. Price 20*s.*

THE SUBJECT-MATTER INDEX of PATENTS for the same period—*Second Edition*—to which is prefixed a Key of Terms and Phrases. 2 vols. Price 2*l.* 16*s.*

A Key to the *First Edition* of the above work is also published separately, and may be had on application.

THE CHRONOLOGICAL INDEXES of APPLICATIONS for PATENTS and PATENTS GRANTED from the 1st October to the 31st December, 1852, and from the 1st January to the 31st December, 1853, in one volume. Price 11*s.*

THE ALPHABETICAL INDEXES for the above periods, in one volume. Price 13*s.*

THE SUBJECT-MATTER INDEX, from 1st October to 31st December, 1852. Price 9*s.*

THE SUBJECT-MATTER INDEX, from 1st January to 31st December, 1853. Price 16*s.*

THE CHRONOLOGICAL INDEX of APPLICATIONS for PATENTS and PATENTS GRANTED from the 1st January to the 31st December, 1854. Price 6*s.*

THE ALPHABETICAL INDEX for the above period. Price 7*s.*

THE SUBJECT-MATTER INDEX for the above period. Price 16*s.* 6*d.*

THE CHRONOLOGICAL INDEX of APPLICATIONS for PATENTS and PATENTS GRANTED from the 1st January to the 31st December, 1855. Price 6*s.* 6*d.*

THE ALPHABETICAL INDEX for the above period. Price 7*s.* 6*d.*

THE SUBJECT-MATTER INDEX for the above period. Price 17*s.*

THE CHRONOLOGICAL INDEX of APPLICATIONS for PATENTS and PATENTS GRANTED from the 1st January to the 31st December, 1856. Price 6*s.* 6*d.*

THE ALPHABETICAL INDEX for the above period. Price 8*s.*

THE SUBJECT-MATTER INDEX for the above period. Price 18*s.* 6*d.*

THE ALPHABETICAL INDEX of APPLICATIONS for PATENTS and PATENTS GRANTED from the 1st January to the 31st December, 1857. Price 8*s.*

THE CHRONOLOGICAL INDEX for the above period. Price 6*s.* 6*d.*

THE SUBJECT-MATTER INDEX for the above period. Price 19*s.* 6*d.*

THE ALPHABETICAL INDEX of APPLICATIONS for PATENTS and PATENTS GRANTED, from the 1st January to the 31st December, 1858. Price 8*s.*

THE REFERENCE INDEX of PATENTS, pointing out the Office in which each enrolled Specification of a Patent may be consulted; the Books in which Specifications, Law Proceedings, and other subjects connected with Inventions have been noticed; also such of the Specifications of Patents granted under the Act of 21 James I. as have been published by the authority of the Commissioners. Price 30*s*.

AN APPENDIX to the REFERENCE INDEX of PATENTS of INVENTION, containing Abstracts from such of the early Patents and Signet Bills as describe the nature of the invention, and which Patents have no enrolled Specifications. Price 4*s*.

AN INDEX to ALL INVENTIONS PATENTED in ENGLAND from 1617 to 1854 inclusive, arranged under the greatest number of heads, with parallel references to INVENTIONS and DISCOVERIES described in the scientific works of VARIOUS NATIONS, as classified by Professor Schubarth. By B. WOODCROFT.

The foreign works thus indexed form a portion of the Library of the Commissioners of Patents, where they may be consulted, or manuscript translations be had.

SOMMAIRE de toutes les INVENTIONS BREVETÉES en ANGLETERRE depuis 1617 jusqu'en 1854 inclusivement, arrangées d'après le plus grand nombre de rubriques, avec renvois aux INVENTIONS et DÉCOUVERTES décrites dans les ouvrages scientifiques de DIFFÉRENTES NATIONS, classés par le Professeur Schubarth. Par B. Woodcroft.

Les ouvrages étrangers ci-dessus font partie de la Bibliothèque de la Commission des Patentes, où l'on peut les consulter, et obtenir des traductions en manuscrit.

VERZEICHNISS aller in ENGLAND von 1617—1854 incl. PATENTIRTEN ERFINDUNGEN, unter vielfältige Titel gebracht, mit Hinweisungen auf ERFINDUNGEN und ENTDECKUNGEN die nach Prof. Schubarth's Klassificirung in den wissenschaftlichen Werken VERSCHIEDENER NATIONEN beschrieben sind. Von B. Woodcroft.

Die hier aufgeführten fremden Werke machen einen Theil der Bibliothek der Patent Commission aus, allwo sie nachgeschlagen oder schriftliche Uebersetzungen besorgt werden können.

REPERTORIO di tutte le INVENZIONI munite di LETTERE PATENTI in INGHILTERRA dal 1617—1854 inclusivo, poste in ordine sotto il piu gran numero di capi, con riferenze alle INVENZIONI e SCOPERTI descritti nelle opere scientifiche di DIVERSE NAZIONI, classate dal Professore Schubarth. Dal Sig. B. Woodcroft.

Le opere straniere quì indicate possono esser consultate nella Biblioteca dei Commissari delle Patenti, e traduzioni in manuscritto vi possono ottenersi.

B. WOODCROFT,
Superintendent of Specifications, &c.

In course of Publication, by Order of the Commissioners of Patents.

ABRIDGMENTS (in Classes, and Chronologically arranged) of all SPECIFICATIONS of PATENTED INVENTIONS, from the earliest enrolled to those published under the Act of 1852.

These books are of 12mo size, and as each is limited to inventions of one class only, they can be sold at prices sufficiently moderate to enable the humblest inventor to examine for himself whether his discovery has been previously patented or not.

At the foot of each abstract are given references to notices of the inventions in scientific and other works, and to the reports of law proceedings for infringements, &c. &c. &c.

The classes already published are,—

1. DRAIN TILES AND PIPES, price 6*d*.
2. SEWING AND EMBROIDERING, price 6*d*.
3. MANURE, price 6*d*.
4. PRESERVATION OF FOOD, price 6*d*.
5. MARINE PROPULSION, price 4*s*.
6. MANUFACTURE OF IRON AND STEEL, price 5*s*.
7. AIDS TO LOCOMOTION, price 1*s*.
8. STEAM CULTURE, price 2*s*.
9. WATCHES, CLOCKS, AND OTHER TIMEKEEPERS, price 1*s*. 6*d*.
10. FIRE-ARMS AND OTHER WEAPONS, AMMUNITION, AND ACCOUTREMENTS, price 6*s*. 6*d*.
11. PAPER.—PART I. MANUFACTURE OF PAPER, PASTEBOARD, AND PAPIER MÂCHÉ, price 3*s*.
12. TYPOGRAPHIC, LITHOGRAPHIC, AND PLATE PRINTING, price 7*s*.
13. BLEACHING, DYEING, AND PRINTING YARNS AND FABRICS, price 9*s*. 6*d*.

The following are in the press:—

PAPER.—PART II. CUTTING, FOLDING, AND ORNAMENTING; INCLUDING ENVELOPES, CARDS, PAPER-HANGINGS, &c.
ELECTRICITY AND MAGNETISM: THEIR GENERATION AND APPLICATIONS.
PREPARATION OF FUEL, AND APPARATUS FOR ITS COMBUSTION.
MANUFACTURE AND APPLICATIONS OF INDIA RUBBER, GUTTA PERCHA, &c.; INCLUDING AIR, FIRE, AND WATER PROOFING.
PRODUCTION AND APPLICATIONS OF GAS.
STEAM ENGINES.

B. WOODCROFT.

The above, and all other works published by the Commissioners of Patents, are now on sale at the Great Seal Patent Office, 25, Southampton Buildings, Holborn.

This Journal is published on the evenings of Tuesday and Friday, and will be forwarded, post free, to Subscribers. — Terms, 30*s*. per annum. — Subscriptions received at the Great Seal Patent Office, where also single copies, at twopence each, may be obtained.

THE

COMMISSIONERS OF PATENTS' JOURNAL.

By Authority.

(*Registered for transmission abroad.*)

No. 570. TUESDAY, JUNE 21, 1859. Price 2d.

Notices to Proceed.

NOTICE is hereby given, that

342. MATTHEW CURTIS, of the city of Manchester, in the county of Lancaster, Machinist, and JOHN MILLER, of Staley Bridge, in the said county, Manager, have given notice at the Office of the Commissioners of their intention to proceed with their application for Letters Patent for the invention of "Improvements in certain mules for spinning cotton and other fibrous substances."

346. And JOHN SMITH, of Bradford, in the county of York, Machine Maker, has given the like notice in respect of the invention of "Improvements in machinery or apparatus for preparing and combing wool and other fibrous substances."

As set forth in their respective petitions, both recorded in the said office on the 7th day of February, 1859.

---

350. And JAMES HOSKING, Oil Merchant, Walworth Common, in the county of Surrey, has given the like notice in respect of the invention of "Improvements in the manufacture of lamps."

357. And ALEXANDER CLARK, of Gate Street, Lincoln's Inn Fields, in the county of Middlesex, Engineer and Revolving Shutter Manufacturer, has given the like notice in respect of the invention of "Improvements in revolving shutters and blinds, and in apparatus connected therewith."

As set forth in their respective petitions, both recorded in the said office on the 8th day of February, 1859.

---

362. And JOHN STEPHEN JOSEPH, of Rhostyllan, near Wrexham, in the county of Denbigh, North Wales, has given the like notice in respect of the invention of "Improvements in coke ovens and in cooling and extinguishing coke."

As set forth in his petition, recorded in the said office on the 9th day of February, 1859.

373. And HENRY POTTER BURT, of Charlotte Row, Mansion House, in the city of London, has given the like notice in respect of the invention of "Improvements in railway carriages and waggons."

377. And ROBERT JOSEPH ELLIS, of Liverpool, in the county of Lancaster, Merchant, has given the like notice in respect of the invention of "Improvements in the apparatus for lifting sunken vessels and other submerged bodies."

As set forth in their respective petitions, both recorded in the said office on the 10th day of February, 1859.

---

390. And CHARLES JACKSON, of Store Street, Bedford Square, in the county of Middlesex, Pianoforte Manufacturer, has given the like notice in respect of the invention of "Improvements in the action of pianofortes."

392. And HENRY RANSFORD, of West Brompton, in the county of Middlesex, has given the like notice in respect of the invention of "An improvement in building ships and other vessels."

As set forth in their respective petitions, both recorded in the said office on the 11th day of February, 1859.

---

400. And JAMES BENNETT and JOHN BENNETT, of the firm of Bennett and Sons, of Kingsland Road, in the county of Middlesex, Engineers, have given the like notice in respect of the invention of "An improvement in refrigerators for cooling beer and worts."

401. And GEORGE BETJEMANN, GEORGE WILLIAM BETJEMANN, and JOHN BETJEMANN, all of Ashby Street, in the county of Middlesex, Desk and Dressing Case Makers, have given the like notice in respect of the invention of "Improvements in book-slides."

As set forth in their respective petitions, both recorded in the said office on the 12th day of February, 1859.

---

410. And CHARLES SANDERS, Photographic Mat Manufacturer, of Harford Street, Birmingham, in the county of Warwick, has given the like

notice in respect of the invention of "Certain improvements in ornamenting English passe-partouts for photographic-pictures, also the glasses used with the same, and which said modes of ornamenting are also applicable to ornamenting photographic frames generally."

411. And JOHN WRIGHT, of New George Street, Sheffield, in the county of York, Spring Manufacturer, has given the like notice in respect of the invention of "Improvements in reducing and rolling steel and iron wire and other forms of those metals in long lengths."

412. And JOSIAH LATIMER CLARK, of Haverstock Hill, in the county of Middlesex, has given the like notice in respect of the invention of "Improvements in the means of working railway signals and switches."

414. And ROBERT CLEGG, of Islington, in the county of Middlesex, FREDERICK ANGERSTEIN, of Kennington, in the county of Surrey, and JOHN WILLIAM PAGE, of Walworth Road, in the county of Surrey, have given the like notice in respect of the invention of "Improvements in making soap."

As set forth in their respective petitions, all recorded in the said office on the 14th day of February, 1859.

418. And ROBERT MUSHET, of Coleford, in the county of Gloucester, Metallurgist, has given the like notice in respect of the invention of "Improvements in the manufacture of steel, iron, and cast steel."

423. And GEORGE BEDSON, of Manchester, in the county of Lancaster, Manager for Messrs. Richard Johnson and Brother, Wire Manufacturers, has given the like notice in respect of the invention of "Improvements in joining wire for telegraphic and other purposes."

As set forth in their respective petitions, both recorded in the said office on the 15th day of February, 1859.

427. And RICHARD COOKSON, of Layton Hawes, near Blackpool, in the county of Lancaster, Gentleman, and CHARLES WILLIAM HOMER, at Castle Hill, near Northwich, in the county of Chester, Civil Engineer, has given the like notice in respect of the invention of "Improvements in machinery for making bricks, tiles, tubes and other articles of plastic materials, and in the mode of jointing drain pipes."

429. And RICHARD JENNINGS STEVENSON PEARCE, of Fleet Street, in the city of London, Machinist, has given the like notice in respect of the invention of "Improvements in weighing and dynamic machines."

As set forth in their respective petitions, both recorded in the said office on the 16th day of February, 1859.

445. And PIERRE EDOUARD FRAISSINET, of Paris, in the empire of France, Civil Engineer, has given the like notice in respect of the invention of "A new or improved structure of iron, applicable for paving, flooring, bridges, gratings, girders, and other like purposes."

As set forth in his petition, recorded in the said office on the 17th day of February, 1859.

453. And GEORGE WALLIS, of Stretton, near Penkridge, in the county of Stafford, Artist, has given the like notice in respect of the invention of "A new or improved method of engraving, applicable to the production of printing surfaces and the ornamentation of metallic and other surfaces."

456. And WILLIAM CLARK, of 53, Chancery Lane, in the county of Middlesex, Engineer and Patent Agent, has given the like notice in respect of the invention of "Improvements in pressure guages."—A communication from abroad by Louis Droissart, Mechanician, of Paris.

As set forth in their respective petitions, both recorded in the said office on the 18th day of February, 1859.

458. And PIERRE ANTOINE JOSEPH DUJARDIN, of the town of Lille, France, Physician, has given the like notice in respect of the invention of "Improvements in the printing apparatus of railway telegraphs."

464. And CHARLES FRÉDERIC VASSEROT, of 45, Essex Street, Strand, London, Patent Agent, has given the like notice in respect of the invention of "An improved apparatus for manufacturing the strands of wire-ropes."—A communication from Jean Baptiste Pieux-Aubert, residing at Clermont-Ferrand, Puy-de-Dôme, in the empire of France.

As set forth in their respective petitions, both recorded in the said office on the 19th day of February, 1859.

483. And WILLIAM STETTINIUS CLARK, of 76, Cannon Street West, in the city of London, and of 35, Boulevart Bonne Nouvelle, Paris, in the empire of France, has given the like notice in respect of the invention of "Improvements in the formation of cast-iron rails for city railways, and also in the method of uniting the ends of two adjacent rails for railway use."—A communication from Sydney A. Beers, Civil Engineer, now residing at Brooklyn, New York.

As set forth in his petition, recorded in the said office on the 22nd day of February, 1859.

489. And AUGUSTUS WILLIAM SMETHURST, of Chorley, in the county of Lancaster, Cotton Spinner and Manufacturer, has given the like notice in respect of the invention of "Improvements in machinery for driving looms for weaving."

As set forth in his petition, recorded in the said office on the 23rd day of February, 1859.

505. And JEAN HENRI GUILLAUME DANIEL WAGNER, of Paris, in the empire of France, Manufacturer, has given the like notice in respect of the invention of "Apparatus for cleaning water and removing all matters in suspension and dissolution contained in it, water intended to feed generators of all sorts, application also to other purposes, which besides, previous to its getting into the generators, is heated to the highest degree, without almost any expense."

506. And JOHN DALE, of Cornbrook, in Manchester, and county of Lancaster, Manufacturing Chemist, has given the like notice in respect of the invention of "Improvements in concentrating caustic alkalis, and in applying a product therefrom to the purpose of obtaining motive power, and to other purposes."

As set forth in their respective petitions, recorded in the said office on the 24th day of February, 1859.

550. And Robert Hanham Collyer, of Alpha Road, in the county of Middlesex, Doctor of Medicine and Civil Engineer, has given the like notice in respect of the invention of "A process of preparing materials for the manufacture of paper, and a machine employed therein, which machine is applicable for crushing, grinding, bruising, and reducing various substances."

As set forth in his petition, recorded in the said office on the 2nd day of March, 1859.

779. And Charles Lewis Roberts, of Clerkenwell, in the county of Middlesex, has given the like notice in respect of the invention of "Improvements in cigars."

As set forth in his petition, recorded in the said office on the 29th day of March, 1859.

797. And John Cartwright, of Shrewsbury, in the county of Salop, Agricultural Implement Manufacturer, has given the like notice in respect of the invention of "An improved implement for crushing clods and pulverizing the surface soil, also convertible into a press wheel roller."

As set forth in his petition, recorded in the said office on the 30th day of March, 1859.

1026. And William Moxon, of Parliament Street, in the city of Westminster, Contractor, and Joseph Jeffrey Bennett, of Homer Terrace, Victoria Park, in the county of Middlesex, Civil Engineer, have given the like notice in respect of the invention of "Improved apparatus for raising or lifting and lowering heavy bodies."

As set forth in their petition, recorded in the said office on the 23rd day of April, 1859.

1158. And Jozé Luis, of the British and Foreign Office for Patents, No. 1B, Welbeck Street, Cavendish Square, London, in the county of Middlesex, Patent Agent, has given the like notice in respect of the invention of "A self-regulating horse machine." — A communication from abroad by P. Isaac Garin, No. 10, Rue Mogador, Paris, in the empire of France.

As set forth in his petition, recorded in the said office on the 9th day of May, 1859.

1173. And George Bell, of Wandsworth, in the county of Surrey, Manufacturer, has given the like notice in respect of the invention of "Improvements in matches or fusees."

As set forth in his petition, recorded in the said office on the 10th day of May, 1859.

1194. And William Warne, John Americus Fanshawe, James Archibald Jaques, and Thomas Galpin, all of Tottenham, in the county of Middlesex, India Rubber Manufacturers, have given the like notice in respect of the invention of "An improved compound or preparation of materials for, and mode of, and apparatus for, covering and insulating wires or conductors used for telegraphic or electrical purposes."

As set forth in their petition, recorded in the said office on the 12th day of May, 1859.

1286. And Marc Antoine François Mennons, of the British and Foreign Patent Offices, 39, Rue de l'Echiquier, Paris, in the empire of France, has given the like notice in respect of the invention of "An improved apparatus for the preparation of sand moulds for metal casting."—A communication from Messrs. Maudoy and Couty, residing in Paris.

As set forth in his petition, recorded in the said office on the 24th day of May, 1859.

1317. And Bernhard Samuelson, of Banbury, in the county of Oxford, has given the like notice in respect of the invention of "Improvements in machines for cutting roots and other vegetables."

1319. And Walter Crum, of Thornliebank, in the county of Renfrew, Bleacher and Calico Printer, has given the like notice in respect of the invention of "Improvements in printing and dyeing textile fibres and fabrics."

1321. And Richard Archibald Brooman, of 166, Fleet Street, in the city of London, E. C., Patent Agent, has given the like notice in respect of the invention of "Improvements in machinery for cleaning, grinding, and bolting corn and other grain."—A communication from abroad by Jean Baptiste Falguière, of Marseilles.

As set forth in their respective petitions, all recorded in the said office on the 28th day of May, 1859.

1336. And Enoch Leeson, of No. 13, Traffic Street, Derby, in the county of Derby, Lace Manufacturer, has given the like notice in respect of the invention of "Improvements in machinery for the manufacture of ornamental chenille fringes and braids or other fabrics."

As set forth in his petition, recorded in the said office on the 30th day of May, 1859.

1378. And James Wood and William Wood, both of the town and county of the town of Nottingham, Lace Manufacturers, have given the like notice in respect of the invention of "A peculiar mode or method of dying lace or other fabrics, and making the same into bonnet and cap fronts or other articles."

As set forth in their petition, recorded in the said office on the 4th day of June, 1859.

And notice is hereby further given, that all persons having an interest in opposing any one of such applications are at liberty to leave particulars in writing of their objections to such application, at the said Office of the Commissioners, within twenty-one days next after the date of the Gazette [and of the Journal] in which this notice is issued.

Patents Sealed.

List of Letters Patent which passed the Great Seal on the

21st June, 1859.

2917. William Speakman Yates, of Leeds, in the county of York, Brush Maker, for an invention of "Machinery or apparatus for dragging bristles, and drawing hair and vegetable fibre."—Dated 21st December, 1858.

2920. Robert Clegg, of Islington, in the county of Middlesex, Frederick Angerstein, of Kennington, in the county of Surrey, and George Ferry, of Hackney, in the said county of Middlesex, for an invention of "Improved mechanism for imparting reciprocating motion to machinery, and more especially pumps."—Dated 22nd December, 1858.

2926. Edward Thomas Dunn, of Hammersmith, in the county of Middlesex, Gentleman, for an invention of "Improved fabrics suitable for the covering of floors, walls, and other like purposes."—Dated 22nd December, 1858.

2930. Alexander Prince, of the Office for Patents, 4, Trafalgar Square, Charing Cross, in the county of Middlesex, for an invention of "Improvements in ornamenting and illuminating surfaces of glass."—Dated 22nd December, 1858.

2942. John Wright Child, of Halifax, in the county of York, Engineer, for an invention of "Improvements in dyeing wool and other fibres."—Dated 24th December, 1858.

2954. John Radley, of 22, Upper Sackville Street, in the city of Dublin, Hotel Keeper, for an invention of "An improved cooking apparatus."—Dated 27th December, 1858.

2966. John Sinclair, of the city of Dublin, Ireland, Turner and Fitter, for an invention of "Improvements in pistons."—Dated 28th December, 1858.

12. Pierre Emmanuel Guérinot, 60, Boulevart de Strasbourg, Paris, Mechanician Jeweller, for an invention of "Improvements in the application of an apparatus to railway locomotives, waggons, and carriages, for the purpose of lessening the effect of concussion in the event of collision."—Dated 1st January, 1859.

37. Frederick Clark, of King Street, Bloomsbury, in the county of Middlesex, Turner, for an invention of "Improvements in connecting knobs and handles to the spindles of locks and latches, and other articles of a like nature."—Dated 5th January, 1859.

39. James Howard, of Bedford, Agricultural Implement Maker, for an invention of "An improved construction of lever-neck plough."—Dated 5th January, 1859.

Patents on which the Stamp Duty of £50 has been Paid.

(*To 18th June*, 1859, *inclusive.*)

16th June.

1436. Walter Henry Tucker, of Fleet Street, London, for an invention of "Improvements in locks and latches."—Dated 18th June, 1856.

1437. Matthew Andrew Muir, of Glasgow, in the county of Lanark, North Britain, Machinist, and James McIlwham, of the same place, Machinist, for an invention of "Improvements in looms for weaving."—Dated 18th June, 1856.

1438. Charles Clifford, of the Temple, for an invention of "Improvements in boat lashings, and in blocks and apparatus used for raising and lowering boats and other articles."—Dated 18th June, 1856.

1441. George Tillett, of Clapham, in the county of Surrey, Bedstead Manufacturer, for an invention of "Improvements in bedsteads."—Dated 19th June, 1856.

1473. Henry Hussey Vivian, Bernhardt Gustav Herrmann, and William Morgan, all of the Hafod Works, Swansea, in the county of Glamorgan, for an invention of "Improvements in the manufacture of copper, and in obtaining gold and silver from the ores employed in such manufacture."—Dated 23rd June, 1856.

1475. Isaac Atkin and Marmaduke Miller, of the town and county of the town of Nottingham, Gentlemen, for an invention of "Improvements in machinery for sewing lace and other fabrics."—Dated 23rd June, 1856.

17th June.

1479. John Saxby, of Brighton, Sussex, for an invention of "A mode of working simultaneously the points and signals of railways at junctions, to prevent accidents."—Dated 24th June, 1856.

18th June.

1934. Pierre Noyer, of 38, Gerrard Street, Soho, for an invention of "Winding up fusee watche and pocket chronometers, and setting the hand without key."—Dated 19th August, 1856.

Erratum in Journal of 17th June.

1369. For "apparatus" read "apparatuses."

DELIVERY OF LETTERS.—For the Great Seal Patent Office the initials are W. C., the District being the Western Central. In the direction of a Letter, these initials should be legibly written in a separate line, and should in all cases end the address, thus:—

The Commissioners of Patents,
Great Seal Patent Office,
25, Southampton Buildings,
London,
W.C.

List of Specifications published during the week ending 17th June, 1859.

No.	Price.	Subject-Matter.
2517	3d.	Furnaces.
2518	1s. 11d.	Machinery for making metallic screw rivets, &c.
2519	3d.	Propelling vessels.
2520	6d.	Removing fur from skins, &c.
2524	6d.	Screw propellers.
2526	3d.	Gas meters.
2527	5d.	Gas regulators.
2528	3d.	Manufacture of fuel.
2529	6d	Oil cans.
2530	3d.	Motive power engine.
2531	1s.	Ships of war and other vessels, &c.
2532	10d.	Manufacture of railway bars.
2533	10d.	Apparatus for securing doors of safes, closets, and apartments.
2534	3d.	Separating animal fibres from mixed fabrics.
2535	10d.	Cisterns.
2536	3d.	Treating and manufacturing buffalo and other horns, &c.
2537	3d.	Propelling vessels.
2538	3d.	Manufacture of steel and iron wire, &c.
2539	3d.	Shuttles for looms.
2540	2s. 11d.	Manufacture of iron.
2541	3d.	Manufacture of wood soles for clogs, boots, and shoes.
2542	7d.	Apparatus for illustrating conic sections and the lines of the globe.
2543	10d.	Looms for weaving.
2544	8d.	Looms for weaving.
2545	7d.	Moveable heels for boots and shoes, &c.
2546	7d.	Air pumps, &c.
2547	3d.	Furnaces for smelting ores, &c.
2548	1s. 9d.	Portable steam engines.
2549	11d.	Furnaces and boilers, &c.
2550	3d.	Floating docks, &c.
2551	3d.	Application of glass to ornamental and useful purposes.
2552	3d.	Manufacture of shuttlecocks.
2553	4d.	Manufacture of mats, &c.
2554	3d.	Manufacture of caustic alkaline lees.
2555	10d.	Covering rollers, shafts, and tubes, &c.
2557	9d.	Machinery for drying yarns and other materials.
2558	7d.	Steam boilers.
2559	5d.	Economical guard for candles and wax lights.
2560	3d.	Hammer rails of pianofortes.
2562	10d.	Finishing piled fabrics, &c.
2563	3d.	Obtaining motive power.
2565	3d.	Compound metal.
2566	10d.	Colouring, preserving, and desiccating wood and marble, &c.
2567	3d.	Advertising.
2568	10d.	Horse-tamer or brake.
2569	6d.	Effecting the locomotion of carriages, &c.
2570	7d.	Machinery for kneading dough or mixing plastic materials.
2571	6d.	Horse mill or gear.
2572	10d.	Manufacture of buttons, &c.
2573	9d.	Railway sleepers.
2574	3d.	Fountain pens.
2575	11d.	Instrument for approximating the course of an approaching vessel at sea.
2576	3d.	Machinery for adjusting the permanent way of railways.
2577	3d.	Fire-arms and ordnance.
2578	3d.	Application of hydrogen gas in distilling coal, &c.
2579	3d.	Producing colors on cotton, linen, and silk fabrics.
2580	7d.	Electric telegraphs.
2582	3d.	Waterproof coating.
2583	6d.	Smoothing iron.
2584	7d.	Laying and securing telegraphic cables.
2585	3d.	Apparatus for heating water and other liquids.
2586	9d.	Manufacture of tobacco, &c.
2587	3d.	Musical instruments.
2588	7d.	Breakwaters, &c.
2589	6d.	Machinery for spinning cotton, &c.
2590	7d.	Looms for weaving, &c.
2593	3d.	Apparatus for uniting lace to blond and other fabrics.
2595	7d.	Treating tanned hides.
2596	3d	Screw propellers.
2598	5d.	Manufacture of hats, bonnets, and caps.

*** Specifications will be forwarded by post on receipt of the amount of price and postage. Sums exceeding 5s. must be remitted by Post Office Order, made payable at the Post Office, High Holborn, to Mr. Bennet Woodcroft, Great Seal Patent Office.

ALL FOREIGN and COLONIAL PATENT LAWS and RULES, being translations or copies of Official Communications, may be found in the following Numbers of this Journal, published at 2d. each, or 3d. free by post :—

A FREE LIBRARY and READING ROOM, in connection with the Office of the Commissioners of Patents, is open to the Public daily from 10 till 4 o'clock.

In addition to the Printed Specifications, Indexes, and other publications of the Commissioners, the Library includes a Collection of the leading British and Foreign Scientific Journals, and text-books in the various departments of science and art. A printed Catalogue of the Library is on sale.

NOTE.—The Commissioners' publications may be consulted daily in the Library of the British Museum; in the Library of the Society of Arts; and in the Free Libraries of the following Towns and Cities:—

Aberdeen (*Public Library Town House*).
Accrington (*Mechanics' Institution, Bank Street*).
Belfast (*Harbour Office, Corporation Square*).
Beverley (*Guildhall*).
Birmingham (*Birmingham and Midland Institute, Cannon Street*).
Bolton-le-Moors (*Public Library, Exchange Buildings*).
Bradford, Yorkshire (*Borough Accountant's Office, Corporation Buildings, Swain Street*).
Brighton (*Town Hall*).
Bristol (*City Library, King Street*).
Burnley (*Office of the Burnley Improvement Commissioners*).
Cambridge (*Free Library, Jesus Lane*).
Canterbury (*Municipal Museum, Guildhall Street*).
Carlisle (*Free Library, Police Office*).
Chester (*Town Hall, Northgate Street*).
Cork (*Royal Cork Institution, Nelson Place*).
Crewe (*Railway Station*).
Darlington (*Mechanics' Institute, Skinnergate*).
Dorchester.
Drogheda.
Dublin (*Royal Dublin Society, Kildare Street*).
Dundalk.
Falmouth (*Public Library, Church Street*).
Gateshead (*Mechanics' Institute*).
Gorton (*Railway Station*).
Glasgow (*Stirling's Library, Miller Street*).
Grimsby, Great (*Mechanics' Institution, Victoria Street*).
Hanley, Staffordshire Potteries (*Town Hall*).
Hartlepool, West (*Literary and Mechanics' Institution, Church Street*).
Hertford (*Public Library, Town Hall*).
Huddersfield (*Commissioners' Offices, No. 1, South Parade*).
Hull (*Mechanics' Institute, George Street*).
Ipswich (*Museum Library, Museum Street*).
Keighley (*Mechanics' Institute, North Street*).
Kidderminster (*Public Free Library, Public Buildings, Vicar Street*).
Kings' Lynn, Norfolk (*Stanley Library, Athenæum*).
Lancaster (*Mechanics' Institute, Market Street*).
Leamington Priors (*Public Library, Town Hall*).
Leeds (*Town Clerk's Office, Town Hall*).
Leicester (*Corporation Library, Town Hall*).
Limerick.
Liverpool (*Free Public Library, Duke Street*).
——— (*Royal Institution*).
London (*British Museum*).
——— (*Society of Arts, John Street, Adelphi*).
Macclesfield (*Useful Knowledge Society*).
Maidstone.
Manchester (*Chetham Hospital*).
——— (*Free Library, Camp Field*).
Montrose.
Newark, Nottingham (*Mechanics' Institute, Middle Gate*).
Newcastle-upon-Tyne (*Literary and Philosophical Society*).
Newport, Monmouth (*Commercial Room, Town Hall*).
Northampton.
Norwich (*Free Library, St. John's, Maddermarket*).
Nottingham (*Corporation Rooms, St. Peter's Church side*).
Oxford (*Public Free Library, Town Hall*).
Paisley (*Government School of Designs, Gilmour Street*).
Plymouth (*Mechanics' Institute, Princess Square*).
Preston (*Dr. Shepherd's Library, the Institution, Avenham*).
Reading (*Literary, Scientific and Mechanics' Institution, London Street*).

Wurtemberg—Bibliothek des Musterlagers, Stuttgart.

PATENT LAW AMENDMENT ACT, 1852.—All Specifications, Indexes, &c., printed by order of the Commissioners of Patents, are sold at the Great Seal Patent Office, 25, Southampton Buildings, Holborn.

THE PATENT LAW AMENDMENT ACTS (15 & 16 Vict., cap. 83; 16 Vict., cap. 5; and 16 & 17 Vict., cap. 115); with the Rules and Regulations made by the Commissioners of Patents for Inventions, and by the Lord Chancellor and the Master of the Rolls, under the Acts 15 and 16 Vict., c. 83, and 16 & 17 Vict., c. 115, accompanied by Specimen Forms of the Provisional Documents printed on sheets of the prescribed size. Price 6*d*.

THE CHRONOLOGICAL INDEX of PATENTS of INVENTION, from March 2, 1617 (14 James I.), to September 30, 1852 (16 Vict.), 2 vols. Price 30*s.*

THE ALPHABETICAL INDEX of PATENTEES of Inventions for the above period. Price 20*s.*

THE SUBJECT-MATTER INDEX of PATENTS for the same period — *Second Edition*—to which is prefixed a Key of Terms and Phrases. 2 vols. Price 2*l.* 16*s.*

A Key to the *First Edition* of the above work is also published separately, and may be had on application.

THE CHRONOLOGICAL INDEXES of APPLICATIONS for PATENTS and PATENTS GRANTED from the 1st October to the 31st December, 1852, and from the 1st January to the 31st December, 1853, in one volume. Price 11*s.*

THE ALPHABETICAL INDEXES for the above periods, in one volume. Price 13*s.*

THE SUBJECT-MATTER INDEX, from 1st October to 31st December, 1852. Price 9*s.*

THE SUBJECT-MATTER INDEX, from 1st January to 31st December, 1853. Price 16*s.*

THE CHRONOLOGICAL INDEX of APPLICATIONS for PATENTS and PATENTS GRANTED from the 1st January to the 31st December, 1854. Price 6*s.*

THE ALPHABETICAL INDEX for the above period. Price 7*s.*

THE SUBJECT-MATTER INDEX for the above period. Price 16*s.* 6*d.*

THE CHRONOLOGICAL INDEX of APPLICATIONS for PATENTS and PATENTS GRANTED from the 1st January to the 31st December, 1855. Price 6*s.* 6*d.*

THE ALPHABETICAL INDEX for the above period. Price 7*s.* 6*d.*

THE SUBJECT-MATTER INDEX for the above period. Price 17*s.*

THE CHRONOLOGICAL INDEX of APPLICATIONS for PATENTS and PATENTS GRANTED from the 1st January to the 31st December, 1856. Price 6*s.* 6*d.*

THE ALPHABETICAL INDEX for the above period. Price 8*s.*

THE SUBJECT-MATTER INDEX for the above period. Price 18*s.* 6*d.*

THE ALPHABETICAL INDEX of APPLICATIONS for PATENTS and PATENTS GRANTED from the 1st January to the 31st December, 1857. Price 8*s.*

THE CHRONOLOGICAL INDEX for the above period. Price 6*s.* 6*d.*

THE SUBJECT-MATTER INDEX for the above period. Price 19*s.* 6*d.*

THE ALPHABETICAL INDEX of APPLICATIONS for PATENTS and PATENTS GRANTED, from the 1st January to the 31st December, 1858. Price 8*s.*

THE REFERENCE INDEX of PATENTS, pointing out the Office in which each enrolled Specification of a Patent may be consulted; the Books in which Specifications, Law Proceedings, and other subjects connected with Inventions have been noticed; also such of the Specifications of Patents granted under the Act of 21 James I. as have been published by the authority of the Commissioners. Price 30*s.*

AN APPENDIX to the REFERENCE INDEX of PATENTS of INVENTION, containing Abstracts from such of the early Patents and Signet Bills as describe the nature of the invention, and which Patents have no enrolled Specifications. Price 4*s.*

AN INDEX to ALL INVENTIONS PATENTED in ENGLAND from 1617 to 1854 inclusive, arranged under the greatest number of heads, with parallel references to INVENTIONS and DISCOVERIES described in the scientific works of VARIOUS NATIONS, as classified by Professor Schubarth. By B. WOODCROFT.

The foreign works thus indexed form a portion of the Library of the Commissioners of Patents, where they may be consulted, or manuscript translations be had.

SOMMAIRE de toutes les INVENTIONS BREVETÉES en ANGLETERRE depuis 1617 jusqu'en 1854 inclusivement, arrangées d'après le plus grand nombre de rubriques, avec renvois aux INVENTIONS et DÉCOUVERTES décrites dans les ouvrages scientifiques de DIFFÉRENTES NATIONS, classés par le Professeur Schubarth. Par B. Woodcroft.

Les ouvrages étrangers ci-dessus font partie de la Bibliothèque de la Commission des Patentes, où l'on peut les consulter, et obtenir des traductions en manuscrit.

VERZEICHNISS aller in ENGLAND von 1617—1854 incl. PATENTIRTEN ERFINDUNGEN, unter vielfältige Titel gebracht, mit Hinweisungen auf ERFINDUNGEN und ENTDECKUNGEN die nach Prof. Schubarth's Klassificirung in den wissenschaftlichen Werken VERSCHIEDENER NATIONEN beschrieben sind. Von B. Woodcroft.

Die hier aufgeführten fremden Werke machen einen Theil der Bibliothek der Patent Commission aus, allwo sie nachgeschlagen oder schriftliche Uebersetzungen besorgt werden können.

REPERTORIO di tutte le INVENZIONI munite di LETTERE PATENTI in INGHILTERRA dal 1617—1854 inclusivo, poste in ordine sotto il piu gran numero di capi, con riferenze alle INVENZIONI e SCOPERTI descritti nelle opere scientifiche di DIVERSE NAZIONI, classate dal Professore Schubarth. Dal Sig. B. Woodcroft.

Le opere straniere quì indicate possono esser consultate nella Biblioteca dei Commissari delle Patenti, e traduzioni in manuscritto vi possono ottenersi.

B. WOODCROFT,
Superintendent of Specifications, &c.

Museum of Patents, South Kensington.

NUMBER of VISITORS for the Week ending 18th June, 1859.

Mornings - - - -	2437
Evenings - - - -	1803
Total - - -	4240

Since the opening of the Museum Free Daily (May 12, 1858,)—109,850.

THIS Museum is open to the public daily, free of charge. The hours of admission are from 10 A.M. to 6 P.M., and in the evenings of Monday, Tuesday, and Wednesday from 7 to 10 P.M.

All communications on the subject of the Museum to be addressed to the Superintendent,

B. WOODCROFT.

Great Seal Patent Office,
Southampton Buildings.

GALLERY OF PORTRAITS OF INVENTORS, DISCOVERERS, AND INTRODUCERS OF USEFUL ARTS.—This Collection, formed by Mr. Woodcroft, and first opened to public view in the Great Seal Patent Office in 1853, now constitutes a portion of the Patent Museum at South Kensington.

Presentations of original Portraits, Medallions, Busts, and Statues, in augmentation of the Collection, are hereby invited, and will on receipt be acknowledged in this Journal, and duly recorded in the next published Catalogue.

REAPING MACHINES.—The entire series of Specifications and Drawings on this subject to the end of 1853, together with an Appendix, prepared by B. Woodcroft, of the Patent Office, and published under the sanction of the Commissioners, may be obtained at the cost price of 2*l.* 3*s.* 11½*d.*

FIRE-ARMS, PROJECTILES, &c.—The series of Specifications and Drawings on this Subject, from 15th May, 1718, to 31st December, 1853, with Alphabetical and Subject-matter Indexes, may be obtained at the cost price of 9*l.* 18*s.* 6½*d.*

The Indexes, separately, price 3*s.*

COLONIAL PATENTS.—Information as to the Mode of obtaining Protection for Inventions in the Colonies; contained in Communications from the Governors, &c. of the different British Colonies in answer to the Application of Mr. W. J. CURTIS for a Patent. Price 1*s.*

PATENT RIGHTS in the COLONIES.—Abstract of Replies to the Secretary of State's Circular Despatch of July 11, 1856, calling for Information as to the Form of the Application to be made by Persons desirous of obtaining Patent Rights in the Colonies, and the Expenses attendant on the Grant of such Patent Rights. Price 2*s.* 6*d.*

In course of Publication, by Order of the Commissioners of Patents.

ABRIDGMENTS (in Classes, and Chronologically arranged) of all SPECIFICATIONS of PATENTED INVENTIONS, from the earliest enrolled to those published under the Act of 1852.

These books are of 12mo size, and as each is limited to inventions of one class only, they can be sold at prices sufficiently moderate to enable the humblest inventor to examine for himself whether his discovery has been previously patented or not.

At the foot of each abstract are given references to notices of the inventions in scientific and other works, and to the reports of law proceedings for infringements, &c. &c. &c.

The classes already published are,—

1. DRAIN TILES AND PIPES, price 6*d.*
2. SEWING AND EMBROIDERING, price 6*d.*
3. MANURE, price 6*d.*
4. PRESERVATION OF FOOD, price 6*d.*
5. MARINE PROPULSION, price 4*s.*
6. MANUFACTURE OF IRON AND STEEL, price 5*s.*
7. AIDS TO LOCOMOTION, price 1*s.*
8. STEAM CULTURE, price 2*s.*
9. WATCHES, CLOCKS, AND OTHER TIMEKEEPERS, price 1*s.* 6*d.*
10. FIRE-ARMS AND OTHER WEAPONS, AMMUNITION, AND ACCOUTREMENTS, price 6*s.* 6*d.*
11. PAPER.—PART I. MANUFACTURE OF PAPER, PASTEBOARD, AND PAPIER MÂCHÉ, price 3*s.*
12. TYPOGRAPHIC, LITHOGRAPHIC, AND PLATE PRINTING, price 7*s.*
13. BLEACHING, DYEING, AND PRINTING YARNS AND FABRICS, price 9*s.* 6*d.*

The following are in the press:—

PAPER.—PART II. CUTTING, FOLDING, AND ORNAMENTING; INCLUDING ENVELOPES, CARDS, PAPER-HANGINGS, &c.
ELECTRICITY AND MAGNETISM: THEIR GENERATION AND APPLICATIONS.
PREPARATION OF FUEL, AND APPARATUS FOR ITS COMBUSTION.
MANUFACTURE AND APPLICATIONS OF INDIA RUBBER, GUTTA PERCHA, &c.; INCLUDING AIR, FIRE, AND WATER PROOFING.
PRODUCTION AND APPLICATIONS OF GAS.
STEAM ENGINES.

B. WOODCROFT.

The above, and all other works published by the Commissioners of Patents, are now on sale at the Great Seal Patent Office, 25, Southampton Buildings, Holborn.

This Journal is published on the evenings of Tuesday and Friday, and will be forwarded, post free, to Subscribers.—Terms, 30*s.* per annum.—Subscriptions received at the Great Seal Patent Office, where also single copies, at twopence each, may be obtained.

(*Registered for transmission abroad.*)

No. 571. FRIDAY, JUNE 24, 1859. Price 2d.

Grants of Provisional Protection for Six Months.

NOTICE is hereby given that Provisional Protection has been allowed

686. To FERDINAND POTTS, of the firm of F. Potts and Co., Tube Manufacturers, of Birmingham, in the county of Warwick, for the invention of "A combined metallic support and label for training, supporting, removing, and transplanting flowers or trees, in gardens, or green or hot houses, or for other horticultural purposes."

On his petition, recorded in the Office of the Commissioners on the 18th day of March, 1859.

1339. To WILLIAM SMITH, of Nos. 18 and 19, Salisbury Street, Adelphi, Civil Engineer, for the invention of "Apparatus for raising and docking ships, and other similar purposes."—A communication from abroad by Mr. John W. Nystrom, a citizen of the United States of North America, at present residing in Russia.

On his petition, recorded in the Office of the Commissioners on the 31st day of May, 1859.

1350. To GEORGE HALLEN COTTAM and HENRY RICHARD COTTAM, of St. Pancras Iron Works, Old Saint Pancras Road, in the county of Middlesex, for the invention of "Improvements in stable fittings."

On their petition, recorded in the Office of the Commissioners on the 1st day of June, 1859.

1381. To THOMAS HYLAND, of the city of Manchester, in the county of Lancaster, Manufacturing Chemist, for the invention of "Improvements in the manufacture of gum or dextrine, and their compounds, from starch."

1383. And to JAMES FERRABEE, of the Phœnix Iron Works, Stroud, in the county of Gloucester, Engineer, for the invention of "Improved machinery for forming bats of fleece or sheet sliver, and also for folding cloth and other fabrics."

On both their petitions, recorded in the Office of the Commissioners on the 6th day of June, 1859.

1385. To CHARLES PORLEY, of the city of Manchester, Cotton Spinner, for the invention of "Improvements in machinery for preparing to spin, and for spinning cotton and other fibrous materials."

1387. To PETER SALMON, of Glasgow, in the county of Lanark, Merchant, for the invention of "Improvements in valves for pumps and other uses."

1389. To WILLIAM HENRY DORMAN, of Winchester House, Old Broad Street, in the city of London, and CHARLES COWPER, of 20, Southampton Buildings, Chancery Lane, in the county of Middlesex, Patent Agent, for the invention of "Improvements in traction and locomotive engines."

1391. To JOHN GREENFIELD, of 8, Speedwell Street, Oxford, in the county of Oxford, for the invention of "Improvements in fastenings for dresses and other like apparel."

1393. And to FRANCIS MUIR, of Paisley, in the county of Renfrew, North Britain, Pattern Printer, for the invention of "Improvements in ornamental or colour printing."

On their several petitions, recorded in the Office of the Commissioners on the 7th day of June, 1859.

1395. To CHARLES DE BERGUE, of No. 9, Dowgate Hill, in the city of London, Engineer, for the invention of "Improvements in machinery for punching and shearing metal."—Partly a communication from abroad by Michael de Bergue, of Barcelona, in the kingdom of Spain.

1397. To JOSEPH NICOLAS ROYER, Tailor, of Paris, France, for the invention of "Improvements in the manufacture of wadded or quilted fabrics, and in their imitation.

1399. To CHARLES WALTER EDDY, of Kegworth in the county of Leicester, Master of Arts, for the invention of "An improvement in reaping machines."

1401. And to JOHN EYRE ASHBY, of Enfield, Bachelor of Arts, F.R.A.S., for the invention of "Improvements in sights for fire-arms."

On their several petitions, recorded in the Office of the Commissioners on the 8th day of June, 1859.

1403. To GEORGE BARTHOLOMEW of the town and county of Linlithgow, North Britain, Edge Tool Maker, for the invention of "Improvements in shoes for horses and other animals."

1404. To JOSEPH HENRY TUCK, of 34, Great George Street, Westminster, for the invention of "Improvements in breakwaters, sea walls, and like structures."

1405. And to ENOS WELSFORD, of Bona, Algeria, Proprietor, for the invention of "Improvements in tanning."

On their several petitions, recorded in the Office of the Commissioners on the 9th day of June, 1859.

1406. To THOMAS GREENSHIELDS, of No 11, Little Titchfield Street, London, for the invention of "Improvements in purifying gas and obtaining ammoniacal and other salts."

1407. To MICHAEL JOHN HAINES, of Dursley, in the county of Gloucester, Strap Maker, for the invention of "Improvements in the manufacture of driving straps or bands."

1408. To GEORGE JAMES FARMER, of Hampton Street, Birmingham, in the county of Warwick, Machinist, and GEORGE BRIGGS HARDY, of Alexander Place, Brompton, in the county of Middlesex, Chemist, for the invention of "Improvements in stair rods and eyes or sockets, which are also applicable for other purposes."

1409. To ALBERT FREDERICK HAAS, of Camomile Street, in the city of London, Merchant, for the invention of "Improvements in lamp and gas shades or glasses."

1410. And FRANCIS PULS, Chemist, of Roxburgh Terrace, Haverstock Hill, in the county of Middlesex, for the invention of "Improvements in the treatment of hydrocarbons."

1411. To SAMUEL WHITFORD TYLER, of Greenwich, in the state of New York, United States of America, for the invention of "Improvements in harvesters."

1412. To WILLIAM SELLERS, of Philadelphia, in the state of Pennsylvania, one of the United States of America, Engineer and Machinist, for the invention of "Improvements in ovens for baking bread or other substances, which improvements are also applicable for drying, annealing, and other analogous purposes."

1413. And to MOSES HAYM PICCIOTTO, of Finsbury Circus, in the city of London, Merchant, for the invention of "Improvements in apparatus for producing or obtaining motive power."

On their several petitions, recorded in the Office of the Commissioners on the 10th day of June, 1859.

1414. To WILLIAM DONBAVAND, of the city of Manchester, in the county of Lancaster, Scale beam and Weighing Machine Manufacturer, and DAVID CRICHTON, of the same place, Machinist, for the invention of "Improvements in looms for weaving."

1415. To JABEZ JAMES, of Broadwall, Lambeth, in the county of Surrey, Engineer, for the invention of "Improvements in obtaining and applying motive power."

1416. To FRANCIS PALLING, of Esher Street, Lambeth, county of Surrey, Clerk, for the invention of "Improvements in the construction of lamps for the purpose of burning tallow, grease or oils, either singly or in combination."

1417. To THOMAS FREDERICK HENLEY, of Denbigh Street, Pimlico, in the county of Middlesex, for the invention of "Improvements in obtaining alcohol or spirit from rice and other grain, and in apparatus for that purpose."

1418. To HENRY JOHN NICOLL, of the firm of Messrs. H. J. and D. Nicoll, Merchant Tailors, 114 to 120, Regent Street, in the county of Middlesex, for the invention of "Improvements in trowsers."

1419. To ALFRED VINCENT NEWTON, of the Office for Patents, 66, Chancery Lane, in the county of Middlesex, Mechanical Draughtsman, for the invention of "An improvement in fire arms."—A communication from abroad from Charles Theodore Pierson, of New York, in the United States of America.

1420. To FELIX ALEXANDRE RESTUD DE BEAUREGARD, of Paris, in the French empire, Civil Engineer, for the invention of "Certain improvements in generating steam, and in apparatus for obtaining power and in generating steam for other purposes."

1421. And to GEORGE CLAUDIUS ASH, of West View, Hampstead, in the county of Middlesex, for the invention of "Improvements in the manufacture of artificial teeth."

On their several petitions, recorded in the Office of the Commissioners on the 11th day of June, 1859.

1422. To BENJAMIN BAUGH, Manager of Salt's Patent Enamel Works, Bradford Street, Birmingham, in the county of Warwick, for the invention of "Certain improvements in apparatus or machinery for raising metals."

1423. To HENRY LEE CORLETT, of Inchicore, in the county of Dublin, Engineer, for the invention of "Improvements in rails, and the permanent way of railways, parts of such improvements being applicable to common roads."

1424. To OLIVER MAGGS, of Bourton, in the county of Dorset, for the invention of "Improvements in washing machines."

1425. To ARTHUR SMITH, of 4, Stafford Terrace, Loughborough Road, Brixton, in the county of Surrey, for the invention of "Improvements in bleaching and purifying bees' wax."

1426. To CONSTANTINE NICOLAUS KOTTULA, of Liverpool, in the county of Lancaster, Soap Manufacturer, for the invention of "A means of cleansing or purifying the 'Thames.'"

1427. To JACQUES THÉODORE SMETS, of Plaçamen, in the empire of France, Distiller, for the invention of "Improvements in the manufacture of

vinegar from grain and other vegetable products containing saccharine matter, and from a refuse product obtained in the manufacture of starch, also in apparatuses employed therein."

1428. To ALFRED VINCENT NEWTON, of the Office for Patents, 66, Chancery Lane, in the county of Middlesex, Mechanical Draughtsman, for the invention of "Improvements in the fitting of life and other boats."—A communication from abroad by Matthias Ludlum, of Fairhaven, in the state of Vermont, United States of America.

1429. And to WILLIAM EDWARD NEWTON, of the Office for Patents, 66, Chancery Lane, in the county of Middlesex, Civil Engineer, for the invention of "Improvements in the manufacture of piled fabrics, and in the machinery employed in such manufacture."—A communication from abroad by Charles Miller, of New York City, in the United States of America, Machinist.

On their several petitions, recorded in the Office of the Commissioners on the 13*th day of June,* 1859.

1430. To GEORGE SMITH, of Manor Road, Saint Mary's, Newington, in the county of Surrey, for the invention of "Improvements in hat-bands."

1431. To WILLIAM BROWN the younger, of the town and county of Selkirk, North Britain, Manufacturer, and SIMEON BATHGATE, of the same place, Engineer, for the invention of "Improvements in machinery or apparatus for carding and treating or preparing fibrous materials."

1432. To JOHN DIXON, of Bishopwearmouth, in the county of Durham, Engineer, for the invention of "Improvements in puddling steel."

1433. To JOHN COWAN, of the firm of L. Cowan and Sons, of Barnes, in the county of Surrey, Soap Manufacturers, for the invention of "An improved soap."

1434. To JAMES WANSBROUGH, of Bridge Street, Southwark Bridge, in the county of Surrey, Manufacturer, and ALEXANDER BAIN, of Clerkenwell Green, in the county of Middlesex, Telegraph Engineer, for the invention of "Improvements in effecting communications between parts of railway trains."

1435. And to ALEXANDER MACDONALD, of Manchester, in the county of Lancaster, Engineer, for the invention of "Certain improvements in machinery or apparatus for punching patterns or devices upon metallic printing rollers or cylinders."

On their several petitions, recorded in the Office of the Commissioners on the 14*th day of June,* 1859.

1436. To EDME JULES MAUMENÉ, Professor of Chymistry, and VICTOR ROGELET, Merchant, both residing in Reims, a town of France, for the invention of "Using the 'suint,' or the portion soluble, in water of the greasy substance found on the skin and hair of sheep for the purpose of manufacturing potash and other products."

1437. And to ALFRED VINCENT NEWTON, of the Office for Patents, 66, Chancery Lane, in the county of Middlesex, Mechanical Draughtsman, for the invention of "Improvements in the manufacture of polishing wheels, sticks, and tools."—A communication from abroad by Thomas J. Mayall, of Roxbury, in the county of Norfolk, and state of Massachusetts, United States of America.

On both their petitions, recorded in the Office of the Commissioners on the 15*th day of June,* 1859.

1439. To JAMES TAYLOR, of the town and county of Aberdeen, North Britain, Joiner, for the invention of "Improvements in planes or cutting tools for working in wood."

1440. To SIMON LEVY, of the city of Manchester, in the county of Lancaster, Cap Manufacturer, for the invention of "Improvements in hats, caps, or coverings for the head."

1441. To EDWARD THOMAS HUGHES, of the firm of Hughes and Son, Patent Agent, 123, Chancery Lane, London, W.C., for the invention of "An improved night lamp clock."—A communication from abroad by Louis Montanari, of Lyons, in the empire of France.

1442. To JOZÉ LUIS, of the British and Foreign Office for Patents, No. 1B, Welbeck Street, Cavendish Square, London, in the county of Middlesex, Patent Agent, for the invention of "A new siphon meter for liquids." — A communication from abroad by A. Grenet, of No. 10, Rue Mogador, Paris, in the empire of France.

1443. To JOZÉ LUIS, of the British and Foreign Office for Patents, No. 1A, Welbeck Street, Cavendish Square, London, in the county of Middlesex, Patent Agent, for the invention of "An apparatus for regulating individually the pressure, expenditure, and light in gas burners."—A communication from abroad by Edward Ferguson, of No. 10, Rue Mogador, of Paris, in the empire of France.

1445. To WILLIAM BIRKMYRE, of Port Glasgow, in the county of Renfrew, North Britain, Manufacturer, for the invention of "Improvements in drying, treating, and preparing yarns or thread.

1447. To CHARLES HENRY WARING, of Neath Abbey, in the county of Glamorgan, Mining Engineer, for the invention of "Improvements in safety lamps."

1448. To CHARLES WILKINSON, of Slaithwaite, in the county of York, Merchant, for the invention of "Improvements in doubling or twisting silk, cotton, worsted, linen, or woollen yarns, or yarns from any other fibrous substance."

1449. To THOMAS EDWARD TALLENT, of the Southwark Bridge Road, Southwark, county of Surrey, Engineer, for the invention of "Improvements in the manufacture of leather, and in machinery for that purpose."

1452. To HENRY FRANCIS SMITH, of No. 4, Dale Street, in the city of Manchester, Agent, for the invention of "Improvements in the manufacture of driving straps or bands."

1454. To ALFRED VINCENT NEWTON, of the Office for Patents, 66, Chancery Lane, in the county of Middlesex, Mechanical Draughtsman, for the invention of "Improvements in casting cylinders and tubes."—A communication from abroad by Freeborn Adams, of Somerville, in the state of Massachusetts, United States of America.

1455. To JOHN HARMER, of Wellington Villas, Brighton, in the county of Sussex, Gent'eman, and WILLIAM PARSONS, of Scotland Street, Brighton,

in the county of Sussex aforesaid, for the invention of "Improvements in fire-arms."

1456. And to THOMAS CATTELL, of 30, Euston Square, in the county of Middlesex, Doctor of Medicine, for the invention of "Improvements in the manufacture of varnish and lacker."

On their several petitions recorded in the Office of the Commissioners, on the 16th day of June, 1859.

1457. To THOMAS ORRELL, junior, of Mill Hill, Bolton-le-Moors, in the county of Lancaster, Cotton Spinner, for the invention of "Certain improvements in mules for spinning."

1458. To HENRI EVETTE, of Lisieux, department of the Calvados, in the empire of France, Manufacturer, for the invention of "A new system of bedding."

1459. To EDWARD THOMAS HUGHES, of the firm of Hughes and Son, Patent Agents, 123, Chancery Lane, London, W.C., for the invention of "Improvements in treating and decomposing fatty substances."—A communication from abroad by Charles Leroy and Joseph Jean Marie Durand, both residing at No. 25, Route de Fontainebleau, at Chantilly, near Paris, in the empire of France.

1460. To WILLIAM HENRY HAMMERSLEY, of Leek, in the county of Stafford, Silk Dyer, for the invention of "Improvements in stringeing, glossing, or finishing silk, and apparatus employed therein."—A communication from abroad, by James Leigh, of Seymour, in the state of Connecticut, America.

1461. To DAVID DEAS, of Carneil, in the county of Fife, North Britain, Farmer, for the invention of "Improvements in reaping machines."

1462. To RICHARD ARCHIBALD BROOMAN, of 166, Fleet Street, in the city of London, E.C., Patent Agent, for the invention of "Improvements in generating anhydrous steam, and in apparatuses employed therein and connected therewith."—A communication from abroad by Claudius Marcius Chaney Duplay, of Firminy Loire, France.

1463. To CHARLES FRÉDERIC VASSEROT, of 45, Essex Street, Strand, London, Patent Agent, for the invention of "Improvements in the construction of stereoscopes."—A communication from Henry Adolphe Corbin, residing in Paris, in the empire of France.

1464. To JULES JEAN LOUIS GUIBLET, of 11, Wilmington Square, Clerkenwell, in the county of Middlesex, for the invention of "Improvements in watches."

1465. To ALFRED VINCENT NEWTON, of the Office for Patents, 66, Chancery Lane, in the county of Middlesex, Mechanical Draughtsman, for the invention of "Improved means for assorting substances of different specific gravities."—A communication from abroad by Désiré Marchal, of Brussels.

1466. And to JOHN COMBE, of Leeds, in the county of York, Engineer, and ROBERT SMALPAGE, of the same place, Woollen Draper, for the invention of "Improvements in winding and spinning machinery, and in arranging and securing a uniform delivery from cops, to be used as weft or warp, or for other purposes."

On their several petitions, recorded in the Office of the Commissioners on the 17th day of June, 1859.

Inventions protected for Six Months by the Deposit of a Complete Specification.

NOTICE is hereby given that the petition of

1444. LEON BARROUX, of No. 10, Rue Mogador, Paris, in the empire of France, praying for Letters Patent for the invention of "A new system of railroad, supported on iron soles, with or without wood being used," was deposited and recorded in the Office of the Commissioners on the 16th day of June, 1859, and a complete specification accompanying such petition was at the same time filed in the said office.

And notice is also hereby given that the petition of

1451. MARC ANTOINE FRANÇOIS MENNONS, of the British and Foreign Patent Offices, 39, Rue de l'Echiquier, Paris, in the empire of France, praying for Letters Patent for the invention of "An improved kiln for brick and plaster burning,"—a communication from Mr. A. Mombrun, residing in Paris,—was deposited and recorded in the Office of the Commissioners on the 16th day of June, 1859, and a complete specification accompanying such petition was at the same time filed in the said office.

And notice is also hereby given that the petition of

1453. EDWARD ADAMS CUTLER, of the state of Connecticut, of the United States of America, praying for Letters Patent for the invention of "A new and useful machine for making horse shoes,"—a communication from Charles H. Perkins, a resident of Putney, of the said state of Connecticut,—was deposited and recorded in the Office of the Commissioners on the 16th day of June, 1859, and a complete specification accompanying such petition was at the same time filed in the said office.

Patents Sealed.

LIST of LETTERS PATENT which passed the Great Seal on the

24th June, 1859.

2939. JAMES THOMAS PETER NEWBON and THOMAS SMITH, of Fenchurch Street, Naval Architects, and JAMES BROWN, of Follit Street, Engineer, for an invention of "Improvements in machinery or apparatus for raising and lowering, or otherwise moving heavy weights."—Dated 24th December, 1858.

2945. DICKINSON EDLESTON, of Halifax, in the county of York, Dyer and Finisher, for an invention of "Improvements in preparing and finishing textile fabrics, and in the means or apparatus employed therein."—Dated 24th December, 1858.

2952. William Beckett Johnson, Manager for Messrs. Ormerod and Son, of Manchester, in the county of Lancaster, Engineers, for an invention of "Improvements in the employment of gas for generating steam, and in engines connected therewith."—Dated 24th December, 1858.

2955. Thomas Steven, Ironfounder, and Thomas Scott, Engineer, both of Glasgow, in the county of Lanark, North Britain, for an invention of "Improvements in heating apparatus for culinary and warming purposes, and in part applicable to steam-boiler and other furnaces."—Dated 27th December, 1858.

2959. James Macpherson, of Aberdeen, in the county of Aberdeen, North Britain, Comb Manufacturer, for an invention of "Improvements in solidifying the raspings and other waste of horns and hoofs, and in applying the process to the cementing of prepared horns, hoofs, and tortoiseshell."—Dated 27th December, 1858.

2960. John Davies, of Liverpool, in the county of Lancaster, Provision Merchant, for an invention of "An improved portable self gas generating lamp."—A communication from James Lawrence, resident at Brooklin, in the state of New York, one of the United States of America.—Dated 27th December, 1858.

2962. Frederick William Turner, of Foxhole Colliery, Swansea, in the county of Glamorgan, Mechanical Engineer, for an invention of "Improvements in steam engines, condensers, and steam boilers, and in promoting combustion in the furnaces of the same."—Dated 27th December, 1858.

2965. Benjamin Browne, of No. 52, King William Street, London Bridge, E.C., Civil Engineer and Patent Agent, for an invention of "Certain improvements in the manufacture of boots and shoes, or other coverings for the feet, and in the mode or method of uniting the same or parts thereof."—A communication from a Foreigner residing abroad.—Dated 28th December 1858.

2971. John Henry Johnson, of 47, Lincoln's Inn Fields, in the county of Middlesex, and of 166, Buchanan Street, in the city of Glasgow, North Britain, Gentleman, for an invention of "Improvements in the manufacture of boots and shoes or other coverings for the feet."—Dated 28th December, 1858.

2999. John Henry Johnson, of 47, Lincoln's Inn Fields, in the county of Middlesex, and of 166, Buchanan Street, in the city of Glasgow, North Britain, Gentleman, for an invention of "Improvements in the manufacture or production of boots and shoes, or other coverings for the feet, and in the machinery and apparatus employed in such manufacture."—Dated 31st December, 1858.

3000. Henri Robin, of Nantes, in the empire of France, for an invention of "Improvements in reaping machines."—Dated 31st December, 1858.

1. John Talbot Pitman, of the American and European Patent Offices, No. 67, Gracechurch Street, London, for an invention of "An improved mode of making and fitting bungs to casks and other vessels."—A communication from a Foreigner residing abroad.—Dated 1st January, 1859.

7. John Oliver, of White Bank, near Chesterfield, in the county of Derby, for an invention of "Improvements in lubricators for steam engine cylinders."—Dated 1st January, 1859.

23. Joseph Bond Morgan, of Liverpool, in the county of Lancaster, Cotton Broker, for an invention of "Improvements in propelling navigable vessels."—Dated 1st January, 1859.

24. Jozé Luis, of the British and Foreign Office for Patents, No. 1B, Welbeck Street, Cavendish Square, London, in the county of Middlesex, Patent Agent, for an invention of "New economical candles."—A communication from Adolphe Michaut, residing at Montpellier, in the empire of France.—Dated 3rd January, 1859.

70. William Edward Newton, of the Office for Patents, 66, Chancery Lane, in the county of Middlesex, Civil Engineer, for an invention of "Improvements in steam engines and steam generators."—A communication from abroad by Louis Arnier, of Marseilles, in the empire of France.—Dated 8th January, 1859.

77. John White, of Finchley, in the county of Middlesex, Surgeon, for an invention of "Improvements in cleansing or purifying air, and in increasing or reducing the temperature thereof, and in the application of air so treated to sanitary and other uses."—Dated 10th January, 1859.

91. William Bray and William Thomas George Bray, both of Folkstone, in the county of Kent, Engineers, for an invention of "Improvements in locomotive and traction engines."—Dated 12th January, 1859.

108. Henry Critchley, of Bury, in the county of Lancaster, Engineer, and Solomon Elston, of the same place, Engineer, for an invention of "Certain improvements in pistons for steam engines or other purposes."—Dated 13th January, 1859.

129. William Henry Edward McKnight, of Lydiard House, near Swindon, co. Wilts, for an invention of "An upright-celled boiler, applicable to all heating purposes by hot-water or other fluid."—Dated 15th January, 1859.

139. Pierre Amable de Saint Simon Sicard, of Paris, in the French empire, Chemist, for an invention of "An improved process and apparatus for converting cast iron into steel."—Dated 17th January, 1859.

142. Edward Brooks, of 43, Edward Street, Dorset Square, in the county of Middlesex, Locksmith, for an invention of "Improvements in locks."—Dated 17th January, 1859.

167. John Henry Johnson, of 47, Lincoln's Inn Fields, in the county of Middlesex, and of 166, Buchanan Street, in the city of Glasgow, North Britain, Gentleman, for an invention of "Certain improvements in the manufacture or production of lasts, boot trees, and clogs, and in the machinery and apparatus employed in the production of such articles."—A communication from Jules Mathieu, residing at Paris, in the empire of France.—Dated 19th January, 1859.

201. David Moseley, of the Chapel Field Works, Ardwick, in the city of Manchester, Manufacturer of India-rubber and Gutta Petcha, for an invention of "Improvements in the manufacture of india rubber thread."—Dated 22nd Jauuary, 1859.

367. John Henry Johnson, of 47, Lincoln's Inn Fields, in the county of Middlesex, and of 166,

Buchanan Street, in the city of Glasgow, North Britain, Gentleman, for an invention of "Improvements in fire arms."—A communication from William H. Bell, residing at the city and county of Washington, in the district of Columbia.—Dated 9th February, 1859.

518. Frederick Weeks, of Bolney, in the county of Sussex, for an invention of "The treatment of certain alcoholic products." — Dated 26th February, 1859.

715. George Gregg, of Sheffield, in the county of York, Currier, for an invention of "Improvements in currying or manufacturing leather."—Dated 21st March, 1859.

757. John Henry Johnson, of 47, Lincoln's Inn Fields, in the county of Middlesex, and of 166, Buchanan Street, in the city of Glasgow, North Britain, Gentleman, for an invention of "Improvements in fire arms.' —A communication from abroad by Francis H. Bell, of the city and county of Washington, in the district of Columbia, in the United States of America. — Dated 25th March, 1859.

1003. John Alison, of Hainault Forest, Essex, Gentleman, for an invention of "An improved instrument for extirpating thistles, docks, and other deep-rooted weeds." — Dated 21st April, 1859.

1016. John Armstrong, of Sunderland, in the county of Durham, Timber Merchant, for an invention of "Improvements in drying and preserving timber."—Dated 23rd April, 1859.

1074. Arthur Boyle, of Birmingham, in the county of Warwick, Tool Maker, for an invention of "Improvements in the manufacture of certain parts of umbrellas and parasols."—Dated 28th April, 1859.

Patents on which the Stamp Duty of £50 has been Paid.

(*To 22nd June*, 1859, *inclusive*).

20th June.

1471. George Riley, of No. 1, The Grove, in the parish of St. Mary, Lambeth, in the county of Surrey, for an invention of "An improved refrigerator for cooling brewers' and distillers' worts." —Dated 23rd June, 1856.

1513. Andrew Shanks, Engineer, 6, Robert Street, Adelphi, Westminster, for an invention of "Certain improvements in machines for drilling, boring, and cutting metals."—Dated 27th June, 1856.

21st June.

1468. Goldsworthy Gurney, of Bude, Cornwall, for an invention of "Certain improvements in warming and moistening air."—Dated 23rd June, 1856.

1529. Thomas Frederick Henley, of Bromley, in the county of Middlesex, for an invention of "An improved process for obtaining arrack or spirit from rice or other grain."—Dated 28th June, 1856.

22nd June.

1501. Gustave Dürrich, of Stuttgart, in the kingdom of Würtemberg, and of 77, Chancery Lane, in the county of Middlesex, for an invention of "Improvements in gas burners."—A communication. —Dated 26th June, 1856.

A Free Library and Reading Room, in connection with the Office of the Commissioners of Patents, is open to the Public daily from 10 till 4 o'clock.

In addition to the Printed Specifications, Indexes, and other publications of the Commissioners, the Library includes a Collection of the leading British and Foreign Scientific Journals, and text-books in the various departments of science and art. A printed Catalogue of the Library is on sale.

Note.—The Commissioners' publications may be consulted daily in the Library of the British Museum; in the Library of the Society of Arts; and in the Free Libraries of the following Towns and Cities:—

Aberdeen (*Public Library, Town House*).
Accrington (*Mechanics' Institution, Bank Street*).
Belfast (*Harbour Office, Corporation Square*).

PATENT LAW AMENDMENT ACT, 1852.—All Specifications, Indexes, &c., printed by order of the Commissioners of Patents, are sold at the Great Seal Patent Office, 25, Southampton Buildings, Holborn.

THE PATENT LAW AMENDMENT ACTS (15 & 16 Vict., cap. 83; 16 Vict., cap. 5; and 16 & 17 Vict., cap. 115); with the Rules and Regulations made by the Commissioners of Patents for Inventions, and by the Lord Chancellor and the Master of the Rolls, under the Acts 15 and 16 Vict., c. 83, and 16 & 17 Vict., c. 115, accompanied by Specimen Forms of the Provisional Documents printed on sheets of the prescribed size. Price 6*d.*

THE CHRONOLOGICAL INDEX of PATENTS of INVENTION, from March 2, 1617 (14 James I.), to September 30, 1852 (16 Vict.), 2 vols. Price 30*s.*

THE ALPHABETICAL INDEX of PATENTEES of Inventions for the above period. Price 20*s.*

THE SUBJECT-MATTER INDEX of PATENTS for the same period—*Second Edition*—to which is prefixed a Key of Terms and Phrases. 2 vols. Price 2*l.* 16*s.*

A Key to the *First Edition* of the above work is also published separately, and may be had on application.

THE CHRONOLOGICAL INDEXES of APPLICATIONS for PATENTS and PATENTS GRANTED from the 1st October to the 31st December, 1852, and from the 1st January to the 31st December, 1853, in one volume. Price 11*s.*

THE ALPHABETICAL INDEXES for the above periods, in one volume. Price 13*s.*

THE SUBJECT-MATTER INDEX, from 1st October to 31st December, 1852. Price 9*s.*

THE SUBJECT-MATTER INDEX, from 1st January to 31st December, 1853. Price 16*s.*

THE CHRONOLOGICAL INDEX of APPLICATIONS for PATENTS and PATENTS GRANTED from the 1st January to the 31st December, 1854. Price 6*s.*

THE ALPHABETICAL INDEX for the above period. Price 7*s.*

THE SUBJECT-MATTER INDEX for the above period. Price 16*s.* 6*d.*

THE CHRONOLOGICAL INDEX of APPLICATIONS for PATENTS and PATENTS GRANTED from the 1st January to the 31st December, 1855. Price 6*s.* 6*d.*

THE ALPHABETICAL INDEX for the above period. Price 7*s.* 6*d.*

THE SUBJECT-MATTER INDEX for the above period. Price 17*s.*

THE CHRONOLOGICAL INDEX of APPLICATIONS for PATENTS and PATENTS GRANTED from the 1st January to the 31st December, 1856. Price 6*s.* 6*d.*

THE ALPHABETICAL INDEX for the above period. Price 8*s.*

THE SUBJECT-MATTER INDEX for the above period. Price 18*s.* 6*d.*

THE ALPHABETICAL INDEX of APPLICATIONS for PATENTS and PATENTS GRANTED from the 1st January to the 31st December, 1857. Price 8*s.*

THE CHRONOLOGICAL INDEX for the above period. Price 6*s.* 6*d.*

THE SUBJECT-MATTER INDEX for the above period. Price 19*s.* 6*d.*

THE ALPHABETICAL INDEX of APPLICATIONS for PATENTS and PATENTS GRANTED, from the 1st January to the 31st December, 1858. Price 8*s.*

THE REFERENCE INDEX of PATENTS pointing out the Office in which each enrolled Specification of a Patent may be consulted; the Books in which Specifications, Law Proceedings, and other subjects connected with Inventions have been noticed; also such of the Specifications of Patents granted under the Act of 21 James I. as have been published by the authority of the Commissioners. Price 30*s.*

AN APPENDIX to the REFERENCE INDEX of PATENTS of INVENTION, containing Abstracts from such of the early Patents and Signet Bills as describe the nature of the invention, and which Patents have no enrolled Specifications. Price 4*s.*

AN INDEX to ALL INVENTIONS PATENTED in ENGLAND from 1617 to 1854 inclusive, arranged under the greatest number of heads, with parallel references to INVENTIONS and DISCOVERIES described in the scientific works of VARIOUS NATIONS, as classified by Professor Schubarth. By B. WOODCROFT.

The foreign works thus indexed form a portion of the Library of the Commissioners of Patents, where they may be consulted, or manuscript translations be had.

SOMMAIRE de toutes les INVENTIONS BREVETÉES en ANGLETERRE depuis 1617 jusqu'en 1854 inclusivement, arrangées d'après le plus grand nombre de rubriques, avec renvois aux INVENTIONS et DÉCOUVERTES décrites dans les ouvrages scientifiques de DIFFÉRENTES NATIONS, classés par le Professeur Schubarth. Par B. Woodcroft.

Les ouvrages étrangers ci-dessus font partie de la Bibliothèque de la Commission des Patentes, où l'on peut les consulter, et obtenir des traductions en manuscrit.

VERZEICHNISS aller in ENGLAND von 1617—1854 incl. PATENTIRTEN ERFINDUNGEN, unter vielfältige Titel gebracht, mit Hinweisungen auf ERFINDUNGEN und ENTDECKUNGEN die nach Prof. Schubarth's Klassificirung in den wissenschaftlichen Werken VERSCHIEDENER NATIONEN beschrieben sind. Von B. Woodcroft.

Die hier aufgeführten fremden Werke machen einen Theil der Bibliothek der Patent Commission aus, allwo sie nachgeschlagen oder schriftliche Uebersetzungen besorgt werden können.

REPERTORIO di tutte le INVENZIONI munite di LETTERE PATENTI in INGHILTERRA dal 1617—1854 inclusivo, poste in ordine sotto il piu gran numero di capi, con riferenze alle INVENZIONI e SCOPERTI descritti nelle opere scientifiche di DIVERSE NAZIONI, classate dal Professore Schubarth. Dal Sig. B. Woodcroft.

Le opere straniere quì indicate possono esser consultate nella Biblioteca dei Commissari delle Patenti, e traduzioni in manuscritto vi possono ottenersi.

B. WOODCROFT,
Superintendent of Specifications, &c.

In course of Publication, by Order of the Commissioners of Patents.

ABRIDGMENTS (in Classes, and Chronologically arranged) of all SPECIFICATIONS of PATENTED INVENTIONS, from the earliest enrolled to those published under the Act of 1852.

These books are of 12mo size, and as each is limited to inventions of one class only, they can be sold at prices sufficiently moderate to enable the humblest inventor to examine for himself whether his discovery has been previously patented or not.

At the foot of each abstract are given references to notices of the inventions in scientific and other works, and to the reports of law proceedings for infringements, &c. &c. &c.

The classes already published are,—

1. DRAIN TILES AND PIPES, price 6*d.*
2. SEWING AND EMBROIDERING, price 6*d.*
3. MANURE, price 6*d.*
4. PRESERVATION OF FOOD, price 6*d.*
5. MARINE PROPULSION, price 4*s.*
6. MANUFACTURE OF IRON AND STEEL, price 5*s.*
7. AIDS TO LOCOMOTION, price 1*s.*
8. STEAM CULTURE, price 2*s.*
9. WATCHES, CLOCKS, AND OTHER TIMEKEEPERS, price 1*s.* 6*d.*
10. FIRE-ARMS AND OTHER WEAPONS, AMMUNITION, AND ACCOUTREMENTS, price 6*s.* 6*d.*
11. PAPER.—PART I. MANUFACTURE OF PAPER, PASTEBOARD, AND PAPIER MÂCHÉ, price 3*s.*
12. TYPOGRAPHIC, LITHOGRAPHIC, AND PLATE PRINTING, price 7*s.*
13. BLEACHING, DYEING, AND PRINTING YARNS AND FABRICS, price 9*s.* 6*d.*

The following are in the press:—

PAPER.—PART II. CUTTING, FOLDING, AND ORNAMENTING; INCLUDING ENVELOPES, CARDS, PAPER-HANGINGS, &c.
ELECTRICITY AND MAGNETISM: THEIR GENERATION AND APPLICATIONS.
PREPARATION OF FUEL, AND APPARATUS FOR ITS COMBUSTION.
MANUFACTURE AND APPLICATIONS OF INDIA RUBBER, GUTTA PERCHA, &c.; INCLUDING AIR, FIRE, AND WATER PROOFING.
PRODUCTION AND APPLICATIONS OF GAS.
STEAM ENGINES.

B. WOODCROFT.

The above, and all other works published by the Commissioners of Patents, are now on sale at the Great Seal Patent Office, 25, Southampton Buildings, Holborn.

This Journal is published on the evenings of Tuesday and Friday, and will be forwarded, post free, to Subscribers. — Terms, 30*s.* per annum. — Subscriptions received at the Great Seal Patent Office, where also single copies, at twopence each, may be obtained.

THE

COMMISSIONERS OF PATENTS' JOURNAL.

By Authority.

(*Registered for transmission abroad.*)

No. 572. TUESDAY, JUNE 28, 1859. Price 2d.

Notices to Proceed.

NOTICE is hereby given, that

154. JOHN FAWCETT, of Kingston-upon-Hull, in the county of the same town, Merchant, has given notice at the office of the Commissioners of his intention to proceed with his application for Letters Patent for the invention of "An improved preparation of food for cattle and horses."

As set forth in his petition, recorded in the said office on the 18*th day of January*, 1859.

420. And WALTER RAYMOND, of No. 4, Albion Square, Dalston, in the county of Middlesex, Master Mariner, has given the like notice in respect of the invention of "An improved life-raft."

421. And JOHN PATERSON, of Wood Street, in the city of London, Manufacturer, has given the like notice in respect of the invention of "Improvements in brace buckles and loops and in braces."

As set forth in their respective petitions, both recorded in the said office on the 15*th day of February*, 1859.

428. And CHARLES EDWARD WRIGHT, of Nottingham, Commercial Traveller, has given the like notice in respect of the invention of "Improvements in means or apparatus employed in the nursing or treatment of infants."

As set forth in his petition, recorded in the said office on the 16*th day of February*, 1859.

441. And SAMUEL THOMAS COOPER, of Upper Clapton, Gentleman, has given the like notice in respect of the invention of "Improvements in the use and application of artificial light."

447. And FREDERICK WILLIAM EMERSON, of New Charlton, in the county of Kent, Mining Engineer and Metallurgical Chemist, has given the like notice in respect of the invention of "Improvements in the treatment of certain ores of lead, and obtaining from them valuable primary and secondary products."

449. And JOHN HENRY JOHNSON, of 47, Lincoln's Inn Fields, in the county of Middlesex, and of 166, Buchanan Street, in the city of Glasgow, North Britain, Gentleman, has given the like notice in respect of the invention of "Improvements in apparatus for propelling and steering vessels, and other floating craft."—A communication from John Eaton, residing at Belleville, in the province of Upper Canada, Engineer.

As set forth in their respective petitions, all recorded in the said office on the 17*th day of February*, 1859.

465. And CHARLES FRÉDERIC VASSEROT, of 45, Essex Street, Strand, London, Patent Agent, has given the like notice in respect of the invention of "An improved carding machine."—A communication from Victor Madeline Morin, residing at Athis, Orne, in the empire of France.

467. And FERDINAND PIERRE JEAN VAN DEN OUWELANT, of Paris, France, Gentleman, has given the like notice in respect of the invention of "Improvements in apparatuses to be applied to fire places for obtaining a more complete combustion of the fuel employed therein."

As set forth in their respective petitions, both recorded in the said office on the 19*th day of February*, 1859.

471. And THOMAS WILSON, of Birmingham, in the county of Warwick, Engineer, has given the like notice in respect of the invention of "Improvements in the manufacture and construction of ordnance."

474. And PETER SPENCE, of Pendleton, in the county of Lancaster, Manufacturing Chemist, has given the like notice in respect of the invention of "Improvements in the manufacture of alum, and in the mode of and apparatus for condensing or destroying gases arising therefrom."

475. And ROBERT JOBSON, of Wordsley, in the county of Stafford, Ironfounder, has given the like

notice in respect of the invention of "Improvements in supplying water or other fluid to axle tree boxes and other journal bearings to lubricate the same."

As set forth in their respective petitions, all recorded in the said office on the 21st day of February, 1859.

484. And JOSEPH HINE, of Clerkenwell, in the county of Middlesex, Fancy Cabinet Manufacturer, has given the like notice in respect of the invention of "An improved book slide."

486. And RICHARD ARCHIBALD BROOMAN, of 166, Fleet Street, in the city of London, E. C., Patent Agent, has given the like notice in respect of the invention of "A method of fixing tannin upon textile fibres, and the employment thereof in dyeing black and dark colors."—A communication from M. Verguin, residing at Lyon, France.

As set forth in their respective petitions, both recorded in the said office on the 22nd day of February, 1859.

490. And SAMUEL RIDGE, of Hyde, in the county of Chester, Millwright, has given the like notice in respect of the invention of "Improvements in coupling or making the joints of pipes and other articles."

As set forth in his petition, recorded in the said office on the 23rd day of February, 1859.

500. And ROBERT MUSHET, of Coleford, in the county of Gloucester, Metallurgist, has given the like notice in respect of the invention of "A new metallic compound or alloy."

501. And ROBERT MUSHET, of Coleford, in the county of Gloucester, Metallurgist, has given the like notice in respect of the invention of "An improvement in the manufacture of cast steel."

504. And ADOLPHE LANÇON, junior, Watch Manufacturer, at Besançon, Departement du Doubs, empire of France, has given the like notice in respect of the invention of "A new system of watches."

As set forth in their respective petitions, all recorded in the said office on the 24th day of February, 1859.

512. And CHARLES WILLIAM SIEMENS, of John Street, Adelphi, in the county of Middlesex, has given the like notice in respect of the invention of "Improvements in electric telegraphs and apparatus, and in supports for electric telegraphic line wires."—Partly a communication from Werner Siemens, residing at Berlin, in Prussia.

513. And WILLIAM MCNAUGHT, of Manchester, in the county of Lancaster, Engineer, has given the like notice in respect of the invention of "Certain improvements in steam engines, particularly applicable to compound steam engines."

As set forth in their respective petitions, both recorded in the said office on the 25th day of February, 1859.

520. And JAMES LEE, of Saint Helen's, in the county of Lancaster, Grocer, has given the like notice in respect of the invention of "Certain improvements in ploughs."

As set forth in his petition, recorded in the said office on the 26th day of February, 1859.

523. And EDWARD GATWOOD, of Great George Street, Westminster, in the county of Middlesex, Carriage Builder, has given the like notice in respect of the invention of "Improvements in buffing, traction, and bearing springs, applicable to railway carriages and locomotive engines."

525. And ALEXANDER MARTIN, Merchant, and ALEXANDER CRICHTON, Mechanic, both residing in Pollokshaws, in the county of Renfrew, have given the like notice in respect of the invention of "Improvements in weaving and woven goods."

As set forth in their respective petitions, both recorded in the said office on the 28th day of February, 1859.

536. And EDWARD JOSEPH HUGHES, of the firm of Hughes and Son, Patent Agents, 123, Chancery Lane, London, has given the like notice in respect of the invention of "Improvements in preserving animal food, poultry, game, fish, fruit, and other similar substances."—A communication from abroad by Edward Gorges, of Paris.

539. And the Reverend HENRY MOULE, Clerk, Master of Arts, of Fordington, in the county of Dorset, has given the like notice in respect of the invention of "Improvements in apparatus applicable to the evaporation of sewage or other waters, and for affording heat for other uses."

As set forth in their respective petitions, both recorded in the said office on the 1st day of March, 1859.

553. And JOHN WILLIAM HARKER, of No. 24, Upper Barnsbury Street, Islington, and JOHN KINGSFORD FIELD, of Upper Marsh, Lambeth, have given the like notice in respect of the invention of "Improvements in coating the bottoms of iron and other ships and vessels."—A communication from abroad, by John Cooke Harker and Frederick Field, both of Chili.

As set forth in their petition, recorded in the said office on the 2nd day of March, 1859.

604. And CHARLES MILLS, of High Street, Camden Town, has given the like notice in respect of the invention of "Improvements in the action of pianofortes."

As set forth in his petition, recorded in the said office on the 8th day of March, 1859.

618. And WILLIAM EDWARD NEWTON, of the Office for Patents, 66, Chancery Lane, in the county of Middlesex, Civil Engineer, has given the like notice in respect of the invention of "Improvements in billiard tables."—A communication from abroad by Abraham Bassford, of New York.

As set forth in his petition, recorded in the said office on the 9th day of March, 1859.

693. And CHARLES LAMBERT, of Sunk Island, in the county of York, Farmer, has given the like notice in respect of the invention of "Improvements in corn and seed drills."

As set forth in his petition, recorded in the said office on the 18th day of March, 1859.

704. And WILLIAM and SAMUEL PICKSTONE, of Radcliffe Bridge, near Manchester, Cotton Spinners, Manufacturers, and Dyers, have given the like notice in respect of the invention of "An im-

provement in stiffening, sizing, filling, or weighting textile fabrics."
As set forth in their petition, recorded in the said office on the 19th day of March, 1859.

768. And Matthew Andrew Muir, of Glasgow, in the county of Lanark, North Britain, Machinist, and James McIlwham, of the same place, Machinist, have given the like notice in respect of the invention of "Improvements in moulding or shaping metals."
As set forth in their petition, recorded in the said office on the 26th day of March, 1859.

1098. And James Childs, of Windsor House, Putney, in the county of Surrey, has given the like notice in respect of the invention of "Improvements in the manufacture of night light cases."
As set forth in his petition, recorded in the said office on the 2nd day of May, 1859.

1143. And William Shakspere Booth, of Birmingham, in the county of Warwick, Undertaker, has given the like notice in respect of the invention of "A new or improved washing machine."
As set forth in his petition, recorded in the said office on the 6th day of May, 1859.

1156. And Walter Jeffery, of Eastgate Street, Gloucester, has given the like notice in respect of the invention of "Rendering more convenient outdoor manipulations in photography by means of an improved portable photographic tent and tent camera."
As set forth in his petition, recorded in the said office on the 7th day of May, 1859.

1189. And Daniel Foxwell, of the city of Manchester, in the county of Lancaster, Card Manufacturer, has given the like notice in respect of the invention of "Improvements in sewing machines and apparatus connected therewith."
As set forth in his petition, recorded in the said office on the 12th day of May, 1859.

1258. And Thomas Stokes Cressey, of Burton-upon-Trent, has given the like notice in respect of the invention of "Improvements in machinery for cutting staves for casks."
As set forth in his petition, recorded in the said office on the 21st day of May, 1859.

1288. And David Simpson Price, of 7, Green Street, Grosvenor Square, in the county of Middlesex, Analytical Chemist, has given the like notice in respect of the invention of "Improvements in the production of colors for dyeing and printing."

1291. And Alexander Prince, of the Office for Patents, 4, Trafalgar Square, Charing Cross, in the county of Middlesex, has given the like notice in respect of the invention of "Improvements in the construction of ships and vessels."—A communication from abroad, by Hermann Hirsch, resident at Berlin, in the kingdom of Prussia.

1292. And Alexander Prince, of the Office for Patents, 4, Trafalgar Square, Charing Cross, in the county of Middlesex, has given the like notice in respect of the invention of "Improvements in screw propellors."—A communication from abroad, by Hermann Hirsch, resident at Berlin, in the kingdom of Prussia.
As set forth in their respective petitions, all recorded in the said office on the 25th day of May, 1859.

1302. And John Young, of Wolverhampton, in the county of Stafford, Manufacturer, has given the like notice in respect of the invention of "Improvements in locks, and in the manufacture of knobs for locks and latches, and also in apparatus for preventing draughts and keeping out wet from doors and windows."
As set forth in his petition, recorded in the said office on the 26th day of May, 1859.

1333. And Isaac Blackburn and Robert Blackburn, both of Long Eaton, in the county of Derby, Engineers, have given the like notice in respect of the invention of "Improvements in locomotive or traction engines, and in implements connected therewith for cultivating the soil."
As set forth in their petition, recorded in the said office on the 30th day of May, 1859.

1374. And Richard Chrimes, of Rotherham, in the county of York, Brass and Ironfounder, has given the like notice in respect of the invention of "Improvements in apparatus for supplying water to and discharging the contents from urinals, wash hand basins, and other similar articles."

1375. And Edward Gill, of the Elms, Saint Ann's Road, Wandsworth Common, in the county of Surrey, Distiller, has given the like notice in respect of the invention of "Improvements in producing spirit from rice, maize, and other descriptions of grain."
As set forth in their respective petitions, both recorded in the said office on the 4th day of June, 1859.

1396. And Joseph Bennett Howell, of Sheffield, in the county of York, Steel Manufacturer, John Hick, of Great Bolton, in the county of Lancaster, Ironfounder, and William Hargreaves, of the same place, Ironfounder, have given the like notice in respect of the invention of "Improvements in apparatus for applying heat to steam or other boilers or vessels, and for facilitating the combustion of gases and smoke."

1400. And Alfred Vincent Newton, of the Office for Patents, 66, Chancery Lane, in the county of Middlesex, Mechanical Draughtsman, has given the like notice in respect of the invention of "Improvements in gas meters."—A communication from abroad by William Richards, of Barcelona, in the Kingdom of Spain.
As set forth in their respective petitions, both recorded in the said office on the 18th day of June, 1859.

1413. And Moses Haym Picciotto, of Finsbur Circus, in the city of London, Merchant, has given the like notice in respect of the invention of "Improvements in apparatus for producing or obtaining motive power."
As set forth in his petition, recorded in the said office on the 10th day of June, 1859.

1415. And JABEZ JAMES, of Broadwall, Lambeth, in the county of Surrey, Engineer, has given the like notice in respect of the invention of "Improvements in obtaining and applying motive power."

As set forth in his petition, recorded in the said office on the 11th day of June, 1859.

1431. And WILLIAM BROWN the younger, of the town and county of Selkirk, North Britain, Manufacturer, and SIMEON BATHGATE, of the same place, Engineer, have given the like notice in respect of the invention of "Improvements in machinery or apparatus for carding and treating or preparing fibrous materials."

As set forth in their petition, recorded in the said office on the 14th day of June, 1859.

1451. And MARC ANTOINE FRANÇOIS MENNONS, of the British and Foreign Patent Offices, 39, Rue de l'Echiquier, Paris, in the empire of France, has given the like notice in respect of the invention of "An improved kiln for brick and plaster burning."—A communication from Mr. A. Mombrun, residing in Paris.

1453. And EDWARD ADAMS CUTLER, of the state of Connecticut, of the United States of America, has given the like notice in respect of the invention of "A new and useful machine for making horse shoes."—A communication from Charles H. Perkins, a resident of Putney, of the said State of Connecticut.

As set forth in their respective petitions, both recorded in the said office on the 16th day of June, 1859.

And notice is hereby further given, that all persons having an interest in opposing any one of such applications are at liberty to leave particulars in writing of their objections to such application, at the said Office of the Commissioners, within twenty-one days next after the date of the Gazette [and of the Journal] in which this notice is issued.

Patents Sealed.

LIST of LETTERS PATENT which passed the Great Seal on the

28th June, 1859.

2976. RICHARD DUGDALE KAY, of Accrington, in the county of Lancaster, Manufacturer of Patent Fabrics, for an invention of "An improved chemical means of applying or fixing on woven or felted fabrics certain colouring matters produced from tar.—Dated 29th December, 1858.

2989. RICHARD ARCHIBALD BROOMAN, of 166, Fleet Street, in the city of London, E.C., Patent Agent, for an invention of "Improvements in washing and drying machinery and apparatuses.—A communication from S. Charles, residing at Paris.—Dated 30th December, 1858.

2990. RICHARD ARCHIBALD BROOMAN, of 166, Fleet Street, in the city of London, E.C., Patent Agent, for an invention of "Improvements in revolving fire-arms.—A communication from L. F. Devisme, residing at Paris.—Dated 30th December, 1858.

2991. RICHARD ARCHIBALD BROOMAN, of 166, Fleet Street, in the city of London, E.C., Patent Agent, for an invention of "Improvements in machines for embroidering."—A communication from B. G. Dutel, residing at St. Quentin, France. —Dated 30th December, 1858.

2992. RICHARD ARCHIBALD BROOMAN, of 166, Fleet Street, in the city of London, E.C., Patent Agent, for an invention of "Improvements in machinery for splitting or dividing hides, skins, leather, and other like materials."—A communication from F. Martin, residing at Paris.—Dated 30th December, 1858.

2994. WILLIAM BURGESS, of the firm of Burgess and Key, of Newgate Street, in the city of London, Agricultural Engineers, for an invention of "Improvements in apparatuses for converting reciprocating into rotary motion."—A communication from G. Bancker, residing in New York.—Dated 30th December, 1858.

2996. JOHN KNOWELDEN, of Southwark, in the county of Surrey, Engineer, and RICHARD DOWNES EDWARDS, of Upper Belgrave Place, in the county of Middlesex, for an invention of "Improvements in hydraulic engines and apparatus connected therewith."—Dated 30th December, 1858.

3005. FREDERIC WILHELM ALEXANDRE CASPER and GUILLAUME HENRY SCHMAHL, both of No. 152, Rue du Faubourg St. Martin, Paris, for an invention of "Using spart or Spanish broom in manufacturing seats of all descriptions." —Dated 31st December, 1858.

3006. LOUIS A. NORMANDY, junr., of 67, Judd Street, London, for an invention of "A new system of shaft tugs."—A communication from a Foreigner now residing abroad.—Dated 31st December, 1858.

4. BENOÎT JOSEPH GOSTEAU, of 2, Rue Sainte Appoline, Paris, in the empire of France, and of 45, Essex Street, Strand, London, Merchant, for an invention of "An improved gridiron which may form a complete cooking-apparatus."—Dated 1st January, 1859.

5. JOSEPH EUGÈNE DROUOT, Baker, of 2, Rue Ste. Appoline, Paris, empire of France, and of 45, Essex Street, Strand, London, for an invention of "Improvements in bakers' ovens."——Dated 1st January, 1859.

9. JAMES GARFORTH, of Dukinfield, in the county of Chester, Engineer, for an invention of "Certain improvements in steam engines." — Dated 1st January, 1859.

11. Montague Wigzell, of Friar's Green, Exeter, in the county of Devon, for an invention of "An improved form of nail or driving article."—Dated 1st January, 1859.

22. Alexandre Louis Lévèque, of Paris, France, Gentleman, for an invention of "An improved apparatus for subduing or stopping run-away or restive horses."—Dated 1st January, 1859.

81. John Biers the younger, of No. 38, Rochester Road, Kentish Town, in the parish of Saint Pancras, in the county of Middlesex, Coach Maker, for an invention of "A self-acting carriage wheel break."—Dated 11th January, 1859.

98. William McNaught, of Manchester, in the county of Lancaster, Engineer, and William McNaught, of Rochdale, in the county of Lancaster, Engineer, for an invention of "Improvements in steam engines, and in apparatus connected therewith."—Dated 12th January, 1859.

145. Robert Mushet, of Coleford, in the county of Gloucester, Metallurgist, for an invention of "Improvements in the manufacture of cast steel."—Dated 17th January, 1859.

175. Thomas Greenwood and John Batley, of Leeds, in the county of York, Machine Makers, for an invention of "An improvement in the process of gassing textile fabrics."—A communication from H. Van den Berghe, residing at Rue de St. Georges, Courtrai, Belgium.—Dated 20th January, 1859.

178. Thomas Greenwood, John Batley, and Jacob Dockray, of Leeds, in the county of York, Machinists, for an invention of "Improved machinery for converting hemp and flax fibres into yarn, twine, ropes, and cordage."—Dated 20th January, 1859.

182. Henry Sagar, of Broughton, near the city of Manchester, in the county of Lancaster, Bleacher and Dyer, and Alexander Schultz, of Paris, in the kingdom of France, and of the city of Manchester aforesaid, Chemist, for an invention of "Improvements in producing pink shades on cotton fabrics or yarns."—Dated 20th January, 1859.

183. Thomas Richardson, of 20, New Bridge Street, Newcastle-on-Tyne, for an invention of "Improvements in the manufacture of manure."—Dated 21st January, 1859.

193. James Childs, of Windsor House, Windsor Road, Putney, in the county of Surrey, for an invention of "An improvement in applying heat in the manufacture of artificial gums and teeth, and other articles composed of india rubber or gutta percha combined with sulphur."—Dated 21st January, 1859.

223. John Henry Johnson, of 47, Lincoln's Inn Fields, in the county of Middlesex, and of 166, Buchanan Street, in the city of Glasgow, North Britain, Gentleman, for an invention of "Improvements in machinery or apparatus for cutting and shaping wood."—A communication from Peter H. Niles, residing at Boston, in the United States of America.—Dated 25th January, 1859.

262. Henry Watson, of High Bridge Works, Newcastle-upon-Tyne, for an invention of "Improvements in the manufacture of knotter plates used in the manufacture of paper."—Dated 28th January, 1859.

269. Henry Grissell, of Regent's Canal Iron Works, Eagle Wharf Road, in the county of Middlesex, Engineer, for an invention of "Improvements in machinery for moving ships and vessels on slips or inclined ways."—Dated 29th January, 1859.

295. William Edward Newton, of the Office for Patents, 66, Chancery Lane, in the county of Middlesex, Civil Engineer, for an invention of "An improved blowing machine."—A communication from Mr. Antoine Louis Hyacinthe Fiefnet de Sauville, of Paris, in the empire of France, a foreigner residing abroad.—Dated 1st February, 1859.

509. Alexander Reid, of the city of Manchester, Merchant, and Richard Tonge, of the same place, Manufacturer, for an invention of "Certain improvements in weaving, and in the machinery employed therein."—Dated 25th February, 1859.

845. David Blair White, of Newcastle-on-Tyne, M.D., for an invention of "Improvements in arranging ships and other pumps."—Dated 4th April, 1859.

951. Hugh Adams Silver, of Cornhill and Bishopsgate Street Within, in the city of London, and Silver-Town, in the county of Essex, India-rubber Manufacturer, for an invention of "Improvements in insulating wire for electric telegraphs."—Dated 15th April, 1859.

996. Henry Rawson, of Leicester, for an invention of "Improvements in machinery for combing wool and other fibres."—Dated 20th April, 1859.

1073. William Alonzo Tompson, of 18, Cecil Street, Strand, in the county of Middlesex, and Weston Green, Thames Ditton, in the county of Surry, Surgeon and Apothecary, for an invention of "Improvements in apparatus for applying liquids to the throat and air passages for medical purposes."—Dated 28th April, 1859.

1119. William Edward Newton, of the Office for Patents, 66, Chancery Lane, in the county of Middlesex, Civil Engineer, for an invention of "Improvements in steam boilers."—A communication from Samuel Pierce, of Troy, in the state of New York and United States of America.—Dated 4th May, 1859.

Patents on which the Stamp Duty of £50 has been Paid.

(*To 24th June*, 1859, *inclusive.*)

23rd June.

1477. Edwin Hardon, of Stockport, in the county of Chester, Manufacturer, and Joseph Henry, of

the same place, Mechanic, for an invention of "Improvements in looms for weaving, and in machinery for communicating motion to looms and other machines."—Dated 24th June, 1856.

1526. Charles Armand Messager-Abit, of 39, Rue de l'Echiquier, Paris, in the empire of France, and 4, South Street, Finsbury, London, for an invention of "Certain improvements in the treatment of fibrous substances."—Dated 28th June, 1856.

24th June.

1495. Robert Wilson Chandler, of Bow, in the county of Middlesex, Engineer, and Thomas Oliver, of Hatfield, in the county of Hertford, Farmer, for an invention of "Improvements in engines employed for agricultural purposes."—Dated 25th June, 1856.

SUPPLEMENT to the SERIES of LETTERS PATENT and SPECIFICATIONS of LETTERS PATENT for INVENTIONS recorded in the Great Seal Patent Office, and granted between the 1st March (14 Jac. 1.) A.D. 1617, and the 1st October (16 Vict.) A.D. 1852; consisting for the most part of Reprints of scarce Pamphlets, descriptive of the early patented Inventions comprised in that Series. Edited by Bennet Woodcroft, Superintendent of Specifications, etc. In one vol., price 9*s.* 6*d.*, or each Tract separately at the price affixed.

CONTENTS OF VOL. I.

1. Metallica; or, the treatise of Metallica, briefly comprehending the doctrine of diverse new metallical inventions, &c. By Simon Sturtevant. (*Letters Patent, dated 29th February,* 1611.) Price 1*s.* 4*d.*
2. A Treatise of Metallica, but not that which was published by Mr. Simon Sturtevant, upon his Patent, &c. By John Rovinson (*Letters Patent, granted A.D.* 1612.) Price 4*d.*
3. A Commission directed to Sir Richard Wynne and others to inquire upon oath whether Nicholas Page or Sir Nicholas Halse was the first inventor of certaine kilnes for the drying of malt, &c. &c. (*Letters Patent, Nos.* 33 *and* 85, *respectively dated* 8*th April,* 1626, *and* 23*rd July,* 1635.) Price 2*d.*
4. Dud Dudley's Metallum Martis; or iron made with pit-coale, sea-coale, &c. (*Letters Patent, Nos.* 18 *and* 117, *respectively dated* 22*nd February,* 1620, *and* 2*nd May,* 1638.) Price 8*d.*
5. Description of the nature and working of the patent Water-scoop Wheels invented by William Wheler, as compared with the raising wheels now in common use. By J. W. B. Translated from the Dutch by Dr. Tolhausen. (*Letters Patent, No.* 127, *dated* 24*th June,* 1642.) Price 2*s.*
6. An exact and true definition of the stupendous Water-commanding Engine, invented by the Right Honourable (and deservedly to be praised and admired) Edward Somerset, Lord Marquis of Worcester, &c. &c. (*Stat.* 15 *Car. II. c.* 12. *A.D.* 1663.) Price 4*d.*
7. Navigation Improved; or the art of rowing ships of all rates in calms, with a more easy, swift, and steady motion than oars can. By Thomas Savery. (*Letters Patent, No.* 347, *dated* 10*th January,* 1696.) Price 1*s.*
8. The Miner's Friend; or an engine to raise water by fire described, &c. By Thomas Savery. (*Letters Patent, No.* 356, *dated* 25*th July,* 1698, *and Stat.* 10 *&* 11 *Will. III. c.* 31, *A.D.* 1699.) Price 1*s.*
9. Specimina Ichnographica; or a brief narrative of several new inventions and experiments, particularly the navigating a ship in a calm, &c. By John Allen, M.D. (*Letters Patent, No.* 513, *dated* 7*th August,* 1729.) Price 8*d.*
10. A description and draught of a new-invented Machine for carrying vessels or ships out of or into any harbour, port, or river, against wind and tide, or in a calm, &c. By Jonathan Hulls. (*Letters Patent, No.* 556, *dated* 21*st December,* 1736.) Price 8*d.*
11. An historical account of a new method for extracting the foul air out of ships, &c., with the description and draught of the machines by which it is performed, &c. By Samuel Sutton, the Inventor. To which are annexed two relations given thereof to the Royal Society by Dr. Mead and Mr. Watson, (*Letters Patent, No.* 602, *dated* 16*th March,* 1744.) Price 1*s.*

FOREIGN PATENTS.

BELGIUM.*

List of Patents of Invention Delivered on the 16th June, 1859.†

(*Communicated by the Belgian Government.*)

(For previous List, see No. 567 of this Journal.)

7442. P. L. M. Debain, represented by D. de Vos-Verraert, of Brussels, for an imported invention of "Obtaining motive power by means of heat."—Dated 20th April, 1859.—(French Patent, 12th April, 1859.)

7526. B. de Smet, of St. Antelinckx, for "A thrashing machine."—Dated 6th May, 1859.

7582. A. Pomme de Mirimonde, represented by J. Piddington, of Brussels, for "Apparatus and processes for obtaining sets of teeth of vulcanized india-rubber."—Dated 23rd May, 1859.

7583. P. Fromont, of Chatelineau, a Patent of Improvement for "A delivery-cock."—Dated 25th May, 1859.—(Original Patent, 12th June, 1858.)

7584. G. L. Vanderspeeten, of Ghent, for "A keyboard system of reading (looms)."—Dated 23rd May, 1859.

7585. D. de Broux, of Ramillies-Offus, for "An apparatus for working mines."—Dated 25th May, 1859.

7586. J. Fermont-Vanwaesberghe, of Lokeren, for "An apparatus for making vinegar."—Dated 25th May, 1859.

7587. S. Pierce, represented by X. Raclot, of Brussels, for an imported invention of "Improvements in steam-boilers."—Dated 25th May, 1859.—(American Patent, 5th April, 1859.)

7588. A. J. Sax, represented by D. de Vos-Verraert, of Brussels, for an imported invention of "Improvements in brass instruments."—Dated 25th May, 1859.—(French Patent, 3rd January, 1859.)

7589. F. Vennin-Dérégniaux, represented by H. Biebuyck, of Brussels, for an imported invention of "A machine for cleaning copper shavings." Dated 25th May, 1859.—(French Patent, 19th March, 1858.)

7590. G. J. J. Laury, represented by H. Biebuyck, of Brussels, for an imported invention of "A

† All Specifications of Patents which have been in force not less than six months, may be inspected or translations of them be had at the Library of the Great Seal Patent Office, where also translated Indexes may be consulted.

system of sheaths applicable to dresses."—Dated 25th May, 1859.—French Patent, 19th May, 1859.

7591. L. Le Chatelier, represented by H. Biebuyck, of Brussels, a Patent of Improvement for "Manufacture of alumina."—Dated 25th May, 1859.—(Original Patent, 8th September, 1858.)

7594. H. De Gruytter, of Brussels, for "A metal or wooden linear instrument."—Dated 26th May, 1859.

7595. F. De Caluwe, of Brussels, a Patent of Improvement for "A system of fastening show windows."—Dated 26th May, 1859.

7596. J. B. Pascal, represented by O. Daillencourt, of Brussels, for an imported invention of "Improvements in hot-air generators and engines."—Dated 26th May, 1859.—(French Patent, 20th May, 1859.)

7597. F. Bangert, of Floreffi, for "Using fine or granular pyrites in the manufacture of sulphuric acid."—Dated 26th May, 1859.

7598. J. M. Colombon, of Liége, for "A system of lamps for burning mineral oil."—Dated 27th May, 1859.

7599. J. C. Botty, of Liége, for "A machine for cutting and pulverizing tobacco."—Dated 30th May, 1859.

7600. J. Laubereau, represented by A. Angot, a Patent of Importation for "A motor worked by means of heated and cool air, with a single and double action."—Dated 28th May, 1859.—(Original Patent, 7th January, 1859.)

7601. H. de Gruytter, of Brussels, a Patent of Improvement for "A linear instrument."—Dated 26th May, 1859.—(Original Patent, 26th May, 1859.)

7602. W. H. Harfield, represented by A. Crooy, of Brussels, for an imported invention of "Improvements in capstans or windlasses."—Dated 28th May, 1859.—(English Patent, 23rd August, 1858.)

7603. G. Dallemagne, of Sclessin, for "A system of fixed grates and removing slags from the bars."—Dated 30th May, 1859.

7604. J. Blethyn, represented by A. Crooy, of Brussels, for an imported invention of "Improvements in the manufacture of artificial fuel."—Dated 30th May, 1859.—(English Patent, 11th November, 1858.)

7605. J. Clegg, represented by A. Anoul, of Ixelles, for an imported invention of "Improvements in lubricating clack valves and pistons of steam engines."—Dated 30th May, 1859.—(English Patent, 17th December, 1858.)

7606. P. Van Hercke, of Ostend, a Patent of Improvement for "An apparatus for preventing the smoke of chimneys from being driven back into apartments."—Dated 1st June, 1859.—(Original Patent, 8th November, 1858.)

7607. J. P. Houget, of Verviers, for an imported invention of "A system of ventilators."—Dated 1st June, 1859.

7608. S. Thomson, of Brussels, for "A system of zinc windows or sashes."—Dated 31st May, 1859.

7609. L. C. Bureau, represented by A. Crooy, of Brussels, for an imported invention of "A system of heating and ventilating furnaces used for industrial purposes."—Dated 31st May, 1859.—(French Patent, 9th April, 1859.)

7610. J. Zelis, represented by H. Biebuyck, of Brussels, for "Manufacture of economical manure."—Dated 31st May, 1859.

7611. J. F. Miguel, represented by D. de Vos-Verraert, of Brussels, for an imported invention of "A truss."—Dated 31st May, 1859.—(French Patent, 28th May, 1859.)

7612. F. Ludewig, represented by O. Daillencourt, of Brussels, for an imported invention of "Manufacture of yeast."—Dated 31st May, 1859.—(French Patent, 8th January, 1859.)

7613. F. Botta, represented by D. de Vos-Verraert, of Brussels, for "A direct mode of returning steam to generators."—Dated 1st June, 1859.

7614. L. Stevenaux, represented by A. Crooy, of Brussels, a Patent of Improvement for "A system of drying stoves, being a substitute for malt-kilns."—Dated 1st June, 1859.—(Original Patent, 6th March, 1858.)

7615. L. Janssens, of Antwerp, for "A system of hats."—Dated 1st June, 1859.

7616. Grenié and Ladevèze, represented by H. Biebuyck, of Brussels, for an imported invention of "Improvements in converting common fire-arms into breech-loading arms."—Dated 3rd June, 1859.—(French Patent, 30th September, 1858.)

7617. E. Charles and Pirotte and Co., represented by A. Anoul, of Ixelles, for "A system of smoke-consuming graduated grates."—Dated 3rd June, 1859.

7618. J. Delporte, of Tournai, for "Retorts for distilling coal."—Dated 6th June, 1859.

7619. L. F. Devisme, represented by H. Biebuyck, of Brussels, a Patent of Improvement for "Revolvers."—Dated 31st May, 1859.—(Original Patent, 27th November, 1854.)

7620. F. Bouquié, represented by P. Bouquié-Lefebvre, of Saint Josse-ten-Node, for an imported invention of "Propelling and loading boats on canals and rivers."—Dated 6th June, 1859.

7621. H. R. L. Schramm, represented by P. Bals, of Brussels, for "An apparatus for simultaneously pressing and separating the fibres of the pellicules contained in beetroot, grain, potatoes, &c."—Dated 6th June, 1859.

7637. D. Marchal, of Brussels, for "A process and apparatus for ranging solid bodies, such as ores, sands, clay, soil, grain, &c., according to their specific weight, by means of a current of water or ascensional air."—Dated 10th May, 1859.

UNITED STATES OF AMERICA.

(Communicated by the Commissioner of Patents.)

LIST of PATENTS, with Claims annexed, issued from the United States Patent Office, for the week ending 7th June, 1859, and each bearing that date.

No. 24,270. JAMES ALBRO, of Elizabeth, N. J., for an "Improvement in printing oilcloths."

"What I claim is, forming ornamental figured surfaces on oilcloth by raising parallel ridges or surfaces *b* on the ground colour, when in a soft or green state, by means of a properly prepared block pressed upon it, and then forming parallel ridges or raised surfaces *d* at right angles thereto, and in the form of the design or desired configuration, by means of a properly prepared block, it being understood that I claim the privilege of having either the ground *b* or figure *d*, one of them only if desired, composed of dots, or broken lines, or ridges, in order to obtain a similar effect."

No. 24,271. D. HILLEN ARMOUR, of Columbia, Texas, for an "Improvement in breakwater."

"What I claim is, the projecting or overhanging sand-plate F, applied in combination with the diagonal walls of the breakwater, substantially as and for the purpose herein described."

No. 24,272. DANIEL S. AYRES, of Hope, N. J., for an "Improved washing machine."

"What I claim, and desire to secure by Letters Patent, is the revolving and movable disks or heads, with the mode of operating the same, as applied to washing machines."

No. 24,273. J. A. AYRES, of Hartford, Conn., for an "Improved device for raising water."

"I claim the wind wheel H, vane G, endless chain J, with buckets *d*, and weight L attached, the cylinder C, and annular receiving trough D, the whole being arranged and combined for joint operation substantially as and for the purpose set forth."

No. 24,274. THOS. BAILEY, of New Orleans, La., for an "Improvement in revolving fire-arms."—(Patented in England 17th January, 1859.)

"What I claim is, first, the placing of the within-named working or actuating means within the body, as herein set forth. Secondly, the revolving chamber, working on two adjustable centers of suspension instead of in the ordinary way. Thirdly, the mode described of connecting the barrel to the body. Fourthly, the stopping or retaining of the revolving chamber by means of a spring stop acting on the ratchet, such stop being actuated by a cam on the tumbler. Fifthly, the notch or cavity in the cap guard, or cock nose, to fit upon the solid part of the chamber and retain the chamber in a safe position."

No. 24,275. JOHN B. BAKER, of Syracuse, N. Y., for an "Improvement in bridle bits."

"What I claim is, the attachment, as described, of sliding rings or rein-connections (P), to the curb bars of bridle bits, when the same are operated upon by springs attached to the bit, substantially in the manner and for the purpose set forth."

No. 24,276. HENRY BEDLOW, of Newport, R. I., for an "Improved chimney cowl."

"I claim the arrangement and combination of the chimney-top or tube A, chamber F, tubes G, or other external draught passages and deflectors *b*, *b*, *c*, c^1, C, the tube chamber and draught passages communicating with each other and the external air to operate as and for the purpose set forth."

No. 24,277. N. BOARDMAN, of Fond du Lac, Wis., for an improved method of sawing shingles from the bolt."

"What I claim is, 1st, the employment or use of two bolt carriages F, F, when used in connection with the adjustable planes H, and arranged in the relation with the circular saw C as shown, so that a shingle may be sawed from each bolt at each movement of its carriage, and the two bolts operated upon simultaneously by one and the same saw. 2nd, the adjustable or tilting tracks, or bolt frames E, E, in combination with the reciprocating carriages F, F, and saw C, the whole being arranged to operate substantially as and for the purpose set forth."

No. 24,278. JEHU BRAINARD and W. H. BURRIDGE, of Cleveland, O., for an "Improvement in tanning."

"What we claim as our improvement, and desire to secure by Letters Patent of the United States, is, the herein-described process of treating skins or hides in a preparation liquor or liquors, substantially as set forth for the purposes described."

No. 24,279. JOHN M. BRUNSWICK, of Cincinnati, O., for an "Improved pocket handle for billiard tables."

"I claim the pocket handles (A, A^1,) arranged and secured substantially as described, and formed of vulcanized gutta percha, or india rubber, as a new article of manufacture, for the purposes set forth."

No. 24,280. F. A. CALVERT and CHAS. G. SARGENT, of Lowell, Mass., for an "Improvement in machines for burring wool and ginning cotton."

"What we claim as our invention, and desire to secure by Letters Patent, as an improvement in machines for burring wool and ginning cotton, is, a cylinder, having spaces between the teeth, for the accommodation of the seed, as set forth, in combination with a revolving guard, operating in the manner substantially as described."

No. 24,281. J. C. CLAPP, of Seneca Falls, N. Y., for an "Improvement in corn huskers."

"What I claim as my invention, and desire to secure by Letters Patent, is, the combination and arrangement of the carriage B, fly clearer *a*, cross lever H, concaves and gauge F, E, blade L, and tread lever J, operating conjointly, substantially as and for the purpose set forth."

No. 24,282. DECIUS W. CLARK, of Bennington, Vt., for an "Improvement in enamel compositions for bricks, &c.

"What I claim is, the enamel or glaze, for pottery ware, or other articles formed of the ingredients, and substantially as specified."

No. 24,283. S. C. COFFIN, of Lawrenceville, Pa., for an "Improved method of jointing shingles."

"What I claim is, so combining with the horizontal saw B, that saws the shingle from the bolt, the transverse piece, J, and carriage K, upon it, so that the same saw that cuts the shingles from the bolt may be used for jointing said shingles, as herein set forth and explained."

No. 24,284. ENOCH COLVIN, of Poultney, Vt., for an "Improvement in knitting machines."

"What I claim, is, 1, the combination of the needle arm (*d*,) and the iron rim upon the ring (*e*), constructed as above described for raising each needle by itself, and completing each stitch before another is begun. 2, the cylinder (*o*) for reversing and regulating the motion of the machine, while forming the heel and toe. 3, the combination of the notched wheel (*t*), the toothed bar (*u*), with its pointer (*v*), the cylinder (*o*), the elevating arm (*u*), the elevating bar (*S*), and cam thereon, and the pin on the wheel (*l*), by means of all which the motion of the machine is reversed back and forth, and regulated so as to knit upon a straight hose flaps of the proper form for the heel and toe. 4, the wheel (*p*) and the elevating arm (*r*), combined with the several parts and devices mentioned in the last preceding claim, or paragraph, as above described, for setting in motion at the proper juncture the machinery for regulating the formation of the flaps for the heel and toe."

No. 24,285. David Conlan, of New York, N. Y., for an "Improved light shade for billiard tables."

"I claim, and desire to secure by Letters Patent, as an improved article of manufacture, a shade for billiard tables, &c., having two reflecting parts B', B'', and otherwise made as herein shown and described."

No. 24,286. Thos. Crane, of Fort Atkinson, Wis., for an "Improvement in rakes."

"What I claim as my invention, and desire to secure by Letters Patent, is, my improved harvesting rake for gathering and elevating cut stalks of grain preparatory to binding the same into sheaves; when the said rake is composed of side handles, gathering fingers, and swinging legs, or the equivalents of the same, substantially as herein set forth."

No. 24,287. Thos. Dougherty, of Macon, Geo., for an "Improved lock."

"What I claim as my invention, and desire to secure by Letters Patent, is, the employment of the spring tumblers, C, D, and E, when constructed and operated in the manner described, in connection with the bolt B, the said springs being detained by the key to let the bolt slide, as specified."

No. 24,288. Daniel Du Pré, of Raleigh, N. C., for an "Improved chain pump."

"What I claim is, 1st, the endless chain for raising water, composed of the curved detachable links M, when said links are constructed and united in the manner and for the purposes set forth. 2nd, keeping the chain stiff between the upper and lower pulleys by means of projections R, on the links, substantially as and for the purpose set forth. 3rd, the combination of the curved links M with the peculiarly shaped curved buckets N, when constructed and operated substantially in the manner and for the purposes set forth."

No. 24,289. Wm. B. Dunning, of Geneva, N. Y., for an "Improvement in railroad chairs."

"What I claim, therefore, is as follows: 1, I claim the peculiar form of a partly raised and double-slotted bed plate, as described. 2, I claim, also, the peculiar form and position of the clamps, one part of them being confined and borne down on the tie by the weight of the rail and all above it, and the other part, viz., the jaw resting upon the flange of the rail and holding it fast. 3, I claim the combination of the several parts as above described, or their mechanical equivalent."

No. 24,290. James Fay, of Baltimore, Md., for an "Improvements in hydrants."

"I claim the arrangement of the stock L, and chamber P, as constructed, with the india rubber ball F, rod E, opening in the top of box I, nut G, spring J, valve stem *n*, valve *m*, and thimble H, the several parts being used, and operating conjointly, substantially in the manner and for the purpose herein specified."

No. 24,291. Wm. Field, of Providence, R. I., for an "Improvement in horse power machines."

"I claim arranging and supporting a hollow driving shaft, and the driven shaft passing through the driver, substantially as described, whereby both driver and driven shaft turn in the same direction, and both ends of the driver are fully supported by boxes, independent of the shaft passing through it, while at the same time the bearing of the shaft passing through the hollow driver will be on the driver only, at a point directly opposite its journal, so that any slight displacement of either shaft will not cause them to bind on each other, so as to increase the friction of the machine."

No. 24,292. Archibald Ford, of Newport, Ky., for an "Improvement in machinery for opening old rope."

"I claim the elevated bar *k*, provided with cavities *k*, *k*, arranged in the described relation to the feed mechanism and drum, and operating in combination with the latter, to preparatorily open the butts of the rope, as set forth."

No. 24,293. Geo. P. Frick, of Baltimore, Md., for an "Improved mode of starting city railroad cars."

"What I claim is, the application of a lever, acting temporarily upon the axle of a railway carriage or other wheeled vehicle, in combination with the pulley and chain, substantially as set forth, and whether the pulley is of uniform or different diameters, as described. I also claim such lever, in combination with the ratchet wheel and catch, substantially as set forth, in their application to a railway or other wheeled vehicle. I also claim the cord, whereby the lever may be loosened from the catch at the will of the driver, in combination with the said lever and catch, pulley, and chain, when applied to a railway carriage or other wheeled vehicle. I also claim the combination of the catch and ratchet wheel with the chain and weight described in the foregoing specification, whereby the engaging and disengaging of the catch is operated by the motion of the draft bar, substantially as described."

No. 24,294. Felix Gelin and Chas. Gelin, of New York, N. Y., for an "Improvement in legs for pianos."

"What we claim is, the glass socket F, so mounted in the legs of musical instruments, that the escape of sound from the instrument to the floor is checked without injuring the appearance or endangering the strength and durability of the instrument."

No. 24,295. T. W. Gibbons, of Franklin, N. J., for an "Improvement in money boxes for stages, &c."

"What I claim, is, 1st, the box A provided with the drawers B, D, the former having a flap or door *h* in its bottom and arranged to operate substantially as and for the purpose set forth. 2nd, the change slide or plate G, one or more used in connexion with tubes *s*, and arranged relatively with drawer B, to operate substantially as and for the purpose set forth. 3rd, in combination with the drawers B, D, and change plate or plates G, the bell *g*, and index *n*, and dial *o*, arranged substantially as and for the purpose set forth."

No. 24,296. David Glover, of Township of Cass, Schuylkill County, Pa., for an "Improved safety cage for coal shafts."

"I claim the construction of the cage in two separate sections separated at the guides, and so connected by hinges at the top of the bottom of the sill, that when the rope or chain used in hoisting brakes or the power ceases to operate, the cage shall open at the top, where the sections are joined, and the height and weight of each section shall operate as a lever and weight, to force the iron shoe on the ends of the sills, and pieces 'B,' 'B,' powerfully against and into the guides, and by this means entirely prevent the dropping of the cage and car down the shaft."

No. 24,297. Robt. Greaves, of Philadelphia, Pa., for an "Improvement in cleaning spinning mule carriage tops.'

"What I claim is the within-described mode of cleaning mule carriage tops, or any mechanical equivalent therefor."

No. 24,298. W. L. Gregory, of Theresa, N. Y., for an "Improvement in wind wheels."

"I claim the arrangement of the main vane K, and the regulating vane L, to operate in combination with the wings E, substantially as and for the purpose described."

No. 24,299. Albert C. Griswold, of Hartford, Conn., and Wait R. Griswold, of Durham, Conn., for an "Improved rocking carriage."

"What we claim, therefore, is, the employment of the rockers A, in combination with the seats or cribs B, as and for the purpose described. Also, the railway track or framework D, with the cords or rods E, springs F, when used as and for the purpose described. Also, the employment of the elastic substance H, attached to the rocker, for the purpose as described."

No. 24,300. John W. Harris, of Durhamville, N. Y., for an "Improved paddle wheel."

"I claim constructing paddle wheels for boats, in such a manner that the paddles may be folded laterally upon the frame, and the wheel thereby withdrawn from projecting beyond the sides of the boat, or extended at pleasure, whether the boat be in motion or at rest, the paddles (H) being connected to the framework (A & D), substantially as descaibed, and their outer edges of the form shown, the whole operating substantially as set forth."

No. 24,301. Wm. A Hawkes, of Corinth, N.Y., for an "Improvement in rotating dumping car."

"I claim the arrangement and combination of the rotating platform *c*, provided with dumping boxes L, with the shaft K, and gearing D, E, H, (*b*), G, (*i*), (*v*), (*m*), and the clutches (*d*, *j*), substantially as herein shown and described, so that the car may be propelled, and the dumping boxes rotated by turning shaft K, as desired, all as set forth."

No. 24,302. Henry W. Henly, of New York, N. Y., for an "Improved mattress."

"I claim the use or employment of the serrated section B, B, when the same shall be combined for the purpose specified."

No. 24,303. J. Herald and C. B. Tompkins, of Trumansburg, N. Y., for an "Improvement in harrows."

"We claim the arrangement of the plates B, B^1, with recesses a, a^1, and b, b^1, and projections c, c^1, and with a hole in their center for the purpose of securing the bars A, A^1, and the tooth C, substantially in the manner specified."

No. 24,304. Chas. Hewitt, of Trenton, N. J., for an "Improved machine for moving iron at the rolls."

"I claim the movable floors, platforms, or supports A, B, for moving iron or other metal at the rolls, while in process of manufacture, constructed and operated as herein described or otherwise, substantially the same."

No. 24,305. Gideon Hotchkiss, of Windsor, N.Y., for an "Improved machine for working butter."

"I claim the combination of the lever stem ladle and oblong bowl, by means of the revolving joint, the projecting cope and follower ladle, substantially as described."

No. 24,306. Wm. H. Howard, of Philadelphia, Pa., for an "Improvement in loom temples."

"I claim the rollers D and D^1, turning in bearing or steps, arranged to yield independently of and in contrary directions to each other, on the opening of the warp threads, substantially as and for the purpose herein set forth."

No. 24,307. Enoch Jacobs, of Cincinnati, O., for an "Improvement in the construction of prisons."

"I claim a secret passage or guard chamber around the outside of an iron plate jail, and between said jail and a surrounding enclosure, constructed and arranged substantially as described, for the purposes set forth."

No. 24,308. Joseph K. Kilbourn, of Pittsfield, Mass., and Edwd. E. Kilbourn, of Litchfield, Conn., for an "Improvement in manufacturing knitted fabrics."

"We claim the new knitted fabric herein described, composed of columns of stitches oblique to each other, having openings at the places where the oblique columns of stitches diverge, the same being a new article of manufacture."

No. 24,309. T. E. King, of West Andover, Ohio, for an "Improved saw filing machine."

"I claim the suspending the file holder upon arms, as herein set forth, so that it is susceptible of adjustment horizontally, vertically, and obliquely, and in combination with the curved faced slot in the holder, as described."

No. 24,310. Josiah Kirby, of Cincinnati, Ohio, for an "Improved bung cutter."

"I claim the mode of pointing the lower or last end cut off the plug or bung, by forcing it into a separate dog, made and used substantially and for the purpose as described. I also claim the mode of lifting the plug out of the dog, after it has been compressed by means of rod G^1, when operated in the manner and for the purpose described. I also claim the mode of driving the plug out of the cutter into the compressing dog by movable rod as at a, Fig. 3, when operating in the manner and for the purpose described."

No. 24,311. Suspended.

No. 24,312. Alexr. Le Mat, of New Orleans, La., for an "Improvement in adjustable hammer for revolving fire-arms."

"I claim providing the hammer with a hinged head, so arranged that it shall present the same face in different directions, for the purpose of discharging in succession different barrels, or a grape shot pistol and a revolving fire-arm, as may be desired, and providing the same with small lateral wings for locking the revolving chambers in position, in the manner and for the purposes herein set forth."

No. 24,313. Alexr. Le Mat, of New Orleans, La., for an "Improvement in automatic finger for closing the vent of cannons, &c."

"What I claim is, 1st, the apparatus B and B^1, with the automatic finger C, substantially as described. 2nd, the inclined plane H, in the manner and purpose described, or as an equivalent, the inclination of the slot of the percussion lock, for the purpose set forth."

No. 24,314. John Lemman, of Cincinnati, O., for an "Improved machine for sawing circular bevels."

"What I claim is, the adjustable rest (e), hinged to the bed (f), in the manner described, and adjustable vertically with reference thereto, substantially as and for the purposes set forth."

No. 24,315. H. J. Lombaert, of Philadelphia, Pa., for an "Improvement in compound railroad axles."

"What I claim is, the divided tubular axle (A and A^1) and the solid undivided center piece or mandrel (C) when the same are constructed and combined together with each other and with the wheels (B and B^1), so that the two said tubular parts (A and A^1) shall project through their respective wheels, and form their journals, and also rotate out of contact and independently of each other, substantially in the manner and for the purposes set forth and described."

No. 24,316. Warren S. Low, of Albany, N. Y, for an "Improvement in furnace grate bars."

"What I claim is, the combination of the corrugated and circular removable face piece C, with the body A, of a furnace grate bar, in the manner and for the purposes herein set forth."

No. 24,317. Wm. J. Lyman, of Easthampton, Mass., for an "Improved shoe sole."

"What I claim as new, and desire to secure by Letters Patent is, the use, or application, or employment of a metallic insoles to shoes, boots, &c."

No. 24,318. H. H. Luther, of Warren, R. I., for an "Improvement in harvesting machines."

"What I claim is, 1st, attaching the finger bar P, to the frame J, suspended on the shaft k, and fitted between bars j, j, on frame G, and arranged on shaft H, substantially as shown, so that the finger bar and sickles may, when necessary, be elevated, placed directly over the main wheel and shaft, as described. 2nd, adjusting the finger bar D and sickles r, r, in a more or less inclined position, in order to cut the grass or grain the desired height, by having the finger bar attached to a circular frame G, fitted on the arm of the driving wheel F, and secured at the desired point by means of the lever I, and projections, or any equivalent fastening. 3rd, the arrangement and combination of the frames J, G, applied to the driving wheel F, in connection with the gearing w, t^1, t^1, u, and v, v, respectively, on the wheel F, shafts t, t, and in the frame J, substantially as and for the purpose set forth."

No. 24,319. Robt. Marcher, of New York, N.Y., for an "Improvement in burnishing mouldings."

"What I claim is, attaching a self-adjusting burnisher I, to a reciprocating plate or carriage C, when used in connection with a moulding N suspended and attached to the machine, in the manner as shown, or in any equivalent way, to admit of being acted upon by the burnisher, for the purpose set forth."

No. 24,320. W. S. Mayo, of New York, N.Y., for an "Improvement in machines for finishing bricks."

"What I claim is, the combination of the box A, plunger B, and plates k, with or without the feed block F, substantially as and for the purpose set forth."

No. 24,321. Chas McBurney, of Boston, Mass., for "Improvements in the manufacture of india-rubber blankets, or aprons, used in the printing of fabrics, books, &c."

"What I claim is, bringing the blanket to a uniform thickness and smooth surface, by passing it between a revolving emery roll, and a revolving feed roll, so arranged with respect to each other that the surface of the feed roll shall be ground by the emery wheel, as set forth, and for the purpose specified."

No. 24,322. J. W. McLean, of Lebanon, Ind., for an "Improvement in rotary harrows."

"I claim the combination of the within specified obliquely set teeth, with two or more harrow frames revolving in opposite directions, substantially as and for the purpose set forth."

No. 24,323. Saml. J. Reeves, of Philadelphia, Pa., and Montgomery C. Meigs, of Washington, D.C., for an "Improvement in truss for roofs, bridges, &c.

"We claim the mode of trussing, or stiffening a curved or arched beam or rafter, for bridges, or roofs, by means of tension rods, or ties of metal, wood, or other suitable material, connected at their outer ends with the arched or curved beam or rafter, at various points, and converging towards and connected together at their inner ends, at a point within the space contained between the arc, or arched, or curved beam or rafter, and the straight line joining its extremities, substantially as above described, and as represented in the drawing and model herewith."

No. 24,324. James S. Moody, of Cincinnati, Ohio, for an "Improvement in sewing machines."

"I claim the employment of an endless belt, arranged and operated as described, to carry one or more hooks, to draw the thread through the cloth in the manner described. I claim the tension collar G, embracing the thread and needle, and operating to hold the thread in the manner herein set forth. I claim alternately holding and releasing the double pointed needle, by means of sliding keys *c* and c^1, operating so as to pass through notches *d*, *d*, towards the ends of said needle, at the proper times, arranged and operating substantially in the manner herein set forth."

No. 24,325. M. Newbauer and P. Adelman, of New York, N. Y., for an "Improvement in apparatus for drying glue."

"What we claim is, the arrangement of a chamber of circular or polygonal form, which is provided with a fan blower, or its equivalent, to which air of the proper temperature is conducted by means of a pipe *b*, and tube E, for the purpose of drying the cakes of glue, substantially as described."

No. 24,326. Wm. Oldman, of Buffalo, N. Y., for an "Improvement in steam boilers."

"What I claim is, the central water space F^1, in the combustion chamber F, arranged in relation to the annular water space F^{11}, and to the tubes D, or their respective equivalents, substantially as within set forth, for the purpose of inducing an active circulation of the water, radially among the tubes, with the advantages above explained."

No. 24,327. Stuart Perry, of Newport, N. Y., for an "Apparatus for exhibiting stereoscopic pictures."

"What I claim is, first, a movable framework for holding a series of stereoscopic pictures, from which the pictures are brought to be inspected, and then returned to it again by a mechanism operated by the user, substantially as described. I also claim bringing each individual picture, or pair of pictures, in succession to the same point or place before they are projected from their compartment to be exhibited by mechanism, substantially such as described. I also claim in combination with a movable picture holder, a reciprocating carrying frame that catches each picture or pair of pictures in succession, and carries them to the place where they are to be inspected, and returns them to their compartment again, substantially as described. I also claim in combination with a box or case, containing within it a series of pictures and a mechanism for projecting them from said case, a framework on the outside of said box or case for receiving said pictures, substantially as described. I also claim the slots in the picture-holder carrier *f*, and in the box or case, so that the picture from its compartment in the picture holder may be projected through both slots or openings to the outside of the box, substantially as described. I also claim the friction brake *t*, or its equivalent, for holding the picture holder, and prevent it from moving until started by the crank, substantially as described. I also claim making the frame B in sections, or with an opening, for the purpose of introducing the pictures through said frame into the compartments of the picture holder, as well as removing them therefrom, substantially as described. I also claim the clamps as applied to single or double pictures for the purpose of strengthening them, preventing their warping or bending, and thus facilitating their passage through the slot, which they must pass through to the place where they are exhibited, as described."

No. 24,328. Edward L. Perkins, of Roxbury, Mass., for an "Improvement in machinery for drying paper."

"What I claim is, a new mode of drying paper, which consists in feeding the paper from a roll outside of the drying chamber through proper openings to a series of rollers, arranged as described, and then conducting it over said rollers vertically through the apparatus, and subjecting it during its passage there through to a gentle current of heated air, produced by forming inlets at the bottom of the reception of the atmospheric air, which passes up and is heated by a suitable heating apparatus, and escapes readily through apertures at the top, as set forth, and then out of the drying chamber through proper openings to a receiving roller, in the manner substantially as described."

No. 24,329. John Pfaff, of Philadelphia, Pa., for an "Improvement in tail pieces for violins."

"I claim the metal tail piece A with an eye *a*, adapted to the detachable pin *h*, recesses 1, 2, 3, and 4, for the reception of the strings, and with the rib *h*, the whole being constructed and applied to a violin, substantially as and for the purpose herein set forth."

No. 24,330. Sam'l M. Richardson, of New York, N. Y., for an "Improvement in cutting out strap hinges."

"What I claim is, the relieving die *d*, in combination with the shaping die *f* and cutter *g*, in the manner and for the purposes specified."

No. 24,331. J. Hall Rohrman, of Philadelphia, Pa., for an "Improved dust pan."

"What I claim as a new article of manufacture, and desire to secure by Letters Patent, is, a dust pan, having its bottom corrugated, and its back edge seamed over, substantially as herein-before described, for the purposes of making the bottom of the pan rigid, without extending any brace from the handle, and rendering unnecessary the wiring of the back edge of the pan."

No. 24,332. Chas. B. Sawyer, of Fitchburg, Mass., for an "Improvement in furnaces and stoves."

"What I claim is, first, the arrangement of the closed topped fire pot K, gas or combustion chamber X, fire or draft flues H, small gas openings *e*, and air-heating flues G, in relation to each other, substantially as shown and described. Second, the arrangement of the horizontal ventilating flue J, ventilating chamber I, and exit ventilating flue *o*, and right-angled draft flue F, in relation to each other, and in the top of the furnace, as shown and described."

No. 24,333. Geo. Schott and John Loudon, of New York, N. Y., for "Improved spring bedstead bottoms."

"What we claim is, the arrangement of the eyes *d*, *d* elastic cord or strap (1), and hooks 2, 2, on the ends of the slats (*c*, *c*,) substantially as and for the purposes specified. We also claim the studs 3, 3, and 5, 5, constructed and acting as specified to sustain the slats *c*, *c*, on the strap or elastic cord 4, as set forth."

No. 24,334. Joseph Sedgebeer, of Cincinnati, O. for an "Improvement in grinding mills."

"What I claim is, 1st, constructing the rotating plate (A), with the same dress or finish upon its grinding face as that of the stationary plate (B), substantially as described for the purposes set forth. 2d, I claim the diamond-shaped teeth (*a*, *b*, *c*, *e*,) constructed and arranged substantially as and for the purposes set forth."

No. 24,335. Chas. W. Seeley and Benjn. F. Locke, of Wellington, Ohio, for an "Improved means of securing the bits of bench planes."

"What we claim is, stopping the upper end of the interposed bit below the screw, and upsetting it, so as to catch into the cross serrations in the bed piece, as set forth."

No. 24,336. M. Semple, of Philadelphia, Pa., for an "Improvement in mode of switching off R. R. cars from one track to another."

"I claim the immovable switch or turnout (I, P), in combination with the guide bars (G), when arranged and operating substantially as described."

No. 24,337. Peter Shank, of Jefferson Township, Ohio, for an "Improved machine for raising water."

"What I claim as my invention, and desire to secure by Letters Patent, is, the combination of the horizontal float wheel, the crank motion, as produced by the three pins, which gives six motions of the pump to one revolution of the wheel, and the horizontal double pump, substantially as described for raising water."

No. 24,338. Dexter C. Slater, of Lawrens, N.Y., for an "Improvement in operating machinery by dog power."

I claim the arrangement and combination of the wheel G, shaft F, cam H, and lever I, substantially, as and for the purpose set forth."

No. 24,339. De Witt Stevens, of Newark, N. J., for an "Improved cheese cutter."

"I claim, 1st, the arrangement of the platform B with the projecting rings *g*, to operate in combination with the corrugated cutting edge of the knife, substantially as and for the purpose described. 2nd, the arc D, arranged in combination with the platform B, with the handle C, and with the knife F, so that the cheese on the platform can be cut up in slices of any given weight, substantially as set forth. 3rd, the arrangement and combination of the lever I, the link J, and the slide G, for the purpose of operating the knife F, substantially as herein specified."

No. 24,340. W. D. Tewksbury, of Cuylersville, N.Y., for an "Improved rocking cradle."

"I claim the two escapement wheels *h* and *k*, arranged in combination with the verge E, and with the arm F, and operating substantially in the manner and for the purpose described."

No. 24,341. Alfred Tichenor, of Newark, N.J., for a "Method of printing bank notes."

"I claim 1st, the making bank notes and other engraved plates or sections of plates with tongue and groove or dowel joints. 2d, the locking together tongue and grooved bank note or other engraved plates, by a 'chase' having its side formed with tongue or groove or with dowels made to match or correspond to the ends and sides of the tongue and grooved plates, which chase is made in pieces fitted together, and furnished with set screws *e*, *e*, substantially as described."

No. 24,342. Ruggles S. Torrey, of Bangor, Me., for an "Improvement in bee-hives."

"What I claim, is, providing the troughs in the tops of the comb bars, arranged with the series of conducting tubes for converging the feed to the troughs, and with apertures or slots for the free exit of the moisture to the condenser in the manner and for the purpose described."

No. 24,343. Wm. S. Watson, of Madison, Ind., for an "Improvement in brick machines."

"What I claim, is, firstly, the combination and arrangement with a stationary pressing block (K), of an intermittently reciprocating press box, formed with one or more chambers (I, J), and provided with one or more plungers (L, L^1), having a joint motion with the press box, and an independent movement thereto, essentially as and for the purpose set forth. Secondly, the combination with the intermittently reciprocating press box of the top and bottom holding slides (*b*, b^1), or either of them, arranged to move conjointly with the press box, and independently of it substantially as specified. Thirdly, mounting the intermittently reciprocating press box, with a feed box having one or more chambers (M, M^1), essentially as and for the purpose herein set forth."

No. 24,344. T. F. Weston, of Salem, Mass., for an "Improvement in machine for finishing leather."

"I claim, 1st, the combination and arrangement of the devices herein described or their mechanical equivalents for changing the angle of the tool while the machine is in motion, so as to cause it to operate upon the latter, first with a sharp edge to take out its inequalities, and then with a dull or blunt edge to smooth the leather, the successive operations producing the peculiar effect desired for the purposes as set forth. Second, the arrangement of devices herein described for giving positive motions to the tool, for lifting it from and holding it down upon the bed, the same consisting of the sliding bar and friction box operating as set forth."

No. 24,345. Rob't F. White, of New York, N.Y., for an "Improved omnibus register."

"I claim the spring platform B, arranged in combination with the hammer K, and with the index *k*, and operated by the lever F or its equivalent, substantially in the manner and for the purpose specified."

No. 24,346. John M. Wilson, of Philadelphia, Pa., for an "Improved lock attachment."

"I claim the arrangement in combination with a lock A, *a*, and door B, *d*, of the box C, keyholes *c*, *b*, wards *e*, guard E, plate F, pivoted stops G, G, *h*, *h*, *i*, *i*, and springs H, H, the whole being constructed and arranged for united operation in the manner and for the purpose herein set forth."

No. 24,347. Sam'l Wiswall, of Hyde Park, Vt., for an "Improved washing machine."

"I claim the arrangement and combination within the oscillating cylinder B, of a receiving chamber (*d*), having plates (*e*, *e*), and a door (*f*), when said door (*f*) is corrugated on one side, and hinged to one of the plates (*e*), so that said door (*f*) may serve as a rubbing board, and also as a presser, all substantially as herein shown and described."

No. 24,348. John Young, of Joliet, Ill., for an "Improvement in cultivators."

"What I claim, is, 1st, the combination of the screw extension A, on the bottom of the standard B, with the oblique slotted castings C, C, attached to the front side of the cross bar D of the beam E, substantially as and for the purposes set forth. 2nd, the combination of the stationary vertically perforated bar G, with the adjustable rake or harrow H, arranged on a cultivator, substantially as and for the purposes set forth."

No. 24,349. John G. Clark, of Augusta, Geo., assignor to himself, D. G. Cotting, and Saml. W. Hatch, of same place, for "Burglar's alarm pistol."

"I claim, 1st, a pistol arranged on a vertical suspension guide of a hammer, so that the explosion of its cap, and the firing of its charges, may be accomplished by concussions of the pistol and hammer, substantially as and for the purposes set forth. 2nd, holding the pistol suspended by the means, and in the particular manner herein described, for the purpose set forth."

No. 24,350. J. D. Custer, of Norristown, Pa., assignor to himself and J. M. Roberts, of Perth, Amboy, N. J., for an "Improvement in machines for tempering clay."

"I claim the arrangement and combination of the stationary toothed rim *o*, encompassing the pit A, the frame H, with the gearing *k*, M, *l*, attached to its outer ends, the pinion *b* of the shaft N gearing into the rim *o*, and the rod or shaft F connected with the frame H, the hollow shaft *g* on the shaft B, and the belt *e*, *i*, passing around the pulleys K, *f*, *h*, *j*, substantially as and for the purpose set forth."

No. 24,351. Wm. Godsoe, of Manchester, Mass., assignor to himself and Isaac Ayres, of same place, for an "Improved steering apparatus."

"What I claim is the combination of the toothed segment M, and the curved way P, operating as set forth, for the purpose specified."

No. 24,352. C. Harris and Paul W. Zoiner, of Cincinnati, O., assignors to themselves and J. Langstaff, of same place, for an "Improvement in stoves."

"We claim the arrangement and combination of the damper G, chamber (*f*), double walled case (*a*), and pipe E, substantially as herein shown, so that the damper G, which pertains to the oven, shall, when drawn out, extend across the bottom of the pipe E, and cause the products of combustion to circulate as described when closed, shall permit a more direct draft, for the purposes set forth."

No. 24,353. Geo. L. Ingersoll, of Cleveland, Ohio, assignor to J. E. Ingersoll, of same place, for an "Improved apparatus for heating water."

"I claim the double cylinder heater C, C^1, the same being united by the plates G, F, H, I, so as to form the space J, J,

for the ascension of the heat, and by the pipes D, E, for the passage of the water, the heating space being covered by the cap K, and the parts here named being arranged as set forth. I also claim, in combination with the two cylinders C, C^1, the ingress pipe o, extending to near the bottom of the cylinder C, the exit pipe o, and the pipe N, in connection with the pipe D, E, for the purpose of establishing a circulation and rapid heating of the water."

No. 24,354. Ira Merritt, of Abington, Mass., assignor to himself and L. S. Merritt, of South Weymouth, Mass., for an "Improvement in shoe knives."

"What I claim is the within-described knife holder, in combination with an extensible blade, so arranged that as the blade is worn it may be protruded, as set forth, for the purpose described."

No. 24,355. Chas. Miller, of St. Louis, Mo., assignor to Henry Danford, of same place, for an "Improvement in spirit gas burners."

"What I claim, is, the arrangement of the valve over the tube and wick for the purpose of extinguishing the flame or regulating its size, and altering its direction, in the manner set forth."

No. 24,356. Felix Miller and Alois Wirsching, of New York, N.Y., assignor to Felix Miller and H. H. Hayden, of same place, for "Diaphragm for photographic cameras."

"We claim the arrangement and combination of the plates (a, a^1,) the notched plate C, and springs (m), as and for the purpose herein shown and described."

No. 24,357. Jedediah Morse, of Canton, Mass., assignor to the S. P. Ruggles Power Press Manufacturing Company, of Boston, Mass., for an "Improvement in power printing presses."

"What I claim is as follows:—I claim the improvement in the construction of each of the platen rails, a^3, a^3, the same consisting in the chute k, and a notch or depression l, arranged therein, and with reference to the rollers or tapes, substantially in manner and for the purpose as herein-before specified. I also claim the arrangement and combination of the slider R, with the operating cam, and the pin or stud o, on the rocker toggle, such slider being actuated by a foot treadle n, a spring q, and the cam r, of the toggle, substantially as described. I also claim the mode of ensuring the return movement of the toggles, and their gradual forward motion, after each impression has taken place, the same being accomplished by the notched wheel u, or its notch x, as described. I also claim the mode of constructing the gears a^1 and b^1, for operating the frisket carrier, viz., with the toothed arcs c^1, c^1, d^1, d^1, and the concave and convex arcs, e^1, e^1, and f^1, f^1, unprovided with teeth, the whole being arranged so as to operate together, substantially as specified. I do not claim the subject of the United States Patent, No. 7,205, but I claim the combination of the two, or any other suitable number of wheels r^2, r^2, lever nippers t^2, (applied respectively to them,) and their opening and closing bars x^2, y^2, or mechanical equivalents for such bars, the same being substantially as and for the purpose described. I also claim the above specified mode of constructing each of the nippers v, v, for receiving the sheet of paper from the table G, viz., so that each jaw may move away from the other, while the upper is being raised, the same producing the advantages, not only of ensuring the passage of the lower jaw underneath the sheet of paper, simultaneously with that of the other jaw over it, but of both jaws closing upon the paper, at one and the same time so as not to lift it out of place. I also claim the mode of constructing the lower jaw p^4, of each pair of nippers V, viz., with a lip or bend n^1, arranged thereon, and for the purpose described. I also claim the mode of applying and operating each of the points l^2, viz., hinging or jointing it to the table G, and combining with it a stop m^2, and lever k^2, or the equivalents therefor, the whole operating, or being made to operate, substantially as described. I also claim the improved method of operating the frisket carrier, the same consisting in causing it to descend and pass in an inclined position under the delivering tapes and rollers, while the nippers V, V, may be approaching the sheet table G, the same enabling the press to be made lower and shorter than when the frisket carriage is moved horizontally under the said delivering tapes or rollers."

No. 24,358. Wm. Noyes, jr., of West Newbury, Mass., assignor to S. C. Noyes and Co., of West Roxbury, Mass., for an "Improvement in machinery for cutting comb teeth."

"What I claim, is, in combination with the saw, or the same and its peripheral guide or guides, a mechanism or means of pressing or bending the saw laterally, substantially as and for the purpose specified. I also claim the mode of producing the lateral and longitudinal movements of the carriage of the comb carrier, viz., by means of the cam and its screw thread periphery, arranged and operating in conjunction with a rack applied to the said carriage, substantially as herein-before described.'"

No. 24,359. Louis Planer, of New York, N. Y., assignor to himself and Joseph Auger, of same place, for an "Improvement in machine for converting oscillating motion into direct circular motion."

"I claim the grooved dog F, having its tail resting in a recess b, c, or equivalent resting place in the lever E, without being pivoted or otherwise attached thereto, and having a spring G applied in combination with it and the said lever, and the whole being applied and combined with the wheel A and its axle E, substantially as herein described.'

No. 24,360. Thos. Shaw, of Philadelphia, Pa., assignor to himself and John C. Bailey, of same place, for an "Improvement in moulds for pressing glass."

"I claim forming on the plunger B a shoulder f of a size corresponding to that of the upper edge of the recess in the base A of the mould, and limiting the downward movement of the plunger, so that the said shoulder shall coincide or be slightly below the said upper edge of the recess, substantially in the manner and for the purpose set forth."

No. 24,361. Jacob J. Smith, of Philadelphia, Pa., assignor to himself and I. Henry Pugh, of same place, for an "Improved plug bedstead fastening."

"What I claim is, 1st, a double plug fastening for bedsteads, consisting of two distinct parts (A and A^1), so constructed as to be adapted for being driven or secured into the post and rail respectively, and also fitted with a wedge-shaped dove-tail tenon (d), and a corresponding groove (e), operating together so as to cause the end of the rail to be drawn tightly against the post in the downward pressure of the said rail after they are connected together, all substantially in the manner and for the purpose set forth and described. 2d, I also claim making the post plug (A^1) with the inclined dovetail groove (g) across in one side of the same, so as to operate in combination with the wedge-shaped tenon (e) on the rail plug (A), substantially in the manner, and for the purpose set forth and described."

No. 24,362. Anthony Wallach, of New York, N. Y., assignor to himself and Adolph Wallach, of same place, for an "Improvement in hooks for vest chains."

"What I claim is, the clasping hook c, in combination with the bolt i in the body b of the vest chain hook, for the purposes and as specified."

Designs.

Solomon B. Ellithrop, of New York, N. Y., for a "Design for sewing machines."

"What I claim is, the design for a sewing machine, illustrated and shown in the accompanying drawing."

Anthony J. Gallagher and Jacob Beesley, of Philadelphia, Pa., assignors to Anthony J. Gallagher aforesaid, for a "Design for Cook's stove."

"What we claim is, the arrangement and combination of the ornaments that form the design herein specified and represented in the accompanying drawings."

Erratum in Journal of 24th June.

1385. For "Porley" read "Pooley."

List of Specifications published during the week ending 24th June, 1859.

No.	Price.	Subject-Matter.
		(*Disclaimer*, 1851.)
13,552	5*d.*	Steam engines and boilers.
		(*Disclaimer*, 1858.)
1195	3*d.*	Lamp chimneys and glasses.
		1858.
2581	1*s.* 3*d.*	Looms for weaving.
2591	6*d.*	Ploughs, &c.
2592	1*s.* 4*d.*	Apparatus for the manufacture of lace and net.
2594	1*s.* 4*d.*	Machinery for making bricks or tiles.
2597	5*d.*	Bit or bridle.
2599	10*d.*	Assorting and separating combed fibres, &c.
2600	5*d.*	Obtaining caloric.
2601	6*d.*	Insulators, &c.
2602	3*d.*	Weaving machines.
2603	9*d.*	Warping mills, &c.
2604	4*d.*	Manufacture of gas.
2605	1*s.* 6*d.*	Manufacture of spurs.
2606	11*d.*	Machinery for winding fibrous substances.
2607	3*d.*	Ploughshares.
2608	7*d.*	Hat ventilators, &c.
2609	6*d.*	Ventilating hats and caps, &c.
2610	3*d.*	Refining lamp oil.
2611	3*d.*	Weaving machines.
2612	3*d.*	Manufacture of dextrine.
2613	8*d.*	Boiling water or worts for brewing, distilling, &c.
2614	3*d.*	Self-acting temples for looms.
2615	3*d.*	Trowser buttons.
2616	3*d.*	Manufacture of electric telegraph wires and cables.
2617	3*d.*	Apparatus for condensing and cooling vapours and liquids.
2618	3*d.*	Waterproofing fabrics or materials.
2619	10*d.*	Fire-arms.
2620	6*d.*	External surface condensers.
2621	6*d.*	Heating razors.
2622	4*d.*	Purifying natural phosphates of lime.
2623	3*d.*	Fastening buttons and studs.
2624	3*d.*	Motive power engines.
2626	5*d.*	Electric telegraphic cables or conductors.
2627	3*d.*	Chain cables and chains.
2628	7*d.*	Drains, sewers, and watercourses.
2629	5*d.*	Apparatus for transmitting motive power.
2630	2*s.* 7*d.*	Machinery for the manufacture of casks.
2631	3*d.*	Breech-loading cannon.
2632	7*d.*	Gas burners, &c.
2633	7*d.*	Fire-arms and ordnance, &c.
2634	3*d.*	Steam engines.
2635	6*d.*	Machinery for pulverizing land.
2636	7*d.*	Stop taps or valves.
2637	10*d.*	Railway brakes.
2638	5*d.*	Lubricating cocks and taps.
2639	3*d.*	Manufacture of dolls, statuettes, &c.
2640	10*d.*	Navigable vessels.
2641	1*s.* 4*d.*	Tubular steam boilers, &c.
2642	3*d.*	Attaching knobs to spindles, &c.
2643	10*d.*	Fastenings for window sashes and casements, &c.
2644	3*d.*	Stereoscopes, &c.
2645	3*d.*	Plaiting and braiding machinery.
2646	6*d.*	Compound axle, hub, and wheel for railroad cars.
2647	3*d.*	Manufacture of woven fabrics.
2648	1*s.*	Apparatus for raising and lifting water and other liquids.
2649	4*d.*	Obtaining salts and products from the ashes of marine plants.
2650	6*d.*	Pressure and vacuum gauges.
2651	10*d.*	Apparatus for propelling and steering vessels.
2652	6*d.*	Turnip cutters.
2653	9*d.*	Springs.
2654	3*d.*	Embossing and finishing woven fabrics, &c.
2655	5*d.*	Forge hammers, &c.
2656	9*d.*	Furnaces, &c.
2657	3*d.*	Weaving bags, sacks, and other tubular fabrics.
2658	3*d.*	Smoke preventing apparatus.
2659	3*d.*	Gas retorts.
2660	10*d.*	Machinery for sweeping floors.
2773	7*d.*	Electric telegraph cables.

*** Specifications will be forwarded by post on receipt of the amount of price and postage. Sums exceeding 5*s.* must be remitted by Post Office Order, made payable at the Post Office, High Holborn, to Mr. Bennet Woodcroft, Great Seal Patent Office.

PATENT LAW AMENDMENT ACT, 1852.—All Specifications, Indexes, &c., printed by order of the Commissioners of Patents, are sold at the Great Seal Patent Office, 25, Southampton Buildings, Holborn.

THE PATENT LAW AMENDMENT ACTS (15 & 16 Vict., cap. 83; 16 Vict., cap. 5; and 16 & 17 Vict., cap. 115); with the Rules and Regulations made by the Commissioners of Patents for Inventions, and by the Lord Chancellor and the Master of the Rolls, under the Acts 15 and 16 Vict., c. 83, and 16 & 17 Vict., c. 115, accompanied by Specimen Forms of the Provisional Documents printed on sheets of the prescribed size. Price 6*d*.

Museum of Patents, South Kensington.

NUMBER of VISITORS for the Week ending 25th June, 1859.

Mornings - - - -	1236
Evenings - - - -	825
Total - - -	2061

Since the opening of the Museum Free Daily (May 12, 1858,)—111,911.

THIS Museum is open to the public daily, free of charge. The hours of admission are from 10 A.M. to 6 P.M., and in the evenings of Monday, Tuesday, and Wednesday from 7 to 10 P.M.

All communications on the subject of the Museum to be addressed to the Superintendent,

B. WOODCROFT.

Great Seal Patent Office,
Southampton Buildings.

GALLERY OF PORTRAITS OF INVENTORS, DISCOVERERS, AND INTRODUCERS OF USEFUL ARTS.—This Collection, formed by Mr. Woodcroft, and first opened to public view in the Great Seal Patent Office in 1853, now constitutes a portion of the Patent Museum at South Kensington.

Presentations of original Portraits, Medallions, Busts, and Statues, in augmentation of the Collection, are hereby invited, and will on receipt be acknowledged in this Journal, and duly recorded in the next published Catalogue.

REAPING MACHINES.—The entire series of Specifications and Drawings on this subject to the end of 1853, together with an Appendix, prepared by B. Woodcroft, of the Patent Office, and published under the sanction of the Commissioners, may be obtained at the cost price of 2*l.* 3*s.* 11½*d.*

FIRE-ARMS, PROJECTILES, &c.—The series of Specifications and Drawings on this Subject, from 15th May, 1718, to 31st December, 1853, with Alphabetical and Subject-matter Indexes, may be obtained at the cost price of 9*l.* 18*s.* 6½*d.*

The Indexes, separately, price 3*s.*

COLONIAL PATENTS.—Information as to the Mode of obtaining Protection for Inventions in the Colonies; contained in Communications from the Governors, &c. of the different British Colonies in answer to the Application of Mr. W. J. CURTIS for a Patent. Price 1*s.*

PATENT RIGHTS in the COLONIES.—Abstract of Replies to the Secretary of State's Circular Despatch of July 11, 1856, calling for Information as to the Form of the Application to be made by Persons desirous of obtaining Patent Rights in the Colonies, and the Expenses attendant on the Grant of such Patent Rights. Price 2*s.* 6*d.*

In course of Publication, by Order of the Commissioners of Patents.

ABRIDGMENTS (in Classes, and Chronologically arranged) of all SPECIFICATIONS of PATENTED INVENTIONS, from the earliest enrolled to those published under the Act of 1852.

These books are of 12mo size, and as each is limited to inventions of one class only, they can be sold at prices sufficiently moderate to enable the humblest inventor to examine for himself whether his discovery has been previously patented or not.

At the foot of each abstract are given references to notices of the inventions in scientific and other works, and to the reports of law proceedings for infringements, &c. &c. &c.

The classes already published are,—

1. DRAIN TILES AND PIPES, price 6*d.*
2. SEWING AND EMBROIDERING, price 6*d.*
3. MANURE, price 6*d.*
4. PRESERVATION OF FOOD, price 6*d.*
5. MARINE PROPULSION, price 4*s.*
6. MANUFACTURE OF IRON AND STEEL, price 5*s.*
7. AIDS TO LOCOMOTION, price 1*s.*
8. STEAM CULTURE, price 2*s.*
9. WATCHES, CLOCKS, AND OTHER TIME-KEEPERS, price 1*s.* 6*d.*
10. FIRE-ARMS AND OTHER WEAPONS, AMMUNITION, AND ACCOUTREMENTS, price 6*s.* 6*d.*
11. PAPER.—PART I. MANUFACTURE OF PAPER, PASTEBOARD, AND PAPIER MÂCHÉ, price 3*s.*
12. TYPOGRAPHIC, LITHOGRAPHIC, AND PLATE PRINTING, price 7*s.*
13. BLEACHING, DYEING, AND PRINTING YARNS AND FABRICS, price 9*s.* 6*d.*

The following are in the press:—

PAPER.—PART II. CUTTING, FOLDING, AND ORNAMENTING; INCLUDING ENVELOPES, CARDS, PAPER-HANGINGS, &c.

ELECTRICITY AND MAGNETISM: THEIR GENERATION AND APPLICATIONS.

PREPARATION OF FUEL, AND APPARATUS FOR ITS COMBUSTION.

MANUFACTURE AND APPLICATIONS OF INDIA RUBBER, GUTTA PERCHA, &c.; INCLUDING AIR, FIRE, AND WATER PROOFING.

PRODUCTION AND APPLICATIONS OF GAS.

STEAM ENGINES.

B. WOODCROFT.

The above, and all other works published by the Commissioners of Patents, are now on sale at the Great Seal Patent Office, 25, Southampton Buildings, Holborn.

This Journal is published on the evenings of Tuesday and Friday, and will be forwarded, post free, to Subscribers.—Terms, 30*s.* per annum.—Subscriptions received at the Great Seal Patent Office, where also single copies, at twopence each, may be obtained.

THE

COMMISSIONERS OF PATENTS' JOURNAL.

By Authority.

(*Registered for transmission abroad.*)

No. 573. FRIDAY, JULY 1, 1859. Price 2d.

Grants of Provisional Protection for Six Months.

NOTICE is hereby given that Provisional Protection has been allowed

1064. To JOSHUA KIDD, of Birkenhead, in the county of Chester, Civil Engineer, for the invention of "Improvements in sewing machines."

On his petition, recorded in the Office of the Commissioners on the 28th day of April, 1859.

1438. To EDWARD HUMPHRYS, of Deptford, in the county of Kent, for the invention of "Improvements in marine steam engines."

On his petition, recorded in the Office of the Commissioners on the 15th day of June, 1859.

1446. To NICHOLAS CHARLES SZERELMEY, of No. 6, Park Terrace, Brixton Road, in the county of Surrey, for the invention of "Improvements in preparing combinations of materials for preventing rust in iron and other metals, and decay in timber."

On his petition recorded in the Office of the Commissioners, on the 16th day of June, 1859.

1467. To JOZÉ LUIS, of the British and Foreign Office for Patents, No. 1B, Welbeck Street, Cavendish Square, London, in the county of Middlesex, Patent Agent, for the invention of "A new system of windmill."—A communication from abroad by Bernard Zacharie Lethiers, No. 10, Rue Mogador, Paris, in the empire of France.

1468. To JAMES COX, of Wenlock Road, City Road, in the county of Middlesex, Printing Press Manufacturer and Engineer, for the invention of "Improvements in machinery or apparatus for cutting rags for paper makers."

1469. To ALFRED JEFFERY, of the Commercial Road, in the parish of Limehouse, in the county of Middlesex, Manufacturer, for the invention of "An improved mode of giving rotary motion to projectiles fired from rifled fire-arms."

1470. To RICHARD BRADSHAW, of Camden Town, Dentist, for the invention of "Improvements in rotary steam engines and pumps."

1471. To RICHARD HARPER, Lace Maker, and ROBERT STOKES, Lace Maker, and THOMAS WALKER, Clock Maker, each of Derby, in the county of Derby, for the invention of "An improvement in the manufacture of chenille bonnet wreaths and bonnet feathers."

1473. To GEORGE JUBILEE PARKER, of Church Street, Stoke Newington, in the county of Middlesex, Carpenter, for the invention of "A self-acting apparatus for giving alarm of fire, which is also useful in checking the same."

1474. To WILLIAM CLARK, of 53, Chancery Lane, in the county of Middlesex, Engineer and Patent Agent, for the invention of "An improved method of supplying furnaces with hot air."—A communication from abroad by Messrs. Addison Calvin Fletcher, of Cincinnati, Ohio, and George Ambrose Redman, of New York city, Gentleman, United States of America.

1475. To PAUL FRANÇOIS AERTS, formerly of Brussels, in the kingdom of Belgium, but now residing in London, England, Civil Engineer, for the invention of "Improved apparatus for lubricating railway rolling stock, and the moving parts of machinery."

1476. To JAMES RANSLEY, of No. 19, Princess Terrace, Islington, in the county of Middlesex, Carriage Builder, for the invention of "An improved brake for retarding railway and other carriages."

1477. And to JAMES RANSLEY, of No. 19, Princes' Terrace, Islington, in the county of Middlesex,

Carriage Builder, for the invention of "An improved omnibus."

On their several petitions, recorded in the Office of the Commissioners on the 18th day of June, 1859.

1479. To JOHN COX, Saddler's-Ironmonger, of Birmingham, in the county of Warwick, and SAMUEL FRANKHAM and MOSES FRANKHAM, Bit, Stirrup, and Spur Manufacturers, of Walsall, in the county of Stafford, for the invention of "Certain improvements in spurs for military and general use."

1480. To RICHARD LAMING, of Hampstead, in the county of Middlesex, for the invention of "Improvements in purifying gas, and in obtaining and reproducing materials useful for that purpose."

1481. To CHARLES LOUIS JOSEPH DIERICKX, Director of the Paris Mint, of the Hotel des Monnaies, in the city of Paris, for the invention of "Improvements in coining."

1482. To JOHN EDWARDS, of 77, Aldermanbury, in the city of London, for the invention of "Improvements in the manufacture of iron rails."

1483. To ALFRED VINCENT NEWTON, of the Office for Patents, 66, Chancery Lane, in the county of Middlesex, Mechanical Draughtsman, for the invention of "Improved apparatus for blowing off water from steam boilers."—A communication from abroad by James Harvey Washington, of Baltimore, in the United States of America.

1484. To ALFRED JAMES HAWKES, of Jewin Crescent, in the city of London, for the invention of "An improved triturating apparatus."

1485. To WILLIAM ROWAN, of the firm of John Rowan and Sons, Engineers, of Belfast, in the county of Antrim, for the invention of "Improvements in the generation of steam."

1486. And to THOMAS CHARLES CLARKSON, of No. 56, Stamford Street, Blackfriars, in the county of Surrey, Manufacturer, for the invention of "Improvements in the manufacture of boots, shoes, and other articles."

On their several petitions, recorded in the Office of the Commissioners on the 20th day of June, 1859.

1487. To ANDREW PEDDIE HOW, of No. 81, Mark Lane, in the city of London, Engineer, for the invention of "Improvements in self-supplying distilling apparatus, and in apparatus for cooking combined therewith."

1489. To EDWARD GWYN, of Islington, in the county of Middlesex, Gas Engineer, for the invention of "Improvements in breech-loading fire-arms."—A communication from abroad by Henry Gross, residing in Ohio, U. S. A.

1491. To WILLIAM EDWARD NEWTON, of the Office for Patents, No. 66, Chancery Lane, in the county of Middlesex, Civil Engineer, for the invention of "An improvement in tailors' and other shears."—A communication from abroad, by James H. Roome, of New York, in the United States of America.

1493. And to ALEXANDER PARKES, of Birmingham, in the county of Warwick, for the invention of "Improvements in the manufacture of cylinders and tubes of copper, and alloys of copper."

On their several petitions, recorded in the Office of the Commissioners on the 21st day of June, 1859.

1497. To ROBERT SMITH, of Longridge, near Preston, in the county of Lancaster, Manufacturer, for the invention of "Improvements in apparatus applicable to looms for weaving fancy fabrics."

1499. To ANDREW BARCLAY, of Kilmarnock, in the county of Ayr, Engineer, for the invention of "Improvements in steam hammers and pile driving machines."

1501. To CHARLES CLARINI, of New York, U.S.A., for the invention of "Making wrought metal nails by machinery."

1503. To FRANCIS XAVIER KUKLA, Chemist, of No. 121, Pentonville Road, in the county of Middlesex, for the invention of "Improvements in projectiles."

1505. And to THOMAS MOORE, of Lupus Street, Pimlico, in the county of Middlesex, for the invention of "Improvements in knapsacks and messtins."

On their several petitions, recorded in the Office of the Commissioners on the 22nd day of June, 1859.

Invention protected for Six Months by the Deposit of a Complete Specification.

NOTICE is hereby given that the petition of—

1500. GEORGE TOMLINSON BOUSFIELD, of Loughborough Park, Brixton, in the county of Surrey, praying for Letters Patent for the invention of "Improvements in apparatus for winding thread of cotton or linen, or other fibrous materials, or sewing silk, or similar articles, upon bobbins or spools,"—a communication from abroad by Lawson C. Ives, of Hartford, Connecticut, United States of America,—was deposited and recorded in the Office of the Commissioners on the 22nd day of June, 1859, and a complete specification accompanying such petition was at the same time filed in the said office.

Patents Sealed.

LIST of LETTERS PATENT which passed the Great Seal on the

1st July, 1859.

17. JAMES HARRIS, of Hanwell, in the county of Middlesex, Engineer, for an invention of "Improvements in apparatuses for regulating the pressure and flow of steam, water, and other fluids."—Dated 1st January, 1859.

19. GEORGE SKINNER, of Stockton-on-Tees, county of Durham, Earthenware Manufacturer, and JOHN WHALLEY, of South Stockton-on-Tees, county of York, Earthenware Manufacturer, for an invention

of "Improvements in the manufacture of ornamental and other tiles, and other similar articles."—Dated 1st January, 1859.

29. William Renton, of Leeds, in the county of York, Cloth Dresser, Thomas Renton, of Leeds aforesaid, Millwright, and William Binns, of Leeds aforesaid, Cloth Finisher, for an invention of "Improvements in raising the nap or pile of textile fabrics."—Dated 3rd January, 1859.

33. John Barnett Joyce, of Bradford, in the county of York, Machine and Tool Maker, for an invention of "Improvements in means, machinery, or apparatus applicable to wool combing."—Dated 4th January, 1859.

34. William Hood, of 68, Upper Thames Street, in the city of London, Iron Merchant, for an invention of "Improvements in racks and water cisterns for stables."—Dated 4th January, 1859.

35. Alfred Bedborough, of the town and county of the town of Southampton, Architect and Surveyor, for an invention of "An improved chimney cowl and ventilator."—Dated 4th January, 1859.

36. Charles de Forest, of Leicester Square, in the county of Middlesex, Gentleman, for an invention of "An improvement in the manufacture of springs for carriages and other uses."—A communication from Charles Goodyear, junior, residing at New York, in the United States of America.—Dated 4th January, 1859.

38. William Draper, of 2, Gordon Terrace, Holland Road, Brixton, in the county of Surrey, Artist, for an invention of "Improvements in machinery for printing on paper and other fabrics."—Dated 5th January, 1859.

47. William Renton, of Leeds, in the county of York, Cloth Dresser, Thomas Renton, of Leeds aforesaid, Millwright, and William Binns, of Leeds aforesaid, Cloth Finisher, for an invention of "Improvements in finishing woollen and other fabrics."—Dated 6th January, 1859.

51. William Spence, of 50, Chancery Lane, in the county of Middlesex, Patent Agent, for an invention of "Improvements in the mode of taking photographic pictures on wood."—A communication from Charles B. Boyle, residing in the United States of America.—Dated 7th January, 1859.

79. Eugenio Agneni, of 29, Devonshire Street, Queen Square, Bloomsbury, in the county of Middlesex, an Historical Painter, native of Rome, for an invention of "Increasing particularly the effect of decorative pictures, landscapes, drawings, and prints through looking-glasses."—Dated 11th January, 1859.

97. Thomas Elwell, of Paris, in the empire of France, Engineer, for an invention of "Improvements in governors for steam engines, and other motive power engines."—Dated 12th January, 1859.

130. Polynice Auguste Viette, of No. 25, Faubourg de Schaerbeck, near Brussels, a Major in the Service of His Majesty the King of the Belgians, for an invention of "Certain inks, applicable for engraving and lithographic purposes."—Dated 15th January, 1859.

150. Henry Gallon, Joseph Henry Bean, and Samuel Lumb, of Leeds, Machine Makers, for an invention of "Improvements in machinery for slotting, morticeing, tennoning, and cutting wood, iron, and other substances."—Dated 18th January, 1859.

168. John Henry Johnson, of 47, Lincoln's Inn Fields, in the county of Middlesex, and of 166, Buchanan Street, in the city of Glasgow, North Britain, Gentleman, for an invention of "Improvements in apparatus for making cigarettes."—A communication from Jacques Louis Lemaire Daimè, residing at Paris, in the empire of France, Merchant.—Dated 19th January, 1859.

258. Charles Edwards Amos, of the Grove, in the borough of Southwark, Engineer, and John Francis, of Bangor, in North Wales, Engineer, for an invention of "Improvements in water pressure engines, and their application to pumping machinery."—Dated 28th January, 1859.

312. Samuel Dobson Davison, of Leith, in the county of Mid Lothian, North Britain, Engineer, for an invention of "Improvements in locomotive steam engines."—Dated 3rd February, 1859.

314. Mark Smith, of the firm of William Smith and Brothers, of the Sun Foundry, Heywood, in the county of Lancaster, Machine Makers, for an invention of "Certain improvements in looms for weaving."—Dated 4th February, 1859.

884. William Edward Newton, of the Office for Patents, 66, Chancery Lane, in the county of Middlesex, Civil Engineer, for an invention of "Improvements in telegraphing and in telegraphic apparatus."—A communication from Mr. A. Wilson, of New York in the United States of America.—Dated 8th April, 1859.

962. Henry Hussey Vivian, of Swansea, M.P., for an invention of "Improvements in smelting copper."—Dated 16th April, 1859.

1056. John Stuart, of Musselburgh, in the county of Mid Lothian, North Britain, and William Stuart, of the same place, Manufacturers, for an invention of "Improvements in machinery or apparatus for manufacturing nets for fishing and for other purposes."—Dated 27th April, 1859.

1136. John Henry Johnson, of 47, Lincoln's Inn Fields, in the county of Middlesex, and of 166, Buchanan Street, in the city of Glasgow, North Britain, Gentleman, for an invention of "Improvements in piano-fortes."—A communication from abroad by George Vogt, of the city of Philadelphia, in the state of Pennsylvania, United States of America.—Dated 5th May, 1859.

1144. John Frearson, of Birmingham, in the county of Warwick, Mechanical Engineer, for an invention of "New or improved fastenings for wearing apparel, and for such other purposes as the same are or may be applicable to."—Dated 6th May, 1859.

Patents on which the Stamp Duty of £50 has been Paid.

(*To 29th June*, 1859.)

1582. Thomas Smith, of Bredfield, in the county of Suffolk, for an invention of "Improvements in horse rakes."—Dated 5th July, 1856.

1608. Alfred Vincent Newton, of the Office for Patents, 66, Chancery Lane, in the county of Middlesex, Mechanical Draughtsman, for an invention of "Improvements in repeating fire-arms." —A communication.—Dated 8th July, 1856.

1623. Alexander William Williamson, of the London University, Gower Street, in the county of Middlesex, for an invention of "Improvements in obtaining the rosin and sugar of scammony."—Dated 9th July, 1856.

Notice of Application for Leave to enter a Disclaimer and Memorandum of Alteration.

In the matter of Letters Patent, granted to William Taylor, of Woodhall Cottage, Shipborne, Tunbridge, for "Improvements in the conversion of cast iron into steel and malleable iron."—Dated 22nd September, 1856.

Notice is hereby given, that the said William Taylor has applied by petition to the Commissioners of Patents according to the Statute in that case made and provided, for leave to enter a Disclaimer of and Memorandum of Alteration of certain parts of the specification and of alteration of the title.

ALL FOREIGN and COLONIAL PATENT LAWS and RULES, being translations or copies of Official Communications, may be found in the following Numbers of this Journal, published at 2*d.* each, or 3*d.* free by post:—

In course of Publication, by Order of the Commissioners of Patents.

ABRIDGMENTS (in Classes, and Chronologically arranged) of all SPECIFICATIONS of PATENTED INVENTIONS, from the earliest enrolled to those published under the Act of 1852.

These books are of 12mo size, and as each is limited to inventions of one class only, they can be sold at prices sufficiently moderate to enable the humblest inventor to examine for himself whether his discovery has been previously patented or not.

At the foot of each abstract are given references to notices of the inventions in scientific and other works, and to the reports of law proceedings for infringements, &c. &c. &c.

The classes already published are,—

1. Drain Tiles and Pipes, price 6*d.*
2. Sewing and Embroidering, price 6*d.*
3. Manure, price 6*d.*
4. Preservation of Food, price 6*d.*
5. Marine Propulsion, price 4*s.*
6. Manufacture of Iron and Steel, price 5*s.*
7. Aids to Locomotion, price 1*s.*
8. Steam Culture, price 2*s.*
9. Watches, Clocks, and other Timekeepers, price 1*s.* 6*d.*
10. Fire-arms and other Weapons, Ammunition, and Accoutrements, price 6*s.* 6*d.*
11. Paper.—Part I. Manufacture of Paper, Pasteboard, and Papier Mâché, price 3*s.*
12. Typographic, Lithographic, and Plate Printing, price 7*s.*
13. Bleaching, Dyeing, and Printing Yarns and Fabrics, price 9*s.* 6*d.*

The following are in the press:—

Paper.—Part II. Cutting, Folding, and Ornamenting; including Envelopes, Cards, Paper-hangings, &c.
Electricity and Magnetism: their Generation and Applications.
Preparation of Fuel, and Apparatus for its Combustion.
Manufacture and Applications of India Rubber, Gutta Percha, &c.; including Air, Fire, and Water Proofing.
Production and Applications of Gas.
Steam Engines.

B. Woodcroft.

The above, and all other works published by the Commissioners of Patents, are now on sale at the Great Seal Patent Office, 25, Southampton Buildings, Holborn.

This Journal is published on the evenings of Tuesday and Friday, and will be forwarded, post free, to Subscribers.—Terms, 30*s.* per annum.—Subscriptions received at the Great Seal Patent Office, where also single copies, at twopence each, may be obtained.

No. 574. TUESDAY, JULY 5, 1859. Price 2d.

Notices to Proceed.

NOTICE is hereby given, that

488. WILLIAM GOSSAGE, of Widnes, in the county of Lancaster, has given notice at the Office of the Commissioners of his intention to proceed with his application for Letters Patent for the invention of "Improvements in the utilization of alkali-waste."

As set forth in his petition, recorded in the said office on the 22nd day of February, 1859.

492. And GEORGE DAVIES, of No. 1, Serle Street, Lincoln's-Inn, in the county of Middlesex, and No. 28, St. Enoch Square, in the city of Glasgow, Civil Engineer and Patent Agent, has given the like notice in respect of the invention of "Improved apparatus applicable to the evaporation of saccharine liquids, and for the concentration of heat for other purposes."—A communication from Augustus Jouan, residing at San Francisco, California.

493. And URIAH SCOTT, of Camden Town, in the county of Middlesex, Civil Engineer, has given the like notice in respect of the invention of "Improvements in carriages and various parts of the same, which parts may be applied to vehicles of any description."

As set forth in their respective petitions, both recorded in the said office on the 23rd day of February, 1859.

498. And HENRY BERNOULLI BARLOW, of the city of Manchester, Patent Agent, has given the like notice in respect of the invention of "Improvements in apparatus for condensing steam."—A communication from abroad by François Daina, of Bergamo, in the empire of Austria.

As set forth in his petition, recorded in the said office on the 24th day of February, 1859.

514. And ROBERT FIELDEN, junior, of Walsden, in the county of Lancaster, Picker Manufacturer, and THOMAS FIELDEN, of the same place, also Picker Manufacturer, have given the like notice in respect of the invention of "An improvement or improvements in the manufacture of pickers to be used in looms for weaving, and also in the machinery or apparatus to be employed in the manufacture of the same."

As set forth in their petition, recorded in the said office on the 25th day of February, 1859.

521. And JOSEPH HINE, of Clerkenwell, in the county of Middlesex, Fancy Cabinet Manufacturer, has given the like notice in respect of the invention of "An improved joint for cabinet making, carpentry, and other constructive purposes."

As set forth in his petition, recorded in the said office on the 26th day of February, 1859.

524. And FRANCOIS BRIGNOLES, residing at No. 3, Duke Street, Adelphi, London, county of Middlesex, has given the like notice in respect of the invention of "The disinfection and rectification of alcohols by the separation of the essential and other oils from the alcohol."—A communication from Mr. St. Cyprieur, now residing in Avignon town, France.

531. And COLLINSON HALL and COLLINSON HALL the younger, of Navestock, in the county of Essex, Agriculturalists, have given the like notice in respect of the invention of "Improvements in steam agricultural machinery."

534. And WILLIAM HODSON, of Kingston Square, Hull, has given the like notice in respect of the invention of "Improvements in rotatory engines."

As set forth in their respective petitions, all recorded in the said office on the 28th day of February, 1859.

537. And THOMAS CLOAKE, of 6, Saville Row, Walworth, in the county of Surrey, Watch Maker, has given the like notice in respect of the invention of "Stopping the bodys and wheels of railway and other carriages."

541. And JOHN EDWARDS, of Fenton, in the county of Stafford, Manufacturer, has given the like

notice in respect of the invention of "Improvements in stacking or holding biscuit, earthen china and glossed ware, for firing."

As set forth in their respective petitions, both recorded in the said office on the 1st day of March, 1859.

554. And ETIENNE ROCHE, of Marseille, town in the French empire, Manufacturer, has given the like notice in respect of the invention of "Improvements in the manufacture of paper suitable for forming cigarrettes, and for other purposes, and also improvements in the manufacture of cigars."

557. And JOHN HENRY JOHNSON, of 47, Lincoln's Inn Fields, in the county of Middlesex, and of 166, Buchanan Street, in the city of Glasgow, North Britain, Gentleman, has given the like notice in respect of the invention of "Improvements in the construction of grease boxes and bearings generally." — A communication from Joseph Vallot, residing at Paris, in the empire of France, Engineer.

As set forth in their respective petitions, both recorded in the said office on the 2nd day of March, 1859.

579. And JOHN MACMILLAN DUNLOP, of the city of Manchester, in the county of Lancaster, Engineer, has given the like notice in respect of the invention of "Improvements in machinery or apparatus for cleaning fibrous materials."

584. And WILLIAM PEACOCK SAVAGE, of Roxham, Downham Market, in the county of Norfolk, has given the like notice in respect of the invention of "An improved machine for excavating, raising, and depositing soil."

585. And FRANÇOIS VERDEIL, Medical Doctor, of No. 30, Rue St. Sulpice, in the city of Paris, and EDMOND MICHEL, Chemist, of No. 4, Quai Impérial, Puteaux, Seine, have given the like notice in respect of the invention of "Improvements in treating madder."

As set forth in their respective petitions, all recorded in the said office on the 5th day of May, 1859.

599. And JOHN LOUIS JULLION and GORDON PIRIE, both of Stoneywood Works, Aberdeen, North Britain, Paper Makers, have given the like notice in respect of the invention of "The manufacture of gelatine."

As set forth in their petition, recorded in the said office on the 7th day of March, 1859.

653. And WILLIAM CLARK, of No. 53, Chancery Lane, in the county of Middlesex, Engineer and Patent Agent, has given the like notice in respect of the invention of "Improvements in the apparatus of electric lamps or lights."—A communication from abroad by Victor Louis Marie Serrin, Civil Engineer, of Paris.

As set forth in his petition, recorded in the said office on the 15th day of March, 1859.

706. And WILLIAM COLBORNE CAMBRIDGE, of Bristol, Agricultural Implement Maker, has given the like notice in respect of the invention of "An improved construction of chain harrow."

As set forth in his petition, recorded in the said office on the 19th day of March, 1859.

713. And SIGISMOND LEONI, of St. Paul Street, in the county of Middlesex, Manufacturer, has given the like notice in respect of the invention of "Improvements in the manufacture of useful and ornamental articles, surfaces, and works, parts of articles and parts of machinery or apparatus, from talc and other silicates of magnesia, and from the same combined with other substances."

As set forth in his petition, recorded in the said office on the 21st day of March, 1859.

739. And JOHN EVANS, of Nash Mills, in the parish of King's Langley, in the county of Hertford, Paper Maker, has given the like notice in respect of the invention of "Improvements in the manufacture of paper."

As set forth in his petition, recorded in the said office on the 23rd day of March, 1859.

889. And JAMES HADDEN YOUNG, of 66, Great College Street, Camden Town, London, county of Middlesex, has given the like notice in respect of the invention of "Improvements in setting up, (composing), and distributing types."

As set forth in his petition, recorded in the said office on the 9th day of April, 1859.

908. And WILLIAM HENRY BARLOW, of Great George Street, Westminster, has given the like notice in respect of the invention of "Improvements in beams and girders."

As set forth in his petition, recorded in the said office on the 11th day of April, 1859.

1272. And NATHANIEL SHATTSWELL DODGE, of 44, St. Paul's Churchyard, in the city of London, Merchant and Manufacturer, has given the like notice in respect of the invention of "Improvements in treating waste vulcanized india rubber."—A communication from abroad by Hiram Lyman Hall, of Beverley, Massachusetts, United States of America.

1274. And NATHANIEL SHATTSWELL DODGE, of 44, St. Paul's Churchyard, in the city of London, Merchant and Manufacturer, has given the like notice in respect of the invention of "Improvements in finishing, coloring, and varnishing india rubber goods and similar manufactures."—A communication from abroad by Hiram Lyman Hall, of Beverley, Massachusetts, United States of America.

As set forth in his respective petitions, both recorded in the said office on the 23rd day of May, 1859.

1299. And JOSEPH REYNOLDS, of No. 11, Carthusian Street, Charter House Square, London, Gentleman, has given the like notice in respect of the invention of "Improvements in propelling vessels."

As set forth in his petition, recorded in the said office on the 26th day of May, 1859.

1389. And WILLIAM HENRY DORMAN, of Winchester House, Old Broad Street, in the city of London, and CHARLES COWPER, of 20, Southampton Buildings, Chancery Lane, in the county of Middlesex, Patent Agent, have given the like notice in respect of the invention of "Improvements in traction and locomotive engines."

As set forth in their petition, recorded in the said office on the 7th day of June, 1859.

1418. And Henry John Nicoll, of the firm of H. J. and D. Nicoll, Merchant Tailors, 114 to 120, Regent Street, in the county of Middlesex, has given the like notice in respect of the invention of "Improvements in trousers."

As set forth in his petition, recorded in the said office on the 11th day of June, 1859.

1448. And Charles Wilkinson, of Slaithwaite, in the county of York, Merchant, has given the like notice in respect of the invention of "Improvements in doubling or twisting silk, cotton, worsted, linen, or woollen yarns, or yarns from any other fibrous substance."

1454. And Alfred Vincent Newton, of the Office for Patents, 66, Chancery Lane, in the county of Middlesex, Mechanical Draughtsman, has given the like notice in respect of the invention of "Improvements in casting cylinders and tubes."—A communication from abroad by Freeborn Adams, of Somerville, in the state of Massachusetts, United States of America.

1455. And John Harmer, of Wellington Villas, Brighton, in the county of Sussex, Gentleman, and William Parsons, of Scotland Street, Brighton, in the county of Sussex aforesaid, have given the like notice in respect of the invention of "Improvements in fire arms."

As set forth in their respective petitions, all recorded in the said office on the 16th day of June, 1859.

And notice is hereby further given, that all persons having an interest in opposing any one of such applications are at liberty to leave particulars in writing of their objections to such application, at the said Office of the Commissioners, within twenty-one days next after the date of the Gazette [and of the Journal] in which this notice is issued.

Patents Sealed.

List of Letters Patent which passed the Great Seal on the

5th July, 1859.

42. William Corfield the younger, of Charlton-Adam, in the county of Somerset, for an invention of "Improvements in chains for coupling cranes, cables, mining purposes, hoisting, and all other purposes where chains are used."—Dated 5th January, 1859.

48. John Aspinall, of Great Tower Street, in the city of London, Civil Engineer, for an invention of "Improvements in machines for the manufacture of bolts, rivets, and spikes."—Dated 6th January, 1859.

52. Isaac Holden, of St. Denis, near Paris, in the empire of France, and Angus Holden, of Bradford, in the county of York, for an invention of "Improvements in means or apparatus employed in preparing and combing wool and other fibres."—Dated 7th January, 1859.

54. Jean Joseph Florance, of Paris, France, Merchant, for an invention of "Improvements in reels or spooling wheels."—Dated 7th January, 1859.

60. Henry Harden, of Dundalk, in the county of Louth, Ireland, Locomotive Superintendent to the "Dublin and Belfast Junction Railway Company," for an invention of "Improvements in fire bars for steam boiler and other furnaces."—Dated 8th January, 1859.

78. Thomas Harris Toms, of Staining Lane, in the city of London, for an invention of "The employment of certain materials for the production of raised ornamental figures or devices upon textile fabrics."—Dated 10th January, 1859.

148. John Foster, of Lancaster, in the county of Lancaster, Corn Merchant, for an invention of "Certain improvements in machinery or apparatus called 'spinning frames' and 'roving frames' employed for spinning and roving flax, tow, hemp, jute, and other fibrous substances."—Dated 18th January, 1859.

190. Charles O'Hara, of Toronto, Canada West, but now residing at No. 4, Upper Seymour Street, Hyde Park, in the county of Middlesex, Esquire, for an invention of "Improvements in propellers for propelling steam boats, ships, and vessels."—Dated 21st January, 1859.

198. Bernard Lauth, late of Pittsburgh, state of Pennsylvania, U. S. A., but now residing at Surrey Street, in the city of Westminster, Mechanician, for an invention of "An improved mode of and improved machinery for rolling plates, bars, rods, and shafts."—Dated 21st January, 1859.

210. Robert Mushet, of Coleford, in the county of Gloucester, Metallurgist, for an invention of "Improvements in the manufacture of cast steel and iron."—Dated 24th January, 1859.

251. Edward Thomas Hughes, of the firm of Hughes and Son, Patent Agents, 123, Chancery Lane, London, W. C., for an invention of "Improvements in the manufacture of biscuits."—A communication from Messrs. Pascal and Sirben, residing at Toulouse, département de la Haute Garonne, in the empire of France.—Dated 27th January, 1859.

294. Edward Hammond Bentall, of Heybridge, near Maldon, in the county of Essex, Ironfounder, for an invention of "Improvements applicable to machinery for grinding or pulverizing various substances."—Dated 1st February, 1859.

372. William Edward Newton, of the Office for Patents, 66, Chancery Lane, in the county of Middlesex, Civil Engineer, for an invention of "Certain improvements in breech-loading fire-arms, and in cartridges to be used in such fire-arms."—A communication from abroad by Gilbert Smith, of the State of New York, in the United States of America.—Dated 9th February, 1859.

910. William Clark, of Langhaugh, Galashiels, Scotland, a Lieutenant in Her Majesty's Navy, for an invention of "An improved safety block to be used for lowering ships' boats, the same being applicable to other like or analogous purposes."—Dated 12th April, 1859.

1040. William Warne, John Americus Fanshawe, James Archibald Jaques, and Thomas Galpin, all of Tottenham, in the county of Middlesex, India Rubber Manufacturers, for an invention of "Improved compounds, applicable for packing the joints of steam or other pipes,

which compounds are also applicable for packing or lining parts of machinery in general, or parts of ships, bridges, tanks, or railways."—Dated 25th April, 1859.

Patents on which the Stamp Duty of £50 has been Paid.

(*To 2nd July*, 1859, *inclusive.*)

1st July.

1559. WILLIAM HENRY HUBBARD, of 18, Hemus Terrace, King's Road, Chelsea, in the county of Middlesex, for an invention of "Improvements in the manufacture of articles for lighting domestic and other fires."—Dated 2nd July, 1856.

1572. ROBERT LUKE HOWARD, of 85, Whitecross Street, in the county of Middlesex, Engineer, for an invention of "Improvements in valves for regulating the flow of fluids."—Dated 4th July, 1856.

1594. JAMES HORSFALL, of Birmingham, in the county of Warwick, Manufacturer, for an invention of "An improvement or improvements in the manufacture of wire rope."—Dated 7th July, 1856.

2nd July.

1591. GEORGE SAMPSON, of Bradford, in the county of York, Stuff Finisher and Presser, for an invention of "Improvements in finishing fabrics."—Dated 7th July, 1856.

1597. EDWARD CHARLES HEALEY, of Sidmouth Lodge, Old Brompton, and EDWARD ELLIS ALLEN, of 376, Strand, for an invention of "An improvement in preparing for use veneers, paper, and other fabrics or sheets made of fibres."—Dated 7th July, 1856.

1632. PAUL PRINCE, of Derby, in the county of Derby, for an invention of "Improvements in making moulds for casting railway chairs and other articles."—Dated 10th July, 1856.

1635. JOHN FOWLER, junior, of Havering, in the county of Essex, and WILLIAM WORBY, of Ipswich, for an invention of "Improvements in machinery for ploughing and tilling land by steam." Dated 10th July, 1856.

1720. ROBERT RICHARDSON, of 26, Great George Street, Westminster, Civil Engineer, and JONATHAN EDWIN BILLUPS, of Llanelly, South Wales, Railway Contractor, for an invention of "Improvements in the permanent way of railways."—Dated 21st July, 1856.

Erratum in Journal of 1st July.

1483. For "James Harvey Washington" read "James Havey Washington."

FOREIGN PATENTS.

BELGIUM.*

LIST of PATENTS Delivered on the 30th June, 1859.†

(*Communicated by the Belgian Government.*)

(For previous List, see No. 572 of this Journal.)

7622. J. F. MAYOR, of Dison, for "A loom."—Dated 6th June, 1859.

7623. W. WARNE, J. A. FANSHAWE, J. A. JAQUES, and TH. GALPIN, represented by A. Anoul, of Ixelles, for an imported invention of "Chemical compounds for joining steam pipes and packing machinery."—Dated 4th June, 1859.—(English Patent, 25th April, 1859.)

7626. R. VIERNE and Co., of St. Etienne (département de la Loire), represented by A. Angot, of Brussels, a Patent of Improvement for "Obtaining acierated wheel tyres of railway carriages by means of the steam hammer."—Dated 7th June, 1859.—(Original Patent, 12th August, 1857.)

7628. R. NELSON, represented by R. Culliford, of Brussels, for an imported invention of "An apparatus for raising water and other fluids."—Dated 8th June, 1859.—(English Patent, 22nd November, 1858.)

7629. A. DUNN, represented by R. Culliford, of Brussels, for an imported invention of "Improvements in making marking ink."—Dated 8th June, 1859.—(English Patent, 16th October, 1858.)

7630. L. J. FICHEROULLE, of Farciennes, for "A safety apparatus of whims, counter, and alarum for mines."—Dated 10th June, 1859.

7631. L. HUBINON, of Liége, for "Improvements in fastening Lefaucheux' guns."—Dated 8th June, 1859.

7632. CH. MANUEL, represented by Cail, Halot, and Co., of Molenbeek St. Jean, for "Using centrifugal power for extracting beetroot juice, and working the scum of sugar and refining works."—Dated 9th June, 1859.

7633. P. PERIER and L. A. POSSOZ, represented by Cail, Halot, and Co., for "Improvements in refining sugar."—Dated 9th June, 1859.

* For the Belgian Patent Law, see Nos. 292 and 348 of this Journal.

† All Specifications of Patents which have been in force not less than six months, may be inspected or translations of them be had at the Library of the Great Seal Patent Office, where also translated Indexes may be consulted.

7634. F. Vouillon and F. R. Tavernier, represented by H. Biebuyck, of Brussels, a Patent of Improvement for "Treatment of filamentous substances in the manufacture of thread and tissues."—Dated 9th June, 1859.—(Original Patent, 12th March, 1859.)

7636. P. A. Loron, of Housse, for "Modifications in revolvers."—Dated 9th June, 1859.—(Original Patent, 13th October, 1857.)

7638. G. D. Vandenhaute, of Brussels, for "A fly-wheel for spinning flax, hemp, and oakum."—Dated 10th June, 1859.

7639. H. A. Corbin, represented by H. Biebuyck, of Brussels, for an imported invention of "A system of stereoscopes."—Dated 10th June, 1859.—(French Patent, 1st August, 1857.)

7640. H. Guyot, represented by Biebuyck, of Brussels, for an imported invention of "A machine for moulding bricks."—Dated 10th June, 1859.—(French Patent, 7th May, 1858.)

7641. W. H. Nevill, represented by A. Anoul, of Ixelles, for an imported invention of "Improvements in the manufacture of iron and steel."—Dated 10th June, 1859.—(English Patent, 26th May, 1859.)

7642. H. F. Gardner, represented by J. Piddington, of Brussels, for an imported invention of "Improvements in the manufacture of boots."—Dated 11th June, 1859.—(English Patent, 9th April, 1859.)

7643. B. J. Jean, of St. Ghislain, for "An apparatus called 'vinegar fountain.'"—Dated 11th June, 1859.

7644. F. J. Motte, of Ghent, for "Manufacturing and refining sugar without using animal charcoal or ox-blood."—Dated 11th June, 1859.

7645. A. Baillot, of St. Josse-ten-Noode, for "A needle rest for sewing machines."—Dated 14th June, 1859.

7646. Ed. Delaute, of Ixelles, for "Belgian cement."—Dated 14th June, 1859.

7647. L. A. Pruneau, represented by O. Daillencourt, of Brussels, for an imported invention of "A machine for sowing all kinds of seeds."—Dated 14th June, 1859.—(French Patent, 21st April, 1859.)

7648. L. Nagant, of Liége, a Patent of Improvement for "Metallic cartridges, applicable to Lefaucheux's guns and revolvers."—Dated 15th June, 1859.—(Original Patent, 21st January, 1859.)

7649. J. F. Larose, of Liége, for "Breech-loading fire-arms."—Dated 15th June, 1859.

7650. R. Mushet, represented by R. S. Kirkpatrick, of Ixelles, for "Improvements in the manufacture of cast-steel."—Dated 15th June, 1859.—(English Patent, 16th December, 1858.)

7652. Ed. Lemmens, represented by H. Biebuyck, of Brussels, for "Improvements in apparatus for roasting coffee."—Dated 15th June, 1859.

7653. Gastinne-Renette, represented by A. Francotte, of Liége, for an imported invention of "Breech-loading guns and revolvers with a central fire."—Dated 16th June, 1859.—(French Patent, 5th March, 1853.)

7654. J. F. X. Perrin, represented by Ad. Romberg, of St. Josse-ten-Noode, a Patent of Improvement for "Pumps with two cylinders of a different diameter."—Dated 16th June, 1859.—(Original Patent, 12th October, 1857.)

7655. J. L. Manby, represented by A. Anoul, of Ixelles, for an imported invention of "Improvements in apparatus and furnaces for annealing metal wire."—Dated 16th June, 1859.—(French Patent, 14th June, 1859.)

7656. R. Mushet, represented by R. S. Kirkpatrick, of Ixelles, for an imported invention of "Improvements in the manufacture of cast-steel."—Dated 16th June, 1859.—(English Patent, 22nd December, 1858.)

7657. L. G. Scriba, represented by H. Biebuyck, of Brussels, a Patent of Improvement for "A purse combined with a portemonnaie."—Dated 16th June, 1859.

7658. C. J. E. Pavy, represented by H. Biebuyck, of Brussels, a Patent of Improvement for "An apparatus for preserving grain."—Dated 16th June, 1859.—(Original Patent, 22nd December, 1858.)

7659. C. F. Sibbald, represented by H. Biebuyck, of Brussels, for an imported invention of "Improvements in steam boilers and other vessels."—Dated 16th June, 1859.—(English Patent, 9th June, 1859.)

7660. W. Strode, represented by H. Biebuyck, of Brussels, for an imported invention of "Improvements in gas apparatus for lighting and ventilating."—Dated 16th June, 1859.—(French Patent, 4th March, 1859.)

7661. Th. Guibal, of Mons, for "A mode of suspending pulleys on springs for working mines."—Dated 17th June, 1859.

7662. J. E. S. Achet, represented by A. Crooy, of Brussels, a Patent of Improvement for "A mode of stopping horses."—Dated 17th June, 1859.—(Original Patent, 3rd March, 1859.)

7663. Ch. Lambotte, of Verviers, a Patent of Improvement for "A power loom."—Dated 20th June, 1859.—(Original Patent, 12th October, 1855.)

7665. Ph. Gambardella, represented by H. Biebuyck, of Brussels, for an imported invention of "Obtaining and applying motive power without fuel."—Dated 18th June, 1859.—(English Patent, 31st May, 1859.)

7666. P. F. Varenne, of Brussels, for an imported invention of "Improvements in making bonnets."—Dated 20th June, 1859.—(French Patent, 14th June, 1859.

7669. Th. Bochum, Mining and Steel Smelting Company, represented by A. Anoul, of Ixelles, for an imported invention of "Improvements in smelting steel and making bells, tyres, and wheels of locomotives."—Dated 20th June, 1859.—(French Patent, 8th March, 1859.)

7670. J. F. Larose, of Liége, a Patent of Improvement for "Economical kitchen ranges."—Dated 20th June, 1859.—(Original Patent, 19th May, 1858.)

UNITED STATES OF AMERICA.

(Communicated by the Commissioner of Patents.)

LIST of PATENTS, with Claims annexed, issued from the United States Patent Office, for the week ending 14th June, 1859, and each bearing that date.

No. 24,363. PLEASANT ARMSTRONG, of Camden, Ala., for an "Improved washing machine."

"I claim, 1st, the arrangement of the complete stationary rounds of the convex swing frame, on two semicircular lines of different diameters, so that the rollers on the smallest semicircle shall stand above and opposite the spaces between the rollers on the largest semicircle, in combination with the arrangement of the stationary rounds of the concave, substantially as and for the purposes set forth. 2nd, the arrangement of two auxiliary treadle standards, with the main standards of the tub, in the manner herein described, and for the purpose set forth."

No. 24,364. JOHN A. BARRINGTON, of Fredericktown, Ohio, for a "Machine for printing addresses, &c."

"What I claim is, 1st, a cylinder constructed with grooved ribs, or their equivalents, for holding forms of type, presenting them at a proper point to perform the office of printing, and afterward allowing them to be delivered from the cylinder, substantially as described. 2nd, in combination with the cylinder (B), I claim the ribs (*k*) arranged upon an endless chain, in such manner as to receive the forms of type, as herein described. 3rd, securing the forms (*i*) within the rib (*b*), in such manner as to present said forms properly for printing, by means of the follower (*j*, j^1, *m*,) (catch j^{11}), and spring (j^{111}), substantially as described. 4th, adjusting the forms of type for printing and delivering them from the cylinder, after printing by means of a reciprocating bar, operating substantially as herein described, or its equivalent in effect. 5th, the inclined feed wheel (W) constructed with adjustable spring conveyors (*o*, o^1,) and operating substantially as herein described. 6th, regulating and adjusting the speed of the endless apron (T), by means of the inclined disk (*t*), friction wheel (t^1), set screws v^1, v^{11}, v^{111},), and crank screw (*v*), all constructed, arranged, and operating substantially as herein described, for the purposes set forth."

No. 24,365. VICTOR BEAUMONT, of New York, N. Y., for an "Improved gauge for measuring the pressure of fluid."

"I claim, 1, so arranging respectively, dome-shaped elastic disks, of one or more spring chambers, in pressure gauges, so that the pressure of steam, or other fluid within said chambers, be indicated by the motion of the disk or plate which presents its convexity to the pressure. II, the manner, substantially as herein described, of guiding the free end of a spring, consisting of one or more chambers, expanding, by pressure from within, in order to prevent it from vibrating in any direction but that of its axis. III, in pressure gauges with a hollow spring chamber mechanism, I claim partially filling the space inside of said chambers, with a solid substance or substances, in the manner and for the purposes set forth."

No. 24,366. JAMES M. BOTTUM, of New York, N. Y., for an "Improved instrument for measuring the strength of watch springs."

"I claim an arbor, having a measuring spring affixed thereto, together with an index, substantially as herein described, and an attachment for attaching the hair spring to be measured, combined, and arranged in the manner and for the purposes set forth, and constituting a ready means of determining the exact force of said hair springs, as above specified."

No. 24,367. WM. OLAND BOURNE, of New York, N. Y., for an "Improved ore separator."

"I claim, first, a sieve bed, in which the openings or perforations for the passage of the air or water through it are so constructed as to enforce an uniform action of the air or water through the entire surface of the sieve bed, which may be made of sheet metal, or of any textile material, either separately, or in combination, or of their equivalent, as above set forth. Second, the application of a vibrating and shaking motion to a sieve bed, in combination with a blast or current of air or water, in the manner and for the purpose above described. Third, the above-described adjustable blades for agitating the substance on the sieve bed, and for regulating the discharge of the refuse substances over the front edge of the table, as above described. Fourth, the separation of metals, or other heavy substances, from ores or other materials, when fed upon a sieve bed, by the gravitation of the lighter substances towards and over the front or waste edge, when acted upon by a current of air or water through a sieve bed, in the manner and for the purpose above set forth."

No. 24,368. E. C. BRACKETT, of Newton Corner, Mass., for an "Improved marine hand propeller."

"I claim the arrangement and combination of the adjustable bar E, arms D, oscillating shaft E, hinged blades F, rods G, arms K. P, rod N, and lever H, as and for the purposes herein set forth and described."

No. 24,369. WM. BRAMWELL, of New York, N. Y., for an "Improved valve."

"What I claim is, the sliding nut *k* actuated by the screw *i*, in combination with the hinged valve *m* and toggle links *l*, *l*, substantially as specified."

No. 24,370. JOSEPH FRANCIS BROUARD, of Havre de Grace, France, for an "Improvement in reefing sails."—Patented in France, 2nd February, 1855.

"What I claim is, 1st, supporting the rolling yard F (Fig. 12, Sheet No. 3,) between its points of suspension by the hook N, the said hook being constructed and operated as described, for the purpose of staying the rolling yard and holding it in position when the sail attached to it is acted upon by the wind, as herein set forth. 2nd, the construction of the boom iron, shown in Fig. 9, Sheet No. 3, for the purpose of placing the boom in position to prevent the chafing of the sail, as described."

No. 24,371. ROBT. BROWN, of New London, Conn., for an "Improvement in projectile for killing whales."

"What I claim as my invention in the harpoon bomb, and desire to secure by Letters Patent, is, the flukes on the shank of the bomb, the line attached thereto, the groove or indentation in the barrel of the bomb for the line, as above stated."

No. 24,372. J. S. BUTTERFIELD and SIMEON MARSHALL, of Philadelphia, Pa., for an "Improvement in self-priming gun locks."

"First, we claim the extension (*g*) on the carrier (*c*), in the manner and for the purpose as herein-before substantially set forth. Second, we claim disconnecting each primer from the roll with the raising of the hammer, in the manner and for the purpose as herein-before substantially set forth. Third, we claim the adjustable centre projection *h*, *h*, and thumb screw *q*, *q*, arranged and operated in the manner and for the purpose as herein-before substantially set forth."

No. 24,373. ROGER S. CADWELL, of Andover, Ohio, for an "Improved method of attaching the capping of fence posts."

"I claim the projection or tongue *h* formed on the top of the post in connection with the mortise 1 in the capping for attaching the said capping to the post and securing it by a batten, as described."

No. 24,374. THOS. CHAMPION and THOS. MOTLEY, of Washington, D. C., for a "Mode of fastening letters to sign boards, &c."

"What we claim is, the placing or casting on the back of letters projections with solid cast or wrought shanks therefrom. We claim holes in said projections to fasten by screws, nails, or rivets, substantially as described."

No. 24,375. Isaac S. Clough, of Brooklyn, N. Y., and Saml. R. Burrell, of New York, N. Y., for a "Fly-trap."

"We claim the combination of the stationary cone, revolving catcher and start, and receptacle, when constructed as described and for the purpose specified."

No. 24,376. Thos. Crane, of Fort Atkinson, Wis., for an "Improved sugar-cane press."

"What I claim is, the combination of the pressure rollers (B, C,) with the main bearing wheel (A) of a frame, which is so proportion and supported that it can be rotated around a pivot post, but this I only claim when a fluid-receiving vessel (*a*), a conducting tube (*i*), an annular channel (*j*), and a delivery spout (*k*), are combined with the said frame, substantially in the manner and for the purpose herein represented and described."

No. 24,377. Saml. S. Crocker and Geo. E. Marshall, of Lawrence, Mass., for an "Improvement in manufacturing paper."

"What we claim is, first, the combination of internally-heated drying cylinders (*a*) with a steam box or boxes, arranged for the purpose of continuously first thoroughly drying paper, and then superficially moistening it by the direct application of steam, prior to the operation of calendering. Second, the combination of a steam box or boxes, so arranged as to moisten paper superficially by the steam therein contained, with rolls which calender by pressure, as described."

No. 24,378. Chas. Crossley, of Ellington, Conn., for an "Improvement in looms."

"What I claim is, first, the combination of the series of vibrating tuft formers K, K^1, K^{11}, and the vibrating reed G, H, arranged and operating substantially as above described. Second, the combination of the weights 3 and 4, the knotted cord and slotted arm *s*, for the purpose of controlling the set off of the tufting yarn beam, as above described."

No. 24,379. John Daines, of Birmingham, Mich., for an "Improvement in drain tile machines."

"What I claim is, first, the bar G, and hooks D, in combination with the cross bar E, when used for the purpose of opening the lid C automatically, as above described. Secondly, I claim the bar P, combined with the frames M, in the manner aforementioned with the levers L, for cutting off the tile by the returning of the plunger."

No. 24,380. Horace B. Davis, of Lexington, Mass., for an "Improved horse bracket."

"Claim: the improved mode of fastening and confining it to the foot, by having the points of attachment bear directly upon the shoe so as not to injure the ankle or fetlock by galling, or the hoof by compression; and also the machinery by which the racket is adjusted to the size of the foot, and held more firmly and securely than by any other mode of attachment now known."

No. 24,381. E. R. Denniston, of Middletown, N. Y., for an "Improved milk can."

"I claim as an improved article of manufacture a milk can having its cover C hinged to a flanch (*f*), and provided with a plate (*h*), stopper (*k*), and having the guard hoop B attached to the body of the can (*b*), all as herein shown and described."

No. 24,382. Patrick S. Devlan, of Reading, Pa., for an "Improved churn."

"What I claim is, the employment in a churn in which the cream is acted upon by a blast only of a float G, substantially as and for the purpose herein-before described."

No. 24,383. Christian H. Eisenbrandt, of Baltimore, Md., for an "Improvement in attachments to locomotive engines for removing objects from the track."

"What I claim is, the double suspension lifting platform, composed of the parts *c*, *c*, c^2, *d*, *d*, *e*, *e*, *f*, *f*, *g*, *g*, *h*, *h*, J, J, K, K, L, L, *m*, *m*, the yielding net work, or flexible fender guard (or its equivalent) I, I, I, I, when constructed, combined and arranged substantially in the manner as herein set forth and described."

No. 24,384. Chas. Foster, of Eldridge's Hill, N.J., for an "Improvement in operating switches on railroads."

"I claim the mode of operating switches by means o movable cams *i*, *i*, or their equivalents on the car, acting on a cam A, or its equivalent, connected by means of levers with the switch rail *c*, substantially as above described."

No. 24,385. H. B. Gill, of Ogden, N. Y., for an "Improvement in machines for dressing millstones."

"I claim the combination and arrangement of the pivoted segmental arm *o*, and slide N, with the striking lever G, and cam M, or its equivalent, substantially in the manner and for the purpose set forth."

No. 24,386. Thos. I. Goff, of Harren, R. I., for an "Improvement in machines for making hay."

"I claim the combination of the gathering rake D and revolving rake E, when arranged for joint operation, substantially as and for the purpose set forth."

No. 24,387. Geo. D. Greenleaf, of Chateangay, N. Y., for an "Improvement in ventilators."

"I claim, in combination with the cylinder A bell-shaped casting G, and plates B, D, the cup J, and register F, for the purpose specified."

No. 24,388. Dexter D. Hardy, of Cincinnati, Ohio, for an "Improvement in rotary engines."

"I claim the arrangement of the rings e^1, e^{11}, e^{111}, operating in the described combination with the pipes *s*, *s*, to pack the revolving shaft C, in its connection with the stationary cylinder A, by the use of steam or water pressure as explained. 2d, the combination and arrangement of the revolving shaft C, containing the receiving and discharge ports J, K, with the stationary cylinder A, B, and valves E, E, substantially as described."

No. 24,389. Henry Hersh, of Lancaster, Pa., for an "Improvement in horse rakes."

"What I claim is, the arrangement and combination of the S-shaped teeth H, lock I, revolving axle B, and clearers M, as described, and for the purposes set forth."

No. 24,390. Henry Charles Howells, of New York, N.Y., and Joseph Charles Howells, of Madison, Wis., for an "Improved omnibus register."

"First, we claim the employment of a yielding platform to determine the value of the entry or fare, and in combination with doors or equivalent devices to secure the registration of persons standing upon it, previous to their ingress or egress, substantially as specified and set forth. Second, we also claim the employment and use of the circular or segmental doors, or equivalent devices, having within the area of their action, a yielding platform, operating substantially as set forth and specified. Third, we claim, in combination with the yielding platform G, an operative lever N, and vertical rod M, and puppet Q, or their equivalents, substantially as set forth, and for the purpose specified. Fourth, we claim the pin or bolt *s*, in combination with the arm O, attached to the vertical rod M, or their equivalents, for communicating motion to the registering levers S and T, by the action of the jointed arm P, substantially as specified and set forth. Fifth, we also claim the registering levers S and T, operated as set forth, or their equivalents, and in combination with the registering ratchet wheels U and V, and the spring pawls *m*, *m*, together with the double dial X, for registering the whole or half entries or fares, substantially as set forth and specified. Sixth, we also claim the stationary brushes, and the arrangement and combination of levers and rods, or their equivalents, for operating the doors and steps, substantially as set forth and described."

No. 24,391. Solon P. Hubbell, of Unadilla, N.Y. for an "Improvement in sowing machines."

"I claim the combination of the bar I, having teeth W, angular notches X, and clearers V, with hopper D, its pins Y, and slide blocks O, the whole being constructed and arranged as and for the purpose set forth. I also claim, in combination with the hopper D, pins Y, slide blocks O, and regulating plate E, the reciprocating bar F, with its clearers R, R^1, and stirrers S, these several devices being constructed and arranged for operation conjointly in the manner and for the purpose described."

No. 24,392. Richd. Humphreys, of Jonesborough, Tenn., for a "Tuning key-board."

"I claim, as a new article of manufacture, the before-described compound tuning reeds, necessary to represent the corresponding keys in the general scale of musical notations, substantially as before described."

No. 24,393. Henry L. Kendall, of Providence, R.I., for an "Improvement in wood screws."

"What I claim under this Patent, is, a wood screw having a thread of a ratchet-tooth shape, in combination with wide spaces between the convolutions thereof, on a stem cylindrical, or nearly so, and on a point of any suitable form, substantially as herein set forth. I also claim, making the threaded point of a wood screw in such manner that the thread thereof (except the terminal convolution) shall be of the same or nearly the same depth on its upper and lower sides, to give the screw a firmer hold of the wood, especially on its first entrance, than it would have, if the threads on the points were made of gradually less depth toward the apex, substantially as herein set forth. I also claim, so forming the thread of a wood screw, that it shall be of the same depth on the upper and under side on the point and on the stem (except the terminal convolution of the point, which is contracted rapidly in depth and width,) substantially as herein set forth."

No. 24,394. Daniel Leavitt, of Chicopee, Mass., for an "Improvement in breech-loading fire-arm."

"What I claim is, effecting the locking and unlocking of the upwardly opening breech, and the starting of the same from its seat to open it, by means of a detached lever, having a locking dog f^1 to enter a notch in the breech, and a toe g, to act against the bottom of the breech, substantially as herein described."

No. 24,395. James S. McCurdy, of Brooklyn, N.Y., for an "Improvement in sewing machines."

"I claim, first, the combination of a reciprocating needle with a pair of loopers, or their equivalent, the combination as a whole operating in such manner that each successive needle loop is encircled by a tight coil of the thread of the preceding loop, substantially as described. Second, the combination and arrangement of two loopers, substantially such as herein described, with a driver operating substantially in the manner and for the purpose described. Third, constructing and operating one of the loopers, in such manner that a supplementary movement is imparted to it, while the other is at rest, for the purpose of tightening the stitch."

No. 24,396. H. T. Merrill, of Galena, Ill., for an "Improvement in musical instruments."

"What I claim is, the Gamut board C, applied above and behind the keys, in combination with a sliding name board B, or its equivalent, substantially as herein specified."

No. 24,397. Rufus S. Merrill, of Lynn, Mass., for an "Improvement in lamps."

"In coal oil burners, of otherwise ordinary construction, I claim the combination with a flat wick tube of the removable director, constructed as described, with inclined side walls and vertical ends, the latter being corrugated or grooved to fit the ends of the wick tube, as a means of securing the director to the wick tube, and for directing or conveying the heated vapors, mixed with atmospheric air, to the sides of the flame, substantially in the manner and for the purpose set forth."

No. 24,398. Leman C. Miner, of Hartford, Conn., for an "Improvement in hanging carriage bodies."

"What I claim is, 1st, the application of the double-jointed shackle H to the front axle, whereby the vertical position of the spring and axle is sustained, and the fifth wheel and appendages dispensed with. 2nd, the back axle braces, with double joints B, B, to admit a free and easy vertical motion of the springs, and supporting the axle in its upright position, substantially in the manner as herein described."

No. 24,399. Eli Moore, of Slabtown, So. Ca., for an "Improvement in ploughs."

"What I claim is, the arrangement of the beam A, brace B, clevis C, foot D, stock E, and ring F, the whole being constructed as described for the purposes specified."

No. 24,400. James D. Osborn, of Constantine, Mich., for an "Improvement in machines for binding grain in bundles."

"I claim a binding knot, composed of three loops passing through each other, when said passing of the loops through each other is effected by machinery, driven or moved from any of the moving parts of a harvesting machine, and whether accomplished by the means herein stated or by their substantial equivalents."

No. 24,401. Dubois D. Parmelee, of New York, N.Y., for an "Improvement in vulcanizing caoutchouc."

"I claim the preparation and use of the ingredients herein described, with bromine, whether combined or not with sulphur, substantially as herein described, and for the purposes set forth."

No. 24,402. A. P. Pitkin, of Hartford, Conn., for an "Improved steam pressure regulator."

"What I claim is, the forming a connection with the reduced pressure pipe or chamber A, and diaphragm, spring, or piston B (or their equivalents) for the purpose of opening and closing a passage C between the high and reduced pressure pipes or chambers A and D, as and for the purpose described. Also, the combination of passage C, piston or valve E, rod I, lever F, diaphragm, spring, or piston B, and safety valve H, arranged to operate in relation to each other, as and for the purpose described."

No. 24,403. R. B. Prindle, of Coventry, N. Y., for an "Improvement in devices for securing the clevis to ploughs."

"I claim the arrangement of the pin (C), feather or rib (*c*), spaces (*e*, *e*), clevis (B), beam (A), and groove (*a*), as described, for the purposes set forth."

No. 24,404. Joseph Hoffacker and Joseph Richards, of New York, N. Y., for an "Improvement in keys, &c., for pianofortes."

"What we claim, is, 1, the construction of the key board, by substituting, instead of the usual keys, knobs connected with the main levers, substantially as described. 2, the pivoted rod *a*, in combination with the main levers *m*, substantially as described. 3, the construction of the damper *o*, substantially as set forth. 4, the construction of the trigger *n*, and its action on the damper O, substantially as described. 5, the construction of the hammer S, and its action, in combination with the principal lever *m*, substantially as described."

No. 24,405. Daniel J. Riker, of Harlem, N. Y., for an "Improvement in clip for carriage thills."

"What I claim is, extending the plate *c* of the carriage clip, in the form of a spring, to the eye of the shafts, and causing said spring to operate on the aforesaid eye in the direction of the pull, to keep the parts of the bolt and eye in contact, for the purposes and as described."

No. 24,406. John N. Sawtell, of Chicopee, Mass., for an "Improvement in speeder and stretcher flyers."

"What I claim is, the new article of manufacture herein described, for a flyer, for spinning frames, when constructed essentially in the manner and for the purposes set forth."

No. 24,407. Noah Seitz, of Mellmore, Ohio, for an "Improvement in method of ventilating corn houses."

"What I claim, is, the arrangement of the openings O and O^1, with the wire grating, in combination with the secondary perforated floor *d*, lathing *c*, and ventilator *f*, substantially as and for the purposes set forth."

No. 24,408. Alexr. Shoemaker, of Carey, Ohio, assignor to James G. Hunt, of Reading, Ohio, for an "Improved saw-set."

"What I claim is, the adjustable arm O, with the fingers, and adjusting screw, in combination with the spring trip hammer. I also claim the spring I and trip hammer, in combination with the adjusting frame L, and rollers N, N, and adjusting screws; these several devices I claim, when arranged substantially as herein set forth for the purpose described."

No. 24,409. Isaac C. Shuler, of Amsterdam, N.Y., for an "Improvement in constructing sheet metal coffins."

"I claim, first, the arrangement of strengthening the lower part of a sheet metal coffin, by folding over and soldering together consecutively, in several thicknesses, the surplus metal of the sides and ends of a sheet metal tray *c*, forming

a rim all around the outside circumference of the base, and fastening the walls of the coffin firmly thereto. I claim also, the arrangement of fastening to the underside of this tray or bottom of the coffin the frames *b*, *b*, for the purpose of stiffening it. Second, the arrangement of placing on the inside of a sheet metal coffin a metal tray *d*, with scrolled edges, which rests on a flange formed by turning in the walls of the coffin all round their tower edges, and fastening this tray firmly thereto, and also to the walls, for the purpose of strengthening the structure. I also claim the bars *b* for strengthening this tray. Third, the arrangement of scrolling or folding outwardly and soldering consecutively, each fold of the surplus edges of the walls of a sheet metal coffin, forming a rim all round the upper edge of the walls, for the purpose of strengthening and securing the same in straight lines for jointing, substantially as described. Fourth, the arrangement of forming on the inside of the upper edges of the walls of a sheet metal coffin, a scrolled rim on the piece *c*, for the purpose of more firmly supporting the air-tight cover, and also for the purpose of securing the cover by screws as well as by solder, when desirable. Fifth, the arrangement of fastening on the outside of a sheet metal coffin, between the stiffening rims of the upper and lower edges of the walls, the studs or pillars *o*, at the corners and along the sides and ends in any required number, according to the size of the coffin, for the purpose of stiffening the sheet metal, in order that the structure may sustain a heavy weight. Sixth, the arrangement of scrolling and soldering together the surplus edges of the air-tight cover of a sheet metal coffin, and heading the same, which, on being turned under, serves to fit the groove *c* as well as to stiffen the cover. Also the stiffening bars *h*, substantially as described. Seventh, the arrangement of pressing a recess in the sheet metal, all round the windows of a sheet metal coffin, for receiving and supporting the glass. I also claim the arrangement of supporting the glass by a flange formed by the extension of a second inside sheet of the double cover. Eighth, the arrangement of fastening the glass in these recesses, by means of metal sashes fastened to the coffin lid, as described. Ninth, I claim the flanges formed on the outer edges of the sheet metal blinds *m*, *m*, for the purpose of closing around the metal sash, and securing the glass from the intrusion of dust and from other annoyances. Tenth, I am aware that I have claimed the bisection of a hinged cover, for the joint of the lid of a sheet metal coffin, according to the breaks in the side walls. I claim the cover *j*, as applicable to a coffin with straight side walls in two hinged sections, as described."

No. 24,410. Andrew Simmons, of Nora, Ill., for an "Improvement in seeding machines."

"What I claim, is, the arrangement of the boxes T, in relation to the agitator C, plates N, and O, and in combination therewith, the hollow drill tooth V, the several parts being so constructed as to form a continued broad cast seed and drill."

No. 24,411. Azel Smith, of Westfield, Ohio, for an "Improvement in cultivators."

"What I claim, is, the adjusting brace plates C, C, frames B, B, and cutters D, D, when arranged as described, and in combination with the adjustable mould boards."

No. 24,412. John M. Spooner, of Springfield, Mass., for an "Improvement in the construction of sled runners."

"What I claim, is, making both of the runners and the bearers of a sled or sleigh, or other similar vehicle of one continuous piece or rod of steel or other metal substantially as set forth."

No. 24,413. Enos Stimson, of Plainfield, Vt., for an "Improvement in seeding machines."

"What I claim, is, the arrangement and combination of the shaft F, box E, shaft M, arm O, and box N, as and for the purpose herein shown and described."

No. 24,414. Wm. Mont Storm, of New York, N.Y., for an "Improvement in breech-loading fire-arms."

"What I claim, is, such an arrangement of the links as described, and their connection with the breech-piece and lever, that they shall jam forward and firmly hold the former against the rear of the bore of the barrel after it has ceased its motion transversely to the latter, and vice versa, release the breech piece (in opening the breech) before its movement commences. Second, I claim the perforated breech piece in the manner and for the purpose described. Third, I claim arranging the horn or head of the hammer in the manner and for the purpose described."

No. 24,415. R. Sutton, of East Avon, N.Y., for an "Improvement in the running gear of sleds."

"I claim the arrangement and combination of the sliding collar G, rods *o*, reach E, sliding bolster F, pendents *i*, links *j*, and runners B, as herein shown and described."

No. 24,416. Isaac C. Tate, of New London, Conn., for an "Improved stop-cock."

"I claim the application of the spring A, in the manner substantially as herein set forth and described, and for the purpose described."

No. 24,417. Lewis C. Terry, of Chenango, N.Y., for an "Improvement in whiffletree hooks."

"I claim a hook pivoted or hinged to its supporting eye, which is cut away or flattened on its back in the manner described, so that the point of the said hook being in contact or nearly so, with its said holding eye will securely confine a link, a ring, a staple, a trace, or similar object in all positions, excepting when turned back upon the said flattened or eccentric part of the eye, substantially as set forth in my description. I also claim the right in addition to the above, to so construct the hook and eye that the hook shall have but one motion, viz., a horizontal motion directly around the circle formd by the said eye, so that the said hook shall not drop or work from side to side, and the exclusive right to use the same in either or both the forms above mentioned and described for all purposes for which they may or can be used, when constructed substantially as set forth."

No. 24,418. Joseph Thirlwell, of Galesburg, Ill., for an "Improvement in cultivators."

"I claim the arrangment of the frame A, A, the iron bows (B, B), the hinge bow (C), the tongue braces D, D, and lifting chain E, when constructed and used in combination, for the purposes set forth."

No. 24,419. Franklin Veal, of Hallettsville, Texas, for an "Improvement in seeding machines."

"What I claim is, 1st, the arrangement of the windlass K the hand lever H, and the lever N, in combination with the smoothing roller L, the hopper F, and the harrow M, and in such relation to the driver's seat I that they can be operated from the same, substantially as and for the purpose specified. 2nd, the combination of the fan cylinder *f*, *f*^{1}, with the hopper, substantially as and for the purpose described."

No. 24,420. David Warren, of Gettysburgh, Pa., for an "Improvement in R. R. car couplings."

"What I claim is, the arrangement of the adjustable plate *a*, as constructed with the pin *b*, arm A, rock shaft R, and guards B, when the same are operated and used, substantially in the manner and for the purpose herein set forth."

No. 24,421. Lyman White, of Davenport, Iowa, for an "Improvement in rock drills."

"I claim, 1st, placing the bearings *e* of the shaft D, to which the box M and drill carriage N are attached, in bars C, C, which are fitted in annular parts *c* of the supports B, and arranged substantially as shown, so as to admit of the facile adjustment of the drill P to any angle or position required. 2nd, the employment or use of the racks E on the bars C, C, in connection with the wheels F, G, on the shaft D, the screws H attached to the sliding bearings *e* by the bars *f*, the wheels I on the upper ends of the screws H, and the pins *o*^{1} on the cranks J, the whole being arranged, substantially as shown, to feed the drill to its work."

No. 24,422. Gilbert Yates, of West Dresden, N. Y., for an "Improvement in car couplings."

"I claim the combination of the chains H, H, clasps J, J, with the bent and lifting rods B, B, grooved parts C, C, and chains I, I, arranged in relation to each other, substantially in the manner and for the purposes set forth."

No. 24,423. Wm. Zimmerman, of Quincy, Ill., for an "Improvement in grain hulling machines."

"I claim the conduits arranged to receive the grain scoured or operated upon by the first or each revolving scourer, when operated on a horizontal shaft, and conduct it to the centre or central part of the second or next revolving scourer, and so on in succession through the whole series of scourers, until it passes out of the machine."

No. 24,424. Daniel D. Badger and Wm. S. Sampson, of New York, N. Y., assignors to Daniel D. Badger aforesaid, for an "Improvement in grain bins."

"We claim the arrangement and combination of the metallic bins A, in the manner and for the purposes substantially as herein shown and described."

No. 24,425. JOHN E. COFFIN, of Portland, Maine, assignor to A. F. GERRISH, of same place, for an "Improvement in machines for shaping the backs of books."

"But what I claim is, 1st, the arrangement of the sliding holding jaws and the reciprocating roller carriage, substantially as herein described. 2nd, combining the toggle mechanism, which operates the clamping jaws, and the screw, which operates the roller carriage, with a cam and pulley, or its equivalent, on the same shaft, in such manner as to make a machine for shaping the backs of books, which is perfectly continuous and automatic in its operation, and to and from which the books only require to be introduced and removed by the attendant at the proper stage in its operation, substantially as herein described."

No. 24,426. JOSEPH W. COX, of Malden, Mass., assignor to Horace H. Day, of New York, N. Y., for an "Improved machine for cutting india rubber into threads."

"I claim, 1st, in combination with the concave rotary cutter, substantially as described, the employment of a tube, placed in the concavity thereof, substantially as described, for the discharge of a jet of water against the cutting edge, as described. 2nd, I also claim the carriage with its divided clamp and follower, substantially as described, in combination with a rotary cutter, substantially as described, or any equivalent cutter, for the purpose set forth. 3rd, and, finally, I claim in combination with the carriage clamp and follower, substantially as described, the mechanism, or any equivalent thereof, for operating the follower, substantially as described."

No. 24,427. DANIEL DUNHAM, of Pawtucket, R.I., assignor to D. D. Sweet, James Bromily, and E. W. French, of same place, for a "Compound machine for boring blind slats."

"I claim, 1st, the rack J, or its equivalent, arranged in combination with the sliding carriage F, and with the dog o, as described. 2nd, the lever M arranged with the nose p^1, in such relation to the treadle D, that by its action the dog o is operated as specified."

No. 24,428. BENNET HOTCHKISS, of New Haven, Conn., assignor to himself and F. S. Collins, of same place, for an "Improvement in trip hammers."

"What I claim is, my improved means of operating the hammer, that is, by an air spring cylinder, substantially as described (or its equivalent), applied to the piston and combined with mechanism, by which a rapid reciprocating rectilinear motion may be imparted to such cylinder, essentially in manner and so as to operate the piston and hammer, as specified. I also claim, in combination with the piston trip hammer, the air spring cylinder and the mechanism for imparting to the latter reciprocating rectilinear motions, as described, mechanism, substantially as specified, for varying the altitude of the path of movement of the cylinder, under circumstances as explained, such mechanism as above described, consisting of an eccentric bearing shaft H, applied in boxes I, I, and to the crank shaft G of the cylinder B, substantially as specified."

No. 24,429. JOB JOHNSON, of East Brooklyn, N. Y., assignor to Chas. D. Archibald, of London, England, for an "Improvement in composition for cementing iron."

"What I claim is, the combination and use of lime, bone dust, and charcoal, in the manner and for the purposes substantially herein described."

No. 24,430. FRANCIS MILWARD, of Cincinnati, Ohio, assignor to H. Homan, and W. L. Thomas, and D. D. Hardy, of same place, for an "Improvement in spinning tops."

"What I claim is, a combined gyroscope and spinning top, constructed and operating substantially in the manner set forth."

No. 24,431. DANIEL NICHOLS, of Onargo, Ill., assignor to Chas. Rumley and Edwd. Rumley, of same place, for an "Improvement in seeding machines."

"What I claim is, the combination and arrangement of hinged bars E, H, slotted arc I, driving wheel J, and auxiliary seed hopper F, when the same are arranged and operating in the manner and for the purposes herein specified."

No. 24,432. JOHN S. PALMER, of Providence, R.I., assignor to himself and Chas. S. Capron, of same place, for an "Improvement in rolling metal for jewelry."

"What I claim is, the employment of a tapering die A, in combination with the pressing rollers, substantially as and for the purpose specified."

No. 24,433. E. T. QUIMBY, of New Ipswich, N.H., assignor to himself and Newton Brooks, of same place, for an "Improved attachment for alarm clocks."

"What I claim is, 1st, the wheel A, or its equivalent, having a series of projections a, which, or some of which, can be covered up or removed, and operating in combination with the hammer B, substantially as and for the purpose described. 2nd, the arrangement of the slides F, to operate in combination with the wheel A, and with the hammer B, substantially in the manner and for the purpose specified."

No. 24,434. GEO. W. RICHARDSON, and JAMES W. WHITE, of Grayville, Ill., assignors to themselves and Geo. M. Weed, of White Co., Ill., for an "Improvement in corn harvesters."

"The particular improvement which we claim as having been originally and first invented by us, is, the combination of the gathering wheels L, L, terete rollers H, H, stripping plates M, and guide plates N, as set forth; and we also claim the combination of the fender or guide plates N, meeting the points of the rollers H, with the terete rollers and stripping plates, as set forth."

No. 24,435. ROBT. ROSS, of St. Alban's, Vt., assignor to himself and Geo. J. Stannard, of same place, for an "Improved water wheel."

"I claim the plate or gate F, placed within the water passages a, of the wheel provided with the vertical projections f, at the issues e, and attached to the rod E, within the shaft C, of the wheel, substantially as and for the purpose set forth."

No. 24,436. HENRY WEBB, of Cincinnati, Ohio, assignor to S. L. Wilder, of same place, for an "Improvement in railroad bars."

"What I claim, is, the angular rail herein-above described, when constructed so as to be convertible and present a new surface, after the first surface has been worn out in the manner and for the purposes above specified."

No. 24,437. THOS. BAILEY, of New Orleans, La., for an "Improvement in means for actuating movable parts of fire-arms."—Patented in England, 3rd December, 1858.

"I claim combining a toothed wheel or pinion on a traveling center, and working between guides with a pair of racks, one of which is stationary and the other movable, having connected to it the part of the fire-arm to be moved, the toothed wheel changing its position, or traveling in the same plane with the guides, substantially as herein set forth."

RE-ISSUES.

DAVID G. OLMSTEAD, of Vicksburg, Miss., assignee of R. A. L. McCurdy, of Sabine Parish, La., for an "Improvement in cotton gins."—Patented 26th June, 1855; Re-issued, 15th July, 1856; again re-issued, 14th June, 1859.

"What I claim as the above-described invention, and desire to secure by Letters Patent, is, the revolving screen, cylinder, or shaft, situated in the hopper or roll-box, so that the 'roll' moves around it, when constructed and arranged substantially in the manner described, whether as a single or double device, so as to perform any or all of the functions as herein specified. I also claim, discharging the hulls and trash from the roll-box, through the sides of the cotton gin, as above set forth."

ABEL W. STREETER, of Shelburne Falls, Mass., for an "Improvement in fastening centre bits."—Patented 23rd January, 1855.—Re-issued 14th June, 1859.

"What I claim is, fastening a bit in its stock by means of a projection on one and a suitable recess for it on the other, when combined with mechanical pressure or friction that will hold the projection and recess together, substantially as described."

Designs.

S. W. Gibbs, of Albany, N. Y., assignor to Abbott and Lawrence, of Philadelphia, Pa., for a "Design for stove plates."

"What I claim is, the ornamental configuration of the plates of a premium cooking stove, as fully set forth and described."

S. W. Gibbs, of Albany, N. Y., assignor to Abbott and Lawrence, of Philadelphia, Pa., for a "Design for stove plates."

"What I claim as my invention or production is, the ornamental configuration and combination of ornaments of a six plate wood stove."

S. W. Gibbs, of Albany, N. Y., assignor to Rathbone and Co., of Albany, N. Y., for a "Design for tops and bases of sheet-iron stoves."

"What I claim as my invention or production, and desire to secure by Letters Patent, is, the combination of the different ornamental figures and forms and configuration of the mouldings of the top and base and door of a sheet iron parlour or wood stove, as herein set forth and described."

James S. McCurdy, of Brooklyn, N.Y., assignor to John M. Myers, of New York City, for a "Design for the arms of sewing machines."

"What I claim is, the ornamental design of the arms for sewing machines, as shown in the drawing."

Additional Improvement.

Charles Robinson, of Cambridgeport, Mass., for an "Improvement in the construction of chairs, sofas, &c."—Patented 9th March, 1858.—Additional improvement dated 14th June, 1859.

"What I claim as my invention, and desire to secure by Letters Patent, additional to the original improvement, is, the spring plate D, arranged and operating in combination with the supporting blocks B, B, substantially as herein specified."

List of Specifications published during the week ending 1st July, 1859.

No.	Price.	Subject-Matter.
2661	3*d.*	Fabric for covering floors and walls, &c.
2662	10*d.*	Gas fittings.
2663	6*d.*	Cigar cases.
2664	3*d.*	Ball-proof shields or mantlets.
2665	3*d.*	Mills for grinding corn.
2666	1*s.*	Machinery for making bolts and rivets.
2668	3*d.*	Manufacture of paper cartridges, &c.
2669	11*d.*	Lighting, heating, and ventilating.
2670	3*d.*	Electro-motive apparatus.
2671	3*d.*	Apparatus for raising and supporting ships or vessels.
2672	4*d.*	Manufacture of size.
2673	3*d.*	Purification of gas.
2674	1*s.*	Valves for regulating the supply of steam.
2675	10*d.*	Safeguard against burglars.
2676	3*d.*	Petticoat and bustle.
2677	3*d.*	Composition for sizing cotton, linen, &c.
2678	6*d.*	Candlesticks.
2679	7*d.*	Looms for weaving.
2680	10*d.*	Gas regulators.
2681	5*d.*	Steam trap.
2682	3*d.*	Preparation of coloring matter for dyeing.
2683	6*d.*	Drawers or trousers for ladies or children.
2684	3*d.*	Rollers for sizing, dressing, &c.
2685	3*d.*	Manufacture of welded iron tubes.
2686	3*d.*	Governors for marine engines.
2687	1*s.* 3*d.*	Parasols.
2688	3*d.*	Manufacture of leather.
2689	3*d.*	Machinery for compressing bales.
2690	3*d.*	Apparatus for brightening and polishing metal surfaces.
2691	10*d.*	Machinery for preparing and spinning cotton, &c.
2692	10*d.*	Gas meters.
2693	7*d.*	Lubricators.
2694	3*d.*	Manufacture of paper.
2695	5*d.*	Hydraulic presses.
2696	7*d.*	Water meters, &c.
2697	3*d.*	Weaving.
2698	1*s.* 4*d.*	Treating, preparing, and bleaching textile fabrics, &c.
2699	3*d.*	Preserving life and property in navigation.
2700	3*d.*	Utilizing waste heat from slags.
2701	1*s.* 1*d.*	Traction engines and carriages.
2702	10*d.*	Jugs.
2703	3*d.*	Manufacture of shirts and shirt fronts.
2704	5*d.*	Pattern chains for weaving.
2705	3*d.*	Manufacture of gas.
2706	4*d.*	Manufacture of alkalies, &c.
2707	6*d.*	Manufacture of scissors.
2708	3*d.*	Static pressure engine.
2709	3*d.*	Manufacture of bridles.
2710	1*s.* 7*d.*	Manufacture of spokes for wheels, &c.
2711	7*d.*	Steam engines.
2712	9*d.*	Carboys, barrels, &c.
2713	9*d.*	Apparatus for melting fat, tallow, &c.
2714	4*d.*	Manufacture of electric telegraph wires and cables.
2715	3*d.*	Treatment of vegetable fibres.
2716	11*d.*	Machinery for the manufacture of boots and shoes, &c.
2717	10*d.*	Locomotive engines.
2718	5*d.*	Petticoats.
2719	1*s.*	Manufacture of files.
2720	1*s.* 4*d.*	Manufacture of elastic fabrics, &c.
2721	8*d.*	Apparatus for preserving ships' papers.
2722	3*d.*	Purifying animal charcoal.
2723	1*s.* 7*d.*	Pumps and water gauges.
2724	3*d.*	Watch.
2725	3*d.*	Railroad.
2726	3*d.*	Smoothing irons.
2727	3*d.*	Manufacture of braided articles.
2728	3*d.*	Machinery for raising water, &c.
2729	6*d.*	Preventing the fusion of fire-bars in locomotive or other furnaces.
2730	7*d.*	Fastenings for belts, braces, garters, &c.
2731	3*d.*	Furnaces.
2732	3*d.*	Telegraphy.
2733	1*s.* 1*d.*	Machinery for cutting and shaping staves, &c.
2734	6*d.*	Threshing and dressing machines.
2735	3*d.*	Manufacture of cravats, braces, &c.
2736	10*d.*	Railway chairs and fastenings.
2737	3*d.*	Ornamenting the surfaces of japanned goods, &c.
2738	6*d.*	Manufacture of coke.
2741	3*d.*	Colouring threads.
2742	8*d.*	Marine and other steam engines.
2758	3*d.*	Obtaining and applying motive power.
2770	4*d.*	Arithmetical machines.
2779	10*d.*	Actuating railway breaks.

*** Specifications will be forwarded by post on receipt of the amount of price and postage. Sums exceeding 5*s.* must be remitted by Post Office Order, made payable at the Post Office, High Holborn, to Mr. Bennet Woodcroft, Great Seal Patent Office.

Museum of Patents, South Kensington.

Number of Visitors for the Week ending 2nd July, 1859.

Mornings - - - -	1314
Evenings - - - -	787
Total - - -	2101

Since the opening of the Museum Free Daily (May 12, 1858,)—114,012.

THIS Museum is open to the public daily, free of charge. The hours of admission are from 10 A.M. to 6 P.M., and in the evenings of Monday, Tuesday, and Wednesday from 7 to 10 P.M.

All communications on the subject of the Museum o be addressed to the Superintendent,

B. Woodcroft.

Great Seal Patent Office,
Southampton Buildings.

Gallery of Portraits of Inventors, Discoverers, and Introducers of Useful Arts.—This Collection, formed by Mr. Woodcroft, and first opened to public view in the Great Seal Patent Office in 1853, now constitutes a portion of the Patent Museum at South Kensington.

Presentations of original Portraits, Medallions, Busts, and Statues, in augmentation of the Collection, are hereby invited, and will on receipt be acknowledged in this Journal, and duly recorded in the next published Catalogue.

REAPING MACHINES.—The entire series of Specifications and Drawings on this subject to the end of 1853, together with an Appendix, prepared by B. Woodcroft, of the Patent Office, and published under the sanction of the Commissioners, may be obtained at the cost price of 2*l.* 3*s.* 11½*d.*

FIRE-ARMS, PROJECTILES, &c.—The series of Specifications and Drawings on this Subject, from 15th May, 1718, to 31st December, 1853, with Alphabetical and Subject-matter Indexes, may be obtained at the cost price of 9*l.* 18*s.* 6½*d.*

The Indexes, separately, price 3*s.*

COLONIAL PATENTS.—Information as to the Mode of obtaining Protection for Inventions in the Colonies; contained in Communications from the Governors, &c. of the different British Colonies in answer to the Application of Mr. W. J. Curtis for a Patent. Price 1*s.*

PATENT RIGHTS in the COLONIES.—Abstract of Replies to the Secretary of State's Circular Despatch of July 11, 1856, calling for Information as to the Form of the Application to be made by Persons desirous of obtaining Patent Rights in the Colonies, and the Expenses attendant on the Grant of such Patent Rights. Price 2*s.* 6*d.*

In course of Publication, by Order of the Commissioners of Patents.

ABRIDGMENTS (in Classes, and Chronologically arranged) of all SPECIFICATIONS of PATENTED INVENTIONS, from the earliest enrolled to those published under the Act of 1852.

These books are of 12mo size, and as each is limited to inventions of one class only, they can be sold at prices sufficiently moderate to enable the humblest inventor to examine for himself whether his discovery has been previously patented or not.

At the foot of each abstract are given references to notices of the inventions in scientific and other works, and to the reports of law proceedings for infringements, &c. &c. &c.

The classes already published are,—

1. Drain Tiles and Pipes, price 6*d.*
2. Sewing and Embroidering, price 6*d.*
3. Manure, price 6*d.*
4. Preservation of Food, price 6*d.*
5. Marine Propulsion, price 4*s.*
6. Manufacture of Iron and Steel, price 5*s.*
7. Aids to Locomotion, price 1*s.*
8. Steam Culture, price 2*s.*
9. Watches, Clocks, and other Time-keepers, price 1*s.* 6*d.*
10. Fire-arms and other Weapons, Ammunition, and Accoutrements, price 6*s.* 6*d.*
11. Paper.—Part I. Manufacture of Paper, Pasteboard, and Papier Mâché, price 3*s.*
12. Typographic, Lithographic, and Plate Printing, price 7*s.*
13. Bleaching, Dyeing, and Printing Yarns and Fabrics, price 9*s.* 6*d.*

The following are in the press:—

Paper.—Part II. Cutting, Folding, and Ornamenting; including Envelopes, Cards, Paper-hangings, &c.
Electricity and Magnetism: their Generation and Applications.
Preparation of Fuel, and Apparatus for its Combustion.
Manufacture and Applications of India Rubber, Gutta Percha, &c.; including Air, Fire, and Water Proofing.
Production and Applications of Gas.
Steam Engines.

B. Woodcroft.

The above, and all other works published by the Commissioners of Patents, are now on sale at the Great Seal Patent Office, 25, Southampton Buildings, Holborn.

This Journal is published on the evenings of Tuesday and Friday, and will be forwarded, post free, to Subscribers.—Terms, 30*s.* per annum.—Subscriptions received at the Great Seal Patent Office, where also single copies, at twopence each, may be obtained.

THE

COMMISSIONERS OF PATENTS' JOURNAL.

By Authority.

(*Registered for transmission abroad.*)

No. 575. FRIDAY, JULY 8, 1859. Price 2d.

Grants of Provisional Protection for Six Months.

NOTICE is hereby given that Provisional Protection has been allowed

1488. To GEORGE TOMKINS, of Pontymister, near Newport, in the county of Monmouth, Tin Plate Worker, for the invention of "Improvements in coating metals and in the apparatus connected therewith."

1490. To STEPHEN GIBBS, of Eddington, parish of Herne, near Canterbury, in the county of Kent, for the invention of "Improvements in apparatus for slinging horses, mules, and other animals."

1492. To JAMES MEIKLE, of 79, Rumford Street, Glasgow, for the invention of "Improvements in coating iron ships with asphalte, which improvements are also applicable to coating other surfaces."

1496. And to EBENEZER OLIVER, of King William Street, in the city of London, for the invention of "Improved medicinal mixtures for the cure of rheumatism, tic-doloreux, lumbago, cramp, sciatica, and such like complaints."

On their several petitions, recorded in the Office of the Commissioners on the 21st day of June, 1859.

1502. To WILLIAM GOULDING, of the borough of Leicester, in the county of Leicester, Plough Maker, for the invention of "Improvements in the construction of ploughs."

1504. To WILLIAM RUSSELL, of the borough of Leicester, in the county of Leicester, Ironmonger, for the invention of "Improvements in wheels for ploughs, cultivators, and other implements or carriages."

1506. And to JAMES APPERLY, Cloth Manufacturer, and WILLIAM CLISSOLD, Engineer, both of Dudbridge, in the county of Gloucester, for the invention of "Improvements in the manufacture of wheels for carriages and engines."

On their several petitions, recorded in the Office of the Commissioners on the 22nd day of June, 1859.

1508. To JOZÉ LUIS, of the British and Foreign Office for Patents, No. 1, Welbeck Street, Cavendish Square, London, in the county of Middlesex, Patent Agent, for the invention of "A machine for corking bottles." — A communication from abroad, by Jacques Peury, No. 10, Rue Mogador, Paris, in the empire of France.

1509. To CROMWELL FLEETWOOD VARLEY, of No. 4, Fortess Terrace, Kentish Town, and CORNELIUS JOHN VARLEY, No. 7, York Place, Kentish Town, St. Pancras, Middlesex, for the invention of "Improvements in proving electric conductors, and in the apparatus connected therewith."

1511. To EDWARD THOMAS HUGHES, of the firm of Hughes and Son, Patent Agents, 123, Chancery Lane, London, W. C., for the invention of "Improvements in the manufacture of artificial sandstone, bricks, tiles, and similar articles."—A communication from abroad, by Léon and Edouard Pavin de Lafarge, Merchants, residing at Viviers, département de l'Ardéche, in the empire of France.

1513. To ALEXANDER PRINCE, of the Office for Patents, 4, Trafalgar Square, Charing Cross, in the county of Middlesex, for the invention of "Improvements in alarum locks and latches."

1514. To HENEY DOULTON, of Lambeth, for th invention of "Improvements in earthenware jars and bottles."

1515. And to ALFRED VINCENT NEWTON, of the Office for Patents, 66, Chancery Lane, in the county of Middlesex, Mechanical Draughtsman, for the invention of "Improvements in springs for resisting sudden and continuous pressure."—A communication from abroad, by Charles Perratone,

Engineer, and Messrs. J. F. Cail and Co. Mechanicians, of Paris, in the empire of France.

On their several petitions, recorded in the Office of the Commissioners on the 23rd day of June, 1859.

1516. To WILLIAM LISTER, junior, Master Mariner, and THOMAS GILBERT GARRICK, Agent, both of Sunderland, in the county of Durham, for the invention of "Improvements in ships' windlasses, and other like apparatuses, applicable also to the steering of ships."

1517. To JAMES MILLS, of Heaton Norris, in the county of Lancaster, Machinist, for the invention of "Improvements in the manufacture of keys and gibs, and in the machinery employed therein."

1518. To AUGUSTE CHESNEAU, of 29, Boulevart St. Martin, Paris, in the empire of France, Merchant, for the invention of "Improvements in paddlewheels."

1519. To WILLIAM CLARK, of 53, Chancery Lane, in the county of Middlesex, Engineer and Patent Agent, for the invention of "Improvements in sewing machines."—A communication from abroad by Mr. James Snow Goodridge, of 29, Boulevart St. Martin, Paris, Merchant.

1520. To GEORGE REDRUP, of the Loughborough Brewery, Loughborough, in the county of Leicester, Brewer, for the invention of "Machinery for the cutting of shives, bungs, corks, spiles, and vent or other pegs."

1521. To RICHARD HORNSBY, junior, of Spittlegate Iron Works, Grantham, in the county of Lincoln, for the invention of "Improvements in ploughs and in giving motion to ploughs and other agricultural implements by steam power."

1522. To PROSPER FAURE and JULES PERNOD, of Avignon, in the empire of France, for the invention of "An improved process for utilising the residues of madder in the manufacture of garancine and other preparations of madder."

1523. And to JOHN DRURY, of Exley, near Halifax, in the county of York, Engineer, for the invention of "Improvements in steam engines and boilers."

On their several petitions, recorded in the Office of the Commissioners on the 24th day of June, 1859.

1524. To THOMAS HOWARD, of King and Queen Iron Works, Rotherhithe, in the county of Surrey, Engineer, for the invention of "Improvements in condensing steam in engines where superheated steam is used."

1525. To WILLIAM JAMES SLUCE, of Bethnal Green Road, in the county of Middlesex, OWEN MURRELL, of Edward Street, Bethnal Green Road, aforesaid, and WILLIAM HUDSON, of Hackney Road, in the county of Middlesex, for the invention of "An improved method of generating steam."

1526. To CHARLES WYE WILLIAMS, of Liverpool, in the county of Lancaster, for the invention of "Improvements in steam boilers."

1527. To WILLIAM EDWARD NEWTON, of the Office for Patents, 66, Chancery Lane, in the county of Middlesex, Civil Engineer, for the invention of "Apparatus for exhibiting stereoscopic pictures."—A communication from abroad by J. Stuart Perry, of Newport, in the state of New York, United States of America.

1528. To JOHN ROBERTS, of Upnor, in the county of Kent, Terra Cotta Manufacturer, for the invention of "Improvements in filters."

1529. To JOHN BODEN, of Portswood Road, Southampton, Engineer, and WILLIAM CLARK, of Northern Road, Southampton aforesaid, Boiler, Maker, for the invention of "Improvements in apparatus for superheating steam."

1530. To SAMUEL RUSSELL, of Sheffield, in the county of York, Manufacturer, for the invention of "Improvements in breech-loading fire arms, and in projectiles to be used therewith."

1531. And to WILLIAM COPPIN, of Strand Foundry, Londonderry, Marine Architect and Engineer, for the invention of "Improvements in apparatus for raising sunken and stranded vessels and their cargoes, and for raising and lowering other bodies into, and out of, the water, part of which improvements are applicable to raising weights generally."

On their several petitions, recorded in the Office of the Commissioners on the 25th day of June, 1859.

1533. To GEORGE WRIGLEY, of the firm of Messrs. Cryer, Lees and Company, of Dukinfield, in the county of Chester, Machine Makers, and THOMAS HIRAM WRIGLEY, of Mossley, in the county of York, Overlooker, for the invention of "Improvements in self-acting mules for spinning and doubling."

1534. To DANIEL JOSEPH FLEETWOOD, of Birmingham, in the county of Warwick, Copper Agent, for the invention of "An improvement or improvements in shaping metals."

1535. To BETHEL BURTON, of Brooklyn, in the state of New York, United States of America, for the invention of "Improvements in breech-loading fire-arms."

1536. To GILBERT SMITH, of Buttermilk Falls, Orange County, in the state of New York, United States of America, Engineer, for the invention of "An improved construction of primer for fire arms."

1537. And to THOMAS LEIGH, of St. Mary Cray, in the county of Kent, Millwright, and JOB LINE, of the same place, Paper Maker, for the invention of "An improvement in paper-making machinery."

On their several petitions, recorded in the Office of the Commissioners on the 27th day of June, 1859.

1540. And to ALFRED VINCENT NEWTON, of the Office for Patents, 66, Chancery Lane, in the county of Middlesex, Mechanical Draughtsman, for the invention of "Improved machinery for cutting corks."—A communication from abroad by Edward Conroy, of Boston, in the United States of America.

On his petition recorded in the Office of the Commissioners, on the 28th day of June, 1859.

Invention protected for Six Months by the Deposit of a Complete Specification.

NOTICE is hereby given, that the petition of

1561. LEVI LINCOLN TOWER, of the state of Massachusetts, of the United States of America, praying for Letters Patent for the invention of "A new and useful machine for dampening and wetting paper, etc."—a communication from John A. Lynch, a resident of Boston, of the said state of Massachusetts,—was deposited and recorded in the Office of the Commissioners on the 30th day of June, 1859, and a complete specification accompanying such petition was at the same time filed in the said office.

Patents Sealed.

LIST of LETTERS PATENT which passed the Great Seal on the

8th July, 1859.

69. JOHN THOMAS FORSTER, of Holland Road, Kensington, in the county of Middlesex, Gentleman, for an invention of "Improvements in bed berths, applicable for bunks, hammocks, cots, and other fixed and moveable sleeping places."—Dated 8th January, 1859.

72. ROBERT DAWSON CLEGG, of Manchester, in the county of Lancaster, for an invention of "Improvements in signalling apparatus."—Dated 10th January, 1859.

83. WILLIAM TILLIE, of the city of Londonderry, in the county of Londonderry, Ireland, Shirt Manufacturer, for an invention of "An improvement in the manufacture of shirts and shirt fronts."—Dated 11th January, 1859.

84. DAVID EDWARD HUGHES, of New York, but now residing at Northampton Square, in the county of Middlesex, Telegraphic Engineer, for an invention of "An improved mode of insulating electrical conducting wires."—Dated 11th January, 1859.

87. CHARLES WILLIAM SIEMENS, of John Street, Adelphi, in the county of Middlesex, for an invention of "Improvements in supports for electric telegraphic line wires, and in tools or apparatus to be used in the construction of such supports, part of which improvements are applicable to the joining of pipes and other articles."—Dated 11th January, 1859.

88. FREDERICK VERSMANN and ALPHONS OPPENHEIM, of Bury Court, St. Mary Axe, in the city of London, Analytical Chemists, for an invention of "Improvements in rendering fabrics and substances non-inflammable."—Dated 11th January, 1859.

89. NICHOLAS PROCTER BURGH, of Sheerness, Engineer, for an invention of "Improvements in steam engines."—Dated 11th January, 1859.

92. WILLIAM OLIVER, of Shadwell, in the county of Middlesex, for an invention of "Improvements in boats, and in the mode of propelling them."—Dated 12th January, 1859.

103. CHARLES BESLAY, of 52, Rue St. Sebastien, Paris, in the empire of France, Engineer, for an invention of "Improvements in coating or covering iron or steel with tin, zinc, or lead, or alloys of those metals, by electrical deposit."—Dated 12th January, 1859.

105. RICHARD ASHTON LIGHTOLLER, of Chorley, in the county of Lancaster, Cotton Spinner, for an invention of "Certain improvements in machinery or apparatus for spinning cotton or other fibrous materials."—Dated 13th January, 1859.

118. THOMAS HERBERT, of the firm of Thomas Herbert and Company, of Nottingham, and EDWARD WHITAKER, also of Nottingham, for an invention of "Improvements in the manufacture of warp lace."—Dated 13th January, 1859.

126. JOHN DAUGLISH, of Tunbridge Wells, M.D., for an invention of "Improvements in obtaining carbonic acid gas."—Dated 14th January, 1859.

181. JOSIAH LATIMER CLARK, of Haverstock Hill, and JOHN MUIRHEAD, of Gloucester Road, Regent's Park, both in the county of Middlesex, for an invention of "Improvements in electric telegraphs, and in the apparatus used in working the same."—Dated 20th January, 1859.

211. ROBERT MUSHET, of Coleford, in the county of Gloucester, Metallurgist, for an invention of "An improvement in the manufacture of cast steel."—Dated 24th January, 1859.

236. ISAAC HAMMOND, of the city of Winchester, in the county of Hants, Gun Maker, for an invention of "Improvements in breech loading fire arms, and in cartridges to be used therewith."—Dated 26th January, 1859.

265. JOSIAH LANE, of West Bromwich, in the county of Stafford, Machinist, for an invention of "New or improved machinery for the manufacture of screws, and for tapping nuts for screws."—Dated 29th January, 1859.

278. JOHN PETER BOOTH, of Cork, in the kingdom of Ireland, Feather Factor, for an invention of "Improvements in ventilating ships."—Dated 31st January, 1859.

497. GEORGE TURNBULL, of Calcutta, in the province of Bengal, in the East Indies, Civil Engineer, for an invention of "Improvements in the permanent way of railways."—Dated 23rd February, 1859.

1083. JOSEPH TOUSSAINT, of No. 1 B, Welbeck Street, Cavendish Square, London, in the county of Middlesex, for an invention of "A new process of modelling and moulding for galvano-plastic."—Dated 30th April, 1859.

1153. RICHARD PEARSALL, of Smethwick, in the county of Stafford, Glass Blower, for an invention of "Improvements in the manufacture of glass shades."—Dated 7th May, 1859.

1155. RICHARD DUGDALE KAY, of Accrington, in the county of Lancaster, Manufacturer of Patent Fabrics, for an invention of "Improvements in the preparation of certain colouring matters."—A

communication from abroad by Dollfus, Mieg, and Co., residing at Mulhouse, France.—Dated 7th May, 1859.

1203. JOHN HENRY JOHNSON, of 47, Lincoln's Inn Fields, in the county of Middlesex, and of 166, Buchanan Street, in the city of Glasgow, North Britain, Gentleman, for an invention of "Improvements in machinery or apparatus for treating india rubber and other similar gums."—A communication from abroad by Austin G. Day, of Seymour, Connecticut, United States of America. —Dated 13th May, 1859.

Patents on which the Stamp Duty of £50 has been Paid.

(*To 5th July* 1859, *inclusive*).

4th July.

1578. JOSEPH LEWTAS, of the city of Manchester, Manufacturer of Venetian and other Blinds, and JOHN HUMPHREYS the younger, of the same place, Mechanic, for an invention of "Improvements in apparatus for holding and releasing cords, chains, bands, or bars."—Dated 5th July, 1856.

1583. LORENZO BLACKSTONE, of Lawrence Lane, in the city of London, Merchant, for an invention of "Improvements in the manufacture of corks and bungs."—Dated 5th July, 1856.

5th July.

1587. ALFRED LOUIS STANISLAS CHENOT and EUGÈNE CHARLES ADRIEN CHENOT, of Clichy-la-Garenne, near Paris (empire of France), Chemists, for an invention of "A method of extracting eliminating extraneous substances from steel sponges."—Dated 7th July, 1856.

1588. ALFRED LOUIS STANISLAS CHENOT and EUGÈNE CHARLES ADRIEN CHENOT, of Clichy-la-Garenne, near Paris (empire of France), Chemists, for an invention of "Improvements in sorting ores or separating metals from each other and from certain combinations with other substances." —Dated 7th July, 1856.

1589. ALFRED LOUIS STANISLAS CHENOT and EUGÈNE CHARLES ADRIEN CHENOT, of Clichy-la-Garenne, near Paris (empire of France), Chemists, for an invention of "Improvements in machinery for compressing metallic sponges and other substances."—Dated 7th July, 1856.

1590. ALFRED LOUIS STANISLAS CHENOT and EUGÈNE CHARLES ADRIEN CHENOT, of Clichy-la-Garenne, near Paris (empire of France), Chemists, for an invention of "Improvements in apparatus for the reduction of metallic oxydes."—Dated 7th July, 1856.

1595. WILLIAM LAING, of Denny, in the county of Stirling, North Britain, Manager, for an invention of "Improvements in stretching or breadthening woven fabrics."—Dated 7th July, 1856.

Notice of Application for leave to enter a Disclaimer.

In the matter of Letters Patent, granted to WILLIAM ECCLES, of Blackburn, Power-loom Manufacturer, WILLIAM CROOK, of Livesey, Hand-loom Weaver, and WILLIAM LANCASTER, Power-loom Weaver, of Blackburn, all in the county of Lancaster, bearing date at Westminster the 18th day of September, 1845, for "Certain improvements in looms for weaving."

Notice is hereby given, that the said WILLIAM CROOK, sole surviving Patentee of the above Letters Patent, has applied to the Solicitor General for leave, certified by his fiat and signature, to enter with the clerk of the Patents for England, a Disclaimer of certain parts of the Specification of the said Letters Patent.

HUGHES and BLOODWORTH,
17, Cross Street, Manchester,
HUGHES and SON,
123, Chancery Lane, London,
Agents for the Petitioner.

Dated this 6th day of July, 1859.

FOREIGN PATENTS.

AUSTRIA.*

List of Patents which were Delivered, Prolonged, or became Void during the Month of April, 1859.†

(Communicated by the Austrian Government.)

1. Patents Delivered.

1. Joseph Werdosi, of Ofen, for "A machine on vessels worked by horses for propelling said vessels."—1 year.—(Secret.)—Dated 1st April, 1859.

2. Julius Modest Count Regis, of Turin, represented by Georg Märkl, Vienna, for "An electrical apparatus applicable to jacquard looms for weaving figured fabrics."—1 year.—(Secret.)—Dated 1st April, 1859.

3. Johann Justin Albert von Bronac and Augustin Joseph Martial Deherrypon, of Batignolles, near Paris, represented by Georg Märkl, Vienna, for "A peculiar process for treating sulphurous metals, phosphorous metals, amalgams of arsenic, alloys of antimony, &c., and especially lead ores, copper ores, and zinc ores, combined with sulphur."—1 year.—(Secret.)—Dated 1st April, 1859.

4. Stephan Zsiros and J. Mihalovits, of Pesth, for "A chromographic rotary printing machine, whereby different colours may be printed at the same time in the manufacture of playing cards and other objects, such as pictures, vignettes, labels, &c."—1 year.—(Secret.)—Dated 2nd April, 1859.

5. Berthold Curant and Ignaz Dornauet, of Vienna, for "An iron piece of furniture which may be converted into a field bed, chair, or into a table and chair at the same time."—1 year.—(Public.)—Dated 2nd April, 1859.

6. Christoph Haller, of Gratz, for "Improvements in his fire and water-proof pasteboard for covering roofs, &c. by the addition of oakum thereto."—1 year.—(Secret.)—Dated 2nd April, 1859.

7. Jacob Ludwig Lemaire, of Paris, represented by Cornelius Kasper, of Vienna, for "Improvements in atmospheric fulminating toys."—1 year.—(Secret.)—Dated 4th April, 1859.

8. Anton Wiesner and Ferdinand Biber, of Vienna, for "Improvements in American ice-cellars."—1 year.—(Secret.)—Dated 4th April, 1859.

9. Marie Mally, of Vienna, for "Obtaining an article for the toilette from Oriental plants for preserving the hair, said article being called 'Meditrina.'"—1 year.—(Secret.)—Dated 4th April, 1859.

10. Lorenz Nemelka, of Fischamend, Lower Austria, for "Improvements in machines for cleaning and rolling corn."—1 year.—(Secret.)—Dated 6th April, 1859.

11. Michael Hoffmann and Franz Neuner, of Vienna, for "Improvements in safety baskets to be used in cleaning windows, and for protecting children and flower-pots from falling down."—1 year.—(Public.)—Dated 7th April, 1859.

12. Ferdinand Neiber and Heinrich Breiter, of Vienna, for "Improvements in the manufacture of tobacco-pouches."—1 year.—(Secret.)—Dated 7th April, 1859.

13. Moriz Wilhelm Schloss, of Vienna, for "A machine for making pins with heads forged on, and which cannot be separated from the shanks."—3 years.—(Secret.)—Dated 7th April, 1859.

14. Moriz Thilen and Moriz Plank, of Vienna, for "Improvements in the former's universal autographic and copying press."—1 year.—(Public.)—Dated 9th April, 1859.

15. J. B. Herah, of Vienna, for "Manufacture of parasols in the shape of flowers."—1 year.—(Secret.)—Dated 9th April, 1859.

16. Anton Ludwig Adolph Favier, of Paris, represented by Georg Märkl, Vienna, for "A peculiar process for improving hides badly tanned."—1 year.—(Secret.)—Dated 9th April, 1859.

17. Fabius Mainardi, of Lyons, represented by Georg Märkl, Vienna, for "A magneto-electrical machine for spooling and measuring, silk with a counting and dividing apparatus."—1 year.—(Public.)—Dated 9th April, 1859.

18. Joseph Mandl, of Pest, for "Improvements in making bookbinders' work by means of a peculiar glue."—1 year.—(Secret.)—Dated 9th April, 1859.

19. Bland William Croker, of Vienna, for "Improvements in cocks for the flow and passage of fluids and gases, whereby a better direction of the same is obtained."—2 years.—(Public.)—Dated 9th April, 1859.

20. Adolph Pirker, of Bleyberg-Kreuth of Villach, Carinthia, for "Improvements in his Patent oil candlestick for mines and domestic purposes, and a safety oil flask combined therewith, and which may be used as a lamp."—1 year.—(Public.)—Dated 10th April, 1859.

21. M. A. Spitzer, of Vienna, for "A peculiar mode of manufacturing articles of cotton chenille."—1 year.—(Secret.)—Dated 10th April, 1859.

22. Alexander Weiss, of Pest, for "Waterproofing foot coverings of women and men."—1 year.—(Secret.)—Dated 11th April, 1859.

23. Johann Grantham, of Liverpool, represented by August Lenz, Vienna, for "Improvements in

* For the Austrian Patent Law, see No. 291 of this Journal.

† In the case of inventions patented in other states as well as in Austria, the Specifications (whether described as "public" or not) may in most cases be consulted, or translations of them be had, at the Library of the Commissioners' Office.

the construction of locomotive boilers and other steam boilers, whereby their power of generating steam is increased."—3 years.—(Public.)—Dated 11th April, 1859.

24. Johann Mario Ludwig Arnier, of Marseille, represented by Georg Märkl, Vienna, for "Improvements in steam engines."—1 year.—(Public.)—Dated 11th April, 1859.

25. Otto Fänger, of Vienna, for "A peculiar stamping press."—1 year.—(Public.)—Dated 11th April, 1859.

26. Friedrich Rödiger, of Vienna, for "Improvements in percussion locks with priming apparatus."—1 year.—(Secret.)—Dated 11th April, 1859.

27. Moriz Grünhuth, of Pesth, for "Improvements in the manufacture of cordwain, morocco leather, calf and cow leather, by an addition of grease."—1 year.—(Secret.)—Dated 11th April, 1859.

28. Carl Rettig and Carl Lönicker, of Pesth, for "A peculiar soldering water."—1 year.—(Secret.)—Dated 11th April, 1859.

29. Anton von Sibrik, of Csecsen, near Raab, Hungary, for "Improvements in his mowing and harvesting machine."—1 year.—(Public.)—Dated 11th April, 1859.

30. Maximilian Stein, of Fünfhaus, near Vienna, for "Improvements in the manufacture of half boots and other foot coverings."—1 year.—(Secret.)—Dated 13th April, 1859.

31. Johann Heinrich Wilhelm Daniel Wagner, of Paris, represented by Georg Märkl, Vienna, for "An apparatus for purifying, heating, and filtering the feed water of steam boilers, being also applicable to other purposes."—1 year.—(Secret.)—Dated 13th April, 1859.

32. Carl Pietzsch, of Lemberg, and Liepe Jiegermann, of Drohobycz, Galicia, for "Obtaining a colourless, crystal lighting substance, called crystalline, from rock-oil, or so-called 'naphtha.'"—2 years.—(Secret.)—Dated 13th April, 1859.

33. Hermann Someiller, of Seraing, Belgium, represented by Georg Märkl, Vienna, for "An apparatus for boring rocks in mines."—1 year.—(Public.)—Dated 13th April, 1859.

34. Friedrich Paget, of Vienna, for "Improvements in the manufacture of emery, glass, and diamond canvass and paper."—1 year.—(Secret.)—Dated 13th April, 1859.

35. Otto Schütte, of Prague, for "A peculiar process, whereby great advantages may be obtained in the manufacture of coke from pit coal and peat."—1 year.—(Secret.)—Dated 13th April, 1859.

36. Rudolph Laube, of Saaz, Bohemia, for "A folding bonnet which may be converted into a fan."—1 year.—(Secret.)—Dated 13th April, 1859.

37. Friedrich Lang, of Storé, Styria, for "A process for obtaining cast steel of a certain hardness directly from pig iron."—2 years.—(Secret.)—Dated 13th April, 1859.

38. Michael Müller, of Papa, Hungary, for "A peculiar mode of fastening buttons of men's dresses."—1 year.—(Secret.)—Dated 15th April, 1859.

39. Hermann Spiller, of Totis, Hungary, for "Improvements in the manufacture of rugs for horses, and carpets of all shades, and also the so-called 'dark Thalmo mantle cloth.'"—1 year.—(Secret.)—Dated 18th April, 1859.

40. Leopold Hoffmann, of Temeswar, for "Improvements in fixing buttons of men's dresses, and in suspending the same."—5 years.—(Secret.)—Dated 18th April, 1859.

41. Marcus Fried, of Eperies, for "Rendering those parts in ladies' dresses that are most exposed to wear and tear more durable by the use of a peculiar sewing material."—1 year.—(Secret.)—Dated 18th April, 1859.

42. Jacob Haufmann, of Pesth, for "A composition for waterproofing foot-coverings."—1 year.—(Secret.)—Dated 18th April, 1859.

43. Andreas Gran, of Vienna, for "Improvements in blacking."—1 year.—(Secret.)—Dated 18th April, 1859.

44. Ernst Heinrich Burkhardt, of Aussig-on-the-Elbe, for "A peculiar method for obtaining aluminous ultramarine."—5 years.—(Secret.)—Dated 19th April, 1859.

45. Bernhard Bucher, of Pesth, for "A machine for mixing flour and other pulverized substances."—1 year.—(Secret.)—Dated 19th April, 1859.

46. Joseph Alois Widemann, of Atzgersdorf, near Vienna, for "Improvements in the manufacture of press-yeast by using a peculiar self-acting pressing machine."—1 year.—(Secret.)—Dated 19th April, 1859.

47. Joseph Beck, of Gaudenzdorf, near Vienna, for "Obtaining a black colour for dyeing silk from waste not used thereto till now."—1 year.—(Secret.)—Dated 19th April, 1859.

48. Nikolaus Rabe, Martin Riener, of Vienna, and Vincenz Gurnigg, of Laibach, for "Protecting timber from rot by impregnating the same with a solution of shining soot, or with peat-water."—1 year.—(Public.)—Dated 19th April, 1859.

49. Peter Eduard Fraisinet, of Paris, represented by Georg Märkl, Vienna, for "Iron surfaces for paving streets, for floors, bridges, buildings, &c."—1 year.—(Public.)—Dated 20th April, 1859.

50. Eduard Elsden Goldsmid, of Paris, represented by Georg Märkl, Vienna, for "A stove heated by means of coke for cooking and other purposes."—1 year.—(Public.)—Dated 20th April, 1859.

51. Emil Rousseau, of Paris, represented by Cornelius Kasper, of Vienna, for "A peculiar process, chiefly applicable to refining sugar, for discolouring and purifying juice or the immediate products of plants."—1 year.—(Secret.)—Dated 20th April, 1859.

52. Elias Kohn, of Gran, for "Rendering single parts of men's dresses most exposed to wear and tear more durable by the use of a peculiar sewing material."—1 year.—(Secret.)—Dated 20th April, 1859.

53. Mathias Deutsch, of Altofen, for "Obtaining a better fit in fur dresses and caps by means of an elastic string."—1 year.—(Secret.)—Dated 20th April, 1859.

54. Andreas Link, of Vienna, for "Improvements in his so-called 'Nut pomatum.'"—5 years.—(Secret.)—Dated 20th April, 1859.

55. Maria Rossig, Gabrieli, and Leopoldin von Ullrichsthal, of Vienna, for "Improved locomotives for travelling on gradients."—1 year.—(Secret.)—Dated 21st April, 1859.

56. Wilhelm Dittmann, of Pesth, for "A peculiar distilling apparatus for alcoholic liquids."—2 years.—(Secret.)—Dated 22nd April, 1859.

57. Friedrich Kirst, of Prague, for "An expansion slide apparatus, applicable to all steam engines, whereby a considerable saving of coal is obtained, and whereby the machines work more steadily and easier."—2 years.—(Secret.)—Dated 22nd April, 1859.

58. Moriz Ujhelyi, of Pesth, for "Improvements in the manufacture of candles at all seasons."—1 year.—(Secret.)—Dated 22nd April, 1859.

59. Franz Kouff, of Vienna, for "A steam apparatus for distilling resin, whereby a purer product and a greater amount of resin and turpentine oil is obtained, and whereby all danger from fire is removed."—1 year.—(Secret.)—Dated 22nd April, 1859.

60. J. K. Defeher, of Vienna, for "A bodice for children."—1 year.—(Public.)—Dated 22nd April, 1859.

61. Joseph Pohlmann, of Vienna, for "A peculiar aromatic tooth paste."—5 years.—(Secret.)—Dated 22nd April, 1859.

62. Joseph Markowsky, of Vienna, for "A liquid for the hair, called 'poll water.'"—1 year.—(Secret.)—Dated 23rd April, 1859.

63. Franz and Johann Niessner, of Vienna, for "Obtaining an oil-varnish from fats not used hitherto, which is equal to linseed oil varnish, and being exempt from lead is especially applicable to paints of white of zinc."—1 year.—(Secret.)—Dated 23rd April, 1859.

64. Ernst Guignet, of Paris, represented by A. Martin, Vienna, for "Improvements in the manufacture of hydrate of chromic oxide."—1 year.—(Secret.)—Dated 23rd April, 1859.

65. Nich. Ronsperger, of Vienna, for "Wicks consisting of two parts which divide themselves whilst burning and require no snuffing."—6 years.—(Secret.)—Dated 26th April, 1859.

66. Adolph Goldberg, of Komorn, for "Improvements in the manufacture of pockets of men's dresses."—1 year.—(Secret.)—Dated 26th April, 1859.

67. Otto Lahmann, of Vienna, for "Ascending rivers on boats propelled by horses or oxen on board."—1 year.—(Public.)—Dated 26th April, 1859.

68. Friedrich Wilhelm Schack, of Steyr, Upper Austria, for "Suspending bell clappers by means of hinges instead of leather straps."—1 year.—(Secret.)—Dated 26th April, 1859.

69. Alois Bing, of Pesth, for "An improved method of fastening buttons on all kinds of men's dresses."—1 year.—(Secret.)—Dated 28th April, 1859.

70. Samuel F. Goldberger and Sons, of Pest, for "Improvements in moire mangles for cotton linen and mixed fabrics by applying an iron table thereto."—2 years.—(Secret.)—Dated 28th April, 1859.

71. Franz Herold, Joseph Pankl, and Ferdinand Scheithauer, of Penzing, near Vienna, for "Improvements in a machine for printing cloth as patented by the former two on the 14th August, 1858."—1 year.—(Secret.)—Dated 28th April, 1859.

72. Friedrich Wiese, of Vienna, for "Improvements in fireproof iron chests."—1 year.—(Public.)—Dated 28th April, 1859.

73. Friedrich Wiese, of Vienna, for "A peculiar apparatus for preventing the illicit opening of Bramah locks."—1 year.—(Public.)—Dated 29th April, 1859.

74. Carl Mezzanotte, of Milan, for "A peculiar mechanism, whereby telegraphic messages are conveyed by a single metal wire, and appear in printed letters at the next station."—1 year.—(Secret.)—Dated 29th April, 1859.

---

2. Patents Prolonged.

1. Luigi Cardone (Carlo Armelino Butti, assignee), for "A process for purifying oil of cotton seed."—2nd year.—(Secret.)—Dated 29th March, 1858.

2. Andreas Eduard Gill, for "An apparatus for drying and preserving corn in magazines, granaries, &c."—4th year.—(Secret.)—Dated 8th March, 1856.

3. Anton Alphons Chassepot, for "A means of fastening fire-arms and mechanism for breech-loading."—2nd year.—(Secret.)—Dated 23rd March, 1858.

4. Eduard Schmidt and Friedrich Paget, for "Manufacture of oil-coatings."—3rd year.—(Secret.)—Dated 27th March, 1857.

5. Joseph Watremetz, for "An apparatus in steam boilers for preventing their explosion by means of an audible signal."—8th and 9th year.—(Secret.)—Dated 29th April, 1852.

6. Johann Maria Farina, for "Improvements in the manufacture of Eau de Cologne."—6th year.—(Secret.)—Dated 5th April, 1854.

7. James Edward Mac Conell, for "Improvements in hollow axles of locomotives, tenders, and railway carriages."—4th year.—(Secret.)—Dated 27th March, 1856.

8. Adolph Pleischl and Son, for "Improvements in coating iron, sheet iron, and objects made thereof, with a metal enamel."—4th–7th years.—(Secret.)—Dated 8th April, 1856.

9. Carl Ludwig Kriegel and Carl Johann Hoschek, for "An improved process for making waterproof roofings of railway carriages and other objects."—3rd year.—(Secret.)—Dated 24th March, 1857.

10. Adolph Siegel, for "Lighting gas, called 'clarine.'"—3rd year.—(Secret.)—Dated 27th March, 1857.

11. Carl Lichtl, for "A furnace for carbonizing bones."—3rd year.—(Secret.)—Dated 30th March, 1857.

12. Wilhelm Skallitzky, for "A peculiar boot-jack."—2nd year.—(Public.)—Dated 30th March, 1858.

13. Albert Eckstein, for "Varnish of all colours."—2nd year.—(Secret.)—Dated 3rd April, 1858.

14. Friedrich Hoffmann, for "An annular continuous furnace for baking bricks and articles of clay, lime, plaster, &c."—2nd year.—(Public.)—Dated 17th April, 1858.

15. Johann Cimeg, for "Foliating glass with silver instead of a tin amalgam."—2nd year.—(Secret.)—Dated 28th April, 1858.

16. Heinrich Seufert, for "Improvements in spindle battens of ribbon-looms."—4th year.—(Public.)—Dated 29th April, 1856.

17. Gerhard Uhlhorn, for "An apparatus with a divided axle for counteracting the effect of an unequal speed in two motors."—4th–6th years.—(Secret.)—Dated 17th September, 1856.

18. Carl Müller, for "Improvements in the construction of spectacles without frames."—3rd year.—(Public.)—Dated 29th April, 1857.

19. Joseph Grünwald, for "Improvements in making all kinds of fur articles for men and women."—2nd and 3rd year.—(Secret.)—Dated 18th June, 1858.

20. Heinrich Honegger, for "Substituting tongs for templets in power looms."—2nd year.—(Public.)—Dated 18th January, 1858.

21. Ludwig Mertens, for "Improvements in the manufacture of felt articles."—10th year.—(Secret.) Dated 10th April, 1850.

22. Alois Muller, for "Obtaining hinges or pipes without joints or soldering."—12th year.—(Secret.)—Dated 16th April, 1848.

23. Anton Schindler, for "Improvements in galvanized matches."—3rd year.—(Secret.)—Dated 29th November, 1856.

24. Heinrich Breton, for "A means of purifying alcohol, and removing the fusel thereof."—3rd year.—(Public.)—Dated 29th May, 1857.

25. Alexander Legé and Fleury Benoit Pironnet, for "A process for dyeing, drying, and hardening timber."—2nd year.—(Public.)—Dated 16th May, 1858.

26. Mathias Schwell, for "Manufacture of mineral matches."—3rd year.—(Secret.)—Dated 13th April, 1857.

27. Christian Haumann, for "Cement."—2nd year.—(Secret.)—Dated 15th April, 1858.

28. Samuel Jakobovits, for "Improvements in suspending men's dresses."—2nd year.—(Secret.)—Dated 20th April, 1858.

29. Theodor Bosch, for "A peculiar travelling trunk."—2nd year.—(Secret.)—Dated 29th May, 1858.

30. Joseph Muck von Muckenthal, for "Applying wool to the manufacture of felt for hats and other articles."—9th year.—(Secret.)—Dated 30th March, 1851.

31. François Charles Lepage (Latry, sen., and Co., at Paris, assignees), for "A solid durable substance, called 'indurated wood.'"—4th year.—(Secret.)—Dated 11th June, 1856.

32. Samuel Handl, for "Improvements in the manufacture of washing soap."—2nd and 3rd year.—(Secret.)—Dated 15th April, 1858.

33. Seraphine Agnese and Cajetan Ambrosioni, for "Boxes fitting into one another with moveable bottoms for loading and unloading various articles."—2nd and 3rd year.—(Secret.)——Dated 23rd June, 1858.

34. Joseph Neumayer, for "A washing apparatus."—8th year.—(Public.)—Dated 22nd March, 1852.

---

3. Patents which have become Void.

1. Edward Clarence Shepard, for "An electro-magnetic machine with fixed spools of induction and rotary magnets."—Dated 29th July, 1854; cancelled 5th April, 1859, because of not being worked.

2. Edward Clarence Shepard, for "Improvements in magneto-electric rotary apparatus with rotary spools of induction."—Dated 29th July, 1854; cancelled 5th April, 1859, because of not being worked.

3. Franz Paweck, for "Waterproofing cloth and cotton and woollen fabrics for dresses."—Dated 16th November, 1857; expired 16th November, 1858.

4. J. F. H. Hemberger, for "Improvements in the treatment of madder, and other plants of the madder tribe, and of their products, for obtaining alizarine for dyeing."—Dated 2nd October, 1853; expired 2nd October, 1858.

5. Fulleran Peyre and Mich. Dolques, for "A machine for finishing cloth and other felt woollen stuffs."—Dated 6th October, 1853; expired 6th October, 1858.

6. Andreas Regensburger, for "A new process and apparatus for distilling all kinds of fat, without almost any waste."—Dated 14th October, 1853; expired 14th October, 1858.

7. Franz Schatten, for "Improvements in furnaces with vertical cylinders for treating spodium."—Dated 21st October, 1853; expired 21st October, 1858.

8. Isak Christian and Fred. Engelställer, for "A machine for napping cloth."—Dated 24th October, 1853; expired 24th October, 1858.

---

* The Specifications of these Patents may be consulted in the original language, or translations be had at the Public Free Library.

9. Baron Fabian von Wrede, for "A gas machine for utilizing the expansion of permanent gases by heat for obtaining mechanical action."—Dated 27th October, 1853; expired 27th October, 1858.

10. Anton Narcisse Michelet and Victor Alfred Raye, for "Improvements in a new system of engraving."—Dated 29th October, 1853; expired 29th October, 1858.

11. Ferdinand Martin, for "A safety anchor."—Dated 29th October, 1853; expired 29th October, 1858.

12. C. L. Andreazzi, for "Improvements in the manufacture of sealing-wax."—Dated 30th October, 1854; expiring 30th October, 1858.

13. Carl Wenzel Dovry and Anton Schmid, for "A manure-powder, which prevents also the potato and wine disease."—Dated 21st October, 1855; expired 21st October, 1858.

14. Ferdinand Heinrich Krauskopf, for "Improvements in shoes of gum elastic or caoutchouc."—Dated 7th October, 1856; expired 7th October, 1858.

15. Lucius Hall Gibbs, for "Improvements in fire-arms."—Dated 9th October, 1856; expired 9th October, 1858.

16. Friedrich Georg Wieck, for "A peculiar machine for making sand moulds for castings, and especially pipes."—Dated 13th October, 1856; expired 13th October, 1858.

17. Dr. Carl Eckel, for "Improvements in the construction of harvesting machines, whereby they are rendered portable."—Dated 13th October, 1856; expiring 13th October, 1858.

18. Antonia Roth von Jelegd, for "Manufacture of portable hatching machines, heated by means of gas or spirits of wine."—Dated 17th October, 1856; expired 17th October, 1858.

19. Franz Seraphin Chrismar, for "Metal fly wheels of one piece."—Dated 25th October, 1856; expired 25th October, 1858.

20. Friedrich Wilhelm Bock, for "Improvements in the manufacture of garancine."—Dated 25th October, 1856; expired 25th October, 1858.

21. Ignaz Taussig, for "A new improved composition for matches, free from spirting and protected from damp."—Dated 20th October, 1856; expired 28th October, 1858.

22. Edouard Zulger, for "Improvements in sewing machines."—Dated 29th October, 1856; expired 29th October, 1858.

23. Carl Emanuel Brosch, for "A rotary oven for baking bread.—Dated 31st October, 1856; expired 31st October, 1858.

24. Innocenz Manzetti, for "A portable rotary press for making vermicelli."—Dated 2nd October, 1857; expired 2nd October, 1858.

25. Moriz Neufeld, for "Improvements in his apparatus and process for printing copper-plate and lithographies."—Dated 4th October, 1857; expired 4th October, 1858.

26. Joseph Riedel, for "Improvements in sewing machines."—Dated 3rd October, 1857; expired 3rd October, 1858.

27. Sigmund Salzmann and Sigmund Landesmann, for "Distilling lamp-oil, lubricating oil, paraffine, creosote, sal-ammoniac, benzine, picri-acid, oil of bitter almonds, and pitch, from peat tar."—Dated 21st October, 1857; expired 21st October, 1858.

28. Harry Whitaker, for "An apparatus in vessels with lateral screw propellors for bringing the action of the machine direct on the external cranks of the propelling axles."—Dated 19th February, 1856; expired 19th February, 1859.

29. Anton Prokesch, for "Improvements in double signal lanterns, whereby two parabolic reflectors act in two directions by means of one single lamp, &c.'—Dated 9th February, 1854; expired 9th February, 1859.

30. Friedrich von Exter, for "Improvements in xylography."—Dated 4th May, 1856; disclaimed 28th February, 1859.

31. Wilhelm Adolph Zempliner, for "A self-acting break for carriages."—Dated 27th December, 1857; expired 27th December, 1858.

32. Peter Breithut, for "Mosaic work of gold, silver, and jewels."—Dated 2nd January, 1858; expired 2nd January, 1859.

33. Joseph Borkowsky, for "A machine for planing matches."—Dated 15th April, 1858; expired 15th April, 1859.

34. Dietrich Rauch, for "A signal whistle worked by a caoutchouc ball applied at one end of a metal pipe."—Dated 17th April, 1858; disclaimed 1st April, 1859.

35. Moriz Fischer, for "Improvements in making ladies' dresses, whereby they are protected from being unstitched, torn, &c., and are made to preserve their shape."—Dated 27th March, 1857; annulled 24th April, 1859, for want of novelty in certain parts.

36. Leopold Friedrich and Leonhard C. Cohn, for "A peculiar mode of obtaining artificial sets of teeth without spiral springs."—Dated 25th January, 1858; annulled 28th April, 1859, for want of novelty.

37. Franz Xaver Kukla, for "Applying dead animals to industrial purposes."—Dated 10th November, 1846; expired 10th November, 1858.

38. Louis von Orth and Leop. Stephan, for "Improvements in the manufacture of gutta percha and in the construction of machines and apparatus belonging thereto."—Dated 18th November, 1847; expired 8th November, 1858.

39. Franz Hartwägner (Eduard Krause, assignee), for "Manufacture of oil obtained by means of presses."—Dated 5th November, 1852; expired 5th November, 1858.

40. Johann and Anton Schmidmayer, for "Improvements in machines for combing wool."—Dated 8th November, 1852; expired 8th November, 1858.

UNITED STATES OF AMERICA.

(Communicated by the Commissioner of Patents.)

LIST of PATENTS, with Claims annexed, issued from the United States Patent Office, for the week ending 21st June, 1859, and each bearing that date.

No. 24,438. JOHN K. BARNEY, of Warren, R. I. for an "Improved instrument for gauging casks."

"What I claim is, the calliper rod, Fig. VIII, the slides IX, and X, the triangular calliper, bracket and pins as described, and their combinations in the instrument by which the true diameter at the bung of any cask can be obtained, however thick the sediments therein may be. I do not confine myself to the particular manner of fastening the parts in the instrument, but to the principles of the construction of the instrument."

No. 24,439. RICHD. C. BRISTOL, of Chicago, Ill., for an "Improvement in slide valves for steam engines."

"What I claim is, the construction and arrangement of the partial rollers E, when sustained in their respective positions, substantially in the manner and for the purposes herein set forth. I claim, second, the within-described arrangement of the supported back piece B, loose face piece A, cut off means D, and the united passages *a*, *b*, *a*, *b*, in the respective parts A, B, whereby the parts A, B, are allowed to work to a limited extent, relatively to each other, without affecting the action of the steam, nor allowing an escape of the same through the joint. I likewise claim in connection with the above arrangement of the several parts the within-described method of adjusting the parts A. B, relatively to each other, that is to say, working the parts A, B, for a period in a free relation, and then tightening the union by the set screws C, C, or their equivalents, until it becomes rigid, substantially as herein shown and described."

No. 24,440. JOHN BURGE, of Terre Haute, Ind., for an "Improvement in sugar mills."

"What I claim as my invention, is, the combination and arrangement of one large and two or more small cylinders with the stripper, for stripping the leaves of the cane, and the scraper or separator for cleaning the cylinder, and carrying off pressed cane, the whole constructed and operating as and for the purpose substantially as described."

No. 24,441. WM. BURTON, of Cazenovia, N.Y., for an "Improved double seaming machine."

"What I claim is, 1st, the use of a working head, in combination with a disc or 'former' when arranged to produce an outward or eccentric draft, and at the same time accomplish the turning down of the double seam, substantially as and for the purpose herein set forth. 2nd, the working head *a*, *b*, *c*, *d*, in combination with the shaft which is adjustable up and down, and supports a taper, or straight sided 'former' or disc, and with the working head frame, adjustable longitudinally, substantially as and for the purposes set forth."

No. 24,442. O. S. CAMP, of Fairfield, Iowa, for an "Improved boiler."

"What I claim is, a boiler made of double walls, and a single top and bottom, said top having flanges to fit against each wall, and the communication between the interior of the inner boiler and the space between the walls being made by closed passages, such as described."

No. 24,443. MARION CARPENTER, of Cincinnati, O., for an "Improvement in railway chairs.

"What I claim is, the combination of the lugs *h*, *h*, *k*, *k*, with the base piece J, for sustaining the elastic cushion and its follower, in the manner and for the purpose set forth."

No. 24,444. JAMES W. CHAPMAN, of Trinity Springs, Ind., for an "Improvement in sugar mills."

"What I claim is, the combination and arrangement of the forked lever or crushing wheels B, B, bearings and table or bed timber, the table being prepared with notches, to receive the projections on the seat of the bearings and key wedge, substantially as set forth."

No. 24,445. C. G. CONOVER, of Jefferson, Wis., for an "Improved shingle machine."

"I claim, 1st, the employment or use of the fence F, in combination with a reciprocating splitting knife O, and reciprocating or shoving plate N, arranged to operate substantially as and for the purpose set forth. 2nd, the reciprocating splitting knife O, shoving plate N, tapering knives E, E, jointers *o*, and clamp K, combined and arranged to operate substantially as and for the purpose specified. 3rd, operating the bolt carriage G, by means of the revolving arm I, on the shaft B, and the obliquely toothed rack *a*+, at the under side of the carriage G, substantially as described."

No. 24,446. REUBEN DANIELS, of Woodstock, Vt., for an "Improvement in straw cutters."

"I claim, 1st, the combination with the roller D of the convex (*d*), having the major diameter of their bases arranged parallel with the axis of the roller D, as and for the purpose herein shown and described. 2nd, the arrangement and combination of the roller D, cutter C, and cylinders E, E^1, substantially as and for the purpose herein shown and described."

No. 24,447. NATHANIEL EAMES, of Hanover, Pa., for an "Improvement in machines for hulling clover."

"I claim the combination of the screen D with the cylinder B, when said cylinder is provided with a spiral groove *i*, *i*, and a spiral strip of rubber H, the same being constructed, arranged, and operating substantially in the manner and for the purpose herein specified."

No. 24,448. HENRY EHRENFELD, of New York, N. Y., for an "Improved device for converting reciprocating into alternate circular motion."

"I claim, 1st, arranging the lever C and dog B in combination with the grooved wheel A, or its equivalent, in such a manner that the dog acts on the wheel entirely independent from the centre or hub of the wheel, and that the lever can be brought in such a position as to impart motion to the wheel in either direction, substantially as and for the purpose specified. Second, in combination with the lever C, dog B, and wheel A, I claim the arrangement of the groove *d*, or its equivalent, in the hub of the wheel, for the purpose of keeping the dog in the proper position, and to prevent the lever from tipping over sidewise, substantially as herein specified."

No. 24,449. A. H. EMERY, of Mexico, N. Y., for an "Improvement in cheese presses."

"What I claim is, the method of moving the follower (*f*) upwards by means of the weight (*h*), the cords (*i*, *i*), and the pulleys (*j*, *j*), the whole arranged and operated as and for the purposes herein described and set forth. I also claim the arrangement of the arm (*u*), the ratchet (*w*), the pinion (*t*), the crank arm (*v*), together with the wheel (*p*), with the cogs either on the inside or outside, the whole being arranged and operated as and for the purposes herein described and set forth."

No. 24,450. A. H. EMERY, of Mexico, N. Y., for an "Improvement in sash fastener."

"What I claim is, the construction of a window sash spring and fastener of drawn pipe, with the end (*g*) and the end (*h*) arranged and fastened therein, as herein described. I also claim the construction of the knob rod or bolt (*c*), as and for the purpose herein described and set forth."

No. 24,451. THOS. EVANS, of Watkins, N. Y., for an "Improved attachment of handles to tin pails."

"What I claim is, forming metallic ears for pails, buckets, and other vessels, with concentric angular corrugations sur-

rounding the bail orifice, in combination with the flattened hook at the end of the bail, provided with an additional bearing against the surface of one or more of said corrugations, and the drip-opening or downward continuation of the outer corrugations, substantially in the manner and for the purposes herein shown and described."

No. 24,452. P. H. Freylinghousen and J. G. Heilman, of Johnstown, Pa., for an "Improvement in corn planters."

"We claim the perforated wheels G when hung to the sliding bars I and situated in respect to the hopper *a* and wheels H, and otherwise arranged, as herein set forth, so that on moving the said bars I inwards the wheels G may be drawn out of gear, and the orifices of the hopper at the same time closed by the wheels."

No. 24,453. John H. Gage, of Nashua, N. H., for an "Improved roll for forming tire.

"I claim the combination of the flange B, recess or depression O, wide shoulder or tread L, flange C, and short shoulder D, with a series of thin metallic discs F, said parts being constructed, arranged, and operating relatively to each other, substantially in the manner and for the purpose set forth."

No. 24,454. Henry P. Gengembre, of Allegheny, Pa., for an "Improvement in retorts for distilling coal oils."

"I claim, first, the use of an L-shaped retort, combined with charging boxes, crusher, and discharging tube, as described, capable of being subjected to a degree of temperature at the end of the horizontal part at which the residuum of the substance under treatment is discharged higher than at the upright part at which the coal is charged, the whole so arranged as to avoid the admission of atmospheric air. Second, the combination with my retort, constructed substantially as herein-before described, of a crusher suited to the material to be distilled placed within the retort at a point intermediate between the points where the heat is highest and lowest, for the purpose of breaking up the coal or other substance before the process of distillation is complete."

No. 24,455. H. H. Goodwyn, of New Orleans, La., for an "Improvement in sewing machines."

"I claim, 1st, the combination of the loosely fitted double conical sleeve D with the soft lever or elastic backed and bound bearing eye *c*, and a spring pressure, whereby the spool is brought to a proper centre, and the requisite tension produced, the cone sleeve revolving simultaneously with the spool and pivoted arm, and the friction or tension being obtained by the action of the outer end of the double cone against the elastic eye, in the manner and for the purpose herein described. 2nd, the arrangement with the above of the peculiar spring pressure herein described, consisting of the pivoted or rocking standard B, rod *f*, spring *i*, and rosette or nut *h*, for operation together and with the spool, in the manner herein described. 3rd, the attachment to the stationary shell or outer case G of the tension arm *p*, substantially in the manner and for the purposes herein described. 4th, hanging the bobbin F on, and so as to rotate together, with a cylinder *l*, when the same is combined with a spring *m*, inducing friction in the run of the bobbin, and operating in connection with a tension arm or elbow *p*, acting on thread from the bobbin, as described."

No. 24,456. Saml. F. Gold, of Cornwall, Conn., for an "Improved apparatus for heating buildings."

"I claim constructing the generation of a series of similar cast metal sections, each complete in itself, and united, substantially as described, so that the capacity of the generator will be governed by the number of sections used, and may be increased or diminished by adding or removing any desired number of the internal sections. I also claim constructing these sections, so that when united there will exist the chambers E, rising above the water line, and out of the draft of the furnace, substantially as and for the purposes set forth. I further claim, in combination with the generator, the supplementary steam chambers made up of flat cast metal sections, substantially as specified."

No. 24,457. Jacob Gove, of Milford, N. H., for an "Improvement in tanning."

"I claim stirring the liquor or tanning fluid in the vat, by means of a stirrer, constructed, arranged, and operated substantially in the manner set forth."

No. 24,458. John Greenwood, of Rochester, N.Y., for an "Improved machine for chamfering barrel heads."

"I claim the arrangement of the sliding frame B, clamps C, D, cam F, lever G, and gearing E, *h*, substantially as shown in connection with the circular dish-shaped saw Q, and cutters R, R, the whole being arranged for joint operation as and for the purpose specified."

No. 24,459. Thos. Hall, of Boston, Mass., for an "Improved electro-magnetic machine."

"I claim the combination of the spring connecting bar H and the switch O, placed between the machine and the battery, and operating with reference to each other, substantially as herein described."

No. 24,460. Joel T. Ham, of Covington, Ky., for an "Improvement in connecting the iron girders of bridges."

"I claim, 1st, combining the posts and braces with the chords by means of the metal saddles E, E^1, and the metal stirrups or straps F, F^1, applied substantially as described, whereby the expansion and contraction of the chords, posts, and braces, by changes of temperature, is provided for. 2nd, the india-rubber blocks or springs L, L, applied between metal blocks M, N, in combination with the saddles and stirrups, substantially as and for the purpose set forth."

No. 24,461. A. Hotchkiss, of Sharon, Conn., and Jno. P. Adriance, of New York, N. Y., for an "Improvement in guard fingers for harvesters."

"We claim, 1st, the angular cavity D, for the free admission of the front end of the face plate C, to permit its shoulders at the rear end to be inserted, whereby the ends of said plate are firmly secured, substantially in the manner and for the purpose specified. Second, confining the back end C^{11} of the steel face plate C, by bending down the metal of the finger at *a*, *a*, upon the reversely beveled edges of C^{11}, in the manner and for the purposes above described."

No. 24,462. Daniel H. Hull, of Plantsville, Conn., for an "Improved track fastener."

"I claim the combination and arrangement of metal plate A, spring latch C, spring D, and knob F, substantially in the manner and for the purposes herein set forth."

No. 24,463. W. S. Huntington, of Andrasville, N. Y., for an "Improvement in snow plow for railroads."

"I claim the employment or use of the plates or scrapers E, E, attached to arms D, of the shafts C, which shafts have springs G attached, and are connected to an adjusting lever I, by means of the arms F and rods H, the whole being applied to a car, and arranged to operate as and for the purpose set forth."

No. 24,464. E. A. Jeffery, of Corning, N.Y., for an "Improvement in tools for fastening bale hoops."

"I claim, 1st, the employment or use of the combined pliers, and die B, constructed and arranged substantially as and for the purpose set forth. 2nd, the combination of the pliers and hammer A, with the pliers and die B, arranged for joint operation, substantially as described."

No. 24,465. Wm. Johnson, 2d, of Hampstead, N. H., for an "Improved chamfering tool."

"What I claim as my present invention or improvement is my improved mode of supporting the knife F, and adjusting it with reference to the sole rest and the edge bearer, viz., by means of a carrier A, and adjusting screws *h*, *h*, *i*, applied and arranged with respect to the sole rest C, the edge bearer B, and the presser B, substantially as described."

No. 24,466. K. H. Kinne, of Mexico., N.Y., for an "Improved apparatus for cutting teeth in saws."

"I claim the movable curved switch *p*, in conjunction with the curved groove F, for the purpose of adapting the machine to the cutting of teeth on, setting or sharpening the teeth of straight, as well as circular saws, substantially as herein described. I also claim operating and feeding the burr, by means of the shaft Q, turning within the hollow screw shaft D, when applied to a saw sharpener, substantially in the manner and for the purpose herein described. I also claim the bed piece or anvil *c*, for the purpose of supporting the saw tooth while being sharpened, substantially as herein described. I also claim, in combination with the burr E, and the anvil C, the clamps *f*, *f*, for gauging and firmly holding the saw whilst being acted upon, substantially as described."

No. 24,467. David Knowlton, of Camden, Me., for an "Improved ship's capstan."

"What I claim is, fixing the shafts of the stud gears on a revolving plate, arranged to turn with the barrel and head when they are locked together, and to be stationary when they are unlocked, in combination with two stud gears, by which the head and barrel are turned in the same direction when used as a geared or simple capstan."

No. 24,468. Andrew Lanergan, of Boston, Mass., for an "Improvement in exhibition rocket."

"I claim the improvement of making the rocket with a match *b*, arranged and fixed in the choke, and protected or covered by a plane or thin disc *c*, having no opening into the choke, nor any cavity or recess to hold the match or catch sparks, as described. And I particularly claim attaching the match, as described, to the inner surface or side of the choke, or arranging the attachment *d* therein, and with respect to the lower end of the match, substantially as described, the same not only enabling the match to be confined to the choke of the rocket, but to have a portion of it, after breakage of the cap, capable of being bent downward out of the choke into a convenient position for being fired."

No. 24,469. Albertus Larrowe, of Cohocton, N.Y., for an "Improvement in sled brake."

"I claim, first, constructing the brake eyes R, R, in the peculiar form shown and described, and for the purposes set forth. Second, the combination of the brake eyes R, R, with the brake Q, substantially as described."

No. 24,470. Lucius Leavenworth, of Trumansburg, N.Y., for a "Whip and line holder for guiding horses without the use of the hands."

"I claim the arrangement of the rein hooks or knobs *a*, *a*, which are united by one or more cross bars or braces, and which are provided with a whip-socket, or without the same, in such a manner that a frame is formed, which, by the aid of suitable shoulder straps, or their equivalents, may be secured to the body of a person, substantially as and for the purpose described."

No. 24,471. Harvey Locke, of South Boston, Mass., for an "Improved cork machine."

"I claim, 1st, the employment or use of a reciprocating knife stock E, when provided with necessary knives, and arranged in combination with a rotating mandrel N, traversing clamp H, and feed spout or trough S, so that as the knife stock moves back and forth, pieces of cork *a** will be cut from the bar or slab T, and said pieces turned in suitable conical form, substantially as described. 2nd, I claim, in connection with the reciprocating knife stock E, attaching the mandrel N and head *u* to an adjustable bar O, fitted in the framing A, and arranged substantially as described, so as to admit of the adjusting of the pieces of cork *a** more or less obliquely with the knife *c*, and vary the taper of the corks, as may be desired. 3rd, I claim, placing the clamp H in a reciprocating plate G, operated by the lever Q from the wheel C, and the lever R from the reciprocating knife stock E, substantially as shown and described, for the purpose of giving the traversing movement to said clamp, to convey the pieces of cork *a** from the jaws n^1, *o*, to the mandrel N."

No. 24,472. James K. Lum, of Shookumchuck, Wash. Ter., for an "Improvement in windmills."

"What I do claim is, the employment or use of the fly or frame I, placed on the arbor J, and I having the ends of the cord I passing through it, and attached to said arbor, said cords being also attached to the rope W of the weight P, the fly being operated by the wind wheel, in such a manner as to admit of a simultaneous rotation of the arbor J."

No. 24,473. J. C. Lyon, of Auburn, N.Y., and Henry F. Phillips, of Seneca Falls, N.Y., for an "Improvement in grinding mills."

"What we claim is, 1, the arrangement and combination of the clasp (*i*), pin (*j*), screw (*k*), hand wheel J, and shaft C, whereby the said shaft and grinding cone D may be readily adjusted and firmly secured, whether the machine is in operation or at rest, as herein set forth. 2. The arrangement and combination of the double-flanged pulley (*o*), shaft C, fork (*n*), rod (*m*), and shell L, as herein shown and described, so that by the adjustment of the shaft C the shell L will also be adjusted."

No. 24,474. Perry Marcy, of Tunkhannock, Pa., for an "Improvement in potato diggers."

"I claim the arrangement of the inclined smooth belt N, tightening pulley *u*, shield *o*, ratchet wheel J, levers *a*, *a*, and bars I, I, provided with teeth *i*, *i*, *i*, the whole being constructed and operating substantially in the manner herein set forth."

No. 24,475. James Massey, of Thomasville, Geo., for an "Improvement in the construction of driving shafts for mills, cotton gins, &c."

"I claim suspending the driving shaft C, in the manner described, to allow it to rise or fall with the floor to which it is attached, operating substantially in the manner set forth, and for the purposes described."

No. 24,476. Thos. J. Mayall, of Roxbury, Mass., for an "Improved drainage pipe."

"I claim combining with a stationary washing bowl, sink, washing tub, or other similar articles, the elastic drainage pipe, terminating in a wedge shape, for the purposes and in the manner described."

No. 24,477. H. D. McGeorge, and D. C. Greer, of Morgantown, Va., for an "Improvement in corn and cane harvesters."

"We claim providing a corn or cane harvester, with a vertical reciprocating cutting apparatus, for the purpose of cutting the stalks into two or more pieces, substantially in the manner herein described."

No. 24,478. Andrews T. Merriman, of Chicago, Ill., for an "Improvement in machines for sawing stone."

"I claim the lowering the saw frame, by means of the long screws *s*, *s*, acting on the sliding bars *f*, *f*, and the stiff connecting rods *r*, *r*, hung with hinge joints at the saw frame, and the sliding bars *f*, *f* (instead of chains or ropes), for the purpose of holding the saw frame steady, and prevent any jumping motion, all in the manner described."

No. 24,479. Purches Miles, of New Britain, Conn., for an "Improved window curtain fixture."

"I claim, 1st, the compound hanging bracket, capable of being raised up, to permit the opening and closing of blinds, or for other purposes, as described. 2nd, constructing and combining the parts, as described, so that the bracket can be attached to the top side or back of the window frame, and at either side of the window. 3rd, holding the band against a pulley having a friction surface, by an arm or arms, as set forth."

No. 24,480. Richd. Montgomery, of New York, N.Y., for an "Improvement in corrugating metallic sheets."

"I claim the waved corrugated wrought metal plate for boilers, as herein described, in combination with flat margins of greater thickness than its middle, substantially as described."

No. 24,481. John B. Newbrough, of St. Louis, Md., for an "Improved instrument for adding numbers."

"I claim, 1st, the bent arm K, underlying the dial G, so as to operate it without obstructing the vision. 2nd, the stud Q, operating in the described connection with the pawl *j*, to permit the backward motion of the dial, for the purpose set forth. 3rd, the combination and arrangement, substantially as set forth of the rib N, cavity *n*, catch *i*, and teeth *h*, operating as explained to shift the obstructing plate at each revolution of the dial, and arrest the reverse motion of the latter at the right instant in setting the machine. 4th, the described arrangement and combination of the pins *p*, *p*, and hook *o*, operating in the manner and for the purposes set forth."

No. 24,482. S. Van Rensselaer Newman, of Covington, N.Y., for an "Improvement in machines for harvesting beans."

"I claim, 1st, the employment or use of the rotary sickles K, K, provided with scolloped-shaped teeth, and arranged to operate substantially as and for the purpose set forth. 2nd, the combination of the endless chain of rods *o*, with the rotary sickles K, K. And 3rd, the combination of the rotary sickles K, K, endless chain of rods *o*, platform Q, with or without the rake O, placed in a mounted frame A, and arranged for joint operation."

No. 24,483. Andrew O'Neill, of Portsmouth, O., for an "Improved fire-back for stoves and fire places."

"I claim the hooded damper (*c*), in combination with a radiating fire-back (A), constructed and arranged substantially as described, for the purposes set forth."

No. 24,484. Joseph B. Palser and Gardner Howland, of Fort Edward, N. Y., for an "Improvement in apparatus for manufacture of paper pulp."

"We claim 1st, having the pipe *b*, which passes through the hollow journal of the boiler, divided by a partition, so that the steam may find exit through one compartment of the pipe, and the contents of the boiler through the other compartment, as set forth. 2nd, the employment of the perforated diaphragm *p*, p^1, when arranged substantially as described, to protect the pipes *h*, h^1, *s*, s^1, and strain the liquids from the 'stock,' as and for the purposes herein set forth. 3rd, the arrangement of the boilers J, J^1, with the surrounding envelope, substantially as herein shown and described, so that the resultant liquids of the boiling may be evaporated, and also employed to cool down the boilers and surrounding envelope, as set forth. 4th, the arrangement of the basin *g*, *g*, below the boiler, to receive the falling liquid, as and for the purposes described. 5th, the injection of the steam arising from the boiling of the alkaline, and other contents of boiler J^1, into the boiler J, and vice versa, substantially as and for the purposes herein shown and described. 6th, the arrangement of the warming chamber S, between the two boilers, and the combination therewith of the pipes T, V, W, W^1, as and for the purposes described. 7th, the arrangement and combination of the boilers J, J^1, furnace A, and doors D, D^1, E, E^1, F, F^1, so as to apply the furnace heat to either or both boilers, at pleasure, substantially as herein shown and described. 8th, the combination of the cylindrical bottomed vats K, K^1, having the chimneys N, N, passing through them, with the boilers J, J^1, as and for the purposes described."

No. 24,485. James Peeler, of Tallahassee, Florida, for an improvement in machines for sowing fertilizers."

"I claim the arrangement of the frame A, wheels B, B, axle C, and apron D, attached to the frame by means of straps *a* and *c*, with the bar *d*, metallic strip *x*, corrugated wheel F, bar *i*, chuck J, hopper E, and slide L, the whole being constructed and placed in the relative position herein set forth, and operating in the manner specified."

No. 24,486. James Peeler, of Tallahassee, Florida, for an "Improvement in cultivators."

"What I claim is, the arrangement of the bars D and E, beam A, handles B, B, and standard C, the bar E forming a brace, a colter, and a landside, and the bar D being provided with an inclined or tapering point, on which any style of blade may be secured, the two bars being pivoted together at *x*, and the whole operating substantially in the manner and for the purpose specified."

No. 24,487. Albert Philipp, of Mayville, Wis., for an "Improvement in machines for cutting sugar cane."

"I claim the arrangement of the cutters H^1, with the forked arms I^1, and with the endless apron *p*, in combination with the cutters H, the forked arms I, the reels J, and the additional platforms C^1, to operate substantially in the manner and for the purpose specified."

No. 24,488. Rensselaer Reynolds and Gordon B. Reynolds, of Stockport, N. Y., for an "Improvement in brakes for power looms." — Antedated 8th February, 1859.

"What we claim is, applying and arranging the two faces of the brake relatively to its centre of motion, and the said centre of motion relatively to the centres of the crank and cam shafts, in the manner substantially as described, whereby the brake is not only rendered automatic in case of recoil after the stoppage of the loom by the action of the protector, but self-liberating when the loom is started again, as herein fully set forth."

No. 24,489. Wm. Price, of Philadelphia, Pa., for an "Improved filter."

"I claim, first, the general arrangement of the two casings, the perforated plates, the wire gauze body of sand, the system of pipes, and three cocks, herein-before described. Second, confining a body of sand D between the perforated plates B and B^1, by means of a ring C, constructed in the manner set forth, or any equivalent thereto, by which the said ring may be made to compress the body of sand without disturbing the said perforated plates. Thirdly, the orifices *m*, *m*, at the lower ends of the pipes H, and H^1, for the purpose specified."

No. 24,490. Christian Ritter, of Reading, Pa., for an "Improvement in cider presses."

"I claim the application of the chamfered and grooved inner slats and partitions, with their fastenings and arrangements, which will produce the intended effect."

No. 24,491. Philip C. Rowe, of Boston, Mass., for an "Improved brush for washing windows."

"I claim the hydraulic window washer, or brush, constructed with the spray jet tube, and the conduit or pipe, applied to its stock and handle, substantially in the manner and to operate as above specified."

No. 24,492. W. G. Ruggles, of Worcester, Mass., for an "Improvement in cooking ranges."

"I claim the arrangement and combination of the oven D, provided with a central hollow shaft (*b*), the oven G, provided with a hollow shelf (*m*), fire chamber B, damper E, chambers (*h*, *d*), flues C, H, *n*, n^1, substantially as and for the purposes herein shown and described."

No. 24,493. Paul A. Sabbaton, of Albany, N. Y., for an "Improved door frames for furnaces."

"I claim the combination of the mouth of the furnace of the door frame A and door B, when the said door frame is provided with an opening larger than the door into which the door shuts, so as to close against the furnace, or against a shield or false frame C, as and for the purposes herein set forth and described."

No. 24,494. Henry Sauerbier, of Newark, N. J., for an "Improved tool for planing and finishing the edges of boots and shoe soles."

"What I do claim is, the combination of the collis and edge plane, substantially in the manner and for the purpose herein above specified."

No. 24,495. Wm. Schnebly and Thos. Schnebly, of Hackensack, N. J., for an "Improvement in harvesting machines."

"We claim the arrangement and combination of the inclined tapering discharge trough I, with the concave or curved platform and raker reel, whereby the grain is made to fall from the machine in compact gavels, as herein shown and described."

No. 24,496. Wm. Schnebly and Thos. Schnebly, of Hackensack, N. J., for an "Improvement in harvesting machines."

"We claim the employment, in combination with the pendulous levers *d*, d^1, of the toggle levers *g*, *g*, as herein shown, whereby the levers *d*, d^1, may, without shifting their axes of motion *f*, *f*, be thrown in or out of connection with the drivers B, B."

No. 24,497. Jonas Smith, of Westport, Conn., for an "Improved waterwheel."

"I do claim the arrangement and combination of the annular gate B, when provided with tangential vertical plates *i*, stationary rim C, interposed between the gate D, and wheel A, when provided with buckets (*a*), having lips (*c*), all as herein shown and described for the purposes set forth."

No. 24,498. Joseph Smith, of Cincinnati, O., and G. B. Griffin, of Madison, Wis., for an "Improvements in measuring faucets."

"We claim, 1st, operating the plunger by means of the cam grooves on the face of wheel G, in connection with the pins on the sleeve, when both are constructed and operated in the manner and for the purpose set forth. 2nd, the serrated circular register plate H, in connection with the ratchet *p* and pointer *m*, the same being arranged and operated, substantially in the manner and for the purpose specified. 3rd, we claim the disc *c*, constructed as described, in combination with the inlet pipe B and the outlet pipe C, the same being used substantially in the manner and for the purpose herein fully set forth."

No. 24,499. JOHN G. STEPHENSON, of Buffalo, N. Y., for an "Improved machine for jointing staves."

"I claim the adjustable plates I, I, with yielding cutter stocks or plates K, K, attached, in connection with the feed rollers D, D, and yielding pressure plate *c*, or its equivalent, the whole being arranged to operate substantially as and for the purpose set forth."

No. 24,500. J. C. STODDARD, of Worcester, Mass., for an "Improvement in cultivators."

"What I do claim is, the arrangement and combination of the slotted adjustable revisable blades (*h*), arms *f*, and hub (*e*), as and for the purposes herein shown and described."

No. 24,501. GILES M. STONE, of Fredericksburg, Va., for an "Improved panoramic attachment for clocks, to indicate the comparative time in all longitudes."

"I claim, first, the chronometer dial, divided off into 24 equal parts, for indicating the 24 hours of day and night, by one revolution of the index point, substantially as set forth. Secondly, the revolving disc, representing the northern or southern hemisphere, for indicating the relative time of day or night, at any and all localities thereon, in the manner specified. Thirdly, the combination of the revolving disc, with the twenty-four hour dial, for demonstrating the cause of day and night, by the diurnal revolutions of the former, representing the revolutions of the earth on its own axis, substantially as described."

No. 24,502. JOHN F. STURDY, of Attleborough, Mass., for a "Combined case for pen, pencil, knife, toothpick, &c."

"I do claim the case A, constructed as shown and provided with the knife blade *i*, operated by the spirally slotted tube *f*, pencil tube *l*, toothpick *m*, and pen slide *n*, arranged and combined to form a new and improved article of manufacture."

No. 24,503. WM. H. TOWERS, of New York, N.Y., for an "Improved clothes pin."

"I claim the before-described improved article of manufacture, to wit, a clothes clamp formed of two parts A, jointed together at their upper ends substantially as set forth."

No. 24,504. CYRUS B. THAYER, of Boston, Mass., for an "Apparatus to hold and turn the leaves of books and music."

"I claim the combination and arrangement of the wedge-acting back pieces B, B, and clamps C, C, with their connecting dove-tail tongues and grooves *b*, *b*, substantially as described, so that simply raising the clamps shall unclamp and depress them, shall clamp the music sheets as herein specified. I also claim the arrangement and combination substantially as herein specified, of the leaf-turning cords D, D, D, arms G, G, G, lever E, and catch *m*, for the purpose set forth."

No. 24,505. GEO. S. TIFFANY, of Palmyra, Mich., for an "Improvement in machines for digging potatoes."

"I claim the hinged fork P, in combination with the plow L^1, when the same are arranged and operate as and for the purposes herein set forth."

No. 24,506. CHAS. N. TYLER, of Washington, D.C., for an "Improvement in manufacture of gas."

"What I claim is, combining hydrogen gas with the volatile and easily condensible products of coal, rosin, tar, &c., in their nascent state, in the manner and for the purposes substantially as herein set forth."

No. 24,507. FRANKLIN VEAL, of Hallettsville, Texas, for an "Improvement in cultivators."

"What I claim, is, arranging the dove-tailed projections *i* at equal distances from the cutting edges of the shares in combination with the slots *j*, and recesses *k*, in the arms and for the purpose of securing the shares to the arms, and to render them reversible substantially as described."

No. 24,508. JULES JEAN BAPTISTE VERGNE, of Paris, France, for an "Improved screw propeller."

"I claim the arrangement of the grooving, fluting, or ribs, in the form of a series of steps substantially as and for the purposes herein set forth and described."

No. 24,509. ANTON VON SCHUTTENBACK, of St. Petersburg, Russia, for an "Improvement in fluid lamps."—Patented in England, 11th October, 1858.

"What I do claim as my invention, is, the combination of the gasholder or gasometer A, the vessel I, the pipe N, with its branches, the pipe F, the chamber H, the chimney I, the oil reservoir A, and the burner G, the whole being applied and made to operate together substantially as specified."

No. 24,510. EDWD. WALCOTT, of Providence, R.I., for an "Improvement in gas retorts."

"I claim the combination with the lid D of the projecting incline plane *a*, *a*, substantially as and for the purposes herein set forth and described. 2nd, the employment for securing the lid of the mouth piece of the retort in place, of a horizontal eccentric or cam G, and lever H, attached to and combined with a cross bar F, and applied to the mouth piece of the retort substantially as herein described."

No. 24,511. F. F. WAGNER, and P. P. DICKINSON, of Harrisburgh, Pa., for an "Improvement in railroad car seats."

"We claim the arrangement and combination of the wheels I^1, J, arms D, D^1, cushions E, E^1, and bars G, as and for the purpose herein shown and described."

No. 24,512. AMBROSE WARD, of Altoona, Pa., for an "Improvement in body bolsters for railway cars."

"I claim, 1st, the arrangement and combination of the trusses F, centre plate D, sills G, and tension rods I, substantially as and for the purpose herein shown and described. 2nd, providing the centre plate D, with lugs K, protecting flange or cap (*b*), lateral bearing flange (*e*), at the centre, fitting into cup in plate B, the vertical bearing flange (d^1), fitting into the cup or groove, in plate B, the whole combined and arranged as and for the purposes herein shown and described."

No. 24,513. DAVID WARREN, of Gettysburgh, Pa., for an "Improved method of opening and closing farm gates."

"I claim the arrangement of the lever F and bar *d* with the bar E and falling catch D, as constructed substantially in the manner and for the purpose herein fully described."

No. 24,514. HENRY WELLS, of Walnut Grove, Ill., for an "Improvement in cultivators."

"I claim the arrangement of the share F, mould boards G, G, rods H, H, and I, I, the latter having the parts *d*, *d*, formed on them, the said parts passing respectively through the bar C and beam A, thus making a very firm structure, in the manner and for the purpose set forth."

No. 24,515. SOLON R. ATKINS and D. H. HULL, of Plantsville, Conn., assignors to D. H. Hull aforesaid, for an "Improved trace fastener."

"We claim the metallic box A, having a semicircular ring B on its end, and provided with a slide C, which is to be operated by a knob H, and held against the neck of the button on the whiffle-tree by springs D, E, all arranged and operating in the manner and for the purposes herein set forth."

No. 24,516. WM. BROWN, of Shelbyville, Ind., assignor to himself and Fontain G. Robertson, of same place, for an "Improved device for feeding bees."

"I do claim, as a new article of manufacture, the bottle stopper, consisting of the cork A, tube B, and cup D, D, secured together by the screw and nut C, substantially as described, and for the purposes specified."

No. 25,517. WALTER HUNT, of New York, N. Y., for an "Improvement in heels for boots and shoes."

"I claim making the external form of the heels of boots and shoes of a metallic shell, with an inner flanch at the upper edge to fit over the usual heel seat of the sole, and between that and the counter or back portion of the upper, substantially as described, and to be provided with an inner core, and the whole to be secured to the heel seat, substantially as described. I also claim, in combination with the shell and upper flanch and inner core, substantially such as described, making the said shell with an inner flanch at the lower edge, substantially as and for the purpose specified. And I also claim, in combination with a heel constructed, substantially as above described, and consisting of the shell with the upper and lower flanches and the enclosed core, the

employment of a rotating top lift, substantially as and for the purpose specified."

No. 24,518. Wm. M. Jeffers, of Elmira, N. Y., assignor to himself and Wm. L. Gibson, of same place, for an "Improvement in double cannon for chain shot."

"I claim the use of a partition intermediate between the breech and muzzle of the piece, in combination with the slot *c*, so arranged that the charge of the barrels shall mingle at the fuse, so that immediately on the ignition thereof, the expansion force shall be wholly expended in projecting the two balls, and not weakened by a continuous connection between the barrels, substantially as and for the purpose shown and described."

No. 24,519. Robt. H. Mathies, of Boston, Mass., assignor to A. N. Clark, of Beverly, Mass., for an "Improvement in water gauges for steam boilers."

"What I here claim as my invention is, the combination with the partion that separates the upper and lower main tubes of the gauge of the independent steam and water tubes or courses, arranged to unite the spaces in the main tubes, substantially as specified, and for the purposes set forth."

No. 24,520. H. K. Moore, of Malden, Mass., assignor to A. W. Adams and G. W. Dane, of Boston, Mass., and Wm. G. Howe, of Haverhill, Mass., for an "Improvement in water gauges for steam boilers."

"I do not claim the single balanced valve apparatus, constructed with the arrangement of steam receiving and discharging chambers A, G, hollow stem or passage E, external steam passage *a*, and parts *d*, *d*; but I claim combining therewith the auxiliary steam space *t*, and the nipple or raised valve seats *s*, *s*, arranged substantially as specified."

No. 24,521. E. L. Pratt, of Philadelphia, Pa., assignor to himself and R. B. Fitts, of same place, for an "Improved cheese cover."

"What I claim is, as an improved article of manufacture for the purposes herein described, a ventilating cover constructed of tin plate or other suitable material, so as to protect articles placed therein from the rays of light and heat and the ravages of animals or insects, and at the same time secure perfect ventilation by means of a series of small perforations at or near the base or bottom for the inlet of cool air, and another series of perforations at or near the top for the escape of warm air, moisture, and gases, as herein set forth and described."

No. 24,522. Archibald Putnam and James H. Putnam, of Wellsville, Ohio, assignors to themselves and Philip S. Geisse, of Wellsville aforesaid, for an "Improvement in railroad turn tables."

"We claim the adjustable spindle *g*, applied as adapted, in the manner and for the purposes set forth."

No. 24,523. Lawrence Schroder, of Cincinnati, Ohio, assignor to John H. Schroder and Co., of same place, for an "Improved lock guard."

"I claim the arrangement of the several tumblers in combination with intervening springs, which vary the spaces between said tumblers, and operate the lock, in the manner and for the purpose substantially as set forth."

No. 24,524. John W. Smith, of Washington, D. C., assignor to himself and Jesse H. Whitehurst, of Baltimore, Md., for an "Improvement in gas retorts."

"I claim the within-described arrangement of the pipes *e* and e^1, when combined with the retort and condensing chamber, in the manner and for the purpose herein set forth."

No. 24,525. Robt. Wm. Sievier, of Upper Halloway, Middlesex county, England, assignor to Wm. Lilley, of Ohio, for an "Improved smelting furnace for iron."

"I claim the use of the exhaust pipe, in connection with a fan pump or other means to exhaust the foul air and gases, and cause a current of air to pass through the bottom or apertures of the furnace, of sufficient density for the smelting and purifying iron and other ores, in the manner and for the purposes above set forth. I also claim the exhaust fan, constructed and operating as herein explained. I further claim the use of the movable crucible, as described, and for the purposes above set forth."

No. 24,526. Benjn. Tolman, of Pembroke, Mass., assignor to himself and Asa F. Ramsdell, of same place, for an "Improved edge plane for boots and shoes."

"Therefore, what I claim as the improved edge plane, as constructed, with cutter and gauge bearings, flanges, and confining devices, arranged on the stock and with respect to the cutter and gauge, substantially as specified."

No. 24,527. Chas. Teuesdale and A. J. Sennett, of Cincinnati, O., assignor to Wm. Resor and Jacob Resor, of same place, for an "Improvement in patterns for casting stove covers."

"What we claim is, constructing patterns for stove covers and centres, with an opening in their under sides, by means of which a draw bar *f* may be withdrawn from the mould before removing the patterns, and also with a perforation (*g*), substantially as and for the purposes set forth."

Re-issues.

James Ingram, of New York, N. Y., for an "Improvement in water backs for ranges."—Patented 16th February, 1858.—Re-issued 21st June, 1859.

"What I claim, is, protecting the water backs of ranges by the introduction of a movable fire brick soap stone, or equivalent material, between the fire and said water backs, substantially as specified. I also claim arranging said water back, substantially as set forth, whereby the same can be moved away from the fire to allow space for introducing said protecting fire brick, or its equivalent, as specified. And, in combination with said water back, I claim the lever *k*, and weight *g*, or their equivalents, to move the intervening soap stone, or fire brick, substantially as specified."

D. C. McCallum, of Owego, N. N., for an "Improvement in bridges."—Patented 20th January, 1857.—Re-issued 21st June, 1859.

"What I claim is, so combining the arch, cord, or beam, the arch brace, and the abutment or pier of a bridge, as that the thrust of the arch shall be thrown down upon the abutment or pier, and any deflection in the lower chord be contracted by an upward force at the upper ends of the arch braces. I also claim the method of lengthening or shortening the braces of a bridge truss or girder, by which the truss may be elevated or depressed as required, by means of the yoke *a*, the plate *b*, on the end of the brace, and the straining pieces *c*, *c*, with their nuts *d*, substantially as described."

Charles T. Porter, of New York, N. Y., for an "Improvement in governors for steam engines."—Patented 13th July, 1858.—Re-issued 21st June, 1859.

"What I claim, is, first, in combination with arms and very small balls, or their equivalents, revolving at a velocity several times greater than would be due or natural to them, considered as a conical pendulum, I claim the employment of a counterpoise, applied substantially as described, and so proportioned in weight as to balance, or nearly so, the centrifugal force developed by the revolution of the said arms and balls, or their equivalents. Second, I claim the employment at the connection between the arms and the central spindle of the governor of a joint, constructed substantially as described, and illustrated in Figure 2, whereby each arm is brought to the outside of the joint on one side, and made to thrust against the joint pin close to one end thereof at a right angle, and at a distance from the axis of revolution, as herein described."

John A. Jackson, of Philadelphia, Pa., assignee of Israel Amies, of said Philadelphia, for an "Improvement in veneers."—Patented 11th December, 1855.—Re-issued 21st June, 1859.

"What I claim, is, the embossed veneers described, the same being adapted for subsequent application in the construction and ornamenting of furniture and other articles to which veneers are or may be applicable."

Obed Hussey, of Baltimore, Md., for an "Improvement in reaping machines."—Patented 7th August, 1847.—Re-issued 14th April, 1857.—Again re-issued 21st June, 1859.

"What I claim is, the combination of side and cross bearings of the guards with flush edges at and near the forks of the blades, substantially as described."

Obed Hussey, of Baltimore, Md., for an "Improvement in reaping machines."—Patented 7th August, 1847.—Re-issued 14th April, 1857.—Again re-issued 21st June, 1859.

What I claim is, scolloped cutters with their blades bevelled, as herein described."

THE CHRONOLOGICAL INDEX of PATENTS of INVENTION, from March 2, 1617 (14 James I.), to September 30, 1852 (16 Vict.), 2 vols. Price 30*s.*

THE ALPHABETICAL INDEX of PATENTEES of Inventions for the above period. Price 20*s.*

THE SUBJECT-MATTER INDEX of PATENTS for the same period — *Second Edition*—to which is prefixed a Key of Terms and Phrases. 2 vols. Price 2*l.* 16*s.*

A Key to the *First Edition* of the above work is also published separately, and may be had on application.

THE CHRONOLOGICAL INDEXES of APPLICATIONS for PATENTS and PATENTS GRANTED from the 1st October to the 31st December, 1852, and from the 1st January to the 31st December, 1853, in one volume. Price 11*s.*

THE ALPHABETICAL INDEXES for the above periods, in one volume. Price 13*s.*

THE SUBJECT-MATTER INDEX, from 1st October to 31st December, 1852. Price 9*s.*

THE SUBJECT-MATTER INDEX for the above period. Price 19*s.* 6*d.*

THE ALPHABETICAL INDEX of APPLICATIONS for PATENTS and PATENTS GRANTED, from the 1st January to the 31st December, 1858. Price 8*s.*

In course of Publication, by Order of the Commissioners of Patents.

ABRIDGMENTS (in Classes, and Chronologically arranged) of all SPECIFICATIONS of PATENTED INVENTIONS, from the earliest enrolled to those published under the Act of 1852.

These books are of 12mo size, and as each is limited to inventions of one class only, they can be sold at prices sufficiently moderate to enable the humblest inventor to examine for himself whether his discovery has been previously patented or not.

At the foot of each abstract are given references to notices of the inventions in scientific and other works, and to the reports of law proceedings for infringements, &c. &c. &c.

The classes already published are,—

1. Drain Tiles and Pipes, price 6*d.*
2. Sewing and Embroidering, price 6*d.*
3. Manure, price 6*d.*
4. Preservation of Food, price 6*d.*
5. Marine Propulsion, price 4*s.*
6. Manufacture of Iron and Steel, price 5*s.*
7. Aids to Locomotion, price 1*s.*
8. Steam Culture, price 2*s.*
9. Watches, Clocks, and other Timekeepers, price 1*s.* 6*d.*
10. Fire-arms and other Weapons, Ammunition, and Accoutrements, price 6*s.* 6*d.*
11. Paper.—Part I. Manufacture of Paper, Pasteboard, and Papier Mâché, price 3*s.*
12. Typographic, Lithographic, and Plate Printing, price 7*s.*
13. Bleaching, Dyeing, and Printing Yarns and Fabrics, price 9*s.* 6*d.*

The following are in the press:—

Paper.—Part II. Cutting, Folding, and Ornamenting; including Envelopes, Cards, Paper-hangings, &c.

Electricity and Magnetism: their Generation and Applications.

Preparation of Fuel, and Apparatus for its Combustion.

Manufacture and Applications of India Rubber, Gutta Percha, &c.; including Air, Fire, and Water Proofing.

Production and Applications of Gas.

Steam Engines.

B. Woodcroft.

The above, and all other works published by the Commissioners of Patents, are now on sale at the Great Seal Patent Office, 25, Southampton Buildings, Holborn.

This Journal is published on the evenings of Tuesday and Friday, and will be forwarded, post free, to Subscribers. — Terms, 30*s.* per annum. — Subscriptions received at the Great Seal Patent Office, where also single copies, at twopence each, may be obtained.

THE

COMMISSIONERS OF PATENTS' JOURNAL.

By Authority.

(*Registered for transmission abroad.*)

No. 576. TUESDAY, JULY 12, 1859. Price 2d.

Notices to Proceed.

NOTICE is hereby given, that

543. JAMES TEMPLEMAN, of Glasgow, in the county of Lanark, North Britain, Artificial Fuel Manufacturer, has given notice at the office of the Commissioners of his intention to proceed with his application for Letters Patent for the invention of "Improvements in the manufacture or production of artificial fuel."

545. And DAVID LICHTENSTADT, of No. 1, Henry Cottages, Park Road, Peckham, in the county of Surrey, Chemist, has given the like notice in respect of the invention of "Converting certain vegetable substances into fibrous material for the manufacture of paper, textile, and other fabrics."

As set forth in their respective petitions, both recorded in the said office on the 1st day of March, 1859.

---

551. And WILLIAM FRANCIS DEARLOVE, of No. 10, Dartmouth Street, in the city of Westminster, has given the like notice in respect of the invention of "An improved chopping machine."

As set forth in his petition, recorded in the said office on the 2nd day of March, 1859.

---

563. And JOHN HARRISON, of Bermondsey, Southwark, in the county of Surrey, Builder, has given the like notice in respect of the invention of "An improvement or improvements in the construction of rotating window sashes."

As set forth in his petition, recorded in the said office on the 3rd day of March, 1859.

---

573. And CHARLES FREDERICK DENNET, of Pall Mall, Gentleman, has given the like notice in respect of the invention of "Improvements in bayonets."

575. And JAMES COWBAN and ELIAS ANDREWS, of Burnley, in the county of Lancaster, have given the like notice in respect of the invention of "Improvements in machinery or apparatus for spinning fibrous materials."

576. And RICHARD ARCHIBALD BROOMAN, of 166, Fleet Street, in the city of London, E.C., Editor of the Mechanics' Magazine and Patent Agent, has given the like notice in respect of the invention of "An improvement in boiler stays."—A communication from Jean Perrier, residing at Nimes, France.

As set forth in their respective petitions, all recorded in the said office on the 4th day of March, 1859.

---

586. And GEORGE LEACH, of Leeds, in the county of York, Yarn Spinner and Cloth Manufacturer, has given the like notice in respect of the invention of "Improved machinery for reeling and leashing yarn or thread."

As set forth in his petition, recorded in the said office on the 5th day of March, 1859.

---

598. And JOHN PRETTY CLARKE, of King's Street Mills, Leicester, has given the like notice in respect of the invention of "Improvements in the manufacture of reels for the winding on cotton linen threads, silk, or other fibrous materials."

As set forth in his petition, recorded in the said office on the 7th day of March, 1859.

---

610. And JOHN ALLIN WILLIAMS, of Baydon, in the county of Wilts, Farmer, has given the like notice in respect of the invention of "Improvements in machinery or apparatus for cultivating land by steam power."

As set forth in his petition, recorded in the said office on the 9th day of March, 1859.

---

621. And JAMES YUILL, of Glasgow, in the county of Lanark, North Britain, Saddlers' Ironmonger, has given the like notice in respect of the invention of "Improvements in saddle trees."

623. And HENRY LODGE, of Liverpool, in the county of Lancaster, Merchant, has given the like

notice in respect of the invention of "Improved means of protecting ships' batteries and other constructions or buildings from the effects of projectiles of various kinds."

As set forth in their respective petitions, both recorded in the said office on the 10th day of March, 1859.

643. And THOMAS LIGHTFOOT, of Accrington, in the county of Lancaster, Calico Printer, has given the like notice in respect of the invention of "Improvements in fixing colours on woven fabrics or fibrous materials."

As set forth in his petition, recorded in the said office on the 14th day of March, 1859.

655. And JOHN DIXON and ROBERT CLAYTON, both of Bradford, in the county of York, Engineers, have given the like notice in respect of the invention of "Improvements in rolling iron and steel for manufacturing railway wheels, and for other purposes."

664. And WILLIAM AVERY, of Birmingham, in the county of Warwick, Engineer, has given the like notice in respect of the invention of "Improvements in machinery for the manufacture of screws."

665. And JOSEPH MICHEL-DENYS, of Charleroi, in the kingdom of Belgium, Gentleman, and 4, South Street, Finsbury, London, has given the like notice in respect of the invention of "Certain improvements in the construction of railway crossings."

As set forth in their respective petitions, all recorded in the said office on the 16th day of March, 1859.

753. And WILLIAM CLARK, of 53, Chancery Lane, in the county of Middlesex, Engineer and Patent Agent, has given the like notice in respect of the invention of "A machine for separating oats from their husks or chaff."—A communication from abroad by Léon Jean Emile Dupont, of Paris.

As set forth in his petition, recorded in the said office on the 24th day of March, 1859.

770. And BENJAMIN SMITH and CHARLES LAVERS SMITH, both of Corbet's Court, Spitalfields, in the county of Middlesex, Manufacturing Chemists, have given the like notice in respect of the invention of "Improvements in the preparation of certain colouring matter applicable for dyeing and printing."

As set forth in their petition, recorded in the said office on the 26th day of March, 1859.

810. And FRANCIS MORTON, of James Street, Liverpool, in the county of Lancaster, Engineer, has given the like notice in respect of the invention of "Improvements in the construction of fences, and the post or pillars for the same, parts of which improvements are also applicable to the construction of gate posts or poles for telegraph purposes or for signal posts."

811. And WILLIAM EDWARD NEWTON, of the Office for Patents, 66, Chancery Lane, in the county of Middlesex, Civil Engineer, has given the like notice in respect of the invention of "Improvements in mills for cleaning rice."—A communication from abroad by Peter McKinley, of Charleston, in the United States of America.

As set forth in their respective petitions, both recorded in the said office on the 31st day of March, 1859.

881. And WILLIAM HOOPER, of Mitcham, in the county of Surry, India Rubber Manufacturer, has given the like notice in respect of the invention of "Improvements in insulating and protecting telegraphic conductors."

882. And WILLIAM HOOPER, of Mitcham, in the county of Surry, India Rubber Manufacturer, has given the like notice in respect of the invention of "Improvements in re-working or re-manufacturing compounds of india rubber and sulphur."

As set forth in their respective petitions, both recorded in the said office on the 8th day of April, 1859.

921. And RICHARD ARCHIBALD BROOMAN, of 166, Fleet Street, in the city of London, E.C., Patent Agent, has given the like notice in respect of the invention of "Improvements in the preparation of red dyes."—A communication from abroad, by Messrs. Renard, Frères, of Lyons.

As set forth in his petition, recorded in the said office on the 12th day of April, 1859.

981. And FREDERICK EDWARDS and WILLIAM EDWARDS, of the city of Coventry, Machinists, have given the like notice in respect of the invention of "Improvements in looms for weaving ribbons and other like goods."

As set forth in their petition, recorded in the said office on the 18th day of April, 1859.

1033. And THOMAS ALDRIDGE WESTON, of King's Norton, in the county of Worcester, Accountant, has given the like notice in respect of the invention of "A new or improved pulley."

As set forth in his petition, recorded in the said office on the 25th day of April, 1859.

1060. And JAMES HOLROYD, of Leeds, in the county of York, Cloth Finisher, has given the like notice in respect of the invention of "Improvements in machinery used for finishing woollen and other cloths."

As set forth in his petition, recorded in the said office on the 27th day of April, 1859.

1335. And ARTHUR MICKELTHWATE, JOSEPH PEACE, and SAMUEL JOHNSTONE HOBSON, all of Sheffield, in the county of York, have given the like notice in respect of the invention of "Improvements in the coating and covering of metallic springs, steel, iron, and other metal bands for the use of any kind of machinery, driving bands or straps, ribs suitable for umbrellas and parasols, stay busks and ribs for stays, hats, bonnets, reeds, and crinoline, and articles of dress and other useful purposes."

As set forth in their petition, recorded in the said office on the 30th day of May, 1859.

1350. And GEORGE HALLEN COTTAM and HENRY RICHARD COTTAM, of St. Pancras Iron Works, Old St. Pancras Road, in the county of Middlesex, have given the like notice in respect of the invention of "Improvements in stable fittings."

As set forth in their petition, recorded in the said office on the 1st day of June, 1859.

1372. And Alfred Vincent Newton, of the Office for Patents, 66, Chancery Lane, in the county of Middlesex, Mechanical Draughtsman, has given the like notice in respect of the invention of "An improvement in balancing millstones."—A communication from abroad by John Fairclough, of Louisville, in the county of Jefferson, and state of Kentucky, United States of America.

As set forth in his petition, recorded in the said office on the 3rd day of June, 1859.

1392. And Robert Riddell Fairgrieve, of Boston, in the United States of America, Machinist, and Simeon Bathgate, of the town and county of Selkirk, North Britain, Engineer, have given the like notice in respect of the invention of "Improvements in machinery or apparatus for winding yarns or thread."

As set forth in their petition, recorded in the said office on the 7th day of June, 1859.

1394. And John Henderson, William Henderson, and Thomas Bagley, of the city of Durham, Carpet Manufacturers, and Samuel Holdsworth, of the same place, Engineer to Messieurs Henderson and Company, have given the like notice in respect of the invention of "Improvements in looms for weaving, some of which improvements are applicable to other purposes."

As set forth in their petition, recorded in the said office on the 8th day of June, 1859.

1420. And Felix Alexandre Testud de Beauregard, of Paris, in the French empire, Civil Engineer, has given the like notice in respect of the invention of "Certain improvements in generating steam, and in apparatus for obtaining power and in generating steam for other purposes."

As set forth in his petition, recorded in the said office on the 11th day of June, 1859.

1428. And Alfred Vincent Newton, of the Office for Patents, 66, Chancery Lane, in the county of Middlesex, Mechanical Draughtsman, has given the like notice in respect of the invention of "Improvements in the fitting of life and other boats."—A communication from abroad by Matthias Ludlum, of Fairhaven, in the state of Vermont, United States of America.

As set forth in his petition, recorded in the said office on the 13th day of June, 1859.

1437. And Alfred Vincent Newton, of the Office for Patents, 66, Chancery Lane, in the county of Middlesex, Mechanical Draughtsman, has given the like notice in respect of the invention of "Improvements in the manufacture of polishing wheels, sticks, and tools."—A communication from abroad by Thomas J. Mayall, of Roxbury, in the county of Norfolk, and state of Massachusetts, United States of America.

As set forth in his petition, recorded in the said office on the 15th day of June, 1859.

1488. And George Tomkins, of Pontymister, near Newport, in the county of Monmouth, Tin Plate Worker, has given the like notice in respect of the invention of "Improvements in coating metals, and in the apparatus connected therewith."

As set forth in his petition, recorded in the said office on the 21st day of June, 1859.

1497. And Robert Smith, of Longridge, near Preston, in the county of Lancaster, Manufacturer, has given the like notice in respect of the invention of "Improvements in apparatus applicable to looms for weaving fancy fabrics."

1501. And Charles Clarini, of New York, U. S. A., has given the like notice in respect of the invention of "Making wrought metal nails by machinery."

As set forth in their respective petitions, both recorded in the said office on the 22nd day of June, 1859.

1516. And William Lister, junior, Master Mariner, and Thomas Gilbert Garrick, Agent, both of Sunderland, in the county of Durham, have given the like notice in respect of the invention of "Improvements in ships' windlasses, and other like apparatuses, applicable also to the steering of ships."

1520. And George Redrup, of the Loughborough Brewery, Loughborough, in the county of Leicester, Brewer, has given the like notice in respect of the invention of "Machinery for the cutting of shives, bungs, corks, spiles, and vent or other pegs."

1521. And Richard Hornsby, junior, of Spittlegate Iron Works, Grantham, in the county of Lincoln, has given the like notice in respect of the invention of "Improvements in ploughs, and in giving motion to ploughs and other agricultural implements by steam power."

As set forth in their respective petitions, all recorded in the said office on the 24th day of June, 1859.

1529. And John Boden, of Portswood Road, Southampton, Engineer, and William Clark, of Northern Road, Southampton aforesaid, Boiler Maker, have given the like notice in respect of the invention of "Improvements in apparatus for superheating steam."

As set forth in their petition, recorded in the said office on the 25th day of June, 1859.

1561. And Levi Lincoln Tower, of the state of Massachusetts, of the United States of America, has given the like notice in respect of the invention of "A new and useful machine for dampening and wetting paper, &c."—A communication from John A. Lynch, a resident of Boston, of the said state of Massachusetts."

As set forth in his petition, recorded in the said office on the 30th day of June, 1859.

And notice is hereby further given, that all persons having an interest in opposing any one of such applications are at liberty to leave particulars in writing of their objections to such application, at the said Office of the Commissioners, within twenty-one days next after the date of the Gazette [and of the Journal] in which this notice is issued.

Notice of Emendation.

Notice is hereby given, that a petition, declaration' and provisional specification, in the name of

1420.—(1859.) Felix Alexandre Restud de Beauregard, of Paris, in the French empire, Civil Engineer, applying for Letters Patent for his invention of "Certain improvements in generating steam, and in apparatus for obtaining power and in generating steam for other purposes" (advertized in the London Gazette on the 24th day of June last), the certificate of the law officer, allowing provisional protection thereon, and the records relating thereto, in the Office of the Commissioners for Patents, have been severally amended by the substitution of the name Felix Alexandre *Testud* de Beauregard for Felix Alexandre *Restud* de Beauregard, the same having been written Felix Alexandre *Restud* de Beauregard in error.

Patents Sealed.

List of Letters Patent which passed the Great Seal on the

12th July, 1859.

106. William Bennetts, of Tuckingmill, in the county of Cornwall, Workman, for an invention of "Improvements in mechanism used for preventing accidents when raising or lowering skips, baskets, or apparatus particularly applicable to mines."—Dated 13th January, 1859.

110. John Picksley and Reuben Sims, of Bedford Foundry, Leigh, in the county of Lancaster, Machine Makers, for an invention of "Improvements in lawn mowing machines."—Dated 13th January, 1859.

112. Daniel Lancaster Banks, of Kennington, in the county of Surrey, Engineer, for an invention of "A method of constructing a travelling suspension rail or road way, applicable, among other uses, as a bridge and lifting agent."—Dated 13th January, 1859.

113. James John Stevens, of Darlington Works, Southwark, in the county of Surrey, Engineer, for an invention of "Improvements in railway signal apparatuses."—Dated 13th January, 1859.

114. François Jules Manceaux, of Paris, in the empire of France, Manufacturer, and Eugene Napoléon Vieillard, of the same place, Gunsmith, for an invention of "Improvements in breech loading fire arms and in cartridges."—Dated 13th January, 1859.

115. John Grist, of Beazley Crescent, Old Ford, in the county of Middlesex, Engineer, for an invention of "Improvements in machinery for cutting and shaping staves and heads for casks and for the manufacture of casks."—Dated 13th January, 1859.

122. Samuel Holt, of the city of Manchester, in the county of Lancaster, Silk Manufacturer, for an invention of "A new and improved manufacture of woven silk fabrics."—Dated 14th January, 1859.

125. William Davis, of 2, Ann Street, Globe Fields, Mile End, in the county of Middlesex, for an invention of "Improvements in sluice valves."—Dated 14th January, 1859.

131. Daniel Lancaster Banks, of 3, Kennington Row, Kennington Park, in the county of Surrey, Engineer, for an invention of "Improvements in the method of constructing a travelling suspension rail or roadway to be used for the cultivation of land."—Dated 15th January, 1859.

431. William Edward Newton, of the Office for Patents, 66, Chancery Lane, in the county of Middlesex, Civil Engineer, for an invention of "An improved mowing machine or grass harvester."—A communication from abroad by John Peter Adriance, of the United States of America.—Dated 16th February, 1859.

499. John Robinson, of Lower House, near Burnley, in the county of Lancaster, Manager, for an invention of "Improvements in machinery and apparatus applicable to machines for spinning and doubling."—Dated 24th February, 1859.

899. Rudolph Wappenstein, of the city of Manchester, in the county of Lancaster, Medallion Engraver, for an invention of "Improvements in cop tubes, and in machinery or apparatus for placing the same on the spindles used for spinning and doubling fibrous materials."—Dated 11th April, 1859.

339. Ebenezer Partridge, of Stourbridge, in the county of Worcester, Engineer and Iron Founder, for an invention of "An improvement in the manufacture of 'pipe' boxes for cart and wagon axles."—Dated 14th April, 1859.

Patents on which the Stamp Duty of £50 has been Paid.

(*To 9th July*, 1859, *inclusive.*)

7th July.

1586. Robert Shaw, of Portlaw, in the county of Waterford, Ireland, Cotton Spinner and Manufacturer, for an invention of "Improvements in obtaining pressure applicable to machinery for preparing and spinning cotton and other fibrous materials, and other purposes."—Dated 7th July, 1856.

1616. William Bridges Adams, of No. 1, Adam Street, Adelphi, in the county of Middlesex, Engineer, for an invention of "Improvements in railway wheels, axles, and axle boxes."—Dated 9th July, 1856.

1647. William Bridges Adams, of No. 1, Adam Street, Adelphi, in the county of Middlesex, Engineer, for an invention of "Improvements in the permanent way of railways."—Dated 12th July, 1856.

8th July.

1622. Timothy Jerome, of 125, Great Hampton Street, Birmingham, in the county of Warwick, Button Manufacturer, for an invention of "Certain improvements in buttons for ornamenting and fastening dresses, as also in loops for attaching or holding buttons on garments while in use."—Dated 9th July, 1856.

1661. William Watt, of Belfast, in the county of Antrim, in Ireland, for an invention of "Improvements in the manufacture of starch."—Dated 15th July, 1856.

9th July.

1638. Robert Harrington, of Witham, in the county of Essex, Watch Maker, for an invention of "Improvements in umbrellas, parasols, walking sticks, whips, &c."—Dated 11th July, 1856.

FOREIGN PATENTS.

BELGIUM.*

List of Patents Delivered on the 7th July, 1859.†

(Communicated by the Belgian Government.)

(For previous List, see No. 574 of this Journal.)

7317. Ch. Van Kalck, represented by X. Raclot, of Brussels, for an imported invention of "A furnace for annealing pins, bolts, and rivets."—Dated 26th March, 1859.—(French Patent, 15th April, 1859.)

7500. J. Kershaw, represented by H. Biebuyck, of Brussels, for "Improvements in weaving apparatus."—Dated 30th April, 1859.—(English Patent, 2nd March, 1859.)

7531. C. C. Caique, represented by X. Raclot, of Brussels, for "An air-reservoir for millstones."—Dated 10th May, 1859.—(H. Gilbert's French Patent, 7th July, 1857.)

7651. L. Borgeol, represented by H. Biebuyck, of Brussels, for "Apparatus for twisting and winding thread continuously."—Dated 15th June, 1859.—(French Patent, 9th June, 1859.)

7664. A. Pongowski, of Liége, for "Disinfecting all kinds of alcohol."—Dated 17th June, 1859.—(French Patent, 5th November, 1857.)

7671. A. Caron, of Liége, for "Breech-loading guns."—Dated 21st June, 1859.—(French Patent, 19th April, 1859.)

7672. J. Willem, of Liége, for "Improvements in Lefaucheux' guns."—Dated 21st June, 1859.

7673. J. B. Vande Velde, of Alost, for "A machine for twisting and softening thread."—Dated 17th June, 1859.

7674. C. L. J. Dierickx, represented by X. Raclot, of Brussels, for "Improvements in the manufacture of coin, and in sizing gold and silver planchets of all diameters."—Dated 21st June, 1859.

675. Candelot, alias Fulgens, of Brussels, for an imported invention of "A chemical process for obtaining waterproof coating, crystalline enamel and artificial marble."—Dated 22nd June, 1859.—(French Patent, 3rd May, 1858.)

7676. J. Mutet, represented by H. Biebuyck, of Brussels, for "Improvements in continuous power looms, applicable to all looms."—Dated 23rd June, 1859.—(French Patent, 18th November, 1852.)

7677. P. Vandevoorde, of Lokeren, a Patent of Improvement for "An apparatus for feeding boilers with chemical substances."—Dated 22nd June, 1859.—(Original Patent, 24th March, 1859.)

7678. C. Kingsford, of Mons, for "A centrifugal and centripetal propeller of vessels."—Dated 24th June, 1859.

7679. E. Bataille, represented by A. Depuichault, of Schaerbeek, for an imported invention of "Improvements in presses, dies, and punches."—Dated 24th June, 1859.—(French Patent, 8th September, 1858.)

7684. J. Cimeg, represented by H. Biebuyck, of Brussels, for an imported invention of "A process for silvering glass, mirrors, ceramic products, tissues, paper, &c."—Dated 24th June, 1859.—(Austrian Patent, 28th April, 1858.)

7681. E. L. Montefiore, of Liége, for "Treatment of lead ores and other lead substances."—Dated 24th June, 1859.

7682. R. A. Langer, of Ixelles, for "Applying animal or vegetable hair to jewellery."—Dated 7th June, 1859.

7683. J. J. J. Mary, of Schaerbeek, for "A sheet-iron apparatus for preserving meat and other organic substances."—Dated 25th June, 1859.

7684. A. Laurent, of St. Josse-ten-Noode, for "A product for manufacturing fermented beverage."—Dated 25th June, 1859.

7685. J. Foster, represented by A. Anoul, of Ixelles, for "Improvements in frames for rovings and spinning."—Dated 25th June, 1859.—(English Patent, 18th January, 1859.)

7686. J. S. Goodridge, represented by O. Daillencourt, of Brussels, for an imported invention of "A sewing machine for obtaining helical stitches."—Dated 25th June, 1859.—(French Patent, 11th June, 1859.)

7687. Vandenweghe-Weghsteen, of Bruges, for "A ventilating apparatus for cooling beer."—Dated 27th June, 1859.

7688. Th. Tissington, of Jupille, for "Breech-loading rifles, and projectiles for the same."—Dated 27th June, 1859.

7689. N. Van de Velde, of Ghent, for "A process for disinfecting and improving spirits."—Dated 25th June, 1859.

7690. J. G. Newberry, represented by P. Bals, of Brussels, for an imported invention of "A machine for cutting screws, bolts, and nuts."—Dated 27th June, 1859.—(English Patent, 9th September, 1858.)

7691. J. Davis, represented by P. Bals, of Brussels, for an imported invention of "Improvements in machines worked by air, gas, and steam."—Dated 27th June, 1859.—(English Patent, 6th July, 1858.)

* For the Belgian Patent Law, see Nos. 292 and 348 of this Journal.

† All Specifications of Patents which have been in force not less than six months, may be inspected or translations of them be had at the Library of the Great Seal Patent Office, where also translated Indexes may be consulted.

7692. A. Taylor, represented by P. Bals, of Brussels, for an imported invention of "Improvements in pianos and musical instruments."—Dated 27th June, 1859.—(English Patent, 27th July, 1858.)

7693. H. Cartwright, represented by P. Bals, of Brussels, for an imported invention of "Improvements in the construction of steam-engines."—Dated 27th June, 1859.—(English Patent, 3rd April, 1858.)

7694. Taylor, Roussillon, and Burel, represented by X. Raclot, of Brussels, for "A moveable machine for towing and propelling vessels."—Dated 27th June, 1859.

7695. W. Richards, represented by H. Biebuyck, of Brussels, for an imported invention of "Improvements in the construction of gas meters."—Dated 27th June, 1859.—(English Patent, 26th November, 1858.

7696. R. Garrett and J. Kerridje, represented by H. Biebuyck, of Brussels, for an imported invention of "Improvements in machines for thrashing and cleaning corn."—Dated 27th June, 1859.—(English Patent, 18th January, 1859.)

7697. A. R. André, of Charleroi, for "A machine for making nuts."—Dated 29th June, 1859.

7698. L. J. Beeckman, represented by D. Hérode, of Schaerbeek, for "A machine for collecting votes."—Dated 29th June, 1859.

7700. H. Potez and L. Sénéchal, represented by R. S. Kirkpatrick, of Ixelles, a Patent of Improvement for "A machine for screw-cutting bolts."—Dated 29th June, 1859.—(Original Patent, 2nd June, 1857.)

7701. J. M. B. S. Papillon, represented by O. Daillencourt, of Brussels, for an imported invention of "A smoke-consuming fire-place with a moveable grate."—Dated 29th June, 1859.—(French Patent, 14th May, 1859.)

7702. Bouillon, Muller, and Co., represented by O. Daillencourt, of Brussels, for an imported invention of "A washing machine."—Dated 29th June, 1859.—(French Patent, 19th April, 1858.)

7703. Bouillon, Muller, and Co., represented by O. Daillencourt, of Brussels, for an imported invention of "Fixed or portable hot-air drying kilns for various domestic or industrial purposes."—Dated 29th June, 1859.—(French Patent, 30th March, 1859.)

7704. Bouillon, Muller, and Co., represented by O. Daillencourt, of Brussels, for an imported invention of "Improvements in portable and fixed boilers, applicable to apparatus used for domestic or industrial purposes."—Dated 29th June, 1859.—(French Patent, 28th June, 1859.)

7705. Bouillon, Muller, and Co., represented by O. Daillencourt, of Brussels, for an imported invention of "Fixed and moveable apparatus for washing linen."—Dated 29th June, 1859.—(French Patent, 28th June, 1859.)

7706. M. Erard, of Lodelinsart, for "Improvements in irons for moulding the mouth and collars of bottles."—Dated 1st July, 1859.

THE NETHERLANDS.

List of Patents Delivered since the 3rd and 4th April, 1859.*

(Communicated by His Excellency the Minister of the Interior.)

(For previous List, see No. 551 of this Journal.)

1. Reuver and Silvie, of Paris, represented by J. J. von Dort, of Gravenhage, for an imported invention of "Improvements in machines for obtaining and condensing steam and vapours of other fluids, being especially applicable to steam engines in which steam of ether and other fluids may also be used."—10 years.—Dated 8th June, 1857.

2. R. S. Kirkpatrick, of Paris, represented by J. de Bas, of Gravenhage, for an imported invention of "Improvements in the treatment and machines employed in carbonizing peat, lignite, brown coal, wood, pit-coal and bones."—15 years, from the 14th February, 1856.—Dated 29th June, 1857.

3. E. J. Cusinberche, jun., of Paris, represented by L. J. Vonk, of Gravenhage, for an imported invention of "New substances and cement for moulding."—15 years, from the 7th May, 1857.—Dated 15th October, 1857.

4. Eng. Dumont, of Luik, represented by A. F. de Salle, at Gravenhage, for an imported invention of "A gas carburator."—15 years.—Dated 11th February, 1859.

5. P. A. Comte de Fontaine Moreau, of Paris, represented by L. J. Vonk, for an imported invention of "A new kind of tubular or cylindrical filtering apparatus."—10 years.—Dated 8th May, 1859.

* For the Dutch Patent Law, see No 289 of this Journal.

DELIVERY OF LETTERS.—For the Great Seal Patent Office the initials are W. C., the District being the Western Central. In the direction of a Letter, these initials should be legibly written in a separate line, and should in all cases end the address, thus:—

The Commissioners of Patents,
Great Seal Patent Office,
25, Southampton Buildings,
London,
W.C.

List of Specifications published during the week ending 8th July, 1859.

No.	Price.	Subject-Matter.
2487	10*d.*	Distilling products from bituminous coal, &c.
2625	1*s.* 4*d.*	Steam engines.
2739	7*d.*	Pressure gauge.
2740	5*d.*	Purification of gas, &c.
2743	5*d.*	Portmanteaus, desks, &c.
2744	10*d.*	Furnaces and apparatus for annealing wire.
2745	5*d.*	Manufacture of cocks or taps.
2746	5*d.*	Fastening for doors, sashes, or frames.
2746	3*d.*	Railway and other wheels and wheel tyres.
2748	7*d.*	Agricultural implements.
2749	3*d.*	Manufacture of coloring matter for spirits, &c.
2750	5*d.*	Annealing kilns or ovens.
2751	7*d.*	Trucks for locomotive engines.
2752	6*d.*	Attaching sails to the yards of ships or vessels.
2753	4*d.*	Manufacture of useful alloys or alluminium.
2754	7*d.*	Combined bathing, washing, and water-closet apparatus.
2755	7*d.*	Manufacture of sugar.
2756	3*d.*	Manufacture of ropes, cables, cords, and lines.
2757	1*s.*	Machinery for winding yarns or thread.
2759	9*d.*	Railway wheels.
2760	6*d.*	Knapsacks.
2761	10*d.*	Manufacture of animal charcoal, &c.
2762	9*d.*	Loading fire arms, &c.
2763	3*d.*	Apparatus for measuring the human figure, &c.
2764	1*s.* 1*d.*	Generating gas from coal.
2765	3*d.*	Manufacture of pipes and tubes.
2766	3*d.*	Cornets, trumpets, &c.
2767	10*d.*	Maundrills for printing.
2768	3*d.*	Apparatus for ventilating mines, &c.
2769	3*d.*	Preventing draughts, &c. from window sashes.
2772	7*d.*	Machine for compressing and cutting tobacco.
2774	6*d.*	Furnace doors and dampers.
2775	7*d.*	Communicating railway signals.
2777	5*d.*	Looms for weaving.
2778	3*d.*	Breech-loading fire-arms.
2780	3*d.*	Chairs.
2781	3*d.*	Manufacture of boards or sheets when wood sawdust is used.
2782	3*d.*	Machines for stretching and drying fabrics.
2784	7*d.*	Harvesting machines.
2785	3*d.*	Mules for spinning.
2786	3*d.*	Combs, gills, hackles, &c.
2787	10*d.*	Manufacture of stoves and fire places.
2788	6*d.*	Envelopes.
2789	3*d.*	Agricultural machinery.
2790	3*d.*	Ornamental or colour printing.
2791	9*d.*	Machinery for cutting woollen fabrics.
2792	5*d.*	Machinery for raising the nap on woollen cloths.
2793	7*d.*	Indicating gauges
2794	6*d.*	Manufacture of gloves.
2795	6*d.*	Bolts for securing doors, &c.
2796	3*d.*	Railway and other breaks.
2797	4*d.*	Taps, valves, &c.
2798	3*d.*	Portable bath.
2799	3*d.*	Securing and liberating the corks and stoppers of bottles.
2800	3*d.*	Apparatus for hot-pressing woven fabrics
2801	3*d.*	Machinery for embroidering woven fabrics.
2802	3*d.*	Apparatus for refrigerating and regulating the temperature of worts and beer.
2803	3*d.*	Steam fire engines, &c.
2804	10*d.*	Apparatus for the manufacture of boots and shoes.
2805	3*d.*	Healds for weaving.
2806	5*d.*	Pumping and forcing liquids.
2807	3*d.*	Obtaining and purifying naphtha, paraffine and other oils, &c.
2808	11*d.*	Machinery for carding, scribbling, and condensing wool, &c.
2809	6*d.*	Registering apparatus for lever balances.
2810	9*d.*	Manufacture of animal or vegetable charcoal.
2811	3*d.*	Hydraulic counter.
2812	3*d*	Floating paddle wheel.
2815	1*s.* 4*d.*	Apparatus for superheating steam.

*** Specifications will be forwarded by post on receipt of the amount of price and postage. Sums exceeding 5*s.* must be remitted by Post Office Order, made payable at the Post Office, High Holborn, to Mr. Bennet Woodcroft, Great Seal Patent Office.

ALL FOREIGN and COLONIAL PATENT LAWS and RULES, being translations or copies of Official Communications, may be found in the following Numbers of this Journal, published at 2*d.* each, or 3*d.* free by post:—

Austria, No. 291.
Bavaria, No. 262.
Belgium, Nos. 292 and 348.

Museum of Patents, South Kensington.

NUMBER of VISITORS for the Week ending 9th July, 1859.

Mornings - - - -	1244
Evenings - - - -	959
Total - - -	2203

Since the opening of the Museum Free Daily (May 12, 1858,)—116,215.

THIS Museum is open to the public daily, free of charge. The hours of admission are from 10 A.M. to 6 P.M., and in the evenings of Monday, Tuesday, and Wednesday from 7 to 10 P.M.

All communications on the subject of the Museum to be addressed to the Superintendent,

B. WOODCROFT.

Great Seal Patent Office,
Southampton Buildings.

GALLERY OF PORTRAITS OF INVENTORS, DISCOVERERS, AND INTRODUCERS OF USEFUL ARTS.—This Collection, formed by Mr. Woodcroft, and first opened to public view in the Great Seal Patent Office in 1853, now constitutes a portion of the Patent Museum at South Kensington.

Presentations of original Portraits, Medallions, Busts, and Statues, in augmentation of the Collection, are hereby invited, and will on receipt be acknowledged in this Journal, and duly recorded in the next published Catalogue.

REAPING MACHINES.—The entire series of Specifications and Drawings on this subject to the end of 1853, together with an Appendix, prepared by B. Woodcroft, of the Patent Office, and published under the sanction of the Commissioners, may be obtained at the cost price of 2*l.* 3*s.* 11½*d.*

FIRE-ARMS, PROJECTILES, &c.—The series of Specifications and Drawings on this Subject, from 15th May, 1718, to 31st December, 1853, with Alphabetical and Subject-matter Indexes, may be obtained at the cost price of 9*l.* 18*s.* 6½*d.*

The Indexes, separately, price 3*s.*

COLONIAL PATENTS.—Information as to the Mode of obtaining Protection for Inventions in the Colonies; contained in Communications from the Governors, &c. of the different British Colonies in answer to the Application of Mr. W. J. CURTIS for a Patent. Price 1*s.*

PATENT RIGHTS in the COLONIES.—Abstract of Replies to the Secretary of State's Circular Despatch of July 11, 1856, calling for Information as to the Form of the Application to be made by Persons desirous of obtaining Patent Rights in the Colonies, and the Expenses attendant on the Grant of such Patent Rights. Price 2*s.* 6*d.*

In course of Publication, by Order of the Commissioners of Patents.

ABRIDGMENTS (in Classes, and Chronologically arranged) of all SPECIFICATIONS of PATENTED INVENTIONS, from the earliest enrolled to those published under the Act of 1852.

These books are of 12mo size, and as each is limited to inventions of one class only, they can be sold at prices sufficiently moderate to enable the humblest inventor to examine for himself whether his discovery has been previously patented or not.

At the foot of each abstract are given references to notices of the inventions in scientific and other works, and to the reports of law proceedings for infringements, &c. &c. &c.

The classes already published are,—

1. DRAIN TILES AND PIPES, price 6*d.*
2. SEWING AND EMBROIDERING, price 6*d.*
3. MANURE, price 6*d.*
4. PRESERVATION OF FOOD, price 6*d.*
5. MARINE PROPULSION, price 4*s.*
6. MANUFACTURE OF IRON AND STEEL, price 5*s.*
7. AIDS TO LOCOMOTION, price 1*s.*
8. STEAM CULTURE, price 2*s.*
9. WATCHES, CLOCKS, AND OTHER TIMEKEEPERS, price 1*s.* 6*d.*
10. FIRE-ARMS AND OTHER WEAPONS, AMMUNITION, AND ACCOUTREMENTS, price 6*s.* 6*d.*
11. PAPER.—PART I. MANUFACTURE OF PAPER, PASTEBOARD, AND PAPIER MÂCHÉ, price 3*s.*
12. TYPOGRAPHIC, LITHOGRAPHIC, AND PLATE PRINTING, price 7*s.*
13. BLEACHING, DYEING, AND PRINTING YARNS AND FABRICS, price 9*s.* 6*d.*

The following are in the press:—

PAPER.—PART II. CUTTING, FOLDING, AND ORNAMENTING; INCLUDING ENVELOPES, CARDS, PAPER-HANGINGS, &c.
ELECTRICITY AND MAGNETISM: THEIR GENERATION AND APPLICATIONS.
PREPARATION OF FUEL, AND APPARATUS FOR ITS COMBUSTION.
MANUFACTURE AND APPLICATIONS OF INDIA RUBBER, GUTTA PERCHA, &c.; INCLUDING AIR, FIRE, AND WATER PROOFING.
PRODUCTION AND APPLICATIONS OF GAS.
STEAM ENGINES.

B. WOODCROFT.

The above, and all other works published by the Commissioners of Patents, are now on sale at the Great Seal Patent Office, 25, Southampton Buildings, Holborn.

This Journal is published on the evenings of Tuesday and Friday, and will be forwarded, post free, to Subscribers.—Terms, 30*s.* per annum.—Subscriptions received at the Great Seal Patent Office, where also single copies, at twopence each, may be obtained.

THE

COMMISSIONERS OF PATENTS' JOURNAL.

By Authority.

(*Registered for transmission abroad.*)

No. 577. FRIDAY, JULY 15, 1859. Price 2d.

Grants of Provisional Protection for Six Months.

NOTICE is hereby given that Provisional Protection has been allowed

1402. To WILLIAM BUMESS, of 2, Prospect Terrace, Brixton, in the county of Surrey, for the invention of "Improvements in steam culture machinery, part of which is applicable to steam cartage and other purposes."

On his petition, recorded in the Office of the Commissioners on the 9th day of June, 1859.

1450. To THOMAS WHARTON JONES, of 35, George Street, Hanover Square, in the county of Middlesex, Esquire, for the invention of "Stereoscopic glasses for single pictures."

On his petition, recorded in the Office of the Commissioners on the 16th day of June, 1859.

1472. To JOSIAH FIRTH, of Heckmondwike, near Leeds, in the county of York, Manufacturer, and JAMES CRABTREE, of Mill Bridge, Leeds, in the county of York, Overlooker, for the invention of "Improvements in the manufacture of carpets."

On their petition, recorded in the Office of the Commissioners on the 18th day of June, 1859.

1494. To LEMUEL DOW OWEN, of No. 192, Tottenham Court Road, in the county of Middlesex, Engineer, for the invention of "Improvements in machinery for manufacturing bolts and nails."—A communication from Foreigners residing abroad, videlicit, by Messieurs Buck and Company, Engineers, of Lebanon, New Hampshire, in the United States of America.

On his petition, recorded in the Office of the Commissioners on the 21st day of June, 1859.

1532. To ROBERT DICK, of the city of Toronto, in the county of York, and province of Canada, for the invention of "Keeping accounts current in printed form, for addressing cards, circulars, papers, and periodicals of all kinds, with great rapidity," by the aid of a very simple machine, which is a constituent part of this invention."

On his petition, recorded in the Office of the Commissioners on the 27th day of June, 1859.

1539. To WILLIAM EDWARD NEWTON, of the Office for Patents, No. 66, Chancery Lane, in the county of Middlesex, Civil Engineer, for the invention of "An improvement in variable cut off gear for producing expansion in steam and other motive engines."—A communication from abroad by Ambrose Foster, Noah Sutton, and James Stephens, all of New York.

1541. And to JOHN MARIA JOSEPH BAILLIE, of No. 15, St. Mary Axe, in the city of London, for the invention of "A new process for tanning hides and skins."—A communication from Monsieur A. Paulmier, resident at Paris, in the empire of France.

On both their petitions, recorded in the Office of the Commissioners on the 28th day of June, 1859.

1542. To JAMES NASH, of Mill Wall, in the county of Middlesex, Smith, for the invention of "An improved disengaging block."

1543. To GEORGE HALL, jr., of Montrose, in the county of Forfar, North Britain, Farmer, for the invention of "Improvements in reaping machines."

1544. To ALEXANDER MCDOUGALL, of Manchester, in the county of Lancaster, Chemist, for the invention of "Improvements in the preparation of disinfecting and antiseptic substances."

1547. To WILLIAM WILKINSON, of Bayswater, in the county of Middlesex, Engineer, and DAVID WHITE, of High Holborn, in the same county, Surveyor, for the invention of "Improvements in apparatuses for holding, regulating, compressing, and burning gas and other gaseous fluids, parts of which apply to the holding of liquids."

1548. To Isaac Tirebuck, of Windsor Court, in the city of London, Printer, for the invention of "Improved machinery for printing from engraved plates."

1549. To William John Thompson Williamson, of 37, Gerrard Street, Soho, in the county of Middlesex, for the invention of "Improvements in gas burners."

1550. To George Chapman, of Rutland Street, Leicester, for the invention of "Improvements in knitting machines."

1551. To John Joseph Griffin, of 119 and 120, Bunhill Row, in the county of Middlesex, for the invention of "Improvements in gas furnaces suitable for fusing refractory metals."

1552. And to George Baker, of Birmingham, in the county of Warwick, for the invention of "Improvements in the manufacture of metallic lattice or trellis work."—A communication from abroad by Owen Carraway, late of New York.

On their several petitions, recorded in the Office of the Commissioners on the 29th day of June, 1859.

1553. To Edward Francis, of Wrexham, in the county of Denbigh, Grocer, for the invention of "Apparatus for facilitating the making up or packing of sugar, and other articles of grocery, and other substances."

1555. To Richard Kay, Cotton Spinner, John Manock, Manager, John Whittaker, Mechanic, and Thomas Booth, Operative Cotton Spinner, all of Heywood, in the county of Lancaster, for the invention of "Improvements in machinery for slubbing, roving, spinning, and doubling cotton, and other fibrous materials."

1556. To William Bestwick, of Salford, near Manchester, in the county of Lancaster, Crinoline Steel Manufacturer, for the invention of "Improvements in crinoline steel for ladies' dresses, skirts, and other similar purposes."

1557. To Richard Archibald Brooman, of 166, Fleet Street, in the city of London, E.C., Patent Agent, for the invention of "Improvements in lithographic and chromo-lithographic presses."—A communication from abroad, by Jean Théodore Dupuy, of Paris.

1558. To Louis Boigeol, of Giromagny, near Belfors, town in the French empire, Manufacturer, for the invention of "Improved machinery for winding and twisting fibrous materials."

1559. To Thomas Bell, of Plaistow, in the county of Essex, for the invention of "Improvements in the manufacture of manure."

1562. To Jeptha Avery Wilkinson, of Brooklyn, in the state of New York, United States of America, for the invention of "Improvements in printing presses and apparatus connected therewith."

1563. To William Summerscales the elder, and John Summerscales, of Keighley, in the county of York, Machine Makers, for the invention of an "Improved wringing and mangling machine."

1564. And to Julian Bernard, of the Albany, Piccadilly, in the county of Middlesex, Gentleman, for the invention of "Improvements in uniting certain parts of boots and shoes, and in the means employed therein."

On their several petitions, recorded in the Office of the Commissioners on the 30th day of June, 1859.

1565. To James Rait Beard, of the city of Manchester, in the county of Lancaster, Merchant, for the invention of "Improvements in the manufacture of artificial whalebone, applicable to umbrellas, parasols, stays, hats, bonnets, reeds, crinolines, and other similar purposes."

1566. To Abel Jones, of Blackburn, in the county of Lancaster, Mechanic, for the invention of "Improvements in machinery or apparatus for drawing-in, twisting, or looming textile materials."

1567. To Bridge Standen, of Salford, in the parish of Manchester, in the county of Lancaster, Chymist, for the invention of "Improvements in the deoderizing and separation of fecal and putrescent organic matters, in the preparation or manufacture therefrom of a portable artificial manure or fertilising compound, and in apparatus to be employed in such preparation or manufacture."

1568. To Anton Carron, of No. 25, Little Moorfields, in the city of London, for the invention of "An improved loom for the manufacture of silk and other velvet."—A communication from abroad by Henri Carron, of No. 2, Rue St. Jean, Lyons, in the empire of France.

1569. To Nesserwanjee Ardaseer, British Subject, of Bombay, East Indies, for the invention of "An improved method of making steam boilers."

1570. To Joseph Bennett Howell, of Sheffield, in the county of York, Steel Manufacturer, for the invention of "Improvements in the treatment of iron."

1571. To Edward Wilson Carter, of Rochdale, in the county of Lancaster, Cutler, for the invention of "Improvements in machinery or apparatus for sewing."

1572. To Edwin Archer Wood, of Victoria Terrace, Notting Hill, in the county of Middlesex, of the Peninsular and Oriental Steam Navigation Company, and Martin Dadd Rogers, of Bromley, in the county of Middlesex, Shipwright, for the invention of "Improved apparatus for raising and lowering boats."

1573. To Samuel Fisher, of Birmingham, in the county of Warwick, Manufacturer, for the invention of "Improvements in ordnance and projectiles."

1574. To Robert Royds and Anthony Harcourt, both of Woolston, in the county of Hants, Engineers, for the invention of "An improved composition for protecting the bottoms of ships and other structures of iron."

1575. To William Riddle, of Westbourne Terrace, Barnsbury Park, Islington, in the county of Middlesex, for the invention of "Improvements in advertisement show cards or boards."

1576. To William Edward Kenworthy, of Water Lane, Leeds, in the county of York, Agricultural Chemist and Shoddy Merchant, for the invention of "Improvements in purifying gas, and saving of lime in the said purifying."

1577. And to Mark Bogg, of Duggleby, near Malton, in the county of York, Joiner, for the invention of "Improvements in washing machines."

On their several petitions, recorded in the Office of the Commissioners on the 1st day of July, 1859.

1578. To Charles Hill Penny Cook, of Glasgow, in the county of Lanark, North Britain, Tinsmith, for the invention of "Improvements in ventilators and ventilating flue or chimney tops."

1579. To Robert Whiteside Morville, of Pendleton, Salford, in the county of Lancaster, late of the United States, Engraver, for the invention of "Improvements in mechanism, or arrangements for suspending and securing window sashes."—A communication from abroad by Porter A. Gladwin, of Pawtucket, Rhode Island, United States.

1580. To Thomas James Hart, of Birmingham, in the county of Warwick, Gun Barrel Manufacturer, for the invention of "Improvements in breech loading fire-arms."

1581. To Charles George Guy, of Liverpool, in the county of Lancaster, Engineer and Boiler Maker, James Brough, of the same place, Boiler Maker, and Robert Cotton, of the same place, Gentleman, for the invention of "An improved upright steam boiler."

1582. To Edouard Fourmaux, junior, of Provin, in the department of the North, empire of France, for the invention of "A new weaving loom."

1583. To Charles Hanson Greville Williams, of 39, Regent Square, Gray's Inn Road, in the county of Middlesex, for the invention of "Improvements in dyeing fabrics and yarns."

1584. To Hermann Hirsch, of Berlin, in the kingdom of Prussia, for the invention of "Improvements in screw propeliors."

1585. And to Henry Harris, of Newport, Isle of Wight, for the invention of "An improved method of connecting together the parts of which bedsteads and other furniture are composed."

On their several petitions, recorded in the Office of the Commissioners on the 2nd day of July, 1859.

1586. To Joseph Simon, residing in Paris, Passage des Petites Ecuries, No. 5, for the invention of "A composition named zeiodelite, a kind of paste which becomes as hard as stone, is unchangeable by the air, and being proof against the action of acids, may replace lead and other substances for various uses."

1587. To James Hollingworth, of the Clyde Paper Mills, Eastfield, in the county of Lanark, North Britain, Manager, for the invention of "Improvements in machinery or apparatus for the manufacture of paper."

1588. To Robert Lane, of Cirencester, in the county of Gloucester, Machinist, for the invention of "Improvements in mills for grinding grain and other materials."

1590. To Richard Archibald Brooman, of 166, Fleet Street, in the city of London, E.C., Patent Agent, for the invention of "An improved hemmer or apparatus, to be used in connection with sewing machines, for turning over and presenting the edge of the material to be hemmed properly to the needle."—A communication from abroad, by Joseph Poole Pirsson, of New York.

1591. To Richard Archibald Brooman, of 166, Fleet Street, in the city of London, E.C., Patent Agent, for the invention of "A cementing powder or mixture, and process for cementing, converting, refining, strengthening, and steelifying iron."—A communication from abroad, by Job Johnson, of East Brooklyn, Long Island, in the state of New York.

1592. And to Alfred Vincent Newton, of the Office for Patents, 66, Chancery Lane, in the county of Middlesex, Mechanical Draughtsman, for the invention of "An improvement in the process of, and improved apparatus for, separating metals from their ores."—A communication from abroad, by Lewis Solomon, of New York, in the United States of America.

On their several petitions, recorded in the Office of the Commissioners on the 4th day of July, 1859.

1593. To James McIntosh, of Glasgow, in the county of Lanark, North Britain, Tanner and Currier, for the invention of "Improvements in the manufacture of leather driving belts."

1594. To William Knapton, of Albion Foundry, Monkbar, in the city of York, and Adam Aitchison, of Knottingley, in the county of York, for the invention of "Improvements in the manufacture of gas."

1597. To William Edward Newton, of the Office for Patents, 66, Chancery Lane, in the county of Middlesex, Civil Engineer, for the invention of "Improved apparatus for moving iron or other metals while the same is in process of manufacture at the rolls."—A communication from abroad by Charles Hewitt, of the city of Trenton, in the state of New Jersey, one of the United States of America.

1599. And to John Watkins, of the Cwmamman Colliery, Aberdare, in the county of Glamorgan, Agent, and James Pugh, of the same place, Mechanic, for the invention of "Improvements in lubricating wheels."

On their several petitions, recorded in the Office of the Commissioners on the 5th day of July, 1859.

1601. To Jozé Luis, of the British and Foreign Office for Patents, No. 1B, Welbeck Street, Cavendish Square, London, in the county of Middlesex, (Patent Agent,) for the invention of "An apparatus for washing wool, manufactured or not, and all other matters."—A communication from abroad by Eugène Pasquier, No. 10, Rue Mogador, Paris, in the empire of France.

1603. To Joshua Horton, of Dudley, in the county of Worcester, Machinist, for the invention of "A new or improved gas meter."

1605. To Samuel Burton Haskard, of Wollaton Street, in the town and county of the town of Nottingham, Spring, Point, and Guide Manufacturer, for the invention of "Improvements in the manufacture of hook guides used in machines for the making of lace or other fabrics."

1607. To Louis Schwartzkopff, of Berlin, and Ferdinand Carl Philippson, of Dusseldorf,

for the invention of "Improvements in steam hammers, and in machines for cutting files, and for planing and grooving iron, stone, and other substances."

1609. And to JOHN THOMAS EDMONDS, of Prestwood, Great Missenden, in the county of Bucks, Ironfounder, for the invention of "Improvements in winnowing or corn-cleaning machines, parts of which are applicable for other screening or sifting purposes."

On their several petitions, recorded in the Office of the Commissioners on the 6th day of July, 1859.

1613. To JOHN KNOWELDEN, of Southwark, in the county of Surrey, Engineer, and DOWNES EDWARDS, of Upper Belgrave Place, in the county of Middlesex, Gentleman, for the invention of "Improvements in hydraulic engines and pumps, and the employment of apparatus for applying motive power."

1615. To Sir FRANCIS CHARLES KNOWLES, of Lovell Hill, in the county of Berks, Baronet, for the invention of "Improvements in making iron castings."

1617. And to WILLIAM ROBINSON, of Wembdon, Bridgewater, in the county of Somerset, Brewer, for the invention of "Improvements in cask washing machines."

On their several petitions, recorded in the Office of the Commissioners on the 7th day of July, 1859.

Invention protected for Six Months by the Deposit of a Complete Specification.

NOTICE is hereby given that the Petition of

1621. WILLIAM WAITE, of York House, No. 48, Baker Street, Portman Square, in the county of Middlesex, praying for Letters Patent for the invention of "Manufacturing bonnets, hats, and other articles, partly or entirely from the leaves of the palm tree, or other flat or thin material," was deposited and recorded in the Office of the Commissioners on the 8th day of July, 1859, and a complete specification accompanying such petition was at the same time filed in the said office.

Patents Sealed.

LIST of LETTERS PATENT which passed the Great Seal on the

13th July, 1859.

120. JOSEPH BARRANS, of 2, Caledonian Terrace Queen's Road, Peckham, in the county of Surrey, for an invention of "Improvements in traction and portable steam engines."—Dated 13th January, 1859.

15th July.

128. JOSEPH ECCLES, of Blackburn, in the county of Lancaster, Cotton Manufacturer, for an invention of "Improvements in the manufacture of articles from clay earths for building purposes, as substitutes for such articles as are usually formed of stone and other materials."—Dated 15th January, 1859.

143. ROGER GEORGE SALTER, of Alphington, in the county of Devon, Engineer, for an invention of "Improvements in apparatuses for collecting or picking up letters, papers, and other articles requiring to be stamped or printed."—Dated 17th January, 1859.

144. GEORGE COLLIER and JOHN COLLIER, both of Halifax, in the county of York, for an invention of "Improvements in means or apparatus for washing and drying wool and other fibres, part of which improvements is also applicable for other purposes where steam, hot water, or other fluids are required to be conveyed under pressure through moveable connections."—Dated 17th January, 1859.

149. GEORGE HAMILTON, of Liverpool, in the county of Lancaster, Professor of Chemistry, Queen's College, Liverpool, aforesaid, for an invention of "Improvements in treating rosin and resinous subjects to obtain products therefrom, and in treating the products obtained from rosin and resinous substances."—Dated 18th January, 1859.

151. CHARLES DICKSON ARCHIBALD, of Rusland Hall, in the county palatine of Lancaster, England, Esquire, at present being in the city of New York, United States of America, for an invention of "Generating force."—A communication from Henry Munro Paine, residing at Worcester, Mass.—Dated 18th January, 1859.

152. RICHARD ARCHIBALD BROOMAN, of 166, Fleet Street, in the city of London, E.C., Patent Agent, for an invention of "An improved silk thread, and a new fabric made entirely or partially from the same."—A communication from C. Depoully, senior, residing at Paris.—Dated 18th January, 1859.

156. WILLIAM TROTTER, of South Acomb, in the county of Northumberland, Farmer, for an invention of "Improvements in reaping machines."—Dated 18th January, 1859.

160. PEHR AMBJÖRN SPARRE, of Stockholm, but now of 50, Chancery Lane, in the county of Middlesex, for an invention of "Improvements in the manufacture of paper suitable for bank notes, cheques, bills, and similar articles."—Dated 19th January, 1859.

162. EDWARD THOMAS HUGHES, of the firm of Hughes and Son, Patent Agents, 123, Chancery Lane, London, W.C., for an invention of "Improvements in machinery or apparatus for measuring and sorting silk and other textile materials."—A communication from Jules Veyrin, Silk Merchant, residing at Lyons, in the empire of France.—Dated 19th January, 1859.

164. EBENEZER STEVENS, of 5, Patriot Row, Cambridge Road, in the county of Middlesex, for an invention of "An improved cooking utensil."—Dated 19th January, 1859.

166. WILLIAM POUPARD, of Blackfriars Road, in the county of Surrey, Engineer, for an invention of "An improved wheel-skid or shoe."—Dated 19th January, 1859.

171. HARVEY HILLIARD and THOMAS CHAPMAN, Cutlery Manufacturers and Patentees of the 'Furbator,' of Glasgow, in the county of Lanark, North Britain, for an invention of "Improvements in

table-knives and in table-knife sharpeners."—Dated 20th January, 1859.

172. Abraham Lindo, of Batignolles, in the French empire, Chemist, for an invention of "Improvements in manufacturing soap."—Dated 20th January, 1859.

176. Samuel Phillips, of Moseley, in the county of Worcester, Gentleman, for an invention of "Improvements in sliding sashes, shutters, or doors."—Dated 20th January, 1859.

189. Richard Howell, of Smethwick, in the county of Stafford, Gas Fitter, and Richard James Willder, of Birmingham, in the county of Warwick, Hatter, for an invention of "An improvement or improvements in taps or stopcocks."—Dated 21st January, 1859.

245. Thomas Hartshorne, of West Bromwich, in the county of Stafford, Brass Founder, for an invention of "An improved metal to be used for making journey brasses for mills, rollers, forges, and all kinds of shafts and machinery, and also for shipping, and for bearings for shafts and journey brasses in general."—Dated 27th January, 1859.

252. George Francis Bradbury, of Oldham, in the county of Lancaster, and Joseph Jackson King, of Glasgow, in the county of Lanark, North Britain, for an invention of "Improvements in certain apparatus applicable to sewing machines."—Dated 27th January, 1859.

256. William Robertson, of the city of Manchester, in the county of Lancaster, Mechanician, for an invention of "A new apparatus for propelling boats on canals, rivers, and lakes of moderate depth."—Dated 28th January, 1859.

301. Samuel Tearne, of Birmingham, in the county of Warwick, Japanner, for an invention of "Improvements in ornamenting surfaces."—Dated 2nd February, 1859.

336. Thomas Russell Ayerst, of Newenden, in the county of Kent, Bookkeeper, for an invention of "Improvements in breech-loading guns and other fire arms."—A communication from abroad by James Hunter Sears, of Brantford, in the county of Brant, Upper Canada.—Dated 5th February, 1859.

496. Samuel Russell, of No. 12, Sheaf Gardens, Sheffield, in the county of York, Britannia Metal Manufacturer, for an invention of "An improvement in the manufacture of handles for tea and coffee-pots, jugs, kettles, knives, daggers, and forks, or any other description of article to which handles are applied."—Dated 23rd February, 1859.

511. Thomas Callender Hinde, of Dudley, in the county of Worcester, Iron Merchant, and George James Hinde, of Wolverhampton, in the county of Stafford, Merchant, for an invention of "Improvements in coating iron with copper or alloys of copper."—Dated 25th February, 1859.

556. William Edward Newton, of the Office for Patents, 66, Chancery Lane, in the county of Middlesex, Civil Engineer, for an invention of "Improvements in the construction of barometers or instruments to indicate pressure."—A communication from Mr. Alfred Nobel, of Paris, a foreigner residing abroad.—Dated 2nd March, 1859.

986. Christopher Batty, of Manchester, in the county of Lancaster, Collector, for an invention of "An improved means or apparatus for effecting instantaneous communication on railways between passengers and officials."—Dated 19th April, 1859.

1004. John Davies, of Tetbury, in the county of Gloucester, Machinist, for an invention of "A new or improved apparatus for ringing door bells, and a bolt to be used with the said apparatus and for other purposes to which the said bolt is or may be applicable."—Dated 21st April, 1859.

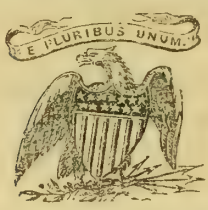
1009. George Roberts and John Bridges, of No. 20, Ponsonby Place, Vauxhall Bridge Road, in the county of Middlesex, for an invention of "Improvements in the manufacture of candles."—Dated 21st April, 1859.

1043. Herbert Allman, of Mornington Place, Hampstead Road, London, Consulting Engineer, for an invention of "Certain improvements in the construction of window-blind mountings and in apparatus connected therewith."—Dated 26th April, 1859.

1160. Frederick Vernon Hadlow, of 8, Prince Albert Street, Brighton, in the county of Sussex, Engraver, for an invention of "An improved stamp for marking linen and other wearing apparel."—Dated 9th May, 1859.

1167. William Frost Nuthall, of North Lodge, Kilburn, in the county of Middlesex, a Major in Her Majesty's Bengal Army, for an invention of "Improvements in ordnance and fire-arms, and in projectiles to be used therewith."—Dated 10th May, 1859.

Patents on which the Stamp Duty of £50 has been Paid.



(*To 13th July*, 1859.)

1660. William Clibran and Joseph Clibran, of the city of Manchester, Machinists and Manufacturers of 'Gas Regulators,' for an invention of "Improvements in apparatus or mechanism for regulating and measuring gas."—Dated 15th July, 1856.

1670. Henry Turner, of Leeds, in the county of York, Leather Merchant, for an invention of "Improvements in cutting hides for making flexible pipes and for certain other purposes."—Dated 16th July, 1856.

1767. William Wood, of Monkhill House, near Pontefract, in the county of York, Gentleman, for an invention of "Improvements in machinery or apparatus for weaving pile fabrics."—Dated 25th July, 1856.

FOREIGN PATENTS.

UNITED STATES OF AMERICA.

(Communicated by the Commissioner of Patents.)

LIST of PATENTS, with Claims annexed, issued from the United States Patent Office, for the week ending 28th June, 1859, and each bearing that date.

No. 24,528. JAMES N. ALLEN, of Providence, R.I., for an "Improvement in constructing rims and field pieces for watch and locket cases."

"I claim making the rim and field piece for watch or locket cases, from a strip of sheet metal, substantially as described."

No. 24,529. C. M. ALEXANDER, of New Albany, Ind., for an "Improvement in vapor lamp burners."

"I claim the combination of a retort having converging sides, and constructed substantially in the manner herein set forth, with an inlet pipe, an outlet pipe, and a burner, for the purpose of forming a gas generating apparatus, to be used in connection with fluid lamps, as is herein fully described."

No. 24,530. JOSHUA C. BEAN, of Grayville, Ill., for an "Improvement in seeding machines."

"I claim the arrangement of the hopper (C) and arms (i, i^1), in combination with the inclined equalizer (h), the whole being constructed substantially as and for the purposes set forth."

No. 24,531. WM. BEAUMONT, of Paterson, N. J., for an "Improvement in gas retorts."

"I claim making all that part of a retort, which is most subject to expansion and contraction, corrugated, to prevent fracture, as herein described."

No. 24,532. EDWD. BECK, of Allentown, Pa., for an "Improved contrivance by which the workman operates scroll saws."

"I claim the oscillating platform L, connected with the shaft C, by means of the straps h, h, and pulley D, or their equivalents, the arm E, pitman F, and spring I, arranged for joint operation, substantially as and for the purpose set forth."

No. 24,533. HENRY BETTS, of Hamilton City, Canada West, for an "Improvement in railroad bars or rails."

"What I claim is, the angle rail, in combination with the outside bar, where the space between them is filled in with cement, prepared by boiling sand and coal tar, in such proportions as will best resist the action of the elements, cold, heat, and moisture, and the wear of the wheels."

No. 24,534. MILTON B. BIGELOW and ANSON HARDY, of Boston, Mass., for an "Improved fire-proof desk."

"What we claim is, the movable table d, or any device essentially the same, in combination with the fire-proof case a, a, a, said table being constructed and made so as to operate in the manner substantially as and for the purposes herein specified. We also claim the slide f, or any device essentially the same, in combination with the movable table d, and the fire-proof case a, a, a, for supporting or assisting to support said movable table, whenever said table is drawn out to the position shown in Fig. 2, said slide and said table being connected and made, so as to operate in the manner and for the purpose substantially as herein specified and shown. We also claim the brackets q, q, or any device substantially the same, in combination with the fire-proof case a, a, a, for supporting or assisting to support the movable table d, and the slide f, in the manner and for the purpose, substantially as herein shown and explained."

No. 24,535. NELSON BIRDSALL, of Port Jervis, N. Y., for an "Improved spring hinge."

"I claim the combination and arrangement of the spring E, and adjusting piece G and H, applied to a hinge, as described and specified. I also claim inserting within the spiral spring E, the tubular spring I, as described, for assisting the action of the spiral spring, and preventing it from setting or getting out of plane with the other parts, as set forth and specified."

No. 24,536. L. E. BURDIN, of Paris, Ky., for an "Improvement in ploughs."

"I claim the arrangement of the beam M, the handles N the standard K, brace H, share B, landside F, cone A, spindle or shaft E, braces C and G, and lug o, as described, for the purposes set forth."

No. 24,537. ALEXANDER, WILLIAM, and JAMES CAMPBELL, of Harrison, Ohio, for an "Improvement in corn planters."

"We claim the described arrangement of the inclined slides or valves H, H^1, levers J, J^1, adjustable rods o, o, and cam wheel K, k, for the purpose explained."

No. 24,538. JAMES A. CAMPBELL, of New Orleans, La., for a "Job and card printing press."

"I claim fastening the cylinder permanently on its solid axle E, and also fastening the ends of this axle securely into the slides F. I also claim, in combination with the cylinder L, the revolving of the roller frame H, on the solid axle E, as its working centre, while the axle itself does not revolve either by eccentric wheels, which are to be used when the cylinder vibrates, or by plain ones, when it is stationary. I also claim the eccentric wheels G and G^1, in combination with the cylinder L, for the purposes specified. I also claim the cranks R and connecting rods D in combination with the cylinder L, the inking frame H, and the eccentric wheels G and G^1. I also claim the combination of the cranks S, the connecting rods T, the slots Y, the pins W, and the buttons X, with this press, as specified and described."

No. 24,539. W. I. CANTELO, of Burlington, N.J., for an "Improvement in stoves."

"I claim the exterior casing A, and inner adjustable casing H, in combination with the fire pot F, and cone-shaped grate G, when the several parts are arranged, substantially, as and for the purpose herein set forth."

No. 24,540. THOS. F. CHRISTMAN, of Wilson, N.C., for an "Improvement in machine for hoisting bricks."

"I claim the combination of the rollers D, D, with the saddle and buckets E, F, supported by rollers J, J, the whole combined and described as a machine for elevating brick, and made to operate in the manner as set forth."

No. 24,541. GILES CRAMTON, of Marshall, Mich., for an "Improvement in seed planters."

"But what I claim, is, the application and use of the pulleys P^1, P^2, P^3, in combination with the adjustable hanger T, tension bar R, lever H^2, and yoke U, with its attached spring stops W, W, the whole being arranged, constructed, and operated substantially as and for the purposes specified."

No. 24,542. CALEB B. DAVIS, of Lawrenceburgh, Tenn., for an "Improvement in machines for sowing fertilizers in drills."

"I claim the arrangement of hopper A, wheels B^1, B^2, frame C, C, handles D, D, shoe E, handle of shoe H, pins on wheels b, b, and axle-trees G, G, as described, for the purpose set forth."

No. 24,543. AURELIUS DICKINSON, of Claremont, N. H., for an "Improvement in apparatus for purifying gas."

"What I claim, is, the washer constructed as described, with horizontal plates B, B, corrugated, or with the bottoms

partly or wholly concave, and with upright plates projecting above and below the said plates, and dipping into the water below the said plates, and with orifices so arranged in the highest portions of the said horizontal plates as to cause the collection of the gas in the concave portions of the said plates, below and around said orifices, substantially as herein described."

No. 24,544. Geo. Dieffenbach, of New York, N.Y., for an "Improvement in bases for artificial teeth."

"What I claim, is, the composition of matter, consisting of sulphate of alumina, and other ingredients, substantially as described, for the purpose as set forth."

No. 24,545. Geo. Dieffenbach, of New York, N. Y., for an "Improvement in process for coloring artificial teeth."

"What I claim, is, developing the color of a cured or hardened composition, by the agency of solar light, when the coloring matter is incorporated into the said composition while in its plastic or uncured state, substantially as described."

No. 24,546. Wm. T. De Golyer, of Schenectady, N. Y., for an "Improvement in connecting boards for roofs, &c."

"I claim covering the joints of boards or plank, for roofing by means of sheets of metal, bent in the form shown at *a*, *b*, *c*, so that the strips of wood, or other packing used, shall lie on as well as against the flanges turned on said sheet metal, as represented."

No. 24,547. John H. Dukme, of Cincinnati, Ohio, for an "Improvement in furnaces."

"What I claim, is, the arrangement of the flue spaces A, A^1, controlled by dampers H and G, for the purpose of increasing and perfecting the combustion, substantially as set forth."

No. 24,548. J. Henry Ferguson, of Baltimore, Md., for an "Improvement in cartridges."

"What I claim is, a waterproof and inflammable cartridge made substantially as described."

No. 24,549. Benj. G. Fitzhugh, of Frederick, Md., for an "Improvement in harvesting machines."

"What I claim is, the combination of a rake and reel revolving on the same shaft, when the rake is so made as to deliver the cut material in a line oblique to the swath of the machine, substantially as described."

No. 24,550. Moses R. Flanders, of Parishville, N. Y., for an "Improvement in grain cradles."

"What I claim is, attaching the finger standard B to the snath A by means of the rod *c* and eye *b*, secured respectively to the standard and snath, in connection with the compensating or adjustable braces H, J, the whole being constructed and arranged substantially as and for the purpose set forth."

No. 24,551. Peter Fontain, of Philadelphia, Pa., for an "Improvement in gas purifiers."

"What I claim is, the receptacle or receiver E, in combination with the filtering and purifying apparatus, arranged and operating substantially as described, for the purpose set forth."

No. 24,552. John Galt, of Philadelphia, Pa., for an "Improved reciprocating propeller."

"What I claim is, first, combining the buckets E, E, and E^1, E^1, with the frames D, D^1, and with the driving rods F, F^1, or their equivalents, by means of cross heads G, G^1, and H, H^1, link connections *f*, *f*, f^1, f^1, and slots *c*, *c*, c^1, c^1, and *d*, *d*, d^1, d^1, substantially as and for the purpose herein specified. Second, the construction of the propellers with their frames D, D^1, of flaring form, and with their buckets fitted to the smaller front portions thereof, substantially as and for the purpose herein specified. Third, constructing the driving rods each in two parts, one of which, connected with the buckets, is capable of being connected with or disconnected from the other at pleasure, for the purpose either of closing the buckets before the backward movement and opening them before the forward movement of the propeller frame D or D^1 commences, or of causing the closing of the buckets before the forward, and the opening of them before the backward, movement, as may be desired, and thereby enabling the action of the propeller to be reversed without reversing the engine."

No. 24,553. W. H. Gray, of Dover, N. H., for an "Improvement in the let-off motion for looms."

"I claim the board or plate *k* and springs *n*, *n*, applied to the breast beam of the loom, and combined with a clutch, by which the yarn beam can be thrown into gear with the cam shaft or crank shaft of the loom, to operate substantially as and for the purpose herein described."

No. 24,554. Christian Gingrich and Joseph K. Gingrich, of Annville, Pa., for an "Improvement in rotary harrows."

"We claim the cleavers H in combination with roller G and ring B, when arranged substantially as and for the purposes herein set forth."

No. 24,555. C. P. Gronberg, of Montgomery, Ill., for an "Improvement in raking attachment for harvesters."

"I claim the peculiar arrangement of the mechanism, namely, the reciprocating rack bar D and semicircular toothed bar *d* in connection with the bent rack shaft E, provided with a spring *h*, arm *m*, and part pinion G^1, and the semicircular bar *j* on the support e^1, provided with teeth *k* and a projecting arm *n* for joint operation, substantially as and for the purpose set forth."

No. 24,556. Heinrich Guth, of New York, N. Y., for an "Improvement in alcohometers."

"What I claim is, an alcohol indicator, substantially such as described, by which the evaporation of a fixed quantity of alcoholic liquid is made to indicate the exact per centage of alcohol contained in the said liquid, for the purpose set forth."

No. 24,557. James Harrison, jr., of New York, N. Y., for an "Improvement in machine for making upholstery springs."

"What I claim is, 1st, giving one or more of the forming rollers a positive rotary motion at a velocity which causes its or their periphery or peripheries to move faster than the periphery of that part of the mandrel in conjunction with it, or they, at any time are in operation, substantially as and for the purpose set forth. 2nd, connecting the axle of the roller g^2, or any of the forming rollers, by a link and two universal joints with a shaft having a longitudinally sliding and also a rotary motion, for the purpose of giving the said roller a rotary motion and a motion along the mandrel, and allowing it to accommodate its position to the varying diameter of the mandrel, substantially as herein described."

No. 24,558. I. F. Holloway, of Saline Mines, Ill., for an "Improved ship's capstan."

"What I claim is, a capstan, having a vertical movement, as well as a rotary one, substantially in the manner and for the purpose specified."

No. 24,559. Marcus L. Horton, of Lebanon, N. H., for an "Improvement in stoves."

"I claim the ventilator I, with valve *h*, and hood *g*, as arranged, and in combination with chambers H, H^1, E, E^1, and flues G, G, and D, operating as described, and for the purpose set forth."

No. 24,560. D. L. Hubbard, of Glastenbury, Conn., for an "Improvement in apparatus for tanning."

"I claim the wheel or cylinder B, having its periphery formed of oblique slats *c*, placed within the vat A, and arranged to operate as and for the purpose set forth. I further claim, in combination with the wheel or cylinder B, constructed as described, the apron C, for the purpose specified."

No. 24,561. Wm. G. W. Jaeger, of Baltimore, Md., for an "Improvement in apparatus for condensing coal oils."

"I claim the employment of a fan blower, when the same is used to draw the vapors from the retort, in the manner and for the purposes herein set forth. 2nd, and in combination with the fan blower or draft so used, I claim the escape pipe *x* and trap a^1, arranged and operating as herein set forth."

No. 24,562. J. C. Jeffries, of Mount Vernon, Ind., for an "Improved bedstead fastening."

"I claim the construction, use, and application of a bedstead fastening, formed with male and female plates *a*, *a*

g, *g*, Figures 2 and 3, provided with tongues *b*, *b*, *h*, *h*, and hooks *c*, *c*, *i*, *i*, when arranged in combination with a post and rail, substantially in the manner as set forth and described."

No. 24,563. Edwd. C. Knight, of Philadelphia, Pa., for an "Improvement in arranging couches in railroad cars."

"What I claim is, first, the mode of arranging berths, or couches, over backs of railroad car seats, substantially as set forth. Second, I claim the manner of supporting the backs of the seats, by slides E^{11} and rod (F), for the purpose herein shown and described."

No. 24,564. Melvin W. Knox, of Sheridan, N.Y., for an "Improved cross-cut sawing machine."

"I claim, 1st, the arrangement of the several parts of a sawing machine, as herein described, whereby the operator can manage the sawing, elevating, and depressing the saw, and opening and closing the clamp, without changing its position in relation to the machine. 2d, the guides O, and blocks *r*, when arranged in combination with the saw, in the manner specified."

No. 24,565. Isaac W. Lamb, of West Novi, Mich., for an "Improvement in braiding machines."

"I claim, 1st, the combination of the two sets of shuttle carriers K, K, K^1, K^1, rotating in opposite directions in concentric circles, and the shuttle changers N, N^1, having the movements described, the whole operating substantially as herein set forth. 2nd, the construction of the shuttles, each with two openings *r*, *s*, and with a spring dog *u*, entering both openings, to operate in combination with the inclined surfaces and stops of the shuttle carriers and shuttle changers, substantially as and for the purpose described. 3d, the combination with the shuttles of the nippers *v*, *v*, and their several appendages and appliances, by which their bite or friction upon the plaits, are regulated and rendered uniform, substantially as and for the purposes herein described."

No. 24,566. Wm. D. Ludlow, of New York, N. Y., for an "Improvement in preserve cans."

"I claim the described combination of the key D with lugs E, attached in the manner shown to the sides of a cavity (*a*), in the top of the can, in order to prevent the disruption of the said lugs, during the act of closing the can, and avoid projections above or beyond its periphery."

No. 24,567. Wm. H. Maim, of Liverpool, Ohio, for an "Improvement in machine for folding and packing wool."

"What I claim is, the herein-named devices for rolling the fleece into a compact cylindrical form, namely, the combination of the belt G, rod H, hooks I, and pins K, the same being operated by means of the windlass E, and screw S, in the manner and for the purpose specified."

No. 24,568. Gardner Maynard, of Ilion, N. Y., for an "Improvement in cultivator teeth."

"I claim the arrangement of the tooth A, stay C, and wrought iron stem and brace B, when the stem is welded between the wings of the tooth, and made to form a brace, substantially as set forth, the whole being constructed and used in the manner specified."

No. 24,569. Chas. McBurney, of Roxbury, Mass., for an "Improvement in packing for stuffing boxes of pistons."

"What I claim is, a packing for stuffing boxes composed of canvas and india rubber, as set forth, and cut diagonally, as described."

No. 24,570. Saml. Mills and Geo. E. Mills, of New York, N. Y., for an "Improvement in machines for pulverizing minerals."

"What I claim is, a series of circular grooved and roughened metallic plates, working upon their edges side by side in a trough or cylinder, the circle being larger than the plates, which, having an alternating motion in combination with each other and the cylinder, and in connection with the rock shafts and levers for operating the same substantially as described, and for the purposes set forth."

No. 24,571. Thos. Mitchell, of Lansingburgh, N. Y., for an "Improved machine for finishing hair brush handles."

"What I claim is, the rotating cutter wheels D, D, and guards and guides F, in combination with the clamps G, K, provided with patterns H, H^1, arranged substantially as and for the purpose set forth, I also claim centering the unfinished brushes in the clamp G, by means of the bristles *i*, in connection with the strip or plate J, and the inner edge of the pattern H, or its extension H^{11}, substantially as described."

No. 24,572. Marie Heloise Nicolas, and Louise Jesephine Champagne, of Thibodeaux, La., for an "Improvement in defecating sugar juices."

"What we claim is, the employment in the bleaching and defecating of sugar juices of the herein-described combination of sulphur and lime, prepared in the manner substantially as set forth."

No. 24,573. Henry S. North and John O. Couch, of Middletown, Conn., for an "Animal trap."

"What we claim is, 1st, the combination of the many-chambered cylinder A, with the breech pin C, by means of a central counter bore in the said cylinder meeting the chambers *a*, *a*, and a groove or recess *c* all around the end of the breech pin, substantially as herein described, whereby communication is made between the chambers of the cylinder, and all are enabled to be fired at once with a single vent. 2nd, fitting the hammer in the form of a ring, to slide along the exterior of the breech pin C, as herein described. 3rd, the combination with the hammer applied to slide along the exterior of the hollow breech pin of a rod B, sliding through the centre of the cylinder, and within the breech pin, and a spring sear *j*, attached to the said rod, and working through a slot *k*, in the breech pin, substantially as herein described. 4th, the combination with the hammer applied outside of the hollow breech pin of a collar *g*, or its equivalent, applied within the breech pin, and having pins or ears *h*, *h*, projecting through slots *i*, *i*, in the sides of the breech pin behind the hammer, and a helical spring F applied within the breech pin behind the said collar or equivalent, substantially as herein described. 5th, the extension of the central rod B, which carries the sear directly through the cylinder, and through the hollow breech pin, so that it may be operated either by a pull at its front end, or by a push at its rear end, substantially as herein described. 6th, in combination with the many-chambered cylinder A, hollow breech pin C, hammer E, central rod B, sere *j*, and spring F, and collar *g*, as described, we claim the stock D and trigger *p*, applied as described to make a weapon that can be baited and set for shooting game, by the seizure of the bait, or that can be used in the hand, like an ordinary pistol or fire arm, as herein set forth."

No. 24,574. Chas. Peck, of New Haven, Conn,, for an "Improvement in tool-holders for lathes."

"I claim, 1st, the combination of the tool rest *g* with the segment *i*, or their mechanical equivalents, so as to elevate or depress the cutting instrument, when arranged substantially in the manner and for the purpose described. Second, I claim the T-slotted bed plate with the tool rest *g*, connecting the tool posts *d*, *d*, when combined substantially in the manner described, so as to allow the cutting tool to be placed at any required angle horizontally."

No. 24,575. Geo. Race, of Norwich, N. Y., for an "Improved clothes dryer."

"I claim, 1st, the employment of a hollow post enclosing the arms of the reel, in which the arms may be elevated and depressed through its top, in the manner and for the purpose set forth. 2nd, the combination of the sliding head H and the arms D, hinged to said head at their lower extremities, and connected by cords, or other equivalent connection at their upper extremities, substantially as and for the purpose described. 3rd, the combination with the foregoing of the cord and pulleys, the pinion *m*, rack F, and latch *t*, for elevating and securing the head H in the hollow post, when the whole is constructed and operated substantially in the manner set forth."

No. 24,576. Wm. Raymond, of Marlboro', N. H., for an "Improved machine for driving hoops on pails, &c."

"What I claim is, the employment of a driver when either fixed or turning loosely in its bearings, and operated by means of a jointed lever, or otherwise, so as to press against and drive the hoop up on the tub when a rotary motion is given to said tub, as above described."

No. 24,577. Wm. Resor, of Cincinnati, Ohio, for an "Improvement in cooking ranges."

"What I claim is, the peculiar construction of the plate A, B, which constitutes the upper plate of the stove, forming, as it does, the plate of the stove, the arched roof of the

damper chamber, and part of the chimney pipe, in the manner and for the purpose set forth."

No. 24,578. Delos E. Rice, of Detroit, Mich., for an "Improvement in the mode of lifting stamps for crushing ores."

"What I claim is, the application of the folding wedges *c*, *c*, and *w*, in combination with the band *b*, *b*, or their equivalents, substantially as described, thereby producing, as described, a uniform lift of the rods, together with the stamp head."

No. 24,579. Alexr. Rickurt, of Schoharie, N. Y., for an "Improved machine for turning hubs."

"I claim, first, the graduated scale 1, in combination with the index 2, and the sliding frame and hub blank and mandrel operating in connection with the cutters, in the manner and for the purpose described. Second, I am aware that slides or sleeves are in use, and that the making a rotary shaft to balance is not only common but indispensible, when extreme speed is required; and I make no claim to sleeves, nor to balancing the shaft in themseves; but I claim as my invention and improvement the constructing the sliding sleeve with an opening at the angle, so as to slide over and upon the large cutter on the shaft, so as to cut any required size of hub without change of knife, as described. And I claim the constructing the sliding sleeve (or cutter and stock) to pass over and mask the fixed knife on the shaft, in connection and combination with the making one of the sides of the sleeve thicker and heavier than the others, in order to approximate to an equipoise of the shaft. Third, I claim the setting and adjusting (by means of the slot and screw bolt in 19) the arm 18, so as to cut any required length of the hub, and so arranged upon the bar 19 as to allow it to vibrate for the purpose of bringing up the cutters to the hub, or throwing them back when required, and without interfering with the screw or the adjustment of the arm."

No. 24,590. Wm. J. Rivers, of Sumter District, S. E., for an "Improvement in cotton cultivators."

"I claim the handles 1, helve 2, beam 3, foot bar 10, plough 20, harrow 45, roller frame 6, 7, and roller 8, when the whole are arranged for joint operation, as described, for the purposes set forth."

No. 24,591. Chas. B. Sawyer, of Fitchburgh, Mass., for an "Improved apparatus for heating, cooking, and ventilating."

"What I claim is, the combination of the oven O, and range *e*, with the fire pot *d*, fire-flues T, and warm air pipes P, Q, S, substantially as described."

No. 24,582. Philo B. Sheldon, of Prattsburgh, N. Y., assignor to himself and J. T. Upson, of Huron, N. Y., for an "Improved broom clasp."

"What I claim is, the feathers or ribs *g*, *g*, in combination with the screw threads of the shanks *f*, *f*, and with the handle D, constructed as described for the purposes specified. I also claim the combination of the conical screw shanks *f*, *f*, conical screw ferrule *s*, and screw bolts and nuts *m*, *n*, arranged substantially as and for the purpose herein set forth. I also claim the wires B, B, attached to the jaws A, A, and arranged in combination therewith, in the manner and for the purpose described."

No. 24,583. Adon Siddall, of Ransom, Mich., for an "Improvement in corn shellers."

"What I claim is, the arrangement of the stirrup M, with the levers J, J, for operating the adjustable sliding pressure bar H, in the manner described and for the purpose set forth."

No. 24,584. Wm. Skene and Robt. Skene, of Louisville, Ky., for an "Improvement in power pulley press."

"I claim, first, the arrangement of the scroll D, and the conical windlasses E, E^1, to operate in combination with the windlass H, and with the two followers B, B^1, or their equivalents, substantially as and for the purpose herein specified. Second, arranging the scroll D, and the windlasses E, E^1, or their equivalents, on slides C, which are rigidly attached to the upper follower B, so that the weight of those parts assists in increasing the pressure, or the substance placed between the two followers, substantially as described. Third, the arrangement of the two followers B, B^1, with pulleys *k*, k^1, and l^1, l^1, to operate in combination with the scroll D, the cone windlasses E, E^1, and the ropes *d*, and *e*, e^1, substantially as and for the purpose."

No. 24,585. Wm. Skene and Robt. Skene, of Louisville, Ky., for an "Improvement in power-gear press."

"I claim the arrangement of the windlasses J, the weight L, the scroll I, and the pinion H, to operate in combination with the cog wheel G, the pinions E and E^1, the double rack D, and the follower B, substantially as and for the purpose specified."

No. 24,586. M. D. Snyder and S. A. Snyder, of Clarendon, N. Y., for an "Improved carpet fastener."

"We claim an improved carpet hook, consisting of the barbed shank *a*, gauge notch *d*, throat *c*, and rectangular clinching hook *b*, all constructed and combined, substantially in the manner and for the purposes herein shown and described."

No. 24,587. John L. Stewart, of East Boston, Mass., for an "Improvement in retorts for distillation of coal."

"What I claim is, my improved revolving web retort, constructed not only with its induction and eduction openings, arranged at or near one end of it, but with an endless or other proper carrier, made so as to operate to receive the coal or matter to be distilled from or near one end of the retort, and carry or force the same toward the opposite end thereof, and from thence backward toward the front end, and there discharge such, the same causing the coal or matter to be distilled to pass twice through the retort, or carbonizing chamber, in manner and for securing advantages as specified. And, furthermore, I claim, in combination with the retort, or its discharging mouth, a water sealing trough, and an endless carrier, to operate in such trough, substantially as specified, to receive or carry away from the retort the discharged coke or products, the water of the trough, under such application of it to the discharging mouth, serving to furnish vapour or steam to the retort, in manner and to effect an advantage in the distillation of the coal, or matter therein, as specified."

No. 24,588. J. C. Stoddard, of Worcester, Mass., for an "Improvement in machines for making hay."

"What I claim is, arranging the rakes in radial slots between the two drum heads K, and fixing them therein, so as to serve the purpose of a hay making, and by a simple change, a hay raking machine, substantially in the manner herein set forth."

No. 24,589. Joseph Souter, of Chicago, Ill., for an "Improvement in apparatus for drying grain."

"I claim the drying of grain by means of heated air within a vertical cylindrical chamber, which is provided with a series of tapering rims *r*, and a central shaft *y*, which is armed with a series of winged scattering wheels *w*, when a fan or some other equivalent means is employed for producing an upward current of heated air through the said chamber, in the manner herein set forth."

No. 24,590. George S. G. Spence, of Boston, Mass, for an "Improved apparatus for heating buildings."

"I claim the arrangement of the elevated sides of the boiler, in combination with the pipe H, or its equivalent, depressed within the same, for heating and distributing the air in the manner and for the purpose set forth."

No. 24,591. A. G. Stipher, of Richmond, Ind., for an "Improvement in harvesting machines."

"What I claim is, 1st, the employment or use of the tilting spring raker (D), in combination with the sliding raker frame (*d*), constructed and arranged substantially as and for the purposes set forth. 2nd, operating the raker frame (*d*) and raker (D) by means of the reciprocating bar (F, F^1), through the medium of the rack (F^{11}), cog wheel (*j*), pulley g^1 and cord (g^{11}), all being arranged substantially as and for the purposes set forth. 3rd, in combination with the raker (D) the sliding trap doors (E), operated by means of the bent levers (G), springs (*k*), and cams (*b*), substantially as and for the purposes set forth."

No. 24,592. A. H. Tait, of New York, N.Y., assignor to Geo. B. Hartson, of same place, for an "Improvement in defecating sugar juices."

"What I claim is, the employment of the sulphate of tin, applied in manner substantially as herein described, for defecating cane juice and sirups, as set forth."

No. 24,593. Richd. P. Thomas, of Syracuse, N.Y., for an "Improvement in frames for manufacture of soap."

"What I claim is, lining soap frames in ordinary use with flexible metallic plates, substantially in the manner and for the purpose set forth."

No. 24,594. Calvin G. Udell, of Morris, Ill., for an "Improvement in corn planters."

"What I claim is, 1st, the arrangement of the grain box A, tubes B, B, connecting bars E, E, and legs I, I, the whole being constructed and operated substantially in the manner and for the purpose set forth. 2nd, in combination with the above, I claim the measure L, L, marking rod M, and guide K, the whole being constructed and operated substantially in the manner and for the purpose set forth."

No. 24,595. Thos. F. Wagoner, of Trenton, N. J., for an "Improvement in machines for hulling and scouring grain."

"What I claim is, the combination of two surfaces, one of which is elastic and the other hard, when the planes of said surfaces are placed on a plane with the horizon, and one of them having a circular motion, for the purpose of hulling and scouring grain, substantially as set forth."

No. 24,596. H. L. Watts, of Chester, Mass., for an "Improved horse-shoe machine."

"I claim the arrangement and combination of the slotted carriage B, the die C, the followers I, as the rollers J, as and for the purpose herein shown and described."

No. 24,597. John Young, of Joliet, Ill., for an "Improvement in rotary cultivators."

"What I claim is, the arrangement and combination of a skeleton or open rotary flowing cylinder, when the mould boards thereof are set tangential, and extend from end to end of the cylinder, in a straight or oblique direction, in combination with a rotary shaft or circular edged disks, the whole being operated substantially as and for the purposes set forth."

No. 24,598. McClintock Young, jr., of Frederick, Md., for an "Improvement in harvesting machines."

"What I claim is, combining the handles (S) of the rake (C), with the shaft (R), by means of the supporter *c*, the shaft arms *g*, *g*, the crank *e*, the pitman *h*, and the pitman *i*, and in such a manner that the rotation of said shaft will steadily and positively impart the desired movements to the rake, substantially as herein set forth. I also claim the combination of the cams D, D^1, and the guides *a*, *b*, or either of them, with the above-described mechanism for operating the rake, constructed and arranged in the manner and for the purpose substantially as described."

No. 24,599. Edmund B. Cherevy, of New York N.Y., assignor to himself and Thos. W. Weathered, of same place, for an "Improvement in furnaces."

"What I claim is, the hollow dome *k* over the fire in combination with the dome *h*, in the manner and for the purposes specified, whereby the heat ascends into said dome *k*, and then passes away between the domes *h* and *k*, heating the circulating water as specified. I also claim the thimbles *o*, *o*, passing through the flanges 2 and 3, and forming openings for the circulating water substantially as specified."

No. 24,600. Saml. Clark, of New York, N.Y., assignor to Wm. Oland Bourne, of same place, for an "Improved mode of imparting momentum motion to a sifting apparatus."

"I claim, first, the imparting a short, quick, or jarring motion to a sifting apparatus or machinery of any kind, where such motion is desirable, by means of an oscillating, vibrating, or reciprocating weight, brought at the end of its motion into contact with the said apparatus or its attachments, the same being arranged and constructed in the manner above described at *d*, *e*, *f*, *h* and *i*, or its equivalent. Second, suspending the object to which the motion is applied by means of a suspending or supporting link or rod, with concave bearing parts uppermost at both ends, and convex bearing parts undermost, constructed as above set forth at *l*, *m*, *n*, *k*, and *r*, or in an equivalent manner."

No. 24,601. Daniel Foreman, of Navarre, Ohio, assignor to himself, G. W. Sweringen, and Jonathan Penoyer, of same place, for an "Improvement in seeding machines."

"I claim the arrangement and combination with the interior of the peculiarly formed hollow slide E, of the adjustable plate (*i*), substantially as and for the purposes herein shown and described."

No. 24,602. Wm. H. Gray, of Dover, N.H., assignor to himself, and Luther Robinson, of Melrose, Mass., for an "Improvement in let-off motion for looms."

"What I claim, is, 1st, combining the clutch *h*, *h*, *i*, *i*, or its equivalent, by which motion is imparted to the let-off mechanism, with the yarn beam, by means of a worm gear *d*, on the yarn beam, and an endless screw *e*, and spring *g*, applied substantially as described to the shaft E, which controls the rotation of the beam, and operating as set forth. 2nd, in combination with the worm gear *d*, endless screw *e*, and spring *g*, applied as described, I claim the lever H, applied between the said spring and the surface of the yarn on the beam, and operating substantially as herein specified."

No. 24,603. Levi C. Johnson, of Buffalo, N.Y., assignor to himself, and Josiah B. Smith, of same place, for an "Improved portable door fastener."

"I claim the sliding bar D, (including the plate F), when so constructed as to form the slot H, and so connected and arranged with the plates A and A^1, and bolt B, as that when placed in the door for use, the bar D will stand at right angles with the bolt B, and when folded for carrying in the pocket the plate F will cover the teeth or spurs of plate A, substantially as herein described."

No. 24,604. Ebenezer G. Pomroy, of New York, N.Y., assignor to Julius R. Pomeroy, of Brooklyn, N.Y., for an "Improvement in method of protecting iron from oxidation."

"What I claim, is, the preparation of iron, by corroding or oxydizing its surface for the express purpose of making the same rough, and capable of being closely and firmly united with a covering of fire proof paint by means of rolling or other mechanical force, and the application of the other processes above described, to iron so prepared, in combination therewith."

No. 24,605. Austin Potter, of Williamson, N. Y., assignor to himself and Joel W. Norton, of same place, for an "Improvement in grain separators."

"I claim the application of the adjustable slide board D to the endless riddle F in such a manner that the grain and straw can be made to impinge upon the end or more open meshes of the same, or upon the top, thereby varying and adapting the action to the quality of grain and straw, and employing the force with which it leaves the cylinder as a means of separating the two, substantially as and for the purposes described. I also claim the combination and arrangement of the parts, consisting of the fan H, self-vibrating riddle E, with pulleys *u*, *x*, driven directly from cylinder B, elongated shaker and board R, G, and intermediate adjustable slide board D, operating conjointly, substantially as described, to form a more portable, cheap, and effective separating attachment to threshing machines, as set forth."

No. 24,606. Chas. A. Stebbins, of Boston, Mass., assignor to himself and Reuben J. Todd, of same place, for an "Improvement in apparatus for oiling cylinders and the pistons of steam engines."

"I claim the combination of the lifter *f* and tubular holder *h* (or their equivalent or equivalents) with the valve *b* and the piston C, the whole being constructed and applied together and to a reservoir A, and its pump barrel B, substantially in manner and to operate, as specified."

Re-issues.

Joseph Kingsland, jr., of Franklin, N. J., for an "Improvement in the process of grinding paper pulp."—Patented 23rd December, 1856.—Re-issued 28th June, 1859.

"What I claim is, the process, substantially as herein described, of reducing fibrous substances to pulp suitable for making paper, while such fibrous substances are suspended in water, by subjecting them to the operation of grinding or

beating action in a closed vessel, to which it is supplied by the hydraulic power of a discending column of water so charged with the fibrous substance, and permitting it to escape and be discharged so soon as it is sufficiently reduced, substantially as set forth. And I also claim separating the fibres from the mass so soon as they are sufficiently reduced, and discharging them by the hydrostatic pressure of the column of water in which the fibres are suspended, and which in flowing upward to the discharge carries with it only the fibres which are sufficiently reduced, substantially as described."

JOSEPH KINGSLAND, jr., of Franklin, N. J., for an "Improvement in machinery for grinding paper pulp."—Patented 16th December, 1856.—Re-issued 28th June, 1859.

"What I claim is, the combination of the rotating grinder with and enclosed in a surrounding case, which constitutes the opposing grinding surface, and which is provided with a feeding pipe and discharge aperture, suitable for feeding or carrying the fibrous substances to and from the grinder in the enclosed vessel by the hydraulic pressure of a descending column of water, as set forth."

JOSEPH W. JAYNE, of Sandusky, Ohio, for an "Improvement in brick machines."—Patented 5th May, 1857.—Re-issued 28th June, 1859.

"What I claim is, 1st, the yoke, constructed of the form above described, by which the converging planes are held firmly in the same position relative to each other, whether the same be composed of one or more pieces of metal. 2nd, the radial, sliding, and revolving chargers, in combination with the mould wheel. 3rd, the arrangement of the guide stem on the side of the pressers instead of on the end whereby I am enabled to place the pressing roller in the cavity of the piston. 4th, what I claim is, making the piston or presser hollow, and inserting the pressing roller in the cavity thereof instead of placing it upon a guide stem, as heretofore done."

HENRY JENKINS, of Brooklyn, N. Y., for an "Improvement in the process of manufacturing wire grating, &c."—Patented 6th March, 1847.—Re-issued 28th June, 1859.

"What I claim is, manufacturing screens or other articles from metallic wires or bars that are bent or crinkled at the point of intersection previously to being laid or woven up, whereby I am enabled to form meshes of any desired size or shape by such intersecting bars or wires, so that they shall be rigid and durable, as set forth; and this I claim, irrespective of the mechanism for bending or crinkling said wires or interweaving them to form the requisite meshes."

MINER VAN ANKEN, of Saratoga Springs, N. Y., for an "Improved washing machine."—Patented 11th May, 1858.—Re-issued 28th June, 1859.

"I claim, 1st, providing a stop board at the lower portion of the rear end of the rubber, substantially as and for the purposes set forth. 2nd, providing an oblong slot, the lower termination of which is of scroll form, in each of the pendulous arms of the rubber, substantially as and for the purposes set forth. 3rd, the combination with said slot of a back trip board, substantially as and for the purposes set forth."

JOHN AMES, of Lansingburgh, N. Y., assignor of Thomas Mitchell, of same place, for an "Improved machine for finishing brush handles."—Patented 23rd June, 1857.—Re-issued 28th June, 1859.

"I claim, 1st, the combination of the crown wheel saw O, with the adjustable platform Y, Y, and stop *g*, substantially as and for the purpose set forth. 2nd, the wheel K, provided with the oblique cutters *y*, in combination with the guard or gauge piece L, the cutter wheel and gauge piece being arranged relatively with each other, substantially as and for the purpose set forth. 3rd, the arrangement and combination of mechanical devices herein set forth and described, to wit, the platform D, with revolving cutters shaped and operating as described, crown saw O, with the arms *d*, *d* and the adjustable platform and cutter wheels K and M, with their cutters, substantially as described."

WM. HOPPER and ROBERT H. GRATZ, of Philadelphia, Pa., assignees of Chas. C. Lloyd, of same place, for an "Improvement in valves for dry gas meters."—Patented 22nd June, 1858.—Re-issued 28th June, 1859.

"We claim, 1st, the construction of the rotary valve *c*, *c*, with series of breaks or edge as at *f*, *p*, *p*, and *q*, *q*, arranged and operating so as to scrape the upper surface of the valve seat. 2nd, the drip K, and valve seat *q*, *q*, arranged and operating so as to collect and carry off any liquid deposit in the meter. 3rd, the valve carriage D, D, arranged and operating substantially as above described. 4th, the combination of the valve *c*, *c*, the valve seat *g*, *g*, the shafts E, E, E, attached to the diaphragms arranged and operating as above described, for the purpose of restraining a reverse movement in the meter and thus dispensing with the click and ratchet."

H. B. MASSER, of Sunbury, Pa., for an "Improvement in ice cream freezers."—Patented 12th December, 1848.—Re-issued 1st January, 1850.—Again re-issued 28th June, 1859.

"I claim a scraper or scrapers which act or bind during the process of freezing cream with a yielding spring force against the inner surface or surfaces of the cream chamber, substantially as and for the purposes set forth."

DESIGN.

P. J. CLARK, of West Meriden, Conn., assignor to S. S. Clark, of same place, for a "Design for match boxes."

"I claim the configuration of the bases or lower terminals C, the same being in the form of a scolloped shell, and constituting a new and ornamental device for a match safe."

ADDITIONAL IMPROVEMENT.

AUGUSTUS B. DAVIS, of Philadelphia, Pa., for an "Improvement in railroad car springs."—Patented 15th February, 1859.—Additional Improvement dated 28th June, 1859.

"I claim the bore A and cover plate C, secured together by a bolt D, or other suitable fastening, in combination with one or more loose plates H, placed within the box, so as to divide the latter into two or more compartments, as and for the purpose herein set forth."

EXTENSION.

EPHRAIM MORRIS, of New York, N.Y., for an "Improvement in machines for raising and lowering weights."—Patented 5th July, 1845.

"I claim the manner of combining the barrel disks *f*, *f*, with the wheel *c*, for the purpose of hoisting, lowering, or suspending weights by means of the ribs and grooves, or any analogous device; and I claim the further combination therewith of the means employed to govern and regulate the action of said parts, namely, the friction bands *g* or g^1, and levers *h* or h^1, the attaching and detaching lever *l* or l^1, rolling shaft and bit 4 or 4^1, pin 3 or 3^1, and slide key 2 or 2^1, substantially as such manner and combination are shewn and set forth, irrespective of the power employed to work the machinery, and also irrespective of the mode by which power is connected to the working parts."

DELIVERY OF LETTERS.—For the Great Seal Patent Office the initials are W. C., the District being the Western Central. In the direction of a Letter, these initials should be legibly written in a separate line, and should in all cases end the address, thus:—

Great Seal Patent Office,
25, Southampton Buildings,
London,
W.C.

THE CHRONOLOGICAL INDEX of PATENTS of INVENTION, from March 2, 1617 14 James I.), to September 30, 1852 (16 Vict.), 2 vols. Price 30*s.*

THE ALPHABETICAL INDEX of PATENTEES of Inventions for the above period. Price 20*s.*

THE SUBJECT-MATTER INDEX of PATENTS for the same period — *Second Edition*—to which is prefixed a Key of Terms and Phrases. 2 vols. Price 2*l.* 16*s.*

A Key to the *First Edition* of the above work is also published separately, and may be had on application.

THE CHRONOLOGICAL INDEXES of APPLICATIONS for PATENTS and PATENTS GRANTED from the 1st October to the 31st December, 1852, and from the 1st January to the 31st December, 1853, in one volume. Price 11*s.*

THE ALPHABETICAL INDEXES for the above periods, in one volume. Price 13*s.*

THE SUBJECT-MATTER INDEX, from 1st October to 31st December, 1852. Price 9*s.*

THE SUBJECT-MATTER INDEX, from 1st January to 31st December, 1853. Price 16*s.*

THE CHRONOLOGICAL INDEX of APPLICATIONS for PATENTS and PATENTS GRANTED from the 1st January to the 31st December, 1854. Price 6*s.*

THE ALPHABETICAL INDEX for the above period. Price 7*s.*

THE SUBJECT-MATTER INDEX for the above period. Price 16*s.* 6*d.*

THE CHRONOLOGICAL INDEX of APPLICATIONS for PATENTS and PATENTS GRANTED from the 1st January to the 31st December, 1855. Price 6*s.* 6*d.*

THE ALPHABETICAL INDEX for the above period. Price 7*s.* 6*d.*

THE SUBJECT-MATTER INDEX for the above period. Price 17*s.*

THE CHRONOLOGICAL INDEX of APPLICATIONS for PATENTS and PATENTS GRANTED from the 1st January to the 31st December, 1856. Price 6*s.* 6*d.*

THE ALPHABETICAL INDEX for the above period. Price 8*s.*

THE SUBJECT-MATTER INDEX for the above period. Price 18*s.* 6*d.*

THE ALPHABETICAL INDEX of APPLICATIONS for PATENTS and PATENTS GRANTED from the 1st January to the 31st December, 1857. Price 8*s.*

THE CHRONOLOGICAL INDEX for the above period. Price 6*s.* 6*d.*

THE SUBJECT-MATTER INDEX for the above period. Price 19*s.* 6*d.*

THE ALPHABETICAL INDEX of APPLICATIONS for PATENTS and PATENTS GRANTED, from the 1st January to the 31st December, 1858. Price 8*s.*

In course of Publication, by Order of the Commissioners of Patents.

ABRIDGMENTS (in Classes, and Chronologically arranged) of all SPECIFICATIONS of PATENTED INVENTIONS, from the earliest enrolled to those published under the Act of 1852.

These books are of 12mo size, and as each is limited to inventions of one class only, they can be sold at prices sufficiently moderate to enable the humblest inventor to examine for himself whether his discovery has been previously patented or not.

At the foot of each abstract are given references to notices of the inventions in scientific and other works, and to the reports of law proceedings for infringements, &c. &c. &c.

The classes already published are,—

1. Drain Tiles and Pipes, price 6*d.*
2. Sewing and Embroidering, price 6*d.*
3. Manure, price 6*d.*
4. Preservation of Food, price 6*d.*
5. Marine Propulsion, price 4*s.*
6. Manufacture of Iron and Steel, price 5*s.*
7. Aids to Locomotion, price 1*s.*
8. Steam Culture, price 2*s.*
9. Watches, Clocks, and other Timekeepers, price 1*s.* 6*d.*
10. Fire-arms and other Weapons, Ammunition, and Accoutrements, price 6*s.* 6*d.*
11. Paper.—Part I. Manufacture of Paper, Pasteboard, and Papier Mâché, price 3*s.*
12. Typographic, Lithographic, and Plate Printing, price 7*s.*
13. Bleaching, Dyeing, and Printing Yarns and Fabrics, price 9*s.* 6*d.*

The following are in the press:—

Paper.—Part II. Cutting, Folding, and Ornamenting; including Envelopes, Cards, Paper-hangings, &c.
Electricity and Magnetism: their Generation and Applications.
Preparation of Fuel, and Apparatus for its Combustion.
Manufacture and Applications of India Rubber, Gutta Percha, &c.; including Air, Fire, and Water Proofing.
Production and Applications of Gas.
Steam Engines.

B. Woodcroft.

The above, and all other works published by the Commissioners of Patents, are now on sale at the Great Seal Patent Office, 25, Southampton Buildings, Holborn.

This Journal is published on the evenings of Tuesday and Friday, and will be forwarded, post free, to Subscribers. — Terms, 30*s.* per annum. — Subscriptions received at the Great Seal Patent Office, where also single copies, at twopence each, may be obtained.

No. 578. TUESDAY, JULY 19, 1859. Price 2d.

Notices to Proceed.

NOTICE is hereby given, that

588. RICHARD LEAKE and MATTHEW SYKES, both of Barnsley, in the county of York, have given notice at the office of the Commissioners of their intention to proceed with their application for Letters Patent for the invention of "Improvements in furnaces for consuming smoke and generating heat, part of which improvements are applicable to furnaces generally."

As set forth in their petition, recorded in the said office on the 5th day of March, 1859.

595. And JOHN ASPINALL, of Great Tower Street, in the city of London, Civil Engineer, has given the like notice in respect of the invention of "Improvements in evaporating in vacuo."

As set forth in his petition, recorded in the said office on the 7th day of March, 1859.

601. And ADAM BOOTH, the elder, and ADAM BOOTH, the younger, of the city of Manchester, in the county of Lancaster, Machine Makers, have given the like notice in respect of the invention of "Improvements in machinery or apparatus for making or manufacturing tags for laces."

605. And JOHN NORTHCOTE RYDER, of Bexley Heath, in the county of Kent, has given the like notice in respect of the invention of "Improvements in preserving fruits, and in apparatus used for such purposes."

As set forth in their respective petitions, both recorded in the said office on the 8th day of March, 1859.

612. And JOHN ROBINSON NICHOLSON, of Redditch, in the county of Worcester, Doctor of Medicine, has given the like notice in respect of the invention of "New or improved machinery to be used in the manufacture of needles, a part or parts of which said machinery may also be used for pointing pins and other like articles."

616. And JOHN COOKE, of Cheltenham, in the county of Gloucester, has given the like notice in respect of the invention of "Improvements in apparatus for giving signals on railways and vessels, and other such like uses."

As set forth in their respective petitions, both recorded in the said office on the 9th day of March, 1859.

626. And ROBERT HELLARD, Ironmonger, Taunton, Somerset, has given the like notice in respect of the invention of "Improvements in reaping and mowing machines."

627. And SAMUEL WHEATCROFT, of Brudenell Place, New North Road, county of Middlesex, Engineer, has given the like notice in respect of the invention of "Improvements in the construction of goffering and rouching machines, in order to render them self-registering and self-indicating."

629. And FREDERICK CLARKE, of Norland Square, in the county of Middlesex, Gentleman, has given the like notice in respect of the invention of "An improved mode of, and apparatus for, cutting, drying, and preparing peat to be used as fuel, or for other purposes for which it may be usefully employed."

As set forth in their respective petitions, all recorded in the said office on the 11th day of March, 1859.

631. And JOHN CUNLIFFE and FREDERICK PIGGOTT, both of the city of Manchester, Manufacturers, and GEORGE MALLINSON, of Salford, in the county of Lancaster, Pattern Designer, have given the like notice in respect of the invention of "Improvement in the manufacture of ornamental woven fabrics."

636. And JAMES THORNTON, of Liverpool, in the county of Lancaster, has given the like notice in respect of the invention of "Improvements in machinery for the manufacture of bricks, tiles, and other similar articles."

As set forth in their respective petitions, both recorded in the said office on the 12th day of March, 1859.

640. And Richard Waller, of No. 50, Baker Street, Portman Square, in the county of Middlesex, Gentleman, has given the like notice in respect of the invention of "Improvements in joining leather, flexible and textile materials for the production of boots and shoes, and articles of the like description, and harness, strapping, bags, sails, tent covers, portmanteaus, and such other articles, together with machinery and apparatus for that purpose."

648. And John Samuel Dawes, of Smethwick House, near Birmingham, Gentleman, has given the like notice in respect of the invention of "A new or improved method or combination of arrangements for the better securing and collecting of night soil or town manure, and rendering it more valuable for agricultural purposes."

As set forth in their respective petitions, both recorded in the said office on the 14th day of March, 1859.

649. And Walter Langton, of 14, Wharf, Belvedere Road, Lambeth, in the county of Surrey, has given the like notice in respect of the invention of "Improvements in the manufacture of keys and wood fastenings used in constructing railways."

650. And Charles Desurmont, of Seclin, France, Gentleman, and Charles Goudeau, of Alost, Belgium, Mechanical Engineer, have given the like notice in respect of the invention of "Certain improvements in looms for weaving."

As set forth in their respective petitions, both recorded in the said office on the 15th day of March, 1859.

663. And James Fuller, of Reading, in the county of Berks, Turner, has given the like notice in respect of the invention of "Improvements in churns."

As set forth in his petition, recorded in the said office on the 16th day of March, 1859.

673. And Charles Garnett, of the firm of Peter and Charles Garnett, of Cleckheaton, in the county of York, Machine Makers, has given the like notice in respect of the invention of "Improvements in machinery for ginning cotton and for cleaning cotton and certain other fibrous materials."

681. And Arthur Warner, of 31, Threadneedle Street, in the city of London, and William Henry Tooth, of Sumner Street, Southwark, in the county of Surrey, have given the like notice in respect of the invention of "Improvements in the manufacture of iron."

As set forth in their respective petitions, both recorded in the said office on the 17th day of March, 1859.

700. And John Walter Hart, of 60, St. Mary Axe, in the city of London, Gentleman, has given the like notice in respect of the invention of "An apparatus for the destruction of flies and other insects."—A communication from abroad by Frederick Barnett, residing at Paris, in the empire of France.

As set forth in his petition, recorded in the said office on the 19th day of March, 1859.

709. And William Hudson, of Burnley, in the county of Lancaster, Machinist, and Christopher Catlow, of the same place, Overlooker, have given the like notice in respect of the invention of "Certain improvements in looms for weaving."

As set forth in their petition, recorded in the said office on the 21st day of March, 1859.

733. And Charles A. Watkins, of the firm of Hamilton and Co., Brush Manufacturers, of Greek Street, Soho Square, has given the like notice in respect of the invention of "Improvements in the manufacture of brushes."

As set forth in his petition, recorded in the said office on the 22nd day of March, 1859.

754. And Hugh Rigby, of Salford, in the county of Lancaster, Engineer, has given the like notice in respect of the invention of "Improvements in machinery or apparatus for obtaining motive power applicable to hoists and all other purposes to which motive power can be applied."

758. And William Edward Newton, of the Office for Patents, 66, Chancery Lane, in the county of Middlesex, Civil Engineer, has given the like notice in respect of the invention of "Improvements in ovens for baking bread and other substances."—A communication from abroad by Thomas Russell, of New York.

As set forth in their respective petitions, both recorded in the said office on the 25th day of March, 1859.

789. And Henry Moss, of 62, Brill Row, Somer's Town, in the county of Middlesex, Boot and Shoe Manufacturer, and Thomas West, of 5, Jewin Street, in the city of London, Machinist, have given the like notice in respect of the invention of "A machine for the cutting of leather for every purpose, and cutting cloths, linen, and other fabrics and materials."

As set forth in their petition, recorded in the said office on the 29th day of March, 1859.

812. And Alfred Vincent Newton, of the Office for Patents, 66, Chancery Lane, in the county of Middlesex, Mechanical Draughtsman, has given the like notice in respect of the invention of "Improvements in the construction of steam boiler and other furnaces."—A communication from abroad by Jonathan Amory, of Boston, in the United States of America.

As set forth in his petition, recorded in the said office on the 31st day of March, 1859.

830. And Arthur Paget, of Loughborough, in the county of Leicester, Manufacturer, has given the like notice in respect of the invention of "Improvements in machinery or apparatus for the manufacture of looped fabrics, and in the manner of constructing the same."

As set forth in his petition, recorded in the said office on the 2nd day of April, 1859.

893. And John Martin, of No. 4, Buckingham Street, Islington, in the county of Middlesex, Manufacturer, has given the like notice in respect of the invention of "Improvements in the materials used in the manufacture of bonnet fronts and ruches."

As set forth in his petition, recorded in the said office on the 9th day of April, 1859.

911. And David Doig, of the city of Manchester, Engineer, has given the like notice in respect of

the invention of "Improvements in the construction of gas lamps."—A communication from abroad by William Gilbert Ginty, of Rio de Janeiro, in the empire of Brazil.

As set forth in his petition, recorded in the said office on the 12th day of April, 1859.

1014. And CHARLOTTE MANSEL, of Plymouth, in the county of Devon, has given the like notice in respect of the invention of "A folding travelling case."

As set forth in her petition, recorded in the said office on the 23rd day of April, 1859.

1086. And JAMES MORRISON, senior, and JAMES MORRISON, junior, of Paisley, in the county of Renfrew, North Britain, Machine Makers, have given the like notice in respect of the invention of "Improvements in looms and in apparatus connected therewith."

As set forth in their petition, recorded in the said office on the 30th day of April, 1859.

1142. And THOMAS JONES, of Liverpool, in the county of Lancaster, Slater and Plasterer, has given the like notice in respect of the invention of "An improved apparatus and arrangement of flues for heating and ventilating buildings, ships, and other structures, and for causing draughts in chimnies."

As set forth in his petition, recorded in the said office on the 6th day of May, 1859.

1243. And HENRY NEWMAN, of Liverpool, in the county of Lancaster, Dentist, has given the like notice in respect of the invention of "Improvements in the construction of artificial teeth, and in the mode or manner of affixing the same to the frame."

As set forth in his petition, recorded in the said office on the 20th day of May, 1859.

1287. And JAMES HARMER, of St. James Street, Lower Road, Islington, in the county of Middlesex, has given the like notice in respect of the invention of "Improvements in parts of dry gas meters."—Partly a communication from abroad by William Sinderby, of Boston, Massachusets, in the United States of America.

As set forth in his petition, recorded in the said office on the 25th day of May, 1859.

1320. And WILLIAM HENRY GRAVELEY, of Upper East Smithfield, in the county of Middlesex, Engineer, has given the like notice in respect of the invention of "Improvements in apparatuses for purifying and aërating sea water, parts of which may be employed for cooking and baking purposes."

As set forth in his petition, recorded in the said office on the 28th day of May, 1859.

1347. And ALFRED SUTER, of 65, Fenchurch Street, in the city of London, has given the like notice in respect of the invention of "A furniture castor, to be used upon the feet of tables, seats, and all descriptions of furniture, or other things."

As set forth in his petition, recorded in the said office on the 31st day of May, 1859.

1387. And PETER SALMON, of Glasgow, in the county of Lanark, Merchant, has given the like notice in respect of the invention of "Improvements in valves for pumps and other uses."

As set forth in his petition, recorded in the said office on the 7th day of June, 1859.

1480. And RICHARD LAMING, of Hampstead, in the county of Middlesex, has given the like notice in respect of the invention of "Improvements in purifying gas, and in obtaining and reproducing materials useful for that purpose."

As set forth in his petition, recorded in the said office on the 20th day of June, 1859.

1493. And ALEXANDER PARKES, of Birmingham, in the county of Warwick, has given the like notice in respect of the invention of "Improvements in the manufacture of cylinders and tubes of copper, and alloys of copper."

1494. And LEMUEL DOW OWEN, of No. 192, Tottenham Court Road, in the county of Middlesex, Engineer, has given the like notice in respect of the invention of "Improvements in machinery for manufacturing bolts and nails."—A communication from foreigners residing abroad, videlicet, by Messieurs Buck and Company, Engineers, of Lebanon, New Hampshire, in the United States of America.

As set forth in their respective petitions, both recorded in the said office on the 21st day of June, 1859.

1541. And JOHN MARIE JOSEPH BAILLIE, of No. 15, St. Mary Axe, in the city of London, has given the like notice in respect of the invention of "A new process for tanning hides and skins."—A communication from Monsieur A. Paulmier, resident at Paris, in the empire of France.

As set forth in his petition, recorded in the said office on the 28th day of June, 1859.

1584. And HERMANN HIRSCH, of Berlin, in the kingdom of Prussia, has given the like notice in respect of the invention of "Improvements in screw propellers."

As set forth in his petition, recorded in the said office on the 2nd day of July, 1859.

1587. And JAMES HOLLINGWORTH, of the Clyde Paper Mills, Eastfield, in the county of Lanark, North Britain, Manager, has given the like notice in respect of the invention of "Improvements in machinery or apparatus for the manufacture of paper."

As set forth in his petition, recorded in the said office on the 4th day of July, 1859.

1605. And SAMUEL BURTON HASKARD, of Wollaton Street, in the town and county of the town of Nottingham, Spring Point and Guide Manufacturer, has given the like notice in respect of the invention of "Improvements in the manufacture of hook guides used in machines for the making of lace or other fabrics."

As set forth in his petition, recorded in the said office on the 6th day of July, 1859.

And notice is hereby further given, that all persons having an interest in opposing any one of such applications are at liberty to leave particulars in writing of their objections to such application, at the said Office of the Commissioners, within twenty-one days next after the date of the Gazette [and of the Journal] in which this notice is issued.

Patents Sealed.

List of Letters Patent which passed the Great Seal on the

19th July, 1859.

161. Thomas Clarke, of Litchurch Lane, near Derby, in the county of Derby, and of Staveley, in the county of Derby, Moulder, for an invention of "Improvements in the manufacture of core barrels for pipes or columns, used either for railway piles or columns, or for water pipes or sewerage pipes."—Dated 19th January, 1859.

163. James Whitehead, of Halifax, in the county of York, Wire Manufacturer, for an invention of "Improvements in the means or machinery for the manufacture of 'purled wire.'"—Dated 19th January, 1859.

179. Joseph Bent, of Newhall Street, Birmingham, in the county of Warwick, Military Ornament Manufacturer, for the invention of "Certain improvements in clasps or fastenings applicable for belts, garters, and other purposes."—Dated 20th January, 1859.

185. Louis Le Prince, of No. 261, Regent Street, in the county of Middlesex, Bootmaker, for an invention of "The improvement of ladies' boots and shoes, called the caméleon boot and the caméleon shoe.'—Dated 21st January, 1859.

194. James Hill Hume, of Broughty Ferry, in the county of Forfar, North Britain, Baker, for an invention of "Improvements in warming apparatus for the feet." — Dated 21st January, 1859.

197. James Newman, of Birmingham, in the county of Warwick, Manufacturer, for an invention of "Improvements in the manufacture of chains." —Dated 21st January, 1859.

206. Thomas Webster Rammell, of No. 16, Spring Gardens, in the county of Middlesex, Civil Engineer, for an invention of "Improvements in atmospheric propulsion, and the structures, tubes, machinery, and apparatus applicable thereto."—Dated 22nd January, 1859.

208. Richard Barter, of St. Ann's Hill, Blarney, in the county of Cork, Doctor of Medicine, for an invention of "Improvements in heating and ventilating buildings, and in apparatus connected therewith."—Dated 22nd January, 1859.

216. John Fowler, junior, of Cornhill, Robert Burton, of Kingsland, in the county of Middlesex, David Greig, of New Cross, in the county of Kent, and Jeremiah Head, of Newcastle-on-Tyne, for an invention of "Improvements in agricultural implements, and in apparatus used for hauling agricultural implements by steam power." —Dated 24th January, 1859.

276. James Robertson, of Glasgow, in the county of Lanark, North Britain, Engineer, for an invention of "Improvements in details by which motive force is transmitted in machinery."—Dated 31st January, 1859.

281. Laurent Rigolier, Engineer, residing at Lyon Place, Grolier, 5, Rhône, in the empire of France, for an invention of "A new brake for railway carriages."—Dated 1st February, 1859.

328. John Honeyman, of Glasgow, in the county of Lanark, North Britain, Miller, for an invention of "Improvements in the construction of ships, vessels, and boats, and in propellers for propelling the same."—Dated 4th February, 1859.

432. Alfred Vincent Newton, of the Office for Patents, 66, Chancery Lane, in the county of Middlesex, Mechanical Draughtsman, for an invention of "An improvement in the construction of brushes."—A communication from abroad by Ira W. Shaler, of the United States of America.—Dated 16th February, 1859.

926. Richard Coleman, of Chelmsford, in the county of Essex, Agricultural Implement Manufacturer, for an invention of "Improvements in agricultural implements." — Dated 13th April, 1859.

Patents on which the Stamp Duty of £50 has been Paid.

(*To 16th July*, 1859, *inclusive.*)

14th July.

1683. John Cartwright, of Shrewsbury, in the county of Salop, Agricultural Implement Manufacturer, for an invention of "Improvements in agricultural implements called chain harrows for more effectually dressing and cleaning land."—Dated 17th July, 1856.

15th July.

1684. The Reverend George Jacque, of Auchterarder, in the county of Perth, North Britain, Clerk, for an invention of "Improvements in the construction of stringed musical instruments." —Dated 17th July, 1856.

1701. James Lawrence Crockett, of West Ham, in the county of Essex, Manufacturer, for an invention of "Improvements in evaporation."—A communication.—Dated 19th July, 1856.

1705. James Lawrence Crockett, of West Ham, in the county of Essex, Manufacturer, for an invention of "Improvements in the manufacture of sulphuric acid.'—A communication.—Dated 19th July, 1856.

16th July.

1674. Thomas Duncan, of Liverpool, in the county of Lancaster, Civil Engineer, for an invention of "A combined and compound engine for applying motive power and for measuring fluids."—Dated 16th July, 1856.

1758. George Collier and John Crossley, both of Halifax, in the county of York, and James William Crossley, of Brighouse, in the parish of Halifax, and in the same county, for an invention of "Improvements in finishing and stretching woven fabrics."—Dated 24th July, 1856.

FOREIGN PATENTS.

SAXONY.†

List of Patents for Inventions Delivered between the 1st April and 30th June, 1859.‡

(*Communicated by the Saxon Government.*)

(For preceding List, the No. 554 of this Journal.)

1. Ferdinand Röhle, of Dresden, for "A stereotype process for casting all kinds of metal type."—5 years.—Dated 30th March, 1859.
2. Richard Hartmann, of Chemnitz, for "Machines and apparatus for the manufacture of screws."—5 years.—Dated 2nd April, 1859.
3. Richard Hartmann, of Chemnitz, for "A double head stock lathe for simultaneously turning two fly-cones, or generally by means of two rotary curved surfaces."—5 years.—Dated 2nd April, 1859.
4. Märgel, Brothers, and Brückner, at Grossenhain, for "A texture called 'worsted.'"—(Public.) —5 years.—Dated 2nd April, 1859.
5. Hermann Böhme, of Dresden, agent for Joseph K. Kilbourn and Edward E. Kilbourn, of Norfolk, U. S., for "A power-loom for making stockings." —5 years.—Dated 2nd April, 1859.
6. Schulze and Niemann, of Leipzig, for "Manufacture of wrapping paper by means of a combination of linen, cotton, and other tissues, with paper produced by machinery, and impregnating the product with varnish."—5 years.—Dated 2nd April, 1859.
7. Hermann Böhme, of Dresden, Agent for Eduard Schmidt, of Vienna, for "A machine for winding up sewing thread."—5 years.—Dated 2nd April, 1859.
8. Friedrich Georg Wieck, agent for Sulzberger-Pfister, of Frauenfeld, Switzerland, for "A folding and stitching machine."—Dated 4th April, 1859.
9. Friedrich Wilhelm Müller, of Dresden, for "A closet."—5 years.—Dated 5th April, 1859.
10. Wünterling, of Leipzig, for "An apparatus for rasping hard substances."—5 years.—Dated 9th April, 1859.
11. Peter Mich. Pannes, of Cologne, for "An apparatus for heating boilers."—5 years.—Dated 11th April, 1859.
12. Friedrich Georg Wieck, of Leipzig, agent for Winshurst and Truemann, of London, for "A process and machine for making metal sheets and foil metal."—5 years.—Dated 12th April, 1859.
13. Carl Beermann, of Berlin, for "Improvements in sewing machines."—5 years.—Dated 14th April, 1859.
14. J. H. F. Prillwitz, of Berlin, Agent for John Eason, of London, for "Improvements in apparatus and means for tanning, dyeing, and for extracting vegetable, animal, and mineral substances." —5 years.—Dated 16th April, 1859.
15. J. H. F. Prillwitz, of Berlin, Agent for Joseph Martin, Hegmann, and Co., of Lyons, for "A new mode of treating vegetable dyeing substances, and especially orchal, and applying the same to dyeing silk and wool."—5 years.—Dated 16th April, 1859.
16. J. H. F. Prillwitz, of Berlin, Agent for Hippolyte Monier, of Paris, for "Improvements in gas burners."—5 years.—Dated 16th April, 1859.
17. August Leonhardi, of Dresden, for "A liquid extract of ink."—5 years.—Dated 19th April, 1859.
18. Augustinus Uhlig, of Chemnitz, for "Improvements in the construction of pianofortes."—5 years.—Dated 19th April, 1859.
19. A. Münich and Co., of Chemnitz, for "Improvements in machines for drying wool and other downy fibrous substances, and self-regulating cylinder employed thereat."—5 years.—Dated 29th April, 1859.
20. Gustav Adolph Buchholz, of Berlin, for "Improvements in machines for husking corn rice and other husky fruits."—5 years.—Dated 3rd May, 1859.
21. Anton Joseph Asbach, of Chemnitz, for "A process for making wire malt-kilns."—5 years.—Dated 19th May, 1859.
22. Gustav Hoyer, of Schandau, for "A process for obtaining salt stones for cattle."—5 years.—Dated 19th May, 1859.
23. Friedrich Gäns, of Berlin, for "A process for manufacturing sulphuric acid and sulphur from gypsum."—5 years.—Dated 25th May, 1859.
24. Franz R. Böhme, of Leipzig, for "A new efficient and economical stone for mean, pure and cheap fuel."—5 years.—Dated 31st May, 1859.
25. Carl Wilhelm Muth, of Pieschen, for "A contrivance in furniture with four legs for rendering the same stable on uneven soil."—5 years.—Dated 3rd June, 1859.
26. Wieck, of Leipzig, Agent for Charles Dorn, of Stuttgart, for "Construction of kilns for firing porcelain, earthenware, and all kinds of pottery and bricks.—5 years.—Dated 6th June, 1859.
27. Hermann Böhme, of Dresden, Agent for Reynard de Frets, of Marseille, for "A substance for blasting rocks in mines, quarries, &c."—5 years.—Dated 14th June, 1859.
28. Hermann Böhme, of Dresden, Agent for Messrs. Lefèbre, of Paris, for "Apparatus for manufacturing nitric acid, and for obtaining artificial mines of saltpetre by utilizing the known action of

† For the Saxon Patent Law, see No. 236 of this Journal.
‡ All the published Specifications are deposited in the free Library of the Commissioners of Patents, where translations of the same may be had.

the electric spark on the oxygen and azote."—5 years."—Dated 15th June, 1859.

29. Johann Friedrich Vetter, of Werdan, for "A machine for cleaning the waste of cotton and wool."—5 years.—Dated 17th June, 1859.

30. T. Fanter, of Berlin, for "A combined veneer-cutting and planing machine."—5 years.—Dated 17th June, 1859.

31. J. H. F. Prillwitz, of Berlin, Agent for Henry Burden, of Troy (U. S.), for "A machine for making horse-shoes." — 5 years. — Dated 18th June, 1859.

32. Hermann Böhme, of Dresden, Agent for François Vouillon and Achille Tranquille Mercier, of Louviers, for "Obtaining thread, cloth, and other substances from fibrous substances without spinning."—5 years.—Dated 23rd June, 1859.

COLONIAL PATENT LAW.

INDIA.

Act No. XV. of 1859.

An Act for granting exclusive privileges to Inventors. (*See No. 552 of this Journal.*)

The above Act, passed by the Legislative Council, received the assent of the Right Honourable the Governor General on the 17th May, 1859, and was on the 21st of the same month promulgated for general information.

ALL FOREIGN and COLONIAL PATENT LAWS and RULES, being translations or copies of Official Communications, may be found in the following Numbers of this Journal, published at 2*d.* each, or 3*d.* free by post:—

Austria, No. 291.
Bavaria, No. 262.
Belgium, Nos. 292 and 348.
Baden, and Petty States of Germany, No. 325.
Canada, No. 279.
Cuba, No. 498.
Dutch West Indies, No. 322.
France, No. 228.
Greece, No. 325.
Germany, No. 435.
Hanover, No. 231.
India, Nos. 240, 348, and 552.
Mexico, No. 496.
Netherlands, No. 289.
New South Wales, No. 380
Prussia, Nos. 313 and 329.
Parma, Piacenza, and Guastalla, No. 321.
Portugal, No. 325.
Poland, No. 335.
Roman States, No. 319.
Russia, Nos. 334 and 508.
Sardinia, Nos. 233 and 235.
Saxony, No. 236.
Sicilies (the Two), No. 316.
Spain, No. 323.
Sweden, Nos. 527 and 354.
Victoria, Nos. 186 and 359.
Wurtemberg, No. 314.

List of Specifications published during the week ending 16th July, 1859.

No.	Price.	Subject-Matter.
2556	7*d.*	Supplying air and steam to furnaces or fire boxes.
2771	8*d.*	Manufacture of sugar.
2813	10*d.*	Twisting fibrous materials, &c.
2814	3*d.*	Sliding window sashes, shutters, and doors.
2816	3*d.*	Roasting coffee.
2817	3*d.*	Railways.
2818	5*d.*	Electric batteries.
2819	6*d.*	Pianofortes and organs.
2820	3*d*	Treatment of coal gas tar, &c.
2821	3*d.*	Glass and other vitreous vessels.
2822	10*d.*	Preparing clay and manufacturing tiles, &c.
2823	3*d.*	Violins and other musical instruments.
2824	3*d.*	Fire grates and heating apparatus.
2825	6*d.*	Paddle wheels.
2826	11*d.*	Pianoforte acton.
2827	6*d.*	Folding bedsteads.
2828	1*s.* 2*d.*	Machinery for tilling and cultivating land.
2829	10*d.*	Pumps.
2830	1*s.* 3*d*	Driving and drawing up piles by steam.
2831	3*d.*	Rods and shafts.
2832	3*d.*	Preserving and colouring wood.
2833	3*d.*	Printing yarns and fabrics.
2834	3*d.*	Taps.
2835	3*d.*	Electro-magnetic telegraph ropes or conductors.
2837	6*d.*	Manufacture of fuel from peat, &c.
2838	9*d.*	Steam boilers.
2839	3*d.*	Lubricating oils.
2840	3*d*	Cements.
2841	3*d.*	Buttons.
2842	3*d.*	India rubber overshoes.
2843	7*d.*	Gas regulator.
2844	3*d.*	Lamps.
2845	3*d.*	Shuttles.
2846	3*d.*	Economizing heat and consuming smoke, &c.
2847	1*s.* 4*d.*	Smelting zinc ores.
2849	4*d.*	Manufacture of waterproof tissues, &c.
2850	9*d.*	Warping, sizing, and weaving machines.
2851	10*d.*	Machinery for tracing designs on metallic surfaces.
2852	3*d.*	Elastic beds.
2853	6*d.*	Obtaining motive power.
2854	7*d.*	Candlesticks, lamps, and lanthorns.
2856	6*d.*	Manufacture of cranked axles and shafts.
2857	3*d.*	Steam engines.
2858	10*d.*	Steam engines, &c.
2859	6*d.*	Precipitation of copper and zinc.
2860	7*d.*	Pumps.
2861	3*d.*	Taps or valves.
2862	1*s.* 4*d.*	Weaving.
2863	6*d.*	Manger fastening.
2864	7*d.*	Transmitting electric telegraph signals.
2865	3*d.*	Manufacture of vinegar from refuse product of starch.
2866	10*d.*	Furnaces for generating steam, &c.
2868	10*d.*	Steam engines.
2869	10*d.*	Working railway breaks.

*** Specifications will be forwarded by post on receipt of the amount of price and postage. Sums exceeding 5*s.* must be remitted by Post Office Order, made payable at the Post Office, High Holborn, to Mr. Bennet Woodcroft, Great Seal Patent Office.

A FREE LIBRARY and READING ROOM, in connection with the Office of the Commissioners of Patents, is open to the Public daily from 10 till 4 o'clock.

In addition to the Printed Specifications, Indexes, and other publications of the Commissioners, the Library includes a Collection of the leading British and Foreign Scientific Journals, and text-books in the various departments of science and art. A printed Catalogue of the Library is on sale.

NOTE.—The Commissioners' publications may be consulted daily in the Library of the British Museum; in the Library of the Society of Arts; and in the Free Libraries of the following Towns and Cities:—

Aberdeen (*Public Library Town House*).
Accrington (*Mechanics' Institution, Bank Street*).
Belfast (*Harbour Office, Corporation Square*).
Beverley (*Guildhall*).
Birmingham (*Birmingham and Midland Institute, Cannon Street*).

PATENT LAW AMENDMENT ACT, 1852.—All Specifications, Indexes, &c., printed by order of the Commissioners of Patents, are sold at the Great Seal Patent Office, 25, Southampton Buildings, Holborn.

THE PATENT LAW AMENDMENT ACTS (15 & 16 Vict., cap. 83; 16 Vict., cap. 5; and 16 & 17 Vict., cap. 115); with the Rules and Regulations made by the Commissioners of Patents for Inventions, and by the Lord Chancellor and the Master of the Rolls, under the Acts 15 and 16 Vict., c. 83, and 16 & 17 Vict., c. 115, accompanied by Specimen Forms of the Provisional Documents printed on sheets of the prescribed size. Price 6*d*.

Museum of Patents, South Kensington.

NUMBER of VISITORS for the Week ending 16th July, 1859.

Mornings - - - -	829
Evenings - - - -	993
Total - - -	1822

Since the opening of the Museum Free Daily (May 12, 1858,)—118,037.

THIS Museum is open to the public daily, free of charge. The hours of admission are from 10 A.M. to 6 P.M., and in the evenings of Monday, Tuesday, and Wednesday from 7 to 10 P.M.

All communications on the subject of the Museum to be addressed to the Superintendent,

B. WOODCROFT.

Great Seal Patent Office,
Southampton Buildings.

GALLERY OF PORTRAITS OF INVENTORS, DISCOVERERS, AND INTRODUCERS OF USEFUL ARTS.—This Collection, formed by Mr. Woodcroft, and first opened to public view in the Great Seal Patent Office in 1853, now constitutes a portion of the Patent Museum at South Kensington.

Presentations of original Portraits, Medallions, Busts, and Statues, in augmentation of the Collection, are hereby invited, and will on receipt be acknowledged in this Journal, and duly recorded in the next published Catalogue.

REAPING MACHINES.—The entire series of Specifications and Drawings on this subject to the end of 1853, together with an Appendix, prepared by B. Woodcroft, of the Patent Office, and published under the sanction of the Commissioners, may be obtained at the cost price of 2*l.* 3*s.* 11½*d.*

FIRE-ARMS, PROJECTILES, &c.—The series of Specifications and Drawings on this Subject, from 15th May, 1718, to 31st December, 1853, with Alphabetical and Subject-matter Indexes, may be obtained at the cost price of 9*l.* 18*s.* 6½*d.*

The Indexes, separately, price 3*s.*

COLONIAL PATENTS.—Information as to the Mode of obtaining Protection for Inventions in the Colonies; contained in Communications from the Governors, &c. of the different British Colonies in answer to the Application of Mr. W. J. CURTIS for a Patent. Price 1*s.*

PATENT RIGHTS in the COLONIES.—Abstract of Replies to the Secretary of State's Circular Despatch of July 11, 1856, calling for Information as to the Form of the Application to be made by Persons desirous of obtaining Patent Rights in the Colonies, and the Expenses attendant on the Grant of such Patent Rights. Price 2*s.* 6*d.*

In course of Publication, by Order of the Commissioners of Patents.

ABRIDGMENTS (in Classes, and Chronologically arranged) of all SPECIFICATIONS of PATENTED INVENTIONS, from the earliest enrolled to those published under the Act of 1852.

These books are of 12mo size, and as each is limited to inventions of one class only, they can be sold at prices sufficiently moderate to enable the humblest inventor to examine for himself whether his discovery has been previously patented or not.

At the foot of each abstract are given references to notices of the inventions in scientific and other works, and to the reports of law proceedings for infringements, &c. &c. &c.

The classes already published are,—

1. DRAIN TILES AND PIPES, price 6*d.*
2. SEWING AND EMBROIDERING, price 6*d.*
3. MANURE, price 6*d.*
4. PRESERVATION OF FOOD, price 6*d.*
5. MARINE PROPULSION, price 4*s.*
6. MANUFACTURE OF IRON AND STEEL, price 5*s.*
7. AIDS TO LOCOMOTION, price 1*s.*
8. STEAM CULTURE, price 2*s.*
9. WATCHES, CLOCKS, AND OTHER TIMEKEEPERS, price 1*s.* 6*d.*
10. FIRE-ARMS AND OTHER WEAPONS, AMMUNITION, AND ACCOUTREMENTS, price 6*s.* 6*d.*
11. PAPER.—PART I. MANUFACTURE OF PAPER, PASTEBOARD, AND PAPIER MÂCHÉ, price 3*s.*
12. TYPOGRAPHIC, LITHOGRAPHIC, AND PLATE PRINTING, price 7*s.*
13. BLEACHING, DYEING, AND PRINTING YARNS AND FABRICS, price 9*s.* 6*d.*

The following are in the press:—

PAPER.—PART II. CUTTING, FOLDING, AND ORNAMENTING; INCLUDING ENVELOPES, CARDS, PAPER-HANGINGS, &c.
ELECTRICITY AND MAGNETISM: THEIR GENERATION AND APPLICATIONS.
PREPARATION OF FUEL, AND APPARATUS FOR ITS COMBUSTION.
MANUFACTURE AND APPLICATIONS OF INDIA RUBBER, GUTTA PERCHA, &c.; INCLUDING AIR, FIRE, AND WATER PROOFING.
PRODUCTION AND APPLICATIONS OF GAS.
STEAM ENGINES.

B. WOODCROFT.

The above, and all other works published by the Commissioners of Patents, are now on sale at the Great Seal Patent Office, 25, Southampton Buildings, Holborn.

This Journal is published on the evenings of Tuesday and Friday, and will be forwarded, post free, to Subscribers.—Terms, 30*s.* per annum.—Subscriptions received at the Great Seal Patent Office, where also single copies, at twopence each, may be obtained.

(*Registered for transmission abroad.*)

No. 579. FRIDAY, JULY 22, 1859. Price 2d.

Grants of Provisional Protection for Six Months.

NOTICE is hereby given that Provisional Protection has been allowed

1310. To LUKE DUNCAN JACKSON, Engineer, 32, Finsbury Market, Finsbury, in the county of Middlesex, for the invention of "An improved machine for cutting wood."

On his petition, recorded in the Office of the Commissioners on the 27th day of May, 1859.

1498. To WILLIAM BUCKWELL, of the Phœnix Stone Works, East Greenwich, in the county of Kent, Artificial Stone Manufacturer, for the invention of "Manufacturing materials for building and other structural purposes, and of the machinery applied thereto, which last invention is applicable to other purposes."

On his petition, recorded in the Office of the Commissioners on the 22nd day of June, 1859.

1510. To ALEXIS JEAN DESSALES, of 13, Rue des Enfants Rouges, Paris, in the empire of France, for the invention of "An improvement in the working and securing of sliding tubes, applicable to gas chandeliers, lamps, and other purposes."

On his petition, recorded in the Office of the Commissioners on the 23rd day of June, 1859.

1554. To ALPHONSE GUEYTON, of Paris, in the French Empire, Jeweller, for the invention of "Improvements in enamelling articles of jewellery, applicable also to other similar purposes."

On his petition, recorded in the Office of the Commissioners on the 30th day of June, 1859.

1598. To JAMES HALL NALDER, of Alvescott, in the county of Oxford, Farmer, and THOMAS NALDER, of Challow Works, in the county of Berks, Engineer and Agricultural Implement Manufacturer, for the invention of "Improvements in winnowing and dressing grain and seeds, and in the machinery or apparatus employed therein."

On their petition, recorded in the Office of the Commissioners on the 5th day of July, 1859.

1600. To WILLIAM HENRY WARD, of the city of Auburn, in the county of Cayuga, and state of New York, one of the United States of North America, for the invention of "Ocean marine signal telegraphing for day and night, whereby messages and communications on all occasions and subjects may be given with clearness and despatch, within seeing distance, day or night."

1608. And to BENJAMIN SEED, of Keighley, Grease Manufacturer, and THOMAS STEEL, of Bradford, Foreman, both in the county of York, for the invention of "Improvements in apparatus employed in the treatment of soap suds or other saponaceous or oily matters."

On both their petitions, recorded in the Office of the Commissioners on the 6th day of July, 1859.

1610. To DAVID THOMAS JONES, of Headless Cross, in the parish of Ipsley, in the county of Warwick, Agricultural Implement Maker, for the invention of "Improvements in ploughs."

1611. To CHARLES FRÉDERIC VASSEROT, of 45, Essex Street, Strand, London, Patent Agent, for the invention of "An improved form of regulator, chiefly applicable to water-wheels."—A communication from Ferdinand Gabet, residing at Bermerain Nord, in the empire of France.

1612. To FRANÇOIS ALEXANDRE LE MAT, of New Orleans, in the state of Louisiana, in the United States of America, Colonel Aide-de-Camp, for the invention of "Improvements applicable to ordnance."

1614. To RICHARD CHRISTOPHER RAPIER, of Newcastle-upon-Tyne, in the county of Northumber-

land, Engineer, for the invention of "Improvements in working rolls for rolling plates of unequal thicknesses."

1618. And to JOHN HENRY JOHNSON, of 47, Lincoln's Inn Fields, in the county of Middlesex, and of 166, Buchanan Street, in the city of Glasgow, North Britain, Gentleman, for the invention of "Improvements in knitting-frames."—A communication from abroad by Jules Nicholas Poivret, of Troyes, France, Mechanician.

On their several petitions, recorded in the Office of the Commissioners on the 7th day of July, 1859.

1619. To GEORGE ELLIS, of No. 4, Collier Street, Pentonville, in the county of Middlesex, Merchant, for the invention of "'The improvement of muffs, to be called 'the patent reticule travelling muff.'"

1620. To WILLIAM HENRY DAWES, of Bromford Iron Works, West Bromwich, in the county of Stafford, Ironmaster, for the invention of "An improvement or improvements in the manufacture of iron."

1622. To FRANÇOIS ALEXANDRE LE MAT, of New Orleans, in the state of Louisiana, in the United States of America, Colonel Aide-de-Camp, for the invention of "Improvements in the construction of revolving or repeating fire arms."

1624. To GEORGE CARTWRIGHT, of Birmingham, in the county of Warwick, Manufacturer, for the invention of "Improvements in corks for bottles and jars."

1625. To GEORGE ALEXANDER BOGGIS, of Croxted Place, Dulwich, in the county of Surrey, for the invention of "Improvements in rendering boots and shoes waterproof."

1626. To ELIJAH LIVERMORE, of the city of New York, in the United States of America, for the invention of "Improvements in the manufacture of burning fluids for illuminating and heating purposes."—A communication by Levi Lewis Hill, resident at Greenport, in the county of Columbia, and state of New York, in the United States of America.

1627. To DAVID MATHEWS, of Eshald Well Brewery, Oulton, near Leeds, in the county of York, Brewer, for the invention of "Improvements in apparatus for refrigerating and heating liquids."

1628. To JOHN HENRY JOHNSON, of 47, Lincoln's Inn Fields, in the county of Middlesex, and of 166, Buchanan Street, in the city of Glasgow, North Britain, Gentleman, for the invention of "Improvements in moulding or shaping metals by pressure, and in the machinery or apparatus employed therein."—A communication from abroad by Levi Dodge, of the United States of America.

1629. To WILLIAM HORATIO HARFIELD, of Fenchurch Street, in the city of London, for the invention of "Improvements in ships' capstans and riding bits."

1630. To HENRY BRINSMEAD and JEREMIAH LAWRENCE, of Ipswich, for the invention of "Improvements in rotatory screens."

1631. To JOHN TAYLOR, of Roupell Park, Streatham Hill, in the county of Surrey, for the invention of "Improvements in the construction of walls to prevent damp from rising, and also in tiles to be used for this purpose in building walls."

1632. To THOMAS DUPPA DUPPA, of Longville, Winstanton, Shropshire, for the invention of "Improvements in carpenters benches."

1633. To WILLIAM WOOFE, of Gloucester, Agriculturalist, for the invention of "Improvements in ploughs."

1635. And to WILLIAM NEWZAN NICHOLSON, of Newark-on-Trent, Agricultural Implement Maker, for the invention of "Improvements in clod crushers and land and garden rollers."

On their several petitions, recorded in the Office of the Commissioners on the 8th day of July, 1859.

1636. To MICHAEL HENRY, of 84, Fleet Street, in the city of London, Patent Agent, for the invention of "Improvements in the manufacture of over-shoes and other articles worn on the feet, and in the apparatus employed therein."—A communication from abroad by Louis Alfred d'Hennin, Mathilde Catherine Georgette Ponceot and Caliste Blois Chiche, all of Paris, in the French empire.

1637. To BERNHARD SAMUELSON and JOHN SHAW, both of the Britannia Works, Banbury, in the county of Oxford, for the invention of "Improvements in reaping and mowing machines."

1638. To FREDERICK AYCKBOURN, of 27, Henry Street, Vauxhall Gardens, Surrey, Gentleman, for the invention of "Constructing certain articles of dress, so as to prevent drowning."

1639. To CHARLES ILIFFE, of Birmingham, in the county of Warwick, Manufacturer, for the invention of "Improvements in the manufacture of buttons."

1641. To ELIJAH LIVERMORE, of the city of New York, in the United States of America, for the invention of "Improvements in generating gas for the purpose of lighting and heating."

1642. And to JOHN SMITH, of Bradford, in the county of York, Engineer, for the invention of "Improvements in apparatus for heating and cooling water."

On their several petitions, recorded in the Office of the Commissioners on the 9th day of July, 1859.

1643. To EDWARD FRANCIS HUTCHINS, Architect, of Albert Cottages, Perry Street, in the parish of Northfleet, Kent, for the invention of "Constructing the jaw or jaws of vices and holding tools in general with a ball and socket joint."

1644. To ROBERT CLEGG, of Islington, in the county of Middlesex, Gentleman, for the invention of "Improvements in machines for cutting wood and metal, and in the means of fixing saws thereto."—A communication from abroad by Felix Crampe, of No. 107, Rue de Vangirard, Paris, in the empire of France.

1645. To HENRY DAVIES, of No. 13, Leicester Buildings, in King Street, Liverpool, in the county of Lancaster, for the invention of "Improvements in the manufacture of soap."

1646. To JOHN CHARLES PICKARD, of Burnley, in the county of Lancaster, Patent Temple and Weft

Fork Maker, for the invention of "Improvements in weft forks for looms."

1647. To WILLIAM EDWARD NEWTON, of the Office for Patents, 66, Chancery Lane, in the county of Middlesex, Civil Engineer, for the invention of "Improvements in magneto-electric machines."—A communication from abroad, by George W. Beardslee, of Flushing, state of New York, in the United States of America.

1648. To JAMES DIBLE, of Northam, in the county of Hants, Shipwright, and WILLIAM HENRY GRAVELEY, of Upper East Smithfield, in the county of Middlesex, Engineer, for the invention of "Improvements in apparatuses for ventilating and lighting ships."

1649. To FRANCIS BURDEN, of John Street, Adelphi, in the city of Westminster, Civil Engineer, for the invention of "Improvements in the permanent way of railways."

1650. And to JULES ALBERT HARTMANN, of Mulhouse, in the empire of France, Chemist, for the invention of "Improvements in the manufacture of colours for printing cotton and other vegetable fibres and silk."

On their several petitions, recorded in the Office of the Commissioners on the 11th day of July, 1859.

Invention protected for Six Months by the Deposit of a Complete Specification.

NOTICE is hereby given that the petition of

1690. WILLIAM MCINTYRE CRANSTON, of 11, New Broad Street, London, praying for Letters Patent for the invention of "Improved delivery apparatus for harvest machines,"—a communication from abroad by Walter Abbott Wood, of Hoosick Falls, county of Renselaer, State of New York, America,—was deposited and recorded in the Office of the Commissioners on the 16th day of July, 1859, and a complete specification accompanying such petition was at the same time filed in the said office.

Patents Sealed.

LIST of LETTERS PATENT which passed the Great Seal on the

22nd July, 1859.

202. BENJAMIN TEMPLAR, of the city and county of Bristol, Dyer, for an invention of "Improvements in umbrellas and parasols."—Dated 22nd January, 1859.

203. EDWARD DORSETT, of 76, Old Broad Street, in the city of London, Tar Distiller, and JOHN BENNINGTON BLYTHE, of Minerva Place, New Cross, in the county of Kent, Merchant, for an invention of "Improvements in the distillation of oil from coal tar, and in apparatus for preserving timber therewith."—Dated 22nd January, 1859.

212. RICHARD ARCHIBALD BROOMAN, of 166, Fleet Street, in the city of London, E.C., Patent Agent, for an invention of "Improvements in pumps."—A communication from François Ruff, residing at Paris.—Dated 24th January, 1859.

213. JOSEPH LAUBEREAU, of Paris, in the empire of France, Civil Engineer, for an invention of "Improvements in air engines."—Dated 24th January, 1859.

214. JOHN SMITH and WILLIAM HENRY SMITH, of 8, Upper Fountain Place, City Road, in the county of Middlesex, Manufacturers, for an invention of "Certain improvements in manufacturing paper, and in producing watermarks, patterns, figures, letters, and devices thereon, and in the construction of the mechanism employed therein."—Dated 24th January, 1859.

215, JOHN SAVORY, of 143, New Bond Street, Chemist and Druggist, and WILLIAM ROBERT BARKER, of the same place, Chemist, for an invention of "Improvements in bottles for medicines and poisons."—Dated 24th January, 1859.

217. ARTHUR WARNER, of 31, Threadneedle Street, in the city of London, and WILLIAM TOOTH, of Summer Street, Southwark, in the county of Surrey, for an invention of "Improvements in the manufacture of iron and gases for such and other uses."—Dated 24th January, 1859.

227. JOHN WHITE, of Finchley, in the county of Middlesex, Surgeon, for an invention of "Improvements in means or apparatus to facilitate respiration under water or under the influence of fire, or in other situations where an artificial supply of air may be required; part of which improvements is also adapted to facilitate movement in or upon the surface of water."—Dated 25th January, 1859.

238. DAVID GRAHAM, of the firm of Graham, West, and Company, of Wapping, in the county of Middlesex, Millwrights and Engineers, for an invention of "An improved method of driving centrifugal machines."—A communication from T. Hanning, residing in the Mauritius.—Dated 26th January, 1859.

240. FREDERICK CARL CHRISTIAN PAULSEN and ALBIN ALSING, both of Emmett Street, Limehouse, in the county of Middlesex, for an invention of "Improvements in preparing beverages usually called Punch."—Dated 26th January, 1859.

370. WILLIAM EDWARD NEWTON, of the Office for Patents, 66, Chancery Lane, in the county of Middlesex, Civil Engineer, for an invention of "An improved mode of bleaching and purifying or refining sugar and vegetable juices or extracts."—A communication from abroad by Emile Rousseau, of Paris, in the empire of France.—Dated 9th February, 1859.

395. THOMAS WILLIS and GEORGE CHELL, both of Longsight, near the city of Manchester, Machine Makers, for an invention of "Improvements in machinery for spinning, twisting, doubling, and winding yarns and threads."—Dated 12th February, 1859.

617. Alfred Vincent Newton, of the Office for Patents, 66, Chancery Lane, in the county of Middlesex, Mechanical Draughtsman, for an invention of "Improved machinery for rolling horse-shoe iron."—A communication from William Watkin Lewis, risiding in the United States of America.—Dated 9th March, 1859.

833 Thomas Richardson, of Hartlepool, in the county of Durham, Engineer, and George William Jaffrey, of the same place, Engineer, for an invention of "Improvements in the arrangement and construction of harbours of refuge, breakwaters, sea walls, or barriers, and other like structures."—Dated 2nd April, 1859.

851. Leonard Brierley, of Birmingham, in the county of Warwick, Manufacturer, and Henry Geering, of Birmingham aforesaid, Manufacturer, for an invention of "A new or improved method of ornamenting metallic bedsteads and other articles of metallic furniture."—Dated 5th April, 1859.

1263. Walter Crum, of Thornliebank, in the county of Renfrew, Bleacher and Calico Printer, for an invention of "Improvements in printing and dyeing textile fibres and fabrics."—Dated 23rd May, 1859.

Patents on which the Stamp Duty of £50 has been Paid.

(*To 20th July*, 1859, *inclusive*).

18th July.

1707. William Astbury Jump, of Moulton, near Northwich, in the county of Chester, Salt Manufacturer, for an invention of "Improvements in the manufacture of salt."—Dated 19th July, 1856.

1708. William Astbury Jump, of Moulton, near Northwich, in the county of Chester, Salt Manufacturer, for an invention of "Improvements in apparatus for supplying with fuel the furnaces of steam boilers and other furnaces, and in the method of cleaning the fire bars thereof."—Dated 19th July, 1856.

1711. William Papineau, of Harrow Bridge, Stratford, Manufacturing Chemist, for an invention of "An improvement in the production of spirits of wine."—Dated 19th July, 1856.

1748. Henry Doubleday, of Coggeshall, in the county of Essex, for an invention of "An improvement in the manufacture of starch."—Dated 23rd July, 1856.

19th July.

1719. James Clark, of Newton Heath, Manchester, India Rubber Manufacturer, for an invention of "Improvements in the manufacture of waterproof fabrics."—Dated 21st July, 1856.

1725. John Edward Hodges, of Leicester, in the county of Leicester, Manufacturer, for an invention of "Improvements in machinery for the manufacture of looped fabrics."—Dated 21st July, 1856.

1742. John Onions, of Wellington Place, Blackfriars Road, Southwark, county of Surrey, Engineer, for an invention of "Improvements in the manufacture of iron."—Dated 23rd July, 1856.

1749. John Derbyshire, of Longton Potteries, in the county of Stafford, for an invention of "Improvements in cocks, taps, and valves."—Dated 23rd July, 1856.

20th July.

1715. Elias Leak, of Longton, in the county of Stafford, Lathe Maker, for an invention of "A thimble pillar with points and branches to be used in placing 'glost' china and earthenware in ovens and kilns, when firing, burning, or baking such ware, in lieu of the cockspurs and stilts now in use for that purpose."—Dated 21st July, 1856.

1729. Clothide Amet, of Tavistock Street, in the county of Middlesex, for an invention of "Improved means of distending articles of dress and preserving the form or shape thereof."—A communication from R. C. Milliet, of Bésançon, France.—Dated 22nd July, 1856.

1810. William Edward Newton, of the Office for Patents, 66, Chancery Lane, in the county of Middlesex, Civil Engineer, for an invention of "A new or improved process for obtaining aluminium."—A communication from Messrs. Rousseau, Frères, and Paul Morin.—Dated 31st July, 1856.

1984. William Henry Perkin, of King David Fort, in the Parish of Saint George in the East, in the county of Middlesex, Chemist, for an invention of "Producing a new colouring matter for dyeing with a lilac or purple color stuffs of silk, cotton, wool, or other materials."—Dated 26th August, 1856.

DELIVERY OF LETTERS.—For the Great Seal Patent Office the initials are W. C., the District being the Western Central. In the direction of a Letter, these initials should be legibly written in a separate line, and should in all cases end the address, thus:—

The Commissioners of Patents,
Great Seal Patent Office,
25, Southampton Buildings,
London,
W.C.

A List of the Patents for Inventions which have become Void by reason of the Nonpayment of the additional Stamp Duty of £50 before the expiration of the Third Year from the date of such Patents, pursuant to the Act of the 16th Vict. c. 5, sec. 2,—for the Quarter ending the 30th day of June, 1859.

No. of Register.	Date of Patent.	Name and Address of Patentee.	Title of Invention.
780	1st April, 1856.	Joseph Bentley, of Liverpool, in the county of Lancaster, Gun Manufacturer.	Improvements in breech-loading fire-arms, and in the cartridges to be used therewith.
781	,,	Charles Baptiste, Mechanician, of Toulouse, France.	Improvements in machines for manufacturing tenons and mortises.
785	,,	Etienne Laport, Chemist, of Paris, in the French empire.	The application of certain new materials in the manufacture of bougies, candles and other similar articles.
787	,,	Alfred Vincent Newton, of the Office for Patents, 66, Chancery Lane, in the county of Middlesex, Mechanical Draughtsman.	Improved apparatus for ascertaining gradients.
791	2nd April, 1856.	Frances Young, of Norwich, in the county of Norfolk.	An improved two-wheeled open vehicle or carriage.
792	,,	Richard Roberts, of the city of Manchester, Engineer.	Improvements in omnibuses and other passenger carriages.
793	,,	Peter McGregor, of the Falcon Works, in the city of Manchester, Machine Maker, and Thomas Marquis, of Huncoat, near Accrington, in the county of Lancaster, Spinner.	Certain improvements in the machines for spinning, called throstles.
794	,,	James Smith Cottrill, of Great Lever, near Bolton, in the county of Lancaster, Bleacher.	Improvements in presses.
796	,,	George Bell Galloway, of 42, Basinghall Street, in the city of London, late of Chili, in South America, Engineer and Shipowner.	Improvements in propelling vessels.
798	,,	George Gwynne, of Trafalgar Square, in the county of Middlesex, Esquire.	Improvements in treating fatty, oily, and greasy bodies.
799	,,	Henry George Hine, of Brecknock Street, Camden Town.	Improvements in children's and in valids' carriage, called perambulators.
802	,,	Alfred Vincent Newton, of the Office for Patents, 66, Chancery Lane, in the county of Middlesex, Mechanical Draughtsman.	Improvements in the construction of rotary steam engines, applicable in part to pumps for raising and forcing fluids.
808	3rd April, 1856.	Thomas White, Junior, of Portsmouth, in the county of Hants, Engineer and Ship Builder.	Improvements in slips and ways for receiving ships or vessels requiring repair, and for apparatus to be used for hauling up ships or vessels.

No. of Register.	Date of Patent.	Name and Address of Patentee.	Title of Invention.
811	3rd April, 1856.	James Bannehr, of Exeter - -	An improvement in manufacturing or preparing paper for, and in mounting copies of written documents thereon.
816	4th April, 1856.	Samuel Fisher, of Birmingham in the county of Warwick, Engineer.	Improvements in the manufacture of anchors, shafting for mill and engine purposes, axles, cranks, and spindles, and in the furnaces or muffles used in the said manufacture.
819	,,	George Tomlinson Bousfield, of Sussex Place, Loughborough Road, Brixton, in the county of Surrey.	Improvements in moulding planes.
822	5th April, 1856.	James Hogg, Publisher, South Blacket Place, and John Napier, Stereotyper, East Siennes Street, both of Edinburgh, in the county of Edinburgh.	Improvements in stereotyping.
825	,,	James Webster, of Birmingham, in the county of Warwick, Engineer.	A new or improved elastic metallic tube and in the method of manufacturing the same.
829	,,	Henry Thomas Sturley, of Church Street, South Lynn, in the county of Norfolk.	An improved compound or breakfast mixture.
831	,,	William Porter Maddison, of Barnsley, in the county of York.	An improved telegraph or apparatus for the transmission of signals.
834	,,	Henry Craigie, of Edinburgh, W. S. -	Improvements in heating apartments where gas and water are used.
839	7th April, 1856.	Ephraim Morris, of Bergen, in the county of Hudson, and State of New Jersey, United States of America.	Improved machinery for raising and lowering weights.
840	,,	William Edward Newton, of the Office for Patents, 66, Chancery Lane, in the county of Middlesex, Civil Engineer.	An improved construction of furnace for the manufacture of glass.
841	,,	Charles Durand Gardissal, of 10, Bedford Street, Strand, London, and of 29, Boulevart St. Martin, Paris, Patent Agent.	Preparing various resins and combining them with oils and fatty matters for manufacturing candles thereof.
844	,,	William Coles Fuller, of 2, Bucklersbury, Cheapside, in the city of London, India Rubber Spring Manufacturer.	Improvements in constructing and adapting india rubber as tyres for wheels.
848	8th April, 1856.	Stephen Johnson Gold, of the city of New Haven, and State of Connecticut, United States of America.	An improvement in apparatus for warming buildings by steam.
851	,	William Edward Newton, of the Office for Patents, 66, Chancery Lane, in the county of Middlesex, Civil Engineer.	Improvements in the process of manufacturing steel and carbonizing iron and the ores thereof in the said manufacture.
854	,,	John Brook, of 10, Crescent, Jewin Street, City.	Improvements in lift pumps.
856	9th April, 1856.	Joseph Robert Whitgreave, of Rugeley, in the county of Stafford, Gentleman.	Improvements in the arrangement and construction of locomotive engines.
858	,,	Richard Chrimes, of Rotherham, in the county of York, Brass Founder.	Improvements in buffers and other springs for railway and other carriages.
861	10th April, 1856.	Henry Laxton, of the firm of William and Henry Laxton, of the Office for British and Foreign Patents, No. 19, Arundel Street, Strand, Civil Engineer.	An improved mode of adjusting circular saws.

No. of Register.	Date of Patent.	Name and Address of Patentee.	Title of Invention.
867	11th April, 1856.	Thomas Williams Makin, of Longsight, near Manchester, in the county of Lancaster, Silk Finisher, and John Barnsley, of Stockport, in the county of Chester, Engraver.	Improvements in machinery or apparatus for embossing moiré antique water on all kinds of woven fabrics.
868	,,	Louis Normandy, of 67, Judd Street, Brunswick Square, in the county of Middlesex, Civil Engineer.	Improvements in the mode of writing and printing music to facilitate the study thereof.
869	,,	James Burnside, of No. 42, Henry Street, Sunderland, General Traffic Manager for the Sunderland Dock Company.	Improvements in apparatus for propelling and steering ships and boats.
870	,,	Peter Armand le Comte de Fontaine-Moreau, of 39, Rue de l'Echiquier, Paris, in the empire of France, and of 4, South Street, Finsbury, London.	An improved apparatus for measuring the speed of currents of air and water.
871	,,	George Jackson, of Bilston, in the county of Stafford, Iron Master.	A new or improved steam boiler, to be heated by the waste heat of puddling or mill furnaces.
872	,,	Robert Davis, of 267, Oxford Street, in the county of Middlesex.	Improvements in the construction of tobacco pipe stems.
878	12th April, 1856.	Francisco Niubo y Pedros, of 39, Rue de l'Echiquier, Paris, in the empire of France, and of 4, South Street, Finsbury, London.	A new motive power.
880	14th April, 1856.	Edwin Heywood, of Sutton, near Keighley, in the county of York, Designer.	Improvements in fixing apparatus for generating steam, whereby smoke will be prevented or consumed, and fuel economized.
883	,,	John Symonds and Thomas Mara Fell, Smelters and Gold Ores Reducers, of Sufferance Wharf, Mill Wall, Poplar, in the county of Middlesex.	Certain improvements in the reduction of gold, silver, and other ores.
885	,,	George Davies, of the Office for Patents, 1, Serle Street, Lincoln's Inn, in the county of Middlesex, Civil Engineer.	Improvements in the method of soldering or uniting cast iron.
886	,,	Louis Pierre Coulon, of 39, Rue de l'Echiquier, Paris, in the empire of France, and of 4, South Street, Finsbury, London.	A new type distributing and composing machine.
990	,,	William Warren, of Northampton Park, Gentleman, and Warren de la Rue, of Bunhill Row, Manufacturer, both in the county of Middlesex.	An improvement in the manufacture of envelopes.
891	,,	Samuel Cunliffe Lister, of Bradford, in the county of York.	Improvements in weaving.
894	,,	Alfred Vincent Newton, of the Office for Patents, 66, Chancery Lane, in the county of Middlesex, Mechanical Draughtsman.	An improved mode of constructing grate bars.
898	15th April, 1856.	Thomas Jeffries, of Reading, in the county of Berks.	Improvements in cooking stoves.
899	,,	Edmund Richard Southby, of Bulford, Amesbury, in the county of Wilts.	An improvement in coating iron with copper.
900	,,	George Tomlinson Bousfield, of Sussex Place, Loughborough Road, Brixton, in the county of Surrey.	Improvements in surface or fresh water condensers, chiefly applicable to steam-engines.

No. of Register.	Date of Patent.	Name and Address of Patentee.	Title of Invention.
903	16th April, 1856.	WILLIAM ROUTLEDGE, of Salford, in the county palatine of Lancaster, Engineer.	Improvements in the construction of steam-engine and other boilers to prevent explosions.
905	,,	FREDERICK PRIESTLEY, of Cleveland Street, Fitzroy Square, in the county of Middlesex, Pianoforte Manufacturer.	Improvements in pianofortes.
906	,,	DAVID BLAIR WHITE, of Newcastle-upon-Tyne, in the county of the town of Newcastle-upon-Tyne, Doctor of Medicine.	An improvement or improvements in cylinders, pistons, or plungers.
909	,,	WILLIAM EDWARD NEWTON, of the Office for Patents, 66, Chancery Lane, in the county of Middlesex, Civil Engineer.	Improved apparatus for raising sunken vessels and increasing the buoyancy of floating vessels.
910	,,	JOHN HENRY JOHNSON, of 47, Lincoln's Inn Fields, in the county of Middlesex, and of Glasgow, North Britain, Gentleman.	Improvements in cleansing and hulling grain and seeds, and in the machinery or apparatus employed therein.
911	,,	WILLIAM ARMITAGE, of Farnley Iron Works, and HENRY LEA, Manager to the Farnley Iron Company, both of Farnley, near Leeds, in the county of York.	An improvement in the manufacture of iron.
912	,,	WILLIAM LITTLE, of the Strand - -	Improvements in lamps for burning paraffine and bituminous oils or naphthas.
917	17th April, 1856.	LIANNA MESURE, of Billericay, in the county of Essex, Watch Maker.	An improvement in watches.
920	,,	JOHN SKIRROW WRIGHT, of Birmingham, in the county of Warwick, Manufacturer.	Improvements in the construction and ornamentation of belt or band fastenings.
921	18th April, 1856.	GEORGE LÜRIG, of the town of Adelebsen, Hanover, residing in Paris, Soap Manufacturer.	Improvements in the process of manufacturing salt petre.
922	,,	WILLIAM WESTLEY, of Willington, in the county of Derby, Civil Engineer.	A new or improved nail or spike.
924	,,	JOHN MARSH, of Burnt Tree, near Dudley, in the county of Worcester, Manufacturer.	Improvements in fire grates.
927	,,	THOMAS HOLLINGWORTH, of Turkey Mill, near Maidstone, in the county of Kent, Paper Manufacturer.	Improved machinery for dusting or cleaning rags.
930	,,	THOMAS WALKER, of Birmingham, in the county of Warwick, Engineer.	Improvements in governors or regulators of steam and other motive-power engines.
931	,,	GEORGE THOMPSON, of Marchmont Street, Russell Square, in the county of Middlesex, Gentleman.	Improvements in instruments or apparatus used in drawing or marking with crayon, "black lead," or other such materials.
932	,,	JULIUS JEFFREYS, of Kingston Hill, in the county of Surrey.	Improvements in instruments for aiding respiration.
933	,,	PETER WILLIAM BARLOW, of Great George Street, Westminster.	An improvement in seasoning timber.
934	,,	JOSIAH GEORGE JENNINGS, of Great Charlotte Street, Blackfriars Road, in the county of Surrey.	Improvements in pumps.
935	19th April, 1856.	CLAUDE MORET, of 39, Rue de l'Echiquier, Paris, in the empire of France, and of 4, South Street, Finsbury, London, Engineer.	Improvements in rotatory steam engines.

No. of Register.	Date of Patent.	Name and Address of Patentee.	Title of Invention.
938	19th April, 1856.	EDMUND HUNT, of 31, Walnut Tree Walk, in the parish of St. Mary, Lambeth, in the county of Surrey, Practical Chemist.	Improvements in Hansom cabs and similar vehicles, parts of which improvements are also applicable to other carriages.
939	"	CHARLES FREDERICK STANSBURY, of the American and European Patent Offices, 67, Gracechurch Street, London.	A new instrument for determining the position and bearing of ships at sea.
940	"	WILLIAM ADKINS, of Smallbrook Street, Birmingham, in the county of Warwick, Draper.	Measuring fabrics, which he proposes designating the automaton measurer or draper's assistant.
941	"	THOMAS WILKES, of Birmingham, in the county of Warwick, Manufacturer.	A new or improved method of manufacturing tubes of copper and alloys of copper.
946	"	FRANÇOIS JEAN BOUWENS, of Malines, in the kingdom of Belgium, Architect.	A new rotative steam engine.
949	21st April, 1856.	SAMUEL MELLOR, of Salford, in the county of Lancaster, Mechanic, and THOMAS YOUNG, of the city of Manchester, Tobacco Manufacturer.	Certain improvements in machinery for suplying water to steam boilers.
952	"	JOSEPH AUGUSTE MARIE TOUËT CHAMBOR, of Paris, in the empire of France.	Improvements in fireplaces.
954	"	JAMES HANSOR, of 2, Portland Place, Wandsworth Road, in the county of Surrey, Practical Chemist.	Improvements in the manufacture of illuminating gas.
955	22nd April, 1856.	WILLIAM JAMES CANTELO, of Southwark, in the county of Surrey, Gentleman.	Improvements in the preservation of vegetable matters.
957	"	ALEXANDER SYMONS, of George Street, Mansion House, in the city of London, and EDWARD BURGESS, of Clerkenwell Green, in the county of Middlesex.	Improvements in instruments for ascertaining and indicating heat, and also in the parts for making and breaking contact in electric circuits used therewith."
960	"	ALFRED VINCENT NEWTON, of the Office for Patents, 66, Chancery Lane, in the county of Middlesex, Mechanical Draughtsman.	A new method of obtaining purified oil from coal, shale, and other bituminous substances.
965	"	THOMAS JEACOCK, of 20, Bridge Street, Leicester.	An improvement in knitting machinery.
967	"	WILLIAM GEORGE ARMSTRONG, of Newcastle-upon-Tyne, in the county of Northumberland, Civil Engineer.	Improvements in apparatus for lifting, lowering, and hauling.
968	"	RICHARD ARCHIBALD BROOMAN, of 166, Fleet Street, in the city of London, Patent Agent.	Improvements in or connected with centrifugal machinery.
970	23rd April, 1856.	GEORGE FORSTER, of Standish, near Wigan, in the county of Lancaster, Colliery Viewer.	Certain improvements in the arrangement of "trap doors" or "air-doors," and their cases in the workings or passages in mines, whereby the efficient ventilation is maintained, which said improvements are also applicable in other similar situations.
972	"	JAMES GARNETT, of Low Moor, Clitheroe, in the county of Lancaster, Cotton Spinner.	Improvements in twisting, winding, and reeling yarn, and in machinery or apparatus employed thereon.

No. of Register.	Date of Patent.	Name and Address of Patentee.	Title of Invention.
974	23rd April, 1856.	THOMAS SQUIRE, of Latchford, in the county of Chester, Tanner, and CHARLES FREDERICK CLAUS, of the same place, Practical Chemist.	Improvements in the manufacture of artificial manure.
975	,,	JOHN SHAE PERRING, of Radcliffe, in the county of Lancaster, Civil Engineer.	Improvements in chairs for railways.
976	,,	WILLIAM HENRY BALMAIN, of Saint Helens, in the county of Lancaster, Manufacturing Chemist, and THOMAS COLBY, of the same place, Practical Chemist.	Improvements in the manufacture of alkalies from their sulphates.
977	,,	JAMES BARBOUR, of Glasgow, in the county of Lanark, North Britain, Joiner.	Improvements in sawing apparatus.
980	24th April, 1856.	ALEXANDER SOUTHWOOD STOCKER, of 11, Poultry, Cheapside, in the city of London, Manufacturer.	Improvements in the application of certain materials to the manufacture of ink and other stands and other articles, and in the manufacture and finishing of articles produced out of such or other material or materials.
981	,,	ABEL DÉSIRÉ SCHRATZ, of Saint Denis, near Paris, in the empire of France, Chemist.	Improvements in preparing colours for the impression of woven or textile fabrics or stuffs of any kind.
982	,,	JOHN YEOMANSON and WILLIAM YEOMANSON, both of Leicester, Manufacturers of Hosiery.	Improvements in the manufacture of knitted fabrics.
987	,,	VICTOR DOAT, of Albi, in the French empire, Gentleman.	An improved galvanic battery, and method of recovering and revivifying the agents employed.
988	,,	WALTER NEILSON, of Glasgow, in the county of Lanark, North Britain, Engineer.	Improvements in locomotive engines.
993	25th April, 1856.	JAMES HARDACRE, of the city of Manchester, in the county of Lancaster, Engineer.	Improvements in the arrangement and construction of carriages and carriage wheels.
995	,,	ISAËE DANIEL FRAÉTANIEL, of Paris, France, Proprietor.	An improved safety rein or bridle.
996	,,	WILLIAM GOSSAGE, of Widnes, in the county of Lancaster, Chemist.	Improvements in the manufacture of sulphuric acid.
998	26th April, 1856.	THOMAS HILL, of Heywood, in the county of Lancaster, Boiler Manufacturer.	Improvements in steam boilers and furnaces connected therewith.
1000	,,	EDMUND TOPHAM, of Mansfield Road, Nottingham, in the county of Notttingham.	Apparatus for cleansing out the sediment from the water in steam boilers, and preventing incrustation of the same.
1002	,,	WILLIAM EDWARD NEWTON, of the Office for Patents, 66, Chancery Lane, in the county of Middlesex, Civil Engineer.	Improved machinery for manufacturing painted or enamelled cloth.
1004	,,	THOMAS WALKER, of Warwick Place, Pimlico, in the county of Middlesex.	Improvements in playing cards.
1011	28th April, 1856.	WILLIAM DENNY RUCK, of Topping's Wharf, Tooley Street.	An improvement in tanning hides and skins.
1013	29th April, 1856.	JOHN HICK, of Bolton-le-Moors, in the county of Lancaster, Engineer.	Apparatus for equalizing the temperature of the water in that kind of steam boilers generally called multitubular boilers.

No. of Register.	Date of Patent.	Name and Address of Patentee.	Title of Invention.
1014	29th April, 1856.	James Stead Crosland, of Openshaw, near the city of Manchester, Engineer.	Certain improvements in furnaces and steam generators for locomotive steam engines, and other purposes.
1015	,,	Thomas Greenshields, of No. 11, Little Titchfield Street, London.	Improvements in sleepers for railways.
1017	,,	Thomas Webster Rammell, of Trafalgar Square, in the county of Middlesex.	Improvements in pen and pencil holders.
1018	,,	Isaac Abraham Boss, of Bury Street, in the city of London.	Improvements in preparing cane, in order to render it suitable to be used as a substitute for whalebone.
1019	,,	William Pilling, of Oldham, in the county of Lancaster, Manager.	An improvement in the treatment of yarns or threads, and in the apparatus connected therewith.
1021	30th April, 1856.	John Smith, of Collyhurst, near the city of Manchester, Dyer and Finisher, and William Craven, of the same place, Engineer.	Certain improvements in machinery or apparatus for dressing machinery and finishing velvets, velveteens, and other fabrics.
1023	,,	Samuel Dyer, of the city of Bristol, Shipowner.	Improvements in reefing, furling, and setting the sails of ships and vessels.
1025	,,	Louis Jean Baptiste Manevy, of Paris, in the empire of France.	Certain improvements in manufacturing cast steel.
1026	,,	Wright Jones, of Pendleton, in the county of Lancaster, Engineer.	Improvements in apparatus for regulating the pressure and flow of steam, water, and other fluids.
1032	1st May, 1856.	Stephen Carey, of Clink Street Wharf, Bankside, Southwark, in the county of Surrey, Contractor.	Improvements in water carts and barrows.
1034	,,	Richard Archibald Brooman, of 166, Fleet Street, in the city of London, Patent Agent.	Improvements in machinery for felting or "planking" hat bodies.
1036	,,	Nathaniel Smith, of Thrapston, in the County of Northampton, Engineer.	Improvements in clod-crushing rollers, parts of which are applicable to other descriptions of rollers.
1037	,,	Augustus Smith, of Wentworth Street, in the county of Middlesex, Brush Manufacturer.	Treating vegetable fibres in order to fit them for use as a substitute for bristles in paint and other brushes.
1038	,,	Samuel Hunter, of 13, Ravensworth Terrace, Gateshead, and Dock Anchor Works, Hartlepool.	An Improvement in anchors.
1040	2nd May, 1856.	Richard Pearcy, of Manchester, in the county of Lancaster, Machinist.	Improvements in machinery or apparatus for twisting cotton and other fibrous substances.
1044	,,	Alexander Gordon, of Fludyer Street, Whitehall.	Improvements in evaporating, boiling, and distilling fluids and generating steam.
1045	,,	Henry Edward Brown, of No. 2, Summer Street North, in the city of Dublin.	Improvements in the description of hinges denominated concealed hinges for carriage doors and doors of every description.
1046	,,	Samuel Rooke, of Birmingham, in the county of Warwick, Manufacturer.	A new or improved manufacture of stair rods.
1048	,,	Henry Attwood Thompson, of Lewes, in the county of Sussex, Agricultural Implement Manufacturer.	Improvements in hay-making machines.

No. of Register.	Date of Patent.	Name and Address of Patentee.	Title of Invention.
1049	2nd May, 1856.	Robert Tolmie Campbell, of Washington City, in the United States of America, but now of 67, Gracechurch Street, London.	Improvements in machines for reaping and mowing.
1050	3rd May, 1856.	Peter Armand le Comte de Fontaine-Moreau, of 39, Rue de l'Echiquier, Paris, in the empire of France, and of 4, South Street, Finsbury, London.	Improvements in electric telegraphs.
1054	,,	Wright Garside, of Vicar Street, Kidderminster, in the county of Worcester.	A new and improved method of letting off the worsted or yarn from the bobbins employed in weaving carpets and other similar fabrics in which bobbins are employed during the manufacture thereof.
1060	5th May, 1856.	William Gregory, of Old Church Street, Paddington, in the county of Middlesex, Building Surveyor.	An improvement in the construction of roofing tiles.
1061	6th May, 1856.	Amedée Louis Beudant and Jean Louis Marie Paul Benoit, Engineers, of Paris, in the French empire.	Certain improvements in treating ores of copper containing arsenic and antimony.
1062	,,	Obed Blake, of the Thames Plate Glass Works, Blackwall, in the county of Middlesex, Manager.	Improvements in applying practically the principle of internal reflection within transparent substances.
1063	,,	John Wright, of Upnor, near Rochester, in the county of Kent, Civil Engineer.	Improvements in apparatus for lowering ships' boats.
1065	,,	William Edward Newton, of the Office for Patents, 66, Chancery Lane, in the county of Middlesex, Civil Engineer.	Improved apparatus for connecting boats with their tackle, and clearing or detaching them therefrom when lowered from on board ship into the water.
1066	,,	William Edward Newton, of the Office for Patents, 66, Chancery Lane, in the county of Middlesex, Civil Engineer.	Improved machinery for making envelopes.
1067	,,	Thomas Huckvale, of Choice Hill, Chipping Norton, Oxon.	Improvements in implements for thinning and hoeing turnips and other crops.
1072	7th May, 1856.	Ralph Heaton, the younger, of Birmingham, in the county of Warwick, and Harry Heaton, of Birmingham aforesaid, and George Heaton, of Birmingham aforesaid, Manufacturers and Co-partners.	A new or improved manufacture of balance weights used for counterbalancing pendant lamps and chandeliers, and for other like purposes.
1074	,,	Jean Périnaud, Dyer, of Paris, town in the French empire.	Certain improvements in preparing or dressing silks.
1075	,,	Robert Royds, of Southampton, in the county of Hants, Engineer.	An improvement or improvements in the manufacture of soap.
1079	8th May, 1856.	Alexander Ebenezer Riddle, of 33, Walbrook, City, and Isaac Hoare Boyd, of 3½, Mansion House Place, City.	The improvements in tanning by machinery and chemicals.
1081	,,	James Gray Laurie, of Glasgow.	Improvements in steam engines.
1082	,,	Jonathan Amory, of Boston, Massachusetts, United States of America.	Improvements in furnaces for locomotive and other steam boilers, which improvements are applicable to reverberatory and puddling furnaces and to furnaces for heating buildings.

No. of Register.	Date of Patent.	Name and Address of Patentee.	Title of Invention.
1083	8th May, 1856.	Conrad William Finzell, of Bristol, Sugar Refiner, William Needham, of Smallbury Green, in the county of Middlesex, Manufacturer, and John Barton, of Shoe Lane, in the city of London, Engineer.	Improvements in apparatus for filtering sugar and saccharine juices.
1084	„	Richard Archibald Brooman, of 166, Fleet Street, in the city of London, Patent Agent.	Improvements in machinery for felting or sizing hat bodies.
1085	„	Alexander Alliott, of the Park, Nottingham, Engineer.	Improvements in drying apparatus.
1086	„	William Edward Newton, of the Office for Patents, 66, Chancery Lane, in the county of Middlesex, Civil Engineer.	Improved machinery for cutting, punching, and forging or swaging nuts or washers.
1089	„	Alfred Vincent Newton, of the Office for Patents, 66, Chancery Lane, in the county of Middlesex, Mechanical Draughtsman.	An improvement in bands for securing bales of goods, and for other like uses.
1090	„	Stephen Walter Underhill, Wellfield Cottage, Dunse, Berwickshire.	"The preservation of life in cases of shipwreck, or other casualty at sea, 'The buoyant cushion.'"
1093	9th May, 1856.	John Henry Johnson, of 47, Lincoln's Inn Fields, in the county of Middlesex, and of Glasgow, North Britain, Gentleman.	Improvements in carding engines for carding cotton and other fibrous materials.
1096	„	Edward Daniel Johnson, of Wilmington Square, in the county of Middlesex, Watchmaker.	An improved mode of mounting marine chronometers.
1098	„	William Edward Wiley, of 34, Great Hampton, Street, Birmingham, Pen and Pencil Manufacturer.	Improvements in the manufacture of pens and penholders.
1100	„	Louis Beauché, of Offenbach, near Frankfort-on-the-Maine.	A machine for the manufacture of cigars.
1103	„	Richard Archibald Brooman, of 166, Fleet Street, in the city of London, Patent Agent.	Improvements in machinery for the manufacture or finishing of tyres, hoops, and rings.
1104	„	Frederick Richard Laurence, of Southampton Street, in the city of Westminster, Shirt Collar Manufacturer.	An improvement in the manufacture of shirt collars and wristbands.
1107	10th May, 1856.	John Henry Johnson, of 47, Lincoln's Inn Fields, in the county of Middlesex, and of Glasgow, North Britain, Gentleman.	Improvements in machinery or apparatus for cutting irregular forms.
1108	„	James Wallace, junior of Glasgow, in the county of Lanark, North Britain, Manufacturer.	Improvements in preparing, bleaching, washing, cleansing, and drying textile fabrics and materials and pulpy substances.
1109	„	Robert Wotherspoon, of Glasgow, in the county of Lanark, North Britain, Hat Manufacturer.	Improvements in hats and other coverings for the head.
1111	„	John Ridal, of Sheffield, in the county of York, Working Cutler.	Improvements in spring knife handles.
1116	12th May, 1856.	Richard Whytock, of Edinburgh -	Improvements in apparatus to facilitate the printing of yarns or threads.

No. of Register.	Date of Patent.	Name and Address of Patentee.	Title of Invention.
1117	12th May, 1856.	Edouard Besnier de la Pontonerie, of Paris, in the empire of France.	Certain improvements in the appararatus for consuming smoke.
1118	,,	Barnet Samuel, of Sheffield, in the county of York.	Improvements in the manufacture of combs.
1119	,,	William Edward Newton, of the Office for Patents, 66, Chancery Lane, in the county of Middlesex, Civil Engineer.	Certain improvements in machinery for pumping and forcing water and other fluids.
1120	,,	William Edward Newton, of the Office for Patents, 66, Chancery Lane, in the county of Middlesex, Civil Engineer.	Improved machinery for splitting or cutting blocks of wood for match splints, kindling wood, treenails, and other purposes.
1122	13th May, 1856.	Michael Hodge Simpson, of the state of Massachusetts, of the United States of America.	Certain improvements in machinery for combing wool or various other fibrous substances.
1128	,,	William Edward Newton, of the Office for Patents, 66, Chancery Lane, in the county of Middlesex, Civil Engineer.	Improved apparatus for generating illuminating gases from coal or other substances.
1129	,,	William Edward Newton, of the Office for Patents, 66, Chancery Lane, in the county of Middlesex, Civil Engineer.	Improved machinery for removing snow from railroad tracks.
1131	14th May, 1856.	Henry Bragg, the younger, of Belfast, in the county of Antrim, in Ireland, Commission Agent.	Improvements in machinery or apparatus for finishing linen and other fabrics.
1132	,,	William Galloway and John Galloway, both of Manchester, in the county of Lancaster, Engineers.	Improvements in machinery for rasping, cutting, and chipping dye woods.
1133	,,	Hiram Groves, of the city of New York, in the United States of America, Surveyor and Lithographer.	Improvements in time barrels, or cylinders, or other apparatus for playing upon organs, or other musical instruments.
1136	,,	Jerome André Drieu, of Patricroft, near Manchester, in the county of Lancaster.	Improvements in weaving horse cloths, blankets, rugs, or similar thick materials.
1139	,,	Gustavus Palmer Harding, of Kingsland, in the county of Middlesex, Warehouseman.	An improvement in the manufacture of cloth bonnets.
1140	,,	Alphonse Meillet, of 39, Rue de l'Echiquier, Paris, in the empire of France, and of 4, South Street, Finsbury, London, Gentleman.	An improved artificial stone for grinding, sharpening, and polishing.
1142	,,	Charles Gibson, of Draycott, in the county of Derby, Gentleman.	Improved machinery for the manufacture of bricks, tiles, pipes, and other articles made of clay or plastic materials.
1143	,,	William Crofts, of Derby Terrace, Nottingham Park, Manufacturer.	Improvements in the manufacture of lace and other weavings.
1144	,,	William Horatio Harfield, of 113, Fenchurch Street, in the city of London.	Improvements in machinery for cutting and smoothing the surfaces of metallic nuts.
1145	,,	William Evans, of Sherston Malmesbury, in the county of Wilts.	An improved description of plough.
1146	15th May, 1856.	John Cox, of Ivy Bridge Cottage, near Caerleon, in the county of Monmouthshire, Civil Engineer.	Improvements in coke and coke ovens.

No. of Register.	Date of Patent.	Name and Address of Patentee.	Title of Invention.
1148	15th May, 1856.	William Norris, of Liverpool, in the county of Lancaster, Anchor Manufacturer, and Robert King, of the same place, Foreman to the said William Norris.	Improvements in anchors.
1149	„	James Young Simpson, of Edinburgh, in the county of Midlothian, Doctor of Medicine, and Wyville Thomson, of Belfast, in the county of Antrim, Professor of Geology.	The manufacture or production of lubricating oil from a new material.
1151	„	Robert Foulds, Overlooker, and William Bracewell, Manufacturer, both of Barnoldswicke, near Colne, in the county of Lancaster.	Certain improvements in power looms constructed on what is called the loose reed principle.
1153	„	Charles Richard Williams, of Shiffnal, in the county of Salop, Farmer.	A new or improved implement or apparatus for the cultivation of land.
1155	„	Samuel Weston Moore, of Nottingham, Lace Manufacturer.	Improvements in dividing and finishing lace goods.
1156	„	William Marychurch, Agricultural Implement Maker, and John Griffiths, Engineer, both of Haverfordwest, in the county of Pembroke.	Improvements in horse rakes, part of which is applicable to two-wheeled carriages.
1157	„	Matthew Townsend, of Leicester, Fancy Hosiery Manufacturer.	Improvements in the manufacture of knitted fabrics.
1159	16th May, 1856.	William Thistlethwaite, of 2, Verulam Buildings, Gray's Inn, London, Gentleman.	Certain improvements in photography.
1160	„	Joseph Martin, of Liverpool, in the county of Lancaster, Rice and Corn Miller.	Improvements in machinery for draining or partially drying certain descriptions of wheat and other grain.
1166	17th May, 1856.	Richard Coleman, of Chelmsford, in the county of Essex.	Improvements in implements for ploughing, hoeing, and scarifying land.
1167	„	David Curwood, of George Street, Grosvenor Square, in the county of Middlesex.	An improved apparatus for facilitating the cleaning of knives and forks.
1169	„	Alfred Vincent Newton, of the Office for Patents, 66, Chancery Lane, in the county of Middlesex, Mechanical Draughtsman.	Improvements in machinery for forging or pointing wrought nails, spikes, and other four-sided articles.
1171	„	Louis Cornides, of No. 4, Trafalgar Square (Office for Patents), Charing Cross, in the county of Middlesex.	Improvements in ornamental window blinds and such like transparent decorations.
1172	„	Johan Jacob Meyer, of No. 28, Tatham Street, out of Molesworth Street within, the borough of Rochdale, in the county of Lancaster.	Improvements in machinery for mortising, tenoning, rounding, sweep and straight moulding, boring, grooving, and mitreing.
1176	„	Richard McCloy and John Hare, both of Glasgow, in the county of Lanark, North Britain, Managers.	Improvements in spinning and twisting fibrous materials, and in the machinery or apparatus employed therein.
1179	19th May, 1856.	John Wilkes, of Birmingham, in the county of Warwick, Manufacturer, and Thomas Wilkes, of Birmingham aforesaid, Manufacturer, and Gilbert Wilkes, of Birmingham aforesaid.	A new or improved manufacture of rollers or cylinders for printing fabrics.

No. of Register.	Date of Patent.	Name and Address of Patentee.	Title of Invention.
1182	19th May, 1856.	GEORGE CLARK, of Great Cambridge Street, Hackney Road, in the county of Middlesex, Gas Engineer.	Improvements in the manufacture of illuminating gas.
1188	20th May, 1856.	GEORGE WILKINSON, of 7, Evan Street, Poplar, in the county of Middlesex.	Improvements in steering apparatus and in giving motion to machinery for raising and moving weights.
1190	"	RICHARD MAXWELL, of No. 4, Carlton Terrace, North Brixton, in the county of Surrey.	Improvements in the construction of taps for drawing off liquids.
1191	20th May, 1856.	JAMES ANNING GOLLOP, of 74, Lower Sloane Street, Chelsea, in the county of Middlesex.	An improved method of excluding dust, water, air, and other extraneous matters from doors, windows, glass show cases, and such like constructions.
1193	"	WILLIAM CARDWELL MCBRIDE, of Armagh, county Armagh, Manufacturer.	Improvements in machinery for scutching flax and other vegetable fibrous substances.
1195	"	WILLIAM EDWARD NEWTON, of the Office for Patents, 66, Chancery Lane, in the county of Middlesex, Civil Engineer.	Improvements in the process of manufacturing oil from seeds, and in the machinery and apparatus to be used therein.
1196	"	ALFRED VINCENT NEWTON, of the Office for Patents, 66, Chancery Lane, in the county of Middlesex, Mechanical Draughtsman.	An improved rotary pump.
1198	21st May, 1856.	DAVID SHAW, of Gee Cross, in the county of Chester, Manufacturer.	Improvements in looms and apparatus employed therewith for weaving.
1199	"	ROBERT PEMBERTON, of Hildenborough, Tonbridge, in the county of Kent.	Improvements in barrel organs.
1202	"	JOHN COPE, of Birmingham, in the county of Warwick, Manufacturer.	An improvement or improvements in the manufacture of buttons made of pearl or other shell, ivory, bone, or wood.
1207	"	GEORGE HERON, of South Street, Newcastle-on-Tyne, in the county of the same, Mechanical Engineer.	Improvements in machinery or apparatus for raising, lowering, moving, or transporting heavy bodies.
1209	"	MACLEROY NEILSON, of Thorn Mill, in the county of Renfrew, North Britain, Cotton Spinner.	Improvements in the treatment, preparation, or finishing of yarns or threads.
1212	"	THOMAS LAWRENCE, of Birmingham, in the county of Warwick, Manufacturer.	Improvements in machinery to be used for grinding and polishing gun barrels, swords, matchets, bayonets, scythes, fire-irons, and other articles similar in transverse section to any of those above named.
1213	"	EDWARD HAMMOND BENTALL, of Heybridge, in the county of Essex, Iron Founder.	Improved machinery for crushing or splitting grain or seeds.
1217	22nd May, 1856.	WILLIAM GALLOWAY and JOHN GALLOWAY, both of Manchester, in the county of Lancaster, Engineers.	Improvements in steam boilers.
1218	"	ALEXANDRE HUBERT, of Bordeaux, dept. de la Gironde, in the empire of France, and 4, South Street, Finsbury, London, Captain in the Navy, and Knight of the Legion of Honour.	An improved apparatus for ventilating ships or vessels.

No. of Register.	Date of Patent.	Name and Address of Patentee.	Title of Invention.
1220	22nd May, 1856.	William Richelieu Hodges, of the city of Manchester, in the county of Lancaster, Merchant and Manufacturer.	Improvements in machinery or apparatus for manufacturing loop pile fabrics.
1221	„	William Churchill Dempsey, of No. 4, Liverpool Street, King's Cross, in the county of Middlesex.	A compound for removing all obstructions of the air passages.
1222	„	Alexandre Tolhausen, of No. 7, Duke Street, Adelphi, London, county of Middlesex, Sworn Interpreter at the Imperial Court of Paris.	Improvements in clock-work, part of these improvements being applicable to other regulating purposes.
1223	„	Job Cutler, of Sparkbrook, Birmingham, in the county of Warwick, Gentleman.	Improvements in the manufacture of metallic pipes or tubes to be used for various purposes.
1224	„	Charles Barreswil, of Paris, in the empire of France, Chemist.	Improvements in gas meters.
1225	„	Germain Barruel, Chemist, of No. 24, Rue Hautefeuille, in the city of Paris.	Improvements in treating cotton seed.
1227	„	Charles Dewick, senr., of Stanley Street, Leicester, county of Leicester, Manufacturer.	Improvements in machines generally called "rib fram or rib machine," for producing fancy hosiery.
1228	„	James Howard, of Bedford, Ironfounder, and George Williams Baker, of Woburn, in the county of Bedford, Farm Bailiff to His Grace the Duke of Bedford.	Improvements in machinery or apparatus applicable to the tilling of land.
1229	23rd May, 1856.	Thomas Dawson Russum, of Tipton, in the county of Stafford, Engineer.	A new or improved break for steam engines and other motive power engines.
1230	„	Samuel Berrisford, of Portwood, near Stockport, in the county of Chester, and Enoch Wilkinson, of Oldham, in the county of Lancaster, Overlooker.	Certain improvements in looms for weaving.
1237	„	John Gedge, of No. 4, Wellington Street South, Strand, in the county of Middlesex, Patent Agent.	Improvements in the application of distillation to gas from the furnaces of steam engines.
1240	„	John Dixon, of High Bridge, Newcastle-upon-Tyne, Engineer.	Improvemements in apparatus for measuring water and other liquids.
1241	„	Frederick Peter Dimpfel, of the city and county of Philadelphia, and state of Pennsylvania, one of the United States of America, Engineer.	Improvements in the construction of screw nuts for axle boxes and other purposes.
1242	24th May, 1856.	John de Cockkenifeck, of Cork, in the kingdom of Ireland, Belgian Inspector of the Royal Flax Improvement Society of Ireland.	An improved process and apparatus for preparing, refining, and filtering oils or fatty matters.
1243	„	Pierse Eustace Laurence Barron, of Coleshill Street, Eaton Square, in the county of Middlesex, Gentleman.	An improved process for coating metals for sheathing ships, and for other purposes, and in the means of attaching sheathing plates to ships or vessels.
1248	„	Frederick Peter Dimpfel, of the city and county of Philadelphia, in the state of Pennsylvania, one of the United States of America, Engineer.	Improvements in the construction of steam boilers and furnaces.
1251	26th May, 1856.	Andre Adolphe Gaget, of No. 39, Rue de l'Echiquier, Paris, and 4, South Street, Finsbury, London, Gentleman.	Improvements in bookbinding.

No. of Register.	Date of Patent.	Name and Address of Patentee.	Title of Invention.
1256	26th May, 1856.	Bennett Johns Heywood, of Leicester Square, in the county of Middlesex, Gentleman.	Improvements in holders for leads, slate, and other marking materials.
1257	„	Frederick Charles Jeune, of Gresham Street, in the city of London, India Rubber Manufacturer.	An improved manufacture of floor cloth.
1258	„	William Edward Newton, of the Office for Patents, 66, Chancery Lane, in the county of Middlesex, Civil Engineer.	An improvement applicable to quadrants and other instruments for taking the altitude of the sun or other objects.
1260	„	Samuel Newington, of Ticehurst, in the county of Sussex, Doctor of Medicine.	A preparation for destroying the fly or aphis, and other insects on hop and other plants.
1261	„	John Roberts, of Falmouth, Builder.	Improvements in machinery for moulding bricks and tiles.
1262	„	Thomas Charlton, of Brentwood, in the county of Essex, Engineer, and William Turnbull, of Rotherhithe, in the county of Surrey, Engineer.	Improvements in steam engines.
1266	27th May, 1856.	Frank Clarke Hills, of Deptford, in the county of Kent, Manufacturing Chemist.	Improvements in the purification of gas.
1268	„	Alfred Vincent Newton, of the Office for Patents, 66, Chancery Lane, in the county of Middlesex, Mechanical Draughtsman.	Improvements in reaping machines.
1269	„	Frederick Peter Dimpfel, of the city and county of Philadelphia, and state of Pennsylvania, one of the United States of America.	Improvements in constructng the permanent way of railroads.
1274	28th May, 1856.	Charles Herbert Holt, of the city of Manchester, in the county of Lancaster, Engineer.	Improvements in steam boilers, furnaces for the same, and apparatus connected therewith.
1277	„	Oldham Whittaker, of Hurst, near Ashton-under-Lyne, in the county of Lancaster, Manufacturer, and Cyrus Wallwork, of the same place, Manager.	Improvements in weaving figured fabrics.
1281	30th May, 1856.	William Carr Hutton, of Sheffield, in the county of York, Manufacturer.	Improvements in stamps or hammers worked by power.
1282	„	John Weems, of Johnstone, in the county of Renfrew, North Britain, and John Henderson, McCrindell, of Glasgow, in the county of Lanark, North Britain, Engineers.	Improvements in the manufacture and working of metals and their ores.
1284	„	John Harris Heal, of 196, Tottenham Court Road, in the county of Middlesex.	An improvement in hair and wool mattresses.
1286	31st May, 1856.	Francis Alton Calvert, of the city of Manchester, Engineer.	Improvements in machinery for opening, cleaning, and carding cotton, and other fibrous materials.
1290	„	Henry Bessemer, of 4, Queen Street Place, New Cannon Street, in the city of London.	Improvements in shaping, pressing, and rolling malleable iron and steel.
1293	„	William Gossage, of Widnes, in the county of Lancaster, Chemist.	Improvements in the manufacture of certain kinds of soap.

No. of Register.	Date of Patent.	Name and Address of Patentee.	Title of Invention.
1296	2nd June, 1856.	Robert Blackwood, senior, of Kilmarnock, in the county of Ayr, North Britain, Worsted Spinner.	Improvements in machinery or apparatus for doubling yarns or threads.
1299	,,	Gustavus Gidley, of 14, Clinger Street, Hoxton, and William Christopher, of No. 2, Oak Villa, Pinner, Middlesex.	Reducing the bottle or imported india rubber to a transparent liquid state, so that it may be used as a transparent varnish or solution for mixing with colours.
1300	,,	Stephen Rossin Parkhurst, of the city and state of New York, United States of America.	Improvements in paddle wheels for steam boats and vessels.
1301	,,	Bennett Johns Heywood, of Leicester Square, in the county of Middlesex, Gentleman.	An improved construction of holder for leads and other marking materials.
1303	,,	Auguste Cadet, of No. 36, College Street North, Camden Town, Gentleman.	Improved stamp inking apparatus.
1304	,,	Augustin Marie Herland, of Paris, in the empire of France, Gentleman.	A new regulator pen holder.
1305	,,	Victor Jean Baptiste Mauban, of 39, Rue de l'Echiquier, Paris, and 4, South Street, Finsbury, Lamp Manufacturer.	Certain improvements in the manufacture of cans for holding oil and other liquids.
1306	,,	James Edward McConnell, of Wolverton, in the county of Buckingham, Civil Engineer.	Improvements in locomotive engines.
1307	,,	Delia Avery, of Essex Street, London -	Improvements in the construction of bonnets and other coverings for the head.
1308	,,	James Nasmyth, of Patricroft, in the county of Lancaster, Engineer, and James Brown, of Newport, in the county of Monmouth, Tin Plate Manufacturer.	Improvements in apparatus for the manufacture of tin plates.
1316	3rd Jun, 1856.	Christian Rudolph Wessel, of 25, Fitzroy Square, New Road, Gentleman, and Francis Xavier Kukla, of 3, Raven Row, Mile End Road, Doctor of Philosophy, both in the county of Middlesex.	A vapourless glow heat disseminator.
1317	,,	Joseph Bauzemont, of Paris, France -	Improvements in purifying turpentine.
1318	,,	John Henry Johnson, of 47, Lincoln's Inn Fields, in the county of Middlesex, and of Glasgow, North Britain, Gentleman.	Improvements in oil cans employed in lubricating machinery.
1321	,,	Raymond Fletcher, of Derby, in the county of Derby, Painter, and Edwin Fletcher, of Monk Bretton, in the county of York, Paper Stainer.	Improvements in sweeping chimneys or other flues.
1322	,,	Montague Richard Leverson, Solicitor, of 12, St. Helens, London.	Improvements in tackle blocks.
1324	4th June, 1856.	Joseph Briggs, of Fleet Street, in the city of London, Gentleman.	Improvements in blocks and bricks for building.
1325	,,	Thomas Morris, of Bunney, in the county of Nottingham, Farmer.	An improved trap for beetles and other insects.
1326	,,	Frederick Albert Gatty, of Accrington, in the county of Lancaster, Manufacturing Chemist.	An instrument to be used in lighting and holding matches or vesta lights.

No. of Register.	Date of Patent.	Name and Address of Patentee.	Title of Invention.
1328	4th June, 1856.	WILLIAM POTTS, of Handsworth, in the county of Stafford, Manufacturer.	Improvements in sepulchral monuments.
1329	,,	REUBEN BOYCE WIGLEY, of Birmingham, in the county of Warwick, Manufacturer.	A new or improved method of attaching handles to coffins.
1330	,,	EDWARD HATTON, of Birmingham, in the county of Warwick, Metallic Bedstead Manufacturer.	Improvements in the manufacture of plain and ornamental metallic tubes.
1331	,,	DUNCAN MORRISON, of Bordesley Works, Birmingham.	Improvements in the manufacture of metallic bedsteads and other articles to sit or recline on.
1334	,,	JOHN CHRISTOPHERS, of Heavitree, in the county of Devon, formerly a Merchant.	Improvements in knives and forks whose handles are not metallic.
1335	,,	RICHARD ARCHIBALD BROOMAN, of 166, Fleet Street, in the city of London, Patent Agent.	Improvements in plating glass to render it reflective.
1337	,,	ALEXANDRE LOUIS GIBON, and ANDRÉ FRÖHLICH, of 39, Rue de l'Echiquier, Paris, and of No. 4, South Street, Finsbury, London.	Certain improvements in economizing fuel in the treatment of metals.
1338	5th June, 1856.	JOHN BETTS, of the Strand, in the county of Middlesex, Publisher.	Improvements in the preparation or manufacture of artificial spheres.
1339	,,	JOHN NORRIS, junior, of New York, in the United States of America, but at present residing in Birmingham, in the county of Warwick, Gentleman.	An improvement or improvements in the manufacture of the cutting tools employed in nail-making machines.
1341	,,	ANDREW EDMUND BRAE, of Leeds, in the county of York.	Improvements in apparatus for communicating signals from one part of a railway train to another.
13	,,	ARCHIBALD SINCLAIR, of Birmingham, in the county of Warwick, Engineer.	An improvement or improvements in wrought-iron pins for railway chair fastenings.
1343	,,	WILLIAM WATSON HEWITSON, of Headingley, near Leeds, and WILLIAM HAMOND BARTHOLOMEW, of 15, Brunswick Terrace, Leeds.	Improvements in the construction of the furnaces or fire boxes of tubular steam boilers.
1348	6th June, 1856.	ROBERT HARLOW, of Stockport, in the county of Lancaster, Brass Founder.	Improvements in the construction of water closets and in valves or taps for water closets and other purposes.
1349	,,	JAMES SOMERVILLE, of Glasgow, in the county of Lanark, North Britain, Manager.	Improvements in weaving.
1350	,,	CHARLES DURAND GARDISSAL, of 10, Bedford Street, Strand, London, and of 29, Boulevart St. Martin, Paris, Patent Agent.	Improvements in machinery for extracting fibrous and other products from vegetable substances.
1352	,,	THOMAS CHAMBERS, junior, of Colkirk, Fakenham, in the county of Norfolk.	Improvements in agricultural drills.
1356	7th June, 1856.	ADAM STAMM, of Buenos Ayres, in South America, Engineer.	Improvements in presses for packing, parts of which improvements are also applicable to other presses.
1357	,,	ALFRED VINCENT NEWTON, of the Office for Patents, 66, Chancery Lane, in the county of Middlesex, Mechanical Draughtsman.	An improved furnace for heating soldering irons.

No. of Register.	Date of Patent.	Name and Address of Patentee.	Title of Invention.
1359	7th June, 1856.	William Denny Ruck, of Toppin's Wharf, and Victor Touche, of 14, Rathbone Place, Oxford Street, in the county of Middlesex.	Improvements in the manufacture of paper from fibres not hitherto applied to such purpose.
1360	,,	Samuel Dyer, of the city of Bristol, Ship Owner.	Improvements in reefing, furling, and setting the sails of ships and vessels, also for protecting such sails from wet and other abuses caused by ropes and rigging.
1361	9th June, 1856.	Alexander Robertson, of the city of Dublin, Surgical Instrument Maker.	An improved inkstand.
1365	,,	Robert Ferrier, of Jedburgh, in the county of Roxburgh, North Britain, Smith and Machine Maker.	Improvements in machinery or apparatus for sweeping and cleansing roads and streets.
1366	,,	James Holdin, of Manchester, in the county of Lancaster, Paper Manufacturer.	Certain improvements in machinery or apparatus for washing rags, which said improvements are also applicable for washing other materials.
1367	,,	James Holdin, of Manchester, in the county of Lancaster, Paper Manufacturer.	Certain improvements in machinery or apparatus for bowking, bleaching, dyeing, and washing textile fabrics or materials.
1368	,,	John Henry Johnson, of 47, Lincoln's Inn Fields, in the county of Middlesex, and of Glasgow, North Britain, Gentleman.	Improvements in the construction of rails for railways, and in the mode of securing the ends of rails for railways.
1369	,,	John Ellis, of Heckmondwicke, in the county of York, Surgeon.	Improvements in the manufacture of muriate of ammonia and carbonate of ammonia, and in converting certain ingredients employed therein into an artificial manure.
1370	,,	Benjamin Smith and William Kalthoff, of Gemünd, near Cologne, in the kingdom of Prussia.	Improvements in economizing fuel in the locomotive and other steam engines.
1377	10th June, 1856.	Carlo Pietroni, of London Wall, in the city of London, Merchant.	Improvements in printing on cloth and other fabrics.
1378	,,	Perceval Moses Parsons, of Duke Street, Adelphi, in the county of Middlesex, Civil Engineer.	Certain improvements in the permanent way of railways.
1380	,,	Armand Eugène Preux, of Paris, in the empire of France.	Warming railway and other vehicles.
1382	,,	William Wilson, of Newcastle-upon-Tyne, Fur Cutter.	Improvements in machinery for pulling the hair from coney and other skins.
1383	11th June, 1856.	Henry Benson James, of Derby, in the county of Derbyshire, Engineer.	Improvements in moulding metallic castings.
1384	,,	William Henry Westwood, Thomas Wright, and Edward Wright, of Queen's Cross, Dudley, in the county of Worcester, Boiler and Gas-holder Makers and Engineers.	An improved stop or regulating valve.
1385	,,	William Bayliss, of Birmingham, in the county of Warwick, Tube Maker.	A new or improved manufacture of ornamental metallic tubes.
1386	,,	John Henry Johnson, of 47, Lincoln's Inn Fields, in the county of Middlesex, and of Glasgow, North Britain, Gentleman.	Improvements in the manufacture of safety paper.

No. of Register.	Date of Patent.	Name and Address of Patentee.	Title of Invention.
1389	12th June, 1856.	RICHARD ARCHIBALD BROOMAN, of 166, Fleet Street, in the city of London, Patent Agent.	Improvements in the manufacture of spoons, forks, and other similar articles, and in the machinery employed therein.
1394	,,	JAMES FAIRCLOUGH, of Liverpool, in the county of Lancaster, Upholsterer and Cabinet Maker.	An improved expander and contractor for dining tables.
1395	,,	JOHN STENHOUSE, of 15, Upper Barnsbury Street, Islington.	Improvements in the preparation of a decolourizing material suitable for the treatment of acid, alkaline, and neutral solutions.
1404	13th June, 1856.	SERVANS DE JONG, of 17, New Hampstead Road, in the county of Middlesex.	Improvements in warming and ventilating apartments and buildings.
1405	,,	WILLIAM JACOT, of Molyneux Place, Water Street, in Liverpool, in the county of Lancaster, Merchant.	Improvements in fire arms.
1406	,,	PETER ARMAND le Comte de FONTAINE-MOREAU, of 39, Rue de l'Echiquier, Paris, and of 4, South Street, Finsbury, London.	Certain improvements in shipbuilding.
1407	14th June, 1856.	HYPOLITTE MÈGE, Chemist, of Paris (empire of France).	Improvements in the manufacture of bread.
1410	,,	HECTOR GRAND DE CHATEAUNEUF, of Paris, in the empire of France, and of 45, Essex Street, Strand, London, Civil Engineer.	Improvements in apparatus for washing and bleaching clothes and other materials to be called "The steam washing lixiviateur."
1411	,,	PETER ARMAND le Comte de FONTAINE-MOREAU, of 39, Rue de l'Echiquier, Paris, in the empire of France, and 4, South Street, Finsbury, London, Agent for Patents of Invention.	Certain improvements in metallic packing for stuffing boxes and pistons.
1414	,,	WILLIAM SEED, of Preston, in the county of Lancaster, Machine Maker.	Certain improvements in "Lap machines," or apparatus used in the preparation of cotton and other fibrous substances for spinning.
1415	,,	EDWARD LINDNER, of the city and state of New York, United States of America.	Improvements in breech-loading fire arms.
1416	16th June, 1856.	JOSEPH SUTCLIFFE, of Rochdale, in the county of Lancaster, Foreman, and JAMES LEECH, of the same place, Cotton Spinner.	Improvements in machinery or apparatus for opening, cleaning, and preparing cotton, wool, and other fibrous substances.
1417	,,	CHARLES DESNOS, of Bedford Street, Strand, in the county of Middlesex.	Improvements in furnaces for consuming smoke.
1420	,,	JAMES BALL MANNIX, of Westminster, in the county of Middlesex.	A method of applying locomotive power to the working of inclines.
1426	17th June, 1856.	JOHN SADLER, of Birmingham, in the county of Warwick, Manufacturer, and JOSIAH GREEN, of Birmingham aforesaid, Manufacturer, and THOMAS DAVIS, of Birmingham aforesaid, Manufacturer.	Improvements in the manufacture of hinges.
1428	,,	JAMES EIVES, of 17, Cornhill, London.	An improved dynamometer.
1430	,,	FREDERICK COLLIER BAKEWELL, of No. 6, Haverstock Terrace, Hampstead, in the county of Middlesex.	Improvements in percussion bomb shells.

No. of Register.	Date of Patent.	Name and Address of Patentee.	Title of Invention.
1434	18th June, 1856.	Raymond Leopold de Berenger, of Enfield, in the county of Middlesex, Farmer.	Improvements in nose bags.
1435	„	Thomas Burton, of Padiham, near Burnley, in the county of Lancaster.	Improvements in machinery or apparatus for sizing and dressing warps, yarns, or threads.
1439	„	Charles Edmund Green, of 13, Blandford Green, Portman Square, in the county of Middlesex.	Improvements in tents, huts, and camp hospitals.
1440	„	Caleb Perry Sharpley, of Berry's Cottage, Chapel Street, Stockwell, Surrey.	Improvements in paddle wheels for propelling vessels.
1442	19th June, 1856.	William Hunt, of Tonge, near Middleton, in the county of Lancaster, Silk Manufacturer.	Certain improvements in machinery or apparatus for polishing and finishing yarns or threads.
1443	„	Francis Gybbon Spilsbury, of Chaudfontaine, in the kingdom of Belgium, and of 56, Stones End, Borough of Southwark, county of Surrey, Gentleman.	Making soda and alum.
1444	„	Guilford Lindsay Molesworth, of 13, Beaufort Buildings, Strand, London, in the county of Middlesex, Engineer.	An improved pendent child's cot.
1445	„	Theodore Schwartz, of New York, United States, but now of 67, Gracechurch Street, London.	An improved brick.
1446	„	George Pye, of Ipswich, in the county of Suffolk, Flax Manufacturer.	An improvement in preparing silk.
1448	„	William Parsons, of 18, Pratt Street, Old Lambeth, Manufacturing Engineer.	Improvements in washing and bleaching woven fabrics.
1449	„	Jacinto Dias Damazio, of Lisbon, in the kingdom of Portugal, Merchant.	A new process of making illuminating and heating gas by a double distillation without retort.
1450	20th June, 1856.	William Radley, of Hill Street, Peckham, in the county of Surrey, Surgeon.	Improvements in machinery, apparatus, materials, and processes for preparing and treating auriferous, argentiferous, and cupreous rocks, minerals, and alluviums, parts whereof are applicable to other purposes.
1452	„	John Talbot Pitman, of the American and European Patent Offices, 67, Gracechurch Street, in the city of London.	A new method of using the electric current or currents for telegraphic and other purposes.
1455	„	Jonathan Hague, of Ashton-under-Lyne, in the county of Lancaster, Overlooker.	Improvements in machinery or apparatus for manufacturing bands or cords for driving machinery and other purposes.
1456	„	Michael Thomas Crofton, of Leeds, in the county of York.	An apparatus for inking stamps used by bankers and others.
1461	21st June, 1856.	George Davies, of the Office for Patents, 1, Serle Street, Lincoln's Inn, in the county of Middlesex, Civil Engineer.	Improvements in apparatus for measuring and indicating the leakage of vessels.
1462	„	Elias Robison Handcock, of 16, North Frederick Street, Dublin, and Lower Belgrave Street, Westminster, Esquire.	Certain improvements in mechanism connected with engines to be worked by steam or other motive power.
1464	„	Charles Minne and Amand Colson, of Brussels, Civil Engineers.	Improvements in making bread.

No. of Register.	Date of Patent.	Name and Address of Patentee.	Title of Invention.
1465	23rd June, 1856.	WILLIAM VALENTINE MILLER, of Portsmouth, in the county of Southampton, Paymaster in Her Majesty's Navy.	Improvements in propelling vessels.
1466	„	JEAN CHARLES LEFEVRE LACROIX, Merchant of Huitrégiville (Marne), in the empire of France.	Filthing and shaving the merino, plain satin, and muslin, of wool.
1470	„	JAMES ATKINSON LONGRIDGE, of 17, Fludyer Street, Westminster, in the county of Middlesex.	Improvements in obtaining and applying motive power for the conveyance of minerals, pumping, and other purposes in mines in which motive power is required.
1472	„	JOHN MILLER, of Drogheda, Ireland -	Improvements in furnaces for more effectually consuming the smoke and economizing the fuel employed therein.
1476	„	CHARLES MILLS, of 8, High Street, Camden Town, in the county of Middlesex.	An improvement in the hammer rails of pianofortes.
1478	24th June, 1856.	JOHN TAYLOR, of Hackney Road, in the county of Middlesex.	An improved vessel for containing chemicals for the generation of disinfecting gases.
1481	„	JOSEPH HARRISON, of Blackburn, Machinist, and CHRISTOPHER GELDERD, of Low Moor, Clitheroe, Manager, both in the county of Lancaster.	Improvements in machines for warping and sizing or otherwise preparing yarns or threads for weaving.
1483	„	JOHN HENRY JOHNSON, of 47, Lincoln's Inn Fields, in the county of Middlesex, and of Glasgow, North Britain, Gentleman.	Improvements in railway breaks.
1484	„	LEONARD BOWER, of Birmingham, in the county of Warwick, Manufacturer.	An improvement or improvements in the manufacture of bolts, rivets, spikes, screw blanks, nuts for screws, and washers.
1487	„	JULES ETIENNE LAFOND, of Belleville, near Paris, in France, Engineer, and 4, South Street, Finsbury, London.	Improvements in lighting.
1489	25th June 1856.	CHARLES DURAND GARDISSAL, of 10, Bedford Street, Strand, London, and 29, Boulevart St. Martin, Paris, Patent Agent.	Improvements in engraving glass and crystals.
1490	„	HENRICH LUDWIG BUFF, of 9, Fitzroy Square, in the county of Middlesex, and FREDERIC VERSMANN, of 3, Forest Place, Kingsland Road, in the same county, Chemists.	An improvement in purifying and softening water.
1492	„	ALEXANDER KEILLER, of Dundee, in the county of Forfar, North Britain, Confectioner.	Improvements in the manufacture of articles of confectionery.
1498	„	JAMES PLATT, of Oldham, in the county of Lancaster, Machine Maker, and JOHN WHITEHEAD, of the same place, Manager.	Improvements in machinery or apparatus for making bricks.
1499	„	JAMES KENYON, of Bury, in the county of Lancaster, and RICHARD KENYON, of the same place, Manufacturers.	An improved fabric, to be used in printing and other similar purposes, and a method of joining or connecting the ends of the same.
1500	„	LOUIS CORNIDES, of No. 4, Trafalgar Square (Office for Patents), Charing Cross, in the county of Middlesex.	Improvements in ornamenting metal, wood, leather, textile fabrics, and other substances.

No. of Register.	Date of Patent.	Name and Address of Patentee.	Title of Invention.
1502	26th June, 1856.	JOHN GRATRIX, of Preston, in the county of Lancaster, and ALFRED KNIGHT, of Birmingham, in the county of Warwick, Machinists.	Improvements in apparatus for registering a permanent record of the speed of steam or other engines, which apparatus is also applicable to watchmen's registers and other similar purposes.
1504	,,	DAVID WHITE, of No. 3, Winchester Place, in the parish of St. James, Clerkenwell, in the county of Middlesex, Surveyor.	Improved apparatus for the more perfect combustion of gases for preventing their escape, and the unnecessary radiation of heat therefrom.
1505	,,	DAVID MACDONALD, of Glasgow, in the county of Lanark, North Britain, Manufacturer.	Improvements in printing textile fabrics and other surfaces.
1506	,,	JOHN PORTUS, of Morpeth, in the colony of New South Wales, Engineer.	Improvements in wheeled carriages.
1507	,,	JAMES AIKMAN, of Paisley, in the county of Renfrew, North Britain, Scourer and Shawl Finisher.	Improvements in the treatment, cleansing, or finishing of textile fabrics.
1509	,,	JOSEPH JAMES FOOT, of Spital Square, in the county of Middlesex.	Improvements in weaving narrow fabrics.
1510	26th June, 1856.	BASILIO SCARIANO and RAPHAËL PAUL DE VILLAMIL, both of No. 10, Rue Lepelletier, in the city of Paris, Gentleman.	Improvements in apparatus for measuring and setting out the forms of garments.
1511	,,	WILLIAM HUDSON, of Burnley, in the county of Lancaster, Machinist, and CHRISTOPHER CATLOW, of Clitheroe, in the same county, Overlooker.	Certain improvements in looms for weaving.
1514	27th June, 1856.	CHARLES AUGUSTUS PRELLER, of Lant Street, in the borough of Southwark, Leather Manufacturer.	Improvements in unhairing and preparing skins in tanning.
1515	,,	JOHN HENRY JOHNSON, of 47, Lincoln's Inn Fields, in the county of Middlesex, and of Glasgow, North Britain, Gentleman.	Improvements in the production of carbonate of barytes.
1517	,,	EDWARD BURNAND, of Moudon, Canton du Vaud, Switzerland.	An improvement in the manufacture of fire-arms.
1518	28th June, 1856.	GEORGE HENRY ORMEROD, of Newchurch, in the parish of Whalley, in the county of Lancaster, Manufacturer.	Improvements in machinery for brushing and cleaning cotton fabrics.
1522	,,	BEVAN GEORGE SLOPER, of Kentish Town, in the county of Middlesex, Gentleman.	Improvements in freezing, refrigerating, and cooling, and in the machinery employed therein.
1525	,,	WILLIAM MCADAM, of Glasgow, in the county of Lanark, Manufacturer.	Improvements in the manufacture of articles of clay and such like plastic substances.
1530	30th June, 1856.	SAMUEL JABEZ GOODE, of Aston, near Birmingham, in the county of Warwick, Machinist.	Improvements in gas stoves, and the application of the same to the ventilation of buildings.
1534	,,	CORNELIUS MORIARTY, of 22, Nelson Street, Greenwich, in the county of Kent.	Improvements in the construction of tube brushes used in cleaning the tubes of marine, locomotive, and all kinds of multitubular boilers.

FOREIGN PATENTS.

UNITED STATES OF AMERICA.

(Communicated by the Commissioner of Patents.)

LIST of PATENTS, with Claims annexed, issued from the United States Patent Office, for the week ending 5th July, 1859, and each bearing that date.

No. 24,607. DEMAS S. BARNES, of New York, N. Y., for an "Improved furniture caster."

"What I claim is, the spherical roller B, with its axle running in the framework C, C, (Figs. 2 and 3,) in combination with the two convex surfaces E and F, (Fig. 2,) or with the convex and concave surfaces E and F, (Fig. 3,) so as to enable the same readily to revolve on a vertical axis, the whole being constructed, combined, and enclosed in the tube or case A, substantially as herein described, and for the purposes herein set forth."

No. 24,608. BENJN. BILLINGS, of Macedon, N. Y., for an "Improved water wheel."

"What I claim is, the conical crown A, and conical wheel B, constructed and combined, substantially in the manner, and for the purposes herein specified."

No. 24,609. LEWIS BISHOP, of Talladega, Ala., for an "Improvement in cotton harvesters."

"I claim the endless picker chains F, placed on the cylinder E, in connection with the brush cylinder D, the above parts being attached to a cart, or to a box, or receptacle A, mounted on wheels, and the whole arranged to operate as and for the purpose set forth."

No. 24,610. SNOWBALL BOTTERILL, of Westmoreland, N. Y., for an "Improvement in hook for whiffle-trees."

"I claim the combination and arrangement of hooks D, D, and spring button E, in the manner and for the purposes herein above set forth."

No. 24,611. HENRY W. BOWEN, of Providence, R.I., for an "Improved wind engine."

"I claim the frame D, provided with sails E, and attached to the shaft C, in connection with the bent lever G, connected with the sails by the rods F, and arms *b*, the link H, spring rod I, and the weight J, and spring K, or their equivalents, the whole being arranged, substantially as and for the purpose set forth."

No. 24,612. ROBT. BROWN, of Stroudsburg, Pa., for an "Improved washing machine."

"I claim the arrangement in the trough E, of the chambers *s*, *s*, and transverse strips *h*, *h*, with the bars *a*, *a*, when the chambers stand behind the strips, and the strips are placed in such relation to the bars *a*, *a*, that they will pass between them, and thus, at the same time, press and rub the clothes, the several parts being constructed and operating substantially in the manner and for the purpose set forth."

No. 24,613. THOS. B. BUTLER, of Norwalk, Conn., for an "Improvement in harvesting machines."

"I claim the employment of the cams and guides S, in Fig. 2, for the purpose of giving a forward and backward motion to the cutter bar and cutters, substantially as set forth."

No. 24,614. W. I. CANTELO, of Burlington, N. J., for an "Improved method of reducing wood, &c., to sawdust or finer grains."

"I claim, reducing glutinous, fibrous, and other tough materials to powder by placing the ends of blocks of the same, opposite to and in contact with each other, and presenting them simultaneously, and at the point of junction to the edge of a circular or reciprocating saw, with the aid of the appliances herein described, or any equivalent to the same."

No. 24,615. MICHEL CELERIER, of Philadelphia, Pa., for an "Improvement in machinery for webbing single strands of thread."

"I claim the combination of the pulley E, the sliding car D, D, D, the fork H, H, and the eye-piece L, arranged and operating substantially as above described, for preparing silk for making twist."

No. 24,616. CHAS. CLARENI, of New York, N. Y., for an "Improved wrought nail machine."

"What I claim is, first, the combination of the top and side hammers and vibratory anvil, substantially as herein described, so as to form two or more nails at a time, without turning the rod as above specified. I also claim the apparatus for connecting the driving shaft with the top hammer, by which it receives its motion in a proper manner, as specified. I also claim the connections of the side hammers, with the driving shaft, to produce the requisite motions thereof, and allow said hammers to be raised and lowered, as and for the purposes set forth. I also claim the arrangement and operation of the cutter, as described for severing the nail from the rod."

No. 24,617. ISAAC COOK and JOHN T. BEVER, of Haynesville, Mo., for an "Improvement in ploughs."

"What we claim, is, the combination and arrangement of the sharp-edged land-side wheel D, E, with a reversible double-pointed mould board A, B, C, which has no land-side bars, substantially as and for the purposes herein set forth."

No. 24,618. GEO. H. CORLISS, of Providence, R.I., for an "Improvement in steam engines."

"What I claim, is, imparting to the liberated slide valves of steam engines, their closing movements by springs, so connected with the valve gear, that whilst these springs impart the same initial force to the valves at every operation, the expansive force which these springs exert varies with every change in the range of movement given to the valves. I also claim, imparting to the liberated slide valves of steam engines, their closing movements by springs combined with a curved moving support, in such manner that the spring applies itself tangentially to the said support, and that the effective length of the spring varies with the tensive force which it exerts.

No. 24,619. B. M. DORR, of Kenawee, Ill., for an "Improved method of opening and closing farm gates."

"What I claim is, the arrangement of the pinion *i*, the toothed racks *h*, h^1, and the levers *d*, d^1, to operate in combination with the slotted rods *k*, k^1, and the crank levers E, E^1, for the purpose of opening and closing the gate A, A^1, substantially as herein described.

No. 24,620. EPES E. ELLERY and JOSEPH F. ELLERY, of New York, N.Y., for an "Improvement in waterproof paints."

"What we claim, is, the composition prepared and composed of the materials as described, in the proportions set forth, for the purpose of making waterproof paint."

No. 24,621. H. C. EMERY, of Lincoln, Ohio, for an "Improvement in mills for crushing cane."

"I claim arranging the adjustable shafts of the rollers in slide bearings at top and bottom, operating them in a rectilinear frame in a direct manner, for giving a wedge pressure, providing them near their top with flanges and a groove, and a bevel on their bottoms from the periphery toward the shafts, substantially as described, the several parts standing in the relation to each other herein specified for the purpose set forth."

No. 24,622. A. L. FLEURY, of Baltimore, Md., for an "Improvement in lamps."

"I claim, 1st, the quicklime cones (*c*, *c*), or their equivalents, arranged substantially as herein described for the pur-

poses set forth. 2nd, in combination with the above, I claim the flanged cap (n, n^1, n^{11}), substantially as herein described."

No. 24,623. Reuben Fretz, of Montville, Ohio, for an "Improved machine for finishing the exterior of rims of carriage wheels."

"I claim combining in the arm that gauges the plane, devices for varying the height of the radial arm, with the devices for varying its length, so as to enable the operator to dress a wheel straight or square across the edge, substantially as described. I claim making the arm or bar k, which guides the plane in the arc of a circle to vibrate in the stock so as to adjust and fasten it in the position desired."

No. 24,624. P. W. Gates, D. R. Fraser, and Thos. Chalmers, of Chicago, Ill., for an "Improvement in cut-off gear for steam engines."

"What we claim, is, the combination of the two levers D, D^1, and their dogs E, E^1, the lever or levers C, and its or their teeth b, b^1, and the eccentric curved plate or plates H, the whole applied to the stem or stems of the valve or valves, to operate substantially as herein set forth. And we also claim, in combination with the said levers teeth and dogs, and the eccentric curved plate or plates of the arm j, on the valve stem, and the spring or stationary curved surface k, applied and operating together, substantially as and for the purpose herein specified."

No. 24,625. Ira Glynn and Mikel Borowsky, of Placerville, Cal., for an "Improved machine for cutting ends of billiard cues true."

"What we claim as our invention is, the application of the reversed A knife or cutter E and the spring jaws C, C, for holding the cue so as it can be cut off square for the leather; these jaws will open or close to suit the size of the cues, the whole as set forth in our specification."

No. 24,626. Geo. P. Gordon, of New York, N. Y., for a "Printing press."

"I claim, 1st, taking the sheet from the feed-board by grippers, or their equivalents, and presenting it directly to or upon the form of types, thence conveying it to the place of impression, so that it may be printed. 2nd, the combination of a reciprocating bed with a set of sheet-receiving grippers, so that the movements of the bed may control the action of the grippers, in order that the sheet may be taken from the place of feeding to the place of printing by such grippers. 3rd, the combination of a vibrating platen, having a stationary or fixed axis upon which to vibrate, with a reciprocating bed. 4th, the combination of a set of sheet-piling grippers, which will peel or take the printed sheet from the face of the type and pile it on its place of deposit, with a reciprocating bed, operating substantially as described. 5th, by use of automatic grippers piling the sheets directly before or in front of and under the eye of the operator, so that he may at once detect any imperfection in the impression. 6th, the combination, in one and the same machine, of a set of grippers to take the sheet and carry it to the place of printing with another set of grippers to take the sheet from the form and pile it, substantially as described. 7th, the arrangement and construction of a chase, as described, in combination with the piling grippers, operating substantially as set forth. 8th, the giving a reciprocating vibratory motion to a bed or carriage, allowing the necessary intervals of time for the purpose of receiving the sheet or the impression either or both of them by means of the cam forming a part of the bed, the cranked shaft, the vibrating arm, and the connecting rod, or their equivalents, all of which is herein fully described and set forth."

No. 24,627. Wm. Gorman, of New York, N. Y., for an "Improved paddle wheel."

"I claim the sliding paddles or floats D, placed between the traverse bars a of the arms C, C, of the wheel, and arranged with the catches F and stationary cam G, or their equivalents, to operate as and for the purpose set forth."

No. 24,628. S. N. Gragg, of Shelburne Falls, Mass., for an "Improvement in corn huskers."

"What I claim is, the curved or convex rest E, in combination with the reciprocating knife k, arranged and operating as described, for the purpose herein-before set forth."

No. 24,629. Wm. Grout, of Worcester, Mass., for an "Improvement in sewing machines."

"I claim, first, the arrangement of the feeding bar, needle, and looper in the manner described, so that the movement of the cloth shall aid in extending the looper thread, and in tightening the needle thread, and this when the needle is out of the cloth. Second, the arrangement of the looper and forceps, as described, so that the forceps shall draw the loop of the needle thread across the path of the looper and in line with the movement of the cloth. Third, the combination of the needle and looper, when arranged as described, so that both shall reciprocate in straight lines, and also so that by merely changing the length of the looper a single or double stitch may be formed in the manner described."

No. 24,630. Benjn. A. Grover, of Mimence, Ill., for an "Improvement in abdominal supporters."

"I claim, 1st, constructing an adjustable spring steel frame of the form described, by combining, arranging, and securing together a series of spring bars, substantially in the manner and for the purpose described. 2d, I claim covering the concave portion of said frame with a canvas or other cloth Z, whose edge or border is gathered and drawn together over the outside edges of the said spring frame by an india-rubber or other elastic cord c, so as to give the covering portion of said canvas or other cloth the character of an elastic cushion, no matter what may be the extent of the contraction or expansion of the spring frame, as before described. 3rd, I also claim attaching the upper and lower straps P, P^1, which respectively branch upward and downward from the band b of the main strap S, O, at the points of the spring frame, and in the relation to each other and the centre or main straps S, O, described and represented, so as to give an upward pressure to the spring frame, and for other purposes set forth."

No. 24,631. Elijah Harris, of Princeton, Ill., for an "Improvement in horse rakes."

"What I claim is, the lever D with the arms d, d, and the projection or finger c, in combination with the stop a, substantially as set forth and specified."

No. 24,632. W. Hartsfield, of Thomaston, Ga., for an "Improved door fastening."

"What I claim is, the arrangement of the bar C, which is attached to the inside of a door, to operate in combination with the staple D, and with the bolt E, and spring d, substantially as and for the purpose described."

No. 24,633. Henry Hayes, of New York, N.Y., for an "Improved machine for boring."

"What I claim is, the arrangement of the adjustable head blocks c, carrying the spindles d of the boring tools, when combined with the spring tightening pulley o, in the manner and for the purposes specified."

No. 24,634. John Henderson, of Horseheads, N.Y., for an "Improvement in stoves."

"I claim the construction and arrangement of the ventilating passages i, i, and concealed flues m, m, the former having their origin in the heating chamber K, and terminating at or near the top of the oven, and the latter starting from the lower part thereof, and terminating in the flue G, whereby external air is admitted, and currents thereof passed through the oven, substantially as and for the purposes specified."

No. 24,635. Isaac C. Shuler, of Amsterdam, N.Y., for an "Improvement in the construction of sheet metal coffins."

"I claim, first, the arrangement of stiffening the lower part of a sheet metal coffin, by locking together the scrolled edges of the sides and bottom, forming a firm rim, when they are soldered together, substantially as described. Second, I am aware that I have before claimed stiffening the base of a sheet metal coffin, by filling with molten metal, the surplus diameter of a tray, in which the sides were set. I claim the sheet metal rim c, on the outside of the walls, as a means of stiffening the base, either with or without a filling of molten metal, according to the size of the coffin. Third, I am aware that I have claimed stiffening the base of a sheet metal coffin, by means of a tray with scrolled edges fixed to the inside base. I claim the rim d of sheet metal, single or scrolled, forming an inside chamber, which may be filled with molten metal or left hollow, according to the size of the coffin. Fourth, I am aware that I have claimed an entire cast metal frame resting on the flanged upper edge of the walls of a sheet metal coffin. I claim a cast metal rim f, with a deep groove on the underside, which receives, straightens, and stiffens the walls, and which serve to support the lids. Fifth, I am aware that I have claimed a certain arrangement of ribs, what I now claim is, a different arrangement, namely, setting the pillars or braces x, at the corners and around the body of the coffin, between the inward projections of the rim d and f, which give them an extended purchase, for the purpose of stiffening the walls, substantially as described. I also claim the peculiar braces k, to prevent the lateral racking of the bottom. Sixth, I

claim the arrangement of pressing inverted beads or recesses in any required number, in the sheet metal of the lid, walls, and bottom of a metal coffin on the inside, and on the outside of the same, which may be filled with molten metal in the large size, and left empty in the small size coffins, for the purpose of securing, by a peculiar mode of manufacture, of a level surface between the indented parts described. Seventh, the arrangement of fastening firmly on the underside, near the outer edge of the air-tight lid of a sheet metal coffin, a cast metal rim, or its equivalent, for the purpose of strengthening this lead, and also for fitting into the groove in the rim F, on the upper edge of the walls of the coffin, substantially as described. Eighth, the arrangement of fastening around the face-window, on the underside of the air-tight lid of a sheet metal coffin, a cast metal sash, or rim *m*, which receives and supports the face glass, when it is cemented in its proper place. Ninth, I claim the arrangement of fastening, permanently, on the underside, near the outer edge of the sheet metal blind *m*, which covers the glass in the face window of a sheet metal coffin, a cast metal rim O, or its equivalent, for the purpose of strengthening and furnishing a means of securing the same to the outer lid, which covers the air-tight joint, substantially as described. Tenth, I am aware of having claimed various modes of covering the air-tight joint of the lid of a sheet metal coffin, both bisected and entire. I now claim the arrangement described of two entire, distinct, separate sheet metal lids."

No. 24,636. G. W. Smith, of Hartford, Conn., for an "Improved butter cooler."

"I claim the arrangement of the air-tight ice chamber D, in combination with the butter plate A, and with the cup B, substantially as and for the purpose set forth."

No. 24,637. Daniel Hess, of Uniontown, Iowa, for an "Improved device for heating steam boilers."

"I claim, 1st, the combination with a steam boiler of the tight external casing A, and fan H, for the purpose of producing currents of air around the boiler, substantially as set forth. 2nd, in combination with the subject of the 1st claim, the stove D, provided with a smoke pipe E, through which the products of combustion pass, while the heat passes into the casing, substantially as set forth."

No. 24,638. Henry Hoffman, of New York, N.Y., for an "Improved automatic fan."

"What I do claim is, the arrangement of the rock shaft D, arms F, F^1, bells *f*, f^1, and rollers G, or their equivalents, to operate in combination with the fan carrier H, substantially as and for the purpose specified."

No. 24,639. Isaac B. Howe, of Northfield, Vt., for an "Improvement in railroad chairs."

"What I claim is, the one lip chair secured by the single bolt, in combination with the permanent fishing piece, arranged and operating in the manner set forth, for the purpose specified."

No. 24,640. Julius C. Hurd and Moses A. Johnson, of Dorchester, Mass., for an "Improvement in manufacturing wadding."

"What we claim as a new article of manufacture is, the within-described wadding, having its two surfaces felted, as set forth, for the purpose specified."

No. 24,641. Obed Hussey, of Baltimore, Md., for an "Improvement in mowing machines."

"What I claim is, in combination with the ordinary apparatus fixed to the extreme end of the finger beam, and called a track clearer, a similar apparatus at the opposite or frame end of said beam, when so arranged as to sweep the cut grass towards the centre of the swath, and leave it in a windrow behind the machine, substantially as herein described."

No. 24,642. Joshua Irving, of New York, N. Y., for an "Improved machine for turning ovals."

"I claim the sliding disk and driving rim combined with the centre mandrel and slides, substantially as and for the purposes set forth."

No. 24,643. Joseph Jorey, of Rocky Hill, Conn., for an "Improved horse-shoe."

"What I claim, therefore, is, the combination of the plate B, corks C, shoe A, substantially in the manner as and for the purpose described."

No. 24,644. Philip Kribs, of Jefferson Furnace, Pa., for an "Improvement in cultivators."

"I claim the arrangement of the bars A, B, C, metal frame G, handles H, shanks E^1, teeth E, bar I, and shafts F, as described, for the purposes set forth."

No. 24,645. Philip Lebezetter, of Lancaster, Pa., for an "Improvement in horse rakes."

"What I claim is, the double axle A, B, brace and sliding bands C, hinged braces E, slot, hook, and staple F×, binding screw D, hinged rod and beam G and H, when these parts are combined substantially in the manner and for the purpose specified."

No. 24,646. Lewis Lillie, of Troy, N. Y., for an Improvement in vault doors and cast-iron safes."

"I claim the arrangement and combination of a series of pipes or tubes (*a*, *b*, and *c*,) and the filling of the same with cast steel hardened, or with refined cast iron, as and for the purposes herein described."

No. 24,647. Lewis Lillie, of Troy, N.Y., for an "Improved door knob bolt."

"I claim the knob bolt or spindle (B), constructed in the manner as and for the purposes herein substantially described. I further claim the switch (D) and the nut (C), arranged and fastened to and upon the knob bolt or spindle (D) in the manner as herein set forth."

No. 24,648. Matthius Ludlum, of Fair Haven, Vt., for an "Improvement in trunks."

"I claim the combination with a watertight shell or body part (A) to a trunk or box, having ordinary or any other suitable inner and outer lids (C and D) of a valvular spring borne lid (B) of water-tight construction, and arranged to occupy an intermediate position, in relation to the inner and outer or ordinary lids (C and D) essentially as and for the purpose or purposes herein set forth."

No. 24,649. Thos. P. Marshall, of Trenton, N.J., for an "Improvement in buckles."

"What I claim is, a buckle constructed of a sliding case A, with the platform *d*, and slot B, in combination with the nose *i*, and otherwise arranged as herein set forth."

No. 24,650. Jarrett Megaw, of Wilmington, Del., for an "Improvement in rotary pumps."

"What I claim is, combining the water packing chambers formed around the axis or shaft, between the suction pipe and stuffing boxes, with the ascending main or discharging pipe of the pump, substantially as and for the purposes set forth."

No. 24,651. Richd. L. Mills and Paul Carpenter, of Lancaster, Ohio, for an "Improvement in R. R. car couplings."

"We claim the arrangement of the sliding frame K and vibrating frame J, in combination with the flat locking key L, the whole being constructed and arranged for joint operation, substantially as set forth."

No. 24,652. Z. N. Morrel, of Cameron, Texas, for an "Improvement in machines for planting cotton seed."

"I claim, 1st, the arrangement and combination of the one side wheel D, cylinder F, *e*, stirrer E, *c*, gear wheels *a*, *b*, mortised beam A, *d*, *f*, share H, *h*, and book I, substantially as and for the purpose herein described. 2nd, the arrangement of the V-shaped fender with the harrow teeth, and with the devices included on the 1st claim, substantially as and for the purpose set forth."

No. 24,653. A. A. Moss, of Philadelphia, Pa., for an "Improved elastic friction roller."

"I claim the elastic friction apparatus described, the same consisting of the ball or sphere (A), spring (B), and case or hole (C), constructed, arranged, and combined together, in relation to each other, in the manner set forth and described, irrespectively of the plate (*e*), or the conical form of the spiral spring (B.)"

No. 24,654. J. W. Naramore, of Derby, Conn., for an "Improved pin-sticking machine."

"I claim, 1st, operating the driver or drivers and the crimping and feeding apparatus, or any portion of the same, by means of a clutch or clutches, carried by a constantly rotating shaft, and thrown into gear, therewith to effect such

operation by the action of the sliding bed or pin carriage, as the latter after having received the pins completes its movement to the necessary position for the sticking operation, substantially as herein described. Second, the combination with a single reciprocating sliding bed or pin carriage, and a single conductor, of two drivers and two sets of crimping and paper feeding apparatus, arranged on opposite sides of the mouth of the conductor, in such a manner that the said bed or carriage, in every movement, in either direction, is caused to be filled with pins from the conductor, and to convey them to a proper position, relatively to one or the other of the drivers, to be thereby driven into the paper supplied and crimped by its respective feeding and crimping apparatus, substantially as herein described, whereby I effect a saving of the time heretofore lost in running the bed twice under the conductor to be once filled. Third, effecting the combination between the sliding bed or carriage, and a clutch carried by a constantly revolving shaft to operate a driver, a crimper, and a feeding apparatus, or either of them, by means of a toothed lever R and R^1, a spring T, or notched slide P or P^1, plate V or v^1, with an inclined edge and a shifting tooth i, the whole applied and operating substantially as herein described, to permit one and only one revolution of the loose portion of the clutch, and hence but a single operation of the part or parts driven by it."

No. 24,655. A. Newbury and B. Newbury, of Windham Centre, N. Y., for an "Improvement in hand printing presses."

"We claim the arrangement and combination of the slotted frame E, adjustable bar G, platen F, roller frame K, and rotating into table L, substantially as and for the purposes herein shown and described."

No. 24,656. Ellis Nordyke and Addison H. Nordyke, of Richmond, Ind., for an "Improvement in flour bolts."

"We claim the band c encircling the shaft M, in combination with the spring catches S, S, S, for the purpose described. Second, we also claim making the movable slide H, F, in two parts jointed, substantially as and for the purpose set forth."

No. 24,657. Anthony Overocker, of McHenry, Ill., for an "Improvement in clover hullers."

"I claim the combination of the concave C, and cylinder E, with the adjustable sliding door F, the several parts being arranged and constructed, substantially in the manner and for the purpose described."

No. 24,658. Andrew Patterson, of Birmingham, Pa., for an "Improvement in manufacture of hoes."

"I claim the combination of the two jaws d, d, which clasp the blade with the head b, and the blade, arranged and constructed substantially as set forth."

No. 24,659. John Percival, of Auburn, N. Y., for an ""Improvement in piano hammers."

"I claim constructing and arranging the cushion forming the elastic covering to the hammer head, substantially as described, for the purpose as set forth."

No. 24,660. Albert Potts, of Philadelphia, Pa., for an "Improvement in setting gas meters in the walls of buildings."

"I claim the manner herein described of adjusting a gas meter to an auxiliary case of the character substantially as specified, so that the meter is applied to a building in a neat and secure manner, and at the same time the examination of the same, to ascertain its condition or the amount of gas consumed from the outside of the building, is rendered practicable and convenient, all as and for the purposes herein set forth."

No. 24,661. Thos. B. Quigley, of Galion, Ohio, for an "Improvement in the mode of regulating the exhaust in locomotive engines."

"I claim, first, the sliding throttle valves g and f, when combined with the exhaust pipes of a locomotive engine, substantially in the manner and for the purpose specified. Secondly, the sliding box O, with apertures r, in combination with the chest b, as herein set forth."

No. 24,662. D. B. Bay, of Galena, Ill., for an "Apparatus for punching stereotype plates."

"What I claim is, the arrangement of stamping bars D, upon A, B, when provided with the characters to be printed or stereotyped, so that they will all work to a common centre, and imprint the character upon the face of the type metal, substantially in the manner and for the purposes herein set forth. I also claim arranging upon the end of bar F, knives a, b, for the purposes herein specified."

No. 24,663. John A. Reed, of Jersey City, N. J., for an "Improvement in trunnion box-lining for oscillating engines."

"What I claim is, the employment, in combination with the conical trunnions, of slit cap like bearings D, D, applied to the boxes with screws and nuts, or other equivalent means of forcing them up towards the sides of the cylinder, substantially as herein described."

No. 24,664. Geo. P. Sanborn and Willis Mansfield, of New Haven, Conn., for an "Improvement in elastic railroad frogs."

"We claim as of our invention an elastic frog, constructed of layers of plate metal and wood, substantially in the manner specified, and either with or without layers of vulcanized rubber. Also we claim constructing an elastic frog with end slots suitable to receive the lower flange and neck of a rail, as specified, whereby the frog may be kept in alignment as described."

No. 24,665. Thaddeus Selleck, of Greenwich, Conn,, for an "Improvement in protecting surfaces of articles of iron."

"What I claim as a new article of manufacture is a horse-shoe, or other article, as indicated herein, made by uniting Franklinite pig metal with the surface of iron, as set forth."

No. 24,666. Horace Smith and D. B. Wesson, of Springfield, Mass., for an "Improvement in revolving fire-arms."

"We claim the wedge n, on the top of the nose of the hammer, the spring m, and stop bolt k, when combined for the purpose and operating in the manner as herein described."

No. 24,667. James Speer, of Philadelphia, Pa., for an "Improved ironing pan for ranges or stoves."

"What I claim is, an ironing pan, constructed with a perforated bottom, in the manner and for the purpose described."

No. 24,668. Wm. Stearns, of Manchester, N. H., for an improvement in picker motion for power looms."

"I claim extending the picker staff down through and below the rocker and through the rail, as described. I claim the rocker D, made to receive the staff, in the way and manner described. And, in combination with the rocker D, I claim the hook G or G^1, whether made separate or cast on the rocker, for the purposes set forth. I claim making the picker staff adjustable in the rocker in the manner described, or in some equivalent manner. I claim making the stud surrounded by the coiled spring P smaller in the middle than at the ends, to allow the spring to contract in diameter in the middle, as it is drawn in working. I also claim making that portion of the stud surrounded by the stationary end of the coiled spring permanent or stationary, and that portion surrounded by the moving end of the spring to revolve, to facilitate the working of the spring."

No. 24,669. Joseph W. Strange, of Bangor, Me., for an "Improvement in scales for weighing."

"I claim, 1st, arranging the beam in such a manner that the several indications or scales marked on the same can be brought before the eye of the operator by turning the beam, substantially as described. 2nd, the arrangement of the socket C so that its end forms the common index pointer C for the several indications marked on the sides of the beam, substantially as and for the purpose specified."

No. 24,670. Wm. Stratton, of Philadelphia, Pa., for an "Improvement in gas retorts."

"What I claim is, the employment of an upright partition B dividing the D retort into chambers, in the manner and for the purposes substantially as set forth in the foregoing specifications."

No. 24,671. John Stock, of New York, N.Y., for an "Improvement in photographic cameras."

"I claim, first, the arrangement of the front plate of a camera, to which the lens tube is attached in such a manner

that the centre of the tube may be moved in any desired position, for the purpose as described, and in the manner substantially as specified. Secondly, I claim the arrangement of the plates 5 and 8, for the purpose described. Thirdly, I claim attaching the ground-glass holder to the end of the camera, and the manner of supporting the weight of the same, substantially as specified."

No. 24,672. ELAM STOCKBRIDGE, of Houston, Texas, for an "Improvement in cotton and hay presses."

"What I claim is, the arrangement, in combination with the horizontal ropes or chains a^1, a^1, vertical windlass G, horizontal toggles E, E, and horizontal follower C, of the auxiliary horizontal ropes or chains a^1, a^1, and h, in the manner and for the purposes herein set forth."

No. 24,673. JOSIAH STUBBS, of Dublin, Ind., for an "Improved churn."

"What I claim is, operating the butterfly wings d and d with the single crank k, confined to one side of the cylinder (g^1) being made to cross the body of the cylinder obliquely to effect this movement, in the manner and for the purpose set forth."

No. 24,674. GUISEPPE TAGLIABUE, of New York, N. Y., for an "Improvement in mercurial barometers."

"What I claim is, the external slotted sleeve gauge D, applied in combination with the cistern or lower limb of the barometer, and with the adjustable scale, substantially as and for the purposes herein described."

No. 24,675. LOUIS TREGRE, of the parish of St John the Baptist, La., for an "Improvement in bagasse furnace."

"What I claim is, the employment of a double feeder, arranged substantially as described, with openings through the blades of the lower feeder to allow the hot air from the furnace to pass from the lower feeder to the upper feeder, for the purpose set forth. And I also claim arranging between the two feeders an intermediate chamber, to receive and retain the bagasse as it passes from the upper to the lower feeder; and I claim constructing the upper feeder of larger size than the lower feeder with or without an increased number of blades, or in an equivalent manner, for the purpose herein set forth. And I further claim introducing an independent current of hot dry air into the chamber between the two feeders, substantially as herein described for the purpose set forth."

No. 24,676. JACOB W. TRUOX, of Richford, Vt., for an "Improved head block for saw mills."

"I claim, 1st, the combination and arrangement of the ratchet wheel F, setting lever P, cam wheel R, gauge wheel M, and spur wheel I, with the spring latch H, in the manner and for the purposes herein above specified. 2nd, I claim the clamps V, the lever W, and eccentric lever Y, arranged and operating as herein above specified."

No. 24,677. MARIANUS X. TSCHUS, of Bloomington, Ill., for an "Improved spring snap for bridle reins."

"I claim the combination of the two in one, in the manner described and for the purpose described."

No. 24,678. LEVI B. TYNG, of Lowell, Mass., for an "Improvement in cast-iron tires for railroad wheels."

"I claim, first, the wedge-shaped braces d, d^1, arranged in the chamber C, between the rims A and B, of a hollow cast-iron tire, so that the chamber is continuous throughout, substantially as and for the purpose set forth. Second, in combination with the continuous chamber C, I claim the groove b, in the inner rim, arranged substantially as and for the purpose described. Third, arranging the ribs C, alternately in the inner and outer rim, for the purpose of strengthening them without tying them together, substantially as described."

No. 24,679. WM. W. VIRDIN, of Baltimore, Md., for an "Improvement in mode of propelling locomotive engines on railroads."

"What I claim, is, the placing of friction wheels under the driving wheels of locomotives or other vehicles, in the manner substantially the same as described in this specification."

No. 24,680. WM. W. VIRDIN, of Baltimore, Md., for an "Improvement in mode of braking locomotive engines in rail roads."

"What I claim is, the introduction of air into the cylinders of locomotives, in the manner as herein-before set forth, and for the purpose of offering a yielding resistance to the movement of the piston, and by this resistance overcome the momentum of the train."

No. 24,681. JOSEPH W. WATTLES, of Canton, Mass., for an "Improvement in ring and traveler spinning machines."

"What I claim is, the combination and arrangement of the bearing annulus b, with the ring or its traveler carrier a, substantially in manner and to operate with the traveler as described."

No. 24,682. JOHN S. WERTZ, of Middletown, Iowa, for an "Improvement in machine for boring post holes in the earth."

"What I claim is, 1, the arrangement and combination of the screw shaft D, cross head C, grooves (k), pinions (m), and toothed cylinders (B), as and for the purpose herein shown and described. 2nd, the arrangement and combination with the cylinders B, of the shafts F, and rotary scrapers G, as and for the purpose herein shown and described. 3rd, the arrangement and combination with the frame A, of the jointed bars (c, c,) sectors (e), and adjusting rods (h), as and for the purpose herein shown and described."

No. 24,683. J. W. WEST, of Hillsboro, Ohio, for an "Improvement in corn planters."

"What I claim is, the arrangement of cords o and u, with the pulleys i and j, working in arms h, h, for operating the slotted plunger l, and seeding bar g, the whole operated together in the manner and for the purpose substantially as set forth."

No. 24,684. WM. WHEELER, of West Poultney, Vt., for an "Improvement in manufacturing machine and animal cards."

"What I claim is, the construction and arrangement of the sheet metal backs and wire teeth, in combination substantially as herein described, when united by solder applied thereto, by immersion or otherwise."

No. 24,685. E. B. WHITE, of Nashua, N.H., for an "Alarm attachment for tills."

"I claim, 1st, the bolt plate b, provided with bolts C, connected by a joint c to the box B, and connected to a bell-striking apparatus, substantially as shown in connection with the keys k and a stop D, the whole being applied to the till, substantially as and for the purpose set forth. 2nd, in combination with the bolt plate b, bolts C, and keys k, the bar j^1 and screws e, in the parts k^1 of the keys, when the bolt plate and bar j^1 are both connected with the lever h or the bell-striking apparatus, in any proper way. 3rd, the employment or use of the sliding plate G, combined and arranged with the bolt plate b and stop D to operate automatically, as and for the purpose set forth. 4th, the employment or use, for the purpose specified, of a supplemental spring u fitted in a socket t, or otherwise arranged to resist the movement of the bar j, when said bar j is used in connection with spring bolts C, substantially as described."

No. 24,686. LOREN J. WICKS, of Racine, Wis., for an "Improved churn."

"I claim, 1st, the combination of the box A, the pipe B, and the box C, when the same are used in the manner and for the purpose herein set forth. 2nd, placing the box C over the box A, and providing said box C with a screen D and depending wire gauze partition E, E, substantially in the manner and for the purpose specified."

No. 24,687. HENRY WILEY, of Frankfort, Ohio, for an "Improvement in corn planters."

"I claim the arrangement of the gate H, wheel k, bars B, hopper J, rods d, slides N, and seed tubes Y, being all constructed, arranged, and operated, substantially as set forth."

No. 24,688. LEONARD WORCESTER, of Lebanon, N. H., for an "Improved machine for boring or mortising blind stiles."

"What I claim is, combining the transversely reciprocating carriages A, A, with the cam cylinders L, L, by means of the

pairs of vibrating levers E, E, and *f*, *f*, substantially in the manner and for the purposes herein set forth. I also claim as my invention the notched plates N, N, for sustaining the stiles during the operation of mortising or boring the same, when the said plates are combined with reciprocating bearings, and other suitable mechanism, in such a manner that the necessary laterally reciprocating and longitudinally feeding movements will be imparted to said plates, substantially as herein set forth. I also claim combining the bearings of the bit shaft G with the reciprocating carriage C, when the said shaft is so arranged with relation to the notched plates N, N, that the bits which project from the ends of said shaft, will act upon the stiles as they are automatically presented to them, substantially as herein set forth. I also claim the combination and joint operation with each other of the reciprocating carriages A, A, the notched plates N, N, the pairs of levers E, E, and *f*, *f*, the cam cylinders L, L, the reciprocating spring pawls *k*, *k*, and the bit carrying cylinder G, substantially as herein set forth."

No. 24,689. Wm. E. Worthen and Henry B. Renwick, of New York, N. Y., for an "Improvement in corrugating sheet-metal."

"We claim the method of corrugating or moulding sheet metal by several dies acting in succession, substantially in the manner specified upon a sheet resting upon a bed, die, or dies, so as to cause the metal to conform to shape, substantially in the manner herein described."

No. 24,690. John Wright, of Worcester, Mass., for an "Improvement in self-acting spinning mules."

"What I claim is, the shaft F, with its screw thread *d*, *e*, *f*, arranged and applied substantially as herein described, in combination with the carriage, the quadrant, and the shaft, which drives the drawing rollers, for the purpose herein set forth."

No. 24,691. Frederick Baare and Julius G. Garrelly, of New York, N. Y., assignors to Horace H. Day, of same place, for an "Improvement in manufacturing corrugated fabrics."

"What we claim is, the combination of two or more parallel series of corrugations in the same fabric, in such manner that the ridges of the adjacent series alternate. We also claim combining rubber strands (one or more) with a texile material, in such manner that when the rubber contracts the compound fabric gathers up into two or more parallel series of corrugations, whose members alternate. We also claim combining rubber strands with a texile material in such manner that the strands are alternately secured to the fabric and left free therefrom at alternating parts of their length, so that the secured part of one rubber strand corresponds with the free part of an adjacent one. We also claim forming the fabric sleazy at the division lines between the corrugations of adjacent series, so as to insure uniformity in the form of the adjacent extremities of the corrugations."

No. 24,692. Francis W. Bacon, of West Newton, Mass., assignor to Edw. H. Ashcroft, of Boston, Mass., for an "Improvement in gauge cocks for steam boilers."

"I claim the combination of the throat clearer C, with the throat and screw-plug of the gauge-cock, and so as to operate therewith, substantially as specified."

No. 24,693. Henry W. Beins, of New York, N.Y., assignor to the New England Car Spring Company, of same place, for an "Improvement in vulcanized rubber car springs."

"What I claim is the sectional gum car spring, of two or more pieces, vulcanized, in the manner herein set forth."

No. 24,694. E. Culver, of Shelburne Falls, Mass., assignor to himself and R. N. Fife, of same place, for an "Improved table and clothes' dryer."

"What I claim is the within-described combination of ironing table and clothes dryer, the table furnishing a support to the dryer, and a receptacle in which it may be stowed away, as set forth."

No. 24,695. A. K. Eaton, of New York, N. Y., assignor (through J. S. L. Cummins, et al.,) to the Joslin India Rubber Company, for an "Improvement in vulcanizing rubber."

"What I claim is, the use of the sulphide of manganese in the curing of india rubber, in the manner herein specified."

No. 24,696. O. F. Fuller, of Lamonte, Mich., assignor to himself and W. M. Ferry, of Ferrysburgh, Mich., for an "Improvement in railroad brakes."

"I claim the brake blocks C, pins *a*, *a*, and levers D, D, constructed and operating together, substantially as and for the purpose herein described."

No. 24,697. Joseph R. Gates, of Indianapolis, Ind., assignor to himself, J. J. Dumont, and E. F. Sinker, of same place, for an "Improvement in sugar mills."

"What I claim is the grooved friction rollers (G), (G), (G), (G), when used for stripping the blade from the stalk, substantially as set forth."

No. 24,698. Joseph Jones, of Philadelphia, Pa., assignor to himself and James G. Bryce, of same place, for an "Improved butter worker."

"I claim the use of the yielding beater G, whether solid or constructed with an open, or with a perforated bottom, enclosing an absorbing material, as set forth in combination with a traveling tray, the whole operated as described."

No. 24,699. Lansing Marble, of Vassar, Mich., assignor to himself and Townsend North, of same place, for a "Method of manufacturing baskets."

"I claim the within-described method of forming baskets by passing a series of staves or splints through proper guides over a mould, and pressing the same in the proper shape by a suitable piston and form, as set forth."

No. 24,700. Lewis Miller and Jacob Miller, of Canton, Ohio, assignors to C. Aultman and Co., of same place, for an "Improvement in harvesters."

"We claim extending the finger or platform bar, one or both far enough under the yielding bars, by which they are hung to the main frame, as that the two may be united by suspension rods, which allows them a yielding motion in one direction, makes them rigid in another direction, and prevents the motions of the main frame from being communicated to the finger bar, substantially as described."

No. 24,701. Chas. Neale, of Philadelphia, Pa., assignor to Frederick Leibrandt and W. L. McDowell, of same place, for an "Improvement in moulding beads on hollow ware."

"What I claim is, moulding for the production of beads, flanges, or other projections and ornaments, on the outer sides of cast metal pots, kettles, and other vessels so as to form the said vessels in two part flasks, the pattern bead flange, or other projecting ornament, being so constructed, arranged, and operated, as to admit of its being drawn in and pushed out of the vessel pattern, substantially in the manner described."

No. 24,702. Alfred S. Phillips, of Boston, Mass., assignor to himself and Isaac Adams, of South Boston, Mass., for an "Improved hawse pipe for ships."

"I claim a tubular cable guide, curved substantially as described."

No. 24,703. Peter Platter, of Moore's Hill, Ind., assignor to himself and James S. Fleming, of same place, for an "Improvement in corn planters."

"What I claim is, the arrangement of the shield T, hammer G, sliding feed bar I, lever O, crank shaft K, and spring H, the whole being constructed for operation conjointly, as and for the purpose set forth."

No. 24,704. John I. Rollow, of Fredericksburgh, Va., assignor to Chas. C. Wellford, of same place, for an "Improvement in threshing machines."

"I claim the combination of the inclined carrier (H) with the shoot (I), and curved screen (J), the whole being constructed, arranged, and operated in the manner and for the purposes set forth."

No. 24,705. Wm. Spink, of Providence, R. I., assignor to Oliver A. Washburn, jr., of same place, for an "Improved machine for pointing nails and spikes."

"I claim the combination of the bunter G, the pointer F, and the spring I, with each other and with the back piece and other parts of the reed machine, or with the correspond-

ing parts of any other nail machines, constructed and operated substantially in the manner as herein-before set forth."

No. 24,706. Geo. C. Wheeler, of Grayville, Geo., assignor to himself and Geo. Calvert, of Upperville, Va., for an "Improved machine for washing and amalgamating gold."

"I claim 1st, the relative arrangement for united operation of the hopper I, horizontally revolving vertical tubes H, H, H, horizontally revolving rakes G, G^1, G^2, and stationary washing vessels, B, C, substantially as and for the purpose herein described. 2nd, making the receiver or washing vessel in two parts B, C, and combining with the part C an adjusting device D, *a*, *a*, substantially as and for the purpose herein described."

No. 24,707. Wm. W. W. Wood and Henry Howson, of Philadelphia, Pa., assignor to John Rice, of same place, for an "Improved device for operating the cut-off valve of steam engines."

"We limit our claim to causing the positive power of the engine to operate the throttle valve by the employment of two vibrating, reciprocating, or rotating strikers, actuated by any positive movement of the engine, in combination with two inclined planes intervening between the said strikers and the valve or appliances connected therewi h, any governor being so connected to the strikers, or to the inclined planes, that the movement of the governor caused by any increase or diminution in the speed of the engine, shall change the position of the inclined planes in respect to the strikers, or that of the strikers in respect to the inclined planes, and that the latter may thereby be the intermediate means of regulating the extent of the opening of the valve to suit the speed of the engine, while the actual movement of the valve is effected through one or the other of the strikers, by the power of the engine itself, as herein set forth."

Re-issues.

No. 752. Albert Fuller, of Cincinnati, Ohio, for an "Improved faucet."—Patented 16th October, 1855.—Re-issued 5th July, 1859.

"What I claim is, the elastic plug valve attached to a stem when operated by an eccentric or its equivalent, substantially as set forth for the purposes described. 2d, I claim the elastic plug valve constructed as described in combination with the cup-shaped cap to prevent the cup frem spreading substantially as described."

No. 753. James Powell, of Cincinnati, O., for "Improvements in faucets." — Patented 22nd March, 1859.—Re-issued 5th July, 1859.

"I claim the described arrangement of the cam F, flanges J and J^1, longitudinal slot *i*, and spurs K, combined and operating in the manner and for the purposes set forth."

Designs.

No. 1,112. James Greer and Rufus J. King, of Dayton, Ohio, for a "Design for cooking stoves."

"We claim the design for a cooking stove exhibited in the accompanying drawings."

No. 1,113. James Greer and Rufus J. King, of Dayton, O., for a "Design for sides and doors or cooking stoves."

"We claim the design exhibited in the accompanying drawings for the side and doors of a cooking stove."

No. 1,114. Henry Hebbard, of New York, N. Y., for a "Design for spoon and fork handles."

"I claim the combination and arrangement of the several devices before described, with the handle of a spoon, fork, or other article of table cutlery, whether made of silver or other metal, for the purpose of ornamenting the handles thereof."

No. 1,114. Wm. W. Wilson, of Pittsburgh, Pa., for a "Design for sun dials."

"I claim the new and improved configuration of sun dials, as set forth in the specification and accompanying drawing."

No. 1,116. James Bogle, of West Newton, Mass., assignor to himself and Daniel Bogle, of Dover, N. H., for a "Design for floor oil cloth."

"I claim as new and as my invention, and desire to secure by Letters Patent of the United States, to my assignees, agreeably to my assignment and petition of the 9th day of June, 1859."

No. 1,117. James Bogle, of West Newton, Mass., assignor to himself and Daniel Bogle, of Dover, N. H., for a "Design for floor oil cloth."

"I claim the design of whatever size, in whatever colors, or kind, or number, or in whatever contrasts or blending of colors, or of light and shade, is the thing I claim as new and as my invention, and desire to secure by Letters Patent of the United States, to my assignees, agreeably to my assignment and petition of this 9th day of June, 1859."

No. 1,118. Garrettson Smith and Henry Brown, of Philadelphia, Pa., assignors to J. G. Abbott and A. Lawrence, of same place, for a "Design for stoves."

"We claim the design and configuration of the ornamental castings as above described and set forth in the annexed drawings."

No. 1,119. Wm. W. Stevens, of Westbrook, Maine, assignors to Nathl. P. Richardson and Co., of Portland, Maine, for a "Design for fire frames."

"I claim the configurations, ornaments, and mouldings above described, as shown in the drawings, as a design for fire frames."

No. 1,120. Elemir J. Ney, of Lowell, Mass., assignor to the Lowell Manufacturing Company, for "A design for a carpet pattern."

"I claim the design or pattern for carpets herein set forth."

No. 1,121. Elemir J. Ney, of Lowell, Mass., assignor to the Lowell Manufacturing Company, for a "Design for a carpet pattern."

"I claim the design or pattern for carpets herein set forth."

No. 1,122. Elemir J. Ney, of Lowell, Mass., assignor to the Lowell Manufacturing Company, for a "Design for a carpet pattern."

"I claim the design or pattern for carpets as herein set forth."

No. 1,123. Elemir J. Ney, of Lowell, Mass., assignor to the Lowell Manufacturing Company, for a "Design for a carpet pattern."

"I claim the design or pattern for carpets herein set forth."

Additional Improvement.

No. 242. Hubbard Beebe, of New Haven, Conn. for a "Mode of preparing and mounting slates."—Patented 29th March, 1859.—Additional Improvement dated 5th July, 1859.

"I claim the combination of leather or cloth, or felt (or felting) instead of, or in addition to india rubber and gutta percha, so far as beauty, and economy, and desirableness in use may require, with the metallic band or rim around the edge of the slate, as patented 29th March, 1859. I also claim as my improvement, the combination of leather and cloth with my metallic rim, or with a waterproof cement of such strength and stiffness as will warrant, to some extent, the disuse of said metallic rim, especially in mounting slates in portfolio form or forms, as set forth in the above specification and accompanying drawings."

EXTENSION.

ISAAC T. GRANT, of Schagticoke, N. Y., for an "Improvement in fan mills."—Patented 10th July, 1845.—Extended 28th June, 1859.

"I claim the manner in which I have arranged the screen F and the chess-board H, and combined them with the screens ordinarily used, so as to obtain two distinct currents of wind, and to subject the falling grain to the stronger currents below the screen and chess-board, thereby blowing off the heavier portions of foreign matter, whilst the chaff is blown off by the ordinary currents in the upper compartments of the shoe."

SUPPLEMENT to the SERIES of LETTERS PATENT and SPECIFICATIONS of LETTERS PATENT for INVENTIONS recorded in the Great Seal Patent Office, and granted between the 1st March (14 Jac. 1.) A.D. 1617, and the 1st October (16 Vict.) A.D. 1852; consisting for the most part of Reprints of scarce Pamphlets, descriptive of the early patented Inventions comprised in that Series. Edited by BENNET WOODCROFT, Superintendent of Specifications, etc. In one vol., price 9*s.* 6*d.*, or each Tract separately at the price affixed.

CONTENTS OF VOL. I.

1. Metallica; or, the treatise of Metallica, briefly comprehending the doctrine of diverse new metallical inventions, &c. By SIMON STURTEVANT. (*Letters Patent, dated 29th February*, 1611.) Price 1*s.* 4*d.*
2. A Treatise of Metallica, but not that which was published by Mr. Simon Sturtevant, upon his Patent, &c. By JOHN ROVINSON (*Letters Patent, granted A.D.* 1612.) Price 4*d.*
3. A Commission directed to Sir Richard Wynne and others to inquire upon oath whether NICHOLAS PAGE or Sir NICHOLAS HALSE was the first inventor of certaine kilnes for the drying of malt, &c. &c. (*Letters Patent, Nos.* 33 *and* 85, *respectively dated* 8*th April*, 1626, *and* 23*rd July*, 1635.) Price 2*d.*
4. DUD DUDLEY'S Metallum Martis; or iron made with pit-coale, sea-coale, &c. (*Letters Patent, Nos.* 18 *and* 117, *respectively dated* 22*nd February*, 1620, *and* 2*nd May*, 1638.) Price 8*d.*
5. Description of the nature and working of the patent Water-scoop Wheels invented by WILLIAM WHELER, as compared with the raising wheels now in common use. By J. W. B. Translated from the Dutch by Dr. Tolhausen. (*Letters Patent, No.* 127, *dated* 24*th June*, 1642.) Price 2*s.*
6. An exact and true definition of the stupendous Water-commanding Engine, invented by the Right Honourable (and deservedly to be praised and admired) EDWARD SOMERSET, Lord Marquis of WORCESTER, &c. &c. (*Stat.* 15 *Car. II. c.* 12. *A.D.* 1663.) Price 4*d.*
7. Navigation Improved; or the art of rowing ships of all rates in calms, with a more easy, swift, and steady motion than oars can. By THOMAS SAVERY. (*Letters Patent, No.* 347, *dated* 10*th January*, 1696.) Price 1*s.*
8. The Miner's Friend; or an engine to raise water by fire described, &c. By THOMAS SAVERY. (*Letters Patent, No.* 356, *dated* 25*th July*, 1698, *and Stat.* 10 *&* 11 *Will. III. c.* 31, *A.D.* 1699.) Price 1*s.*
9. Specimina Ichnographica; or a brief narrative of several new inventions and experiments, particularly the navigating a ship in a calm, &c. By JOHN ALLEN, M.D. (*Letters Patent, No.* 513, *dated* 7*th August*, 1729.) Price 8*d.*
10. A description and draught of a new-invented Machine for carrying vessels or ships out of or into any harbour, port, or river, against wind and tide, or in a calm, &c. By JONATHAN HULLS. (*Letters Patent, No.* 556, *dated* 21*st December*, 1736.) Price 8*d.*
11. An historical account of a new method for extracting the foul air out of ships, &c., with the description and draught of the machines by which it is performed, &c. By SAMUEL SUTTON, the Inventor. To which are annexed two relations given thereof to the Royal Society by Dr. Mead and Mr. Watson, (*Letters Patent, No.* 602, *dated* 16*th March*, 1744.) Price 1*s.*

THE CHRONOLOGICAL INDEX of PATENTS of INVENTION, from March 2, 1617 14 James I.), to September 30, 1852 (16 Vict.), 2 vols. Price 30*s.*

THE ALPHABETICAL INDEX of PATENTEES of Inventions for the above period. Price 20*s.*

THE SUBJECT-MATTER INDEX of PATENTS for the same period—*Second Edition*—to which is prefixed a Key of Terms and Phrases. 2 vols. Price 2*l.* 16*s.*

A Key to the *First Edition* of the above work is also published separately, and may be had on application.

THE CHRONOLOGICAL INDEXES of APPLICATIONS for PATENTS and PATENTS GRANTED from the 1st October to the 31st December, 1852, and from the 1st January to the 31st December, 1853, in one volume. Price 11*s.*

THE ALPHABETICAL INDEXES for the above periods, in one volume. Price 13*s.*

THE SUBJECT-MATTER INDEX, from 1st October to 31st December, 1852. Price 9*s.*

THE SUBJECT-MATTER INDEX, from 1st January to 31st December, 1853. Price 16*s.*

THE CHRONOLOGICAL INDEX of APPLICATIONS for PATENTS and PATENTS GRANTED from the 1st January to the 31st December, 1854. Price 6*s.*

THE ALPHABETICAL INDEX for the above period. Price 7*s.*

THE SUBJECT-MATTER INDEX for the above period. Price 16*s.* 6*d.*

THE CHRONOLOGICAL INDEX of APPLICATIONS for PATENTS and PATENTS GRANTED from the 1st January to the 31st December, 1855. Price 6*s.* 6*d.*

THE ALPHABETICAL INDEX for the above period. Price 7*s.* 6*d.*

THE SUBJECT-MATTER INDEX for the above period. Price 17*s.*

THE CHRONOLOGICAL INDEX of APPLICATIONS for PATENTS and PATENTS GRANTED from the 1st January to the 31st December, 1856. Price 6*s.* 6*d.*

THE ALPHABETICAL INDEX for the above period. Price 8*s.*

THE SUBJECT-MATTER INDEX for the above period. Price 18*s.* 6*d.*

THE ALPHABETICAL INDEX of APPLICATIONS for PATENTS and PATENTS GRANTED from the 1st January to the 31st December, 1857. Price 8*s.*

THE CHRONOLOGICAL INDEX for the above period. Price 6*s.* 6*d.*

THE SUBJECT-MATTER INDEX for the above period. Price 19*s.* 6*d.*

THE ALPHABETICAL INDEX of APPLICATIONS for PATENTS and PATENTS GRANTED, from the 1st January to the 31st December, 1858. Price 8*s.*

A FREE LIBRARY and READING ROOM, in connection with the Office of the Commissioners of Patents, is open to the Public daily from 10 till 4 o'clock.

In addition to the Printed Specifications, Indexes, and other publications of the Commissioners, the Library includes a Collection of the leading British and Foreign Scientific Journals, and text-books in the various departments of science and art. A printed Catalogue of the Library is on sale.

NOTE.—The Commissioners' publications may be consulted daily in the Library of the British Museum; in the Library of the Society of Arts; and in the Free Libraries of the following Towns and Cities:—

Aberdeen (*Public Library Town House*).
Accrington (*Mechanics' Institution, Bank Street*).
Belfast (*Harbour Office, Corporation Square*).
Beverley (*Guildhall*).
Birmingham (*Birmingham and Midland Institute, Cannon Street*).
Bolton-le-Moors (*Public Library, Exchange Buildings*).
Bradford, Yorkshire (*Borough Accountant's Office, Corporation Buildings, Swain Street*).
Brighton (*Town Hall*).
Bristol (*City Library, King Street*).
Burnley (*Office of the Burnley Improvement Commissioners*).
Cambridge (*Free Library, Jesus Lane*).
Canterbury (*Municipal Museum, Guildhall Street*).
Carlisle (*Free Library, Police Office*).
Chester (*Town Hall, Northgate Street*).
Cork (*Royal Cork Institution, Nelson Place*).
Crewe (*Railway Station*).
Darlington (*Mechanics' Institute, Skinnergate*).
Dorchester.
Drogheda.
Dublin (*Royal Dublin Society, Kildare Street*).
Dundalk.
Falmouth (*Public Library, Church Street*).
Gateshead (*Mechanics' Institute*).
Gorton (*Railway Station*).
Glasgow (*Stirling's Library, Miller Street*).
Grimsby, Great (*Mechanics' Institution, Victoria Street*).
Hanley, Staffordshire Potteries (*Town Hall*).
Hartlepool, West (*Literary and Mechanics' Institution, Church Street*).
Hertford (*Public Library, Town Hall*).
Huddersfield (*Commissioners' Offices, No. 1, South Parade*).
Hull (*Mechanics' Institute, George Street*).
Ipswich (*Museum Library, Museum Street*).
Keighley (*Mechanics' Institute, North Street*).
Kidderminster (*Public Free Library, Public Buildings, Vicar Street*).
Kings' Lynn, Norfolk (*Stanley Library, Athenæum*).
Lancaster (*Mechanics' Institute, Market Street*).

PATENT LAW AMENDMENT ACT, 1852.—All Specifications, Indexes, &c., printed by order of the Commissioners of Patents, are sold at the Great Seal Patent Office, 25, Southampton Buildings, Holborn.

THE PATENT LAW AMENDMENT ACTS (15 & 16 Vict., cap. 83; 16 Vict., cap. 5; and 16 & 17 Vict., cap. 115); with the Rules and Regulations made by the Commissioners of Patents for Inventions, and by the Lord Chancellor and the Master of the Rolls, under the Acts 15 and 16 Vict., c. 83, and 16 & 17 Vict., c. 115, accompanied by Specimen Forms of the Provisional Documents printed on sheets of the prescribed size. Price 6*d*.

THE REFERENCE INDEX of PATENTS pointing out the Office in which each enrolled Specification of a Patent may be consulted; the Books in which Specifications, Law Proceedings, and other subjects connected with Inventions have been noticed; also such of the Specifications of Patents granted under the Act of 21 James I. as have been published by the authority of the Commissioners. Price 30*s.*

AN APPENDIX to the REFERENCE INDEX of PATENTS of INVENTION, containing Abstracts from such of the early Patents and Signet Bills as describe the nature of the invention, and which Patents have no enrolled Specifications. Price 4*s.*

AN INDEX to ALL INVENTIONS PATENTED in ENGLAND from 1617 to 1854 inclusive, arranged under the greatest number of heads, with parallel references to INVENTIONS and DISCOVERIES described in the scientific works of VARIOUS NATIONS, as classified by Professor Schubarth. By B. WOODCROFT.

The foreign works thus indexed form a portion of the Library of the Commissioners of Patents, where they may be consulted, or manuscript translations be had.

SOMMAIRE de toutes les INVENTIONS BREVETÉES en ANGLETERRE depuis 1617 jusqu'en 1854 inclusivement, arrangées d'après le plus grand nombre de rubriques, avec renvois aux INVENTIONS et DÉCOUVERTES décrites dans les ouvrages scientifiques de DIFFÉRENTES NATIONS, classés par le Professeur Schubarth. Par B. Woodcroft.

Les ouvrages étrangers ci-dessus font partie de la Bibliothèque de la Commission des Patentes, où l'on peut les consulter, et obtenir des traductions en manuscrit.

VERZEICHNISS aller in ENGLAND von 1617—1854 incl. PATENTIRTEN ERFINDUNGEN, unter vielfältige Titel gebracht, mit Hinweisungen auf ERFINDUNGEN und ENTDECKUNGEN die nach Prof. Schubarth's Klassificirung in den wissenschaftlichen Werken VERSCHIEDENER NATIONEN beschrieben sind. Von B. Woodcroft.

Die hier aufgeführten fremden Werke machen einen Theil der Bibliothek der Patent Commission aus, allwo sie nachgeschlagen oder schriftliche Uebersetzungen besorgt werden können.

REPERTORIO di tutte le INVENZIONI munite di LETTERE PATENTI in INGHILTERRA dal 1617—1854 inclusivo, poste in ordine sotto il piu gran numero di capi, con riferenze alle INVENZIONI e SCOPERTI descritti nelle opere scientifiche di DIVERSE NAZIONI, classate dal Professore Schubarth. Dal Sig. B. Woodcroft.

Le opere straniere quì indicate possono esser consultate nella Biblioteca dei Commissari delle Patenti, e traduzioni in manuscritto vi possono ottenersi.

B. WOODCROFT,
Superintendent of Specifications, &c.

REAPING MACHINES.—The entire series of Specifications and Drawings on this subject to the end of 1853, together with an Appendix, prepared by B. Woodcroft, of the Patent Office, and published under the sanction of the Commissioners, may be obtained at the cost price of 2*l.* 3*s.* 11½*d.*

FIRE-ARMS, PROJECTILES, &c.—The series of Specifications and Drawings on this Subject, from 15th May, 1718, to 31st December, 1853, with Alphabetical and Subject-matter Indexes, may be obtained at the cost price of 9*l.* 18*s.* 6½*d.*

The Indexes, separately, price 3*s.*

CATALOGUE of the LIBRARY of the GREAT SEAL PATENT OFFICE. Two vols. imp. 8vo. (Vol. I. Titles; Vol. II. Index.) Price 21*s.*

ALL FOREIGN and COLONIAL PATENT LAWS and RULES, being translations or copies of Official Communications, may be found in the following Numbers of this Journal, published at 2*d.* each, or 3*d.* free by post;—

Austria, No. 291.
Bavaria, No. 262.
Belgium, Nos. 292 and 348.
Baden, and Petty States of Germany, No. 325.
Canada, No. 279.
Cuba, No. 498.
Dutch West Indies, No. 322.
France, No. 228.
Greece, No. 325.
Germany, No. 435.
Hanover, No. 231.
India, Nos. 240, 348, and 552.
Mexico, No. 496.
Netherlands, No. 289.
New South Wales, No. 386
Prussia, Nos. 313 and 329.
Parma, Piacenza, and Guastalla, No. 321.
Portugal, No. 325.
Poland, No. 335.
Roman States, No. 319.
Russia, Nos. 334 and 508.
Sardinia, Nos. 233 and 235.
Saxony, No. 236.
Sicilies (the Two), No. 316.
Spain, No. 323.
Sweden, Nos. 327 and 354.
Victoria, Nos. 186 and 359.
Wurtemberg, No. 314.

In course of Publication, by Order of the Commissioners of Patents.

ABRIDGMENTS (in Classes, and Chronologically arranged) of all SPECIFICATIONS of PATENTED INVENTIONS, from the earliest enrolled to those published under the Act of 1852.

These books are of 12mo size, and as each is limited to inventions of one class only, they can be sold at prices sufficiently moderate to enable the humblest inventor to examine for himself whether his discovery has been previously patented or not.

At the foot of each abstract are given references to notices of the inventions in scientific and other works, and to the reports of law proceedings for infringements, &c. &c. &c.

The classes already published are,—

1. Drain Tiles and Pipes, price 6*d.*
2. Sewing and Embroidering, price 6*d.*
3. Manure, price 6*d.*
4. Preservation of Food, price 6*d.*
5. Marine Propulsion, price 4*s.*
6. Manufacture of Iron and Steel, price 5*s.*
7. Aids to Locomotion, price 1*s.*
8. Steam Culture, price 2*s.*
9. Watches, Clocks, and other Timekeepers, price 1*s.* 6*d.*
10. Fire-arms and other Weapons, Ammunition, and Accoutrements, price 6*s.* 6*d.*
11. Paper.—Part I. Manufacture of Paper, Pasteboard, and Papier Mâché, price 3*s.*
12. Typographic, Lithographic, and Plate Printing, price 7*s.*
13. Bleaching, Dyeing, and Printing Yarns and Fabrics, price 9*s.* 6*d.*

The following are in the press:—

Paper.—Part II. Cutting, Folding, and Ornamenting; including Envelopes, Cards, Paper-hangings, &c.

Electricity and Magnetism: their Generation and Applications.

Preparation of Fuel, and Apparatus for its Combustion.

Manufacture and Applications of India Rubber, Gutta Percha, &c.; including Air, Fire, and Water Proofing.

Production and Applications of Gas.

Steam Engines.

B. Woodcroft.

COLONIAL PATENTS.—Information as to the Mode of obtaining Protection for Inventions in the Colonies; contained in Communications from the Governors, &c. of the different British Colonies in answer to the Application of Mr. W. J. Curtis for a Patent. Price 1*s.*

PATENT RIGHTS in the COLONIES.—Abstract of Replies to the Secretary of State's Circular Despatch of July 11, 1856, calling for Information as to the Form of the Application to be made by Persons desirous of obtaining Patent Rights in the Colonies, and the Expenses attendant on the Grant of such Patent Rights. Price 2*s.* 6*d.*

The above, and all other works published by the Commissioners of Patents, are now on sale at the Great Seal Patent Office, 25, Southampton Buildings, Holborn.

This Journal is published on the evenings of Tuesday and Friday, and will be forwarded, post free, to Subscribers. — Terms, 30*s.* per annum. — Subscriptions received at the Great Seal Patent Office, where also single copies, at twopence each, may be obtained.

No. 580. TUESDAY, JULY 26, 1859. Price 2d.

Notices to Proceed.

NOTICE is hereby given, that

637. JOHN COURT, of Brompton Row, in the county of Middlesex, Gas Fitter, has given notice at the Office of the Commissioners of his intention to proceed with his application for Letters Patent for the invention of "An improvement in nibs for gas burners."

638. And RICHARD ALLISON, of Birmingham, in the county of Warwick, Engineer, has given the like notice in respect of the invention of "Improvements in apparatuses for boring and sinking."

As set forth in their respective petitions, both recorded in the said office on the 12*th day of March,* 1859.

657. And WILLIAM ROBERTSON, of Dundee, in the county of Forfar, North Britain, Engineer, and JAMES GUTHRIE ORCHAR, of the same place, Engineer, have given the like notice in respect of the invention of "Improvements in weaving."

660. And ISAIAH ASH, of No. 17, Great Bridport Street, Blandford Square, in the county of Middlesex, Locksmith, has given the like notice in respect of the invention of "Improvements in the construction of locks and latches."

668. And JAMES CLARK, of Newton Heath, near Manchester, has given the like notice in respect of the invention of "Improvements in the manufacture of fabrics in which compounds containing india rubber are used."

669. And GEORGE HAMILTON, of St. Martin's-le-Grand, and WILLIAM HENRY NASH, of Poplar, Engineer, have given the like notice in respect of the invention of "Improvements in tumbler or lever locks, and in keys for such and other locks."

671. And THOMAS WILLIAM MILLER, of Her Majesty's Dockyard, Portsmouth, has given the like notice in respect of the invention of "Improvements in blocking or securing ships and other vessels whilst being removed, examined or repaired."

As set forth in their respective petitions, all recorded in the said office on the 16*th day of March,* 1859.

672. And COLEMAN DEFRIES, of the firm of Jonas Defries and Sons, Hounsditch, has given the like notice in respect of the invention of "Improvements in lamps."

678. And ANDREW GEORGE HUTCHINSON, of West Derby, in the county of Lancaster, Builder, has given the like notice in respect of the invention of "Improvements for counteracting damp in buildings."

679. And PH. LAROCHETTE, ainé, of Paris, in the empire of France, has given the like notice in respect of the invention of "Improvements in machinery for brewing.

As set forth in their respective petitions, all recorded in the said office on the 17*th day of March,* 1859.

690. And ROBERT MUSHET, of Coleford, in the county of Gloucester, Metallurgist, has given the like notice in respect of the invention of "A new or improved metallic alloy."

691. And ROBERT MUSHET, of Coleford, in the county of Gloucester, Metallurgist, has given the like notice in respect of the invention of "An improvement in the manufacture of cast steel."

692. And ALBERT LOUIS THIRION, Pastor of Ascheen-Refail, Province de Namur, kingdom of Belgium, has given the like notice in respect of the invention of "Improvements in water, wind, steam, and hand mills."

As set forth in their respective petitions, all recorded in the said office on the 18*th day of March,* 1859.

696. And WILLIAM BRUCE GINGELL, of 37, Corn Street, in the city of Bristol, Architect, has given the like notice in respect of the invention of "Improvements in the form of metal bars used for the stiles, rails, heads, and sills of window sashes, casements, and other lights."

703. And Robert Mushet, of Coleford, in the county of Gloucester, Metallurgist, has given the like notice in respect of the invention of "An improvement or improvements in the manufacture of cast steel."

As set forth in their respective petitions, both recorded in the said office on the 19th day of March, 1859.

708. And Arnould Baucq, Sugar Manufacturer, of Marchiennes, departement of the Nord, empire of France, has given the like notice in respect of the invention of "Maintaining graters mechanically."

712. And Joseph Roberts, of Staley Bridge, in the county of Chester, Engineer, has given the like notice in respect of the invention of "Improvements in packings for pistons."

717. And William Rhodes, of Wade Street, Thornton Road, Bradford, in the county of York, Whitesmith, has given the like notice in respect of the invention of "Certain improvements in fire-proof safes."

As set forth in their respective petitions, all recorded in the said office on the 21st day of March, 1859.

719. And John Davis, of No. 18, Frith Street, Soho, in the county of Middlesex, Professor of Music, has given the like notice in respect of the invention of "Improvements in musical instruments."

721. And William Armand Gilbee, of No. 4, South Street, Finsbury, London, Patent Agent, has given the like notice in respect of the invention of "An improved apparatus for stretching and polishing silk thread."—A communication from abroad, by Messieurs Lyomet, and Prénat, of St. Etienne, France.

722. And William Weild, of the city of Manchester, in the county of Lancaster, Machinist, has given the like notice in respect of the invention of "Improvements in machinery and arrangements for coating slips, sheets, rods, and bars of metal, and laths, rods, and boards of wood and similar articles formed of other substances, with paints, varnishes, and other like preparations and drying the same."

727. And Daniel Lancaster Banks, of Kennington, in the county of Surrey, Engineer, has given the like notice in respect of the invention of "Improvements in suspension rail or road ways, and in machinery or apparatus connected therewith."

730. And Thomas Manlove, of Radford Grove, Lace Manufacturer, and William Hodgkinson, of New Lenton, Draughtsman, both in the county of Nottingham, have given the like notice in respect of the invention of "A new method of manufacturing plain, figured, striped and plaited textile fabrics, in imitation of loom-made fabrics."

732. And Jacobus Tyssen, of Rotterdam, in the kingdom of Holland, Mariner, has given the like notice in respect of the invention of "An improved apparatus for indicating the speed of ships and other vessels."

As set forth in their respective petitions, all recorded in the said office on the 22nd day of March, 1859.

741. And Jean Vanden Hielakker, of the city of Brussels, in the kingdom of Belgium, Civil Engineer, has given the like notice in respect of the invention of "Improved apparatus for pressing or moulding artificial or patent fuel, fire-bricks, and similar articles."

As set forth in his petition, recorded in the said office on the 23rd day of March, 1859.

752. And Charles Sanderson, of Sheffield, in the county of York, Merchant, has given the like notice in respect of the invention of "Improvements in preparing, tempering, and covering or coating thin strips or sheets of steel."

As set forth in his petition, recorded in the said office on the 24th day of March, 1859.

778. And Thomas Carr, of Bebington, in the county of Chester, Artificial Manure Manufacturer, has given the like notice in respect of the invention of "Improvements in machinery for disintegrating artificial manures and various other substances."

As set forth in his petition, recorded in the said office on the 29th day of March, 1859.

790. And Walter Brown, of Bolton le Moors, in the county of Lancaster, Clog Manufacturer, has given the like notice in respect of the invention of "Improvements in manufacturing clog soles, and in the machinery employed therein."

800. And Alfred Vincent Newton, of the Office for Patents, 66, Chancery Lane, in the county of Middlesex, Mechanical Draughtsman, has given the like notice in respect of the invention of "An improved governor for marine and other steam engines."—A communication from abroad by H. C. Sergeant, of the United States of America.

As set forth in their respective petitions, both recorded in the said office on the 30th day of March, 1859.

818. And William Edward Newton, of the Office for Patents, 66, Chancery Lane, in the county of Middlesex, Civil Engineer, has given the like notice in respect of the invention of "Improvements in cricket bats."—A communication from abroad by Michæl Doherty, of Boston, in the United States of America.

As set forth in his petition, recorded in the said office on the 1st day of April, 1859.

993. And Job Wotton, of Birmingham, in the county of Warwick, Manufacturer, has given the like notice in respect of the invention of "An improvement or improvements in raising or shaping metals."

As set forth in his petition, recorded in the said office on the 20th day of April, 1859.

1222. And Lemuel Dow Owen, of 192, Tottenham Court Road, in the county of Middlesex, Engineer, has given the like notice in respect of the invention of "An improved menstrual receiver or truss."—A communication from abroad by Herman W. Ladd, of Boston, Massachusetts, United States of America.

As set forth in his petition, recorded in the said office on the 17th day of May, 1859.

1268. And Charles Peters Moody, of Corton Denham, in the county of Somerset, Gentleman, has given the like notice in respect of the inven-

tion of "Improvements in machinery for the manufacture of matting or fabric from straw and other vegetable fibres and rods or bars of wood and metal."

1270. And FREDERICK JOSEPH BRAMWELL, of Great George Street, Westminster, in the county of Middlesex, has given the like notice in respect of the invention of "Improvements in apparatus for raising ships and vessels out of the water."—Partly a communication from abroad by Messrs. Miers Brothers and Maylor, of Rio de Janeiro.

As set forth in their respective petitions, both recorded in the said office on the 23rd day of May, 1859.

1410. And FRANCIS PULS, Chemits, of Roxburgh Terrace, Haverstock Hill, in the county of Middlesex, has given the like notice in respect of the invention of "Improvements in the treatment of hydrocarbons."

As set forth in his petition, recorded in the said office on the 10th day of June, 1859.

542. And JAMES NASH, of Millwall, in the county of Middlesex, Smith, has given the like notice in respect of the invention of "An improved disengaging block."

1544. And ALEXANDER MCDOUGALL, of Manchester, in the county of Lancaster, Chemist, has given the like notice in respect of the invention of "Improvements in the preparation of disinfecting and antiseptic substances.

1552. And GEORGE BAKER, of Birmingham, in the county of Warwick, has given the like notice in respect of the invention of "Improvements in the manufacture of metallic lattice or trellis work."—A communication from abroad by Owen Carraway, late of New York.

As set forth in their respective petitions, all recorded in the said office on the 29th day of June, 1859.

1590. And RICHARD ARCHIBALD BROOMAN, of 166, Fleet Street, in the city of London, E.C., Patent Agent, has given the like notice in respect of the invention of "An improved hemmer or apparatus to be used in connection with sewing machines for turning over and presenting the edge of the material to be hemmed properly to the needle."—A communication from abroad by Joseph Poole Pirsson, of New York.

As set forth in his petition, recorded in the said office on the 4th day of July, 1859.

1598. And JAMES HALL NALDER, of Alverscott, in the county of Oxford, Farmer, and THOMAS NALDER, of Challow Works, in the county of Berks, Engineer and Agricultural Implement Manufacturer, have given the like notice in respect of the invention of "Improvements in winnowing and dressing grain and seeds, and in machinery or apparatus employed therein."

1599. And JOHN WATKINS, of the Cwmamman Colliery, Aberdare, in the county of Glamorgan, Agent, and JAMES PUGH, of the same place, Mechanic, have given the like notice in respect of the invention of "Improvements in lubricating wheels."

As set forth in their respective petitions, both recorded in the said office on the 15th day of July, 1859.

1613. And JOHN KNOWELDEN, of Southwark, in the county of Surrey, Engineer, and DOWNES EDWARDS, of Upper Belgrave Place, in the county of Middlesex, Gentleman, have given the like notice in respect of the invention of "Improvements in hydraulic engines and pumps, and the employment of apparatus for applying motive power."

As set forth in their petition, recorded in the said office on the 7th day of July, 1859.

1627. And DAVID MATHEWS, of Eshald Well Brewery, Oulton, near Leeds, in the county of York, Brewer, has given the like notice in respect of the invention of "Improvements in apparatus for refrigerating and heating liquids."

As set forth in his petition, recorded in the said office on the 8th day of July, 1859.

1637. And BERNHARD SAMUELSON and JOHN SHAW, both of the Britannia Works, Banbury, in the county of Oxford, have given the like notice in respect of the invention of "Improvements in reaping and mowing machines."

1639. And CHARLES ILIFFE, of Birmingham, in the county of Warwick, Manufacturer, has given the like notice in respect of the invention of "Improvements in the manufacture of buttons."

As set forth in their respective petitions, both recorded in the said office on the 9th day of July, 1859.

And notice is hereby further given, that all persons having an interest in opposing any one of such applications are at liberty to leave particulars in writing of their objections to such application, at the said Office of the Commissioners, within twenty-one days next after the date of the Gazette [and of the Journal] in which this notice is issued.

Patents Sealed.

LIST of LETTERS PATENT which passed the Great Seal on the

26th July, 1859.

246. ELIJAH DIXON, of Preston, in the county of Lancaster, Mechanic, and HENRY WHITTAKER, of the same place, Mechanic, for an invention of "Improvements in apparatus used in weaving textile fabrics."—Dated 27th January, 1859.

253. WILLIAM CROWTHER, of Leeds, in the county of York, Manufacturing Chemist, for an invention of "Improvements in the manufacture of prussiates of potash or soda, and in recovering a useful material therefrom."—Dated 27th January, 1859.

254. JAMES GATHERCOLE, of Bath Terrace, Camberwell New Road, in the county of Surrey, Gentleman, for an invention of "Improved machinery for manufacturing envelopes and paper bags."—Dated 27th January, 1859.

255. IGNAZIO ZACHERONI (native of Italy), residing at Liverpool, in the county of Lancaster, Artist, for an invention of "An improved mode or method of preventing the escape of smoke into the atmosphere, and in the construction of chimney 'pots' or 'tops' for curing smoky chimneys."—Dated 28th January, 1859.

259. Frederic Prince, of 138, New Bond Street, in the county of Middlesex, Gun Maker, for an invention of "A new breech loading gun."—Dated 28th January, 1859.

266. James MacKenzie, Manager to William Strode, of Saint Martin's-le-Grand, in the city of London, Gas Engineer, for an invention of "An improved method of operating ventilating valves, especially applicable to ventilating gas burners."—Dated 29th January, 1859.

270. Jean Justin Albert de Bronac, and Augustin Joseph Martial Deherrypon, Civil Engineers, of Paris, in the empire of France, for an invention of "A new or improved process for treating metallic sulphurets, phosphurets, arseniurets, antimoniurets, and particularly sulphuretted ores of lead, antimony, copper, silver, zinc."—Dated 29th January, 1859.

272. Thomas Plunkett Smith, of Stanmore, in the county of Middlesex, Schoolmaster, for an invention of "An apparatus for guiding or directing the pen or pencil in writing or drawing."—Dated 31st January, 1859.

274. John Raywood, Engineer, of Wentworth, in the county of Yorkshire, for an invention of "Certain improvements in the construction and method of working sewing machines."—Dated 31st January, 1859.

289. Richard Archibald Brooman, of 166, Fleet Street, in the city of London, E. C., Patent Agent, for an invention of "Improvements in sewing machines."—A communication from J. P. Pirsson, residing in New York.—Dated 1st February, 1859.

297. Edward Wilkins, of No. 7, Addington Place, Camberwell, in the county of Surrey, Gentleman, for the invention of "Improvements in drain pipes and tiles for draining and liquid manuring land."—Dated 2nd February, 1859.

307. Thomas Storer, of Birmingham, in the county of Warwick, Undertaker and Funeral Carriage Proprietor, for an invention of "A new or improved funeral carriage."—Dated 3rd February, 1859.

330. William Clark, of 53, Chancery Lane, in the county of Middlesex, Engineer and Patent Agent, for an invention of "Improvements in the means or apparatus for preserving grain, flour, eggs, and other vegetable and animal substances."—A communication from abroad by Louis Jacques Chateau, of Paris, Notary.—Dated 4th February, 1859.

342. Matthew Curtis, of the city of Manchester, in the county of Lancaster, Machinist, and John Miller, of Staley Bridge, in the said county, Manager, for an invention of "Improvements in certain mules for spinning cotton and other fibrous substances."—Dated 7th February, 1859.

343. Joseph Lee of 18, Monson Street, Lincoln, for an invention of "Improvements in the manufacture of cranks for steam engines and other purposes."—Dated 7th February, 1859.

359. Thomas Stokes Cressey, of High Street, Homerton, in the county of Middlesex, for an invention of "Improvements in machinery used in the manufacture of casks."—Dated 8th February, 1859.

373. Henry Potter Burt, of Charlotte Rowe, Mansion House, in the city of London, for an invention of "Improvements in railway carriages and waggons."—Dated 10th February, 1859.

388. Robert Cogan, of Red Lion Square, in the county of Middlesex, Glass Dealer, for an invention of "Improved instruments for crushing and mixing solid and liquid substances."—Dated 11th February, 1859.

390. Charles Jackson, of Store Street, Bedford Square, in the county of Middlesex, Pianoforte Manufacturer, for an invention of "Improvements in the action of piano fortes."—Dated 11th February, 1859.

412. Josiah Latimer Clark, of Haverstock Hill, in the county of Middlesex, for an invention of "Improvements in the means of working railway signals and switches."—Dated 14th February, 1859.

451. Charles Garton, of the city and county of Bristol, Brewer, for an invention of "An improved method of treating cane sugar in order to render it fitter to be employed in brewing, distilling, and wine and vinegar making."—Dated 18th February, 1859.

529. John Henry Johnson, of 47, Lincoln's Inn Fields, in the county of Middlesex, and of 166, Buchanan Street, in the city of Glasgow, North Britain, Gentleman, for an invention of "Improvements in apparatus for stopping horses."—A communication from Madame Achet, residing at Paris, in the empire of France.—Dated 28th February, 1859.

662. Henry Ambler, of Halifax, in the county of York, for an invention of "Improvements in breech loading ordnance, and in the means of producing part or parts thereof, which improvements are also applicable to what are called small arms."—Dated 16th March, 1859.

875. John Bindley, of Birmingham, in the county of Warwick, Engineer, and Joseph Lester Hinks, of Birmingham aforesaid, Manufacturer, for an invention of "Improvements in rotatory steam engines and pumps, a portion of which improvements may also be applied to the bearings of shafts or axles and other rotating bodies."—Dated 8th April, 1859.

948. John Chapman, of Wolverhampton, in the county of Stafford, Iron Master, for an invention of "An improvement or improvements in the manufacture of angle iron."—Dated 15th April, 1859.

1158. Jozé Luis, of the British and Foreign Office for Patents, No. 1 B, Welbeck Street, Cavendish Square, London, in the county of Middlesex, Patent Agent, for an invention of "A self-regulating horse machine."—A communication from abroad by P. Isaac Gurin, No. 10, Rue Mogador, Paris, in the empire of France.—Dated 9th May, 1859.

1228. Charles Law, of Wolverhampton, in the county of Stafford, Lockmaker, for an invention

of "Improvements in the construction of locks."—Dated 17th May, 1859.

1319. Walter Crum, of Thornliebank, in the county of Renfrew, Bleacher and Calico Printer, for an invention of "Improvements in printing and dyeing textile fibres and fabrics."—Dated 28th May, 1859.

Patents on which the Stamp Duty of £50 has been Paid.

(*To 23rd July, 1859, inclusive.*)

21st July.

1768. Thomas Byford, of Carlton Villas, 34, Edgware Road, for an invention of "Improvements in horses' bits."—Dated 25th July, 1856.

1793. John Knowles, of Calow, in the county of Derby, Ironmaster, and William Buxton, of Brimington, in the said county of Derby, Manager of Ironworks, for an invention of "Improvements in tuyeres."—Dated 29th July, 1856.

2021. Hezekiah Conant, of the state of Connecticut, of the United States of America, for an invention of "A new and useful improvement in fire-arms."—Dated 30th August, 1856.

22nd July.

1741. Ferdinand Potts, Tube Manufacturer, of Birmingham, in the county of Warwick, for an invention of "Certain improvements in tags for stay and other laces, as also in the machinery for forming and finishing the same."—Dated 23rd July, 1856.

1759. George Alexander Copeland, of Constantine, near Falmouth, Cornwall, for an invention of "An improved safety blasting cartridge for the use of miners and quarrymen."—Dated 24th July, 1856.

1781. Samuel Yeadon, of Idle, near Bradford, in the county of York, Reed Maker, and George Chapman, of Stockport, in the county of Chester, Draper, for an invention of "Improvements in the construction of reeds for weaving, and in machinery or implements and materials to be used in such construction."—Dated 26th July, 1856.

1834. Nicolas Cadiat, of Rue de l'Odéon, 12, Paris, Civil Engineer, for an invention of "The application of centrifugal force for purifying liquids."—Dated 4th August, 1856.

23rd July.

1760. Charles Tiot Judkins, of 98, Fleet Street, London, Middlesex, and 35, Corporation Street, Manchester, Merchant, for an invention of "An improved gas regulator."—Dated 24th July, 1856.

1766. Edward Lord, Thomas Lord, Abraham Lord, and William Lord, all of Todmorden, in the county of York, Machine Makers, for an invention of "Improvements in machinery for opening, blowing, scutching, and preparing cotton and other fibrous substances."—Dated 25th July, 1856.

1770. Thomas Wrigley, of Bury, in the county of Lancaster, Paper Manufacturer, for an invention of "Certain improvements in machinery or apparatus for cleaning 'cotton waste' or other materials used in the manufacture of paper."—Dated 25th July, 1856.

1776. Julien Denis, of Queenhithe, in the city of London, for an invention of "Improvements in cutting or perforating steel and other metals."—A communication.—Dated 25th July, 1856.

FOREIGN PATENTS.

HANOVER.*

List of Patents of Invention Granted between the 11th April and 24th June, 1859.

(*Communicated by the Hanoverian Government.*)

(For previous List, see No. 555 of this Journal.)

1. P. Noak, of Camina, Saxony, Brewer, for "The production of a spirituous liquor from malt."—5 years.—Dated 11th April, 1859.
2. H. Hutchinson, of Paris, for "A process to produce patterns in relief of coutchouc upon woven fabrics, leather, or felt, &c."—5 years.—Dated 14th April, 1859.
3. Edward Hunt and Henry Davis Pochin, of Manchester, for "An apparatus for purifying pitch and resinous substances by distillation without decomposing them."—5 years.—Dated 14th April, 1859.
4. R. Von Bandel, of Hanover, for "A parallel vice."—5 years.—Dated 18th April, 1859.

4*a*. E. Meyer and O. Schuchard, of Hanover, for "An endless cloth to prepare waddings of great length, a machine for churning liquid glue into froth, and a machine for sizing and drying the same waddings."—5 years.—Dated 20th April, 1859.

5. S. C. Lister and Co. of Uebigau, near Dresden, for "An improved machine for combing wool of long staple."—5 years.—Dated 6th May, 1859.
6. G. Th. König, of Linden, for "An improved valve gear in oscillating steam engines."—5 years.—Dated 6th May, 1859.

* For the Hanoverian Patent Law, see No. 251 of this Journal.

7. Captain D. SCHAFFLER, of Neustadt, am Rb., for "An apparatus for distributing the gases in smelting furnaces and cupolas."—2 years.—Dated 25th May, 1859.

8. T. NONNE, of Dingen, for "An arrangement of brick kilns systematically connected and œconomising fuel."—5 years.—Dated 16th June, 1859.

9. G. H. WENDT BRÜGGEN for "A simplified drilling machine upon Cook's system."—5 years.—Dated 16th June, 1859.

10. S. ELSTER, of Berlin, for "A mechanical contrivance in gas meters to maintain a constant water level."—5 years.—Dated 24th June, 1859.

PRUSSIA.*

LIST of PATENTS Granted and Cancelled between the 1st and 30th June, 1859.

(*Communicated by the Minister of Commerce and Public Works.*)

1. PATENTS GRANTED.

1. ROBERT RUDOLPH WERNER, of Berlin, for "A rotary steam engine, composed as shown in the drawing and specification and without limiting any one in the application of such parts of it as are already known."—5 years.—Dated 1st June, 1859.

2. F. MARTINI, of Rothenburg, near Connern, for "A furnace explained by drawing and specification and acknowledged as new and peculiar in its whole construction for the manufacture of tar from brown coal and other fossil substances without limiting any one in the application of parts already known."—5 years.—Dated 4th June, 1859.

3. F. ANDREW SIEMENROTH, of Custrin, for "A construction of the tuning head for string instruments explained by drawing and specification, and acknowledged as new and peculiar in its whole construction."—5 years.—Dated 11th June, 1859.

2. PATENTS CANCELLED.

1. A. FACILIDES and WIEDE, of Plauen, for "A mechanical arrangement in mulejennies for uniting the threads when broken." — Dated 3rd April, 1858.—Cancelled 1st June, 1859.

2. KÜHNE, C. E., from Halberstadt for "An apparatus for extracting sugar from carrots." — Dated 10th April, 1858.— Cancelled 10th June, 1859.

* For the Prussian Patent Law, see Nos. 313 and 329 of this Journal.

LIST of SPECIFICATIONS published during the week ending 23rd July, 1859.

No.	Price.	SUBJECT-MATTER.
		(*Disclaimer*, &c., 1853.)
2187*	3*d.*	Sewing machines.
		(*Disclaimer*, &c., 1853.)
2331*	4*d.*	Winnowing corn.
		(*Disclaimer*, 1856.)
598*	3*d.*	Tartaric and citric acids and tartrate of potash and soda.
		1859.
2783	1*s.* 5*d.*	Weaving, &c.
2836	11*d.*	Obtaining electro-motive power.
2848	7*d.*	Ever pointed pencils.
2855	7*d.*	Twisting threads, twine, cords, &c.
2867	6*d.*	Bleaching or cleansing textile fabrics.
2870	5*s.* 8*d.*	Screws, rivets, nails, &c.
2871	7*d.*	Bullets.
2872	7*d.*	Condensing apparatus.
2873	10*d.*	Looms.
2874	9*d.*	Pendulum governor for marine steam engines.
2875	9*d.*	Agricultural implements.
2876	6*d.*	Stopper for chains and ropes.
2877	3*d.*	Matches and fusees.
2878	4*d.*	Printing bank notes, bills of exchange, &c.
2879	3*d.*	Iron.
2880	3*d.*	Preparation of leather in combination with india rubber, &c.
2881	3*d.*	Furnaces for the manufacture of iron and steel.
2882	7*d.*	Manufacture of screws.
2883	4*d.*	Cast steel.
2884	10*d.*	Apparatus for paying out or laying submarine telegraph cables, &c.
2885	5*d.*	Projectiles.
2886	6*d.*	Water meter and ships' log.
2887	3*d.*	Sewing machines.
2888	7*d.*	Galvanic batteries.
2889	3*d.*	Preparation of carton pierre, &c.
2890	3*d.*	Plating and gilding forks, spoons, &c.
2891	5*d.*	Submarine electric cables.
2892	10*d.*	Propellers for ships, &c.
2893	1*s.* 3*d.*	Fish joints for rails.
2894	3*d.*	Locomotive engines.
2895	3*d.*	Iron.
2896	7*d.*	Revolving fire-arms.
2897	8*d.*	Lubricators.
2898	6*d.*	Apparatus for roasting meat, &c.
2899	10*d.*	Looms.
2900	5*d.*	Gas burners.
2901	6*d.*	Registering the speed of engines, &c.
2902	1*s.* 1*d.*	Pumps.
2903	3*d.*	Cocks or stop valves.
2904	10*d.*	Dyeing textile fabrics, &c.
2905	7*d.*	Drying or airing linen, &c.
2906	3*d.*	Regenerating steam.
2907	5*d.*	Index or book and paper marker.
2908	6*d.*	Anchors.
2909	3*d.*	Stereoscopes.
2910	7*d.*	Spinning machine.
2911	3*d.*	Lanterns.
2912	3*d.*	Preparation and application of varnishes for waterproofing.
2913	5*d.*	Self-detaching safety hook or coupling.
2914	8*d.*	Lowering and raising boats.

No.	Price.	Subject-Matter.
2915	3*d.*	Drying yarns or fabrics, &c.
2916	7*d.*	Machine for pumicing felts, tissues, and skins.
2917	4*s.* 2*d.*	Drawing bristles, hair, and vegetable fibres.
2918	3*d.*	Order books.
2919	3*d.*	Brakes.
2920	6*d.*	Imparting reciprocating motion to pumps
2921	4*d.*	Cast steel.
2922	3*d.*	Furnaces and steam boilers.
2923	3*d.*	Jacquard machinery for weaving.
2924	11*d.*	Bridges.
2925	8*d.*	Granaries or apparatus for preserving grain.
2926	3*d.*	Fabrics for covering floors, walls, &c.
2927	3*d.*	Tables.
2928	3*d.*	Ships and vessels, &c.
2929	3*d.*	Grinding and rubbing surfaces.
2930	3*d.*	Ornamenting glass.
2931	3*d.*	Manufacture of neck ties, &c.
2932	3*d.*	Treating sugar cane for the manufacture of textile and other fabrics.
2933	9*d.*	Cordage, &c.
2934	3*d.*	Spinning, &c.
2938	3*d.*	Ordnance and projectiles.
2941	3*d.*	Fabrics for curtains, table covers, &c.
2943	3*d.*	Horse shoe nails.
2944	5*d.*	Vent peg.
2946	10*d.*	Looms.
2947	3*d.*	Brazing metal tubes in tube plates, &c.
2948	3*d.*	Gigs, dog carts, and other vehicles.
2949	3*d.*	Lamps.
2951	3*d.*	Ornamenting leather cloth.

*** Specifications will be forwarded by post on receipt of the amount of price and postage. Sums exceeding 5*s.* must be remitted by Post Office Order, made payable at the Post Office, High Holborn, to Mr. Bennet Woodcroft, Great Seal Patent Office.

Errata in Journal of 22nd July.

1635. For "Newzan" read "Newzam."

1636. For "Blois Chiche" read "Bloisbluche."

PATENT LAW AMENDMENT ACT, 1852.—All Specifications, Indexes, &c., printed by order of the Commissioners of Patents, are sold at the Great Seal Patent Office, 25, Southampton Buildings, Holborn.

THE PATENT LAW AMENDMENT ACTS (15 & 16 Vict., cap. 83; 16 Vict., cap. 5; and 16 & 17 Vict., cap. 115); with the Rules and Regulations made by the Commissioners of Patents for Inventions, and by the Lord Chancellor and the Master of the Rolls, under the Acts 15 and 16 Vict., c. 83, and 16 & 17 Vict., c. 115, accompanied by Specimen Forms of the Provisional Documents printed on sheets of the prescribed size. Price 6*d.*

THE CHRONOLOGICAL INDEX of PATENTS of INVENTION, from March 2, 1617 14 James I.), to September 30, 1852 (16 Vict.), 2 vols. Price 30*s.*

THE ALPHABETICAL INDEX of PATENTEES of Inventions for the above period. Price 20*s.*

THE SUBJECT-MATTER INDEX of PATENTS for the same period—*Second Edition*—to which is prefixed a Key of Terms and Phrases. 2 vols. Price 2*l.* 16*s.*

A Key to the *First Edition* of the above work is also published separately, and may be had on application.

THE CHRONOLOGICAL INDEXES of APPLICATIONS for PATENTS and PATENTS GRANTED from the 1st October to the 31st December, 1852, and from the 1st January to the 31st December, 1853, in one volume. Price 11*s.*

THE ALPHABETICAL INDEXES for the above periods, in one volume. Price 13*s.*

THE SUBJECT-MATTER INDEX, from 1st October to 31st December, 1852. Price 9*s.*

THE SUBJECT-MATTER INDEX, from 1st January to 31st December, 1853. Price 16*s.*

THE CHRONOLOGICAL INDEX of APPLICATIONS for PATENTS and PATENTS GRANTED from the 1st January to the 31st December, 1854. Price 6*s.*

THE ALPHABETICAL INDEX for the above period. Price 7*s.*

THE SUBJECT-MATTER INDEX for the above period. Price 16*s.* 6*d.*

THE CHRONOLOGICAL INDEX of APPLICATIONS for PATENTS and PATENTS GRANTED from the 1st January to the 31st December, 1855. Price 6*s.* 6*d.*

THE ALPHABETICAL INDEX for the above period. Price 7*s.* 6*d.*

THE SUBJECT-MATTER INDEX for the above period. Price 17*s.*

THE CHRONOLOGICAL INDEX of APPLICATIONS for PATENTS and PATENTS GRANTED from the 1st January to the 31st December, 1856. Price 6*s.* 6*d.*

THE ALPHABETICAL INDEX for the above period. Price 8*s.*

THE SUBJECT-MATTER INDEX for the above period. Price 18*s.* 6*d.*

THE ALPHABETICAL INDEX of APPLICATIONS for PATENTS and PATENTS GRANTED from the 1st January to the 31st December, 1857. Price 8*s.*

THE CHRONOLOGICAL INDEX for the above period. Price 6*s.* 6*d.*

THE SUBJECT-MATTER INDEX for the above period. Price 19*s.* 6*d.*

THE ALPHABETICAL INDEX of APPLICATIONS for PATENTS and PATENTS GRANTED, from the 1st January to the 31st December, 1858. Price 8*s.*

Museum of Patents, South Kensington.

NUMBER of VISITORS for the Week ending 23rd July, 1859.

Mornings - - - -	807
Evenings - - - -	908
Total - - -	1715

Since the opening of the Museum Free Daily (May 12, 1858,)—119,752.

THIS Museum is open to the public daily, free of charge. The hours of admission are from 10 A.M. to 6 P.M., and in the evenings of Monday, Tuesday, and Wednesday from 7 to 10 P.M.

All communications on the subject of the Museum to be addressed to the Superintendent,

B. WOODCROFT.

Great Seal Patent Office,
Southampton Buildings.

GALLERY OF PORTRAITS OF INVENTORS, DISCOVERERS, AND INTRODUCERS OF USEFUL ARTS.—This Collection, formed by Mr. Woodcroft, and first opened to public view in the Great Seal Patent Office in 1853, now constitutes a portion of the Patent Museum at South Kensington.

Presentations of original Portraits, Medallions, Busts, and Statues, in augmentation of the Collection, are hereby invited, and will on receipt be acknowledged in this Journal, and duly recorded in the next published Catalogue.

REAPING MACHINES.—The entire series of Specifications and Drawings on this subject to the end of 1853, together with an Appendix, prepared by B. Woodcroft, of the Patent Office, and published under the sanction of the Commissioners, may be obtained at the cost price of *2l. 3s. 11½d.*

FIRE-ARMS, PROJECTILES, &c.—The series of Specifications and Drawings on this Subject, from 15th May, 1718, to 31st December, 1853, with Alphabetical and Subject-matter Indexes, may be obtained at the cost price of *9l. 18s. 6½d.*

The Indexes, separately, price *3s.*

COLONIAL PATENTS.—Information as to the Mode of obtaining Protection for Inventions in the Colonies; contained in Communications from the Governors, &c. of the different British Colonies in answer to the Application of Mr. W. J. CURTIS for a Patent. Price *1s.*

PATENT RIGHTS in the COLONIES.—Abstract of Replies to the Secretary of State's Circular Despatch of July 11, 1856, calling for Information as to the Form of the Application to be made by Persons desirous of obtaining Patent Rights in the Colonies, and the Expenses attendant on the Grant of such Patent Rights. Price *2s. 6d.*

CATALOGUE of the LIBRARY of the GREAT SEAL PATENT OFFICE. Two vols. imp. 8vo. (Vol. I. Titles; Vol. II. Index.) Price *21s.*

In course of Publication, by Order of the Commissioners of Patents.

ABRIDGMENTS (in Classes, and Chronologically arranged) of all SPECIFICATIONS of PATENTED INVENTIONS, from the earliest enrolled to those published under the Act of 1852.

These books are of 12mo size, and as each is limited to inventions of one class only, they can be sold at prices sufficiently moderate to enable the humblest inventor to examine for himself whether his discovery has been previously patented or not.

At the foot of each abstract are given references to notices of the inventions in scientific and other works, and to the reports of law proceedings for infringements, &c. &c. &c.

The classes already published are,—

1. DRAIN TILES AND PIPES, price *6d.*
2. SEWING AND EMBROIDERING, price *6d.*
3. MANURE, price *6d.*
4. PRESERVATION OF FOOD, price *6d.*
5. MARINE PROPULSION, price *4s.*
6. MANUFACTURE OF IRON AND STEEL, price *5s.*
7. AIDS TO LOCOMOTION, price *1s.*
8. STEAM CULTURE, price *2s.*
9. WATCHES, CLOCKS, AND OTHER TIMEKEEPERS, price *1s. 6d.*
10. FIRE-ARMS AND OTHER WEAPONS, AMMUNITION, AND ACCOUTREMENTS, price *6s. 6d.*
11. PAPER.—PART I. MANUFACTURE OF PAPER, PASTEBOARD, AND PAPIER MÂCHÉ, price *3s.*
12. TYPOGRAPHIC, LITHOGRAPHIC, AND PLATE PRINTING, price *7s.*
13. BLEACHING, DYEING, AND PRINTING YARNS AND FABRICS, price *9s. 6d.*

The following are in the press:—

PAPER.—PART II. CUTTING, FOLDING, AND ORNAMENTING; INCLUDING ENVELOPES, CARDS, PAPER-HANGINGS, &c.
ELECTRICITY AND MAGNETISM: THEIR GENERATION AND APPLICATIONS.
PREPARATION OF FUEL, AND APPARATUS FOR ITS COMBUSTION.
MANUFACTURE AND APPLICATIONS OF INDIA RUBBER, GUTTA PERCHA, &c.; INCLUDING AIR, FIRE, AND WATER PROOFING.
PRODUCTION AND APPLICATIONS OF GAS.
STEAM ENGINES.

B. WOODCROFT.

The above, and all other works published by the Commissioners of Patents, are now on sale at the Great Seal Patent Office, 25, Southampton Buildings, Holborn.

This Journal is published on the evenings of Tuesday and Friday, and will be forwarded, post free, to Subscribers.—Terms, 30*s.* per annum.—Subscriptions received at the Great Seal Patent Office, where also single copies, at twopence each, may be obtained.

Published at the Great Seal Patent Office, 25, Southampton Buildings, Holborn.

THE

COMMISSIONERS OF PATENTS' JOURNAL.

By Authority.

(Registered for transmission abroad.)

No. 581. FRIDAY, JULY 29, 1859. Price 2d.

Grants of Provisional Protection for Six Months.

NOTICE is hereby given that Provisional Protection has been allowed

1495. To WILLIAM COLES FULLER, of No. 2, Bucklersbury, Cheapside, London, Patent Spring Manufacturer, for the invention of "Improvements in india-rubber shackles, and in springs for carriages, and the metal fittings connected therewith."

On his petition, recorded in the Office of the Commissioners on the 21st day of June, 1859.

1512. To GEORGE CHARLES GRIMES, of Wandsworth, in the county of Surrey, for the invention of "Improvements in cigar or such like lights, and in the means of producing them."

On his petition, recorded in the Office of the Commissioners on the 23rd day of June, 1859.

1546. To THOMAS WIGHT, of Middlesborough-on-Tees, in the county of York, Foundry Manager, for the invention of "Improvements in the apparatus used in the manufacture of cast metal pipes and castings, termed core bars or spindles and chaplets."

On his petition, recorded in the Office of the Commissioners on the 29th day of June, 1859.

1595. To CHARLES BARLOW, of No. 89, Chancery Lane, London, Patent Agent, for the invention of "Improvements in capstans."—A communication from abroad, by Samuel Huse, of Boston, United States of America.

1596. And to ARSÉNE BEAULIEU, of No. 25, Rue du Chemin de Fer, Porte de Cologne, Brussels, in the kingdom of Belgium, Mechanical Engineer, for the invention of "Improvements in crinolines, and in machinery for manufacturing springs for such and other purposes."—A communication from abroad, by Henri Theodore Van Eycken, a person resident at Rue Terre Neuve, No. 25, Brussels.

On both their petitions, recorded in the Office of the missioners on the 5th day of July, 1859.

1604. To CHARLES HAGAN, Clerk of Works, Tower of London, for the invention of "Improvements in apparatus for curing smoky chimneys, and preventing down draught."

1606. And to SAMPSON LLOYD, of Wednesbury, Staffordshire, for the invention of "Improvements in the manufacture of cast steel tyres."

On both their petitions, recorded in the Office of the Commissioners on the 6th day of July, 1859.

1616. To JOHN SMITH, of Norton Street, Cherry Square, New Radford, in the county of Nottingham, Lace Manufacturer, for the invention of "Improvements in propelling ships and other vessels."

On his petition, recorded in the Office of the Commissioners on the 7th day of July, 1859.

1634. To WILLIAM NEWZAM NICHOLSON, of Newark-on-Trent, Agricultural Implement Maker, for the invention of "Improvements in machines for making and collecting hay, and for cutting thistles and weeds, which improvements in whole or in part are applicable to other agricultural implements where teeth or tines are used."

On his petition, recorded in the Office of the Commissioners on the 8th day of July, 1859.

1640. To WILLIAM MAC KEAN, of Paisley, in the county of Renfrew, Scotland, Starch Manufacturer, for the invention of "Improvements in the manufacture or treatment of farinaceous matters for the obtainment of starch and food."

On his petition, recorded in the Office of the Commissioners on the 9th day of July, 1859.

1651. To Jozé Luis, of the British and Foreign Office for Patents, No. 1 B, Welbeck Street, Cavendish Square, London, in the county of Middlesex, Patent Agent, for the invention of "Imitation leather." — A communication from abroad by Auguste Legeay, No. 10, Rue Mogador, Paris, in the empire of France.

1655. And to George White, of Mansfield, in the county of Nottingham, Schoolmaster, for the invention of "Improvements in apparatus for counteracting the effects of collisions in railway trains."

On both their petitions, recorded in the Office of the Commissioners on the 12th day of July, 1859.

1657. To Charles Samuel Walker and Robert Hoyle, both of Bury, in the county of Lancaster, Engineers, for the invention of "Improvements in machinery or apparatus for promoting the consumption of smoke in steam boiler and other furnaces, and for preventing the explosion of steam boilers."

1658. To Allan Cooper, of Birmingham, in the county of Warwick, Manufacturer, for the invention of "Improvements in the manufacture of the grips of swords and sword bayonets."

1659. To James Strang Thomson, of Kilmarnock, in the county of Ayr, North Britain, Manufacturer, for the invention of "Improvements in steam engines."—A communication from abroad by Henry Blandy and Frederick T. L. Blandy, of Zanesville, United States.

1660. To William Cotton, of Loughborough, in the county of Leicester, Manufacturer, for the invention of "Improvements in means or apparatus for connecting together or uniting looped fabrics."

1661. To James Combe, of Belfast, for the invention of "Improvements in machinery for hackling flax and other fibrous substances."

1662. And to John Taylor, of Roupell Park, Streatham Hill, in the county of Surrey, for the invention of "Improvements in stoves and fireplaces, and in the arrangement of flues connected therewith."

On their several petitions, recorded in the Office of the Commissioners on the 13th day of July, 1859.

1663. To William Walker, of Liverpool, in the county of Lancaster, Patent Agent, for the invention of "Improvements in the manufacture of metallic packages, and in machinery for manufacturing the same."—A communication from James Wilson, Charles Green, and William Wilson, the younger, all of whom reside at Wilmington, in Newcastle county, in the state of Delaware, one of the United States of America, and are citizens of the United States of America.

1664. To Robert Mushet, of Coleford, in the county of Gloucester, Metallurgist, for the invention of "Improvements in the manufacture of shot and shell and other projectiles."

1665. To Robert Mushet, of Coleford, in the county of Gloucester, Metallurgist, "A new or improved manufacture of certain metallic compounds or alloys."

1666. To Joseph Atkinson, of Lancaster, in the county of Lancaster, Gun Manufacturer, for the invention of "Improvements in fire arms."

1667. To John Henry Johnson, of 47, Lincoln's Inn Fields, in the county of Middlesex, and of 166, Buchanan Street, in the city of Glasgow, North Britain, Gentleman, for the invention of "Improvements in the manufacture of artificial fuel."—A communication from abroad by Monsieur de la Fenestre, of 24, Rue Meslay, Paris, in the empire of France.

1668. To Joseph Morgan, of Manchester, for the invention of "Improvements in apparatus for making candles."

1669. To John Bailey, of Manchester, in the county of Lancaster, Manager, for the invention of "Improvements in machinery or apparatus for stretching woven fabrics."

1670. And to Richard Longstaff, at Mornington Road, New Cross, in the county of Kent, Pattern Maker, and Abraham Pullan, of Fortie Cottage, New Cross, in the same county, Engineer, for the invention of "Improvements in traction or locomotive engines."

On their several petitions, recorded in the Office of the Commissioners on the 14th day of July, 1859.

1671. To Christopher Kingsford, of Seaton, near Wingham, in the county of Kent, Civil Engineer, for the invention of "Improvements in the preparation of peat and charcoal for fuel, in the manufacture of coke therefrom, and in the machinery and apparatus employed for effecting the same."

1672. To William Clark and William Williams, of the city of Manchester, in the county of Lancaster, for the invention of "Improvements in finishing woven fabrics."

1673. To Frederick Brown, of City Road, in the county of Middlesex, for the invention of "The preparation and manufacture of a new fibrous pulp for making paper, and for other useful purposes."

1674. To Robert Mushet, of Coleford, in the county of Gloucester, Metallurgist, for the invention of "New or improved methods of manufacturing a certain metallic compound or alloy."

1675. To Hector Grand de Chateauneuf, of Paris, France, Civil Engineer, for the invention of "An improved coverlet called zephyr-eider-down coverlet."

1676. To John Prentice Farrar, of New York, in the United States of America, Gentleman, for the invention of "Improvements in the treatment of iron."

1677. To William McAndrew, of No. 57, King William Street, in the city of London, and Charles Wilson Boyd, of Sochia, Asia Minor, for the invention of "Improvements in treating poppies, to obtain a product resembling opium therefrom."

1678. To William Orme Carter, of No. 12, South John Street, Liverpool, in the county of Lancaster, for the invention of "Improvements in machinery for sawing slate."

1679. And to Frederic Prince, of No. 138, New Bond Street, in the county of Middlesex, Gun

Maker, for the invention of "An improvement in breech-loading firearms."

On their several petitions, recorded in the Office of the Commissioners on the 15th day of July, 1859.

1680. To JOHN MUSGRAVE, junior, of the firm of John Musgrave and Sons, Globe Iron Works, Bolton-le-Moors, in the county of Lancaster, Engineers, for the invention of "Improvements in the construction of steam boilers."

1681. To JULIAN BERNARD, of the Albany, Piccadilly, in the county of Middlesex, Gentleman, for the invention of "Improvements in the construction and arrangement of hydraulic and other pumps, for forcing liquids and for obtaining pressure."

1683. To CHRISTOPHER POTTINGER, of Anstruther, in the county of Fife, North Britain, Boat Builder, for the invention of "Improvements in machinery or apparatus for dredging or excavating, and for driving piles."

1684. To HENRY CUNNEW, of the Triangle, Hackney, in the county of Middlesex, Manufacturer, for the invention of "Improvements in elastic bands."

1685. To PAUL AUGUSTIN AMÉDÉE TROUTTET, of Dijon, in the empire of France, Gentleman, for the invention of "A new moveable stopper for gaseous liquids."

1687. To WILLIAM MORRIS SMITH, of Northampton, Gentleman, for the invention of "The construction of fare-boxes for the prevention of fraud on the part of drivers, conductors, &c."—A communication from abroad by J. B. Slawson, of New Orleans, in the state of Louisiana, in the United States of America.

1688. To MYRON HOLLEY CHAPIN, of Boston, in the state of Massachusetts, in the United States of America, but now residing in Manchester, in the county of Lancaster, Merchant, for the invention of "Improvements in the manufacture of galloons, tapes, or ribbons for supporting steel or other hoops used for distending ladies' dresses."

1689. And to THOMAS CARLIELL, of Union Street, Portsea, Hampshire, for the invention of "Improvements in vent pegs."

On their several petitions, recorded in the Office of the Commissioners on the 16th day of July, 1859.

1691. To JULIAN BERNARD, of the Albany, Piccadilly, in the county of Middlesex, Gentleman, for the invention of "Improvements in the manufacture of boots and shoes and the means employed therein."

1692. To HENRY CHRISTOPHE MARTIN CRAMER, of Paris, France, Joiner, for the invention of "Improvements in bedsteads."

1693. To JAMES SHAW, of Teignmouth, in the county of Devon, for the invention of "Improvements in the manufacture of artificial fuel."

1694. To ANDREW PHILLIPS, of Glasgow, in the county of Lanark, North Britain, Gentleman, for the invention of "Improvements in weaving carpets and in the machinery or apparatus to be used therein, parts of which machinery or apparatus are applicable to the weaving of other fabrics."

1695. To WILLIAM HORATIO HARFIELD, of Fenchurch Street, in the city of London, for the invention of "Improvements in apparatus employed in getting ships anchors and in shackling chains."

1696. To WILLIAM EDWARD NEWTON, of the Office for Patents, 66, Chancery Lane, in the county of Middlesex, Civil Engineer, for the invention of "Improvements in the method of constructing and operating batteries for generating or exciting, by chemical action, electricity for telegraphic purposes." — A communication from abroad by Thomas C. Avery, of New York, in the United States of America.

1697. And to ALFRED VINCENT NEWTON, of the Office for Patents, 66, Chancery Lane, in the county of Middlesex, Mechanical Draughtsman, for the invention of "Improvements in the manufacture of india rubber, and other like fabrics."—A communication from abroad by Jonathan Thompson Trotter, of New York, in the United States of America.

On their several petitions, recorded in the Office of the Commissioners on the 18th day of July, 1859.

1699. To FREDERICK COLLIER BAKEWELL, of No. 6, Haverstock Terrace, Hampstead, in the county of Middlesex, for the invention of "Improvements in extracting oils from coal and other minerals." — A communication from abroad, by David Alter, and Samuel A. Hill, of Pittsburgh, in the United States North America.

1700. To JAMES SHANKS, of Arbroath, in the county of Forfar, North Britain, Machinist, for the invention of "Improvements in mowing machines."

1701. And to HENRI PARENT, of Roubaix, in the empire of France, Manufacturer, for the invention of "Improvements in or applicable to looms for weaving."

On their several petitions, recorded in the Office of the Commissioners on the 19th day of July, 1859.

1703. To JAMES ERSKINE, of Newton Stewart, North Britain, Gun Maker, for the invention of "Improvements in breech loading fire arms."

1705. To WILLIAM EDWARD GEDGE, of the firm of John Gedge and Son, Patent Agents, of No. 4, Wellington Street South, Strand, in the county of Middlesex, for the invention of "Improved apparatus for the prevention of accidents in mines, to be called a mining parachute."—A communication from abroad, by Mr. Fontaine, of the mines of Anzin, département du Nord, in the empire of France.

1707. To the Right Honorable, JAMES Earl of CAITHNESS, of Hill Street, in the county of Middlesex, for the invention of "Improvements in the permanent way of railways."

1709. And to WILLIAM EDWARD NEWTON, of the Office for Patents, 66, Chancery Lane, in the county of Middlesex, Civil Engineer, for the invention of "Improvements in self-acting lithographic printing machines."—A communication from abroad, by William Hermann Stübbe, of Boston, in the United States of America.

On their several petitions, recorded in the Office of the Commissioners on the 20th day of July, 1859.

Patents Sealed.

List of Letters Patent which passed the Great Seal on the

29th July, 1859.

283. Samuel Birchall Eveleigh, of Salford, in the county of Lancaster, Hat Manufacturer, for an invention of "An improved form or construction of hats or covering for the head."—Dated 1st February, 1859.

284. Richard Needham, of Dukinfield, in the county of Chester, Engineer, for an invention of "An improved water-gauge for steam boilers."—Dated 1st February, 1859.

290. George Arthur Waller, of the city of Dublin, Brewer to Arthur Guinness Son and Co., for an invention of "Improvements in the means of and apparatus for expressing liquid from semi-fluid substances and other substances containing liquid."—Dated 1st February, 1859.

296. Edward Ellis Allen, of Brompton Row, in the county of Middlesex, Engineer, for an invention of "Improvements in stereoscopic apparatuses."—Dated 2nd February, 1859.

304. John Hirst, junior, of Dobscross, in Saddleworth, in the county of York, Merchant, and James Hollingworth, of the same place, Joiner, for an invention of "Improvements in the construction of power looms."—Dated 2nd February, 1859.

305. George Leach, of Leeds, in the county of York, Yarn Spinner and cloth manufacturer, for an invention of "Improvements in leashing yarn or thread in the hank, and in machinery for winding off the same."—Dated 2nd February, 1859.

357. Alexander Clark, of Gate Street, Lincoln's Inn Fields, in the county of Middlesex, Engineer and Revolving Shutter Manufacturer, for an invention of "Improvements in revolving shutters and blinds, and in apparatus connected therewith."—Dated 8th February, 1859.

427. Richard Cookson, of Layton Hawes, near Blackpool, in the county of Lancaster, Gentleman, and Charles William Homer, at Castle Hill, near Northwich, in the county of Chester, Civil Engineer, for an invention of "Improvements in machinery for making bricks, tiles, tubes, and other articles of plastic materials, and in the mode of jointing drain pipes."—Dated 16th February, 1859.

489. Augustus William Smethurst, of Chorley, in the county of Lancaster, Cotton Spinner and Manufacturer, for an invention of "Improvements in machinery for driving looms for weaving."—Dated 23rd February, 1859.

745. Pierre Paul Boll, of Paris, in the French empire, Gentleman, and Hermann Reger, of Cologne, Gentleman, for an invention of "Improvements in steam boiler and other furnaces."——A communication from Antoine Speich, residing at Strasbourg.—Dated 23rd March, 1859.

1317. Bernhard Samuelson, of Banbury, in the county of Oxford, for an invention of "Improvements in machines for cutting roots and other vegetables."—Dated 28th May, 1859.

Patents on which the Stamp Duty of £50 has been Paid.

(*To 26th July*, 1859.)

1820. William Wood, of Monkhill, near Pontefract, in the county of York, Gentleman, and Matthew Smith, of Heywood, in the county of Lancaster, Manufacturer, for an invention of "Improvements in looms for weaving terry and cut pile fabrics."—Dated 1st August, 1856.

1821. William Wood, of Monkhill, near Pontefract, in the county of York, Gentleman, and Matthew Smith, of Heywood, in the county of Lancaster, Manufacturer, for an invention of "Improvements in apparatus for cutting the wires out of terry fabrics."—Dated 1st August, 1856.

FOREIGN PATENTS.

UNITED STATES OF AMERICA.

(*Communicated by the Commissioner of Patents.*)

List of Patents, with Claims annexed, issued from the United States Patent Office, for the week ending 12th July, 1859, and each bearing that date.

No. 24,708. E. H. Angamar, of New Orleans, La., for an "Improvement in mode of staying piles for wharves, piers, &c."

"I claim, in combination with the piles, the frames *s*, *s*, and sleeves *a*, and the braces *b*, when made and arranged as or substantially as and for the purpose set forth."

No. 24,709. Steuben T. Bacon, of Boston, Mass., for an "Improvement in locks."

"I claim the construction of one or more pistons or drivers, or both, also one or more holes in the rotating tumbler or surrounding cylinder, or both, substantially as and for the purpose specified."

No. 24,710. Steuben T. Bacon, of Boston, Mass., for an "Improvement in bank and safe locks."

"I claim, 1st, arresting and holding the tumbler in an exact locked position. 2nd, preventing the displacement of the tumbler in the direction of unlocking by means of pins (*l*, *l*, *l*, *l*,) in combination with the sliding bottom key-hole guard and the tenons. 3rd, preventing the displacement of the tumbler at and beyond the locked position by means of the slotted collar, in combination with the cylinder, the tumbler, and the tumbler pin. 4th, preventing the displacement of the tumbler inwardly by means of the collar, in combination with the cylinder and the bolt of the lock.

5th, enlarging the piston holes throughout the lock, for the purpose specified. 6th, enlarging the holes in both tumbler and cylinder in each direction from the dividing line between them, for the purpose specified. 7th, constructing the key-hole guard of two or more pieces of metal hardened, for the purpose specified. 8th, making one or more air chambers between the several parts of the key-hole guard, for the purpose specified. 9th, dividing the air chamber or chambers with one or more narrow ridges, for the purpose specified."

No. 24,711. Joseph M. Batchelor, of Foxcroft, Me., for an "Improvement in lamps."

"I claim the arrangement and combination of adjustable tube B with the wick L, button spindle F, spur wheels D, J, and friction spring H, or the equivalents thereof, as set forth."

No. 24,712. John T. Bever, of Haynesville, Mo., for an "Improvement in devices for training pea vines."

"What I claim is, the posts B, B, when forming a box, as described, and combined with cords *g*, *g*, rope *f*, and pegs *h*, *h*, the whole constructed and arranged in the manner and for the purposes set forth."

No. 24,713. Daniel Edwd. Bishop, of New York, Y. Y., for an "Improvement in railroad chairs."

"What I claim is, the formation of a bridle A in the centre of the continuous lift D of a railroad chair, constituting a new article of manufacture, as described."

No. 24,714. J. L. Booth, of Cuyahoga Falls, Ohio, for an "Improvement in grain separators."

"I claim the box A provided with an inclined bottom or flooring and adjustable strips or valves, arranged to operate substantially as and for the purpose set forth."

No. 24,715. J. Borton, of Middlebourne, Ohio, for an "Improvement in rat traps."

"What I claim is, the combination of the spring doors D, D, rods O, O, dog *d*, and rod *r*, when arranged substantially in the manner and for the purpose set forth."

No. 24,716. Chas. B. Bristol, of Naugatuck, Conn., for an "Improved combination of flesh fork and skimmer."

"What I claim as my invention, and desire to secure by Letters Patent as a new article of manufacture, is, the combination of the fork and skimmer, when constructed, attached, and fitted for use, substantially as herein described."

No. 24,717. J. H. Butler and P. G. Van Houten, of Cohocton, N. Y., for an "Improved mode of operating farm gates."

"But what we claim is, actuating the traps L, L, by means of the weight M and cord *o*, arranged in combination with the lever F, or its equivalent, for operating automatic gates, substantially in the manner and for the purposes shown and described. We also claim the construction and operation of the double-acting latch I in combination with an automatic gate for carriages, substantially in the manner and for the purpose set forth."

No. 24,718. Ansel Cain, of Holyoke, Mass., for an "Improvement in walking canes."

"What I claim is, the combination of the lamp, constructed and arranged in the manner described, with the walking cane, for the purpose herein set forth."

No. 24,719. James H. Case, of Lyons, N.Y., for an "Improvement in hanging the bodies of vehicles."

"What I claim is, the combination of the metallic springs with thorough braces, substantially in the manner and for the purpose herein set forth. I also claim the combination and arrangement of the combined thorough braces *a*, *b*, with the circular body E, and supplementary spring G, substantially as and for the purpose herein described."

No. 24,720. Matthew Chambers, of New York, N.Y., for an "Improvement in skirt supporters."

"I claim combining with and securing to a corset band extending in the rear, or in the rear and front downwards from the waist, to clasp the body around the hips of the wearer, the framework of a skirt or bustle, when said framework is composed of hoops, disconnected and fastened in front or thereabouts, substantially as described and for the purposes set forth herein."

No. 24,721. Denison Chesbro', of Syracuse, N.Y., for an "Improved mode of telegraphing from R. R. cars while moving."

"I claim the combination of a sufficient number of pendents, arranged as described, and each having a movable vertical tongue, as described, and so constructed as to admit of a telegraph wire being attached to each of them in the particular manner specified, with the metallic plates, wood scantling, or equivalent, and conducting internal wires attached to the roof of a railroad car, the whole being constructed, operated, and operating in the manner herein-before described, and for the purposes set forth."

No. 24,722. Wm. A. Clark, of Bethany, Conn., for an "Improved device for fastening cutters of hollow augers."

"I claim the angle wedge *e*, in combination with the cutters, face plate, screws *c*, and ledges *h*, substantially as described and for the purposes set forth."

No. 24,723. David Cook, of New Haven, Conn., for an "Improved fruit basket."

"I claim making a metal bound wooden fruit basket, either plain or ornamental, when constructed and fitted for use, substantially as herein described."

No. 24,724. John Davis, of New Bedford, Mass., for an "Improved mode of connecting the ends of railway bars."

"I claim, 1st, connecting the rails of railroads, in continuous chains with hinge joints, in any practical mode. Second, I claim securing the rails in the couplings, by inserting wedges longitudinally under the rails, and clinching their margins. Third, I claim wedge D^2, in Fig. 2, to secure wedge D^3, in Fig. 3, and vice versâ, by means of the hinge joint or bolt C, in Fig. 1."

No. 24,725. Perry Davis, of Providence, R. I., for an "Improvement in the wheels of buggy boats."

"I claim arranging paddles upon the spokes of the wheels of a buggy-boat, so that the said wheels perform the two-fold purpose of paddle-wheels and carriage-wheels, substantially in the manner and for the purposes above set forth."

No. 24,726. Willard C. Ellis and John N. White, of Springfield, Mass., for an "Improvement in revolving fire-arm."

"We claim the projection C at the bottom of the chambers of the cylinders, on which the fulminate of the cartridge rests, and is struck by the hammer in the discharge. Second, we claim the flange B of the cartridge, parallel with the barrel, the two in combination, for the purpose herein specified."

No. 24,727. Lewis C. England, of Owege, N. Y., for an "Improvement in apparatus for tanning."

"I claim, in combination with the leach vat, and the conveyor trough, the pair of rollers to crack the wet bark before it is delivered into the leach vat, substantially as set forth."

No. 24,728. Daniel Fitzgerald, of New York, N.Y., for a "Fireman's ladder."

"I claim, 1st, suspending a ladder upon the standard E, so that it may be elevated and turned in any direction, constructed and arranged substantially as above described, 2nd, the arrangement of the branch pipes C with the stop cocks K, for use at various heights, as above described. 3rd, I also claim making the main pipe B serve as a hand rail to the ladder, and to give it stiffness, by setting it up a little above and parallel to it, as above described."

No. 24,729. W. A. Foster, of Chester, Conn., for an "Improved method of hanging pictures, looking glasses, &c."

"I claim adjusting picture frames, or mirrors, to different positions and at different angles, by means of a central hinge and levers, substantially as described for the purposes set forth."

No. 24,730. M. I. Gallager and Wm. H. Gladding, of Savannah, Geo., for an "Improvement in breech-loading fire-arms."

"We claim forming the chamber in the barrel and breech of the gun, of the shape of two frustrums of cones, or of a

frustrum of a cone, and a section of a parabolic spindle whose bases meet at or near the line of the joint between said barrel and breech, for the purpose of containing a cartridge case of the form, substantially as that herein, represented."

No. 24,731. Joseph Gasser, of Toledo, Ohio, for an "Improved clothes frame."

"I claim the arrangement of the braces D, and arms E, in connection with the standard A, and legs C, substantially as set forth."

No. 24,732. David Glover, of Cass Township, Pa., for an "Improvement in dumping car."

"I claim the construction of a revolving tip, placed upon a movable frame or truck, the side pieces of which form, at a certain stage of the operation, a continuation of the main track or foundation, by means of which the waggon or car can be taken without handling from the main track or foundation, with the load moved to the place required, and there dumped in any direction, substantially as and for the purposes set forth."

No. 24,733. Freeman Godfrey, of Grand Rapids, Mich., for an "Improved shingle machine."

"I claim the cams G, G, gearing into rack bars, F, F, attached one to each end of the carriage E, said arms being fitted in a yielding or adjusted centerpoised frame I, and operated from the power lever D, through the medium of the pawl O, ratchet M, and gearing *l*, *m*, substantially as and for the purpose set forth."

No. 24,734. Wm. Goodale, of Clinton, Mass., for "Machine for making paper bags."

"I claim, 1st, making the cutter which cuts the paper from the roll, or piece, of the form herein described, that in cutting off the paper it also cuts it to the required form to fold into a bag, without further cutting out. 2nd, the attachment of the former F directly to the cutter to operate in combination therewith, and with a folding table C, substantially as herein described. 3rd, the within-described mode of applying and arranging the paster *f*, to operate in combination with the folding table C and former F. 4th, the construction of the side lappers with angular ends *e*, *e*, substantially as described, for the purpose of partly folding the sides of the bag. 5th, the knock-off I, operating in combination with the former, substantially as and for the purpose described. 6th, the vibrating frame J, with its rollers *i*, *i*, operating in combination with the former and the knock-off, substantially as and for the purpose herein described. 7th, the arrangement of the table, the cutter, the former, the side lappers, the bottom paster, the knock-off, and the vibrating frame J, to operate in relation to, and in combination with each other, substantially as described."

No. 24,735. Darwin A. Greene, of New York, N. Y., Administrator of Elias Davis, deceased, late of New York, aforesaid, for an "Improved machine for splitting fire-wood."

"I claim the slabbing knife *a*, and splitting knives *b*, *c*, *d*, *e*, *f*, as secured to one cross head O, acting simultaneously at the forward movement of the latter, substantially as described, and for the purpose set forth."

No. 24,736. Tobias Grodjinski, of New York, N. Y., for an "Improvement in dry gas meters."

"But what I claim is, attaching each pair of the plates (B, B^1,) or their substantial equivalents, to the flexible part (C) of the diaphragms of dry gas meters, by overlapping parts of the one upon the other, substantially in the manner and for the purpose set forth and described."

No. 24,737. Geo. Hensel, of New York, N. Y., for an "Improvement in sewing machines."

"I claim the construction of the disk W, with an elastic plate R attached and operated by means of a cam, in the manner and for the purpose substantially as set forth."

No. 24,738. S. Emilius Hewes, of Albany, N.Y., for an "Improvement in stoves."

"I claim a revolving fire-pot, arranged to traverse perpendicularly, or to be raised and lowered, substantially as described, for the purpose of supplying air to, and shutting it from the openings in the sides of the fire, so as to effect a ready and perfect combustion and consumption of the fuel."

No. 24,739. H. J. Holmes, of Warren, Mass., for an "Improved clothes frame."

"What I claim, is, a series of vertical frames, one of which has permanently affixed to it a foot piece A, and cap B, when said cap and foot pieces form suitable bearings for other frames, arranged and operating as and for the purpose set forth."

No. 24,740. John P. Hughes, of Spout Spring, Va., for an "Improvement in water wheels."

"I claim making the water arms in sections, essentially as described, for the purpose set forth."

No. 24,741. Anthony Iske, of Lancaster, Pa., for an "Improvement in dumping wagon."

"I claim the drop door D, with its lever E, the partitioned box A, with its rack bar *c* on the bottom, the handled spindle L, K, for moving the same, as specified, when the several parts are combined, as and for the purpose set forth."

No. 24,742. John W. Kennedy and John F. Plummer, of Plainfield, Conn., for an "Improvement in machines for dressing millstones."

"What we claim, is, the arrangement and combination of the arbor Q, forked arm (S), spring T, shaft U, ratchet and pawl V, W, wiper N, bar A, movable case G, shaft K, and adjustable plate *o*, as and for the purpose herein shown and described."

No. 24,743. J. Kurtzeman, of Lancaster, Pa., for an "Improved head-block for saw mills."

"I claim the sliding rack bar placed longitudinally in the carriage A, and adjusted therein by the wedges *e*, *e*, in connection with the gearing H, I, F, whereby the two sides C, C, may, by a suitable adjustment of the wedges be actuated both simultaneously and separately, as may be desired."

No. 24,744. Wm. Lance, of Olney, Ill., for an "Improved method of constructing mallets."

"What I claim is, the manner of their construction and arrangement, as shown and described, for the uses and purposes set forth."

No. 24,745. John K. Leedy, of Woodstock, Va., for an "Improvement in bee-hives."

"I claim, 1st, the boxes (*e*), constructed and arranged in the manner and for the purpose herein specified. 2nd, I claim, in combination with the boxes (*e*) the pipes E, E, and *a*, *b*, *c*, and their faucets, all arranged in the manner and for the purpose herein set forth."

No. 24,746. Robt. H. Long, of Philadelphia, Pa., for an "Improved salimometer."

"I claim the means of drawing into a vessel water from the steam boiler, as a means to facilitate testing the density of the water in the same, constructed and arranged for the purpose substantially as set forth."

No. 24,747. A. G. Mack, of Rochester, N.Y., for an "Improved life-preserving raft."

"I claim surrounding a cask or chamber A with conical floats B, arranged radially with said chamber and hinged thereto, and covering the cone with canvas, or other suitable material, and bracing the whole together by a rope suitably arranged, all substantially in the manner and for the purposes herein specified."

No. 24,748. John Masury, of Brooklyn, N.Y., for an "Improvement in paint cans, &c."

"I claim the construction of a metallic can, for hermetically sealing paints and other substances, having attached thereto a rim or ring of thin brass, or other soft metal, in such a manner that the top or cover may be removed, by severing the said rim or ring of brass or other soft metal, with a pen knife, or other sharp instrument, in the manner and for the purposes herein described and represented, or its equivalent."

No. 24,749. A. A. McMahen, of Oxford, Miss., for an "Improvement in earth boring augers."

"I claim bracing the two ends of the spiral portion of the auger, by means of the central rod E, substantially in the manner and for the purposes herein described. I also claim the manner of securing the boring tools F, G, rod H, to the spiral D, by which they may be removed and replaced, without making any changes on the spiral D, substantially in the manner and for the purposes described."

No. 24,750. Anton Menge, of Point a la Hache, La., for an "Improvement in dredging machine."

"I claim, 1st, the bucket frame B, when resting upon adjustable casters or friction rollers, and operated so as to be swung from right to left of the boat, upon a circular track *b*, in combination with the oscillating shaft C, all arranged and operating substantially in the manner and for the purposes herein set forth. 2nd, I claim the buckets F, having a hinged back T, arranged and operating for the purposes specified."

No. 24,751. F. O. More, of Bellefontaine, Ohio, for an "Improvement in preserve cans."

"I claim the peculiarly formed cap B, in combination with the curved spring lip E."

No. 24,752. Z. N. Morrel, of Cameron, Texas, for an "Improved portable oven."

"I claim forming the pin on the handle, on the cover of Dutch ovens, or skillet, in combination with the tube under the centre of the fryingpan or gridiron, substantially as and for the purposes herein set forth."

No. 24,753. Chas. Neer, of Albany, N.Y., for an "Improved dynamometer."

"I claim the combination of the rigid arm or arms *c*, and yielding incline or inclines *d*, with the loose pulley *a*, or its equivalent, whereby the power exerted to rotate the shaft *a*, is denoted by the motion resulting from the pressure against said yielding incline or inclines for the purpose of forming a rotary dynamometer, substantially as specified. I also claim the revolving and sliding cone *h*, adjusted in its position according to the power applied from the pulley *a*, to the shaft *b*, when combined with a registering apparatus, substantially as set forth, to record the amount of power made use of, as described."

No. 24,754. Charity Pendleton, of Galena, Ill., for an "Improved washing machine."

"I claim, 1st, the combination of the two horizontal bars or rails J and M, having a circular reciprocating motion with the fixed corrugated cylindric surface forming the bottom of the machine, and having its axis coincident with the axis of motion of the said bars J and M, the parts being constructed and arranged as herein before described, and operating so as to produce the effect previously stated. 2nd, the combination of the slot or mouth K, in the arm D, and the tenon I, I^1, at the ends of the corrugated rubbing bar M, with the perforated bar J, by which the portion of the said corrugated rubbing bar M may be altered, with respect to the bottom of the machine, so as to increase or diminish its distance therefrom, substantially as set forth, and without altering the position of the bar J. 3d, the combination of the corrugations on the lower surface of the rubbing bar M with similar corrugations on the bottom or concave of the machine, but so arranged that the direction of the two sets of corrugations will be at right angles to each other, as herein-before more fully described, and for the purpose set forth."

No. 24,755. Peter Philip, of Ghent, N. Y., for an "Improved method of operating windlasses when applied to hay presses, &c."

"What I claim is, 1st, attaching the wheel, or table C, to the capstan A, so as to be operated upon by the loose or boom sweep B, as a brake for the purpose of stopping the press at any point of descent, while being filled, and of regulating and controlling the motion of the capstan in the uncoil. 2nd, providing the capstan A, with the arms *e*, e^1, and the loose or boom-sweep B, in combination with the check lever D, substantially in the manner and for the purpose herein set forth."

No. 24,756. Daniel Quimby, of Littleton, N. H., for an "Improved machine for boring hubs."

"I do claim the shaft A, the boss B, placed on said shaft and provided with a conical bore *d*, and having the collar *p* and arms *q* attached, the screw rod C, connected with the collar *p* by the gearing *n*, *o*, and provided with the divided nut D, attached to the upright *f*, the whole being arranged to operate substantially as and for the purpose set forth. I further claim, in combination with the parts above named, the convex projection *m*, placed on the shaft A, to operate as and for the purpose specified."

No. 24,757. P. D. Richards and F. N. Thayer, of New Orleans, La., for an "Improved pocket register of count."

"We claim the construction and arrangement of a hand operating tally, specifically as described, consisting of three indexes and corresponding wheels, to indicate count, as specified, the whole being operated by a projecting stud (G), and spring brake (I,) with its gage (S), for the purpose herein set forth."

No. 24,578. John Richardson, of New York, N. Y, for an "Improvement in pen and pencil cases."

"I claim the arrangement of the spire-grooved sleeves, and their connection with the penholder and pencil, and also with the outer shell of the case substantially as described, for the purpose as set forth."

No. 24,759. John Robertson, of Brooklyn, N. Y., for an "Improvement in hydrostatic lifting jack."

"I claim the employment of the exterior movable hydraulic cylinder E, with toe-piece upon its surface, in combination with the standard B, which serves also as piston and eduction pipe, as and for the purpose herein shown and described."

No. 24,760. Wm. G. Russell, of Winchester, Va., for an "Improvement in self-detaching whiffle tree."

"What I claim is, a swingle or whiffle tree, provided with a lever turn bar *e*, *e*, *e*, *e*, *f*, *f*, *g*, *h*, *h*, as shown in Figure 3, together with the spring clasp *o*, *o*, Figures 1, 4, 5, and the hinged or jointed hooking ferrules K, K, L, L, *n*, *n*, when constructed and arranged substantially as herein set forth and described."

No. 24,761. Silas T. Savage, of Albany, N. Y., for an "Improvement in coal sieves."

"I claim the employment of the two half globes A and B, in which there are interstices *c*, *c*, *c*, as a coal sifter, when said half globes are provided with grooves *b*, *b*, tongues *a*, *a*, and shoulders *x*, *x*, the same being used in connection with a box or cylinder, by means of which the two portions of the globe are prevented from moving endwise of the trunnions, and are prevented from separating, substantially as set forth."

No. 24,762. J. W. Schmidt, of Philadelphia, Pa., for an "Improved sewing machine."

"I claim the combined arrangement of the stationary frame (A), fitted with the adjustable holders (*d*, *e*, and *u*,) as described, and the saw carriage (B), operated by the crank (*o*), shaft (f^4), spur wheels (l)(l), shaft (*m*), and rope or chain (*n*), as set forth and described, whilst the saw (*k*) is, at the same time, rotated through the media of the gear wheel (*f* and *g*,) pulley (*h* and *i*), and band (7), arranged and combined as set forth and described, the said stationary frame (A) and the said moving saw carriage (B) operating together, as and for the purpose set forth and described."

No. 24,763. Cornelius R. Shaeffer, of Gettysburgh, Pa., for an "Improved machine for making hand rails for stairs."

"I claim the combination of the perpendicular square post erected upon the base A, with the draught board B, pitch board G, rod C, and arm D, the several parts being arranged substantially as and for the purpose set forth."

No. 24,764. Reuben Shaler, of New Haven, Conn., for an "Improved confectionary safe."

"I claim the confectionary safe above described, constructed substantially as specified, as a new and useful article of manufacture."

No. 24,765. Geo. F. Shaw, of Woburn, Mass., for an "Improvement in corn huskers."

"I claim the combination and arrangement of the cylinder E and concave roller C, substantially as set forth, and for the purposes described."

No. 24,766. Christian Shunk, of Canton, Ohio, for an "Improvement in refining iron."

"I claim the use of the external crucible or hearth, having the twier pipe C, the projecting stone D, and the escape pipe E, constructed as described, operating in such a manner that the blast shall deflect from the side of the upright stone, and produce a rotary movement in the melted metal for the purpose of refining the sauce, as specified."

No. 24,767. JOSEPH SIDDALL, of Philadelphia, Pa., for an "Improvement in threshing machines."

"I claim the combination of flails F, roller E, slides C, and straps *g*, when said flails are constructed with the flexible joints J, the arrangement and operation being substantially as and for the purpose set forth."

No. 24,768. MICHAEL TROMLY, of Mount Vernon, Ind., for an "Improvement in lock for fire-arm."

"I claim, 1st, the combination of the hooks G^2, I, or their equivalents, respectively formed on the claw G^1 of the link G, and the trigger K, substantially as described. 2nd, I also claim widening the upper end of the trigger K, so as to form a projection K in front, whose lower curved edge shall operate on the curved surface of the claw G^1, in the manner and for the purpose set forth."

No. 24,769. I. L. G. WARD, of Adrian, Mich., for an "Improvement in artificial stone."

"I claim a cement, composed of pumice stone, silicate of soda, fluor spar, and Roman cement, as herein set forth."

No. 24,770. OLIVER N. WEAVER, of Dover, Ky., for an "Improvement in preserving cans."

"What I claim is, the perforated elastic plug D, *d*, secured in the top of a provision can, in the described combination, with a nozzle E, and tube F, communicating with an exhausting chamber, substantially as set forth."

No. 24,771. LOREN WETMORE, of Tioga county, Pa., for a "Trap for animals."

"What I claim is, the peculiar construction and arrangement of the manifold trap, substantially as set forth. 2, I claim the arrangement of the trip C, provided with a fulcrum or fulcra *c*, guide pin *e*, and arched wire D, for operating substantially as set forth."

No. 24,772. JAMES WILSON, CHAS. GREEN, and WM. WILSON, jr., of Wilmington, Del., for an "Improvement in attaching the heads of metallic powder kegs, &c."

"What we claim is, the double seaming of both heads of the keg, and the opening in one head, in the manner substantially as above described."

No. 24,773. ARCALOUS WYCKOFF, of Elmira, N.Y., for an "Improved hollow auger."

"What I claim is, combining the transverse auxilliary cutters *d*, *d*, with the prime cutters *a*, *a*, and elliptic opening of the annular cutter head, as described, substantially as and for the purpose herein set forth."

No. 24,774. PETER ALTMAIR, of Lewistown Pa., assignor to himself and Myron M. Faxon, of Lewistown aforesaid, for an "Improvement in breech-loading fire-arms."

"What I claim is, in combination with a fixed breech-piece, a hinged barrel, so arranged as that the said barrel shall swing upward, and expose the chamber of the breech-piece below the rear end of the barrel for inserting the charge substantially as herein described and represented."

No. 24,775. ROBT. M. CAMPBELL, of East Cambridge, Mass., assignor to himself and Benjn. S. Wright, of Boston, Mass., for a "Money drawer alarm."

"I claim the combination and arrangement of the two levers F, G, and the spring latch E, with the clock alarm apparatus D, the striker *a*, and bell *b*, and the combination of the same, and a series of perforated key slides, and a set of T bars applied together and to such levers, so as to actuate the same, substantially as specified. I also claim the combination and arrangement of the T bars, and the perforated key slides, to operate in manner as described. I also claim, in combination with the key lock M, and the T bar I, a latching apparatus placed in the case K, and constructed so as to lock both the cover and the T bar, or either, substantially as specified. I also claim the combination of the detector, or indicator, with the case cover and the T bar H, and operated in manner as specified."

No. 24,776. SAML. GREEN, of Lambertville, N.J., assignor to himself and W. R. Green, of Philadelphia, Pa., for an "Improved safety apparatus for city railroad cars."

"I claim the swinging frame (C) in connection with the bolt (*l*) and cover (*v*), the brake blocks (D, D,) in connection with the chairs (*r*, *r*), and rods (*t*, *t*), and the stationary supporting piece (*n*), the same or their equivalents being arranged, applied, and operated substantially in the manner and for the purpose set forth and described."

No. 24,777. SAML. B. GUERNSEY, of Waterbury, Conn., assignor to Willoughby H. Reed and Geo. W. Zeigler, of New York, N.Y., for an "Improvement in clasps for skirt hoops."

"I claim connecting the hoops with the straps, or equivalents thereof, for connecting and suspending them by means of plates bent to embrace the hoops, and formed with two slots or apertures, through which the straps or equivalents pass, thus clasping the straps or equivalents to the hoops, substantially as described. And I also claim the employment of the metal clasps, constructed as above described, in combination with and as a means of connecting the ends of the hoops, substantially as described."

No. 24,778. MOSES HALL, jr., of Osborn, Ohio, assignor to himself and Saml. H. Judy, of Osborn aforesaid, for an "Improvement in cattle gates for railroads."

"I claim constructing a cable guard or gate, with its cross bar or shaft below the rail of the railroad track, and operated by springs, substantially as described."

No. 24,779. ROBT. LAW, of Lockport, N.Y., assignor to himself and P. T. Dix, of Olcott, N.Y., for an "Improvement in apparatus for packing fruit."

"I claim the V-shaped or wedge-acting yoke *c*, provided with fulcrum pins *h*, *h*, and the hooked recesses *g*, *g*, in the upper ends of the bent clamping levers A, A, arranged and acting in combination with the screw D, fulcrum link B and claws *f*, *f*, or their equivalents, substantially in the manner and for the purpose herein specified."

No. 24,780. SIDNEY PARKER, of New York, N.Y., assignor to himself and Hugh Herringshaw, of same place, for an "Improvement in sewing machines."

"What I claim, is the combination of the hook I, and the feeding arc H, in the manner and for the purpose substantially as set forth. I claim also, the method of adjusting the feed by means of the combination of the spring piece G, and the feeding arc H, in the manner described."

No. 24,781. JOHN PAYNTER, of Shelbyville, Ind., assignor to himself and John McCorkle, of Shelbyville, aforesaid, for an "Improvement in sugar mills."

"What I claim is, the combination and arrangement of the journal (C), wheel (D), gearing (E, F, G, and H), and rollers (I, J, and K), the whole being suspended in a frame (A), and constructed and operated, substantially as described."

No. 24,782. ASA T. RING, of Newton, Mass., assignor to Nathl. T. Spear and A. J. Robinson, of Boston, and Milton, Mass., respectively, for an "Improved device for winding skeins of thread."

"What I claim is, the combination of the clamping spring *c*, screw and guide pin or rod *t*, *l*, with the tightening and supporting shank *e*, and bobbin *b*, when said parts are constructed and arranged, in relation to each other, substantially as and for the purpose specified and shown."

RE-ISSUES.

No. 754. JOHN M. BRUNSWICK, of Cincinnati, O., for an "Improved billiard table cushion."—Patented 8th December, 1857.—Re-issued 12th July, 1859.

"I claim that order in the arrangement of the material composing a billiard table cushion, which places the cork in the rear, the rubber in front of it, and the paper, leather, and cloth, or the equivalents thereof outside in the manner and for the purposes set forth."

No. 755. LYSANDER BUTLER and R. BLAKE, of Waterford, N. Y., for an "Improvement in fire-engines." —Patented 30th November, 1858.—Re-issued 12th July, 1859.

"We claim combining with the waterway or channel *i* the air-chamber *d*, divided into two compartments by the contraction *r* at or about one half of the light of said air chamber above the base or point of attachment to said waterway, substantially in the manner and for the purpose herein set forth. We claim, in combination with the hour-glass contraction of the air chamber, the ring enlargement S of the rock shaft, as herein set forth."

No. 756. AUSTIN G. DAY, of Seymour, Conn., for an "Improvement in cleansing caoutchouc."—Re-issued 12th July, 1859.

"I claim the use of alkali, or its equivalent, for separating bark, sticks, or other foreign bodies from crude caoutchouc and other vulcanizable gums to prepare them for manufacturing."

No. 757. AUSTIN G. DAY, of Seymour, Conn., for an "Improvement in treatment of crude caoutchouc."—Re-issued 12th July, 1859.

"I claim charging the caoutchouc or other like gum with alkaline liquor, or the equivalent, by means of the exhausting apparatus herein described and represented."

GEORGE H. CORLISS, of Providence, R. I., for an "Improvement in cut-off and working valves of steam engines."—Patented 10th March, 1849.—Re-issued 12th July, 1859.

"I claim the method, substantially as described, of operating the slide valves of steam engines by connecting the valves that open and close the ports at opposite ends of the cylinder, with separate crank wrists, or their mechanical equivalents, so that from the motion thereof each valve, while its port is closed, shall move a less distance than it moves in opening and closing its port, while at the same time the two wrists by which the two valves are operated have the same range of motion, as described, whereby I am enabled to save much of the power heretofore expended in working the slide valves of steam engines, and by which also I am enabled to make a greater proportion of the movement of the valve available for effecting a free passage of the steam through the ports of the cylinder."

GEORGE H. CORLISS, of Providence, R. I., for an "Improvement in cut-off and working valves of steam engines."—Patented 10th March, 1849.—Re-issued 12th July, 1859.

"I claim the combination of liberating valve-gear with valves which are moved parallel to their seats and continue their closing motion after their ports are closed, and commence their opening motion before their ports open, substantially as described."

GEORGE H. CORLISS, of Providence, R. I., for an "Improvement in cut-off and working valves of steam engines."—Patented 10th March, 1849.—Re-issued 12th July, 1859.

"I claim the combination, substantially as described, of an air cushion, with the liberating valve gear of steam engines."

GEORGE H. CORLISS, of Providence, R. I., for an "Improvement in cut-off and working valves of steam engines."—Patented 10th March, 1849.—Re-issued 12th July, 1859.

"I claim the combination with the part of the valve gear that appertains to a liberated steam valve of an instrument moved by the power of the engine in such manner as to effect the closing of the liberated valve, whenever the independent means provided for that purpose fail to act in time."

GEORGE H. CORLISS, of Providence, R. I., for an "Improvement in cut-off and working valves of steam-engines."—Patented 10th March, 1849.—Re-issued 12th July, 1859.

"I claim the combination of a helical cam, with the opening and closing mechanism of the steam valve, substantially as described."

GEORGE H. CORLISS, of Providence, R. I., for an "Improvement in cut-off and working valves of steam-engines."—Patented 10th March, 1849.—Re-issued 12th July, 1859.

"I claim the method, substantially as described, of regulating the velocity of steam engines by combining a regulator with a liberating valve gear."

DELIVERY OF LETTERS.—For the Great Seal Patent Office the initials are W. C., the District being the Western Central. In the direction of a Letter, these initials should be legibly written in a separate line, and should in all cases end the address, thus:—

The Commissioners of Patents,
Great Seal Patent Office,
25, Southampton Buildings,
London,
W.C.

ALL FOREIGN and COLONIAL PATENT LAWS and RULES, being translations or copies of Official Communications, may be found in the following Numbers of this Journal, published at 2*d.* each, or 3*d.* free by post:—

Austria, No. 291.
Bavaria, No. 262.
Belgium, Nos. 292 and 348.
Baden, and Petty States of Germany, No. 325.
Canada, No. 279.
Cuba, No. 498.
Dutch West Indies, No. 322.
France, No. 228.
Greece, No. 325.
Germany, No. 435.
Hanover, No. 231.
India, Nos. 240, 348, and 552.
Mexico, No. 496.
Netherlands, No. 289.
New South Wales, No. 380
Prussia, Nos. 313 and 329.

Portugal, No. 325.
Poland, No. 335.
Roman States, No. 319.
Russia, Nos. 334 and 508.
Sardinia, Nos. 233 and 235.
Saxony, No. 236.
Sicilies (the Two), No. 316.
Spain, No. 323.
Sweden, Nos. 327 and 354.
Victoria, Nos. 186 and 359.
Wurtemberg, No. 314.

A FREE LIBRARY and READING ROOM, in connection with the Office of the Commissioners of Patents, is open to the Public daily from 10 till 4 o'clock.

In addition to the Printed Specifications, Indexes, and other publications of the Commissioners, the Library includes a Collection of the leading British and Foreign Scientific Journals, and text-books in the various departments of science and art. A printed Catalogue of the Library is on sale.

NOTE.—The Commissioners' publications may be consulted daily in the Library of the British Museum; in the Library of the Society of Arts; and in the Free Libraries of the following Towns and Cities:—

Aberdeen (*Public Library Town House*).
Accrington (*Mechanics' Institution, Bank Street*).
Belfast (*Harbour Office, Corporation Square*).
Beverley (*Guildhall*).
Birmingham (*Birmingham and Midland Institute, Cannon Street*).
Bolton-le-Moors (*Public Library, Exchange Buildings*).
Bradford, Yorkshire (*Borough Accountant's Office, Corporation Buildings, Swain Street*).
Brighton (*Town Hall*).
Bristol (*City Library, King Street*).
Burnley (*Office of the Burnley Improvement Commissioners*).
Cambridge (*Free Library, Jesus Lane*).
Canterbury (*Municipal Museum, Guildhall Street*).
Carlisle (*Free Library, Police Office*).
Chester (*Town Hall, Northgate Street*).
Cork (*Royal Cork Institution, Nelson Place*).
Crewe (*Railway Station*).
Darlington (*Mechanics' Institute, Skinnergate*).
Dorchester.
Drogheda.
Dublin (*Royal Dublin Society, Kildare Street*).
Dundalk.
Falmouth (*Public Library, Church Street*).
Gateshead (*Mechanics' Institute*).
Gorton (*Railway Station*).
Glasgow (*Stirling's Library, Miller Street*).
Grimsby, Great (*Mechanics' Institution, Victoria Street*).
Hanley, Staffordshire Potteries (*Town Hall*).
Hartlepool, West (*Literary and Mechanics' Institution, Church Street*).
Hertford (*Public Library, Town Hall*).
Huddersfield (*Commissioners' Offices, No. 1, South Parade*).
Hull (*Mechanics' Institute, George Street*).
Ipswich (*Museum Library, Museum Street*).
Keighley (*Mechanics' Institute, North Street*).
Kidderminster (*Public Free Library, Public Buildings, Vicar Street*).
Kings' Lynn, Norfolk (*Stanley Library, Athenæum*).
Lancaster (*Mechanics' Institute, Market Street*).
Leamington Priors (*Public Library, Town Hall*).
Leeds (*Town Clerk's Office, Town Hall*).
Leicester (*Corporation Library, Town Hall*).
Limerick.
Liverpool (*Free Public Library, Duke Street*).
——— (*Royal Institution*).
London (*British Museum*).
——— (*Society of Arts, John Street, Adelphi*).
Macclesfield (*Useful Knowledge Society*).
Maidstone.
Manchester (*Chetham Hospital*).
——— (*Free Library, Camp Field*).
Montrose.
Newark, Nottingham (*Mechanics' Institute, Middle Gate*).
Newcastle-upon-Tyne (*Literary and Philosophical Society*).
Newport, Monmouth (*Commercial Room, Town Hall*)
Northampton.
Norwich (*Free Library, St. John's, Maddermarket*).
Nottingham (*Corporation Rooms, St. Peter's Church side*).
Oxford (*Public Free Library, Town Hall*).
Paisley (*Government School of Designs, Gilmour Street*).
Plymouth (*Mechanics' Institute, Princess Square*).

Sunderland (*Corporation Museum, Athenæum, Fawcett Street*).
Tiverton.
Wakefield (*Mechanics' Institution, Earston Square*).
Warrington (*The Museum and Library*).
Waterford (*Town Hall, The Mall*).
Wednesbury (*Board of Health Offices*).
Wexford (*Mechanics' Institute, Crescent Quay*).
Wigan.
Wolverhampton (*School of Practical Art, Darlington Street*).
Wolverton (*Railway Station*).
Yarmouth, Norfolk (*Public Library, South Quay*).
York (*Lower Council Chamber, Guildhall*).

The Commissioners' publications have also been presented to the following Public Offices, Seats of Learning, British Colonies, and Foreign States:—

Public Offices, Institutions, &c.

Admiralty, Department of the Surveyor of the Navy.
——— Steam Branch.
——— Deptford Dockyard.
——— Woolwich ditto.
——— Chatham ditto.
——— Sheerness ditto.
——— Portsmouth ditto.
——— Devonport ditto.
——— Pembroke ditto.
Artillery Institute, Woolwich.
Board of Trade, Whitehall.
Ordnance Office, Pall Mall.
——— Small Arms Factory, Enfield.
War Office, Pall Mall.
Government School of Mines, &c., Jermyn St., Piccadilly.
Dublin Castle, Dublin.
Rolls Office, Chancery (Four Courts), Dublin.
Office of Chancery, Edinburgh.
East India House, Military Stores, Leadenhall Street.
Incorporated Law Society Chancery Lane, London.

Seats of Learning.

Cambridge University.
Trinity College, Dublin.
Queen's College, Galway.
University College, London.

British Colonies.

Malta.
Cape of Good Hope.
Mauritius.
India—Bengal.
North-West Provinces.
Madras.
Bombay.
Ceylon.
Victoria—Patent Office, Melbourne.
Parliamentary Library, Melbourne.
New South Wales.

PATENT LAW AMENDMENT ACT, 1852.—All Specifications, Indexes, &c., printed by order of the Commissioners of Patents, are sold at the Great Seal Patent Office, 25, Southampton Buildings, Holborn.

THE PATENT LAW AMENDMENT ACTS (15 & 16 Vict., cap. 83; 16 Vict., cap. 5; and 16 & 17 Vict., cap. 115); with the Rules and Regulations made by the Commissioners of Patents for Inventions, and by the Lord Chancellor and the Master of the Rolls, under the Acts 15 and 16 Vict., c. 83, and 16 & 17 Vict., c. 115, accompanied by Specimen Forms of the Provisional Documents printed on sheets of the prescribed size.. Price 6*d*.

THE CHRONOLOGICAL INDEX of PATENTS of INVENTION, from March 2, 1617 14 James I.), to September 30, 1852 (16 Vict.), 2 vols. Price 30*s.*

THE ALPHABETICAL INDEX of PATENTEES of Inventions for the above period. Price 20*s.*

THE SUBJECT-MATTER INDEX of PATENTS for the same period — *Second Edition*—to which is prefixed a Key of Terms and Phrases. 2 vols. Price 2*l.* 16*s.*

A Key to the *First Edition* of the above work is also published separately, and may be had on application.

THE CHRONOLOGICAL INDEXES of APPLICATIONS for PATENTS and PATENTS GRANTED from the 1st October to the 31st December, 1852, and from the 1st January to the 31st December, 1853, in one volume. Price 11*s.*

THE ALPHABETICAL INDEXES for the above periods, in one volume. Price 13*s.*

THE SUBJECT-MATTER INDEX, from 1st October to 31st December, 1852. Price 9*s.*

THE SUBJECT-MATTER INDEX, from 1st January to 31st December, 1853. Price 16*s.*

THE CHRONOLOGICAL INDEX of APPLICATIONS for PATENTS and PATENTS GRANTED from the 1st January to the 31st December, 1854. Price 6*s.*

THE ALPHABETICAL INDEX for the above period. Price 7*s.*

THE SUBJECT-MATTER INDEX for the above period. Price 16*s.* 6*d.*

THE CHRONOLOGICAL INDEX of APPLICATIONS for PATENTS and PATENTS GRANTED from the 1st January to the 31st December, 1855. Price 6*s.* 6*d.*

THE ALPHABETICAL INDEX for the above period. Price 7*s.* 6*d.*

THE SUBJECT-MATTER INDEX for the above period. Price 17*s.*

THE CHRONOLOGICAL INDEX of APPLICATIONS for PATENTS and PATENTS GRANTED from the 1st January to the 31st December, 1856. Price 6*s.* 6*d.*

THE ALPHABETICAL INDEX for the above period. Price 8*s.*

THE SUBJECT-MATTER INDEX for the above period. Price 18*s.* 6*d.*

THE ALPHABETICAL INDEX of APPLICATIONS for PATENTS and PATENTS GRANTED from the 1st January to the 31st December, 1857. Price 8*s.*

THE CHRONOLOGICAL INDEX for the above period. Price 6*s.* 6*d.*

THE SUBJECT-MATTER INDEX for the above period. Price 19*s.* 6*d.*

THE ALPHABETICAL INDEX of APPLICATIONS for PATENTS and PATENTS GRANTED, from the 1st January to the 31st December, 1858. Price 8*s.*

THE REFERENCE INDEX of PATENTS pointing out the Office in which each enrolled Specification of a Patent may be consulted; the Books in which Specifications, Law Proceedings, and other subjects connected with Inventions have been noticed; also such of the Specifications of Patents granted under the Act of 21 James I. as have been published by the authority of the Commissioners. Price 30*s.*

AN APPENDIX to the REFERENCE INDEX of PATENTS of INVENTION, containing Abstracts from such of the early Patents and Signet Bills as describe the nature of the invention, and which Patents have no enrolled Specifications. Price 4*s.*

AN INDEX to ALL INVENTIONS PATENTED in ENGLAND from 1617 to 1854 inclusive, arranged under the greatest number of heads, with parallel references to INVENTIONS and DISCOVERIES described in the scientific works of VARIOUS NATIONS, as classified by Professor Schubarth. By B. WOODCROFT.

The foreign works thus indexed form a portion of the Library of the Commissioners of Patents, where they may be consulted, or manuscript translations be had.

SOMMAIRE de toutes les INVENTIONS BREVETÉES en ANGLETERRE depuis 1617 jusqu'en 1854 inclusivement, arrangées d'après le plus grand nombre de rubriques, avec renvois aux INVENTIONS et DÉCOUVERTES décrites dans les ouvrages scientifiques de DIFFÉRENTES NATIONS, classés par le Professeur Schubarth. Par B. Woodcroft.

Les ouvrages étrangers ci-dessus font partie de la Bibliothèque de la Commission des Patentes, où l'on peut les consulter, et obtenir des traductions en manuscrit.

VERZEICHNISS aller in ENGLAND von 1617—1854 incl. PATENTIRTEN ERFINDUNGEN, unter vielfältige Titel gebracht, mit Hinweisungen auf ERFINDUNGEN und ENTDECKUNGEN die nach Prof. Schubarth's Klassificirung in den wissenschaftlichen Werken VERSCHIEDENER NATIONEN beschrieben sind. Von B. Woodcroft.

Die hier aufgeführten fremden Werke machen einen Theil der Bibliothek der Patent Commission aus, allwo sie nachgeschlagen oder schriftliche Uebersetzungen besorgt werden können.

REPERTORIO di tutte le INVENZIONI munite di LETTERE PATENTI in INGHILTERRA dal 1617—1854 inclusivo, poste in ordine sotto il piu gran numero di capi, con riferenze alle INVENZIONI e SCOPERTI descritti nelle opere scientifiche di DIVERSE NAZIONI, classate dal Professore Schubarth. Dal Sig. B. Woodcroft.

Le opere straniere quì indicate possono esser consultate nella Biblioteca dei Commissari delle Patenti, e traduzioni in manuscritto vi possono ottenersi.

B. WOODCROFT,
Superintendent of Specifications, &c.

SUPPLEMENT to the SERIES of LETTERS PATENT and SPECIFICATIONS of LETTERS PATENT for INVENTIONS recorded in the Great Seal Patent Office, and granted between the 1st March (14 Jac. I.) A.D. 1617, and the 1st October (16 Vict.) A.D. 1852; consisting for the most part of Reprints of scarce Pamphlets, descriptive of the early patented Inventions comprised in that Series. Edited by BENNET WOODCROFT, Superintendent of Specifications, etc. In one vol., price 9*s.* 6*d.*, or each Tract separately at the price affixed.

CONTENTS OF VOL. I.

1. Metallica; or, the treatise of Metallica, briefly comprehending the doctrine of diverse new metallical inventions, &c. By SIMON STURTEVANT. (*Letters Patent, dated 29th February*, 1611.) Price 1*s.* 4*d.*
2. A Treatise of Metallica, but not that which was published by Mr. Simon Sturtevant, upon his Patent, &c. By JOHN ROVINSON (*Letters Patent, granted A.D.* 1612.) Price 4*d.*
3. A Commission directed to Sir Richard Wynne and others to inquire upon oath whether NICHOLAS PAGE or Sir NICHOLAS HALSE was the first inventor of certaine kilnes for the drying of malt, &c. &c. (*Letters Patent, Nos.* 33 *and* 85, *respectively dated 8th April*, 1626, *and 23rd July*, 1635.) Price 2*d.*
4. DUD DUDLEY'S Metallum Martis; or iron made with pit-coale, sea-coale, &c. (*Letters Patent, Nos.* 18 *and* 117, *respectively dated 22nd February*, 1620, *and 2nd May*, 1638.) Price 8*d.*
5. Description of the nature and working of the patent Water-scoop Wheels invented by WILLIAM WHELER, as compared with the raising wheels now in common use. By J. W. B. Translated from the Dutch by Dr. Tolhausen. (*Letters Patent, No.* 127, *dated 24th June*, 1642.) Price 2*s.*
6. An exact and true definition of the stupendous Water-commanding Engine, invented by the Right Honourable (and deservedly to be praised and admired) EDWARD SOMERSET, Lord Marquis of WORCESTER, &c. &c. (*Stat.* 15 *Car. II. c.* 12. *A.D.* 1663.) Price 4*d.*
7. Navigation Improved; or the art of rowing ships of all rates in calms, with a more easy, swift, and steady motion than oars can. By THOMAS SAVERY. (*Letters Patent, No.* 347, *dated 10th January*, 1696.) Price 1*s.*
8. The Miner's Friend; or an engine to raise water by fire described, &c. By THOMAS SAVERY. (*Letters Patent, No.* 356, *dated 25th July*, 1698, *and Stat.* 10 *&* 11 *Will. III. c.* 31, *A.D.* 1699.) Price 1*s.*
9. Specimina Ichnographica; or a brief narrative of several new inventions and experiments, particularly the navigating a ship in a calm, &c. By JOHN ALLEN, M.D. (*Letters Patent, No.* 513, *dated 7th August*, 1729.) Price 8*d.*
10. A description and draught of a new-invented Machine for carrying vessels or ships out of or into any harbour, port, or river, against wind and tide, or in a calm, &c. By JONATHAN HULLS. (*Letters Patent, No.* 556, *dated 21st December*, 1736.) Price 8*d.*
11. An historical account of a new method for extracting the foul air out of ships, &c., with the description and draught of the machines by which it is performed, &c. By SAMUEL SUTTON, the Inventor. To which are annexed two relations given thereof to the Royal Society by Dr. Mead and Mr. Watson, (*Letters Patent, No.* 602, *dated 16th March*, 1744.) Price 1*s.*

REAPING MACHINES.—The entire series of Specifications and Drawings on this subject to the end of 1853, together with an Appendix, prepared by B. Woodcroft, of the Patent Office, and published under the sanction of the Commissioners, may be obtained at the cost price of 2*l.* 3*s.* 11½*d.*

FIRE-ARMS, PROJECTILES, &c.—The series of Specifications and Drawings on this Subject, from 15th May, 1718, to 31st December, 1853, with Alphabetical and Subject-matter Indexes, may be obtained at the cost price of 9*l.* 18*s.* 6½*d.*

The Indexes, separately, price 3*s.*

In course of Publication, by Order of the Commissioners of Patents.

ABRIDGMENTS (in Classes, and Chronologically arranged) of all SPECIFICATIONS of PATENTED INVENTIONS, from the earliest enrolled to those published under the Act of 1852.

These books are of 12mo size, and as each is limited to inventions of one class only, they can be sold at prices sufficiently moderate to enable the humblest inventor to examine for himself whether his discovery has been previously patented or not.

At the foot of each abstract are given references to notices of the inventions in scientific and other works, and to the reports of law proceedings for infringements, &c. &c. &c.

The classes already published are,—

1. DRAIN TILES AND PIPES, price 6*d.*
2. SEWING AND EMBROIDERING, price 6*d.*
3. MANURE, price 6*d.*
4. PRESERVATION OF FOOD, price 6*d.*
5. MARINE PROPULSION, price 4*s.*
6. MANUFACTURE OF IRON AND STEEL, price 5*s.*
7. AIDS TO LOCOMOTION, price 1*s.*
8. STEAM CULTURE, price 2*s.*
9. WATCHES, CLOCKS, AND OTHER TIME-KEEPERS, price 1*s.* 6*d.*
10. FIRE-ARMS AND OTHER WEAPONS, AMMUNITION, AND ACCOUTREMENTS, price 6*s.* 6*d.*
11. PAPER.—PART I. MANUFACTURE OF PAPER, PASTEBOARD, AND PAPIER MÂCHÉ, price 3*s.*
12. TYPOGRAPHIC, LITHOGRAPHIC, AND PLATE PRINTING, price 7*s.*
13. BLEACHING, DYEING, AND PRINTING YARNS AND FABRICS, price 9*s.* 6*d.*

The following are in the press:—

PAPER.—PART II. CUTTING, FOLDING, AND ORNAMENTING; INCLUDING ENVELOPES, CARDS, PAPER-HANGINGS, &c.

ELECTRICITY AND MAGNETISM: THEIR GENERATION AND APPLICATIONS.

PREPARATION OF FUEL, AND APPARATUS FOR ITS COMBUSTION.

MANUFACTURE AND APPLICATIONS OF INDIA RUBBER, GUTTA PERCHA, &c.; INCLUDING AIR, FIRE, AND WATER PROOFING.

PRODUCTION AND APPLICATIONS OF GAS.

STEAM ENGINES.

B. WOODCROFT.

The above, and all other works published by the Commissioners of Patents, are now on sale at the Great Seal Patent Office, 25, Southampton Buildings, Holborn.

This Journal is published on the evenings of Tuesday and Friday, and will be forwarded, post free, to Subscribers.—Terms, 30*s.* per annum.—Subscriptions received at the Great Seal Patent Office, where also single copies, at twopence each, may be obtained.

(*Registered for transmission abroad.*)

No. 582. TUESDAY, AUGUST 2, 1859. Price 2d.

Notices to Proceed.

NOTICE is hereby given, that

684. WILLIAM BOWERS TAYLOR, of Ballymena, in the county of Antrim, in Ireland, Gentleman, has given notice at the Office of the Commissioners of his intention to proceed with his application for Letters Patent for the invention of "Certain improvements in or applicable to looms for weaving."

As set forth in his petition, recorded in the said office on the 18th day of March, 1859.

714. And JOSEPH BICKERTON, of Oldham, in the county of Lancaster, Machinist, has given the like notice in respect of the invention of "Improvements in opening and securing window sashes."

As set forth in his petition, recorded in the said office on the 21st day of March, 1859.

726. And SAMUEL NEWINGTON, of Ridgway Ticehurst, in the county of Sussex, M.D., has given the like notice in respect of the invention of "Improvements in apparatus for distributing seeds and manure."

728. And WILLIAM PICKFORD WILKINS, of Ipswich, in the county of Suffolk, Engineer, has given the like notice in respect of the invention of "Improvements in the arrangements of valves, and in their application to steam engines."

As set forth in their respective petitions, both recorded in the said office on the 22nd day of March, 1859.

735. And SAMUEL ORAM, of No. 137, Fleet Street, in the city of London, has given the like notice in respect of the invention of "Improvements in pipes or tubes for generating and superheating steam."

736. And WILLIAM ADAMSON, of the Patent Slip Wellington Quay, Newcastle-on-Tyne, has given the like notice in respect of the invention of "Improvements in apparatus for propelling vessels."

738. And WILLIAM MIDDLESHIP, of Grove Terrace, South Grove, Mile End, in the county of Middlesex, Officer of Her Majesty's Customs, has given the like notice in respect of the invention of "Improvements in propelling vessels."

746. And FREDERIC TILLETT, of Banner Street, in the parish of St. Lukes, in the county of Middlesex, Splint Cutter, has given the like notice in respect of the invention of "Improvements in machinery for cutting splints for matches."

As set forth in their respective petitions, all recorded in the said office on the 23rd day of March, 1859.

748. And WILLIAM EDWARD WILEY, of 34, Great Hampton Street, Birmingham, in the county of Warwick, Gold Pen and Pencil Case Manufacturer, has given the like notice in respect of the invention of "Improvements in the manufacture of boxes or cases used for holding needles, pens, matches, pencils, and for other like purposes."

750. And FREDERICK EDWARD SHARP, of 3, Gloucester Terrace, Blackheath, in the county of Kent, has given the like notice in respect of the invention of "Improvements in machinery for corking bottles."

As set forth in their respective petitions, both recorded in the said office on the 24th day of March, 1859.

762. And WILLIAM REDGRAVE, of Tavistock Street, in the county of Middlesex, Tailor, has given the like notice in respect of the invention of "An improved pillow travelling cap."

763. And ELIZABETH STEANE, of Manor Rise, Brixton, in the county of Surrey, Widow, has given the like notice in respect of the invention of "An improved means or apparatus for preventing candles dropping or guttering."

As set forth in their respective petitions, both recorded in the said office on the 26th day of March, 1859.

772. And CHARLES JAMES RICHARDSON, of No. 34, Kensington Square, and of No. 9A, King Street, Whitehall, both in the county of Middle-

sex, Architect, has given the like notice in respect of the invention of "Improvements in apparatus to be applied to chimnies or flues of buildings for preventing downdraught or return smoke, for their insuring upward ventilation, and for reducing the quantity of smoke or the blacks from the smoke passing into the atmosphere."

774. And James Buckingham, of Westmorland House, Walworth Common, in the county of Surrey, Civil Engineer, has given the like notice in respect of the invention of "Improvements in machinery or apparatus employed in drawing fibrous substances."

As set forth in their respective petitions, both recorded in the said office on the 28th day of March, 1859.

---

785. And Richard Searle, of Woodford Wells, in the county of Essex, Gentleman, has given the like notice in respect of the invention of "Improvements in apparatus used for transmitting signals by electricity for telegraphic purposes, and in the construction of telegraphic cables."

786. And Isaac Spight, of Glanford Briggs, in the county of Lincoln, Ironfounder and Agricultural Machine Maker, have given the like notice in respect of the invention of "Improvements in horse hoes."

787. And Thomas Taylor, of Vere Street, in the county of Middlesex, Chemist, has given the like notice in respect of the invention of "Improved means of giving increased strength to paper."

788. And Henry Potter Burt, of Charlotte Row, Mansion House, in the city of London, has given the like notice in respect of the invention of "Improvements in apparatus for preparing and preserving timber."

As set forth in their respective petitions, all recorded in the said office on the 29th day of March, 1859.

---

795. And Thomas Downs Shipman, of Toronto, Canada West, North America, has given the like notice in respect of the invention of "Improvements in apparatus for stamping and printing."—Partly a communication when abroad from Mr. Kendell, of Canada aforesaid.

798. And Cowper Phipps Coles, of Southsea, in the county of Hants, Captain R.N., has given the like notice in respect of the invention of "An apparatus for defending guns and gunners in ships of war, gun boats, and land batteries."

As set forth in their respective petitions, both recorded in the said office on the 30th day of March, 1859.

---

805. And Thomas Ivory, of Edinburgh, Advocate, has given the like notice in respect of the invention of "Improvements in rotary engines."

806. And Thomas Ivory, of Edinburgh, Advocate, has given the like notice in respect of the invention of "Improvements in steam boilers and furnaces for the same."

807. And Alexander Morton, of Morton Place, Kilmarnock, has given the like notice in respect of the invention of "Improvements in sextants or quadrants for nautical purposes, and which are also adapted to the measuring of altitudes or angular distances."

As set forth in their respective petitions, all recorded in the said office on the 31st day of March, 1859.

813. And Daniel Kinnear Clark, of 11, Adam Street, Adelphi, in the county of Middlesex, Civil Engineer, has given the like notice in respect of the invention of "Feed water heating apparatus."

814. And Frederic Philippe Auguste Aubertin, of Paris, in the empire of France, at present residing at No. 32, Gerard Street, Islington, in the county of Middlesex, has given the like notice in respect of the invention of "An improved preparation of food for herbivorous animals."

As set forth in their respective petitions, both recorded in the said office on the 1st day of April, 1859.

---

824. And Abraham Ripley, of 21, Bridge Street Blackfriars, London, county of Middlesex, Engineer, and John Roberts, of Nelson Square, Bermondsey, county of Surrey, Engineer, have given the like notice in respect of the invention of "Improvements in machinery for striking or scraping leather, and tanned or untanned hides."

As set forth in their petition, recorded in the said office on the 2nd day of April, 1859.

---

861. And Jean Auguste Hilarion Ballande, of Paris, in the empire of France, Gentleman, has given the like notice in respect of the invention of "An improvement in the preparation of writing paper, and ink to be used thereon."

As set forth in his petition, recorded in the said office on the 6th day of April, 1859.

---

883. And William Henderson, of Alderley Edge, in the county of Chester, Chemist, has given the like notice in respect of the invention of "Improvements in treating certain ores, and in obtaining products therefrom."

As set forth in his petition, recorded in the said office on the 8th day of April, 1859.

---

942. And William Sinnock, of Brompton, in the county of Kent, Ropery Engineer, has given the like notice in respect of the invention of "Improvements in submarine and subterranean electric telegraph cables, and in machinery for the manufacture thereof."

As set forth in his petition, recorded in the said office on the 14th day of April, 1859.

---

956. And William Clark, of 53, Chancery Lane, in the county of Middlesex, Engineer and Patent Agent, has given the like notice in respect of the invention of "Improvements in apparatus for separating metals from their ores, and other matters."—A communication from abroad by Henri François Toussaint, Chemist, and Louis Napoleon Langlois, Civil Engineer, both of Paris.

As set forth in his petition, recorded in the said office on the 16th day of April, 1859.

1099. And William Gossage, of Widnes, in the county of Lancaster, Chemist, has given the like notice in respect of the invention of "Improvements in the manufacture and useful application of certain alkaline silicates, and in the production of liquor silicis or liquid flint."

1101. And William Gossage, of Widnes, in the county of Lancaster, Chemist, has given the like notice in respect of the invention of "Improve-

ments in the manufacture of caustic soda and carbonate of soda from certain alkaline liquors and salts."

As set forth in his respective petitions, both recorded in the said office on the 2nd day of May, 1859.

1329. And WILLIAM GOSSAGE, of Widnes, in the county of Lancaster, Chemist, has given the like notice in respect of the invention of "Improvements in the manufacture of iron and steel."

As set forth in his petition, recorded in the said office on the 30th day of May, 1859.

1512. And GEORGE CHARLES GRIMES, of Wandsworth, in the county of Surrey, has given the like notice in respect of the invention of "Improvements in cigar or such like lights, and in the means of producing them."

As set forth in his petition, recorded in the said office on the 23rd day of June, 1859.

1527. And WILLIAM EDWARD NEWTON, of the Office for Patents, 66, Chancery Lane, in the county of Middlesex, Civil Engineer, has given the like notice in respect of the invention of "Apparatus for exhibiting stereoscopic pictures." — A communication from abroad by J. Stuart Perry, of Newport, in the state of New York, United States of America.

As set forth in his petition, recorded in the said office on the 25th day of June, 1859.

1592. And ALFRED VINCENT NEWTON, of the Office for Patents, 66, Chancery Lane, in the county of Middlesex, Mechanical Draughtsman, has given the like notice in respect of the invention of "An improvement in the process of an improved apparatus for separating metals from their ores."—A communication from abroad by Lewis Solomon, of New York, in the United States of America.

As set forth in his petition, recorded in the said office on the 4th day of July, 1859.

1597. And WILLIAM EDWARD NEWTON, of the Office for Patents, 66, Chancery Lane, in the county of Middlesex, Civil Engineer, has given the like notice in respect of the invention of "Improved apparatus for moving iron or other metals while the same is in process of manufacture at the rolls."—A communication from abroad by Charles Hewitt, of the city of Trenton, in the state of New Jersey, one of the United States of America.

As set forth in his petition, recorded in the said office on the 5th day of July, 1859.

1640. And WILLIAM MACKEAN, of Paisley, in the county of Renfrew, Scotland, Starch Manufacturer, has given the like notice in respect of the invention of "Improvements in the manufacture or treatment of farinaceous matters for the obtainment of starch and food."

As set forth in his petition, recorded in the said office on the 9th day of July, 1859.

1647. And WILLIAM EDWARD NEWTON, of the Office of Patents, 66, Chancery Lane, in the county of Middlesex, Civil Engineer, has given the like notice in respect of the invention of "Improvements in magneto-electric machines." — A communication from abroad, by George W. Beardslee, of Flushing, state of New York, in the United States of America.

As set forth in his petition, recorded in the said office on the 11th day of July, 1859.

1687. And WILLIAM MORRIS SMITH, of Northampton, Gentleman, has given the like notice in respect of the invention of "The construction of fare-boxes for the prevention of fraud on the part of drivers, conductors, &c."— A communication from abroad by J. B. Slawson, of New Orleans, in the state of Louisiana, in the United States of America.

As set forth in his petition, recorded in the said office on the 16th day of July, 1859.

And notice is hereby further given, that all persons having an interest in opposing any one of such applications are at liberty to leave particulars in writing of their objections to such application, at the said Office of the Commissioners, within twenty-one days next after the date of the Gazette [and of the Journal] in which this notice is issued.

Patents Sealed.

LIST of LETTERS PATENT which passed the Great Seal on the

2nd August, 1859.

309. WILLIAM CLAYTON and JACOB GOODFELLOW, both of Blackburn, in the county of Lancaster, Engineers, for an invention of "Certain improvements in metallic pistons."—Dated 3rd February, 1859.

311. JOHN PETRIE, junior, of Rochdale, in the county of Lancaster, Machinist, and THOMAS WRIGLEY, of Heap Bridge, in the said county, Paper Manufacturer, for an invention of "Improvements in machinery or apparatus for washing rags and other materials for the manufacture of paper."—Dated 3rd February, 1859.

317. ALEXANDER ALLAN, of Perth, in the county of Perth, North Britain, Engineer, for an invention of "Improvements in locomotive steam engines, in part applicable for retarding and stopping railway trains."—Dated 4th February, 1859.

320. RICHARD ARCHIBALD BROOMAN, of 166, Fleet Street, in the city of London, E. C., Editor of the Mechanics' Magazine and Patent Agent, for an invention of "An improvement in cooling worts and beer."—A communication from Madame Jolibois, residing at Dijon, France.—Dated 4th February, 1859.

322. GEORGE HENRY BAYLIS, of 13, Vauxhall Walk, Lambeth, in the county of Surrey, and FRANCIS ROBINSON, of 88, Salisbury Street, Lisson Grove, in the county of Middlesex, for an invention of "An improved indicator for registering the withdrawal of liquids from vessels."—Dated 4th February, 1859.

323. FREDERICK HERBERT MABERLY, of Stowmarket, in the county of Suffolk, Master of Arts, for an invention of "Improvements in obtaining spring power, and in its application to various purposes."—Dated 4th February, 1859.

332. Nathaniel Greenhalgh, of Bolton, in the county of Lancaster, Cotton Spinner, and William Shaw, of the same place, Cotton Spinner, and James Mallison junior, of the same place, Yarn Agent, for an invention of "Certain improvements in the treatment and preparation of yarns or threads previously to dyeing."—Dated 5th February, 1859.

335. Thomas Sykes, of Cleckheaton, in the county of York, Manufacturing Chemist, and Benjamin Clifford Sykes, of the same place, M.D., for an invention of "Improvements in obtaining or separating oily, fatty, greasy, tarry, waxy, and resinous substances from oleaginous seeds, nuts, and fruits, wool, silk, hair, cotton, flax, line, hemp, furs, skins, leather, bones, fish, and other animal matters and refuse, woollen and cotton waste and refuse, also textile fabrics and refuse grease produced in various branches of industry, indigo, lac, lac dye, and other dyes."—Dated 5th February, 1859.

347. John Wilson, of 55, John Street, Sunderland, for an invention of "Improvements in venlating mines, and in combining apparatus used for such purpose."—Dated 7th February, 1859.

393. Gaylard Hadwen, of Audenshaw, in the county of Lancaster, and John Wadsworth, of Droylsden, in the said county, for an invention of "Improvements in jacquard apparatus applicable to power looms."—Dated 12th February, 1859.

398. Samuel Hazard Huntly, of Upper Baker Street, in the county of Middlesex, for an invention of "Improvements in cooking apparatus."—Dated 12th February, 1859.

418. Robert Mushet, of Coleford, in the county of Gloucester, Metallurgist, for an invention of "Improvements in the manufacture of steel, iron, and cast steel."—Dated 15th February, 1859.

443. Henry Young Darracott Scott, of Brompton Barracks, Chatham, in the county of Kent, Captain in the Royal Engineers, for an invention of "An improvement in the manufacture of cement."—Dated 17th February, 1859.

445. Pierre Edouard Fraissinet, of Paris, in the empire of France, Civil Engineer, for an invention of "A new or improved structure of iron applicable for paving, flooring, bridges, gratings, girders, and other like purposes."—Dated 17th February, 1859.

449. John Henry Johnson, of 47, Lincoln's Inn Fields, in the county of Middlesex, and of 166, Buchanan Street, in the city of Glasgow, North Britain, Gentleman, for an invention of "Improvements in apparatus for propelling and steering vessels and other floating craft."—A communication from John Eaton, residing at Belleville, in the province of Upper Canada, Engineer.—Dated 17th February, 1859.

458. Pierre Antoine Joseph Dujardin, of the town of Lille, France, Physician, for an invention of "Improvements in the printing apparatus of railway telegraphs."—Dated 19th February, 1859.

596. Pierre Ernest Aimont, of Paris, in the French empire, Civil Engineer, for an invention of "Improvements in the construction of waggons and other carriages for railways and ordinary roads, and of apparatuses connected therewith."—Dated 7th March, 1859.

1143. William Skakspere Booth, of Birmingham, in the county of Warwick, Undertaker, for an invention of "A new or improved washing machine."—Dated 6th May, 1859.

1431. William Brown the younger, of the town and county of Selkirk, North Britain, Manufacturer, and Simeon Bathgate, of the same place, Engineer, for an invention of "Improvements in machinery or apparatus for carding and treating or preparing fibrous materials."—Dated 14th June, 1859.

Patents on which the Stamp Duty of £50 has been Paid.

(*To 30th July, 1859, inclusive.*)

28th July.

1809. William Edward Newton, of the Office for Patents, 66, Chancery Lane, in the county of Middlesex, Civil Engineer, for an invention of "A new musical instrument to be played by the agency of steam or highly compressed air."—A communication.—Dated 31st July, 1856.

2060. William Moberly, of Ravenhead, near St. Helen's, in the county of Lancaster, Gentleman, for an invention of "Improvements in the grinding and polishing of curved and rounded surfaces."—A communication.—Dated 4th September, 1856.

30th July.

1823. Eugène Perré Chevalier, of Brussels, in the kingdom of Belgium, at present residing in Paris, Gentleman, for an invention of "Improvements in the manufacture of cigars."—Dated 1st August, 1856.

2121. John Blythe Robinson, of Beverley, in the county of York, Gentleman, for an invention of "Improvements in machinery for effecting agricultural operations.—A communication.—Dated 11th September, 1856.

DELIVERY OF LETTERS.—For the Great Seal Patent Office the initials are W. C., the District being the Western Central. In the direction of a Letter, these initials should be legibly written in a separate line, and should in all cases end the address, thus:—

The Commissioners of Patents,
Great Seal Patent Office,
25, Southampton Buildings,
London,
W.C.

List of Specifications published during th week ending 30th July, 1859.

No.	Price.	Subject-Matter.
		(*Disclaimer*, &c., 1856.)
2129*	3*d.*	Sewing machines.
		1859.
2935	3*d.*	Manufacture of steel.
2937	8*d.*	Applying electricity to motive power and telegraphic purposes.
2939	1*s.* 5*d.*	Raising, lowering, and moving heavy weights.
2940	3*d.*	Filtration of sugar, &c.
2942	6*d.*	Dyeing wool and other fibres.
2945	3*d.*	Preparing and finishing textile fabrics.
2950	6*d.*	Permanent way of railways.
2952	10*d.*	Employment of gas for generating steam, &c.
2953	3*d.*	Composition for the protection of metallic surfaces.
2954	10*d.*	Cooking apparatus.
2955	1*s.*	Stoves, fireplaces, steam boilers, and other furnaces.
2956	5*d.*	Metallic pistons.
2957	9*d.*	Substitute for ratchet and other taking-up motions.
2958	10*d.*	Distilling fatty bodies.
2959	4*d.*	Solidifying waste horn, &c.
2960	1*s.*	Self-gas generating lamp.
2961	8*d.*	Box or case for preserving photographic paper.
2962	1*s.* 5*d.*	Steam engines, boilers, and furnaces.
2963	6*d.*	Axles for carriages.
2964	3*s.* 10*d.*	Steam ploughs,
2965	7*d.*	Boots and shoes.
2966	7*d.*	Pistons.
2967	3*d.*	Glass bottles.
2968	3*d.*	Travelling bags.
2969	4*d.*	Drying textile fabrics and materials.
2970	3*d.*	Railway carriages and brakes.
2971	11*d.*	Manufacture of boots and shoes.
2972	6*d.*	Top clearers of machines for spinning.
2973	3*d.*	Advertizing by day or night.
2974	3*d.*	Sewing machines.
2975	8*d.*	Apparatus for indicating the pressure of steam in boilers, regulating the temperature of building ships, &c.
2976	3*d.*	Fixing colouring matters on woven or felted fabrics.
2977	4*d.*	Manure.
2978	6*d.*	Manufacture of india rubber goods.
2979	3*d.*	Apparatus for stretching fabrics.
2980	10*d.*	Machinery for reaping and mowing.
2981	3*d.*	Roughing the shoes of horses, &c.
2982	3*d.*	Anchors.
2983	3*d.*	Treatment of hydro-carbons.
2984	1*s.* 7*d.*	Apparatus for obtaining and applying electricity.
2985	*d.*	Breakwaters.
2986	3*d.*	Railway chairs, rails, &c.
2987	3*d.*	Purification of gas.
2988	3*d.*	Stoppering or closing bottles, jars, &c.
2989	10*d.*	Washing and drying machinery.
2990	6*d.*	Revolving fire arms.
2993	3*d.*	Pipes for smoking.

*** Specifications will be forwarded by post on receipt of the amount of price and postage. Sums exceeding 5*s.* must be remitted by Post Office Order, made payable at the Post Office, High Holborn, to Mr. Bennet Woodcroft, Great Seal Patent Office.

SUPPLEMENT to the SERIES of LETTERS PATENT and SPECIFICATIONS of LETTERS PATENT for INVENTIONS recorded in the Great Seal Patent Office, and granted between the 1st March (14 Jac. I.) A.D. 1617, and the 1st October (16 Vict.) A.D. 1852; consisting for the most part of Reprints of scarce Pamphlets, descriptive of the early patented Inventions comprised in that Series. Edited by Bennet Woodcroft, Superintendent of Specifications, etc. In one vol., price 9*s.* 6*d.*, or each Tract separately at the price affixed.

CONTENTS OF VOL. I.

1. Metallica; or, the treatise of Metallica, briefly comprehending the doctrine of diverse new metallical inventions, &c. By Simon Sturtevant. (*Letters Patent, dated 29th February*, 1611.) Price 1*s.* 4*d.*
2. A Treatise of Metallica, but not that which was published by Mr. Simon Sturtevant, upon his Patent, &c. By John Rovinson (*Letters Patent, granted A.D.* 1612.) Price 4*d.*
3. A Commission directed to Sir Richard Wynne and others to inquire upon oath whether Nicholas Page or Sir Nicholas Halse was the first inventor of certaine kilnes for the drying of malt, &c. &c. (*Letters Patent, Nos.* 33 *and* 85, *respectively dated* 8*th April*, 1626, *and* 23*rd July*, 1635.) Price 2*d.*
4. Dud Dudley's Metallum Martis; or iron made with pit-coale, sea-coale, &c. (*Letters Patent, Nos.* 18 *and* 117, *respectively dated* 22*nd February*, 1620, *and* 2*nd May*, 1638.) Price 8*d.*
5. Description of the nature and working of the patent Water-scoop Wheels invented by William Wheler, as compared with the raising wheels now in common use. By J. W. B. Translated from the Dutch by Dr. Tolhausen (*Letters Patent, No.* 127, *dated* 24*th June*, 1642.) Price 2*s*
6. An exact and true definition of the stupendous Water-commanding Engine, invented by the Right Honourable (and deservedly to be praised and admired) Edward Somerset. Lord Marquis of Worcester, &c. &c. (*Stat.* 15 *Car. II. c.* 12. *A.D.* 1663.) Price 4*d.*
7. Navigation Improved; or the art of rowing ships of all rates in calms, with a more easy, swift, and steady motion than oars can. By Thomas Savery. (*Letters Patent, No.* 347, *dated* 10*th January*, 1696.) Price 1*s.*
8. The Miner's Friend; or an engine to raise water by fire described, &c. By Thomas Savery. (*Letters Patent, No.* 356, *dated* 25*th July*, 1698, *and Stat.* 10 *&* 11 *Will. III. c.* 31, *A.D.* 1699.) Price 1*s.*
9. Specimina Ichnographica; or a brief narrative of several new inventions and experiments, particularly the navigating a ship in a calm, &c. By John Allen, M.D. (*Letters Patent, No.* 513, *dated* 7*th August*, 1729.) Price 8*d.*
10. A description and draught of a new-invented Machine for carrying vessels or ships out of or into any harbour, port, or river, against wind and tide, or in a calm, &c. By Jonathan Hulls. (*Letters Patent, No.* 556, *dated* 21*st December*, 1736.) Price 8*d.*
11. An historical account of a new method for extracting the foul air out of ships, &c., with the description and draught of the machines by which it is performed, &c. By Samuel Sutton, the Inventor. To which are annexed two relations given thereof to the Royal Society by Dr. Mead and Mr. Watson, (*Letters Patent, No.* 602, *dated* 16*th March*, 1744.) Price 1*s.*

COLONIAL PATENTS.—Information as to the Mode of obtaining Protection for Inventions in the Colonies; contained in Communications from the Governors, &c. of the different British Colonies in answer to the Application of Mr. W. J. Curtis for a Patent. Price 1*s.*

PATENT RIGHTS in the COLONIES.—Abstract of Replies to the Secretary of State's Circular Despatch of July 11, 1856, calling for Information as to the Form of the Application to be made by Persons desirous of obtaining Patent Rights in the Colonies, and the Expenses attendant on the Grant of such Patent Rights. Price 2*s.* 6*d.*

A FREE LIBRARY and READING ROOM, in connection with the Office of the Commissioners of Patents, is open to the Public daily from 10 till 4 o'clock.

In addition to the Printed Specifications, Indexes, and other publications of the Commissioners, the Library includes a Collection of the leading British and Foreign Scientific Journals, and text-books in the various departments of science and art. A printed Catalogue of the Library is on sale.

NOTE.—The Commissioners' publications may be consulted daily in the Library of the British Museum; in the Library of the Society of Arts; and in the Free Libraries of the following Towns and Cities:—

Aberdeen (*Public Library Town House*).
Accrington (*Mechanics' Institution, Bank Street*).
Belfast (*Harbour Office, Corporation Square*).
Beverley (*Guildhall*).
Birmingham (*Birmingham and Midland Institute, Cannon Street*).
Bolton-le-Moors (*Public Library, Exchange Buildings*).
Bradford, Yorkshire (*Borough Accountant's Office, Corporation Buildings, Swain Street*).
Brighton (*Town Hall*).
Bristol (*City Library, King Street*).
Burnley (*Office of the Burnley Improvement Commissioners*).
Cambridge (*Free Library, Jesus Lane*).
Canterbury (*Municipal Museum, Guildhall Street*).
Carlisle (*Free Library, Police Office*).
Chester (*Town Hall, Northgate Street*).
Cork (*Royal Cork Institution, Nelson Place*).
Crewe (*Railway Station*).
Darlington (*Mechanics' Institute, Skinnergate*).
Dorchester.
Drogheda.
Dublin (*Royal Dublin Society, Kildare Street*).
Dundalk.
Falmouth (*Public Library, Church Street*).
Gateshead (*Mechanics' Institute*).
Gorton (*Railway Station*).
Glasgow (*Stirling's Library, Miller Street*).
Grimsby, Great (*Mechanics' Institution, Victoria Street*).
Hanley, Staffordshire Potteries (*Town Hall*).
Hartlepool, West (*Literary and Mechanics' Institution, Church Street*).
Hertford (*Public Library, Town Hall*).
Huddersfield (*Commissioners' Offices, No. 1, South Parade*).
Hull (*Mechanics' Institute, George Street*).
Ipswich (*Museum Library, Museum Street*).
Keighley (*Mechanics' Institute, North Street*).
Kidderminster (*Public Free Library, Public Buildings, Vicar Street*).
Kings' Lynn, Norfolk (*Stanley Library, Athenæum*).
Lancaster (*Mechanics' Institute, Market Street*).
Leamington Priors (*Public Library, Town Hall*).
Leeds (*Town Clerk's Office, Town Hall*).
Leicester (*Corporation Library, Town Hall*).
Limerick.
Liverpool (*Free Public Library, Duke Street*).
——— (*Royal Institution*).
London (*British Museum*).
——— (*Society of Arts, John Street, Adelphi*).
Macclesfield (*Useful Knowledge Society*).
Maidstone.
Manchester (*Chetham Hospital*).
——— (*Free Library, Camp Field*).
Montrose.
Newark, Nottingham (*Mechanics' Institute, Middle Gate*).
Newcastle-upon-Tyne (*Literary and Philosophical Society*).
Newport, Monmouth (*Commercial Room, Town Hall*)
Northampton.
Norwich (*Free Library, St. John's, Maddermarket*).
Nottingham (*Corporation Rooms, St. Peter's Church side*).
Oxford (*Public Free Library, Town Hall*).
Paisley (*Government School of Designs, Gilmour Street*).
Plymouth (*Mechanics' Institute, Princess Square*).
Preston (*Dr. Shepherd's Library, the Institution, Avenham*).
Reading (*Literary, Scientific and Mechanics' Institution, London Street*).
Rochdale (*Commissioners Room, Smith Street*).
Rotherham (*Board of Health Offices, Howard Street*).
Salford (*Peel Park*).
Sheffield (*Free Library, Surrey Street*).
Shrewsbury (*The Public Museum, College Street*).
Southampton (*Corporation Library, Audit House*).
Stirling (*Burgh Library, Town House, Broad Street*).
Stockport (*Court House, Vernon Street, Warren Street*).
Sunderland (*Corporation Museum, Athenæum, Fawcett Street*).
Tiverton.
Wakefield (*Mechanics' Institution, Barston Square*).
Warrington (*The Museum and Library*).
Waterford (*Town Hall, The Mall*).
Wednesbury (*Board of Health Offices*).
Wexford (*Mechanics' Institute, Crescent Quay*).
Wigan.
Wolverhampton (*School of Practical Art, Darlington Street*).
Wolverton (*Railway Station*).
Yarmouth, Norfolk (*Public Library, South Quay*).
York (*Lower Council Chamber, Guildhall*).

The Commissioners' publications have also been presented to the following Public Offices, Seats of Learning, British Colonies, and Foreign States:—

Public Offices, Institutions, &c.

Admiralty, Department of the Surveyor of the Navy.
——— Steam Branch.
——— Deptford Dockyard.
——— Woolwich ditto.
——— Chatham ditto.
——— Sheerness ditto.
——— Portsmouth ditto.
——— Devonport ditto.
——— Pembroke ditto.
Artillery Institute, Woolwich.
Board of Trade, Whitehall.
Ordnance Office, Pall Mall.
——— Small Arms Factory, Enfield.
War Office, Pall Mall.
Government School of Mines, &c., Jermyn St., Piccadilly.
Dublin Castle, Dublin.
Rolls Office, Chancery (Four Courts), Dublin.
Office of Chancery, Edinburgh.
East India House, Military Stores, Leadenhall Street.
Incorporated Law Society Chancery Lane, London.

Seats of Learning.

Cambridge University.
Trinity College, Dublin.
Queen's College, Galway.
University College, London.

British Colonies.

Malta.
Cape of Good Hope.
Mauritius.
India—Bengal.
North-West Provinces.
Madras.
Bombay.
Ceylon.
Victoria—Patent Office, Melbourne.
Parliamentary Library, Melbourne.
New South Wales.
South Australia.
Tasmania.
New Zealand.
Newfoundland.
Canada—Quebec.
Toronto.
New Brunswick.
Prince Edward Island.
Antigua.
Barbados.
Jamaica.
Trinidad.
British Guiana.

Foreign States.

Austria—Handels Ministerium, Vienna.
Bavaria—Königliche Bibliothek, Munich.
Belgium—Ministère de l'Intérieur, Brussels.
France—Bibliothèque Impériale, Conservatoire des Arts et Métiers, Hôtel de Ville. } Paris.
Gotha—Ducal Friedenstein Collection.
Hanover—Ministerium des Innern, Hanover.
Netherlands—Ministère de l'Intérieur, The Hague.
Prussia—Handels Ministerium, Berlin.
Russia—Bibliothèque Impériale, St. Petersburg.
Sardinia—Ufficio delle Privative, Turin
Saxony—Polytechnische Schule, Dresden.
Sweden—Stockholm.
United States—The Patent Office, Washington.
The Astor Library, New York.
The State Library, Albany.
The Franklin Institute, Philadelphia.
The Free Library, Boston.
The Philadelphia Library Company.
Wurtemberg—Bibliothek des Musterlagers, Stuttgart.

PATENT LAW AMENDMENT ACT, 1852.—All Specifications, Indexes, &c., printed by order of the Commissioners of Patents, are sold at the Great Seal Patent Office, 25, Southampton Buildings, Holborn.

THE PATENT LAW AMENDMENT ACTS (15 & 16 Vict., cap. 83; 16 Vict., cap. 5; and 16 & 17 Vict., cap. 115); with the Rules and Regulations made by the Commissioners of Patents for Inventions, and by the Lord Chancellor and the Master of the Rolls, under the Acts 15 and 16 Vict., c. 83, and 16 & 17 Vict., c. 115, accompanied by Specimen Forms of the Provisional Documents printed on sheets of the prescribed size. Price 6*d*.

THE CHRONOLOGICAL INDEX of PATENTS of INVENTION, from March 2, 1617 14 James I.), to September 30, 1852 (16 Vict.), 2 vols. Price 30*s.*

THE ALPHABETICAL INDEX of PATENTEES of Inventions for the above period. Price 20*s.*

THE SUBJECT-MATTER INDEX of PATENTS for the same period — *Second Edition*—to which is prefixed a Key of Terms and Phrases. 2 vols. Price 2*l.* 16*s.*

A Key to the *First Edition* of the above work is also published separately, and may be had on application.

THE CHRONOLOGICAL INDEXES of APPLICATIONS for PATENTS and PATENTS GRANTED from the 1st October to the 31st December, 1852, and from the 1st January to the 31st December, 1853, in one volume. Price 11*s.*

THE ALPHABETICAL INDEXES for the above periods, in one volume. Price 13*s.*

THE SUBJECT-MATTER INDEX, from 1st October to 31st December, 1852. Price 9*s.*

THE SUBJECT-MATTER INDEX, from 1st January to 31st December, 1853. Price 16*s.*

THE CHRONOLOGICAL INDEX of APPLICATIONS for PATENTS and PATENTS GRANTED from the 1st January to the 31st December, 1854. Price 6*s.*

THE ALPHABETICAL INDEX for the above period. Price 7*s.*

THE SUBJECT-MATTER INDEX for the above period. Price 16*s.* 6*d.*

THE CHRONOLOGICAL INDEX of APPLICATIONS for PATENTS and PATENTS GRANTED from the 1st January to the 31st December, 1855. Price 6*s.* 6*d.*

THE ALPHABETICAL INDEX for the above period. Price 7*s.* 6*d.*

THE SUBJECT-MATTER INDEX for the above period. Price 17*s.*

THE CHRONOLOGICAL INDEX of APPLICATIONS for PATENTS and PATENTS GRANTED from the 1st January to the 31st December, 1856. Price 6*s.* 6*d.*

THE ALPHABETICAL INDEX for the above period. Price 8*s.*

THE SUBJECT-MATTER INDEX for the above period. Price 18*s.* 6*d.*

THE ALPHABETICAL INDEX of APPLICATIONS for PATENTS and PATENTS GRANTED from the 1st January to the 31st December, 1857. Price 8*s.*

THE CHRONOLOGICAL INDEX for the above period. Price 6*s.* 6*d.*

THE SUBJECT-MATTER INDEX for the above period. Price 19*s.* 6*d.*

THE ALPHABETICAL INDEX of APPLICATIONS for PATENTS and PATENTS GRANTED, from the 1st January to the 31st December, 1858. Price 8*s.*

THE REFERENCE INDEX of PATENTS pointing out the Office in which each enrolled Specification of a Patent may be consulted; the Books in which Specifications, Law Proceedings, and other subjects connected with Inventions have been noticed; also such of the Specifications of Patents granted under the Act of 21 James I. as have been published by the authority of the Commissioners. Price 30*s.*

AN APPENDIX to the REFERENCE INDEX of PATENTS of INVENTION, containing Abstracts from such of the early Patents and Signet Bills as describe the nature of the invention, and which Patents have no enrolled Specifications. Price 4*s.*

AN INDEX to ALL INVENTIONS PATENTED in ENGLAND from 1617 to 1854 inclusive, arranged under the greatest number of heads, with parallel references to INVENTIONS and DISCOVERIES described in the scientific works of VARIOUS NATIONS, as classified by Professor Schubarth. By B. WOODCROFT.

The foreign works thus indexed form a portion of the Library of the Commissioners of Patents, where they may be consulted, or manuscript translations be had.

SOMMAIRE de toutes les INVENTIONS BREVETÉES en ANGLETERRE depuis 1617 jusqu'en 1854 inclusivement, arrangées d'après le plus grand nombre de rubriques, avec renvois aux INVENTIONS et DÉCOUVERTES décrites dans les ouvrages scientifiques de DIFFÉRENTES NATIONS, classés par le Professeur Schubarth. Par B. Woodcroft.

Les ouvrages étrangers ci-dessus font partie de la Bibliothèque de la Commission des Patentes, où l'on peut les consulter, et obtenir des traductions en manuscrit.

VERZEICHNISS aller in ENGLAND von 1617—1854 incl. PATENTIRTEN ERFINDUNGEN, unter vielfältige Titel gebracht, mit Hinweisungen auf ERFINDUNGEN und ENTDECKUNGEN die nach Prof. Schubarth's Klassificirung in den wissenschaftlichen Werken VERSCHIEDENER NATIONEN beschrieben sind. Von B. Woodcroft.

Die hier aufgeführten fremden Werke machen einen Theil der Bibliothek der Patent Commission aus, allwo sie nachgeschlagen oder schriftliche Uebersetzungen besorgt werden können.

REPERTORIO di tutte le INVENZIONI munite di LETTERE PATENTI in INGHILTERRA dal 1617—1854 inclusivo, poste in ordine sotto il piu gran numero di capi, con riferenze alle INVENZIONI e SCOPERTI descritti nelle opere scientifiche di DIVERSE NAZIONI, classate dal Professore Schubarth. Dal Sig. B. Woodcroft.

Le opere straniere quì indicate possono esser consultate nella Biblioteca dei Commissari delle Patenti, e traduzioni in manuscritto vi possono ottenersi.

B. WOODCROFT,
Superintendent of Specifications, &c.

Museum of Patents, South Kensington.

NUMBER of VISITORS for the Week ending 30th July, 1859.

Mornings - - - -	1165
Evenings - - - -	1142
Total - - -	2307

Since the opening of the Museum Free Daily (May 12, 1858,)—122,059.

THIS Museum is open to the public daily, free of charge. The hours of admission are from 10 A.M. to 6 P.M., and in the evenings of Monday, Tuesday, and Wednesday from 7 to 10 P.M.

All communications on the subject of the Museum to be addressed to the Superintendent,

B. WOODCROFT.

Great Seal Patent Office,
Southampton Buildings.

GALLERY OF PORTRAITS OF INVENTORS, DISCOVERERS, AND INTRODUCERS OF USEFUL ARTS.—This Collection, formed by Mr. Woodcroft, and first opened to public view in the Great Seal Patent Office in 1853, now constitutes a portion of the Patent Museum at South Kensington.

Presentations of original Portraits, Medallions, Busts, and Statues, in augmentation of the Collection, are hereby invited, and will on receipt be acknowledged in this Journal, and duly recorded in the next published Catalogue.

ALL FOREIGN and COLONIAL PATENT LAWS and RULES, being translations or copies of Official Communications, may be found in the following Numbers of this Journal, published at 2*d.* each, or 3*d.* free by post:—

Austria, No. 291.
Bavaria, No. 262.
Belgium, Nos. 292 and 348.
Baden, and Petty States of Germany, No. 325.
Canada, No. 279.
Cuba, No. 498.
Dutch West Indies, No. 322.
France, No. 228.
Greece, No. 325.
Germany, No. 435.
Hanover, No. 231.
India, Nos. 240, 348, and 552.
Mexico, No. 496.
Netherlands, No. 289.
New South Wales, No. 386
Prussia, Nos. 313 and 329.
Parma, Piacenza, and Guastalla, No. 321.
Portugal, No. 325.
Poland, No. 335.
Roman States, No. 319.
Russia, Nos. 334 and 508.
Sardinia, Nos. 233 and 235.
Saxony, No. 236.
Sicilies (the Two), No. 316.
Spain, No. 323.
Sweden, Nos. 327 and 354.
Victoria, Nos. 186 and 359.
Wurtemberg, No. 314.

In course of Publication, by Order of the Commissioners of Patents.

ABRIDGMENTS (in Classes, and Chronologically arranged) of all SPECIFICATIONS of PATENTED INVENTIONS, from the earliest enrolled to those published under the Act of 1852.

These books are of 12mo size, and as each is limited to inventions of one class only, they can be sold at prices sufficiently moderate to enable the humblest inventor to examine for himself whether his discovery has been previously patented or not.

At the foot of each abstract are given references to notices of the inventions in scientific and other works, and to the reports of law proceedings for infringements, &c. &c. &c.

The classes already published are,—

1. DRAIN TILES AND PIPES, price 6*d.*
2. SEWING AND EMBROIDERING, price 6*d.*
3. MANURE, price 6*d.*
4. PRESERVATION OF FOOD, price 6*d.*
5. MARINE PROPULSION, price 4*s.*
6. MANUFACTURE OF IRON AND STEEL, price 5*s.*
7. AIDS TO LOCOMOTION, price 1*s.*
8. STEAM CULTURE, price 2*s.*
9. WATCHES, CLOCKS, AND OTHER TIMEKEEPERS, price 1*s.* 6*d.*
10. FIRE-ARMS AND OTHER WEAPONS, AMMUNITION, AND ACCOUTREMENTS, price 6*s.* 6*d.*
11. PAPER.—PART I. MANUFACTURE OF PAPER, PASTEBOARD, AND PAPIER MÂCHÉ, price 3*s.*
12. PAPER.—PART II. CUTTING, FOLDING, AND ORNAMENTING; INCLUDING ENVELOPES, CARDS, PAPER-HANGINGS, &c., price 2*s.*
13. TYPOGRAPHIC, LITHOGRAPHIC, AND PLATE PRINTING, price 7*s.*
14. BLEACHING, DYEING, AND PRINTING YARNS AND FABRICS, price 9*s.* 6*d.*

The following are in the press:—

ELECTRICITY AND MAGNETISM: THEIR GENERATION AND APPLICATIONS.
PREPARATION OF FUEL, AND APPARATUS FOR ITS COMBUSTION.
MANUFACTURE AND APPLICATIONS OF INDIA RUBBER, GUTTA PERCHA, &c.; INCLUDING AIR, FIRE, AND WATER PROOFING.
PRODUCTION AND APPLICATIONS OF GAS.
STEAM ENGINES.

B. WOODCROFT.

The above, and all other works published by the Commissioners of Patents, are now on sale at the Great Seal Patent Office, 25, Southampton Buildings, Holborn.

This Journal is published on the evenings of Tuesday and Friday, and will be forwarded, post free, to Subscribers.—Terms, 30*s.* per annum.—Subscriptions received at the Great Seal Patent Office, where also single copies, at twopence each, may be obtained.

No. 583. FRIDAY, AUGUST 5, 1859. Price 2d.

Grants of Provisional Protection for Six Months.

NOTICE is hereby given that Provisional Protection has been allowed

1538. To GEORGE DAWES, of Milton Iron Works, in the parish of Hoyland, in the county of York, Ironmaster, and CHARLES JOHN CARR, of Hoyland aforesaid, Engineer, for the invention of "Certain improvements in atmospheric and vacuum hammers and stamps, part of which improvements is also applicable to steam and other engines."

On their petition, recorded in the Office of the Commissioners on the 28th day of June, 1859.

1560. To JOHN LAWSON, of Leeds, in the county of York, Engineer, and STEPHEN COTTON, of Leeds aforesaid, Draftsman, for the invention of "Certain improvements in machinery for roving, twisting, and spinning flax, cotton, wool, and other fibrous substances."

On their petition, recorded in the Office of the Com-Commissioners on the 30th day of June, 1859.

1602. To JOZÉ LUIS, of the British and Foreign Office for Patents, No. 1B, Welbeck Street, Cavendish Square, London, in the county of Middlesex, Patent Agent, for the invention of "An improved mode of manufacture of wheel tires for railway carriages and engines, by means of the therein described apparatus." — A communication from abroad, by Duplay Vidal, Lachaise, and Co., No. 10, Rue Mogador, Paris, in the empire of France.

On his petition, recorded in the Office of the Commissioners on the 6th day of July, 1859.

1623. To JOSEPH GIBBS, of Brentford, in the county of Middlesex, Civil Engineer, for the invention of "Improvements in the manufacture of brushes, brooms, coverings for floors, mats scrapers, and other scraping and rubbing surfaces."

On his petition, recorded in the Office of the Commissioners on the 8th day of July, 1859.

1652. To JOZÉ LUIS, of the British and Foreign Office for Patents, No. 1B, Welbeck Street, Cavendish Square, London, in the county of Middlesex, Patent Agent, for the invention of "Improvements in railway car seats and arm chairs."—A communication from abroad, by Bernard Joachim la Mothe, No. 10, Rue Mogador, Paris, in the empire of France.

1653. And to CAMILLE JOSEPH PROAL, of No. 4, South Street, Finsbury, London, Gentleman, for the invention of "The application of photographic impressions or pictures upon fabrics or tissues, for rendering such fabrics or tissues applicable to various useful purposes." — A communication from abroad, by Jules Bernard, of Paris, France.

On both their petitions, recorded in the Office of the Commissioners on the 12th day of July, 1859.

1698. To JOZÉ LUIS, at the British and Foreign Office for Patents, No. 1B, Welbeck Street, Cavendish Square, London, in the county of Middlesex, Patent Agent, for the invention of "A new system of eccentric socket adapted to axletrees."—A communication from abroad, by Jean Baptiste Gangand, No. 10, Rue Mogador, Paris, in the empire of France.

1702. And to JOHN CHARLEY RIDDEL, of Belfast, in the county of Antrim, Ireland, for the invention of "Improvements in stalls, loose boxes, and enclosures for horses, cows, pigs, or other animals."

On both their petitions, recorded in the Office of the Commissioners on the 19th day of July, 1859.

1704. To THOMAS CURTIS, and JONATHAN HAIGH, both of Leeds, in the county of York, Cloth

Finishers, for the invention of "Improvements in the finishing of cloths."

On their petition, recorded in the Office of the Commissioners on the 20th day of July, 1859.

1711. To JAMES TODD, the younger, of Castlemains, in the county of Haddington, North Britain, Farmer, for the invention of "Improvements in machinery or apparatus for dressing or cleansing and separating grains and seeds."

1712. To GEORGE WELCH, of Birmingham, in the county of Warwick, Manufacturer, for the invention of "An improvement or improvements in the manufacture of frames for mirrors, pictures, and other articles."

1713. To ISAAC ROBSON, of Dalton, near Huddersfield, in the county of York, Dyer, for the invention of "Improvements in means or apparatus for drying and cuttling cotton warps after being dyed or sized, or after any other process of wetting, and when quick drying is required."

1715. To MICHAEL HENRY, of 84, Fleet Street, in the city of London, Patent Agent, for the invention of "Improvements in apparatus or machinery for the manufacture of corks and bungs."—A communication from abroad by Paul Alexis Adolphe Dalverny, of 33, Boulevard Saint Martin, Paris, France, Merchant.

1716. To EDWARD JOHN SCOTT and SAMUEL FREDERICK SCOTT, of Glasgow, in the county of Lanark, North Britain, Manufacturers of Boots and Shoes, for the invention of "Improvements in the manufacture of boots and shoes."

1717. And to HENRY HEALEY, of Ashby Decoy Cottage, near Brigg, in the county of Lincoln, for the invention of "Improvements in machinery for destroying flies and other insects on growing crops."

On their several petitions, recorded in the Office of the Commissioners on the 21st day of July, 1859.

1718. To JOSEPH HARTLEY, of Romiley, near Stockport, in the county of Chester, Manager, for the invention of "Improvements in machinery for regulating the velocity of steam and other engines."

1719. To JOSEPH G. ISHAM and STEPHEN D. ALBERTSON, of the city and state of New York, United States of America, for the invention of "An improved machine for cutting and shaping bottle and other corks."—A communication from Albert Albertson, a person residing abroad."

1720. To SAMUEL ALEXANDER BELL and JOHN BLACK, of Bow Lane, Cheapside, in the city of London, Vesta Light and Fusee Manufacturers, for the invention of "An improved manufacture of fusee."

1721. And to WILLIAM EDWARD NEWTON, of the Office for Patents, 66, Chancery Lane, in the county of Middlesex, Civil Engineer, for the invention of "Improvements in sewing machines."—A communication from abroad by George Kugler, Boniface Plaz, and Jacob Rexroth, all of Paris, in the empire of France.

On their several petitions, recorded in the Office of the Commissioners on the 22nd day of July, 1859.

1722. To JOHN BATKIN WHITEHALL, of the town and county of the town of Nottingham, Engineer, and SAMUEL WHEATCROFT, of the New North Road, county of Middlesex, Engineer, for the invention of "Improvements in the construction of certain parts of the apparatus or machinery made use of for manufacturing bonnet and cap fronts, rouches, and such like articles of millinery."

1723. To HORATIO NELSON HARROP, junr., of Manchester, in the county of Lancaster, Cigar Dealer, for the invention of "Certain improvements in a cigar lighter and fusee box.'

1724. To JAMES BROADLEY, of Saltaire, in the county of York, Overlooker to Messrs. Titus, Salt, Sons, and Co., of the same place, Spinners and Manufacturers, for the invention of "Improvements in means or apparatus used in weaving."

1725. To JOHN TENWICK, of Clarendon Street, (Albion Foundry,) Portsmouth, Hampshire, for the invention of "Improved steering apparatus for ships."

1726. And to WILLIAM HORATIO HARFIELD, of Fenchurch Street, in the city of London, for the invention of "Improvements in capstans, riding bits, and stoppers for working with chains."

On their several petitions, recorded in the Office of the Commissioners on the 23rd day of July, 1859.

1727. To HENRY AMBLER, of Halifax, in the county of York, Engineer, for the invention of "Improvements in explosive projectiles."

1728. To JOHN ROWLAND, junior, of Oldham, in the county of Lancaster, Manufacturer, and GEORGE HALL, of the same place, Engineer, for the invention of "Improvements in machinery or apparatus for sizing yarns or threads, which said improvements are also applicable to dressing machines, or other similar apparatus."

1729. To GEORGE DAVIES, of No. 1, Serle Street, Lincoln's Inn, in the county of Middlesex, and No. 28, St. Enoch Square, in the city of Glasgow, Civil Engineer and Patent Agent, for the invention of "Improvements in dyeing yarns, threads, or woven fabrics of wool, silk, cotton, linen, or other fibrous or filamentous material."—A communication from abroad by François Xavier Hurstel, of Paris, Wool Comber.

1730. To EDMUND HUNT, of Glasgow, in the county of Lanark, North Britain, Consulting Engineer and Patent Agent, for the invention of "Improvements in apparatus for indicating and regulating speed."

1731. To WILLIAM EDWARD NEWTON, of the Office for Patents, No. 66, Chancery Lane, in the county of Middlesex, Civil Engineer, for the invention of "Improvements in extracting oil from coal and other substances yielding pyrogenous oils."—A communication from abroad by Franklin W. Willard, of New York, in the United States of America.

1732. And to CHARLES FRÉDERIC VASSEROT, of No.45, Essex Street, Strand, London, Patent Agent, for the invention of "Preventing and removing incrustations in steam boilers."—A communication from Jean Claude Chavanne, residing at Lyons, in the empire of France.

On their several petitions, recorded in the Office of the Commissioners on the 25th day of July, 1859.

1733. To JAMES KING, of Glasgow, in the county of Lanark, North Britain, Chemist, for the invention of "Improvements in the treatment of materials used in or resulting from the distillation of spirits."

1735. And to JOHN HENRY JOHNSON, of No. 47, Lincoln's Inn Fields, in the county of Middlesex, and of No. 166, Buchanan Street, in the city of Glasgow, North Britain, Gentleman, for the invention of "Improvements in slide valves for steam engines"—A communication from abroad, by Richard C. Bristol, of Chicago, United States of America.

On both their petitions, recorded in the Office of the Commissioners on the 26th day of July, 1859.

1741. To EDWARD WINSTANLEY, Cotton Spinner, Ashton-under-Lyne, for the invention of "Improvements in indicators for registering the quantity produced by spinning machinery."

1743. To THOMAS DICKINS, of Middleton, in the county of Lancaster, Gentleman, for the invention of "Improvements in dyeing and discharging warps or other yarns or threads, and woven fabrics of silk, wool, cotton, and other fibrous materials."

1745. And to CHARLES LOUIS BLUM, of No. 29, Boulevart St. Martin, Paris, Merchant, for the invention of "A mechanical apparatus for smoking and colouring pipes."

On their several petitions, recorded in the Office of the Commissioners on the 27th day of July, 1859.

Patents Sealed.

LIST of LETTERS PATENT which passed the Great Seal on the

5th August, 1859.

154. JOHN FAWCETT, of Kingston-upon-Hull, in the county of same town, Merchant, for an invention of "An improved preparation of food for cattle and horses."—Dated 18th January, 1859.

218. JOHN GUY PROGER, of 13, Trinity Street, Cardiff, and DAVID DAVIES, of Stuart Street, Bute Docks, Cardiff, in the county of Glamorgan, for an invention of "Improvements in lanterns used on board ship to signal to the steersman."—Dated 24th January, 1859.

338. GEORGE FREDERIC CHANTRELL, of Liverpool, in the county of Lancaster, Furnace Engineer, for an invention of "Improvements in the treatment of charcoal after its manufacture or revivification."—Dated 7th February, 1859.

346. JOHN SMITH, of Bradford, in the county of York, Machine Maker, for an invention of "Improvements in machinery or apparatus for preparing and combing wool and other fibrous substances."—Dated 7th February, 1859.

350. JAMES HOSKING, Oil Merchant, of Walworth Common, in the county of Surrey, for an invention of "Improvements in the manufacture of lamps."—Dated 8th February, 1859.

356. JOHN BALDRY REDMAN, of New Palace Yard, in the city of Westminster, Civil Engineer, for an invention of "An improvement in the construction of carriage ways."—Dated 8th February, 1859.

361. EDWARD WILKINS, of No. 7, Addington Place, Camberwell Road, in the county of Surry, Gentleman, for an invention of "Improvements in flower vases."—Dated 9th February, 1859.

362. JOHN STEPHEN JOSEPH, of Rhostyllan, near Wrexham, in the county of Denbigh, North Wales, for an invention of "Improvements in coke ovens and in cooling and extinguishing coke."—Dated 9th February, 1859.

368. GEORGE BOWER, of Saint Neots, in the county of Huntingdon, Gas Engineer, for an invention of "Improvements in apparatus for the manufacture of illuminating gas."—Dated 9th February, 1859.

369. JAMES EDWARD MCCONNELL, of Wolverton, in the county of Bucks, Civil Engineer, for an invention of "Improvements in steam boilers and in the generation and treatment of steam."—Dated 9th February, 1859.

371. EDWARD HERRING, of the Heath, Weybridge, in the county of Surrey, for an invention of "Improvements in the mashing and fermenting of grain for the production of alcohol."—Dated 9th February, 1859.

376. WILLIAM ADOLPHE COVERT, of Long Island, New York, in the United States of America, for an invention of "An improved self-acting railway switch."—A communication from Charles L. Spencer, residing at Rhode Island, U.S.A.—Dated 10th February, 1859.

377. ROBERT JOSEPH ELLIS, of Liverpool, in the county of Lancaster, Merchant, for an invention of "Improvements in the apparatus for lifting sunken vessels and other submerged bodies."—Dated 10th February, 1859.

429. RICHARD JENNINGS STEVENSON PEARCE, of Fleet Street, in the city of London, Machinist, for an invention of "Improvements in weighing dynamic machines."—Dated 16th February, 1859.

456. WILLIAM CLARK, of 53, Chancery Lane, in the county of Middlesex, Engineer and Patent Agent, for an invention of "Improvements in pressure guages."—A communication from abroad by Louis Droissart, Mechanician, of Paris."—Dated 18th February, 1859.

468. GEORGE PAUL, of Glasgow, in the county of Lanark, North Britain, Mechanic, for an invention of "Improvements in spindles and flyers."—Dated 21st February, 1859.

505. JEAN HENRI GUILLAUME DANIEL WAGNER, of Paris, in the empire of France, Manufacturer, for an invention of "Apparatus for cleaning water, and removing all matters in suspension and dissolution contained in it, water intended to feed generators of all sorts (applicable also to other purposes), which besides, previous to its getting into the generators, is heated to the highest degree without almost any expense."—Dated 24th February, 1859.

512. CHARLES WILLIAM SIEMENS, of John Street, Adelphi, in the county of Middlesex, for an invention of "Improvements in electric telegraphs and

apparatus, and in supports for electric telegraphic line wires."—Partly a communication from Werner Siëmens, residing at Berlin, in Prussia, and is partly his own invention.—Dated 25th February, 1859.

525. Alexander Martin, Merchant, and Alexander Crichton, Mechanic, both residing in Pollokshaws, in the county of Renfrew, for an invention of "Improvements in weaving and woven goods."—Dated 28th February, 1859.

618. William Edward Newton, of the Office for Patents, 66, Chancery Lane, in the county of Middlesex, Civil Engineer, for an invention of "Improvements in billiard tables."—A communication from abroad by Abraham Bassford, of New York."—Dated 9th March, 1859.

680. Alexander Mein, Glass Bottle Maker, at Saint Rollox, Glasgow, in the county of Lanark, for an invention of "Improvements in making glass bottles, and in the apparatus connected therewith."—Dated 17th March, 1859.

744. John Henry Johnson, of 47, Lincoln's Inn Fields, in the county of Middlesex, and of 166, Buchanan Street, in the city of Glasgow North Britain, Gentleman, for an invention of "Improvements in machinery or apparatus for the manufacture of sheet tin."—A communication from abroad by Monsieur Masson, of Paris, in the empire of France.—Dated 23rd March, 1859.

Patents on which the Stamp Duty of £50 has been Paid.

(*To 3rd August*, 1859, *inclusive.*)

1st August.

1854. John Yuil Borland, of Manchester, in the county of Lancaster, Machinist, for an invention of "Improvements in machinery for preparing and spinning fibrous materials."—Dated 6th August, 1856.

3rd August.

1840. Henry Walker Wood, of Briton Ferry, Glamorganshire, Gentleman, for an invention of "Further improvements in the manufacture of fuel, and for a new mode of preserving coal and coke and other fuel."—Dated 5th August, 1856.

DELIVERY OF LETTERS.—For the Great Seal Patent Office the initials are W. C., the District being the Western Central. In the direction of a Letter, these initials should be legibly written in a separate line, and should in all cases end the address, thus:—

The Commissioners of Patents,
Great Seal Patent Office,
25, Southampton Buildings,
London,
W.C.

FOREIGN PATENTS.

AUSTRIA.*

List of Patents which were Delivered, Prolonged, or became Void during the Month of May, 1859.†

(*Communicated by the Austrian Government.*)

1. Patents Delivered.

1. Albrecht Bernhard Heller and Otto Graf, both of Dresden, represented by Edward Schmidt, Vienna, for "A grinding and polishing substance from the slags of silver smelting works." —2 years.—(Secret.)—Dated 3rd May, 1859.

2. Anthony Richelmi, of Genoa, Engineer, represented by Nicholas Polleri, Agent, Milan, for "A kneading machine with internal pressure roller."—1 year.—(Public.)—Dated 3rd May, 1859.

3. Frederic Paget, of Vienna, for "An improved method of preserving the shape of weft yarn bobbins by means of glutinous substances."—3 years. —(Public.)—Dated 3rd May, 1859.

4. John Moser, of Vienna, for "An apparatus for cooking eatables without fire or fuel called 'Military camp kitchen.'"—1 year.—(Secret.)—Dated 3rd May, 1859.

5. Emilius Seybel, of Vienna, for "A peculiar regenerative lime kiln heated by gas."—1 year. —(Secret.)—Dated 7th May, 1859.

6. Alois Nidomansky, of Vienna, for "A liquid shoe blacking."—1 year.—(Secret.)—Dated 7th May, 1859.

7. Anthony Kraiziger, of Vienna, for "An elastic stuffing for beds, sofas, &c., arranged for folding together and admitting the circulation of air."—1 year.—(Secret.)—Dated 7th May, 1859.

8. John Szentsak, of Vienna, for "A double window to close hermetically."—1 year.—(Public.)—Dated 7th May, 1859.

9. Frederic Paget, of Vienna, for "An improved method of refining sugar."—2 years.—(Public.)—Dated 7th May, 1859.

* For the Austrian Patent Law, see No. 291 of this Journal.

† In the case of inventions patented in other states as well as in Austria, the Specifications (whether described as "public" or not) may in most cases be consulted, or translations of them be had, at the Library of the Commissioners' Office.

10. Louis Mich. Francis Doyère, of Meudon, in France, represented by A. Martin, Vienna, for "A new method of preserving grain, flour, vegetables, oil seed, and other dried seeds."—1 year.—(Public.)—Dated 7th May, 1859.

11. Joseph Pohlmann, of Vienna, for "A new powder for ladies to remove wrinkles and freckles."—5 years.—(Secret.)—Dated 9th May, 1859.

12. Anthony Jœgerndorfer, of Nussdorf, Vienna, for an invention for "Producing yeast from substances hitherto considered worthless."—1 year.—(Secret.)—Dated 9th May, 1859.

13. L. W. Broadwell, of New Orleans, represented by E. C. Stilles, U. S. Consul at Vienna, for "A new mode for dressing millstones."—2 years.—(Secret.)—Dated 10th May, 1859.

14. James Schwarz, of Vienna, for "Improvements in chromo and mono lithography, by which the most delicate tints and a peculiar effect can be produced and infinitely multiplied from the same drawing."—1 year.—(Secret.)—Dated 13th May, 1859.

15. Henry Gerner, of New York, represented by John Kuffner, Vienna, for "A smoke-consuming apparatus oeconomising fuel."—1 year.—(Secret.)—Dated 14th May, 1859.

16. George Pfanzeder, of Munic, represented by John Spiering, Vienna, for "An improvement in weighing machines."—1 year.—(Public.)—Dated 14th May, 1859.

17. James Heszer, of Vienna, for "An invention for fastening buttons to coats by means of a spring instead of sewing."—1 year.—(Public.)—Dated 18th May, 1859.

18. Cornelius Kasper, of Vienna, for "An improvement in combing machines for fibrous substances."—1 year.—(Secret.)—Dated 18th May, 1859.

19. Augustus Devidé, of Deutsch Landsberg in Styria, for "Improved galvanised lucifer matches."—2 years.—(Secret.)—Dated 18th May, 1859.

20. Max. Lichtenfeld, of Pesth, for "An improvement in fastening glass panes into windows hermetically tight."—1 year.—(Secret.)—Dated 18th May, 1859.

21. Eustache Durst, of Vienna, for "A sowing machine to be used for any description of seed, and on both plans, broadcast or in rows."—1 year.—(Secret.)—18th May, 1859.

22. William Demel, of Vienna, for "Improvements for artificial nipples for feeding infants, by which the said nipples are connected with the glass without stopper."—3 years.—(Public.)—Dated 19th May, 1859.

23. Ignatius Martin Guggenberger, of Vienna, for "An improved ventilating apparatus without draughts for closed rooms and stables."—1 year. (Secret.)—Dated 20th May, 1859.

24. Charles Guardet, of Vienna, for "A self-regulating apparatus, applied to the draught of horses."—1 year.—(Public.)—Dated 20th May, 1859.

25. Alois John Metsger, of Vienna, for "A new kind of soap for linen, as well as the body called 'sapo ex voto.'"—1 year.—(Secret.)—Dated 21st May, 1859.

26. Julius Mahler, of Vienna, for "An invention for peeling the husk from grain, rice, and other such plants in a more complete and economical manner, and separating them from the husks."—5 years.—(Public.)—Dated 23rd May, 1859.

27. James Steinschneider, of Pesth, for "An improvement in stitching together quilting for beds by a peculiar mode of sewing."—1 year—(Secret.)—Dated 23rd May, 1859.

28. Moris Markovitz and Alexander Kaffeesieder, of Pesth, for "An improved glue used in book binding to render such books or similar articles more durable and pliable."—1 year. (Secret.)—Dated 24th May, 1859.

29. John Jordan, of Vienna, for "A method of rendering the granite pavement of streets, foot, paths, yards, and entrances, &c., more durable and of removing the dust."—1 year.—(Secret.)—Dated 24th May, 1859.

30. L. C. Siemens and E. Breunlin, both of Schlan, in Bohemia, for "A new refining substance in the manufacture of beetroot sugar, by which a smaller quantity of crystallised sugar is destroyed, therefore the product increased and the expense diminished"—2 years.—(Secret.)—Dated 24th May, 1859.

31. Francisca Weiss, of Prague, for "A new composition of essences to supersede the so-called 'Eau de Cologne,' and called 'Eau de Prague.'"—1 year.—(Secret.)—Dated 25th May, 1859.

32. Stephen Saschka, of Vienna, for "Improvements in washing machines."—1 year.—(Public.)—Dated 27th May, 1859.

33. John Cristopher Endris, of Vienna, for "Improvements in locks and keys."—2 years.—(Secret.)—Dated 27th May, 1859.

34. Leopold Jedlitschka, of Znaim, for "A new construction of earthenware stoves."—1 year. (Public.)—Dated 27th May, 1859.

35. John Schatzl, of Pfaffstetten, in Lower Austria, for "An invention for preventing cracking in cast iron during the process of cooling."—1 year.—(Secret.)—Dated 27th May, 1859.

36. Albert Lowy, of New Pesth, for "An invention for manufacturing meerschaum pipes by pressure."—1 year.—(Secret.)—Dated 27th May, 1859.

37. Michael Selinger, of Vienna, for "An electromotive machine worked by electro-magnetism and intended to supersede steam engines and all other motive powers."—1 year.—(Secret.)—Dated 28th May, 1859.

38. John Wallace Duncan and James Eglinton Anderson Gwynne, of Paris, represented by Georg Märkl, Vienna, for "An improvement in the mode of producing and condensing steam."—1 year.—(Public.)—Dated 28th May, 1859.

39. Joseph Herzfeld, of Vienna, for "A new plough with three shares or coulters."—1 year.—(Secret.)—Dated 28th May, 1859.

40. Joseph Wilner, of Pesth, for "An improvement in the production of playing cards by means of an oil paper with the design in all colours applied to the back of the cards."—1 year.—(Secret.)—Dated 30th May, 1859.

41. Henry Mall, of Landeck in Tyrol, for an invention of "A new substance for matches, free from phosphorous."—1 year.—(Secret.)— Dated 30th May, 1859.

42. Morris Blaskopf, of Vienna, for "An improvement in the manufacture of shoe blacking."—3 years.—(Secret.)—Dated 30th May, 1859.

43. Philipp Hamburger, of Pesth, for "A peculiar method of rendering every description of leather, even when glazed, watertight."—1 year.—(Secret.)—Dated 30th May, 1859.

44. John Bürgl, of Tüffer, in Styria, for an invention of "Manufacturing ropes and driving bands of steel, iron, or other metal."—1 year.—(Public.)—Dated 30th May, 1859.

45. Charles Dupret, of Charleroi, in Belgium, represented by Ernest Galvagni, Vienna, for an invention for "Producing coke in solid lumps, (called 'Coke agglomeré') from various sorts of ashes."—1 year.—(Secret.)—Dated 30th May, 1859.

46. Francis von Schwind, of Hall, in Tyrol, for an "Improved apparatus for using broken granular, fibrous and pulverized substances as fuel, called 'Schwind's universal combustion pump.'"—5 years.—(Secret.)—Dated 30th May, 1859.

47. William Skallitzky, of Vienna, for an invention of "Manufacturing lacquered coverings for the head, such as hats and caps, soldiers' hats from woven or knitted fabrics of linen, wool, or silk."—1 year.—(Secret.)—Dated 30th May, 1859.

2. Patents Prolonged.

1. Alfred Hartman, for "An improvement in English malt kilns."—2nd year.—(Secret.)—Dated 13th March, 1858.

2. Gustavus Jacger, for an invention of "A peculiar letter paper."—2nd year.—(Public.)—Dated 17th April, 1858.

3. Conrad Otto, for "Improvements in a self-acting coffee machine."—2nd year.—(Public.)—Dated 20th April, 1858.

4. Marcus Back, (Leopold Topf, assignee), for "An invention and improvement in the manufacture of linen, cotton, and woollen fabrics."—8th year.—(Secret.)—Dated 13th May, 1853.

5. Christian Charles Knoderer, for "Improvements in tanning."—4th year.—(Secret.)—Dated 22nd April, 1856.

6. Dominique Didier, for "A new brake for railway carriages."—4th year.—(Public.)—Dated 21st April, 1856.

7. Alois Quenzer and Son, for "Improvements in felt hats."—4th year.—(Secret.)—Dated 13th May, 1856.

8. John Baptist Piattie and Eligius Collella, for an invention of "A machine for making horse shoes."—2nd year.—(Secret.)—Dated 10th April, 1859.

9. Edward Schmidt, for an invention for "Purifying the oil left in the bearings of railway carriages and machinery."—2nd year.—(Secret.)—Dated 22nd April, 1858.

10. Francis Charles Hillardt, for an "Improvement in the drawing apparatus of Albert Durrer, called 'Perspective drawing apparatus.'"—2nd year.—(Public.)—Dated 26th April, 1858.

11. Alois Quenzer and Son, for an invention of "Elastic silk hats."—2nd year.—(Secret.)—Dated 4th May, 1858.

12. Louis Lechatelier, for an invention of "A particular application of the acids resulting from fluor in the manufacture of natron, kali, and various accessory products."—2nd year.—(Secret.)—Dated 31st July, 1858.

13. Peter Catraro, for "An hydraulic cement of superior quality."—2nd year.—(Secret.)—Dated 18th February, 1858.

14. A. M. Pollak, for "Improvements in the manufacture of articles for igniting."—6th and 7th year.—(Secret.)—Dated 16th August, 1854.

15. Charles Krammer and Francisca Scharinger, for "A new nail making machine to be worked by hand."—3rd year.—(Secret.)—Dated 27th April, 1857.

16. Francis Schmutz, for "Improved shears for vines."—2nd year.—(Public.)—Dated 30th May, 1858.

17. Peter Joseph Guyet, for "An application of vulcanized india rubber to valves and cocks."—2nd year.—(Public.)—Dated 29th October, 1858.

18. Theresa Preshel, for "An improved process in the manufacture of aromatic ethers and spirits, hair oils, and pommatum."—2nd year.—(Secret.)—Dated 1st May, 1858.

19. John Czermak, assignee William Lowenthal, for "Improved wicks for lanterns."—2nd year.—(Public.)—Dated 1st May, 1858.

20. Julius Eckel, for "An improved threshing machine to be worked by hand."—2nd year.—(Public.)—Dated 4th May, 1858.

21. Adolphus Schöller, for "Improvements in the manufacture of felt."—3rd and 4th years.—(Secret.)—Dated 21st May, 1857.

22. John Urfus, for "Improvements in the manufacture of mineral manure."—4th year.—(Secret.)—Dated 12th May, 1856.

23. John Urfus, for "A new mineral manure."—4th year.—(Secret.)—Dated 13th May, 1856.

24. Joseph Blümel, for "A new machine for cutting wooden slabs for roofing."—2nd year.—(Public.)—Dated 3rd May, 1858.

25. John Kranzelbauer, for "A belt to prevent protrusion of the stomach."—3rd year.—(Public.)—Dated 7th May, 1857.

26. Leopold Köppel, for "An apparatus for collecting, registering, and publishing addresses and advertisements.—3rd year.—(Public.)—Dated 10th May, 1857.

27. Ignatius Schoffer and Mary Baader, for "An improved mode of extracting cumarin from substances containing such, and preparing a perfume therefrom."—3rd year.—(Secret.)—Dated 10th May, 1857.

28. John Preshel, assignee Theresa Preshel, for "A cosmetic remedy for purifying the skin."—3rd year.—(Secret.)—Dated 10th May, 1857.

29. John Burda, for "Improved powder flasks." —3rd year.—(Public.)—Dated 13th May, 1857.

30. Ignatius Gatter, for "An apparatus by which liquid and dry goods can be protected against shaking, change of temperature, and adulteration during carriage or storing."—2nd year.—(Secret.) —Dated 8th May, 1857.

31. Joseph Jacob and Dr. Francis Köller, partial assignees Klein Brothers, for "An invention for applying the Wolfram metal and its chemical compounds to metallurgical and other industrial objects."—2nd and 3rd year. — (Secret.)—Dated 10th May, 1858.

32. Daniel Wambera, for "A machine for making ornamental paper shavings."—2nd year.—(Secret.) —Dated 10th May, 1858.

33. Adolphus Kur, for "A new valve gear in steam engines."—2nd year.—(Secret.)—Dated 31st May, 1858.

34. Joseph Seykora, for "A smoke-consuming apparatus."—2nd year.—(Secret.)— Dated 16th March, 1858.

35. Benjamin Moore, for "A new sewing machine."—6th year.—(Public.)—Dated 26th May, 1854.

36. Francis Bartosch, for "A new cement for stopping decayed teeth."—6th and 7th years.— (Secret.)—Dated 17th May, 1854.

37. Charles Fischer, for "A new mangle."— 5th year.—(Public.)—Dated 17th May, 1855.

38. Frederic Paget, for "Improvements in locomotives."—4tn year.—(Public.)—Dated 12th May, 1856.

39. Joseph Morawetz, for "A new construction of presses."—4th year.— (Public.) — Dated 2nd June, 1856.

40. Herman Henry Frickenhaus, for "An application of centrifugal power for extracting the raw juice from beetroots." — 4th–9th year. — (Public.)—Dated 9th August, 1856.

41. Francis Chapusot, for "An apparatus for emptying cesspools."—3rd year.—(Secret.)—Dated 3rd May, 1857.

42. Henry Tempele, for "An improved distilling and rectifying apparatus in the manufacture of spirits of wine."—3rd year.—(Secret.)—Dated 10th May, 1857.

43. Alexander Bonzanini, for "A method of producing lighting gas from brown coal and vegetable remains."—2nd year.—(Secret.)—Dated 8th May, 1856.

44. Peter Hugon, for "Improvements in compressing and conducting gas."—4th year.—(Secret.) Dated 8th July, 1856.

45. Couillard Fautrel's widow, sons, and nephews for "Improvements in baking and consolidating the waste of substances used for burning." —2ndyear.—(Secret.)—Dated 18th June, 1858.

46. Joseph Juttner, for "An improved form of tile for roofing."—2nd year. — (Public.)—Dated 29th May, 1858.

47. Alois Mollner, for an "Improvement upon his Patent of 16th April, 1848, in the manufacture of drawn seemless tubes and joints."—7th year.— (Secret.)—Dated 20th May, 1853.

3. Patents Transferred.

1. Charles Reisser and Caroline Reisser, transferred to Charles Reisser, for "An improvement in his patent inocuous fly and insect paper." —Dated 22nd September, 1858.

2. Augustus Huland, transferred to James Gray William Curtis, for "A new smelting furnace for all descriptions of iron ore."—Dated 27th December, 1857.

3. James Grunberger and B. Löwy, transferred to Francis Geringer, for an invention for "Making wooden pegs for shoes and boots."—Dated 6th May, 1858.

4. Peter Catraro, transferred to Henry Escher, for "A new hydraulic cement of superior quality." —Dated 18th February, 1858.

5. Charles Lichtl, transferred to Josephine Liehtl, for an invention of "A furnace for burning bones to charcoal."—Dated 30th March, 1857.

6. Augustus Lenz, transferred to Julius Mahler, for "Improvements in machines for shelling and cleansing rice, wheat, and other grains."—Dated 31st May, 1858.

7. Samuel Handl, transferred to Max Koch, for "An improved soap for washing."—Dated 15th April, 1858.

4. Patents which have become Void.*

1. William Bridges Adams, for "An improved railway construction."—Dated 16th March, 1856; expired 16th March, 1859.

2. Francis Thiel and Francis Charles Thiel, for "Improvements in omnibusses by bringing the hind wheels underneath the body of the carriage."—Dated 29th September, 1855; withdrawn 26th January, 1859.

3. Ferdinand Knobbe, for "A mode of extracting from coal, brown coal, turf and bituminous fossils, paraffin and photogen being a simplification of the present process."—Dated 8th February, 1857; expired 8th February, 1859.

4. Giles Mabie, for "An improved machine for cutting and mowing corn."—Dated 9th March, 1857; expired 9th March, 1859.

5. Rudolph Stengl, for "An invention for producing plastic ornaments, such as frames, vases, &c. from iron wire wound round with thread."— Dated 5th December, 1858; withdrawn 2nd May, 1859.

6. Alphons Louis Poitevin, for "An application of printers' ink as well as liquid and solid colours in photography."—Dated 12th February, 1856; expired 12th February, 1859.

7. Francisca Honoria Felicia Louic, for "A so-called 'Table-bed.'" — Dated 2nd February, 1858; expired 2nd February, 1859.

* The Specifications of these Patents may be consulted in the original language, or translations be had at the Public Free Library.

8. Adolphus Pecoul, for "A nautical instrument for determining the strength and direction of currents."—Dated 17th March, 1858; expired 17th March, 1859.

9. Marc Anthony Francis Mennons, for "A new gas retort with hydraulic joints."—Dated 10th April, 1858; expired 10th April, 1859.

10. George Heidenwag, for "An improvement in turn-tables for railways by which the supports for the rails and rim are made wholly of wrought iron, and the pulleys have a particular position and project partly above the turn-table.'—Dated 30th March, 1858; expired 30th March, 1859.

11. Alphons Sobard, for "An improvement in lighting with gas or oil by which a complete combustion and great saving is effected."—Dated 7th November, 1853; expired 7th November, 1858.

12. Joseph A. Grünwald, for "A circular loom."—Dated 7th November, 1853; expired 7th November, 1858.

13. William Hodgson, for "Improvements in the manufacture of fibrous substances by particular machines."—Dated 7th November, 1853; expired 7th November, 1858.

14. Joseph Scacchi and Sons, for "A new silk spinning machine."—Dated 22nd November, 1853; expired 22nd November, 1858.

15. J. Preshel, for "A new method for extracting the finest scent from all aromatic vegetables as blossoms, leaves, stalks, fruit, bark, wood, roots, and sap and to manufacture therefrom pommatums, hair oil, aromatic spirits and soap."—Dated 23rd November, 1853; expired 23rd November, 1858.

16. Alexis Zoppinger, for "An improved spindle for twisting the silk."—Dated 30th November, 1853; expired 30th November, 1858.

17. Joseph Bischof, for "An invention for manufacturing fine paper, packing paper, and board from wood fibres by means of machines already known."—Dated 1st November, 1855: expired 1st November, 1858.

18. Henry Miller, for "Artificial mineral grindstones."—Dated 9th November, 1855; expired 9th November, 1858.

19. Orestes Rossi, for "Producing lighting gas by the decomposition of water."—Dated 7th November, 1856; expired 7th November, 1858.

20. Frederic George Wieck, for "New arrangements in spinning jennies and a new process of spinning."—Dated 9th November, 1856; expired 9th November, 1858.

21. Frederic George Wieck, for "An invention for treating old ropes, cloth, &c. in order to obtain therefrom a thread which can be spun afresh."—Dated 11th November, 1856: expired 11th November, 1858.

22. Frederic George Wieck, for "Machines for combing and cleansing various short fibres fit for spinning."—Dated 29th November, 1856; expired 29th November, 1858.

23. Peter Saroglia and Valentine Belli, for "Improvements in the English inodorous water-closets."—Dated 29th November, 1856; expired 29th November, 1858.

24. Ferdinand Böhm, for "A power knitting frme, on which work can be done of any width, and so that both sides shall be the right sides."—Dated 29th November, 1856; expired 29th November, 1858.

25. Otto Schütte, for "Improvements in smelting furnaces with heated blast."—Dated 29th November, 1856; expired 29th November, 1858.

26. Joseph v. Kliegl, for "A sound noting machine, with or without electro-magnetism, on which whatever is played on a key instrument, will be noted down by means of signs, so that whatever has been played may be read off with the most delicate shades, and transferred into ordinary musical notes."—Dated 29th November, 1856; expired 29th November, 1858.

27. Wenzel Swetelsky, for "Manufacturing wadding from sheep's wool, by means of a heckling machine and a roller arranged upon the principle of a fulling mill."—Dated 29th November, 1856; expired 29th November, 1858.

28. Gustavus Pfeifinger, for "An apparatus with which burning cigars and cigarets can be immediately extinguished."—Dated 3rd November, 1857; expired 3rd November, 1858.

29. Gustavus Pfeifinger, for "An improvement in an hydraulic spigot for casks."—Dated 16th November, 1857; expired 16th November, 1858.

30. Gustavus Pfeifinger, for "An invention by which vermin of any kind can be destroyed in the deepest crevices of walls and timbers."—Dated 17th November, 1857; expired 17th November, 1858.

31. Thomas Agudio, for "A new pilot engine for moving railway trains on heavy inclines."—Dated 8th November, 1857; expired 8th November, 1858.

32. Robert Monkowsky, for "Improvements in coke furnaces."—Dated 8th November, 1857; expired 8th November, 1858.

33. Francis Horvath, for "A street-sweeping machine which also waters and takes up the dirt."—Dated 7th November, 1857; expired 7th November, 1858.

34. Francis Olbrich, for "A new mode of making velvet and for raising the pile of other fabrics by a peculiarly constructed machine."—Dated 7th November, 1857; expired 7th November, 1858.

35. Peter Pisetti and Vincent Griseri, for an invention for "Deodorizing public urinals &c., and extracting therefrom guano for manure."—Dated 8th November, 1857; expired 8th November, 1858.

36. Louis Cassina, for "A rotary sewing machine."—Dated 8th November, 1857; expired 8th November, 1858.

37. Samuel Popper, for "Producing a toilet soap from the refuse of hides and leather."—Dated 15th November, 1857; expired 15th November, 1858.

38. George Pfanzeder, for "A peculiar construction of weighing machines."—Dated 16th November, 1857; expired 16th November, 1858.

39. John Felsinger, for "Water-tight coverings for railway carriages and glass houses."—Dated 16th November, 1857; expired 16th November, 1858.

40. Alois Platzer and L. Ruziczka junr., for "An ink powder, easily soluble in water, and to be used also for copying ink."—Dated 17th November, 1857; expired 17th November, 1858.

41. Edward Schmdt and Frederic Paget, for "Improvements in the construction of points and switches in railway crossings."—Dated 21st November, 1857; expired 21st November, 1858.

42. Edward Warrens and Liegfried Marcus, for "An electromotor called 'Disk electromotor,' which combines rotary with rectilinear motion, and in which the electromagnetic force is utilised to the utmost extent."—Dated 21st November, 1857; expired 21st November, 1858.

43. Herman Gotthilf Möhring, for "Improvements in flour mills in which by means of cylinders and cavities on their surface every description of grain may be ground to any fineness."—Dated 24th November, 1857; expired 24th November, 1858.

44. Francis Piller, for "An apparatus to render water-closets in rooms or houses perfectly inodorous."—Dated 24th November, 1857; expired 24th November, 1858.

45. Morris Thielen, for "Improvements in the so-called 'Raguenau press.'"—Dated 25th November, 1857; expired 25th November, 1858.

46. Theophilus Weisse, for "A crushing and coarse and fine grinding mill."—Dated 25th November, 1857; expired 25th November, 1858.

47. Joseph König, for "An improvement in hydraulic spigots for casks."—Dated 25th November 1857; expired 25th November, 1858.

48. Joseph Lentschick, for "A water raising machine by which water may be raised to any height in sufficient quantities."—Dated 27th November, 1857; expired 27th November, 1858.

49. Adolphus Postler, for "Improvements in watertight woollen hats."—Dated 30th November, 1857; expired 30th November, 1858.

50. Charles Kutschke, for "Improvements in the manufacture of felt and silk hats."—Dated 24th March; expired 24th March, 1858.

51. John Seidenschnur, for "Elastic rings in gold or silver, with or without jewels, which fit the finger exactly, and can be easily removed and put on."—Dated 27th March, 1857; expired 27th March, 1858.

52. Joseph Stoufs, for "A new method for applying lithography to paper by other means than those hitherto in use, and producing a peculiar effect."—Dated 9th January, 1854; expired 21st May, 1859.—This Patent became void in consequence of its want of novelty.

53. Herman Pollak and Joseph Klein, for "Improvements in every description of men's clothing to protect them against the effects of perspiration."—Dated 11th April, 1858; expired 11th April, 1859.

54. James Augustus Door, for "A new gas regulator."—Dated 7th January, 1854; expired 7th January, 1859.

55. George Basil Dirwell and James Augustus Door, for "Improvements upon the Patent of 7th January, 1854, in gas regulators."—Dated 3rd April, 1854; expired 3rd April, 1859.

56. Charles Goodyear, for "Improvements in cleansing india rubber and similar glutinous substances including gutta percha."—Dated 15th April, 1854; expired 15th April, 1859.

57. Rudolph Ditmar, for "Improvements in asphalt and teresin pavements."—Dated 18th December, 1849; expired 14th December, 1858.

58. John Lehner, for "Improovments in the manufacture of axles for wheels and waggons."—Dated 15th March, 1857; expired 15th March, 1859.

59. Leonard Phleger, for "Improvements in steam boilers for the consumption of anthracite or bituminous coal."—Dated 19th April, 1857; expired 19th April, 1859.

60. Herman Kohn, for "A mode of cleansing every description of hats from fatty substances and restoring them as good as new."—Dated 15th September, 1858; expired 30th May, 1859.—This Patent became void in consequence of its want of novelty.

UNITED STATES OF AMERICA.

(*Communicated by the Commissioner of Patents.*)

List of Patents, with Claims annexed, issued from the United States Patent Office, for the week ending 19th July, 1859, and each bearing that date.

No. 24,784. Lewis Allen, of Sleepy Creek, Va., for an "Improved washing machine."

"What I claim is, the construction of the open hollow washing, rinsing, and dipping cylinder, composed of a series of bars *r*, *r*, *s*, *s*, placed at regular intervals from each other, and provided with an open net work *u*, *u*, as described. I also claim in combination therewith, the fluted or rigid pressure squeezing cylinder *q*, *q*, and detachable framing *e*, *e*, *e*, *f*, *f*, *g*, *g*, g^2 g^1 *h*, *h*, *i*, *i*, *k*, *k*, when arranged, used, and operated in the manner substantially as set forth and described."

No. 24,785. Jacob Barney, of Chicago, Ill., for an "Improvement in variable exhaust device for steam engines."

"I claim, 1st, the employment of two cylinders B, B, so provided with gradually tapering grooves in each, that when revolved together an expanding and contracting circular opening will be formed for the purposes of regulating the passage of the exhaust steam from locomotive and other engines, substantially as herein set forth. 2nd, I claim the cylinders B, B, as constructed, when used in combination with the tight metallic case C, C, and packing *o*, *o*, the same being arranged and operating in the manner and for the purpose herein fully set forth."

No. 24,786. James Baylor, of Canton, Ill., for an "Improvement in universal joints."

"What I claim is, connecting shafts, when placed angularly with each other by means of the universal joints, constructed as represented and described, by which a rotary motion may be transmitted from one shaft to the other."

No. 24,787. W. H. Bettes and J. H. Parker, of Kokomo, Ind., for an "Improvement in boot-trees."

"We claim, 1st, the employment of the sleeve (*c*), in connection with the screw shaft *g*, the two being arranged and operating substantially as set forth. 2nd, the arrangement of the cords *e*, *h*, and *i*, with the levers *d*, d^1, and *m*, substantially in the manner and for the purpose set forth. 3rd, the combination of the instep K, side pieces H, H^1, and toe piece I, when the whole are so arranged and constructed that they will operate simultaneously, substantially as and for the purpose described."

No. 24,788. John T. Bever, of Hainesville Mo., for an "Improved bedstead cord pin."

"What I claim is, a bedstead cord pin, consisting of two parts (*a*, *b*,) which are constructed and operated in the manner and for the purpose substantially as herein described."

No. 24,789. Wm. Bull, of New California, Wis., for an "Improvement in sugar-cane presses."

"What I do claim is, the arrangement and combination of the hinged adjustable frame E, roller J, frame A, wedge F, inclined spouts L, L^1, and rollers D, as and for the purpose herein shown and described."

No. 24,790. A. H. Burdine, of Chulahoma, Miss., for an "Improved cotton-gin sharpener."

"I claim, 1st, the combination of two crossed reciprocating files F, F, with a circular feeding disk *r*, which is constructed with an angular recess, and an inclined hook r^1, at one point of its circumference, substantially as and for the purposes set forth. 2nd, the combination of the above with a jointed slotted frame, and a driving cam, substantially as and for the purposes set forth."

No. 24,791. Peter N. Burke, of Buffalo, N. Y., for an "Improvement in stoves."

"I claim the arrangement and combination of the perforated plates N, R, the partitional plate B, the flue H, the fire guard I, hot-air pipe L, and chamber K, as and for the purpose herein shown and described."

No. 24,792. Jeremiah Carhart, of New York, N. Y., for an "Improvement in machines for planing metal."

"I claim, 1st, the pressure plate or plates in combination with the reciprocating bed and feeding strip, when said plates extend substantially the length of the blank to be planed, and the bed travels far enough to carry the feeding end of the strip entirely past the facing cutter, at each operation, substantially as set forth. 2nd, I also claim rebating the inner edges of the pressure plate or plates, as described, in such manner as to furnish at once edge guides and pressure for the blank while being fed to the cutters. 3rd, I also claim, in combination with the pressure plates and cutters, the shields extending downwards from the pressure plates to protect the space between the plates from shavings and other foreign matter, as described. 4th, I also claim, in combination with the reciprocating bed and feeder, the scraper and brush acting in combination for cleaning the bed and feeder, or feeding strip, substantially as described."

No. 24,793. Heman Carter, of Greene, N.Y., for an "Improvement in harvesters."

"What I claim, is, the vibrating discharger F in combination with the rake *e*, arranged and operated in the manner described for the purposes specified."

No. 24,794. Robt. Cartwright, of Ithaca, N.Y., for an "Improved canal-boat propeller."

"I claim as new, and of my own invention, the step or bearing block I, constructed and arranged relatively to the rudder and vessel, substantially as described, to receive the end thrust of the propeller shaft, and thus relieving the gearing and rudder from pressure, the whole end thrust of the propeller being upon the step block I, which is arranged to admit of any lateral motion to the vessel's centre line, thus forming a steering as well as propelling power, and being all placed externally it entirely obviates the necessity of entering the vessel below the water line."

No. 24,795. Wm. Chesterman, of Centralia, Iowa, for an "Improvement in coffee pots."

"What I claim is, the arrangement and combination of the piston-packed strainer E, cylinder D, receiving vessel A, socket H, and condenser F, as and for the purpose herein shown and described."

No. 24,796. John Clary, of Dayton, O., for an "Improved vegetable cutter."

"What I claim, is, the arrangement of the shaft of the cutting disk, suspended from the cross piece (*b*) in connection with the convex cutting edge of the cutters (*h*), substantially in the manner and for the purpose set forth."

No. 24,797. Wm. H. Davis, of Austin, Ind., for an "Improvement in double-acting pumps."

"I claim the construction and arrangement of the air-chamber, side pipe, and cylinders, and flange at the top, all in one piece of casting, for the purpose of suspending the cylinders sufficiently deep in the well to prevent freezing, in combination with the bottom plate, substantially as above set forth."

No. 24,798. Rufus Dawes and Warren C. Choate, of Washington, D.C., for an "Improvement in stoves.

"We claim the combination of a new fire-room for a downward draft, having a lid to close the opening at the top, containing a valve in the lid and an open grate in front, having a door to close this opening air-tight, with a system of ovens heated and ventilated, as specified."

No. 24,799. Benjn. F. Field, of Sheboygan Falls, Wis., for an "Improvement in rotary cultivators."

"I claim the combination of two or more wheels on one crank, eccentric or equivalent axle, when the said wheels are arranged in pairs on the axle, one wheel within the other, and so as that the spades or forks attached to the inner wheels, shall pass out and in through the apertures in the outer wheels, for the purpose of displacing and pulverizing the soil over which they pass, in the manner described."

No. 24,800. James D. Field, of Davenport, Iowa, for an "Improvement in stoves."

"I claim the fire-chambers D, I, flue F, and water-heater H, the latter been provided with inclined tubes *a*, to form the grate of the fire chamber D, the above parts being arranged relatively with each other, the oven B, and the smoke pipe C, to operate as and for the purpose set forth."

No. 24,801. Ambrose Foster and Noah Sutton, of New York, N.Y., for an "Improvement in variable cut-off gear for steam engines."

"We claim the employment for operating either the main valve or valves of an engine, or a separate cut-off valve or valves of a compound cam composed of two parts C and D, constructed and combined with each other, and applied to the main, or a counter shaft, substantially as herein described."

No. 24,802. August Freutel, of New York, N.Y., for an "Improved lock for safes, &c."

"I claim, first, the slotted wheels *m* (on the tumbler *l*) and the plates 7, in combination with the wheels 6 of the knobs *k*, when said wheels *m* are so arranged that the act of unlocking or attempting to unlock the bolt moves the wheels *m* away from the wheels 6, in the manner and for the purposes specified. Second, in combination with the tumbler *l*, carrying the wheels *m*, and acting as aforesaid, I claim the cross piece *n* and tumbler *o*, substantially as and for the purposes set forth."

No. 24,803. C. B. Garlinghouse and G. B. Garlinghouse, of Allenville, Ind., for an "Improvement in harvesters."

"We claim the peculiar arrangement of the disk (C) in relation to the mechanism for operating the cutters, the standard K, and sliding frame *m*, in the manner and for the purpose specified."

No. 24,804. Halvor Halvorson, of Cambridge, Mass., for an "Improved trimmer for lamp wick."

"I claim in combination with a knife D and bed cranvil E, or other suitable wick-cutting devices, gauges *e*, *f*, constructed and arranged as shown, or in such a manner as to hold or retain the wick, and prevent it expanding laterally while under the action of the cutting device, for the purpose herein set forth."

No, 24,805. Jacob Hess, of Niagara Falls, N. Y., for an "Improvement in lathes."

"I claim the combination of the grooved central shaft *m* with its movable disks *e*, *f*, adjusting gears *k*, *i*, and index

spring hook *n*, all of said parts being constructed and arranged in relation to each other, as and for the purpose set forth."

No. 24,806. Grove Howard, of Westfield Township, Ohio, for an "Improvement in machines for raking and loading hay."

"I claim the arrangement of the endless belt F, pulleys D, and E, curved teeth R, rods K, lever *m*, and catch *d*, in the frame A, and with the body I, the whole being constructed and operating substantially as and for the purpose specified."

No. 24,807. Lewis S. Hoyt and Benjn. B. Beers, of New Fairfield, Conn., for an "Improved bit-stock and wrench."

"1st, we claim the above described wimble or bit-stock wrench, with one permanent and one movable jaw, which may be readily adjusted to turn nuts or screws of different sizes, substantially as described. 2nd, we claim the block K, or its equivalent, with a socket adapted to receive and hold the shanks of common bits, and fitted to the permanent or movable jaw, or both, so as to hold the block and bits, substantially as described. 3rd, we also claim the screw N so arranged as to fasten the block on to the jaw C and the bit in the socket L at the same time, substantially as described."

No. 24,808. Wm. Johnston and Martin Silmser, of Auburn, N. Y., for an "Improved steam cock."

"I claim a plug cock with a sectional plug, whose sides are inclined to its axis, in combination with a single casing, through which and directly opposite are openings, whose sides are parallel to the axis of the plug, and constructed as described."

No. 24,809. David Knowlton, of Camden, Me., for an "Improved joint for pump pipes, &c."

"What I claim is, making the joint hemispherical, in combination with the stiff or rigid flanges, by which the parts joined hemispherically may be held at the desired angle, substantially as described."

No. 24,810. David Knowlton, of Camden, Me., for an "Improved ship's warping chock."

"I claim the cast iron warping chock described as a new article of manufacture."

No. 24,811. A. Henry Lowell, of Manchester, N. H., for an "Improved hose coupling."

"I claim the locking devices described in combination with the screw tube K, arranged in connection with and on the outside of said locking devices, substantially as described."

No. 24,812. Franklin I. May, of Beverly, N. J., for an "Improvement in grain separators."

"1st, I claim the two side or supplementary inclined planes (C and C^1), in combination with the short inclined plane (B) and the two adjustable guides (*r* and r^1), the same being constructed and arranged together, so as to operate substantially as and for the purposes described and set forth. 2nd, I claim the employment of the sliding board (E) in the shaker (E^1), when the said board is arranged to operate in combination with the screen therein, in the manner described, and for the purpose of better preparing the grain, &c., for the inclined planes (B, C, and C^1) and the rotary screen (A), as described and set forth."

No. 24,813. James H. Maydole, of Eaton, N.Y., for an "Improvement in foot stoves."

"What I claim is, in combination with a foot stove, the several parts thereof being arranged in the order specified, the employment of a lamp, constructed with an intermediate space P filled with plaster of Paris, or the equivalent thereof, whereby I am enabled to prevent the heating of fluid contained therein, for the uses and purposes herein set forth."

No. 24,814. Isaac C. Mayer, of Jersey City, N.J., for an "Improved machine for turning skins."

"What I claim is the implement constructed and operated as herein described, for the purpose of turning the skins used by furriers, as herein set forth."

No. 24,815. E. I. McCarthy, of Saugerties, N. Y., for an "Improvement in furnace grates."

"What I claim is a furnace, with a series of stationary grate bars, in combination with a series of movable blades, so arranged as to pass between and above the bars, and descend below, so far as not to obstruct the draught, and be beyond the influence of the intense heat of the furnace, as described for the purpose set forth."

No. 24,816. Z. N. Morrel, of Cameron, Texas, for an "Improvement in excavating and grading machine."

"I claim, 1st, the employment of a revolving cylinder of blades, arranged at the lower end of the inclined digger, in combination with said digger, and with a series of coulter ploughs, arranged at the front end of the machine, substantially as and for the purposes set forth. 2nd, the employment of a revolving cylinder of teeth or blades, arranged at the upper end of the inclined digger, in combination with said digger, substantially as and for the purpose set forth."

No. 24,817. Wm. Newell, of Philadelphia, Pa., for an "Improved machine for scouring and polishing coffee."

"What I claim is the combination of the two cylinders B and E, having a space between them, with the scarified arms or beaters L, M, moving in contrary directions, substantially in the manner and for the purpose herein described."

No. 24,818. Wm. Perkins, of Plympton, Mass., for an "Improvement in rail-road car brakes."

"I claim, 1st, the arrangement of the sliding buffers J, brake levers N, rod *i*, hooked rods *l*, l^1, and staple *n*, to operate in combination with the braker, substantially as and for the purpose specified. Second, arranging the brake shoes L, in combination with the staple *n* and hooks *m*, m^1, substantially as described. Third, the arrangement and combination of the hooked rods *l*, l^1, and the rods *o*, o^1, and with the staple *n*, so that the hooks *m*, m^1, can be adjusted according to the direction in which the car is to run, substantially as set forth. Fourth, the arrangement and combination of the sliding buffer J, lever P, and spring Q, substantially as specified."

No. 24,819. A. P. Petkin, of Hartford, Conn., for an "Improvement in the mode of heating drying cylinders by steam."

"I claim, in combination, the closed heating cylinders, force pump, vacuum valve, and connecting tubes, substantially in the manner as and for the purpose set forth."

No. 24,820. Wm. Porter, of Mexico, N. Y., for an "Improved saw-gummer."

"I claim, 1, the arrangement and combination of the lever (*p*) with the sliding box (*g*) by means of the bar (*m*), so as to give a continued and downward action upon the cutter or bur (f^1), by the use of the coiled springs (g^1, g^1), thereby feeding the said cutter or bur, as and for the purpose herein described. 2, the arrangement and combination of the index pointers (h^1, h^1) with the index (B), and the bars (t, t^1) connected to the frame A, so as to give any required direction to the cutter or bur (f^1), as and for the purpose herein set forth. 3, I also claim the use of the set screw (b^1), by means of which the distance between the blocks (a^1, a^1) is adjusted proportionally to saw plates of different thicknesses, prior to being fastened thereto by the eccentric lever (*c*, *c*)."

No. 24,821. John A. Reed, of Jersey city, N. J., for an "Improvement in oscillating steam engines."

"What I claim is, the arrangement of the reversing valve E, in a steam chest, on the top of the bridge piece D, in combination with the separate passages in the bridge piece communicating with the chambers in the trunnion boxes, substantially as herein described."

No. 24,822. Benjn. Robbins, of Machias, Me., for an "Improved apparatus for working pumps."

"What I claim is, the combination and arrangement of the crank *f*, fly wheel J, lever H, walking beam E, and piston rods D, D, as and for the purposes set forth."

No. 24,823. Edwd. A. L. Roberts, of New York, N. Y., for an "Improved furnace for dental purposes."

"What I claim is, the arrangement and application of the double inclined grates *c*, *c*, subsantially as and for the purposes set forth. I also claim, in combination with such inclined grates, the part B, to contain the muffle C, retort,

&c. the whole arranged substantially as and for the purposes set forth."

No. 24,824. Chas. Rundlett, of Alden, and John W. Drummond, of Winslow, Me., for an "Improved hay press."

"What we claim is, the arrangement of the driving drum or windlass K, and the driving gear I, with reference to the press box B, and the platen screws D, E, and their pinions, disposed on the sides of the press box. We also claim the combination and arrangement of the connecting rods F, F, and rings G, G, with each platen, elevating screw E, and the bais of the colour of the press box, the whole being to operate as specified. We also claim the mode of applying the draft rope guide M to the press frame and the driving pulley, that is, by means of a fulcrum *r*, and the screw or projection made to enter the helical groove of the driving pulley."

No. 24,825. Henry Sauerbier, of Newark, N. J., for an "Improvement in edge planes."

"What I claim, and desire to secure is, the bevel wheel *e*, pinion *b*, worm *a*, wheel *o*, socket shaft *p*, pinion D, feed wheel C, cutter head B, gauges *i*, roller J, lever piece *t*, and corliss head Fig. 3, constructed, combined, and arranged substantially as herein-above set forth, and for the purposes herein-above specified."

No. 24,826. Morrill A. Shepard, of Orio, Ill., for an "Improved hydraulic motor."

"What I claim is, the combination of the vacuum tube *e* and tube *c*, for giving motion to the water wheel by the action of an undammed stream, substantially as herein described."

No. 24,827. T. Briggs Smith, of Marietta, Ohio, for an "Improved metallic bung."

"What I claim is, a metallic screw bung for casks or other wooden vessels for holding liquids, with a knife-like thread, and an elevation at any point between the threads, and a shoulder on the bung let into the stave, substantially as and for the purposes specified."

No. 24,828. Lewis Solomon, of New York, N. Y., for an "Improvement in furnaces."

"What I claim is, so constructing a desulphurizing furnace for roasting the ores of precious metals as that the heat shall be applied first beneath the sole of the furnace, and afterwards on the surface of the ore, when the same is combined with a chamber arranged in the base of the chimney for the reception of such volatilized particles of ore, &c., as may be driven off by heat, or carried over by the draught, substantially as described."

No. 24,829. M. B. Spafford, of Warsaw, N. Y., for an "Improvement in snow ploughs."

"I claim the vertical rotary shaft S, with its spiral wings W, W^1, for the removal of snow from the railroad track, as described."

No. 24,830. Obed S. Squire, of New Haven, Conn., for an "Improvement in lasts."

"What I claim is, the arrangement and combination of the longitudinal sections A, B, strips C, D, and bolt E, as and for the purposes herein shown and described."

No. 24,831. Geo. Stover, of New Britain, Conn., for an "Improved meat masher."

"What I claim is, the hollow or solid cylinders with pointed angular teeth, the base of which teeth has nearly in contact, and in combination therewith, the device for adjusting the cylinders, all constructed substantially as and for the purpose specified."

No. 24,832. John G. Treadwell, of Albany, N. Y., for an "Improvement in stoves."

"What I claim is, the combination of the division C, with the damper D and door E, when the same are arranged, substantially in the manner and for the purpose herein specified."

No. 24,833. John G. Treadwell, of Albany, N. Y., for an "Improvement in stoves."

"What I claim is, the employment of the hinged plate J, in combination with the hearth plate above, the two being used and operated in the manner and for the purpose herein specified."

No. 24,834. A. K. Tupper, of Clarkston, Mich., for an "Improved elbow for stove pipes."

"What I claim is, constructing the joint of pipes P and P^1, with the flange f^1, and the overlapping flange f^1, so as to allow the pipe to be adjusted at any desired angle, substantially as described."

No. 24,835. Albert Warren, of Jefferson, Ohio, for a "Machine for cutting heels and soles for boots and shoes."

"What I claim is, the bent knife *y*, resting on the shoulders *x*, *x*, *x*, *x*, *x*, of the movable slides, as herein described, and for the purposes herein specified. I also claim the knife Y, resting on the shoulders, as herein described, in combination with the knife Q, adjusted as herein set forth, and by which any size or shape of leathers may be cut, ready to be sewed or pegged upon the boot or shoe."

No. 24,836. W. A. Wood and I. M. Rosebrooks, of Hoosick Falls, N. Y., for an "Improvement in harvesters."

"What we claim is, in combination with a main frame, supported upon two driving wheels, and which frame carries the shaft D, and main cog wheel E, a second frame; hinged to said shaft D so that the crank shaft on said second frame shall always be in a radial line to the main cog wheel E, however much said second frame may vibrate on the main frame, as set forth."

No. 24,837. Geo W. Watrous, of Hartford, Conn., for an "Improved fastening for bedstead drapery."

"What I claim is, a new manufacture or a new and improved article of manufacture, a drapery fastening, constructed of a case A, hook C, link D, Fig. 1, substantially as and for the purpose described."

No. 24,838. Henry R. Worthington, of Brooklyn, N. Y., for an "Improvement in pumping engine."

"What I claim is, 1st, the combination herein set forth and exhibited, of two direct acting pumping engines, propelled by steam or other fluid, so arranged as that each engine shall actuate the inlet and outlet valves governing the motive power of the other, thereby ensuring the constant action of at least one pump piston upon the water, and relieving the action of the pump from shocks and concussions. 2nd, I claim the arrangement herein shown, of two distinct systems of levers adapted to the steam and exhaust valves of each engine, the one system to be operated upon, for producing motion, and for determining the duration of the repose of the piston at the termination of the stroke, the other for bringing the pistons to a state of rest, all substantially as herein explained and set forth."

No. 24,839. Jacob Beachler, of Anderson, Ind., assignor to himself and J. F. Brickley, of same place, for an "Improvement in rail road switches."

"I claim the obstruction or 'scotch' E, applied to the turn out, and connected with the switch, so as to be operated automatically by the movement of the same, substantially as and for the purpose set forth."

No. 24,840. Norman Bedell, of Albion, N. Y., assignor to Stephen P. Bedell, of same place, for an "Improvement in elbows for stove pipes."

"I claim, 1st, the employment of the metallic frame C, constructed and used substantially in the manner and for the purpose herein set forth. 2nd, the combination of the clasp D with the frame C, as constructed for the purpose of holding the miter edges of the pipe together, substantially as set forth."

No. 24,841. Henry F. Cox, of Jersey City, N. J., and Alexr. Millar, of New York, N. Y., assignors to Henry F. Cox, aforesaid, for an "Improved machine for polishing corks."

"We claim the cork polishing machine, consisting of a series of rollers, roughened by a surface of pumice stone, or equivalent abrading material, and a brush or brushes, acting in conjunction, to polish the cylindrical portion of machine made corks, as described."

No. 24,842. Levi Dodge, of Waterford, N. Y., assignors to himself and Dodge and Blake, of same place, for an "Improvement in dies for shaping articles in metal."

"What I claim as my improvement in the forming of articles of iron or other metal, when such articles are to be

shaped by a simultaneous action or pressure of dies, on several or all sides, is the employment of the movable dies *e*, operating substantially upon the principles herein set forth."

No. 24,843. Moses H. Gragg, of South Boston, Mass., assignor to himself and Thos. A. Page, of same place, for an "Improvement in corn huskers."

"I claim the arrangement and combination of the small intermediate conical roller C, larger conical rollers A, B, guard G, and hopper D, as and for the purpose herein shown and described."

No. 24,844. Joseph C. Henderson, of Albany, N. Y., assignor to Rathbone and Co., of same place, for an "Improvement in stoves."

"I claim first, the air space *m*, between the oven and the fire, when so constructed and arranged, that a descending draft, the whole width of the stove, passes through said space, and thence to the fire, for promoting combustion, and at the same time, rendering the temperature of the oven more uniform, as set forth. Second, I claim the damper *u*, at the front end of the oven, in connection with the descending flue between the front plate and fire-box, whereby the oven can be entirely closed when the stove is in use for roasting, as specified."

No. 24,845. Lorenzo Lake, of Middlebury, Pa., assignor to himself and Wm. Patton, of same place, for an "Improved churn."

"I claim the dasher made in the manner as described in my specification and shown in drawings at L, when the same shall be operated by the devices as described, for the purpose herein set forth."

No. 24,846. Robt. McWilliams, of Philadelphia, Pa., assignor to Saml. H. Hoffman, of same place, for an "Improvement in journal boxes for rail road cars."

"I claim first, the upper half A, of the box, with its socket, formed by the flanges *h*, in combination with the lower half B of the box, when the two halves are arranged substantially as set forth, so that on adjusting the lower half to its place, it may assume the position shown in Fig. 1, and so that when adjusted, the end *w* of the oil chamber shall be close to the axle, as and for the purpose specified. Secondly, the self-adjusting leather packing E and the metal plate F, when both are dependent upon the lower half of the box for their proper position within the other half, and when they are otherwise arranged, in respect to both upper and lower half of the box, as and for the purpose set forth."

No. 24,847. Louis Planer, of New York, N. Y., assignor to himself and Joseph Auger, of same place, for an "Improvement in sewing machines."

"I claim the combination of the peculiarly constructed notch *a*, *b*, *c*, which is confined to the upper half of the shuttle, and leaves the lower half intact, with a driver having a single horn or finger, which, entering the said notch, constitutes a guard, to prevent the flying up of the heel of the shuttle, substantially as herein described."

No. 24,848. Geo. W. Richardson, of Grayville, Ill., assignor to himself and Geo. M. Weed, of same place, for an "Improvement in harvesting machines."

"I claim the application of the rack (*d*), upon the reciprocating bar D, D, and pinion (*i*), upon the vertical shaft H, connected and arranged for operating the two sickles at the same time, by the cam wheel (*c*), in manner described."

No. 24,849. Lyman L. Thomas, of Dighton, Mass., assignor to the Dighton Furnace Company, for an "Improved damper for cooking stoves."

"I claim the damper D, substantially as herein set forth, or in other words, I claim a damper placed in the outlet of the return flue of a cooking stove, near the termination of said flue, and of such a form that when secured or hinged at its lower end to the side of the flue opposite the oven, and when partially or fully closed, it shall stand in a position more or less diagonal across the flue, and of such a length that it can never be moved more than twenty-five degrees from a perpendicular."

Re-issues.

Lewis Miller, of Canton, Ohio, assignor to C. Aultman and Co., for an "Improvement in harvesters."—Patented 4th May, 1858.—Re-issued 19th July, 1859.

"I claim hinging the finger beam to the main frame, so that it can be folded up thereon, substantially as herein described."

Lewis Miller, of Canton, Ohio, assignor to C. Aultman and Co., for an "Improvement in harvesters."—Patented 4th May, 1858.—Re-issued 19th July, 1859.

"I claim hinging the coupling arm to the frame at one side of the main axle, and supporting it by a brace, hinged to the frame on the opposite side of the axle, in such manner as to obtain among other things a wide basis for bracing on a short frame without interfering with the folding up the finger-beam against or upon the frame to render the machine more portable, substantially as described."

Lewis Miller, of Canton, Ohio, assignor to C. Aultman and Co., for an "Improvement in harvesters."—Patented 4th May, 1858.—Re-issued 19th July, 1859.

"I claim the combination of the crank and the bearing for its journal, the cutter, the coupling arm, and the hinge of its inner end, with a hanger which is made the common support for the hinge of the coupling arm, and the journal of the crank, arranged and operating substantially as herein set forth."

Lewis Miller, of Canton, Ohio, assignor to C. Aultman and Co., for an "Improvement in harvesters."—Patented 4th May, 1858.—Re-issued 19th July, 1859.

"I claim, the method of folding the finger-beam upon the frame by aid of the coupling-arm with a lifting-lever and cord, or the equivalent thereof, substantially as herein set forth."

Lewis Miller, of Canton, Ohio, assignor to C. Aultman and Co., for an "Improvement in harvesters."—Patented 4th May, 1858.—Re-issued 19th July, 1859.

"I claim, first, the combination of a knuckle with the joint which connects the finger beam, and coupling arm, and the lever for raising the finger beam off the ground, the several parts being constructed and arranged as set forth. Second, the combination of a lever arranged to turn on a pivot and to vibrate laterally, with notches and a catch to support the lever at any required elevation, together with the coupling arm and finger beam suspended to it, substantially as herein set forth."

Lewis Miller, of Canton, Ohio., assignor to C. Aultman and Co., for an "Improvement in harvesters."—Patented 4th May, 1858.—Re-issued 19th July, 1859.

"I claim the arrangement of the hand lever R, driver's seat (V), and foot lever (P), whereby the driver may, when necessary, employ both his hands and his feet to raise the finger-beam, substantially as set forth."

Lewis Miller, of Canton, Ohio, assignor to C. Aultman and Co., for an "Improvement in harvesters."—Patented 4th May, 1858.—Re-issued 19th July, 1859.

"I claim the combination of the spring pawl and the teeth with the gib and key of the connecting rod, the connecting rod and cutter, substantially as herein set forth."

Cornelius Aultman and Lewis Miller, of Canton, O., assignors by Mesne Assignments to C. Aultman and Co., for an "Improvement in mowing machines."—Patented 17th June, 1856.—Re-issued 19th July, 1859.

"We claim the combination of the shoe which carries the end of the finger-beam next the main frame with a hinged brace-bar, whose axis of motion at the end connected to the main frame is in a line with that of the corresponding end of the hinged coupling-arm, substantially as herein set forth."

CORNELIUS AULTMAN and LEWIS MILLER, of Canton, O., assignors by Mesne Assignment to C. Aultman and Co., for an "Improvement in mowing machines."—Patented 17th June, 1856.—Re-issued 19th July, 1859.

"We claim the combination with the hinged coupling-arm of a hinged brace, whose axis of motion at the end next the main frame coincides with that of the corresponding end of the coupling-arm, substantially as herein set forth."

CORNELIUS AULTMAN and LEWIS MILLER, of Canton, Ohio, assignors by Mesne Assignment to C. Aultman and Co., for an "Improvement in mowing machines."—Patented 17th June, 1856.—Re-issued 19th July, 1859.

"We claim the construction and arrangement of the finger-beam and the main frame so that the beam may be turned on its hinge into an upright position, and then raised and leaned against the frame to elevate it out of the reach of obstructions, and distribute the weight more equally upon the carrying wheels when the machine is to be removed from one place to another where the mowing is to be done, substantially as described."

CORNELIUS AULTMAN and LEWIS MILLER, of Canton, O., assignors by Mesne Assignment to C. Aultman and Co., for an "Improvement in mowing machines."—Patented 17th June, 1856.—Re-issued 19th July, 1859.

"We claim the combination of a hinged coupling-arm, the finger-beam, and a catch, substantially as described, whereby the finger-beam can be turned, raised, and held up to render the removal of the machine from place to place more convenient and secure."

CORNELIUS AULTMAN and LEWIS MILLER, of Canton, O., assignors by Mesne Assignment to C. Aultman and Co., for an "Improvement in mowing machines."—Patented 17th June, 1856.—Re-issued 19th July, 1859.

"We claim mounting the two driving wheels and one main gear wheel upon a common axle in combination with a ratchet wheel for each driving, each ratchet wheel fitted with a pawl that can be made to stand in or out of gear with the ratchet-teeth at will, the whole arranged and operating substantially as described."

CORNELIUS AULTMAN and LEWIS MILLER, of Canton, O., assignors by Mesne Assignment to C. Aultman and Co., for an "Improvement in mowing machines."—Patented 17th June, 1856.—Re-issued 19th July, 1859.

"We claim the combination of a ratchet wheel, a ratchet pawl, a spring acting on the pawl, and a bearing pin, or the equivalent thereof, for the spring with the driving wheel and the axle of the main-gear wheel, whereby one spring is made to perform the two duties of holding the pawl both in and out of gear with the ratchet wheel, substantially as described."

LEWIS MILLER, of Canton, Ohio, assignor to C. Aultman and Co., for an "Improvement in harvesters."—Patented 4th May, 1858.—Re-issued 19th July, 1859.

"I claim the combination of the inner shoe with a leading wheel, arranged substantially as herein set forth."

LEWIS MILLER, of Canton, O., assignor to C. Aultman and Co., for an "Improvement in harvesters."—Patented 4th May, 1858.—Re-issued 19th July, 1859.

"I claim the combination with the shoe of an adjustable sole of the peculiar double runner form herein described, whereby the sole can be adjusted directly to the heel of the shoe without the intervention of a link rod and joint, as herein set forth."

MCCLINTOCK YOUNG, jr., of Frederick, Md., for an "Improvement in harvesters."—Patented 21st September, 1858.—Re-issued 19th July, 1859.

"I claim connecting the handle of the rake to a transverse shaft in such a manner that the rotation of the said shaft when aided by the curved guiding rod R, or its equivalent will impart the within-described movements to said rake, viz.: a sweeping axial movement from the inner edge of the sector-shaped platform, (or a little beyond the same) over to the forward portion of said platform, and at that point instantly changing to an axial horizontal movement across the platform to the starting point, and so onwards in regular succession, substantially as herein set forth."

SUPPLEMENT to the SERIES of LETTERS PATENT and SPECIFICATIONS of LETTERS PATENT for INVENTIONS recorded in the Great Seal Patent Office, and granted between the 1st March (14 Jac. 1.) A.D. 1617, and the 1st October (16 Vict.) A.D. 1852; consisting for the most part of Reprints of scarce Pamphlets, descriptive of the early patented Inventions comprised in that Series. Edited by BENNET WOODCROFT, Superintendent of Specifications, etc. In one vol., price 9*s.* 6*d.*, or each Tract separately at the price affixed.

CONTENTS OF VOL. I.

1. Metallica; or, the treatise of Metallica, briefly comprehending the doctrine of diverse new metallical inventions, &c. By SIMON STURTEVANT. (*Letters Patent, dated 29th February*, 1611.) Price 1*s.* 4*d.*
2. A Treatise of Metallica, but not that which was published by Mr. Simon Sturtevant, upon his Patent, &c. By JOHN ROVINSON (*Letters Patent, granted A.D.* 1612.) Price 4*d.*
3. A Commission directed to Sir Richard Wynne and others to inquire upon oath whether NICHOLAS PAGE or Sir NICHOLAS HALSE was the first inventor of certaine kilnes for the drying of malt, &c. &c. (*Letters Patent, Nos.* 33 *and* 85, *respectively dated 8th April*, 1626, *and 23rd July*, 1635.) Price 2*d.*
4. DUD DUDLEY'S Metallum Martis; or iron made with pit-coale, sea-coale, &c. (*Letters Patent, Nos.* 18 *and* 117, *respectively dated 22nd February*, 1620, *and 2nd May*, 1638.) Price 8*d.*
5. Description of the nature and working of the patent Water-scoop Wheels invented by WILLIAM WHELER, as compared with the raising wheels now in common use. By J. W. B. Translated from the Dutch by Dr. Tolhausen. (*Letters Patent, No.* 127, *dated 24th June*, 1642.) Price 2*s.*
6. An exact and true definition of the stupendous Water-commanding Engine, invented by the Right Honourable (and deservedly to be praised and admired) EDWARD SOMERSET, Lord Marquis of WORCESTER, &c. &c. (*Stat.* 15 *Car. II. c.* 12. *A.D.* 1663.) Price 4*d.*
7. Navigation Improved; or the art of rowing ships of all rates in calms, with a more easy, swift, and steady motion than oars can. By THOMAS SAVERY. (*Letters Patent, No.* 347, *dated 10th January*, 1696.) Price 1*s.*
8. The Miner's Friend; or an engine to raise water by fire described, &c. By THOMAS SAVERY. (*Letters Patent, No.* 356, *dated 25th July*, 1698, *and Stat.* 10 *&* 11 *Will. III. c.* 31, *A.D.* 1699.) Price 1*s.*
9. Specimina Ichnographica; or a brief narrative of several new inventions and experiments, particularly the navigating a ship in a calm, &c. By JOHN ALLEN, M.D. (*Letters Patent, No.* 513, *dated 7th August*, 1729.) Price 8*d.*
10. A description and draught of a new-invented Machine for carrying vessels or ships out of or into any harbour, port, or river, against wind and tide, or in a calm, &c. By JONATHAN HULLS. (*Letters Patent, No.* 556, *dated 21st December*, 1736.) Price 8*d.*
11. An historical account of a new method for extracting the foul air out of ships, &c., with the description and draught of the machines by which it is performed, &c. By SAMUEL SUTTON, the Inventor. To which are annexed two relations given thereof to the Royal Society by Dr. Mead and Mr. Watson, (*Letters Patent, No.* 602, *dated 16th March*, 1744.) Price 1*s.*

COLONIAL PATENTS.—Information as to the Mode of obtaining Protection for Inventions in the Colonies; contained in Communications from the Governors, &c. of the different British Colonies in answer to the Application of Mr. W. J. CURTIS for a Patent. Price 1*s.*

A Free Library and Reading Room, in connection with the Office of the Commissioners of Patents, is open to the Public daily from 10 till 4 o'clock.

In addition to the Printed Specifications, Indexes, and other publications of the Commissioners, the Library includes a Collection of the leading British and Foreign Scientific Journals, and text-books in the various departments of science and art. A printed Catalogue of the Library is on sale.

Note.—The Commissioners' publications may be consulted daily in the Library of the British Museum; in the Library of the Society of Arts; and in the Free Libraries of the following Towns and Cities:—

Aberdeen (*Public Library Town House*).
Accrington (*Mechanics' Institution, Bank Street*).
Belfast (*Harbour Office, Corporation Square*).
Beverley (*Guildhall*).
Birmingham (*Birmingham and Midland Institute, Cannon Street*).
Bolton-le-Moors (*Public Library, Exchange Buildings*).
Bradford, Yorkshire (*Borough Accountant's Office, Corporation Buildings, Swain Street*).
Brighton (*Town Hall*).
Bristol (*City Library, King Street*).
Burnley (*Office of the Burnley Improvement Commissioners*).
Cambridge (*Free Library, Jesus Lane*).
Canterbury (*Municipal Museum, Guildhall Street*).
Carlisle (*Free Library, Police Office*).
Chester (*Town Hall, Northgate Street*).
Cork (*Royal Cork Institution, Nelson Place*).
Crewe (*Railway Station*).
Darlington (*Mechanics' Institute, Skinnergate*).
Dorchester.
Drogheda.
Dublin (*Royal Dublin Society, Kildare Street*).
Dundalk.
Falmouth (*Public Library, Church Street*).
Gateshead (*Mechanics' Institute*).
Gorton (*Railway Station*).
Glasgow (*Stirling's Library, Miller Street*).
Grimsby, Great (*Mechanics' Institution, Victoria Street*).
Hanley, Staffordshire Potteries (*Town Hall*).
Hartlepool, West (*Literary and Mechanics' Institution, Church Street*).
Hertford (*Public Library, Town Hall*).
Huddersfield (*Commissioners' Offices, No. 1, South Parade*).
Hull (*Mechanics' Institute, George Street*).
Ipswich (*Museum Library, Museum Street*).
Keighley (*Mechanics' Institute, North Street*).
Kidderminster (*Public Free Library, Public Buildings, Vicar Street*).
Kings' Lynn, Norfolk (*Stanley Library, Athenæum*).
Lancaster (*Mechanics' Institute, Market Street*).
Leamington Priors (*Public Library, Town Hall*).
Leeds (*Town Clerk's Office, Town Hall*).
Leicester (*Corporation Library, Town Hall*).
Limerick.
Liverpool (*Free Public Library, Duke Street*).
——— (*Royal Institution*).
London (*British Museum*).
——— (*Society of Arts, John Street, Adelphi*).
Macclesfield (*Useful Knowledge Society*).
Maidstone.
Manchester (*Chetham Hospital*).
——— (*Free Library, Camp Field*).
Montrose.
Newark, Nottingham (*Mechanics' Institute, Middle Gate*).
Newcastle-upon-Tyne (*Literary and Philosophical Society*).
Newport, Monmouth (*Commercial Room, Town Hall*)
Northampton.
Norwich (*Free Library, St. John's, Maddermarket*).
Nottingham (*Corporation Rooms, St. Peter's Church side*).
Oxford (*Public Free Library, Town Hall*).
Paisley (*Government School of Designs, Gilmour Street*).
Plymouth (*Mechanics' Institute, Princess Square*).
Preston (*Dr. Shepherd's Library, the Institution, Avenham*).
Reading (*Literary, Scientific and Mechanics' Institution, London Street*).
Rochdale (*Commissioners Room, Smith Street*).
Rotherham (*Board of Health Offices, Howard Street*).
Salford (*Peel Park*).
Sheffield (*Free Library, Surrey Street*).
Shrewsbury (*The Public Museum, College Street*).
Southampton (*Corporation Library, Audit House*).
Stirling (*Burgh Library, Town House, Broad Street*).
Stockport (*Court House, Vernon Street, Warren Street*).
Sunderland (*Corporation Museum, Athenæum, Fawcett Street*).
Tiverton.
Wakefield (*Mechanics' Institution, Barston Square*).
Warrington (*The Museum and Library*).
Waterford (*Town Hall, The Mall*).
Wednesbury (*Board of Health Offices*).
Wexford (*Mechanics' Institute, Crescent Quay*).
Wigan.
Wolverhampton (*School of Practical Art, Darlington Street*).
Wolverton (*Railway Station*).
Yarmouth, Norfolk (*Public Library, South Quay*).
York (*Lower Council Chamber, Guildhall*).

The Commissioners' publications have also been presented to the following Public Offices, Seats of Learning, British Colonies, and Foreign States:—

Public Offices, Institutions, &c.

Admiralty, Department of the Surveyor of the Navy.
——— Steam Branch.
——— Deptford Dockyard.
——— Woolwich ditto.
——— Chatham ditto.
——— Sheerness ditto.
——— Portsmouth ditto.
——— Devonport ditto.
——— Pembroke ditto.
Artillery Institute, Woolwich.
Board of Trade, Whitehall.
Ordnance Office, Pall Mall.
——— Small Arms Factory, Enfield.
War Office, Pall Mall.
Government School of Mines, &c., Jermyn St., Piccadilly.
Dublin Castle, Dublin.
Rolls Office, Chancery (Four Courts), Dublin.
Office of Chancery, Edinburgh.
East India House, Military Stores, Leadenhall Street.
Incorporated Law Society Chancery Lane, London.

Seats of Learning.

Cambridge University.
Trinity College, Dublin.
Queen's College, Galway.
University College, London.

British Colonies.

Malta.
Cape of Good Hope.
Mauritius.
India—Bengal.
North-West Provinces.
Madras.
Bombay.
Ceylon.
Victoria—Patent Office, Melbourne.
Parliamentary Library, Melbourne.
New South Wales.
South Australia.
Tasmania.
New Zealand.
Newfoundland.
Canada—Quebec.
Toronto.
New Brunswick.
Prince Edward Island.
Antigua.
Barbados.
Jamaica.
Trinidad.
British Guiana.

Foreign States.

Austria—Handels Ministerium, Vienna.
Bavaria—Königliche Bibliothek, Munich.
Belgium—Ministère de l'Intérieur, Brussels.
France—Bibliothèque Impériale, Conservatoire des Arts et Métiers, Hôtel de Ville. } Paris.
Gotha—Ducal Friedenstein Collection.
Hanover—Ministerium des Innern, Hanover.
Netherlands—Ministère de l'Intérieur, The Hague.
Prussia—Handels Ministerium, Berlin.
Russia—Bibliothèque Impériale, St. Petersburg.
Sardinia—Ufficio delle Privative, Turin
Saxony—Polytechnische Schule, Dresden.
Sweden—Stockholm.
United States—The Patent Office, Washington.
The Astor Library, New York.
The State Library, Albany.
The Franklin Institute, Philadelphia.
The Free Library, Boston.
The Philadelphia Library Company.
Wurtemberg—Bibliothek des Musterlagers, Stuttgart.

PATENT LAW AMENDMENT ACT, 1852.—All Specifications, Indexes, &c., printed by order of the Commissioners of Patents, are sold at the Great Seal Patent Office, 25, Southampton Buildings, Holborn.

THE PATENT LAW AMENDMENT ACTS (15 & 16 Vict., cap. 83; 16 Vict., cap. 5; and 16 & 17 Vict., cap. 115); with the Rules and Regulations made by the Commissioners of Patents for Inventions, and by the Lord Chancellor and the Master of the Rolls, under the Acts 15 and 16 Vict., c. 83, and 16 & 17 Vict., c. 115, accompanied by Specimen Forms of the Provisional Documents printed on sheets of the prescribed size. Price 6*d*.

THE CHRONOLOGICAL INDEX of PATENTS of INVENTION, from March 2, 1617 14 James I.), to September 30, 1852 (16 Vict.), 2 vols. Price 30*s.*

THE ALPHABETICAL INDEX of PATENTEES of Inventions for the above period. Price 20*s.*

THE SUBJECT-MATTER INDEX of PATENTS for the same period — *Second Edition*—to which is prefixed a Key of Terms and Phrases. 2 vols. Price 2*l.* 16*s.*

A Key to the *First Edition* of the above work is also published separately, and may be had on application.

THE CHRONOLOGICAL INDEXES of APPLICATIONS for PATENTS and PATENTS GRANTED from the 1st October to the 31st December, 1852, and from the 1st January to the 31st December, 1853, in one volume. Price 11*s.*

THE ALPHABETICAL INDEXES for the above periods, in one volume. Price 13*s.*

THE SUBJECT-MATTER INDEX, from 1st October to 31st December, 1852. Price 9*s.*

THE SUBJECT-MATTER INDEX, from 1st January to 31st December, 1853. Price 16*s.*

THE CHRONOLOGICAL INDEX of APPLICATIONS for PATENTS and PATENTS GRANTED from the 1st January to the 31st December, 1854. Price 6*s.*

THE CHRONOLOGICAL INDEX for the above period. Price 6*s.* 6*d.*

THE SUBJECT-MATTER INDEX for the above period. Price 19*s.* 6*d.*

THE ALPHABETICAL INDEX of APPLICATIONS for PATENTS and PATENTS GRANTED, from the 1st January to the 31st December, 1858. Price 8*s.*

In course of Publication, by Order of the Commissioners of Patents.

ABRIDGMENTS (in Classes, and Chronologically arranged) of all SPECIFICATIONS of PATENTED INVENTIONS, from the earliest enrolled to those published under the Act of 1852.

These books are of 12mo size, and as each is limited to inventions of one class only, they can be sold at prices sufficiently moderate to enable the humblest inventor to examine for himself whether his discovery has been previously patented or not.

At the foot of each abstract are given references to notices of the inventions in scientific and other works, and to the reports of law proceedings for infringements, &c. &c. &c.

The classes already published are,—

1. Drain Tiles and Pipes, price 6*d.*
2. Sewing and Embroidering, price 6*d.*
3. Manure, price 6*d.*
4. Preservation of Food, price 6*d.*
5. Marine Propulsion, price 4*s.*
6. Manufacture of Iron and Steel, price 5*s.*
7. Aids to Locomotion, price 1*s.*
8. Steam Culture, price 2*s.*
9. Watches, Clocks, and other Timekeepers, price 1*s.* 6*d.*
10. Fire-arms and other Weapons, Ammunition, and Accoutrements, price 6*s.* 6*d.*
11. Paper.—Part I. Manufacture of Paper, Pasteboard, and Papier Mâché, price 3*s.*
12. Paper.—Part II. Cutting, Folding, and Ornamenting; including Envelopes, Cards, Paper-hangings, &c., price 2*s.*
13. Typographic, Lithographic, and Plate Printing, price 7*s.*
14. Bleaching, Dyeing, and Printing Yarns and Fabrics, price 9*s.* 6*d.*

The following are in the press:—

Electricity and Magnetism: their Generation and Applications.
Preparation of Fuel, and Apparatus for its Combustion.
Manufacture and Applications of India Rubber, Gutta Percha, &c.; including Air, Fire, and Water Proofing.
Production and Applications of Gas.
Steam Engines.
Metals and Alloys.

B. Woodcroft.

The above, and all other works published by the Commissioners of Patents, are now on sale at the Great Seal Patent Office, 25, Southampton Buildings, Holborn.

This Journal is published on the evenings of Tuesday and Friday, and will be forwarded, post free, to Subscribers. — Terms, 30*s.* per annum. — Subscriptions received at the Great Seal Patent Office, where also single copies, at twopence each, may be obtained.

No. 584. TUESDAY, AUGUST 9, 1859. Price 2d.

Notices to Proceed.

NOTICE is hereby given, that

756. RICHARD BAKER, of Liverpool, in the county of Lancaster, Watch Maker, has given notice at the Office of the Commissioners of his intention to proceed with his application for Letters Patent for the invention of "Improvements in chronometers, watches, and other timekeepers."

As set forth in his petition, recorded in the said office on the 25th day of March, 1859.

767. And JOHN CAMPBELL EVANS and PETER SOAMES, of the Morden Iron Works, East Greenwich, in the county of Kent, Engineers, have given the like notice in respect of the invention of "Improvements in apparatus for superheating steam."

771. And JOSEPH BUCKLEY, of Horwich, in the county of Lancaster, Calico Printer, ORLANDO GREENHALGH, of the same place, Manager, and ROBERT HUTCHINSON, of the same place, Mechanic, have given the like notice in respect of the invention of "Improvements in machinery or apparatus for printing woven f brics."

As set forth in their respective petitions, both recorded in the said office on the 26th day of March, 1859.

773. And CHARLES FRÉDERIC VASSEROT, of 45, Essex Street, Strand, London, Patent Agent, has given the like notice in respect of the invention of "An improved diving apparatus."—A communication from Philippe Bigard, residing in Lyons, in the empire of France.

As set forth in his petition, recorded in the said office on the 28th day of March, 1859.

781. And JOHN WILLIAM KELLY, Civil Engineer, of the town of Ennis, in the county of Clare, Ireland, has given the like notice in respect of the invention of "Improvements in gas burners."

As set forth in his petition, recorded in the said office on the 29th day of March, 1859.

801. And WILLIAM SMITH, of King Street, Smithfield, in the city of London, and EDMUND SMITH, of Hamburgh, Gas Meter Manufacturers, have given the like notice in respect of the invention of "Improvements in means or apparatus for the purpose of regulating the flow or passage of fluids."

As set forth in their petition, recorded in the said office on the 30th day of March, 1859.

802. And JOHN LACY, Cotton Spinner, and SAMUEL SIMPSON and HENRY SMITH, Managers, all of Travis Holme Mill, Walsden, near Todmorden, in the county of Lancaster, have given the like notice in respect of the invention of "Certain improvements in machinery for preparing and spinning cotton and other fibrous materials."

804. And ROBERT CRAIB ROSS, of Glasgow, in the county of Lanark, North Britain, Engineer, has given the like notice in respect of the invention of "Improvened apparatus for cultivating land."

808. And DAVID BLAIR WHITE, of Newcastle-upon-Tyne, in the county of Northumberland, Doctor of Medicine, has given the like notice in respect of the invention of "An improved indicating guage-lead or plummet."

As set forth in their respective petitions, all recorded in the said office on the 31st day of March, 1859.

834. And THOMAS WILLIAMS, of Aberdaron, in the county of Caernarvon, Engineer, and JOHN HOBSON FULLER, of 70, Hatton Garden, in the county of Middlesex, Tool Manufacturer, have given the like notice in respect of the invention of "Improvements in screw stocks and dies."

As set forth in their petition, recorded in the said office on the 2nd day of April, 1859.

836. And JOSEPH ECCLES, of Blackburn, in the county of Lancaster, Cotton Manufacturer, has given the like notice in respect of the invention of "Improvements in machinery for making bricks, tiles, and other articles formed of plastic materials."

840. And JAMES HENRY BURTON, of Enfield Lock, in the county of Middlesex, has given the like notice in respect of the invention of "Improvement in the manufacture of barrels for small firearms."

843. And CHAMPION RUSSELL, of Stubbers, near Romford, in the county of Essex, Esquire, has given the like notice in respect of the invention of "An improvement in the working of marine engines."

846. And EDMUND MOREWOOD, of Enfield, in the county of Middlesex, has given the like notice in respect of the invention of "Improvements in coating metals."

847. And DAVID SOWDEN, of Bradford, in the county of York, Jacquard Machine Maker, has given the like notice in respect of the invention of "Improvements in Jacquard machines employed for weaving figured goods or fabrics."

As set forth in their respective petitions, all recorded in the said office on the 4th day of April, 1859.

---

857. And NICOLAS LIBOTTE, Mechanician, of No. 33, Boulevart, Saint Martin, Paris, empire of France, has given the like notice in respect of the invention of "An improved safety apparatus to be applied to cages in the drawing of coals."

As set forth in his petition, recorded in the said office on the 5th day of April, 1859.

---

862. And WILLIAM OWEN, of Rotherham, in the county of York, Engineer, has given the like notice in respect of the invention of "Improvements in the manufacture of railway wheels and tyres, and in the apparatus employed therein."—Partly a communication from Robert Owen, residing at San Ge Ronimo, Central America.

863. And JOSEPH ROGERS, of No. 9, Queen Square, Bartholomew Close, city of London, Rope Maker, and EDWARD JOHNSON TWEED, of No. 22, Castle Street, Falcon Square, also in the city of London, have given the like notice in respect of the invention of "Improvements in coating conducting wires used for electric telegraphic purposes."

As set forth in their respective petitions, both recorded in the said office on the 6th day of April, 1859.

---

871. And JOHN GARRETT, of Arundel Place, Haymarket, in the county of Middlesex, Tinman, has given the like notice in respect of the invention of "Improvements in the construction of goblets jugs, and other like articles."

872. And JAMES RAWLINGS, of Carlton Hill East, in the county of Middlesex, Gentleman, has given the like notice in respect of the invention of "An improved construction of boot tree."

As set forth in their respective petitions, both recorded in the said office on the 7th day of April, 1859.

873. And JOHN TALBOT PITMAN, of the American and European Patent Offices, No. 67, Gracechurch Street, London, has given the like notice in respect of the invention of "Improvement in the construction and use of fire works for signals."—A communication from abroad by Martha J. Coston, of the city of Washington, D. C., in the United States of America.

878. And MARC ANTOINE FRANÇOIS MENNONS, of the British and Foreign Patent Offices, No. 39, Rue de l'Echiquier, Paris, in the empire of France, has given the like notice in respect of the invention of "An improved articulated joint for water, gas, and steam pipes."—A communication from Victor Doré, a person resident in Paris, France.

879. And MARC ANTOINE FRANÇOIS MENNONS, of the British and Foreign Patent Offices, No. 39, Rue de l'Echiquier, Paris, in the empire of France, has given the like notice in respect of the invention of "Improvements in the treatment of mineral phosphates of lime."—A communication from B. de Siebenthal, a person residing in Paris.

As set forth in their respective petitions, all recorded in the said office on the 8th day of April, 1859.

---

890. And JOHN HAWKINS, of Lisle Street, London, in the county of Middlesex, and of Walsall, in the county of Stafford, Bit, Spur, and Stirrup Manufacturer, has given the like notice in respect of the invention of "Certain improvements in the manufacture of stirrups, bits, spurs, buckles, and other such like articles, connected with harness and saddlery."

As set forth in his petition, recorded in the said office on the 9th day of April, 1859.

---

912. And PATRICK AITCHISON, Brass Founder, of Sheffield, in the county of York, has given the like notice in respect of the invention of "Improvements in taps."

918. And MATHIEU CASTAY, of Paris, in the empire of France, Clergyman, has given the like notice in respect of the invention of "Improvements in metallic bridges."

As set forth in their respective petitions, both recorded in the said office on the 12th day of April, 1859.

---

933. And JOHN HUGHES, WILLIAM WILLIAMS, and GEORGE LEYSHON, of Brockmoor Works, Brierley Hill, Staffordshire, have given the like notice in respect of the invention of "Improvements in the manufacture of tin and terne plates."

As set forth in their petition, recorded in the said office on the 13th day of April, 1859.

---

982. And WILLIAM PARSONS, of Pont ar Tawe, near Swansea, in the county of Glamorgan, Tin Plate Manufacturer, has given the like notice in respect of the invention of "Improvements in preparing sheet iron and other metal sheets for japanners and other uses."

As set forth in his petition, recorded in the said office on the 18th day of April, 1859.

1010. And THOMAS SEAVILLE TRUSS, of Darlington, in the county of Durham, Civil Engineer, has

given the like notice in respect of the invention of "Improvements in the construction of pipes, and in the mode of joining the same."
As set forth in his petition, recorded in the said office on the 21st day of April, 1859.

1028. And WILLIAM STEVENSON, of Johnstone, in the county of Renfrew, North Britain, Manager to George Houstoun and Company, has given the like notice in respect of the invention of "Improvements in spinning, doubling, and manufacturing cotton and other fibrous materials."

1038. And WILLIAM EDWARD NEWTON, of the Office for Patents, 66, Chancery Lane, in the county of Middlesex, Civil Engineer, has given the like notice in respect of the invention of "Improvements in sewing machines."—A communication from abroad by Robert Halstead Morford and Anthony Denton Morford, of New York.
As set forth in their respective petitions, both recorded in the said office on the 25th day of April, 1859.

1084. And JOHN DARLINGTON, of No. 36, Cannon Street, in the city of London, county of Middlesex, Mining Engineer, has given the like notice in respect of the invention of "Improvements in zinc retort furnaces."
As set forth in his petition, recorded in the said office on the 30th day of April, 1859.

1120. And JACOB GEOGHEGAN WILLANS, of 2, Clarence Place, Belfast, has given the like notice in respect of the invention of "Improvements in utilizing bog stuff or peat when applied for treating metals and certain mineral and alkaline substances."
As set forth in his petition, recorded in the said office on the 4th day of May, 1859.

1162. And ALFRED VINCENT NEWTON, of the Office for Patents, 66, Chancery Lane, in the county of Middlesex, Mechanical Draughtsman, has given the like notice in respect of the invention of "An improved construction of lamp."—A communication from abroad by William Henry Racey, of St. Augustine, St. John's county, state of Florida, in the United States of America.
As set forth in his petition, recorded in the said office on the 9th day of May, 1859.

1180. And THOMAS PETER BENNETT, of Gilnow Mills, near Bolton-le-Moors, in the county of Lancaster, Manager, has given the like notice in respect of the invention of "Certain improvements in, or applicable to, carding engines."
As set forth in his petition, recorded in the said office on the 11th day of May, 1859.

1297. And CHARLES EDWARDS AMOS, of the Grove, in the borough of Southwark, Engineer, has given the like notice in respect of the invention of "Improved apparatus for raising vessels for repair, and for floating vessels in shallow water."
As set forth in his petition, recorded in the said office on the 25th day of May, 1859.

1308. And JAMES CORN BENT, of Birmingham, in the county of Warwick, Gas Meter Manufacturer, has given the like notice in respect of the invention of "Improvements in gas-meters."
As set forth in his petition, recorded in the said office on the 26th day of May, 1859.

1313. And PATRICK AITCHISON, Brass Founder, and THOMAS BINKS, Plumber, both of Sheffield, in the county of York, have given the like notice in respect of the invention of "Improvements in self-acting and other water-closets, and in flushing apparatus connected therewith."
As set forth in their petition, recorded in the said office on the 27th day of May, 1859.

1538. And GEORGE DAWES, of Milton Iron Works, in the parish of Hoyland, in the county of York, Ironmaster, and CHARLES JOHN CARR, of Hoyland, aforesaid, Engineer, have given the like notice in respect of the invention of "Certain improvements in atmospheric and vacuum hammers and stamps, part of which improvements is also applicable to steam and other engines."
As set forth in their petition, recorded in the said office on the 28th day of June, 1859.

1648. And JAMES DIBLE, of Northam, in the county of Hants, Shipwright, and WILLIAM HENRY GRAVELEY, of Upper East Smithfield, in the county of Middlesex, Engineer, have given the like notice in respect of the invention of "Improvements in apparatuses for ventilating and lighting ships."
As set forth in their petition, recorded in the said office on the 11th day of July, 1859.

1668. And JOSEPH MORGAN, of Manchester, has given the like notice in respect of the invention of "Improvements in apparatus for making candles."
As set forth in his petition, recorded in the said office on the 14th day of July, 1859.

1724. And JAMES BROADLEY, of Saltaire, in the county of York, Overlooker to Messrs. Titus, Salt, Sons, and Co., of the same place, Spinners and Manufacturers, has given the like notice in respect of the invention of "Improvements in means or apparatus used in weaving."
As set forth in his petition, recorded in the said Office on the 23rd day of July, 1859.

1727. And HENRY AMBLER, of Halifax, in the county of York, Engineer, has given the like notice in respect of the invention of "Improvements in explosive projectiles."
As set forth in his petition, recorded in the said office on the 25th day of July, 1859.

And notice is hereby further given, that all persons having an interest in opposing any one of such applications are at liberty to leave particulars in writing of their objections to such application, at the said Office of the Commissioners, within twenty-one days next after the date of the Gazette [and of the Journal] in which this notice is issued.

Patents Sealed.

LIST of LETTERS PATENT which passed the Great Seal on the

9th August, 1859.

386. HENRY BRUCE, of Kinleith Mill, Currie, in the county of Mid Lothian, North Britain, Paper Manufacturer, for an invention of "Improvements in apparatus for the manufacture of paper."—Dated 11th February, 1859.

399. THOMAS WHITE, of Portsmouth, in the county of Southampton, Shipbuilder, and GEORGE JENKINS, of the same place, Engineer, for an invention of "Improvements in apparatus for raising and lowering ships along inclined slips."—Dated 12th February, 1859.

400. JAMES BENNETT and JOHN BENNETT, of the firm of Bennett and Sons, of Kingsland Road, in the county of Middlesex, Engineers, for an "Improvement in refrigerators for cooling beer and worts."—Dated 12th February, 1859.

401. GEORGE BETJEMANN, GEORGE WILLIAM BETJEMANN, and JOHN BETJEMANN, all of Upper Ashby Street, in the county of Middlesex, Desk and Dressing Case Makers, for an invention of "Improvements in book slides."—Dated 12th February, 1859.

405. ROBERT BELL, of Paris, in the empire of France, and of the Office for Patents, No. 4, Trafalgar Square, Charing Cross, in the county of Middlesex, for an invention of "Improvements in separating and recovering wool from fabrics, composed of wool or wool in connection with cotton and other vegetable substances."—Dated 12th February, 1859.

411. JOHN WRIGHT, of New George Street, Sheffield, in the county of York, Spring Manufacturer, for an invention of "Improvements in reducing and rolling steel and iron wire, and other forms of those metals in long lengths."—Dated 14th February, 1859.

500. ROBERT MUSHET, of Coleford, in the county of Gloucester, Metallurgist, for an invention of "A new metallic compound or alloy."—Dated 24th February, 1859.

501. ROBERT MUSHET, of Coleford, in the county of Gloucester, Metallurgist, for an invention of "An improvement in the manufacture of cast steel."—Dated 24th February, 1859.

Patents on which the Stamp Duty of £50 has been Paid.

(*To 6th August*, 1859, *inclusive.*)

4th August.

1848. JOHN KEITH, of Eltham, in the county of Kent, Gentleman, for an invention of "Improved machinery for making envelopes."—A communication from the first and true inventor.—Dated 5th August, 1856.

5th August.

1876. THOMAS WHITTAKER, of Accrington, in the county of Lancaster, Millwright, for an invention of "Improvements in the mode or method of washing or cleansing woven fabrics."—Dated 9th August, 1856.

6th August.

1885. JOHN CARTLAND, of Birmingham, in the county of Warwick, Manufacturer, for an invention of "A new or improved door spring."—Dated 11th August, 1856.

1913. WILLIAM TRANTER, of Birmingham, in the county of Warwick, Gun Maker, for an invention of "Improvements in fire-arms."—Dated 16th August, 1856.

1939. JOSEPH BROUARD and JOSEPH HUBERT, of 39, Rue de l'Echiquier, Paris, in the empire of France, and 4, South Street, Finsbury, London, for an invention of "Certain improvements in reefing the sails of ships or vessels."—Dated 19th August, 1856.

List of Specifications published during the week ending 6th August, 1859.

No.	Price.	Subject-Matter.
2936	6*d.*	Sewerage and drainage apparatus.
2991	10*d.*	Embroidering machines.
2992	10*d.*	Machinery for splitting hides, skins, &c.
2994	8*d.*	Apparatus for converting reciprocating into rotary motion.
2995	4*d.*	Generation of steam.
2996	10*d.*	Hydraulic engines, &c.
2997	1*s.* 1*d.*	Electric telegraph cables, &c.
2998	10*d.*	Permanent way of railways.
2999	1*s.* 6*d.*	Manufacture of boots and shoes, &c.
3000	10*d.*	Reaping machines.
3001	7*d.*	Tiles for walls, &c.
3002	3*d.*	Protractive power for clocks, &c.
3003	10*d.*	Punching machines.
3004	3*d.*	Apparatus for tightening and releasing the bellybands of riding saddles.
3005	3*d.*	Seats.
3006	7*d.*	Shaft tugs.
3007	6*d.*	Production and casting of steel.
		1859.
1	6*d.*	Making and fitting bungs to casks, &c.
2	3*d.*	Skirt or petticoat.
3	3*d.*	Governors for machinery.
4	9*d.*	Gridiron or cooking apparatus.
5	3*d.*	Bakers' ovens.
6	3*d.*	Railway and other breaks.
7	10*d.*	Lubricators.
8	3*d.*	Apparatus for lighting cigars and tobacco.
9	5*d.*	Steam engines.
10	3*d.*	Power looms for weaving.
11	3*d.*	Casting printing surfaces, &c.
12	1*s.* 7*d.*	Buffing apparatus for railway carriages.
13	3*d.*	Weaving machinery.
14	8*d.*	Nails, &c.
15	3*d.*	Cylindrical presses.
16	3*d.*	Machinery for digging or cultivating land.
17	10*d.*	Regulating the pressure of steam, &c.
18	2*s.* 4*d.*	Machinery for cutting and finishing corks.
19	9*d.*	Manufacture of ornamental and other tiles, &c.
20	3*d.*	Railway buffers, draw and bearing springs.
21	11*d.*	Machinery for forming dough into cakes or bread crackers.
22	7*d.*	Apparatus for subduing restive horses.
23	6*d.*	Propelling vessels.
24	8*d.*	Candles.
25	6*d.*	Machines for preparing cotton, &c.
26	6*d.*	Steam generators.
27	10*d.*	Machinery for preparing and treating jute, hemp, &c.
28	6*d.*	Construction of projectile applicable to the whale fishery.
29	3*d.*	Raising the nap or pile of textile fabrics.
30	9*d.*	Apparatus for supporting articles of china and earthenware in kilns and ovens.
31	3*d.*	Means for obtaining submarine electrical conduction.
41	3*d.*	Separating metals from their ores.
45	3*d.*	Constructing railings, bars, gates, gratings, columns, &c.

*** Specifications will be forwarded by post on receipt of the amount of price and postage. Sums exceeding 5*s.* must be remitted by Post Office Order, made payable at the Post Office, High Holborn, to Mr. Bennet Woodcroft, Great Seal Patent Office.

THE CHRONOLOGICAL INDEX of PATENTS of INVENTION, from March 2, 1617 14 James I.), to September 30, 1852 (16 Vict.), 2 vols. Price 30*s.*

THE ALPHABETICAL INDEX of PATENTEES of Inventions for the above period. Price 20*s.*

THE SUBJECT-MATTER INDEX of PATENTS for the same period—*Second Edition*—to which is prefixed a Key of Terms and Phrases. 2 vols. Price 2*l.* 16*s.*

A Key to the *First Edition* of the above work is also published separately, and may be had on application.

THE CHRONOLOGICAL INDEXES of APPLICATIONS for PATENTS and PATENTS GRANTED from the 1st October to the 31st December, 1852, and from the 1st January to the 31st December, 1853, in one volume. Price 11*s.*

THE ALPHABETICAL INDEXES for the above periods, in one volume. Price 13*s.*

THE SUBJECT-MATTER INDEX, from 1st October to 31st December, 1852. Price 9*s.*

THE SUBJECT-MATTER INDEX, from 1st January to 31st December, 1853. Price 16*s.*

THE CHRONOLOGICAL INDEX of APPLICATIONS for PATENTS and PATENTS GRANTED from the 1st January to the 31st December, 1854. Price 6*s.*

THE ALPHABETICAL INDEX for the above period. Price 7*s.*

THE SUBJECT-MATTER INDEX for the above period. Price 16*s.* 6*d.*

THE CHRONOLOGICAL INDEX of APPLICATIONS for PATENTS and PATENTS GRANTED from the 1st January to the 31st December, 1855. Price 6*s.* 6*d.*

THE ALPHABETICAL INDEX for the above period. Price 7*s.* 6*d.*

THE SUBJECT-MATTER INDEX for the above period. Price 17*s.*

THE CHRONOLOGICAL INDEX of APPLICATIONS for PATENTS and PATENTS GRANTED from the 1st January to the 31st December, 1856. Price 6*s.* 6*d.*

THE ALPHABETICAL INDEX for the above period. Price 8*s.*

THE SUBJECT-MATTER INDEX for the above period. Price 18*s.* 6*d.*

THE ALPHABETICAL INDEX of APPLICATIONS for PATENTS and PATENTS GRANTED from the 1st January to the 31st December, 1857. Price 8*s.*

THE CHRONOLOGICAL INDEX for the above period. Price 6*s.* 6*d.*

THE SUBJECT-MATTER INDEX for the above period. Price 19*s.* 6*d.*

THE ALPHABETICAL INDEX of APPLICATIONS for PATENTS and PATENTS GRANTED, from the 1st January to the 31st December, 1858. Price 8*s.*

A Free Library and Reading Room, in connection with the Office of the Commissioners of Patents, is open to the Public daily from 10 till 4 o'clock.

In addition to the Printed Specifications, Indexes, and other publications of the Commissioners, the Library includes a Collection of the leading British and Foreign Scientific Journals, and text-books in the various departments of science and art. A printed Catalogue of the Library is on sale.

Note.—The Commissioners' publications may be consulted daily in the Library of the British Museum; in the Library of the Society of Arts; and in the Free Libraries of the following Towns and Cities:—

Aberdeen (*Public Library Town House*).
Accrington (*Mechanics' Institution, Bank Street*).
Belfast (*Harbour Office, Corporation Square*).
Beverley (*Guildhall*).
Birmingham (*Birmingham and Midland Institute, Cannon Street*).
Bolton-le-Moors (*Public Library, Exchange Buildings*).
Bradford, Yorkshire (*Borough Accountant's Office, Corporation Buildings, Swain Street*).
Brighton (*Town Hall*).
Bristol (*City Library, King Street*).
Burnley (*Office of the Burnley Improvement Commissioners*).
Cambridge (*Free Library, Jesus Lane*).
Canterbury (*Municipal Museum, Guildhall Street*).
Carlisle (*Free Library, Police Office*).
Chester (*Town Hall, Northgate Street*).
Cork (*Royal Cork Institution, Nelson Place*).
Crewe (*Railway Station*).
Darlington (*Mechanics' Institute, Skinnergate*).
Dorchester.
Drogheda.
Dublin (*Royal Dublin Society, Kildare Street*).
Dundalk.
Falmouth (*Public Library, Church Street*).
Gateshead (*Mechanics' Institute*).
Gorton (*Railway Station*).
Glasgow (*Stirling's Library, Miller Street*).
Grimsby, Great (*Mechanics' Institution, Victoria Street*).
Hanley, Staffordshire Potteries (*Town Hall*).
Hartlepool, West (*Literary and Mechanics' Institution, Church Street*).
Hertford (*Public Library, Town Hall*).
Huddersfield (*Commissioners' Offices, No. 1, South Parade*).
Hull (*Mechanics' Institute, George Street*).
Ipswich (*Museum Library, Museum Street*).
Keighley (*Mechanics' Institute, North Street*).
Kidderminster (*Public Free Library, Public Buildings, Vicar Street*).
Kings' Lynn, Norfolk (*Stanley Library, Athenæum*).
Lancaster (*Mechanics' Institute, Market Street*).
Leamington Priors (*Public Library, Town Hall*).
Leeds (*Town Clerk's Office, Town Hall*).
Leicester (*Corporation Library, Town Hall*).
Limerick.
Liverpool (*Free Public Library, Duke Street*).
——— (*Royal Institution*).
London (*British Museum*).

PATENT LAW AMENDMENT ACT, 1852.—All Specifications, Indexes, &c., printed by order of the Commissioners of Patents, are sold at the Great Seal Patent Office, 25, Southampton Buildings, Holborn.

THE PATENT LAW AMENDMENT ACTS (15 & 16 Vict., cap. 83; 16 Vict., cap. 5; and 16 & 17 Vict., cap. 115); with the Rules and Regulations made by the Commissioners of Patents for Inventions, and by the Lord Chancellor and the Master of the Rolls, under the Acts 15 and 16 Vict., c. 83, and 16 & 17 Vict., c. 115, accompanied by Specimen Forms of the Provisional Documents printed on sheets of the prescribed size. Price 6*d*.

THE REFERENCE INDEX of PATENTS, pointing out the Office in which each enrolled Specification of a Patent may be consulted; the Books in which Specifications, Law Proceedings, and other subjects connected with Inventions have been noticed; also such of the Specifications of Patents granted under the Act of 21 James I. as have been published by the authority of the Commissioners. Price 30*s.*

AN APPENDIX to the REFERENCE INDEX of PATENTS of INVENTION, containing Abstracts from such of the early Patents and Signet Bills as describe the nature of the invention, and which Patents have no enrolled Specifications. Price 4*s.*

AN INDEX to ALL INVENTIONS PATENTED in ENGLAND from 1617 to 1854 inclusive, arranged under the greatest number of heads, with parallel references to INVENTIONS and DISCOVERIES described in the scientific works of VARIOUS NATIONS, as classified by Professor Schubarth. By B. WOODCROFT.

The foreign works thus indexed form a portion of the Library of the Commissioners of Patents, where they may be consulted, or manuscript translations be had.

SOMMAIRE de toutes les INVENTIONS BREVETÉES en ANGLETERRE depuis 1617 jusqu'en 1854 inclusivement, arrangées d'après le plus grand nombre de rubriques, avec renvois aux INVENTIONS et DÉCOUVERTES décrites dans les ouvrages scientifiques de DIFFÉRENTES NATIONS, classés par le Professeur Schubarth. Par B. Woodcroft.

Les ouvrages étrangers ci-dessus font partie de la Bibliothèque de la Commission des Patentes, où l'on peut les consulter, et obtenir des traductions en manuscrit.

VERZEICHNISS aller in ENGLAND von 1617—1854 incl. PATENTIRTEN ERFINDUNGEN, unter vielfältige Titel gebracht, mit Hinweisungen auf ERFINDUNGEN und ENTDECKUNGEN die nach Prof. Schubarth's Klassificirung in den wissenschaftlichen Werken VERSCHIEDENER NATIONEN beschrieben sind. Von B. Woodcroft.

Die hier aufgeführten fremden Werke machen einen Theil der Bibliothek der Patent Commission aus, allwo sie nachgeschlagen oder schriftliche Uebersetzungen besorgt werden können.

REPERTORIO di tutte le INVENZIONI munite di LETTERE PATENTI in INGHILTERRA dal 1617—1854 inclusivo, poste in ordine sotto il piu gran numero di capi, con riferenze alle INVENZIONI e SCOPERTI descritti nelle opere scientifiche di DIVERSE NAZIONI, classate dal Professore Schubarth. Dal Sig. B. Woodcroft.

Le opere straniere quì indicate possono esser consultate nella Biblioteca dei Commissari delle Patenti, e traduzioni in manuscritto vi possono ottenersi.

B. WOODCROFT,
Superintendent of Specifications, &c.

SUPPLEMENT to the SERIES of LETTERS PATENT and SPECIFICATIONS of LETTERS PATENT for INVENTIONS recorded in the Great Seal Patent Office, and granted between the 1st March (14 Jac. I.) A.D. 1617, and the 1st October (16 Vict.) A.D. 1852; consisting for the most part of Reprints of scarce Pamphlets, descriptive of the early patented Inventions comprised in that Series. Edited by BENNET WOODCROFT, Superintendent of Specifications, etc. In one vol., price 9*s.* 6*d.*, or each Tract separately at the price affixed.

CONTENTS OF VOL. I.

1. Metallica; or, the treatise of Metallica, briefly comprehending the doctrine of diverse new metallical inventions, &c. By SIMON STURTEVANT. (*Letters Patent, dated 29th February*, 1611.) Price 1*s.* 4*d.*
2. A Treatise of Metallica, but not that which was published by Mr. Simon Sturtevant, upon his Patent, &c. By JOHN ROVINSON (*Letters Patent, granted A.D.* 1612.) Price 4*d.*
3. A Commission directed to Sir Richard Wynne and others to inquire upon oath whether NICHOLAS PAGE or Sir NICHOLAS HALSE was the first inventor of certaine kilnes for the drying of malt, &c. &c. (*Letters Patent, Nos.* 33 *and* 85, *respectively dated 8th April*, 1626, *and 23rd July*, 1635.) Price 2*d.*
4. DUD DUDLEY'S Metallum Martis; or iron made with pitcoale, sea-coale, &c. (*Letters Patent, Nos.* 18 *and* 117, *respectively dated 22nd February*, 1620, *and 2nd May*, 1638.) Price 8*d.*
5. Description of the nature and working of the patent Water-scoop Wheels invented by WILLIAM WHELER, as compared with the raising wheels now in common use. By J. W. B. Translated from the Dutch by Dr. Tolhausen. (*Letters Patent, No.* 127, *dated 24th June*, 1642.) Price 2*s.*
6. An exact and true definition of the stupendous Water-commanding Engine, invented by the Right Honourable (and deservedly to be praised and admired) EDWARD SOMERSET. Lord Marquis of WORCESTER, &c. &c. (*Stat.* 15 *Car. II. c.* 12. *A.D.* 1663.) Price 4*d.*
7. Navigation Improved; or the art of rowing ships of all rates in calms, with a more easy, swift, and steady motion than oars can. By THOMAS SAVERY. (*Letters Patent, No.* 347, *dated 10th January*, 1696.) Price 1*s.*
8. The Miner's Friend; or an engine to raise water by fire described, &c. By THOMAS SAVERY. (*Letters Patent, No.* 356, *dated 25th July*, 1698, *and Stat.* 10 & 11 *Will. III. c.* 31, *A.D.* 1699.) Price 1*s.*
9. Specimina Ichnographica; or a brief narrative of several new inventions and experiments, particularly the navigating a ship in a calm, &c. By JOHN ALLEN, M.D. (*Letters Patent, No.* 513, *dated 7th August*, 1729.) Price 8*d.*
10. A description and draught of a new-invented Machine for carrying vessels or ships out of or into any harbour, port, or river, against wind and tide, or in a calm, &c. By JONATHAN HULLS. (*Letters Patent, No.* 556, *dated 21st December*, 1736.) Price 8*d.*
11. An historical account of a new method for extracting the foul air out of ships, &c., with the description and draught of the machines by which it is performed, &c. By SAMUEL SUTTON, the Inventor. To which are annexed two relations given thereof to the Royal Society by Dr. Mead and Mr. Watson, (*Letters Patent, No.* 602, *dated 16th March*, 1744.) Price 1*s.*

COLONIAL PATENTS.—Information as to the Mode of obtaining Protection for Inventions in the Colonies; contained in Communications from the Governors, &c. of the different British Colonies in answer to the Application of Mr. W. J. CURTIS for a Patent. Price 1*s.*

PATENT RIGHTS in the COLONIES.—Abstract of Replies to the Secretary of State's Circular Despatch of July 11, 1856, calling for Information as to the Form of the Application to be made by Persons desirous of obtaining Patent Rights in the Colonies, and the Expenses attendant on the Grant of such Patent Rights. Price 2*s.* 6*d.*

Museum of Patents, South Kensington.

NUMBER of VISITORS for the Week ending 6th August, 1859.

Mornings - - - -	1261
Evenings - - - -	1180
Total - - -	2441

Since the opening of the Museum Free Daily (May 12, 1858,)—124,500.

THIS Museum is open to the public daily, free of charge. The hours of admission are from 10 A.M. to 6 P.M., and in the evenings of Monday, Tuesday, and Wednesday from 7 to 10 P.M.

All communications on the subject of the Museum to be addressed to the Superintendent,

B. WOODCROFT.

Great Seal Patent Office,
Southampton Buildings.

GALLERY OF PORTRAITS OF INVENTORS, DISCOVERERS, AND INTRODUCERS OF USEFUL ARTS.—This Collection, formed by Mr. Woodcroft, and first opened to public view in the Great Seal Patent Office in 1853, now constitutes a portion of the Patent Museum at South Kensington.

Presentations of original Portraits, Medallions, Busts, and Statues, in augmentation of the Collection, are hereby invited, and will on receipt be acknowledged in this Journal, and duly recorded in the next published Catalogue.

REAPING MACHINES.—The entire series of Specifications and Drawings on this subject to the end of 1853, together with an Appendix, prepared by B. Woodcroft, of the Patent Office, and published under the sanction of the Commissioners, may be obtained at the cost price of *2l. 3s. 11½d.*

FIRE-ARMS, PROJECTILES, &c.—The series of Specifications and Drawings on this Subject, from 15th May, 1718, to 31st December, 1853, with Alphabetical and Subject-matter Indexes, may be obtained at the cost price of *9l. 18s. 6½d.*

The Indexes, separately, price *3s.*

CATALOGUE of the LIBRARY of the GREAT SEAL PATENT OFFICE. Two vols. imp. 8vo. (Vol. I. Titles; Vol. II. Index.) Price *21s.*

DELIVERY OF LETTERS.—For the Great Seal Patent Office the initials are W. C., the District being the Western Central. In the direction of a Letter, these initials should be legibly written in a separate line, and should in all cases end the address, thus:—

The Commissioners of Patents,
Great Seal Patent Office,
25, Southampton Buildings,
London,
W.C.

In course of Publication, by Order of the Commissioners of Patents.

ABRIDGMENTS (in Classes, and Chronologically arranged) of all SPECIFICATIONS of PATENTED INVENTIONS, from the earliest enrolled to those published under the Act of 1852.

These books are of 12mo size, and as each is limited to inventions of one class only, they can be sold at prices sufficiently moderate to enable the humblest inventor to examine for himself whether his discovery has been previously patented or not.

At the foot of each abstract are given references to notices of the inventions in scientific and other works, and to the reports of law proceedings for infringements, &c. &c. &c.

The classes already published are,—

1. DRAIN TILES AND PIPES, price *6d.*
2. SEWING AND EMBROIDERING, price *6d.*
3. MANURE, price *6d.*
4. PRESERVATION OF FOOD, price *6d.*
5. MARINE PROPULSION, price *4s.*
6. MANUFACTURE OF IRON AND STEEL, price *5s.*
7. AIDS TO LOCOMOTION, price *1s.*
8. STEAM CULTURE, price *2s.*
9. WATCHES, CLOCKS, AND OTHER TIMEKEEPERS, price *1s. 6d.*
10. FIRE-ARMS AND OTHER WEAPONS, AMMUNITION, AND ACCOUTREMENTS, price *6s. 6d.*
11. PAPER.—PART I. MANUFACTURE OF PAPER, PASTEBOARD, AND PAPIER MÂCHÉ, price *3s.*
12. PAPER.—PART II. CUTTING, FOLDING, AND ORNAMENTING; INCLUDING ENVELOPES, CARDS, PAPER-HANGINGS, &c., price *2s.*
13. TYPOGRAPHIC, LITHOGRAPHIC, AND PLATE PRINTING, price *7s.*
14. BLEACHING, DYEING, AND PRINTING YARNS AND FABRICS, price *9s. 6d.*

The following are in the press:—

ELECTRICITY AND MAGNETISM: THEIR GENERATION AND APPLICATIONS.
PREPARATION OF FUEL, AND APPARATUS FOR ITS COMBUSTION.
MANUFACTURE AND APPLICATIONS OF INDIA RUBBER, GUTTA PERCHA, &c.; INCLUDING AIR, FIRE, AND WATER PROOFING.
PRODUCTION AND APPLICATIONS OF GAS.
STEAM ENGINES.
METALS AND ALLOYS.

B. WOODCROFT.

The above, and all other works published by the Commissioners of Patents, are now on sale at the Great Seal Patent Office, 25, Southampton Buildings, Holborn.

This Journal is published on the evenings of Tuesday and Friday, and will be forwarded, post free, to Subscribers.—Terms, *30s.* per annum.—Subscriptions received at the Great Seal Patent Office, where also single copies, at twopence each, may be obtained.

No. 585. FRIDAY, AUGUST 12, 1859. Price 2d.

Grants of Provisional Protection for Six Months.

NOTICE is hereby given that Provisional Protection has been allowed

1507. To MARC ANTOINE FRANÇOIS MENNONS, of the British and Foreign Patent Offices, 39, Rue de l'Echiquier, Paris, in the empire of France, for the invention of "Improvements in machinery for the manufacture of bolts and rivets."—A communication from J. L. Vergniais, residing in Paris.

On his petition, recorded in the Office of the Commissioners on the 23rd day of June, 1859.

1682. To JULIAN BERNARD, of the Albany, Piccadilly, in the county of Middlesex, Gentleman, for the invention of "Certain improvements in the manufacture of boots and shoes, and in the machinery and apparatus to be employed therein."

1686. And to O'DONNELL GRIMSHAW, of Belfast, in the kingdom of Ireland, Pastmaster, for the invention of "Improvements in safety letter boxes or bags."

On both their petitions, recorded in the Office of the Commissioners on the 16th day of July, 1859.

1706. To WILLIAM JAMES GRADWELL, of Manchester, in the county of Lancaster, Mechanic, and DAVID GRADWELL, of the same place, Maker-up and Packer, for the invention of "Certain improvements in bearings or journals employed in machinery, which improvements are also applicable to the bearings of railway and other wheels and axles."

On their petition, recorded in the Office of the Commissioners on the 20th day of July, 1859.

1714. To CHARLES TAPP and JAMES BRYANT TAPP, of Chesterfield, Derbyshire, Engineers, for the invention of "Improvements applicable to steam boilers and furnaces for consuming smoke and economizing fuel in the generation of steam, and in the apparatus connected therewith."

On their petition, recorded in the Office of the Commissioners on the 21st day of July, 1859.

1734. To WILLIAM HENRY BUCKLAND, of Maesteg Iron Works, in the county of Glamorgan, Iron Master, for the invention of "An improved preparation of peat."

1736. To PHILO D. MICKLES, of Syracuse, State of New York, United States of America, for the invention of "An improved spring for railroad and other carriages, and for othes uses and applications where springs are required."—A communication from Danforth Johnson, a person resident at Chicago, state of Illinois, U.S.A.

1737. To JOHN HINKS and GEORGE WELLS, of Birmingham, in the county of Warwick, Manufacturers and copartners, for the invention of "An improvement in, or a substitute for, the hook of the ordinary hook and eye dress fastening."

1738. And to JOSEPH GILLOTT, of Birmingham, in the county of Warwick, Manufacturer, and JOHN MORRISON, of Birmingham aforesaid, Machinist, for the invention of "New or improved machinery for the manufacture of the handles of penholders, which machinery or a part or parts thereof may also be employed for manufacturing other cylindrical articles."

On their several petitions, recorded in the Office of the Commissioners on the 26th day of July, 1859.

1740. To MARC ANTOINE FRANÇOIS MENNONS, of the British and Foreign Patent Offices, 39, Rue de l'Echiquier, Paris, in the empire of France, for the invention of "An improved comb-cleaner."—A communication from Hippolyte Gaudibert, a person residing in Paris.

1742. To JOHN DAVIES, of Tetbury, in the county of Gloucester, Machinist, for the invention of "A new or improved self-adjusting ventilating apparatus."

1744. And to JOHN SCOFFERN, of 4, Barnard's Inn, in the county of Middlesex, Bachelor of Medicine, for the invention of "Improvements in waterproofing, cementing, and stiffening fabrics and fibrous materials, and also in dyeing fabrics and fibrous materials."

On their several petitions, recorded in the Office of the Commissioners on the 27th day of July, 1859.

1746. To WILLIAM HUDSON, of Burnley, in the county of Lancaster, Machinist, and CHRISTOPHER CATLOW, of the same place, Overlooker, for the invention of "Certain improvements in looms for weaving."

1747. To EDWARD HUNT and HENRY DAVIS POCHIN, both of Salford, in the county of Lancaster, Chemists, for the invention of "Improved resin and resinous substances."

1748. To ALFRED SIDEBOTTOM, of Crown Street, Camberwell, in the county of Surrey, Consulting Chemist, for the invention of "Improvements in the mode or process of separating animal fibre from mixed fabrics of animal fibre and cotton or other vegetable fibre."

1749. To CHARLES WESTLEY SMITH, of the town of Evans, county of Erie, and state of New York, Electrician, for the invention of "Improvements in electric telegraphs, and in the apparatus connected therewith."

1750. To WILLIAM KENT, of Paternoster Row, in the city of London, for the invention of "A self-acting fan."

1751. To JOHN WEIR DRAPER BROWN, of Lewisham, in the county of Kent, Surgeon, for the invention of "Improvements in signal and lighthouse lamps and lanterns."

1753. To WILLIAM EDWARD NEWTON, of the Office for Patents, 66, Chancery Lane, in the county of Middlesex, Civil Engineer, for the invention of "Improvements in grinding mills."—A communication from abroad by Joseph Cornelius Lyons and James Schenck Wyckoff, of Sennet, county of Cayuga, and state of New York, in the United States of America.

1754. To WILLIAM CLARK, of 53, Chancery Lane, in the county of Middlesex, Engineer and Patent Agent, for the invention of "Improved apparatus for turning over music leaves or sheets."—A communication from abroad by Hermine Madeleine Basset, of Boulevart St. Martin, Paris, in the empire of France.

1755. To JOHN JACKSON, of Church Street, Spitalfields, in the county of Middlesex, Pen Manufacturer for the invention of "Improvement in metal pens."

1756. And to PATRICK ROBERTSON, of Sun Court, Cornhill, in the city of London, for the invention of "Improvements in the manufacture of beer, ale, porter, and spirits."

On their several petitions, recorded in the Office of the Commissioners on the 28th day of July, 1859.

1757. To THOMAS CULPIN, of No. 25, Royall Hill, Greenwich, in the county of Kent, Engineer, for the invention of "Improvements in water-closets, water-cisterns, urinals, baths, lavatories, and other sanitary apparatus, and in the mode of supplying water thereto."

1758. To ISAAC MARTIN LINDLEY, of Staley Bridge, in the county of Chester, Currier and Leather Merchant, for the invention of "Improvements in cop-tubes."

1759. To JAMES WRIGHT, of No. 42, Bridge Street, Blackfriars, city of London, Civil Engineer, for the invention of "An improved method of raising or drawing up the skirts of gowns or dresses."—A communication from abroad, by M. Bresson, of Paris, in the French empire, Civil Engineer."

1761. To POLYNICE AUGUSTE VIETTE, of No. 25, Faubourg de Shaerbeck, near Brussels, a Major in the Service of His Majesty the King of the Belgians, for the invention of "Improvements in engraving on metal or on other substances decomposable by acids or corrosive salts."

1762. To JAMES CHANDLER, of Deptford, in the county of Kent, Engineer, for the invention of "Improvements in apparatuses for indicating the water level in boilers, and other vessels, parts of which are also applicable for inspecting the interior thereof."

1763. To THOMAS JOSEPH TERRELL, of Poplar, in the county of Middlesex, Shipwright, for the invention of "An improvement in ships, riding bits, and timber heads."

1764. And to ALFRED VINCENT NEWTON, of the Office for Patents, 66, Chancery Lane, in the county of Middlesex, Mechanical Draughtsman, for the invention of "Certain improvements in that class of fire arms known as revolvers, and in bullets for the same."—A communication from abroad by John Walch, of New York, in the United States of America.

On their several petitions, recorded in the Office of the Commissioners on the 29th day of July, 1859.

1765. To JOSEPH WOOD, of York City, Surgical Instrument Maker, for the invention of "An improved truss for hernia."

1767. To GOLDSWORTHY GURNEY, of Woodleigh, Cornwall, Esq., for the invention of "Improvements in electric telegraphic conductors."

1769. To THOMAS FIRTH, of Sheffield, in the county of York, Iron and Steel Manufacturer, for the invention of "An improved breech-loading cannon."

1771. To ARTHUR BUSHBY WILSON, of Cockermouth, in the county of Cumberland, Hat Manufacturer, for the invention of "Improvements in the manufacture of hats."

1773. And to PERCEVAL MOSES PARSONS, of Arthur Street, West, London Bridge, for the invention of "Improvements in switches and crossings of railways."

On their several petitions, recorded in the Office of the Commissioners on the 30th day of July, 1859.

1775. To JOHN MOLLADY, of Manchester, in the county of Lancaster, Hat Manufacturer, for the invention of "An improved form or construction of hat, cap, or covering for the head."

1777. To Thomas Goode Messenger, of High Street, Loughborough, in the county of Leicester, Horticultural Builder and Plumber, for the invention of "Improvements in the construction of buildings or erections to be used for horticultural or other purposes."

1779. To James Rowland, of Salisbury, for the invention of "An improved apparatus for mashing and mixing."

1781. And to William Edward Newton, of the Office for Patents, 66, Chancery Lane, in the county of Middlesex, Civil Engineer, for the invention of "An improvement applicable to salinometer cases for steam boilers."—A communication from abroad by Joseph Grice, of New York City, in the United States of America.

On their several petitions, recorded in the Office of the Commissioners on the 1st day of August, 1859.

1783. To James Charles Ashwell, of Dorchester Street, New North Road, in the county of Middlesex, for the invention of "Improvements in wheels for railway and other carriages."

1785. And to Henry Olorenshaw, of the firm of Herbert and Olorenshaw, of Coventry, in the of Warwick, Manufacturers, for the invention of "An improvement in neck-ties."

On both their petitions, recorded in the Office of the Commissioners on the 2nd day of August, 1859.

Invention protected for Six Months by the Deposit of a Complete Specification.

Notice is hereby given, that the petition of

1840. George Tomlinson Bousfield, of Loughborough Park, Brixton, in the county of Surrey, praying for Letters Patent for the invention of "A new and useful method of manufacturing the vulcanized compounds of vulcanizable gums,"—a communication from abroad by John Murphy, of the city, county, and state of New York,—was deposited and recorded in the Office of the Commissioners on the 9th day of August, 1859, and a complete specification accompanying such petition was at the same time filed in the said office.

Patents Sealed.

List of Letters Patent which passed the Great Seal on the

12*th August*, 1859.

408. James Parkinson, of Manchester, in the county of Lancaster, Dentist, for an invention of "Certain improvements in coffins."—Dated 14th February, 1859.

410. Charles Sanders, Photographic Mat Manufacturer of Harford Street, Birmingham, in the county of Warwick, for an invention of "Certain improvements in ornamenting English passe-partouts for photographic pictures, also the glasses used with the same; and which said modes of ornamenting are also applicable to ornamenting photographic frames generally."—Dated 14th February, 1859.

414. Robert Clegg, of Islington, in the county of Middlesex, Frederick Angerstein, of Kennington, in the county of Surrey, and John William Page, of Walworth Road, in the county of Surrey, for an invention of "Improvements in making soap."—Dated 14th February, 1859.

420. Walter Raymond, of No. 4, Albion Square, Dalston, in the county of Middlesex, Master Mariner, for an invention of "An improved life-raft."—Dated 15th February, 1859.

421. John Paterson, of Wood Street, in the city of London, Manufacturer, for an invention of "Improvements in brace buckles and loops and in braces."—Dated 15th February, 1859.

423. George Bedson, of Manchester, in the county of Lancaster, Manager for Messrs. Richard Johnson and Brother, Wire Manufacturers, for an invention of "Improvements in joining wire for telegraphic and other purposes."—Dated 15th February, 1859.

426. Samuel Bailey, Mining Engineer, of Wednesbury, in the county of Stafford, for an invention of "Certain apparatus for preventing the skip in mine operations being pulled over the pulley on which the rope or chain works, to which such skip or cage may be attached, as well as preventing the skip or cage re-descending until put in motion for that purpose."—Dated 16th February, 1859.

428. Charles Edward Wright, of Nottingham, Commercial Traveller, for an invention of "Improvements in means or apparatus employed in the nursing or treatment of infants."—Dated 16th February, 1859.

446. Thomas Cattell, of 30, Euston Square, in the county of Middlesex, M.D., for an invention of "Improvements in treating and purifying gutta percha."—Dated 17th February, 1859.

447. Frederick William Emerson, of New Charlton, in the county of Kent, Mining Engineer and Metallurgical Chemist, for an invention of "Improvements in the treatment of certain ores of lead, and obtaining from them valuable primary and secondary products."—Dated 17th February, 1859.

448. Charles Fay, of Manchester, in the county of Lancaster, Railway Carriage Builder, for an invention of "Improvements in apparatus for working railway breaks."—Dated 17th February, 1859.

461. William Clay, of Liverpool, in the county of Lancaster, Iron and Steel Manufacturer, for an invention of "Improvements in the manufacture of deck and other beams, and of angular and other bars of various forms."—Dated 19th February, 1859.

462. William Basford, of Burslem, in the county of Stafford, Brick and Tile Manufacturer, for an invention of "Improvements in the method of and means for drying bricks and tiles preparatory to their being burnt, and also in the construction of kilns or ovens for burning such bricks, tiles, pipes, pottery, or earthenware, and in the mode of charging or placing these said articles therein to be burnt or fired, and also in certain appliances for regulating the heat therein."—Dated 19th February, 1859.

464. Charles Fréderic Vasserot, of 45, Essex Street, Strand, London, Patent Agent, for an

invention of "An improved apparatus for manufacturing the strands of wire-ropes."—A communication from Jean Baptiste Pieux-Aubert, residing at Clermont Ferrand (Puy-de-Dôme), in the empire of France.—Dated 19th February, 1859.

467. Ferdinand Pierre Jean Van den Ouwelant, of Paris, France, Gentleman, for an invention of "Improvements in apparatuses to be applied to fire-places for obtaining a more complete combustion of the fuel employed therein."—Dated 19th February, 1859.

469. Obed Blake, of Blackwall, in the county of Middlesex, for an invention of "Improved machinery or apparatus used in the manufacture of glass."—Dated 21st February, 1859.

471. Thomas Wilson, of Birmingham, in the county of Warwick, Engineer, for an invention of "Improvements in the manufacture and construction of ordnance."—Dated 21st February, 1859.

475. Robert Jobson, of Wordsley, in the county of Stafford, Iron Founder, for an invention of "Improvements in supplying water or other fluid to axletree boxes and other journal bearings to lubricate the same."—Dated 21st February, 1859.

477. Richard William Johnson, of Oldbury, in the county of Worcester, Railway Carriage Builder, and William Stableford, of the same place, Manager, for an invention of "Improvements in axle boxes."—Dated 21st February, 1859.

490. Samuel Ridge, of Hyde, in the county of Chester, Millwright, for an invention of "Improvements in coupling or making the joints of pipes and other articles."—Dated 23rd February, 1859.

507. Enock Price, of Doncaster, in the county of York, Railway Contractor, and Edmund Hawkins, of the same place, Builder and Contractor, for an invention of "Improvements in the mode of forming fishplates, and in the method of fixing or attaching them to the joints of rails on railways."—Dated 24th February, 1859.

514. Robert Fielden, junr., of Walsden, in the county of Lancaster, Picker Manufacturer, and Thomas Fielden, of the same place, also Picker Manufacturer, for an invention of "An improvement or improvements in the manufacture of pickers to be used in looms for weaving and also in the machinery or apparatus to be employed in the manufacture of the same."—Dated 25th February, 1859.

520. James Lee, of Saint Helen's, in the county of Lancaster, Grocer, for an invention of "Certain improvements in ploughs."—Dated 26th February, 1859.

528. George Horner, of Falls Road, Belfast, in the county of Antrim, Ireland, Machinist, for an invention of "Improvements in hackling flax and other fibrous materials and in machinery for the same."—Dated 28th February, 1859.

539. The Reverend Henry Moule, Clerk, Master of Arts, of Fordington, in the county of Dorset, for an invention of "Improvements in apparatus applicable to the evaporation of sewage or other waters and for affording heat for other uses."—Dated 1st March, 1859.

547. Peter Currie, General Brassfounder, of Birmingham, in the county of Warwick, for an invention of "Certain improvements in spindles for locks, latches, and other door fastenings."—Dated 2nd March, 1859.

557. John Henry Johnson, of 47, Lincoln's Inn Fields, in the county of Middlesex, and of 166, Buchanan Street, in the city of Glasgow, North Britain, Gentleman, for an invention of "Improvements in the construction of grease boxes and bearings generally."—A communication from Joseph Vallot, residing at Paris, in the empire of France, Engineer.—Dated 2nd March, 1859.

584. William Peacock Savage, of Roxham, Downham Market, in the county of Norfolk, for an invention of "An improved machine for excavating, raising, and depositing soil."—Dated 5th March, 1859.

585. François Verdeil, Medical Doctor, of No. 30, Rue St. Sulpice, in the city of Paris, and Edmond Michel, Chemist, of No. 4, Quai Imperial, Puteaux, Seine, for an invention of "Improvements in treating madder."—Dated 5th March, 1859.

604. Charles Mills, of High Street, Camden Town, for an invention of "Improvements in the action of pianofortes."—Dated 8th March, 1859.

665. Joseph Michel-Denys, of Charleroi, in the kingdom of Belgium, Gentleman, and 4, South Street, Finsbury, London, for an invention of "Certain improvements in the construction of railway crossings."—Dated 16th March, 1859.

704. William and Samuel Pickstone, of Radcliff Bridge, near Manchester, Cotton Spinners, Manufacturers, and Dyers, for an invention of "An improvement in stiffening, sizing, filling, or weighting textile fabrics."—Dated 19th March, 1859.

739. John Evans, of Nash Mills, in the parish of King's Langley, in the county of Hertford, Paper Maker, for an invention of "Improvements in the manufacture of paper."—Dated 23rd March, 1859.

768. Matthew Andrew Muir, of Glasgow, in the county of Lanark, North Britain, Machinist, and James McIlwham, of the same place, Machinist, for an invention of "Improvements in moulding or shaping metals."—Dated 26th March, 1859.

811. William Edward Newton, of the Office for Patents, 66, Chancery Lane, in the county of Middlesex, Civil Engineer, for an invention of "Improvements in mills for cleaning rice."—A communication from abroad by Peter McKinley, of Charleston, in the United States of America.—Dated 31st March, 1859.

867. Robert Postlethwaite, of Liverpool, in the county of Lancaster, Saddler, for an invention of "An improvement in harness pads for horses."—Dated 7th April, 1859.

896. Henry Francis Gardner, of Boston, in the United States of America, for an invention of "Improvements in machinery for blocking or crimping the uppers of boots and shoes, and in treeing boots."—Partly a communication from abroad by William Willmott and Philander Shaw, of the United States of America.—Dated 9th April, 1859.

908. William Henry Barlow, of Great George Street, Westminster, for an invention of "Improvements in beams and girders."—Dated 11th April, 1859.

1033. Thomas Aldridge Weston, of King's Norton, in the county of Worcester, Accountant, for an invention of "A new or improved pulley."—Dated 25th April, 1859.

1098. James Childs, of Windsor House, Putney, in the county of Surrey, for an invention of "Improvements in the manufacture of night light cases."—Dated 2nd May, 1859.

1124. John Scholfield, of Milnrow, near Rochdale, in the county of Lancaster, Cotton Spinner, and William Cudworth, of the same place, Manager, for an invention of "Certain improvements in machinery or apparatus for spinning cotton and other fibrous materials."—Dated 5th May, 1859.

1194. William Warne, John Americus Fanshawe, James Archibald Jaques, and Thomas Galpin, all of Tottenham, in the county of Middlesex, India Rubber Manufacturers, for an invention of "An improved compound or preparation of materials for, and mode of and apparatus for, covering and insulating wires or conductors used for telegraphic or electrical purposes."—Dated 12th May, 1859.

1249. George Robinson Sampson, of the State of Massachusetts, of the United States of America, for an invention of "A new and useful improvement in propelling navigable vessels through water."—A communication from John Taggart, a resident of Roxbury, of the State of Massachusetts, of the United States of America.—Dated 20th May, 1859.

1258. Thomas Stokes Cressey, of Burton-upon-Trent, for an invention of "Improvements in machinery for cutting staves for casks."—Dated 21st May, 1859.

1265. John Hutchinson Mason, of the town and county of the town of Nottingham, Lace Manufacturer, and George Lee Baxter, also of the said town and county of the town of Nottingham, Dyer, for an invention of "Ornamenting lace or other twisted fabrics."—Dated 23rd May, 1859.

1272. Nathaniel Shattswell Dodge, of 44, St. Paul's Church Yard, in the city of London, Merchant and Manufacturer, for an invention of "Improvements in treating waste vulcanized india rubber."—A communication from abroad by Hiram Lyman Hall, of Beverley, Massachusetts, United States of America.—Dated 23rd May, 1859.

1274. Nathaniel Shattswell Dodge, of 44, St. Paul's Church Yard, in the city of London, Merchant and Manufacturer, for an invention of "Improvements in finishing, coloring, and varnishing india-rubber goods and similar manufactures."—A communication from abroad by Hiram Lyman Hall, of Beverley, Massachusetts, United States of America.—Dated 23rd May, 1859.

1286. Marc Antoine François Mennons, of the British and Foreign Patent Offices, 39, Rue de l'Echiquier, Paris, in the empire of France, for an invention of "An improved apparatus for the preparation of sand moulds for metal casting."—A communication from Messieurs Mandoy and Couty, residing in Paris.—Dated 24th May, 1859.

1299. Joseph Reynolds, of No. 11, Carthusian Street, Charterhouse Square, London, Gentleman, for an invention of "Improvements in propelling vessels."—Dated 26th May, 1859.

1302. John Young, of Wolverhampton, in the county of Stafford, Manufacturer, for an invention of "Improvements in locks, and in the manufacture of knobs for locks and latches, and also in apparatus for preventing draughts and keeping out wet from doors and windows."—Dated 26th May, 1859.

1375. Edward Gill, of The Elms, Saint Ann's Road, Wandsworth Common, in the county of Surrey, Distiller, for an invention of "Improvements in producing spirit from rice, maize, and other descriptions of grain."—Dated 4th June, 1859.

1400. Alfred Vincent Newton, of the Office for Patents, 66, Chancery Lane, in the county of Middlesex, Mechanical Draughtsman, for an invention of "Improvements in gas meters."—A communication from abroad by William Richards, of Barcelona, in the kingdom of Spain.—Dated 8th June, 1859.

1415. Jabez James, of Broad Wall, Lambeth, in the county of Surrey, Engineer, for an invention of "Improvements in obtaining and applying motive power."—Dated 11th June, 1859.

1448. Charles Wilkinson, of Slaithwaite, in the county of York, Merchant, for an invention of "Improvements in doubling or twisting silk, cotton, worsted, linen, or woollen yarns, or yarns from any other fibrous substance."—Dated 16th June, 1859.

1453. Edward Adams Cutler, of the state of Connecticut, of the United States of America, for an invention of "A new and useful machine for making horse shoes."—A communication from Charles H. Perkins, a resident of Putney, of the said state of Connecticut.—Dated 16th June, 1859.

Patents on which the Stamp Duty of £50 has been Paid.

(*To 8th August*, 1859.)

1881. Archibald Lockhart Reid, of Glasgow, in the county of Lanark, North Britain, Print Cutter, for an invention of "Improvements in producing ornamental figures or devices on textile fabrics and other surfaces."—Dated 9th August, 1856.

FOREIGN PATENTS.

BELGIUM.*

List of Patents Delivered on the 21st July, 1859.†

(*Communicated by the Belgian Government.*)

(For previous List, see No. 576 of this Journal.)

7624. M. Lebeau, of Dampremy, for "An apparatus for bringing glass cylinders into glass furnaces."—Dated 8th June, 1859.

7625. R. Janssens-Durieux, of Templeuve, for "A regulator coffee-mill without friction."—Dated 8th June, 1859.

7627. J. B. Banck, of Lacken, for "A cast-iron dome applicable to flat roofs."—Dated 7th June, 1859.

7635. D. Hubert, of Brussels, for a Patent of Improvement of "A machine with a perpetual movement."—Dated 9th June, 1859.—(Original Patent, 19th May, 1859.)

7707. Follet, Brothers, of Hodimont, for "Manufacture of woollen fabrics with silk warps."—Dated 28th June, 1859.

7708. J. H. Johnson, represented by H. Biebuyck, of Brussels, for an imported invention of "Improvements in the manufacture of boots, shoes and other foot coverings."—Dated 30th June, 1859.—(French Patent, 28th June, 1859.)

7709. F. A. Testud de Beauregard, represented by H. Biebuyck, of Brussels, for an imported invention of "A spheroidal steam-generator."—Dated 1st July, 1859.—(English Patent, 11th June, 1859.)

7710. J. B. Fourmeaux, of Ghent, for "A loom for weaving two pieces at the same time."—Dated 30th June, 1859.

7711. P. de Vlieger, of Ghent, for "A churn."—Dated 1st July, 1859.

7712. H. Sadin, of Mons, for "Using a porcelain or biscuit plate for stretching window glass."—Dated 2nd July, 1859.

7713. V. Delperdange, of Schaerbeek, for "Lamps with upper reservoirs."—Dated 2nd July, 1859.

7714. L. Doneux, of Hodimont, for "A machine for sharpening spindles of spinning frames and ram rods."—Dated 4th July, 1859.

7715. J. C. Reid and W. Milner, represented by A. Anoul, of Ixelles, for an imported invention of "Improvements in the construction of ships and vessels."—Dated 4th July, 1859.—(English Patent, 20th January, 1859.

7716. G. Gregg, represented by A. Crooy, of Brussels, for an imported invention of "Improvements in currying leather."—Dated 4th July, 1859.—(English Patent, 21st March, 1859.)

7717. E. Pérignon, represented by X. Raclot, of Brussels, for a Patent of Improvement of "A system of steam boilers."—Dated 5th July, 1859.—(Original Patent, 15th October, 1857.)

7718. J. B. Fondu, of Lodelin, for "A double action machine for conglomerating fuel."—Dated 6th July, 1859.

7719. J. J. Adam, of Hodimont, for "A perpetual rotary motion for clocks."—Dated 6th July, 1859.

7720. J. N. Andrien, of Liége, for a Patent of Improvement of "Smoke preventing apparatus for chimneys."—Dated 4th July, 1859.—(Original Patent, 15th April, 1859.)

7721. J. Simon, of Schaerbeek, for an imported invention of "A composition called 'Zeiodelite.'"—Dated 6th July, 1859.—(French Patent, 21st June, 1859.)

7723. J. B. J. Constant, represented by B. Verlinde, of Brussels, for a Patent of Improvement for "An instantaneous break applicable to all vehicles."—Dated 6th July, 1859.—(Original Patent, 8th April, 1856.)

7724. S. Léoni, represented by A. Crooy, of Brussels, a Patent of Improvement for "Manufacture of certain ceramic products."—Dated 6th July, 1859.—(Original Patent, 17th March, 1859.)

7726. J. Kerr, represented by J. Piddington, of Brussels, for an imported invention of "Improvements in revolvers."—Dated 6th July, 1859.—(English Patent, 17th December, 1858.)

7727. Ph. Vander Haegen, of Brussels, for "Making paper from saw dust."—Dated 6th July, 1859.

7729. R. Mushet, represented by R. S. Kirkpatrick, of Ixelles, for an imported invention of "A metallic alloy."—Dated 7th July, 1859.—(English Patent, 12th January, 1859.)

7732. Jolibois, née T. Poulain, represented by H. Biebuyck, of Brussels, for a Patent of Improvement of "A cooling apparatus for breweries."—Dated 9th July, 1859.—(Original Patent, 11th January, 1859.)

7735. P. Vandevoorde, of Lokeren, a Patent of Improvement of "Metrical measures."—Dated 9th July, 1859.—(Original Patent, 5th April, 1859.)

7736. M. Schimmelbusch, of Liége, for "Improvements in the manufacture of puddled steel."—Dated 9th July, 1859.

7737. G. Schopen, of Liége, for "A system of double-breech loading guns with a safety-needle."—Dated 21st July, 1859.

7738. M. Schimmelbusch, of Liége, for "Improvements in the manufacture of cast iron and

* For the Belgian Patent Law, see Nos. 292 and 348 of this Journal.

† All Specifications of Patents which have been in force not less than six months, may be inspected or translations of them be had at the Library of the Great Seal Patent Office, where also translated Indexes may be consulted.

copper by using wolfram thereat."—Dated 13th July, 1859.

7739. Ad. Marteaux and A. Robert, of Lodelinsart, for "A process for obtaining mastic for joining steam pipes, cylinders, &c."—Dated 11th July, 1859.

7740. J. B. Verken, of Verviers, for "A machine for beating and carding wool."—Dated 12th July, 1859.

7741. Ch. Van Lancker, represented by Alb. Allard, for "A system of alarum clock."—Dated 11th July, 1859.

7742. Ed. Gwyn, represented by H. Biebuyck, of Brussels, for an imported invention of "Improvements in fire-arms."—Dated 11th July, 1859.—(English Patent, 21st June, 1859.)

7743. W. Sellers, represented by A. Anoul, of Ixelles, for an imported invention of "An improved system of ovens for baking bread or other alimentary substances."—Dated 11th July, 1859.—(English Patent, 10th June, 1859.)

7744. Ed. Dorsett, represented by R. Culliford, of Brussels, for an imported invention of "Improvements in distilling oil of tar, and in apparatus employed for preserving timber."—Dated 11th July, 1859.—(French Patent, 23rd February, 1859.)

7745. J. B. Vangindertaelen, of Brussels, for a Patent of Improvement of "A system of force and lift pumps for acid liquids."—Dated 12th July, 1859.—(Original Patent, 6th August, 1857.)

7746. R. Mushet, represented by R. Culliford, of Brussels, for an imported invention of "Improvements in the manufacture of cast steel."—Dated 11th July, 1859.—(English Patent, 15th January, 1859.)

7747. A. C. d'Yochet, represented by X. Raclot, of Brussels, for "Apparatus for sounding and boring."—Dated 12th July, 1859.

7748. G. Smith, represented by A. Crooy, of Brussels, for an imported invention of "Improvements in fire-arms."—Dated 12th July, 1859.—(English Patent, 27th June, 1859.)

7749. P. Lemaire, represented by X. Raclot, of Brussels, for "A moderator fire-place for heating apartments."—Dated 13th July, 1859.—(French Patent, 20th July, 1858.)

7750. J. Poulet and J. Ringo, of Liége, for "A process for conglomerating granular metal ores."—Dated 13th July, 1859.

7751. E. J. J. de Schoenowsky, of Malines, for "An electro-telegraphic printing apparatus."—Dated 15th July, 1859.

List of Patents Delivered on the 4th August, 1859.

7041. A. J. Masure, of Buissenal, for "A machine for sowing all kinds of seeds."—Dated 25th January, 1859.

7387. Ph. Fromont, of Châtelineau, for "A ventilator with conical surfaces for mines and blast engines."—Dated 12th April, 1859.

7505. J. Frey, represented by L. Barbe, of Liége, for an imported invention of "A system of fastening with or without keys."—Dated 4th July, 1859.—(French Patent, 24th December, 1858.)

7549. M. Lejeune, of Liége, a Patent of Improvement for "A double slide and lever gun."—Dated 16th July, 1859,—(Original Patent, 17th November, 1857.)

7592. L. Semet, represented by H. Biebuyck, of Brussels, for "A brick machine."—Dated 25th July, 1859.

7728. Mrs. Clenet, of Liége, for "A bag-pipe with a sanitary plate."—Dated 7th July, 1859.

7731. J. J. Bosson, of Verviers, for "A gig with a single doffer."—Dated 9th July, 1859.

7752. L. Giordano, of Brussels, for "A perpetual motor."—Dated 14th July, 1859.

7753. A. Malherbe, of Mons, for "Improvements in double lever guns according to Lefaucheux' system."—Dated 14th July, 1859.

7754. C. J. Proal, represented by D. de Vos-Verraert, of Brussels, for "Using oil-cloth, percaline, nanzonk, and other photographic tissues for making blotting-books, pocket-books, &c."—Dated 14th July, 1859.

7755. E. Smits, of Couillet, for "A system of vertical press with a direct action for shingling blooms in the manufacture of iron."—Dated 16th July, 1859.

7756. Ed. Vermeirre, of Ghent, for "Improvements in cards of cotton-mills."—Dated 12th July, 1859.

7757. C. Toen, of Berchem, for "A system of lamps."—Dated 12th July, 1859.

7759. E. Livermore, represented by A. Crooy, of Brussels, for an imported invention of "Improvements in combustible fluids for lighting and heating."—Dated 15th July, 1859.—(English Patent, 8th July, 1859.)

7760. J. B. Bichelberger, of Huy, for an imported invention of "A machine for washing rags."—Dated 18th July, 1859.—(French Patent, 24th December, 1856.)

7761. H. J. Legrand, of Verviers, for "Improvements in spinning frames."—Dated 18th July, 1859.

7763. L. Dupuis, of Mont-sur-Marchienne, for "A mode of heating coal dust for making compressed coal cakes, applicable to common mixing machines."—Dated 4th July, 1859.

7764. C. Tillière, of Brussels, for "A remontoir of watches."—Dated 16th July, 1859.

7765. J. J. Schaeffler, represented by G. Mohl, of St. Josse-ten-Noode, for "An apparatus for distributing the gas of blast furnaces."—Dated 16th July, 1859.

7766. W. Talbot, represented by A. Crooy, of Brussels, for an "Improved apparatus for lighting cigars."—Dated 16th July, 1859.

7767. G. Spiller, represented by A. Crooy, of Brussels, for an imported invention of "Improvements in military and other knapsacks."—Dated 16th July, 1859.—(English Patent, 2nd December, 1858.)

7768. F. Delagrange, of Brussels, for an imported invention of "A mode of using waste of silk and other filamentous substances."—Dated 16th July, 1859.—(French Patent, 2nd July, 1859.)

7769. L. Guinotte, of Couilbet, for "A regulator of steam-engines."—Dated 21st July, 1859.

7770. A. J. Dessales, of St. Josse-ten-Noode, for an imported invention of "A suspension rod with fixed stops for lighting apparatus."—Dated 19th July, 1859.—(French Patent, 24th May, 1859.)

7771. R. Mushet, represented by R. S. Kirkpatrick, of Ixelles, for an imported invention of "Improvements in the manufacture of cast steel."—Dated 19th July, 1859.—(English Patent, 12th January, 1859.)

7772. R. Mushet, represented by R. S. Kirkpatrick, of Ixelles, for an imported invention of "Improvements in the treatment of cast steel."—Dated 19th July, 1859.—(English Patent, 15th January, 1859.)

7773. H. A. Bonneville, represented by A. Hennelle, of St. Josse-ten-Noode, for "A machine for obtaining heads of bolts by punching."—Dated 19th July, 1859.

7774. H. Gaudibert, represented by A. Hennelle, for an imported invention of "An apparatus for cleansing combs."—Dated 19th July, 1859.—(French Patent, 27th June, 1859.)

7775. Z. G. A. N. Orioli, represented by O. Daillencourt, of Brussels, for an imported invention of "Bleaching, dyeing, and preserving organic substances by means of hydrochlorite of alumina."—Dated 19th July, 1859.—(French Patent, 19th April, 1859.)

7776. G. Walker, represented by A. Crooy, of Brussels, for an imported invention of "Improvements in toilet mirrors."—Dated 20th July, 1859—(English Patent, 20th May, 1859.)

7777. The Floreffe Company for the Manufacture of Mirrors and Chemical Products, represented by H. Henroz, of Floreffe, for "Condensing hydrochloric acid gas and apparatus belonging thereto."—Dated 21st July, 1859.

7778. A. J. Wilmart, of Yoes-Gomezée, for "A machine for obtaining balls of coals."—Dated 22nd July, 1859.

7779. Ch. Van Kalck, of Brussels, for "Manufacture of heads of pins, cramps, bolts, &c."—Dated 21st July, 1859.

7780. W. Knapton and A. Aitchinson, represented by A. Crooy, of Brussels, for "Improvements in the manufacture of lighting gas."—Dated 21st July, 1859.—(English Patent, 5th July, 1859.)

7781. Ch. Charlier, of Wandre, a Patent of Improvement for "A system of revolvers."—Dated 22nd July, 1859.—(Original Patent, 2nd December, 1857.)

7782. Ph. Denis, of Brussels, for "A spring mattress for beds."—Dated 22nd July, 1859.

7784. R. W. Sievier, represented by X. Raclot, of Brussels, for "Improvements in smelting and refining iron and other metals."—Dated 22nd July, 1859.

7785. A. A. Perier and L. Possoz, represented by Ch. Hulot, of Molenbeek St. Jean, a Patent of Improvement for "Manufacture of sugar."—Dated 22nd July, 1859.—(Original Patent, 1st March, 1859.)

7786. F. de Calurve, of Brussels, for "A system of fastening show windows."—Dated 23rd July, 1859.

7788. W. Robertson, represented by J. Sainthill, of Brussels, for an imported invention of "Improvements in apparatus for propelling vessels on canals and rivers."—Dated 23rd July, 1859.—(English Patent, 28th January, 1859.)

In course of Publication, by Order of the Commissioners of Patents.

ABRIDGMENTS (in Classes, and Chronologically arranged) of all SPECIFICATIONS of PATENTED INVENTIONS, from the earliest enrolled to those published under the Act of 1852.

These books are of 12mo size, and as each is limited to inventions of one class only, they can be sold at prices sufficiently moderate to enable the humblest inventor to examine for himself whether his discovery has been previously patented or not.

At the foot of each abstract are given references to notices of the inventions in scientific and other works, and to the reports of law proceedings for infringements, &c. &c. &c.

The classes already published are,—

1. Drain Tiles and Pipes, price 6*d.*
2. Sewing and Embroidering, price 6*d.*
3. Manure, price 6*d.*
4. Preservation of Food, price 6*d.*
5. Marine Propulsion, price 4*s.*
6. Manufacture of Iron and Steel, price 5*s.*
7. Aids to Locomotion, price 1*s.*
8. Steam Culture, price 2*s.*
9. Watches, Clocks, and other Timekeepers, price 1*s.* 6*d.*
10. Fire-arms and other Weapons, Ammunition, and Accoutrements, price 6*s.* 6*d.*
11. Paper.—Part I. Manufacture of Paper, Pasteboard, and Papier Mâché, price 3*s.*
12. Paper.—Part II. Cutting, Folding, and Ornamenting; including Envelopes, Cards, Paper-hangings, &c., price 2*s.*
13. Typographic, Lithographic, and Plate Printing, price 7*s.*
14. Bleaching, Dyeing, and Printing Yarns and Fabrics, price 9*s.* 6*d.*

The following are in the press:—

Electricity and Magnetism: their Generation and Applications.
Preparation of Fuel, and Apparatus for its Combustion.
Manufacture and Applications of India Rubber, Gutta Percha, &c.; including Air, Fire, and Water Proofing.
Production and Applications of Gas.
Steam Engines.
Metals and Alloys.

B. Woodcroft.

The above, and all other works published by the Commissioners of Patents, are now on sale at the Great Seal Patent Office, 25, Southampton Buildings, Holborn.

This Journal is published on the evenings of Tuesday and Friday, and will be forwarded, post free, to Subscribers.—Terms, 30*s.* per annum.—Subscriptions received at the Great Seal Patent Office, where also single copies, at twopence each, may be obtained.

No. 586. TUESDAY, AUGUST 16, 1859. Price 2*d*.

Notices to Proceed.

NOTICE is hereby given, that

822. YVES-MARIE THOMAS, of No. 2, Rue Sainte Appoline, Paris, empire of France, and of No. 45, Essex Street, Strand, London, has given notice at the Office of the Commissioners of his intention to proceed with his application for Letters Patent for the invention of "An improved propeller for ships, vessels, boats, and water-wheels."

As set forth in his petition, recorded in the said office on the 1st day of April, 1859.

832. And MICHAEL COUPLAND, of Haggerstone, in the county of Middlesex, Engineer, has given the like notice in respect of the invention of "Improvements in furnaces."

As set forth in his petition, recorded in the said office on the 2nd day of April, 1859.

850. And EDWARD FAIRBURN, of Kirklees Mills, Mirfield, in the county of York, Card Manufacturer, has given the like notice in respect of the invention of "Improvements in machinery for carding wool and other fibrous substances."

852. And FREDERICK COLLIER BAKEWELL, of No. 6, Haverstock Terrace, Hampstead, in the county of Middlesex, has given the like notice in respect of the invention of "Improvements in open fireplaces."—A communication from abroad by Calvin Dodge, of Pittsburg, North America.

853. And GEORGE FREDERIC CHANTRELL, of Liverpool, in the county of Lancaster, Furnace Engineer, and EDWARD DUTCH, of the same place, Commercial Traveller, have given the like notice in respect of the invention of "Improvements in the apparatus for regulating the quantity of water to be used for the flushing of water closets and other purposes."

855. And JOHN HETHERINGTON, of Manchester, in the county of Lancaster, Machinist, THOMAS WEBB, and JAMES CRAIG, of Tutbury, in the county of Derby, Cotton Spinners, have given the like notice in respect of the invention of "Improvements in machinery or apparatus for spinning and doubling cotton and other fibrous materials."

856. And THOMAS SCOTT, of Dundee, in the county of Forfar, North Britain, Gentleman, has given the like notice in respect of the invention of "Improvements in preparing, treating, or manufacturing fibrous materials, and in the apparatus employed therein."

As set forth in their respective petitions, all recorded in the said office on the 5th day of April, 1859.

864. And JOHN SCOFFERN, of No. 4, Barnard's Inn, Bachelor of Medecine, has given the like notice in respect of the invention of "Improvements in lubricating projectiles and cartridges."

As set forth in his petition, recorded in the said office on the 6th day of April, 1859.

865. And DAVID MOSELEY, af the Chapel Field Works, Ardwick, in the city of Manchester, Manufacturer of india-rubber and gutta-percha, has given the like notice in respect of the invention of "Improvements in the manufacture of cards for carding cotton and other fibrous materials."

As set forth in his petition, recorded in the said office on the 7th day of April, 1859.

880. And NICOLAS ALEXIS GRUMEL, formerly a Dyer, and at present Ink Manufacturer, in Paris, in the empire of France, has given the like notice in respect of the invention of "Improvements in dyeing cotton, wool, silk, flax, and other fibrous materials or fabrics."

As set forth in his petition, recorded in the said office on the 8th day of April, 1859.

888. And THOMAS BARNETT, of Oldham, in the county of Lancaster, HENRY TURNER, Sourbuts, and WILLIAM LOYND, of Hyde, in the county of Chester, Engineers, have given the like notice in respect of the invention of "Improvements in steam engines."

891. And JOHN HENRY JOHNSON, of No. 47, Lincoln's Inn Fields, in the county of Middlesex, and of 166, Buchanan Street, in the city of Glasgow, North Britain, Gentleman, has given the like notice in respect of the invention of "Improvements in the manufacture or production of the ferrocyanide and cyanide of potassium."—A communication from abroad by Jean Victor Lucas, of Paris, in the French empire, Chemist.

895. And WILLIAM EDWARD NEWTON, of the Office for Patents, 66, Chancery Lane, in the county of Middlesex, Civil Engineer, has given the like notice in respect of the invention of "Improvements in steam engines and boilers."—A communication from abroad, by Ernest Georges Xavier Boileau, of Paris, in the empire of France.

As set forth in their respective petitions, all recorded in the said office on the 9th day of April, 1859.

---

923. And RICHARD EMERY, of No. 6, King Street, Saint James's Square, in the city of Westminster, and county of Middlesex, Gentleman, has given the like notice in respect of the invention of "Certain improvements in carriages for common roads."

924. And WILLIAM ARENA MARTIN and JAMES PURDIE, of Woolwich, in the county of Kent, Engineers, have given the like notice in respect of the invention of "Improvements in fire bars."

928. And WILLIAM CRAFT, of No. 12, Cambridge Road, Hammersmith, and THOMAS WILSON, of Bradmore House, Chiswick, both in the county of Middlesex, have given the like notice in respect of the invention of "Improvements in the manufacture of pinafores and bibs for children."

As set forth in their respective petitions, all recorded in the said office on the 13th day of April, 1859.

---

938. And JOSEPH BEATTIE, of Lawn Place, South Lambeth, in the county of Surrey, Engineer, has given the like notice in respect of the invention of "Improvements in the means of preventing locomotive engines and carriages in motion on railways leaving or running off the rails."

945. And STEPHEN BARNWELL, of Coventry, in the county of Warwick, Manufacturer, and ALEXANDER ROLLASON, of Birmingham, in the same county, Chemist, have given the like notice in respect of the invention of "Improvements in the manufacture of umbrellas, parasols, hats, or hat covers, caps, capes, coats, mantles, dresses, gloves, and other similar articles."

As set forth in their respective petitions, both recorded in the said office on the 14th day of April, 1859.

---

946. And GERMAIN ABEILLOU, of Toulouse, a town of France, Joiners' Tool Manufacturer, has given the like notice in respect of the invention of "An extensible arching plane."

As set forth in his petition, recorded in the said office on the 15th day of April, 1859.

957. And WILLIAM EDWARD NEWTON, of the Office for Patents, 66, Chancery Lane, in the county of Middlesex, Civil Engineer, has given the like notice in respect of the invention of "Improvements in the manufacture of alumina."—A communication from abroad by Mr. Le Chatelier, of Paris.

960. And HENRY HARRISON, of the firm of Joseph Harrison and Sons, of Blackburn, in the county of Lancaster, Machine Makers, has given the like notice in respect of the invention of "Certain improvements in looms for weaving."

As set forth in their respective petitions, both recorded in the said office on the 16th day of April, 1859.

---

985. And PETER REYNOLDS, of Belfast, in the county of Antrim, Ireland, and JAMES REYNOLDS, of the same place, Engineers and Machinists, have given the like notice in respect of the invention of "Improvements in machinery or apparatus for hackling flax and other fibrous materials."

991. And ALFRED VINCENT NEWTON, of the Office for Patents, 66, Chancery Lane, in the county of Middlesex, Mechanical Draughtsman, has given the like notice in respect of the invention of "Improved machinery for weaving seamless bags or other articles with hemispherical or regular or irregular ends or forms."—A communication from abroad by John Pender, of the United States of America.

As set forth in their respective petitions, both recorded in the said office on the 19th day of April, 1859.

1046. And ROBERT MAIN, of Birkenhead, in the county of Chester, Carriage Builder, has given the like notice in respect of the invention of "Improvements in wheels for carriages."

1051. And JOHN HENRY JOHNSON, of 47, Lincoln's Inn Fields, in the county of Middlesex, and of 166, Buchanan Street, in the city of Glasgow, North Britain, Gentleman, has given the like notice in respect of the invention of "Improvements in machinery or apparatus for grinding and polishing knives and other articles of cutlery and tools."—A communication from abroad by James Dodge, of Waterford, Saratoga county, state of New York, United States of America.

As set forth in their respective petitions, both recorded in the said office on the 26th day of April, 1859.

1087. And WILLIAM CLARK, of 53, Chancery Lane, in the county of Middlesex, Engineer and Patent Agent, has given the like notice in respect of the invention of "Improvements in ventilating or supplying air to diving bells and divers, and in holding communication therewith from above."—A communication from abroad by François Aquilas Laurent, of Paris.

1091. And JOSEPH SOUQUIÉRE (called EMILE), of 29, Boulevart St. Martin, Paris, in the empire of France, Civil Engineer, has given the like notice in respect of the invention of "A new or improved process for distilling coal."

As set forth in their respective petitions, both recorded in the said office on the 30th day of April, 1859.

1109. And WILLIAM SELLERS, of Philadelphia, in the state of Pennsylvania, United States of America, Engineer and Machinist, has given the

like notice in respect of the invention of "Improved machinery for making screw bolts and nuts."
As set forth in his petition, recorded in the said office on the 3rd day of May, 1859.

1204. And WILLIAM SPARKS THOMSON, of New York, in the United States of America, but now of St. Martin's-le-Grand, London, Skirt Manufacturer, has given the like notice in respect of the invention of "Improvements in the manufacture of hooped skirts."—Partly a communication from abroad by William Wilmot, of New York, in the United States of America.
As set forth in his petition, recorded in the said office on the 13th day of May, 1859.

1412. And WILLIAM SELLERS, of Philadelphia, in the state of Pennsylvania, one of the United States of America, Engineer and Machinist, has given the like notice in respect of the invention of "Improvements in ovens for baking bread or other substances, which improvements are also applicable for drying, annealing, and other analogous purposes."
As set forth in his petition, recorded in the said office on the 10th day of June, 1859.

1560. And JOHN LAWSON, of Leeds, in the county of York, Engineer, and STEPHEN COTTON, of Leeds aforesaid, Draftsman, have given the like notice in respect of the invention of "Certain improvements in machinery for roving, twisting, and spinning flax, cotton, wool, and other fibrous substances."
As set forth in their petition, recorded in the said office on the 30th day of June, 1859.

1580. And THOMAS JAMES HART, of Birmingham in the county of Warwick, Gun Barrel Manufacturer, has given the like notice in respect of the invention of "Improvements in breach loading fire arms."
As set forth in his petition, recorded in the said office on the 2nd day of July, 1859.

1595. And CHARLES BARLOW, of No. 89, Chancery Lane, London, Patent Agent, has given the like notice in respect of the invention of "Improvements in capstans." — A communication from abroad by Samuel Huse, of Boston, United States of America.
As set forth in his petition, recorded in the said office on the 5th day of July, 1859.

1626. And ELIJAH LIVERMORE, of the city of New York, in the United States of America, has given the like notice in respect of the invention of "Improvements in the manufacture of burning fluids for illuminating and heating purposes."—A communication from Levi Lewis Hill, resident at Greenport, in the county of Columbia, and state of New York, in the United States of America.
As set forth in his petition, recorded in the said office on the 8th day of July, 1859.

1658. And ALLAN COOPER, of Birmingham, in the county of Warwick, Manufacturer, has given the like notice in respect of the invention of "Improvements in the manufacture of the grips of swords and sword bayonets."
As set forth in his petition, recorded in the said office on the 13th day of July, 1859.

1681. And JULIAN BERNARD, of the Albany, Piccadilly, in the county of Middlesex, Gentleman, has given the like notice in respect of the invention of "Improvements in the construction and arrangement of hydraulic and other pumps for forcing liquids and for obtaining pressure."

1682. And JULIAN BERNARD, of the Albany, Piccadilly, in the county of Middlesex, Gentleman, has given the like notice in respect of the invention of "Certain improvements in the manufacture of boots and shoes, and in the machinery and apparatus to be employed therein."
As set forth in their respective petitions, both recorded in the said office on the 16th day of July, 1859.

1691. And JULIAN BERNARD, of the Albany, Piccadilly, in the county of Middlesex, Gentleman, has given the like notice in respect of the invention of "Improvements in the manufacture of boots and shoes and the means employed therein."
As set forth in his petition, recorded in the said office on the 18th day of July, 1859.

1720. And SAMUEL ALEXANDER BELL and JOHN BLACK, of Bow Lane, Cheapside, in the city of London, Vesta Light and Fusee Manufacturers, have given the like notice in respect of the invention of "An improved manufacture of fusee."
As set forth in their petition, recorded in the said office on the 22nd day of July, 1859.

1759. And JAMES WRIGHT, of No. 42, Bridge Street, Blackfriars, city of London, Civil Engineer, has given the like notice in respect of the invention of "An improved method of raising or drawing up the skirts of gowns or dresses."—A communication from abroad by M. Bresson, of Paris, in the French empire, Civil Engineer.
As set forth in his petition, recorded in the said office on the 29th day of July, 1859.

And notice is hereby further given, that all persons having an interest in opposing any one of such applications are at liberty to leave particulars in writing of their objections to such application, at the said Office of the Commissioners, within twenty-one days next after the date of the Gazette [and of the Journal] in which this notice is issued.

Patents Sealed.

LIST of LETTERS PATENT which passed the Great Seal on the

16*th August*, 1859.

474. PETER SPENCE, of Pendleton, in the county of Lancaster, Manufacturing Chemist, for an invention of "Improvements in the manufacture of alum and in the mode of and apparatus for condensing or destroying gases arising therefrom."—Dated 21st February, 1859.

478. Joseph Schloss, of Cannon Street, in the city of London, Manufacturer, for an invention of "An improvement in locks or clasps for porte-monnaies, pocket books, bags, and other like purposes." — A communication from Vve. Henry Schloss and Frère, residing in Paris.—Dated 21st February, 1859.

485. Edward Lund, of Manchester, in the county of Lancaster, Gentleman, for an invention of "Certain improvements in the manufacture of fabrics or textures to be used in the construction of umbrellas and parasols." — Dated 22nd February, 1859.

486. Richard Archibald Brooman, of 166, Fleet Street, in the city of London, E.C., Patent Agent, for an invention of "A method of fixing tannin upon textile fibres and the employment thereof in dyeing black and dark colors." — A communication from M. Verguin, residing at Lyon, France.—Dated 22nd February, 1859.

488. William Gossage, of Widnes, in the county of Lancaster, for an invention of "Improvements in the utilization of alkali waste."—Dated 22nd February, 1859.

491. William Ashton, of Heaton Norris, in the county of Lancaster, Manager, for an invention of "Improvements in gas regulators."—Dated 23rd February, 1859.

493. Uriah Scott, of Camden Town, in the county of Middlesex, Civil Engineer, for an invention of "Improvements in carriages and various parts of the same, which parts may be applied to vehicles of any description."—Dated 23rd February, 1859.

495. Samuel Rodgers Samuels, of Nottingham, for an invention of "Improvements in twist lace machines."—Dated 23rd February, 1859.

498. Henry Bernoulli Barlow, of the city of Manchester, Patent Agent, for an invention of "Improvements in apparatus for condensing steam." — A communication from abroad by François Daina, of Bergamo, in the empire of Austria.—Dated 24th February, 1859.

503. Joseph Crosland, of Crosland Moor, Huddersfield, in the county of York, Manufacturer, for an invention of "Improvements in looms for weaving textile fabrics."—Dated 24th February, 1859.

504. Adolphe Lançon, junr., Watch Manufacturer, at Besançon, Departement du Doubs, empire of France, for an invention of "A new system of watches."—Dated 24th February, 1859.

575. James Cowban and Elias Andrews, of Burnley, in the county of Lancaster, for an invention of "Improvements in machinery or apparatus for spinning fibrous materials."—Dated 4th March, 1859.

586. George Leach, of Leeds, in the county of York, Yarn Spinner and Cloth Manufacturer, for an invention of "Improved machinery for reeling and leashing yarn or thread."—Dated 5th March, 1859.

598. John Pretty Clarke, of King's Street Mills, Leicester, for an invention of "Improvements in the manufacture of reels for the winding on cotton, linen, thread, silk, or other fibrous materials."—Dated 7th March, 1859.

643. Thomas Lightfoot, of Accrington, in the county of Lancaster, Calico Printer, for an invention of "Improvements in fixing colours on woven fabrics or fibrous materials."—Dated 14th March, 1859.

655. John Dixon and Robert Clayton, both of Bradford, in the county of York, Engineers, for an invention of "Improvements in rolling iron and steel for manufacturing railway wheels and for other purposes."—Dated 16th March, 1859.

770. Benjamin Smith and Charles Lavers Smith, both of Corbets Court, Spitalfields, in the county of Middlesex, Manufacturing Chemists, for an invention of "Improvements in the preparation of certain colouring matter applicable for dyeing and printing."—Dated 26th March, 1859.

1189. Daniel Foxwell, of the city of Manchester, in the county of Lancaster, Card Manufacturer, for an invention of "Improvements in sewing machines and apparatus connected therewith."—Dated 12th May, 1859.

1275. Alfred Vincent Newton, of the Office for Patents, 66, Chancery Lane, in the county of Middlesex, Mechanical Draughtsman, for an invention of "An improved construction of washing machine."—A communication from abroad by David Parker, of Shaker Village, New Hampshire, in the United States of America.—Dated 23rd May, 1859.

1392. Robert Riddell Fairgrieve, of Boston, in the United States of America, Machinist, and Simeon Bathgate, of the town and county of Selkirk, North Britain, Engineer, for an invention of "Improvements in machinery or apparatus for winding yarns or thread." — Dated 7th June, 1859.

1394. John Henderson, William Henderson, and Thomas Bagley, of the city of Durham, Carpet Manufacturers, and Samuel Holdsworth, of the same place, Engineer to Messieurs Henderson and Company, for an invention of "Improvements in looms for weaving, some of which improvements are applicable to other purposes."—Dated 8th June, 1859.

1428. Alfred Vincent Newton, of the Office for Patents, 66, Chancery Lane, in the county of Middlesex, Mechanical Draughtsman, for an invention of "Improvements in the fitting of life and other boats."—A communication from abroad by Matthias Ludlum, of Fairhaven, in the state of Vermont, United States of America.—Dated 13th June, 1859.

Patents on which the Stamp Duty of £50 has been Paid.

(*To 12th August*, 1859, *inclusive.*)

11th August.

1900. Alfred Priest and William Woolnough, of the Iron Works, Kingston-on-Thames, for an invention of "Improvements in horse hoes."—Dated 14th August, 1856.

12th August.

1899. Edward Hallen, of Cornwall Road, Lambeth, in the county of Surrey, Civil Engineer, and William Holland Kingston, of Bandon, in the county of Cork, Ireland, A.B., Trinity College, Dublin, for an invention of "Improved means for making signals on railways."—Dated 14th August, 1856.

1917. John Weir Draper Brown, of Burrel's Hotel, London Bridge, and George Gibson Brown, of Deptford Dockyard, for an invention of "Improvements in signal lanterns."—Dated 16th August, 1856.

1952. Joseph Crossley, Carpet Manufacturer, of Halifax, in the county of York, and James Bolton, of the same place, Overlooker, for an invention of "Improvements in apparatus or means employed in the printing of yarns for carpets and other fabrics."—Dated 21st August, 1856.

1988. Edward Alfred Cowper, of Great George Street, Westminster, Civil Engineer, for an invention of "An improvement in the manufacture of candles."—Dated 26th August, 1856.

FOREIGN PATENTS.

UNITED STATES OF AMERICA.

(Communicated by the Commissioner of Patents.)

List of Patents, with Claims annexed, issued from the United States Patent Office, for the week ending 26th July, 1859, and each bearing that date.

No. 24,850. Asa Brooks, of Tolland, Conn., for an "Improved mode of setting logs in saw mills."

"What I claim, is, the application and combination of the gear A and screw shaft L, the traveling ratchet E and chock *c*, the stops F and K, the spring pawl B, D, for the purpose as herein described and substantially as set forth."

No. 24,851. Henry F. Bond, of Hudson, Wis., for an "Improved bread slicer."

"What I claim, is, the movable tray G, operated automatically by the motion of the knife C, in the manner substantially as herein set forth. 2nd, I claim the bar T, arranged substantially as described for the purpose specified.

No. 24,852. S. L. Bond, of Greenwood, S.C., for an "Improved tuyere."

"I claim the arrangement and combination of the two pipes C, C, having their orifices opposite to each other, with the air chamber B, so that the two currents of air on entering the chamber will oppose each other, and thus uniformly diffuse the air, as herein shown and described."

No. 24,853. John Biberthaler, of New York, N.Y., for an "Improved iron folding bedstead."

"What I claim, is, the arrangement of the bed bottom in two parts, one of which A being about two thirds of the whole length of the bed, and to which the legs are attached, capable of turning under said part when required, and attaching the other part D (and which forms the upper or head part of the bed) to the legs nearest the head in such a manner that the said part D may be turned over the top of the bottom part A, while the legs to which the same is attached are turned under the said part A, in the manner and for the purpose substantially as described. I further claim fixing the head part of the bed D when unfolded either to the legs B or to the bottom part A, by means of bolts or pins (*n*), in such a manner that by said bolts the inclination of said part D may at the same time be regulated to any desired position, substantially as described and set forth."

No. 24,854. Henry Bessling, of New York, N.Y., for an "Improvement in reefing sails."

"What I claim, is, the slides *d*, d^1, applied to work along the jack stay or other suitable portion of the yard, in combination with the reef points extended from the back of the sail, up through the jack stay or yard, and with the reef pendants, substantially as herein described. And without confining myself to the particular construction of the pawls I, I, I claim securing the reef by means of pawls applied to the yard, to operate in combination portions of the reef pendants made of chain substantially as herein described."

No. 24,855. Alexr. Beekers, of New York, N.Y., for an "Improvement in stereoscopic instruments."

"I claim, first, placing the eye glasses B, in a movable cylinder A, in such a manner that opaque pictures O^1 and O^2, placed back to back, may be viewed by the same pair of eye-glasses, the direction of the said eye-glasses being varied by the partial rotation of the cylinder to suit the opposite position of the pictures, substantially as described. Second, the construction of the picture holders with a double hook N, substantially as described."

No. 24,856. Edwin C. Custer, of Evansburgh, Pa., for an "Improved machine for stoning cherries."

"What I claim, is, the described machine for stoning cherries constructed in a manner substantially as specified, with its spirally grooved cylinder A, and adjustable stripper E, arranged and operating as set forth."

No. 24,857. James M. Clark, of Philadelphia, Pa., for an "Improvement in flour bolts."

"What I claim, is, slide valve *d*, or a series of slide valves d^* without holes in them, so arranged and operating with the apertures *e* and e^1, in the sides of bolting chest, that either of these apertures can be opened or closed, or both closed when required for the purpose of turning the material as desired in either of three directions as set forth."

No. 24,858. B. Wells Dunklee and W. B. Moore, of Boston, Mass., for an "Improved steam heating apparatus."

"What we claim, is, the combination of the tubes E, casing P, inner and outer reservoirs C and D, and condensation pipes I, and escape pipe J, with its valve *d*, with petticoat chamber F, and vaporizing pipe *b*, and the use of the iron known as the Poleux patent metal alloy coating, substantially as and for the purposes set forth in the foregoing specification and accompanying drawings."

No. 24,859. Chas. Frost, of Waterbury, Conn., for an "Improved door fastening."

"What I claim, is, the employment or use of the drop plate D, constructed of the form and applied to the door or doors, substantially as and for the purpose set forth."

No. 24,860. Henry Fisher, of Alliance, Ohio, for an "Improvement in harvesters."

"What I claim, is, attaching the draft or draw bars M, M^1, to the arms L, L^1, in the manner and for the purposes substantially as set forth. I also claim the peculiar arrangement and combination of frames I, K, and M, tongue N, spur *e*, and arm *g*, in relation to each other and to the main shaft B, to operate in the manner and for the purpose specified."

No. 24,861. Geo. H. Ferguson and Sylvester Ferguson, of Malden Bridge, N. Y., for a "Machine for feeding paper to printing presses."

"What we claim, is, feeding sheets of paper singly to a printing press, paper ruling, or other machine requiring

the feed of a single sheet at a time, by means of a feed roller G, feed roller I, and adjustable friction stop J, or the equivalents thereof, when arranged, essentially as herein above specified."

No. 24,862. Benjn. L. Griffith, of Hazelton, Pa., for an "Improvement in locomotive boilers."

"I claim the deflectors G, G¹, and H, arranged within the space C, between the fire place and the tube sheet of a locomotive boiler, substantially as described, in combination with openings in the fire-box for the admission of atmospheric air, for the purpose specified."

No. 24,863. E. A. Goodes and E. L. Miller, of Philadelphia, Pa., for an "Improvement in sewing machines."

"What we claim is the combination of the needles *n*, and *b*, the hook *h*, and the tongue L, the whole applied, arranged, and operating, substantially as herein described."

No. 24,864. Chas. M. Gould, of Worcester, Mass., for an "Improved submarine helmet window."

"What I claim, is, the application to submarine helmets of the above-described window, substantially in the manner and for the purposes herein described."

No. 24,865. Chas. Glassborow, of Philadelphia, Pa., for an "Improvement in piano-fortes."

"I claim constructing the string frame of an upright piano with two pin blocks and other appliances for receiving two sets of strings and two distinct sounding boards, the strings being arranged, one set on one side and the other set on the opposite of the frame, the two sounding boards being connected together, and the whole being otherwise constructed, substantially in the manner and for the purpose herein set forth."

No. 24,866. James Gilfillan, of Hartford, Conn., for an "Improvement in valves for water closets."

"What I claim, is, the combination of elastic tubular spring R, piston D, chamber E, operating in the manner, as and for the purpose described."

No. 24,867. Richd. Gill and Geo. W. Grier, of Altoona, Pa., for an "Improvement in the furnaces of locomotive engines."

"What we claim, is, in combination with the fire-box of a coal-burning locomotive boiler, a water deflector, having a series of small openings through it, and extending up over the fire, as represented, and an air passage behind, or over it, which communicates with the external air, for the purpose of introducing atmospheric air, in small jets over the fire, substantially in the manner and for the purpose set forth."

No. 24,868. Enos Hartzler, of Orville, Ohio, for an "Improved pump."

"What I claim, is, the arrangement of pipes E, F, G, H, valves *c*, *c*, *c*, *c*, springs *x*, *x*, *x*, *x*, and spring *a*, with the rod I, box C, and stock A, the several parts being combined and operating, substantially as and for the purpose specified."

No. 24,869. E. H. Hancock, of Augusta, Geo., for an "Improved sawing machine."

"I claim, 1st, the combination of the yielding guard levers, or their equivalent, with the rotary saws, substantially as and for the purpose described. 2nd, the head blocks D, swinging guide (E), circular saws (A), and guard lever (C), when arranging and operating, substantially as and for the purpose set forth."

No. 24,870. Wm. Hall, of North Adams, Mass., for an "Improvement in sewing machines."

"What I claim, is, first, the combination of the needle carrier B, pivoted bar M, connecting rod J, slide I, pitman H, and crank G, when arranged and operating in the manner and for the purpose substantially as above set forth. Second, the combination of slide I, and rod J (or its equivalent), with a vibrating needle carrier, in such manner as to produce two vertical motions on the needle, during each single horizontal motion of the slide I, substantially in the manner fully set forth in my description."

No. 24,871. Geo. Hall and Alonzo Scudder, of Morris, N. Y., for an "Improved washing machine."

"We claim the employment of a corrugated flexible metallic concave B, stretching across the lower part of the machine, substantially as and for the purpose herein shown and described."

No. 24,872. Chas. H. Hersey, of Boston, Mass., for an "Improvement in rotary pumps."

"I claim the combination of the flange shaft with the hinged valve and cone, substantially as described for the purpose specified."

No. 24,873. Benjn. Hinkley, of Troy, N. Y., for an improved bedstead."

"I claim the arrangement of the dovetailed tenons *m* or *m*¹, on the end rails B, and corresponding dovetailed mortises *n* or *n*¹, in the full posts K, with the side rails J, and longitudinal tension rods *a*, as and for the purposes herein set forth."

No. 24,874. Francis A. Hoyt, of Boston, Mass., for an "Improved water and alarm gauge for steam boilers."

"I claim the arrangement of the balanced valve chamber and valve, the leading pipe thereof, and the whistle, with reference to the dry steam chamber C, the indicator chamber B, and the valve lever and the indicator hand, connected together and arranged in the two chambers B and C, as specified."

No. 24,875. Richd. M. Hoe, of New York. N. Y., for an "Improvement in printing machines."

"I claim stopping the sheet of paper as it issues after its first side is printed, and imparting to it a retrograde motion, thus returning it backwards, or in reverse order, to the impression cylinder for the purpose of printing the second side by the means substantially as above described."

No. 24,876. Frederic Kettler, of Milwaukie, Wis., for an "Improvement in force pumps."

"What I claim as my invention, is, the combination and arrangement of a force pump, as herein described, for the purpose set forth."

No. 24,877. Frederic Kettler, of Milwaukie, Wis., for an "Improved force pump."

"What I claim as my invention, is, the combination and arrangement of a force pump, as herein described for the purpose set forth."

No. 24,878. Geo. T. Kearsing and Wm. F. Kearsing, of Butte City, Cal., for an "Improvement in mills for crushing quartz."

"What we claim, is, the arrangement and combination of the driving shaft C, arms B, rods A, and runner *h*, substantially as and for the purpose described."

No. 24,879. Robt. Marcher, of New York, N. Y., for an "Improvement in machines for enamiling mouldings.

"I do claim, 1st, the elastic or yielding sides *a*, *a*, of the hopper B, arranged to operate substantially as and for the purpose set forth. 2nd, in combination with the hopper B the reciprocating dog S, attached to the bed E, and operated as shown; and also, in combination with said hopper, the feed rollers L, L¹, P, P¹, either or both feeding devices being employed for the purpose specified."

No. 24,880. Chas. Messenger, of Warren, O., for an "Improved bedstead."

"What I claim, is, the angular and oblique slot F and pin G, in combination with the plate or key D, when arranged in connection with the jointed rails, substantially as described and for the purpose herein-before set forth."

No. 24,881. Joseph W. Morton, of Plainfield, N.J., for an "Improvement in sewing machines."

"What I claim, is, my improved loop check or thread-holder, for the Wheeler and Wilson sewing machine, viz., a loop check or thread-holder, which is composed of hair, bristles, or other suitable fibres, by compacting them into a firm mass of suitable size, and then combining the same with a sewing machine in such a manner that the ends of the said

fibres will bear against a portion of the rotating hook of said machine, substantially as herein set forth."

No. 24,882. Richd. Montgomery, of New York, N. Y., for an "Improvement in machines for manufacturing waved and corrugated metal plates."

"What I claim is, the combination of the peculiarly constructed roll I with the peculiarly constructed roll J, arranged and operating in relation to each other as shown, whereby the manufacture of the waved corrugated metallic plate with margins of greater thickness than the middle, as patented to me on the 21st of June, 1859, is facilitated, while a portion of 'each corrugation' is formed at the same time, as described."

No. 24,883. Richd. Montgomery, of New York, N. Y., for an "Improved machine for manufacturing waved and corrugated metal plates."

"What I claim, is, the combination of the peculiarly formed roll I^1 with the peculiarly formed roll J^1, arranged and operating in relation to each other as shown and set forth, whereby the manufacture of the waved corrugated metallic plate with margins of greater thickness than the middle, as patented to me on the 21st of June, 1859, is facilitated while only 'one corrugation' is formed at the same time, as described."

No. 24,884. Daniel Morris, of Bangor, Me., for an "Improvement in shirt studs."

"But I claim the improved manufacture of shirt stud, as constructed with a metallic facing A, and an anti-soiling spool or guard B, arranged and combined together substantially as specified."

No. 24,885. Joseph Newman, of Baltimore, Md., for an "Improvement in platforms between railroad cars."

"What I claim, is, the expanding mesh or lattice work described, when attached by a single point at each end, substantially in the manner set forth, to be used as a bridge, or gangway, between railroad cars."

No. 24,886. Suspended.

No. 24,887. Ira Robbins, of Hughesville, Pa., for an "Improvement in gates for rail-roads."

"I claim the shafts S, S^1, having arms *a*, *b*, as described, in combination with the shaft B, lever A, train of wheels *c*, *c*, *c*, spring detent *g*, spring *f*, and the several rods connecting the aforesaid parts, substantially as set forth for operating the sliding gate G."

No. 24,888. David B. Rogers and Joel N. Wood, of Pittsburgh, Pa., for an "Improvement in springs for railroad cars."

"What we claim, is, the combination of a series of plate springs constructed and arranged as described, with a box, in which they are inserted, and a follower, the spring box being either separate from, or forming part of the truck, substantially in the manner and for the purposes herein-before set forth. Also, making and using the plates or leaves of the spring, constructed and arranged as herein-before described, of different thicknesses in the same series, for the purpose of adapting the spring to the varying degrees of pressure to which it may be subjected from time to time."

No. 24,889. Harrison Roberts, of Mormon Island, Cal., for an "Improvement in gold washers."

"What I claim, is, the arrangement of the sluice B, in combination with the hopper A, and with the supply channel C, in such a manner that the water strikes the dirt from below, and that the hopper is made self-supplying, substantially as herein specified."

No. 24,890. Isaac R. Shank, of Buffalo, Va., for an "Improved biscuit board."

"What I claim, is, the arrangement and combination of trap boards H, H, beveled strips G, G, levers I, I, and vertical pins J, substantially in the manner and for the purposes herein above set forth."

No. 24,891. Henry Simon, of Providence, R.I., for an "Improvement in shirt studs."

"What I claim as my improvement, is, the movable elbow piece *d*, *e*, spring *g*, and lever *h*, applied in combination with each other and with the fixed shank *c*, and in relation to a fixed elbow piece *a*, *b*, substantially as herein described."

No. 24,892. Isaac M. Singer, of New York, N.Y., for an "Improvement in sewing machines."

"I claim making the needle carrier with a mortise, substantially as described, in combination with the needles, a series of blocks having parallel sides grooved to receive the needles, and with a clamp screw, or its equivalent, all substantially as described, and for the purpose set forth."

No. 24,893. John Taggart, of Roxbury, Mass., for an "Improvement in nine-pin balls."

"I claim the new or improved article of manufacture, or nine-pin ball, as composed of a hollow metallic body A, and a covering B of india rubber, or other suitable elastic material, the same being constructed and arranged in manner as herein-before set forth."

No. 24,894. Geo. I. Washburn, of Worcester, Mass., for an "Improvement in boring tools."

"I claim giving the stock or shaft of a boring screw-driving or other tool, a continuous rotary motion in one and the same direction by means of a nut or sleeve, which is moved in a rectilinear reciprocating direction on said shaft, when constructed and arranged substantially in the manner herein described."

No. 24,895. Amos Webb, of Savannah, Geo., for an "Improvement in the construction of railroads."

"I claim the arrangement of the ties A, in alternate reversed inclined positions, as and for the purpose herein shown and described."

No. 24,896. Charles A. Wilson, of Cincinnati, O., for an "Improvement in apparatus for warming by steam."

"I claim the valves E, F, *f*, *g*, adapted and arranged substantially as set forth in the lower or discharging end of the branches, coils, or radiators of a system of steam-heating pipes, and closable, automatically by heat, in the manner and for the purpose explained."

No. 24,897. Chas. A. Wilson, of Cincinnati, Ohio., for an "Improved steam radiator."

"I claim the described arrangement of a series of tubes or boxes 1, 2, 3, &c., provided with corresponding apertures A, and nozzles B, to permit circulation of steam and receive bolts or rods D, which extend from top to bottom of the tier, the whole being adapted in the manner set forth to admit of varying the extent of radiating surface, while that of the floor room occupied remains unchanged."

No. 24,898. Parker Wineman, of Loydsville, Ohio, for an "Improvement in churn dashers."

"What I claim, is, a cylindrical dasher for churns, formed with a perforated top, provided with a movable cap or cover, and with hinged valves, arranged in such manner that cream may be received within the dasher at each downward motion thereof, and all operating substantially as herein described for the purposes set forth."

No. 24,899. Edwd. F. Woodward, of Brooklyn, N. Y., for an "Improved safety guard for ferry wharf."

"What I claim, is, the employment of the apron *g* for the purposes set forth."

No. 24,900. Geo. H. Woodworth, of Brooklyn, N. Y., for an "Improvement in Venetian blinds."

"I claim the eyes 2, 2, or staples passing the cords *f*, *f*, and attaching the tapes *d*, *d*, to the blind slats *e*, *e*, in the manner and for the purposes substantially as specified."

No. 24,901. John N. Wyckoff, of Brooklyn, N.Y., and Thos. M. Fell, of Orange Mines, Va., for an "Improved ore washer and amalgamator."

"To be protected and which we claim as an invention, is, a concentrator constructed with a series of boxes or partitions having curved bottoms, communicating one with the other, and driven transversely, for the purpose of separating poor from rich deposit, all as herein described."

No. 24,902. John N. Wyckoff, of Brooklyn, N.Y., and Thos. M. Fell, of Orange Mines, Va., for an "Improvement in gold amalgamators."

"We do not confine ourselves to the exact details as herein described, but what we especially claim as our invention is,

the application of heat by steam or otherwise to vessels, pans, or cylinders, keeping the contents well triturated or mixed, at an elevated temperature, the whole operating in the manner herein described, so as to amalgamate the prepared ore by the use of mercury and alkali, as specified."

No. 24,903. ELIZA BLAKE, of Albany, N.Y., executrix of Robt. Blake, deceased, assignor to Blake and Son, of same place, for an "Improved wood saw."

"I claim the new manufacture of wood saws, in the manner herein set forth, meaning by this to claim only the sole right to manufacture according to the mode of construction herein set forth, the special kind and character of saws known as wood saws, and clearly defined and represented in the above description and drawings."

No. 24,904. JOHN BURR, of Baltimore, Md., assignor (through mesne assignment) to Geo. H. Fayman, of Washington, D. C., for an "Improved clothes frame."

"I claim the seat S, capable of movement on the shaft in one direction only, and provided with the weighted detent, as set forth, and the ring R, moveable thereon, without bearing against the shaft, in combination with the shaft A, arms D, braces B, and cords E, arranged and operating as and for the purposes described."

No. 24,905. JOHN W. FISCHER, of New York, N.Y., assignor to himself and Chas. S. Fischer, of same place, for an "Improvement in piano-fortes."

"What I claim, is, the bar *l* beneath the dampers *i*, *i*, and above the piano strings, actuated by the levers *m*, *n*, or their equivalents, in the manner and for the purposes specified."

No. 24,906. SIMEON GOODFELLOW, of Troy, N. Y., assignor to himself and John Fish, of same place, for an "Improvement in screw stocks."

"What I claim, is, the cutting die G, in combination with the vibrating circular plug F, and the movable holder D, when the same are arranged and operated essentially as specified."

No. 24,907. ALFRED GUTHRIE, of Chicago, Ill., assignor to Wardell Guthrie, of same place, for an "Improved churn."

"What I claim, is, the combination and arrangement of the cranks C, C, C, C, connected by the plate D or its equivalent, operating in the manner and for the purpose set forth and explained, substantially as herein described."

No. 24,908. ALBERT H. HOOK, of New York, N. Y., assignor to Wm. A. Horstmann, of Brooklyn, N. Y., for an "Improvement in glass polishing machines."

"What I claim therein is, the combination of the apparatus for producing the reciprocating longitudinal motion and continuous lateral motion given to the polishing blocks, consisting of the screws *k*, worm wheel *l*, worm *m*, and its connections with the driving power, arranged and operated in the manner set forth."

No. 24,909. HEZEKIAH JOHNSTON and WM. J. MATTHEWS, of Collingsville, Ill., assignor (through mesne assignment) to Hezekiah Johnston, of same place, for an "Improvement in fire escape ladders."

"We claim the combination of the endless belt F with the folding ladders and the platform M, in the manner described."

No. 24,910. JAMES H. MURRILL, of Baltimore, Md., assignor to Egerton, Dougherty, Words, and Co., of same place, for an "Improvement in machine for cracking sugar."

"What I claim is, the employment of a vibrating saw H, when constructed and operated in the manner described, in combination with a gauge plate P and hopper O, arranged substantially in the manner and for the purposes of sawing off slabs of sugar and directing them between crushing rollers. I claim the employment of rollers A, A, moving in unison with each other, when constructed with cruciform cutters *a*, *a*, as described, for the purpose of perfectly dividing slabs of sugar into regular cubic portions, substantially as set forth. I claim the construction of a hopper O, when provided with parallel grooves, or their equivalent, when used in combination with a circular saw, constructed and operated in the manner and for the purposes as set forth."

No. 24,911. W. H. NICHOLS, of East Hampton, Conn., assignor to A. H. Markham, W. H. Nichols, and David Strong, of same place, for an "Improved coffin screw."

"What I claim is, the employment of plates A, or their equivalent, for the purpose of securing or retaining the caps or covers B of coffin screws or tacks, substantially as herein set forth."

No. 24,912. J. Y. PARCE, of Fairport, N. Y., assignor to himself and D. B. De Land, of same place, for an "Improvement in hoisting crane."

"What I claim is, the main arm E of a crane, arranged with the double diagonal braces I and with the guide rollers *m*, to operate in combination with the arm F jointed to the same by means of the oval pin *d*, substantially as and for the purpose set forth."

No. 24,913. SAML. R. SMITH and PHILANDER P. LANE, of Cincinnati, Ohio, assignors to Lane and Bodley, of same place, for an "Improved portable sawing machine."

"We claim, 1st, the idle friction pulley Z, operating substantially in the manner set forth, in combination with the arbor and feed driving a circular saw. 2nd, in the described connection with the transverse rack *h*, the gearing *q*, *q*, ratchet wheel *r*, pawls *t*, lever *s*, and stop *v*, which operate by their rigidity in one direction to transmit a forward movement of the rack *h* to the knee *f*, yet permitting the retraction of said rack *h*, as set forth. 3rd, the described arrangement and adaptation of the weighted eccentric friction pawl, for the exact retention of the knee to the place of setting, as set forth. 4th, the described arrangement and adaptation of the perforated rack *h*, pinions *q*, q^1, knee *f*, and screen *y*, for the exclusion of dust, as explained."

RE-ISSUES.

GEORGE H. CORLISS, of Providence, R. I., for an "Improved cut-off gear."—Patented 29th July, 1851.—Re-issued 26th July, 1859.

"I claim combining with the rocking levers, or their equivalents, for operating the valves, the shoulders on the spring bars, or their equivalents, substantially as described, and for the purpose specified. And I also claim, in combination with the shoulders on the spring bar that operate the rocking levers, substantially as described, the employment of the gauge bars, or any equivalent therefor, to regulate the periods of closing the valves, whether the said gauge bars be regulated by a governor or by other means, as set forth."

DAVID B. ROGERS, of Pittsburgh, Pa., for an "Improvement in R. R. car springs."—Patented 23rd February, 1858.—Re-issued 26th July, 1859.

"I claim constructing a carriage or car spring of a series of two or more plates of steel, each of which is so cured or twisted that the longitudinal curve on one edge or side of each leaf or plate shall be the reverse of the curve on the other side or edge, a longitudinal section through the center of the plate, midway from either edge is a straight line, or nearly so, said plates being so arranged relatively to each other that on both sides the curve at the edge of each leaf or plate shall be in the reverse direction to the curve at the edge of the leaf or plate next above or below it."

JAMES M. COOPER, of New York, N. Y., assignee of Stanhope W. Marston, of same place, for an "Improvement in trigger operating revolving breech fire arms."—Patented 7th January, 1851.—Re-issued 26th July, 1859.

"I claim, 1st, so constructing the lock of revolving breech fire-arms in the mode substantially as herein-before described, or its equivalent, as that the trigger used to fire the pistol, when drawn back, raises the hammer to full cock, and there retains it, the revolving breech or barrels being at the same time rotated so far as to bring the nipple of one of the chambers or barrels in the proper position to be struck by the hammer on its descent, and the trigger being held in a drawn position, ready for instantaneous firing. 2nd, the use of a fly tumbler or vibrating tooth, intermediate between the hammer and trigger, in trigger operating fire-arms, and the peculiar arrangement of the parts of the lock in connection therewith, herein-before described, whereby the tendency of

the main spring to cause the descent of the hammer is neutralized when the hammer reaches the point of full cock, so that the hammer having been raised by the trigger may either be permitted to stand cocked, or fired immediately, at pleasure, and greater ease in firing and steadiness of aim are secured substantially as herein-before described."

THE SHELTON AND OSBORN SKIRT MANUFACTURING COMPANY, of Birmingham, Conn., assignees of E. G. Atwood, of Derby, Conn., for an "Improvement in skeleton skirts."—Patented 19th October, 1858.—Re-issued 26th July, 1859.

"I claim, a skirt formed of elastic hoops and tape, or equivalent material, when the tapes are disposed across the hoops in opposite diagonal directions, and interlock opposite sides of the hoops at the point of crossing, and are confined thereto, substantially as described. I also claim connecting the hoops by means of a series of loops, formed by a continuous tape or equivalent material, passing around the skirt, from one hoop to the other, in opposite diagonal directions without interloping or interlocking between the hoops, substantially as described for the purpose set forth."

THE SHELTON AND OSBORN SKIRT MANUFACTURING COMPANY, of Birmingham, Conn., assignees of E. G. Atwood, of Derby, Conn., for an "Improvement in skeleton skirts."—Patented 19th October, 1858.—Re-issued 26th July, 1859.

"I claim, a skirt formed of elastic hoops and tape, or equivalent material, disposed across the hoops in opposite diagonal directions without being connected between the hoops, but connected to the hoops at suitable intervals, substantially as described."

DESIGNS.

JOHN A. MUNN, of New York, N.Y., for a "Design for clock cases."

"I claim, the general design and configuration herein described."

DAVID HATHAWAY, of Troy, N. Y., assignor to Fuller, Warren, and Co., of same place, for a "Design for cook's stove."

"I claim, the ornamental design for the front and sides of a cook stove herein described."

GEORGE W. PITTOCK and JOHN PITTOCK, of Union Mills, N. Y., assignors to Mosher and H. M. Chase, of West Providence, for a "Design for cook's stove."

"We claim, the ornamental design for a cook stove herein described and represented in the annexed photographic drawings."

WILLIAM W. STEVENS, of Westbrook, Me., assignor to Nathl. P. Richardson, and Co., of Portland, Me., for a "Design for parlor cooking stoves."

"I claim, the configurations, ornaments, and mouldings as a design for an urn, top, door, and frame, base, bottom, and legs to be used with a sheet iron body in making a coal parlor or coal parlor cooking stove, as above described and represented in the accompanying drawings."

ADDITIONAL IMPROVEMENTS.

THEODORE F. HALL, of Marietta, Ohio, for an "Improvement in hanging window sash."—Patented 21st December, 1858.—Additional Improvement dated 26th July, 1859.

"I claim, the improved arrangement of cords, pulleys, and weights herein-before described, for hanging the sashes of windows, so that either or both sash can be retained in any desired position in the frame, the sash and weights being suspended and moving on cords attached to the frame."

JOHN HAW, of Old Church, Va., for an "Improvement in picker sawing machine."—Patented 23rd June, 1857.—Additional Improvement dated 26th July, 1859.

"I claim, attaching the saw guide to the overhanging bearing so as to adjust them to the sawing of small logs, substantially as set forth."

EXTENSION.

WARREN HALE and ALLEN GOODMAN, of Dana, Mass., for an "Improvement in shaping irregular surfaces in wood."—Patented 22nd July, 1845.—Extended 22nd July, 1859.

"We claim, the method herein above described of copying or forming the longitudinal irregularities of piano legs and other similar articles on rough blocks of wood by means of a carriage moving longitudinally against the revolving cutter, and holding both the pattern and the rough block, the cutting tool being raised and depressed for depths of cut by rollers resting on the patterns, the whole method or modus operandi, being substantially as herein above set forth."

ALL FOREIGN and COLONIAL PATENT LAWS and RULES, being translations or copies of Official Communications, may be found in the following Numbers of this Journal, published at 2*d.* each, or 3*d.* free by post:—

Austria, No. 291.

DELIVERY OF LETTERS.—For the Great Seal Patent Office the initials are W. C., the District being the Western Central. In the direction of a Letter, these initials should be legibly written in a separate line, and should in all cases end the address, thus:—

The Commissioners of Patents,
Great Seal Patent Office,
25, Southampton Buildings,
London,
W.C.

List of Specifications published during the week ending 13th August, 1859.

No.	Price.	Subject-Matter.
32	3*d.*	Oil cans or lubricating apparatus.
33	10*d.*	Wool combing.
34	5*d.*	Racks and water cisterns for stables.
35	5*d.*	Chimney cowl and ventilator.
36	6*d.*	Springs.
37	5*d.*	Connecting knobs and handles to the spindles of locks, &c.
38	1*s.* 4*d.*	Machinery for printing on paper and other fabrics.
39	6*d.*	Construction of lever neck plough.
40	3*d.*	Printing and dyeing woven fabrics, yarns, or threads.
42	3*d.*	Chains for coupling cranes, &c.
43	3*d.*	Weaving counterpanes, &c.
44	3*d.*	Power looms.
46	3*d.*	Machinery for spinning.
47	5*d.*	Finishing woollen and other fabrics.
48	1*s.* 1*d.*	Machines for manufacturing bolts, rivets, and spikes.
49	3*d.*	Varnished cloth as a substitute for leather.
50	10*d.*	Machinery for boring rocks, dressing stone, &c.
51	4*d.*	Taking photographic pictures on wood.
52	7*d.*	Wool combing.
53	3*d.*	Weaving double fabrics.
54	7*d.*	Reels or spooling wheels.
55	3*d.*	Regulating gas burners.
56	3*d.*	Electric and magnetic telegraphs.
57	3*d.*	Bands and belts for the waist.
58	3*d.*	Refining and decolorizing saccharine substances.
59	10*d.*	Machinery for winding, twisting, and doubling fibrous substances.
60	6*d.*	Fire bars for boilers and other furnaces.
61	3*d.*	Chain and bucket pump.
62	3*d*	Smoking pipe.
63	3*d.*	Trap for rabbits, rats, mice, &c.
64	3*d.*	Rendering various substances uninflammable.
65	3*d.*	Condensers for steam engines, &c.
66	3*d.*	Submarine vessels and apparatus for working under water.
67	3*d.*	Purifying natural phosphates of lime.
68	8*d.*	Pens and penholders.
69	6*d.*	Bed berths, applicable for bunks, hammocks, cots, &c.
70	1*s.*	Steam engines and generators.
71	5*d.*	Application of levers as a substitute for springs.
72	6*d.*	Signalling apparatus.
73	8*d.*	Distilling and clarifying resinous substances.
74	5*d.*	Boots and shoes.
75	10*d.*	Machinery for manufacturing ribs for umbrellas, &c.
76	3*d.*	Box for hats, collars, &c.
77	10*d.*	Cleansing or purifying air, &c.
78	3*d.*	Ornamenting fabrics with braid.
80	4*d.*	Purifying and decolorizing paraffine, &c.
139	6*d.*	Conversion of cast iron into steel.
207	8*d.*	Breech loading repeating fire-arms.

*** Specifications will be forwarded by post on receipt of the amount of price and postage. Sums exceeding 5*s.* must be remitted by Post Office Order, made payable at the Post Office, High Holborn, to Mr. Bennet Woodcroft, Great Seal Patent Office.

THE CHRONOLOGICAL INDEX of PATENTS of INVENTION, from March 2, 1617 14 James I.), to September 30, 1852 (16 Vict.), 2 vols. Price 30*s.*

THE ALPHABETICAL INDEX of PATENTEES of Inventions for the above period. Price 20*s.*

THE SUBJECT-MATTER INDEX of PATENTS for the same period — *Second Edition*—to which is prefixed a Key of Terms and Phrases. 2 vols. Price 2*l.* 16*s.*

A Key to the *First Edition* of the above work is also published separately, and may be had on application.

THE CHRONOLOGICAL INDEXES of APPLICATIONS for PATENTS and PATENTS GRANTED from the 1st October to the 31st December, 1852, and from the 1st January to the 31st December, 1853, in one volume. Price 11*s.*

THE ALPHABETICAL INDEXES for the above periods, in one volume. Price 13*s.*

THE SUBJECT-MATTER INDEX, from 1st October to 31st December, 1852. Price 9*s.*

THE SUBJECT-MATTER INDEX, from 1st January to 31st December, 1853. Price 16*s.*

THE CHRONOLOGICAL INDEX of APPLICATIONS for PATENTS and PATENTS GRANTED from the 1st January to the 31st December, 1854. Price 6*s.*

THE ALPHABETICAL INDEX for the above period. Price 7*s.*

THE SUBJECT-MATTER INDEX for the above period. Price 16*s.* 6*d.*

THE CHRONOLOGICAL INDEX of APPLICATIONS for PATENTS and PATENTS GRANTED from the 1st January to the 31st December, 1855. Price 6*s.* 6*d.*

THE ALPHABETICAL INDEX for the above period. Price 7*s.* 6*d.*

THE SUBJECT-MATTER INDEX for the above period. Price 17*s.*

PATENT LAW AMENDMENT ACT, 1852.—All Specifications, Indexes, &c., printed by order of the Commissioners of Patents, are sold at the Great Seal Patent Office, 25, Southampton Buildings, Holborn.

THE PATENT LAW AMENDMENT ACTS (15 & 16 Vict., cap. 83; 16 Vict., cap. 5; and 16 & 17 Vict., cap. 115); with the Rules and Regulations made by the Commissioners of Patents for Inventions, and by the Lord Chancellor and the Master of the Rolls, under the Acts 15 and 16 Vict., c. 83, and 16 & 17 Vict., c. 115, accompanied by Specimen Forms of the Provisional Documents printed on sheets of the prescribed size. Price 6*d*.

Museum of Patents, South Kensington.

NUMBER of VISITORS for the Week ending 13th August, 1859.

Mornings - - - -	1384
Evenings - - - -	1026
Total - - -	2410

Since the opening of the Museum Free Daily (May 12, 1858,)—126,910.

THIS Museum is open to the public daily, free of charge. The hours of admission are from 10 A.M. to 6 P.M., and in the evenings of Monday, Tuesday, and Wednesday from 7 to 10 P.M.

All communications on the subject of the Museum to be addressed to the Superintendent,

B. WOODCROFT.

Great Seal Patent Office,
Southampton Buildings.

GALLERY OF PORTRAITS OF INVENTORS, DISCOVERERS, AND INTRODUCERS OF USEFUL ARTS.—This Collection, formed by Mr. Woodcroft, and first opened to public view in the Great Seal Patent Office in 1853, now constitutes a portion of the Patent Museum at South Kensington.

Presentations of original Portraits, Medallions, Busts, and Statues, in augmentation of the Collection, are hereby invited, and will on receipt be acknowledged in this Journal, and duly recorded in the next published Catalogue.

REAPING MACHINES.—The entire series of Specifications and Drawings on this subject to the end of 1853, together with an Appendix, prepared by B. Woodcroft, of the Patent Office, and published under the sanction of the Commissioners, may be obtained at the cost price of 2*l.* 3*s.* 11½*d.*

FIRE-ARMS, PROJECTILES, &c.—The series of Specifications and Drawings on this Subject, from 15th May, 1718, to 31st December, 1853, with Alphabetical and Subject-matter Indexes, may be obtained at the cost price of 9*l.* 18*s.* 6½*d.*

The Indexes, separately, price 3*s.*

CATALOGUE of the LIBRARY of the GREAT SEAL PATENT OFFICE. Two vols. imp. 8vo. (Vol. I. Titles; Vol. II. Index.) Price 21*s.*

COLONIAL PATENTS.—Information as to the Mode of obtaining Protection for Inventions in the Colonies; contained in Communications from the Governors, &c. of the different British Colonies in answer to the Application of Mr. W. J. CURTIS for a Patent. Price 1*s.*

PATENT RIGHTS in the COLONIES.—Abstract of Replies to the Secretary of State's Circular Despatch of July 11, 1856, calling for Information as to the Form of the Application to be made by Persons desirous of obtaining Patent Rights in the Colonies, and the Expenses attendant on the Grant of such Patent Rights. Price 2*s.* 6*d.*

In course of Publication, by Order of the Commissioners of Patents.

ABRIDGMENTS (in Classes, and Chronologically arranged) of all SPECIFICATIONS of PATENTED INVENTIONS, from the earliest enrolled to those published under the Act of 1852.

These books are of 12mo size, and as each is limited to inventions of one class only, they can be sold at prices sufficiently moderate to enable the humblest inventor to examine for himself whether his discovery has been previously patented or not.

At the foot of each abstract are given references to notices of the inventions in scientific and other works, and to the reports of law proceedings for infringements, &c. &c. &c.

The classes already published are,—

1. DRAIN TILES AND PIPES, price 6*d.*
2. SEWING AND EMBROIDERING, price 6*d.*
3. MANURE, price 6*d.*
4. PRESERVATION OF FOOD, price 6*d.*
5. MARINE PROPULSION, price 4*s.*
6. MANUFACTURE OF IRON AND STEEL, price 5*s.*
7. AIDS TO LOCOMOTION, price 1*s.*
8. STEAM CULTURE, price 2*s.*
9. WATCHES, CLOCKS, AND OTHER TIME-KEEPERS, price 1*s.* 6*d.*
10. FIRE-ARMS AND OTHER WEAPONS, AMMUNITION, AND ACCOUTREMENTS, price 6*s.* 6*d.*
11. PAPER.—PART I. MANUFACTURE OF PAPER, PASTEBOARD, AND PAPIER MÂCHÉ, price 3*s.*
12. PAPER.—PART II. CUTTING, FOLDING, AND ORNAMENTING; INCLUDING ENVELOPES, CARDS, PAPER-HANGINGS, &c., price 2*s.*
13. TYPOGRAPHIC, LITHOGRAPHIC, AND PLATE PRINTING, price 7*s.*
14. BLEACHING, DYEING, AND PRINTING YARNS AND FABRICS, price 9*s.* 6*d.*

The following are in the press:—

ELECTRICITY AND MAGNETISM: THEIR GENERATION AND APPLICATIONS.
PREPARATION OF FUEL, AND APPARATUS FOR ITS COMBUSTION.
MANUFACTURE AND APPLICATIONS OF INDIA RUBBER, GUTTA PERCHA, &c.; INCLUDING AIR, FIRE, AND WATER PROOFING.
PRODUCTION AND APPLICATIONS OF GAS.
STEAM ENGINES.
METALS AND ALLOYS.

B. WOODCROFT.

The above, and all other works published by the Commissioners of Patents, are now on sale at the Great Seal Patent Office, 25, Southampton Buildings, Holborn.

This Journal is published on the evenings of Tuesday and Friday, and will be forwarded, post free, to Subscribers.—Terms, 30*s.* per annum.—Subscriptions received at the Great Seal Patent Office, where also single copies, at twopence each, may be obtained.

No. 587. FRIDAY, AUGUST 19, 1859. Price 2d.

Grants of Provisional Protection for Six Months.

NOTICE is hereby given that Provisional Protection has been allowed

1545. To WILLIAM WRAY and JOHN WRAY, both of Leeming, near Bedale, Yorkshire, for the invention of "Certain improvements in reaping machines."

On their petition, recorded in the Office of the Commissioners on the 29th day of June, 1859.

1656. To WILLIAM AUGUSTUS MUNN, of Throwley House, near Feversham, in the county of Kent, (late a Major in the East Kent Militia,) a Deputy Lieutenant and Justice of Peace for the said county of Kent, for the invention of "Improvements in reaping machines."

On his petition, recorded in the Office of the Commissioners on the 13th day of July, 1859.

1708. To ZEPHIRIN GASPARD ALEXANDRE NATHAN PETRONE ORIOLI, of 29, Boulevart St. Martin, Paris, in the empire of France, Civil Engineer, for the invention of "New applications of hypochloride of alumina to bleaching and dyeing, and to the disinfection and preservation of organic matters."

On his petition, recorded in the Office of the Commissioners on the 20th day of July, 1859.

1710. To HENRY BERTHON PRESTON, of the firm of Messrs. Fawcett, Preston, and Co., of Liverpool, in the county of Lancaster, Engineers, for the invention of "Improvements in apparatus for superheating steam."

On his petition, recorded in the Office of the Commissioners on the 21st day of July, 1859.

1752. To JOHN ASPINALL, of Charing Cross, in the county of Middlesex, Engineer, for the invention of "Improvements in evaporating and in apparatus for the same, especially applicable to the evaporation of sugar."

On his petition, recorded in the Office of the Commissioners on the 28th day of July, 1859.

1760. To SAMUEL WILSON, of Manchester, in the county of Lancaster, Engineer, for the invention of "Certain improvements in the construction of presses for compressing cotton and other articles."

On his petition, recorded in the Office of the Commissioners on the 29th day of July, 1859.

1766. To FRANÇOIS HAECK, of Schaerbeck, near Brussels, in the kingdom of Belgium, Gentleman, for the invention of "Improvements in refrigerating apparatus especially adapted to pumps and other apparatus for the supply of beer and other liquids."

1772. And to WILLIAM JAMIESON, of Stoney Middleton, in the county of Derby, for the invention of an "Improved churn."—A communication from Oliver Gunnell, resident at Moline, Illinois, in the United States of America.

On both their petitions, recorded in the Office of the Commissioners on the 30th day of July, 1859.

1774. To WILLIAM CAMPBELL, Machinist, and GEORGE WORSTENHOLM, Machinist, both of Birmingham, in the county of Warwick, for the invention of "Certain improvements in machinery for the manufacturing of wrought nails, as also in the treatment of the iron from which such or other kinds of nails may be made."—A communication from abroad by George William Allen, of Rhode Island, United States of America.

1776. To THOMAS WRIGHT GARDINER TREEBY, of No. 1, Westbourne Terrace Villas, Upper Westbourne Terrace, Paddington, Middlesex, for the invention of "Improvements in targets."

1780. And to WILLIAM EDWARD NEWTON, of the Office for Patents, 66, Chancery Lane, in the

county of Middlesex, Civil Engineer, for the invention of "An improved mode of and apparatus for making metal cylinders suitable for steam boilers and other purposes."—A communication from abroad by Reiner Daelen, of Hoerde, in Westphalia.

On their several petitions, recorded in the Office of the Commissioners on the 1st day of August, 1859.

1786. To Bryan Donkin, of Bermondsey, in the county of Surrey, Engineer, for the invention of "Improvements in and in connection with slide and other valves."—A communication from abroad by Thomas Coates, of Sommerfield, Silesia, Engineer.

On his petition, recorded in the Office of the Commissioners on the 2nd day of August, 1859.

1787. To Auguste Pin, of Castelnaudary, in the department of the Aude, in France, for the invention of "The compounding, preparing, and application of a new sort of paint."

1788. To John Hewett, of the firm of Hewett, Allott, and Walker, Accountants, of High Street, Sheffield, in the county of York, for the invention of "Improvements in self-acting water-closets."

1789. To William Kirkby Peace, of the firm of W. K. and C. Peace, of Eagle Works, Sheffield, in the county of York, Manufacturer, for the invention of "An improvement in canisters for hermetically sealing paints and other substances."—A communication from abroad by Frederick L. Whiton and John W. Masury, of New York, in the United States of America.

1790. To Mark Mason, of the city of Manchester, Engineer, for the invention of "Improvements in machinery for printing, and in apparatus connected therewith."

1791. To William Henry Tooth, of 3, Spring Terrace, Wandsworth Road, in the county of Surrey, Engineer, for the invention of "Improvements in machinery or apparatus for the manufacture of iron or steel."

1793. To John Petrie the younger, of Rochdale, in the county of Lancaster, Machinist, for the invention of "Improvements in machinery or apparatus for washing wool."

1794. To Joseph Henry Phipson, of Birmingham, in the county of Warwick, Manufacturer, and William Arthur Watson, of Birmingham aforesaid, Architect, for the invention of "A new or improved lubricator for lubricating shafts and other articles requiring lubrication."

1795. To William Henry Maxwell Blews, of Birmingham, in the county of Warwick, Manufacturer, for the invention of "A new or improved regulator for gas burners."

1796. And to Edward Dowling, of Little Queen Street, Holborn, in the county of Middlesex, Scale Maker, for the invention of "Improvements in rosettes or ornaments applicable to harness, and for other purposes."

On their several petitions, recorded in the Office of the Commissioners on the 3rd day of August, 1859.

1797. To Thomas Lister, of Sheepbridge, in the county of Derby, Engineer, for the invention of "An improved sanatory watercloset."

1798. To James Horton, of Handsworth, in the county of Stafford, Brewer, for the invention of "A new or improved water gauge for steam boilers."

1799. To Richard Archibald Brooman, of 166, Fleet Street, in the city of London, E.C., Patent Agent, for the invention of "Improvements in mills for grinding coffee, corn, and other substances." — A communication by Joseph Poole Pirsson, residing in New York.

1801. And to Frederick Walton, of Haughton Dale, Denton, near Manchester, for the invention of "Improvements in the manufacture of ornamental fabrics, suitable for bookbinding and other uses, and in machines employed in such manufacture."

On their several petitions, recorded in the Office of the Commissioners on the 4th day of August, 1859.

1803. To Edward Barker Gowland, of Brecknock Street, Camden Town, in the county of Middlesex, for the invention of "Improvements in pianofortes."

1804. To Edward Swainson, of Preston, in the county of Lancaster, Worsted Spinner and Manufacturer, for the invention of "Certain improvements in looms for weaving."

1804. To Nicholas Doran Maillard, of No. 18, York Street, Dublin, in Ireland, Gentleman, for the invention of "Improvements in compasses for indicating the course and time of ships at sea, without the use of needles or magnets."

1807. To Nathaniel Berry, of Paris, in the empire of France, Merchant, for the invention of "An improvement in the manufacture of knitted fabrics."—A communication from William Benjamin, residing in New York.

1809. To William Edward Newton, of the Office for Patents, 66, Chancery Lane, in the county of Middlesex, Civil Engineer, for the invention of "An improvement in billiard and bagatelle cues."—A communication from abroad by Jonathan H. Green, of Christiansburg, in the state of Iowa, United States of America.

1810. To Francis William Beaumont, of Clapham, in the county of Surrey, Civil, Mechanical, Mining, and Gas Engineer, and Surveyor, for the invention of "A hydraulic apparatus applicable to transmitting, regulating, and measuring the supply or flow of liquids."

1811. And to Warren Thompson, of No. 45, Essex Street, Strand, London, for the invention of "An improved printing telegraph."

On their several petitions, recorded in the Office of the Commissioners on the 5th day of August, 1859.

1815. To Augustus Bryant Childs and Lemuel Dow Owen, of No. 192, Tottenham Court Road, London, in the county of Middlesex, Engineers, for the invention of "Improvements in machinery for cleaning grain and seeds from smut and other extraneous matter."

1816. To Alfred Theodore De Lisle, of No. 14, Addison Road, Kensington, in the county of Middlesex, Gentleman, for the invention of "Improvements in clarifying and decolorizing solutions of sugar and other liquids."

1817. To Edward Albert Scwerkrop, of Leith, in the county of Mid Lothian, Merchant, for the invention of "Improvements in reaping and mowing machines."—Partly a communication from abroad by Francois Leroy, of San Francisco.

1818. To Albert François Delannoy, of Paris, in the empire of France, Civil Engineer, for the invention of "Improvements in lubricating the axles or journals of wheels, also applicable to lubricating apparatus for the transmission of motion in general."

1819. To John Wellington Welch, of Manchester, in the county of Lancaster, Warp Sizer, for the invention of "Improvements in machinery or apparatus for sizing or dressing yarns or threads for weaving."

1820. And to Edward Thomas Hughes, of the firm of Hughes and Son, Patent Agents, No. 123, Chancery Lane, London, W.C., for the invention of "Improvements in machinery or apparatus for manufacturing chenille."—A communication from abroad by Jean Baptiste Mallion, Merchant, residing at Saint Chamond, département de la Loire, in the empire of France.

On their several petitions, recorded in the Office of the Commissioners on the 6th day of August, 1859.

1821. To Joseph Weston, of Fenton, in the county of Stafford, Druggist, for the invention of "Improvements in breaks for railway carriages, and in the method of applying the same, and in conveying signals from one part to another of the same train, parts of which are applicable to breaks for other purposes."

1823. To Henry Liddle, of Middleton, in the county of Lancaster, Manufacturer, for the invention of "Improvements in machinery or apparatus for polishing yarns or threads."

1829. To John Henry Johnson, of 47, Lincoln's Inn Fields, in the county of Middlesex, and of 166, Buchanan Street, in the city of Glasgow, North Britain, Gentleman, for the invention of "Improvements in apparatus for steering ships, applicable also in all cases where a rotatory or partial rotatory motion is required."—A communication from abroad by Messrs. François Augustin Harel and Michel Boniere the younger, both of Paris, in the empire of France.

1831. To Barnet Solomon Cohen, of Magdalen Row, Great Prescot Street, in the county of Middlesex, for the invention of "Improvements in ever-pointed pencils."

1833. And to Thomas Blinkhorn and Richard Blinkhorn, both of the New Road, Spalding, in the county of Lincoln, Engineers, for the invention of "An improved composition for removing scale or fur from the interior of boilers, and also for preventing the formation of scale or fur therein."

On their several petitions, recorded in the Office of the Commissioners on the 8th day of August, 1859.

1835. To Thomas Dunn, of the city of Manchester, Engineer, for the invention of "Improvement in machinery and apparatus for elevating and regulating the level and flow of liquids, part of which is applicable for propelling vessels."

1837. To Pierre François Rolland, of Hensies, in the province of the Hainaut, Belgium, Mechanic, for the invention of "A new electric telegraph."

1839. To Isaac Mitchell and Samuel Lister, of Bradford, in the county of York, Machine Makers and Repairers, for the invention of "An improvement in apparatus applicable to machinery for spinning fibrous materials."

1841. To John Brazer Babcock, of 35, Milk Street, Boston, in the United States of America, for the invention of "Improvements in bustles and skirts."—A communication from Handle N. Daggett, residing at Attleboro', Massachusets, United States of America.

1843. To John Dyer Bryant, of Rock, in the county of Cornwall, Merchant, for the invention of "Improved superphosphate of lime."

1845. To Benjamin Browne, of No. 52, King William Street, in the city of London, Civil Engineer and Patent Agent, for the invention of "Improvements in the manufacture of paints and pigments."—A communication from abroad by Francis Gybbon Spilsbury, of Louvain, in the kingdom of Belgium.

1847. And to Walter Mac Lellan, of Glasgow, in the county of Lanark, North Britain, Iron Merchant, for the invention of "Improvements in parts of the permanent way of railways."—A communication from abroad by John Gregory, of Lisbon, in the kingdom of Portugal, Engineer.

On their several petitions, recorded in the Office of the Commissioners on the 9th day of August, 1859.

1849. To William Muir, of the Britannia Works, in the city of Manchester, Engineer, for the invention of "Improvements in machinery for communicating motion to foot lathes and other machines to be worked by treadles."

1851. To William King Westly, of Leeds, in the county of York, Machinist, for the invention of "Improved machinery for combing, heckling, and preparing to be spun flax and other fibrous substances."

1853. And to Alexander Shaw, of the firm of Alexander Shaw and Company, of the Earle's Field Works, Grantham, in the county of Lincoln, Leather Dressers and Fellmongers, and Glue and Parchment Manufacturers, for the invention of "Certain modes or methods of preparing sheep or other skins or pelts, or the linings thereof, and for raising nap on the same, and also for preparing the said skins for kid leather, and for enamelling and japanning the same."

On their several petitions, recorded in the Office of the Commissioners on the 10th day of August, 1859.

Patents Sealed.

List of Letters Patent which passed the Great Seal on the

19th August, 1859.

506. John Dale, of Cornbrook, in Manchester and the county of Lancaster, Manufacturing Chemist, for an invention of "Improvements in concen-

trating caustic alkalis, and in applying a product therefrom to the purpose of obtaining motive power and to other purposes."—Dated 24th February, 1859.

513. William McNaught, of Manchester, in the county of Lancaster, Engineer, for an invention of "Certain improvements in steam engines particularly applicable to compound steam engines."—Dated 25th February, 1859.

523. Edward Gatwood, of Great George Street, Westminster, in the county of Middlesex, Carriage Builder, for an invention of "Improvements in buffing traction and bearing springs applicable to railway carriages and locomotive engines."—Dated 28th February, 1859.

531. Collinson Hall and Collinson Hall the Younger, of Navestock, in the county of Essex, Agriculturalists, for an invention of "Improvements in steam agricultural machinery."—Dated 28th February, 1859.

559. James Newcomb, of the city of Bristol, Engineer, and Joseph Gwyre Lovell, of the city of Bristol, Merchant, for an invention of "Improvements in obtaining and applying motive power, especially adapted amongst other purposes to the propelling of ships and vessels." — Dated 2nd March, 1859.

631. John Cunliffe and Frederick Piggott, both of the city of Manchester, Manufacturers, and George Mallinson, of Salford, in the county of Lancaster, Pattern Designer, for an invention of "Improvements in the manufacture of ornamental woven fabrics."—Dated 12th March, 1859.

650. Charles Desurmont, of Seclin, France, Gentleman, and Charles Goudeau, of Alost, Belgium, Mechanical Engineer, for an invention of "Certain improvements in looms for weaving." —Dated 15th March, 1859.

673. Charles Garnett, of the firm of Peter and Charles Garnett, of Cleckheaton, in the county of York, Machine Makers, for an invention of "Improvements in machinery for ginning cotton and for cleaning cotton and certain other fibrous materials."—Dated 17th March, 1859.

758. William Edward Newton, of the Office for Patents, 66, Chancery Lane, in the county of Middlesex, Civil Engineer, for an invention of "Improvements in ovens for baking bread and other substances."—A communication from abroad by Thomas Russell, of New York.—Dated 25th March, 1859.

810. Francis Morton, of James Street, Liverpool, in the county of Lancaster, Engineer, for an invention of "Improvements in the construction of fences, and the posts or pillars for the same, parts of which improvements are also applicable to the construction of gate posts or poles for telegraph purposes or for signal posts."—Dated 31st March, 1859.

812. Alfred Vincent Newton, of the Office for Patents, 66, Chancery Lane, in the county of Middlesex, Mechanical Draughtsman, for an invention of "Improvements in the construction of steam boiler and other furnaces."—A communication from abroad by Jonathan Amory, of Boston, in the United States of America.—Dated 31st March, 1859.

911. David Doig, of the city of Manchester, Engineer, for an invention of "Improvements in the construction of gas lamps."—A communication from abroad by William Gilbert Ginty, of Rio de Janeiro, in the empire of Brazil.—Dated 12th April, 1859.

1075. William McIntyre Cranston, of No. 11, New Broad Street, London, Agent, for an invention of "A grass-cutting machine."—A communication from abroad by Walter Abbot Wood, of Hoosick Falls, county of Rensselaer, state of New York, America.—Dated 29th April, 1859.

1201. Thomas Vicars, senior, Thomas Vicars, junior, and Thomas Ashmore, of Liverpool, Engineers, and James Smith, of the same place, in the county palatine of Lancaster, Baker, for an invention of "Improvements in the manufacture of bread, biscuits, and like articles, and in the machinery and apparatus connected therewith."—Dated 13th May, 1859.

Patents on which the Stamp Duty of £50 has been Paid.

(*To 17th August*, 1859, *inclusive.*)

15th August.

1936. Henry Burden, of the City of Troy, county of Rensselair, and state of New York, in the United States of America, for an invention of "Improvements in machinery or apparatus for manufacturing shoes for horses, mules, and other animals."—Dated 19th August, 1856.

17th August.

1931. Charles Marie Chouillou, Manufacturer, of Paris, in the French empire, for an invention of "Certain improvements in thinning or shaving tawed, tanned, or dressed skins." — Dated 18th August, 1856.

1950. Joseph Maudslay, of Lambeth, in the county of Surrey, Engineer, for an invention of "Improvements in steam-engines especially applicable to screw propulsion."—Dated 20th August, 1856.

1955. Thomas York, of Wolverhampton, in the county of Stafford, Engineer, for an invention of "A new or improved safety-valve and low water indicator for steam-boilers."—Dated 21st August, 1856.

FOREIGN PATENTS.

UNITED STATES OF AMERICA.

(Communicated by the Commissioner of Patents.)

LIST of PATENTS, with Claims annexed, issued from the United States Patent Office, for the week ending 2nd August, 1859, and each bearing that date.

No. 24,914. PAUL FRANCIS AERTS, of London, England, for an "Improvement in axle-boxes for lubricating railway rolling stock, &c."—Patented in England 19th March, 1858.

"I claim the wheel *a* fixed on the end of the journal in railway rolling stock, raising water by centrifugal force, and the divergent *c* for conducting the water over the greased surface of the journal or moving parts of machinery, working in fixed bearings, when constructed and arranged, substantially as set forth."

No. 24,915. FREEBORN ADAMS, of Somerville, Mass., for an "Improvement in casting copper cylinders."

"I claim as a new article of manufacture a tube or cylinder cast out of copper, and free from blow holes and other similar defects, when produced as herein stated."

No. 24,916. JONAS BRADLEY AIKEN, of Manchester, N. H., for an "Improvement in knitting machines."

"I claim, 1st, the lever Q, grooved eccentrically to its fulcrum, applied in combination with the sliding loop regulator to adjust the same for different lengths of loop, substantially as herein specified. 2nd, the stop motion, consisting of the lever Y and its self-adjusting dog 11, the ring X with its pins 13, 13, or their equivalents, and the sliding bolt W, or its equivalent, carrying the slipper W^1, the whole combined, applied, and operating, substantially as herein described."

No. 24,917. WM. BAKER, of East Templeton, Mass., for an "Improved tool for riving hoops."

"I claim a hoop riving tool formed of a stock (A), provided with suitable guiding surfaces (a, a^1), and differently arranged or set stock faces (b, b^1), and knives (D, D^1), for operation, essentially as herein set forth."

No. 24,918. THOS. C. BALL, of Keene, N. H., for an "Improvement in the mode of hanging brake rubbers."

"I claim the combination of the brake head and spring, as above described; also, the arrangement of the brake beam F, Fig. 1, so as to allow its independent action upon brake head and spring 'A' and 'D,' Fig. 1, as described."

No. 24,919. THOS. L. BALL, of New York, N. Y., for an "Improved show case."

"I claim the construction of a case or box divided into compartments, each box having a sliding cover, arranged as set forth, in combination with the spring covers G and compartments F, constituting a new article of manufacture."

No. 24,920. WM. T. BARNES, of Buffalo, N. Y., for an "Improvement in apparatus for condensing coal oils."

"I claim, 1st, the employment of the tube K, the lower extremity of which is provided with tubular arms L, L, the same being made to revolve and being used in connection with a tank partially filled with water and a conducting pipe F, substantially in the manner and for the purpose herein set forth. 2nd, the arrangement and employment of the tanks A, B, C, constructed and used substantially in the manner herein specified, and for the purpose set forth."

No. 24,921. WM. T. BARNES, of Buffalo, N. Y., for an "Improved apparatus for generating coal oils."

"I claim, 1st, the arrangement of the levers L, K, and J, and rod I, whether operated by a cam or otherwise, for the purpose of forming an automatic dust clearer to coal-oil retorts, as is herein substantially set forth. 2nd, the employment of the spiral or screw flanges on the head of the retort for pushing the material away from the hole in the journal, as herein fully described."

No. 24,922. DANIEL BASSETT, of White Water, Wis., for an "Improvement in mills for crushing sugar cane."

"I claim, 1, the arrangement and combination of the tongue and groove rollers A, B, wiper F, and 'stripper,' as and for the purpose herein shown and described. 2, the 'stripper,' when composed of spring caps and a movable can G, and when arranged and combined with rollers A, B, substantially as and for the purpose herein shown and described."

No. 24,923. ALBERT BETTELEY, of Boston, Mass., for an "Improvement in elevators for warehouses, factories, mines, &c."

"I claim, first, the combination of an automatic safety shipper and brake apparatus with an elevator, substantially as described, arranged to operate only to prevent an elevation of the car beyond a fixed limit. Second, the combination of the weight (q), flexible rope or chain (c), with the shipping and brake controlling mechanism, substantially in the manner and for the purpose set forth."

No. 24,924. CYRUS C. BISBEE, of Rochester, N.Y., for an "Improved spring bed bottom."

"I claim the arrangement herein described of the slats D, belts Y, rollers J, cords R and R^1, and springs P and P^1, in the construction of spring bed bottoms. I also claim the unequal cams B and B^1, for the more perfect automatic adjustment of spring beds."

No. 24,925. ABRAHAM BOWER, of Pekin, Ill., for an "Improvement in machine for raising water &c."

"I claim the combination of the lazy tongs G, the slide trough J, and valvular bucket H, arranged for joint operation, substantially as and for the purpose set forth."

No. 24,926. SAML. BOYD, of Brooklyn, N.Y., for an "Improvement in manufacturing hoes."

"I claim the employment of an anvil, having an inclined face (a), groove or recess (c), and socket D, in combination with a mandrel F, as herein shown and described, whereby the bevel or 'set' of the blade and eye, and the form, thickness, and bevel of the interior of the socket or eye, will be uniformly and simultaneously produced, as set forth."

No. 24,927. JAMES R. BROWN, of Boston, Mass., for an "Improved pipe tongs."

"I claim the arrangement and application of the serrated surface or rack h, the spring F, and toothed stopper D, with respect to the two jaw levers A, B, the clamp nut E, and the screw-pin C, applied to the toothed jaw lever A, substantially as described."

No. 24,928. MOSES BUCKLIN, of Grafton, N. H., for an "Improved draining machine."

"I claim, 1st, the arrangement of the platform E, with the cutter blade F, and plow share G, for the purpose of cutting underground drains, substantially in the manner specified. 2nd, arranging the blade F, with a sloping, cutting edge d, so that the same more readily passes over obstructions which may come in its way, substantially as described. 3rd, the arrangement and combination of the platform E, the cutter blade F, and the plow share G, with the adjustable bars D and wheels B, to operate substantially in the manner and for the purpose herein described."

No. 24,929. JOHN F. GALLEY, of New York, N.Y. for an "Improved ironing table."

"I claim, 1st, the treadle C, the fulcrum arm D, the upright shaft E, the side jaws 6 and 7, the spiral spring 8

and the thumbscrew 9, when arranged and combined, substantially as described, and for the purposes set forth. 2nd, the hollow screw collar F, on the shaft E, constructed and applied, substantially as described, and for the purposes set forth."

No. 24,930. Thos. B. Garside, of Danville, for an "Improved portable field fence."

"I claim the combination of the long main posts *d*, short auxilliary posts *e*, and triangular pivoted brace *a*, *b*, or its equivalent, when arranged in the relation to one another, and to operate, substantially as and for the purpose set forth."

No. 24,931. Frederick Augustus Genth, of Philadelphia, Pa., for an "Improvement in manufacture of phosphoric acids and phosphates."

"I claim the process of manufacturing phosphoric acid or phosphates by treating the phosphates of iron, alumina, or lead, substantially as above described, by means of sulphuric acid, or its equivalent."

No. 24,932. James Gilfillan, of Hartford, Conn., for an "Improvement in gas burners."

"I claim the improvement in gas burners herein described consisting of a central exit tube, supplied with apertures surrounded by the gas chamber, having its discharge regulated by the mercury cap, upper end of said pipe being furnished with a nozzle or jet burner, the whole constructed and operating, substantially as set forth."

No. 24,933. Chas. F. Greeley, of East Kingston, N.H., for an "Improved cloth holder, for washing crockery, &c."

"I claim the within described washing device, constructed as and for the purpose set forth."

No. 24,934. W. S. Hall, of Quincy, Mass., for an "Improved churn."

"I claim the combination of the frame of stationary transverse bars, with the rotary hollow shaft and hollow arms thereto attached, for the introduction of air and the solid arms attached to the shaft, as substantially described."

No. 24,935. Pierre Jean Hardy, of Boston, Mass., for an "Improved recumbent chair."

"I claim the peculiar construction and arrangement of mechanism herein described, for actuating the back and leg rest, whereby they can not only be brought from vertical into horizontal or nearly horizontal position, so as to constitute a couch, but be maintained in such or any intermediate positions that may be desirable, such mechanism consisting of the levers *c*, *c*, and *d*, *d*, connected with each other, the back and leg rest, or leg rest frame *f*, respectively, in manner as set forth. And in combination with the said construction and arrangement of mechanism for actuating the said back and leg rest, I claim the arrangement of the locking contrivance (constructed and applied as described,) whereby the back and leg rest, when placed in any desirable position, may be firmly secured in such positions, or be released therefrom, as circumstances may require."

No. 24,936. Albert V. Hill, of Hinsdale, N.Y., for an "Improvement in breech-loading fire-arms."

"I claim the combination of the bed piece, breech pin, and connecting rod, which, in connection, forms the sliding process, and operating as above described."

No. 24,937. Hiram W. Hayden, of Waterbury, Conn., for an "Improvement in sewing machines."

"I claim, first, the attachment of the looping hook I, to an arm I^1, or its equivalent, which has a revolving motion, and also a vibrating motion, in a direction transverse to its revolution, and operates substantially as herein described, in combination with a bobbin K, arranged relatively to it, substantially in the manner herein set forth. Second, the stationary cam J, applied in combination with the revolving arm I, which carries the looping hook and with a spring R, and sleeve Q, or their equivalent for holding the said arm in contact with the said cam, to produce the vibrating motion of the said hook, substantially as herein described. Third, the combination of the stationary cam J and the fixed portion L of the bobbin holder, substantially as herein described. Fourth, the looping hook, made and fitted to turn in the revolving and vibrating arm I, as described, and provided with a pin, or projection *h*, operating in combination with a fixed stop *m*, substantially as and for the purpose herein set forth. Fifth, the extension of the mandrel E, forward of the rotating hook, as herein described, for the purpose of carrying the spring R, and a sleeve Q, or it equivalent, by which the revolving and vibrating arm I^1 which carries the hook, is kept in contact with the cam from which it derives its vibrating motion. Sixth, the adjustable pin *r*, applied and operating substantially as herein described, in combination with the revolving and vibrating looping hook and the bobbin, for the purpose set forth. Seventh, feeding the cloth or material to be sewed, by means of one or more smooth-faced angular projections 14, 14, on the feed bar, or its equivalent, and one or more ratchet like wheels *y*, *y*, attached to the presser, said wheels being arranged with the lowest portions of their peripheries above the bottom of the presser foot, and the said projections pressing the material into one notch at a time of each wheel, and operating in combination therewith, substantially as herein described."

No. 24,938. Edwd. L. Keeler, of Pittsburgh, Pa., for an "Improvement in car couplings."

"I claim the combination of a beveled coupling head *c*, shaped substantially as described, with a spring *e*, as a coupling for railroad cars, constructed and arranged in the manner herein-before described."

No. 24,939. David Kelsey, of Harper's Ferry, Va., for an "Improvement in sewing machines."

"I claim the horned eccentric or cam L, applied substantially as herein described, in combination with the vibrating pressure pad E, and the feeding dog sliding on the stem of said pad, and operated for the purpose herein specified by means of a stud *l* or its equivalent attached to the needle bar."

No. 24,940. Benjn. F. Killam, of Braintree, Vt., for an "Improvement in tooth keys."

"I claim the hollow fulcrum as herein described."

No. 24,941. Obed H. King, of Salem, Iowa, for an "Improvement in harvesters."

"I claim the arrangement and combination of the circular platform A, rake B, rod C, guide way E, E^1, endless chain or belt G, wheels F, F, and pin H, constructed, arranged, and operating together, substantially as and for the purposes set forth."

No. 24,942. S. C. Lewis and F. P. Pfleghar, of Whitneyville, Conn., for an "Improvement in revolving fire-arms."

"We claim, 1st, the centre pin E, F, made in two pieces, one of which is fitted to the rotating cylinder and to a rotating recoil shield with fins *b*, *b*, and has applied to it within the cylinder a spring *a*, and the other of which is fitted to slide and turn in the front part of the frame, and is capable of being locked to the frame, substantially as herein described. 2nd, the dog *n*, constructed and applied as described, to constitute its own spring, and operating transversely to the hammer in combination with a peripherical ratchet *l*, *l*, substantially as and for the purpose herein set forth. 3rd, the stop *p*, constructed with a tooth *p*, in its front, and a projection *u* on its back, and applied and operating in combination with a spring *v*, a ring of notches *m*, *m*, on the rear of the recoil shield or cylinder, and a tooth u^1 on the tumbler substantially as herein described. 4th, the recoil shield, constructed with a peripherical ratchet *l*, *l*, a ring of notches *m*, *m*, a central bore *j*, and slots *k*, *k*, substantially as and for the purpose herein specified."

No. 24,943. Henry A. Lincoln and Hebron T. Douglass, of Newhaven, Conn., for an "Improvement in brakes for railroad cars."

"We claim, as of our invention the combined arrangement herein described of brake shoes, truck wheels, equalizing beams and springs, the former being outside of the wheels, and so supported as to rise and fall practically with the wheels, while the equalizing beams support the springs, and the springs are arranged between the wheels, and transfer the weight to be carried to the equalizing beams, the several parts acting in combination, substantially in the manner and for the purposes specified."

No. 24,944. Stephen A. Lindsay, of Unionville, Md., for an "Improvement in harvesters."

"What I claim, is, the combination of the hinged guide piece S, with the hinged platform T, for the purpose of retaining the rake and the reels in their proper relative positions towards the platform, when the latter is raised or lowered substantially in the manner herein described. I also claim the combination of the bar 3, shaft 5, and the hinged bar 7, with the movable frame of the machine, and the finger bar U, for the purpose of raising and lowering the latter without interfering with the free movements of the platform on its hinges substantially in the manner herein described."

No. 24,945. Frederick Meyer, of Naperville, Ill., for an "Improvement in machines for cutting and binding grain."

"I claim, 1st, the combination of the movable gates, the sliding divider and the movable platform as described. 2nd, the construction of the tongs, and the mode of operating them as described. 3rd, the tucker H, for the purpose of fastening the free end of the band, substantially as above described."

No. 24,946. Warren P. Miller, of Marysville, Cal., for an "Improved machine for excavating and grading."

"I claim the use of the cylinders or wheels (K, K), for the purpose of depressing the chains (*h*, *h*), so as to give to the excavators (*i*, *i*) a proper inclination, and thereby facilitate the feeding and working of the same. I claim the construction and arranging of the excavators attached to endless chains, worked in the manner above described, to wit, to fill and discharge while traversing from one tumbler to the other, on the lower plane (from A to B), for the use and purpose of excavating and grading rail and turnpike roads, substantially as set forth."

No. 24,947. John A. Montgomery, of Williamsport, Pa., for an "Improvement in journal boxes."

"What I claim, is, a journal box, formed of a sphere, or segment of a sphere, fitting into a cup, or concave, and prevented from revolving with the shaft, or journal, by a pin and slot, as described, or their equivalent."

No. 24,948. Jarvis T. Mudge, of Dayton, O., for an "Improved washing machine."

"I claim arming the side of the tub, and the plunger F, with round headed knobs, or pins, to act on the clothes, substantially as described, and allow the water to escape freely as it is pressed out of the clothes being washed."

No. 24,949. Edmund T. D. Myers and Charles F. Thomas, of Washington, D. C., for an "Improved apparatus for tapping water or gas mains."

"We claim the method of drilling, tapping, and inserting stop, or other cocks, into cast-iron water or gas mains, or supply pipes, in the manner as set forth, or other manner substantially the same."

No. 24,950. Joseph R. Palmenbery, of New York, N. Y., for an "Improved branch holder for bonnet stands."

"I claim, as a new article of manufacture, a branch holder, made and constructed in the manner substantially as described."

No. 24,951. Henry Pemberton, of East Tarentum, Pa., for an "Improvement in manufacture of common salt."

"I claim the combination of processes herein-before described for the purification of common salt, to wit: washing common salt procured by the evaporation of salt water containing chloride of calcium, and other impurities, with a saturated solution of chloride of sodium, or brine, rendered pure by the use of chemical reagents, substantially in the manner described; and the repeated use for that purpose of the same brine, for an indefinite number of operations, by treating it, after each process of washing the salt with suitable chemical agents, whereby it is restored to its original purity."

No. 24,952. Henry Pemberton, of East Tarentum, Pa., for an "Improvement in refining coal oils."

"I claim recovering the sulphuric acid used from the residuum resulting from the process of the purification of coal oils with sulphuric acid, by treating the residuum with water heated, or caused to boil by steam, or otherwise, substantially in the manner herein-before described."

No. 24,953. John G. Perry, of Kingston, R. I., for an "Improved meat cutter."

"I claim combining the revolving knives with a cylinder or block, having studs upon its surface, substantially as herein set forth."

No. 24,954. Phinehas Pomeroy and J. G. Allen, of Middletown, O., for an "Improvement in machinery for making roofing cement."

"What we do claim, is, the employment of the double walled tank (C), in combination with the hollow metallic cylinders (B), and valves (*p*), all being constructed and arranged to operate, substantially as and for the purpose set forth."

No. 24,955. Jesse Pruette, of Aurora, Ill., for an "Improvement in carriage hubs."

"What I claim, is, the enlargement C upon box B, having an annular flange *a*, for the purposes specified, in combination with the nut F, and its flange *b*, when the same are both arranged, substantially as and for the purposes herein set forth."

No. 24,956. Lyman P. Rood, of Deposit, N. Y., for an "Improved machine for turning hollow-ware."

"I claim the combination of the rotating mandrel B, with the adjustable slide F, provided with the tool rest G, and cutter H, arranged as and for the purpose set forth."

No. 24,957. Andrew Shogren, of Chicago, Ill., for an "Improvement in sickle guard for harvesters."

"What I claim, is, the cutter guard C, constructed in the manner described, in combination with the guard socket B, and wedge-shaped bolt D, substantially as described."

No. 24,958. Daniel C. Smith, of Tecumseh, Mich., for an "Improvement in corn huskers."

"What I claim and desire to secure by Letters Patent, is, the above-described improvement in corn huskers, consisting of the combination of forceps A, lever B, stop C, spring E, and post G, in the manner and for the purposes specified. Secondly, I claim the combination with the forceps A of the slotted post M, nut N, and fork O, in the manner and for the purposes specified."

No. 24,959. John S. Snider, of Lancaster, O., for an "Improvement in seeding ploughs."

"I claim the arrangement of the swinging frame F, wheel W, crank shaft A, with the hopper H and mould board M, together with the devices connecting said parts, so as to operate as herein set forth."

No. 24,960. Geo. A. Stanley, of Cleveland, O., for an "Improvement in machinery for moulding candles."

"I claim, 1st, the moving of the moulds any distance, lengthwise of the candles, to detach the moulds from the candles formed in them, and to withdraw the moulds from the candles, and place the jaws of the clutches around them, 2nd, moving the moulds by the weight of the moulds and boxes containing the moulds, to adjust the jaws of the clutches to the candles, and attach the clutches firmly to the candles, so that they may be raised at the same time at which the moulds are returned empty to their first position."

No. 24,961. Richd. A. Stewart, of St. Bernard Parish, La., for an "Improvement in apparatus for defecating sugar."

"I claim the combination of the retort, the vacuum cylinder, and the receiver, substantially in the manner and for the purpose herein set forth, and these I also claim, in combination with the steam boiler, substantially operating as described, and for the purpose set forth."

No. 24,962. H. W. Stillmann, of Port Washington, Wis., for an "Improvement in brick machines."

"I claim the combination of the revolving moulds D feeder G, and plate I, when arranged and operated in the manner described, for the purpose specified."

No. 24,963. Saml. Taggart, of Indianopolis, Ind., for an "Improvement in flour packers."

"What I claim is, first, the oil pot H, H, with cap G^2, G^2, when operated in connection with the clutch wheel G and shaft D. Second, the cam V, in combination with the barrel lifter T, T, when constructed and operated as and for the purposes set forth. Third, the combination and arrangement of the friction brake Q, rod K, walking beam C, packing shaft D, and barrel lifter T, T, when the whole is combined and operated as and for the purposes set forth."

No. 24,964. N. G. Thom, of Cincinnati, O., for an "Improved machine for pointing and threading wood screws."

"What I do claim as a part of my invention is, the combination of a rotating head, containing two or more spindles or blank holders, revolving round a central point, with an intermittent motion, with an apparatus for pointing and threading screw blanks, so arranged and operated that, while one blank is being pointed and undergoing the other operations necessary thereto, another blank is being threaded by another part of the same machine. 2nd, I claim, in combination with an apparatus for pointing and threading screw blanks, simultaneously, or nearly so, by the same machine, the apparatus so constructed and operated that while the spindles are rotated, or changing positions, the threading cam, or other device for operating the threading tool and its connections remain stationary, and when the motion of the spindles around the central point is arrested, the other part and all necessary parts of the machine, recommence motion. 3rd, I claim the spring brake 'C,' so constructed and operated that when the spring is being depressed, to withdraw it from the notch in the plate S, it acts as a brake upon the periphery of the plate T, to arrest its motion, and the parts connected with it at the same time relieving the plate S, and allowing it to revolve with the spindles. 4th, I claim the quadrant-shaped grooved arm on the pointing tool stock, which, in connection with the spring i^1, or its equivalent, receives the blank from the hopper and conveys it to the grippers, and supports it while being pointed, substantially as described. 5th, in combination with the quadrant, I claim the reciprocating motion of the hopper for the purpose of depositing the blanks in the quadrant to be conveyed to the grippers. 6th, I claim the triangular-grooved cam J, J^1, in combination with the hopper L, so constructed that when moved in one direction by the action of the tool stock or otherwise, the hopper is depressed, and when moved in a contrary direction the hopper is elevated, for the purpose of depositing the blanks in the quadrant, or other mechanical device for receiving them. 7th, in combination with an apparatus for threading and pointing screw blanks by the same machine, I claim the worm F, when combined with the gears *b*, *c*, and *e*, or equivalent arrangement, by which the revolution of the worm causes the spindles to rotate round a central point, substantially as described. 8th, I claim the rocking feed lever o^1, o^{11}, o^{111}, constructed substantially as described, for the purpose of regulating the depth of cut of the threading tool. 9th, I claim the ratchet *s* and revolving cam *r*, when combined with the feed lever, substantially as described, for the purpose of raising the cutting tool out of the thread in its backward motion, and increasing the depth of cut of the threading tool. 10th, in combination with the rod for opening the grippers, I claim the movable nut n^1, which acts upon the thread in the end of the rod *z*, to withdraw the cone and release the screw. 11th, I claim the traversing arm e^1 in combination with the spring lever f^1, or its equivalent, for the purpose of removing the screw from the grippers when released. 12th, I claim the sliding cam w^{11}, in combination with the threading cam, for the purpose of removing the screw from the grippers and releasing it, substantially as described. 13th, I claim the arm m^{11} on the threading tool stock, in combination with the threading tool, and rod n^{11}, or its equivalent, for the purpose of giving the proper form to the thread and curvilinear shape to the point of the screw. 14th, in combination with the spindles or blank holders, I claim the gears f^{11}, g^{11}, h^{11}, in the spindles for the purpose of equalizing their motion, and causing them to revolve round the shaft *c* while changing their position, whether the driving belt rests or acts one or both the spindles."

No. 24,965. Horace Vaughn, of Providence, R.I.[1] and Wm. Hutton, of Baltimore, Md., assignors to W. Vaughn aforesaid, for an "Improvement in lubricating compounds."

"We claim 'the cooling compound solution,' as herein fully described."

No. 24,966. Allen Wilson and Geo. C. Fletcher, of St. Thomas, Mo., for an "Improvement in hemp brakes."

"We claim the arrangement and combination of the plates M, M^1, N, N^1, O, O^1, each pair of plates M, M^1, N, N^1, moving in opposite directions through the medium of double cranks upon shafts I, L, as and for the purposes herein shown and described."

No. 24,967. D. J. Wilcoxson, of Milan, O., for an "Improved ship's hoisting apparatus."

"What I claim is, first, arranging the pawl and ratchet, substantially as described, so as to allow the hoisting shaft to turn backward in lowering without disconnecting the pawl from the ratchet. Second, forming the connection between a friction pulley and hoisting shaft by means of a pawl and ratchet, substantially, so that the friction pulley is only in connection with the shaft while lowering. Third, the combination of the friction pulley, friction brake, and friction lever, arranged substantially as described, so that by the movement of the brake the friction pulley is released to revolve with the shaft and power of the brake simultaneously applied to the pulley, to regulate the velocity of the shaft in lowering. Fourth, combination of the vibrating pawl plates (G), cam levers (H), and the eccentrics arranged as described, to give motion to the hoisting shaft."

No. 24,968. Wm. F. Warburton, of Philadelphia, Pa., for an "Improvement in the manufacture of hats."

"I claim the process herein described of perforating the bodies of hats, by means of heated metal points, for the purpose specified."

No. 24,969. Augustus Watson, of Walnut Run, O., for an "Improvement in mole ploughs."

"What I claim is, suspending the coulter C to the lever D, and guiding it between rollers, so that it may be raised or lowered independently of the beam or frame of the plow, substantially in the manner and for the purpose herein described. I also claim making one or both of the beam plates G, H, adjustable for the purpose of adjusting the position of the coulter, so as to give it the proper tip or inclination, substantially in the manner and for the purpose described. I also claim, in combination with the beam plates and the coulter C, the grooved guide rollers *f*, *g*, for the purpose of guiding the coulter in its vertical motion, and preventing any side or twisting motion of the same, substantially as herein described. I also claim, in connection with the coulter and mole, the pivoted tongue *p*, substantially in the manner and for the purpose herein described. I also claim, in combination with the coulter and mole, the link P, whose ends are secured by a screw sleeve, for the purpose herein described."

No. 24,970. Robt. D. Dwyer, of New York, N.Y., assignor to Abraham B. Sands and Daniel Sands, of same place, for an "Improvement in manufacture of lint."

"I claim the new article of manufacture herein described, being surgeons' lint, produced directly from new flax, in the manner substantially as set forth."

No. 24,971. John G. Ernst, of York, Pa., assignor to himself and S. R. Slaymaker, of same place, for an "Improved machine for bending plow handles."

"I claim, 1st, the employment or use of the form block H, fitted in the frame A, with the chain R attached, with or without the weight *c*×, in connection with the roller P, and the toothed segments O, O, and stop N, the latter being attached to the bed K in carriage B, the whole being arranged to operate as and for the purpose set forth. 2nd, the arrangement of the lever *h*, connected with clutch *g*, the connecting bar *j*, and the lever *k*, attached to shaft G in connection with the rod h^1, and lever or button i^1, substantially as shown, whereby the operation of the machine, so far as the gigging-back motion is concerned, is rendered automatic throughout. 3rd, the movable rack C, when adjusted and arranged substantially as shown with the wheel F^1, for the purpose of stopping the feed or forward movement of the carriage B."

No. 24,972. James A. Hamer, of Reading, Pa., assignor to himself and Norris Maris, of Kimberton, Pa., for an "Improvement in brick moulds."

"I claim, first, the construction, combination, and arrangement of the operating parts of the brick mold, substantially as set forth, for the purpose described. Second, the combination of the sides and partitions of the mold, operating substantially as and for the purpose described. Third, the combination of the levers D, D, with the arms F, F, and pins J, J, for operating the sides and partitions of the mold, as and for the purpose set forth."

No. 24,973. Geo. L. Jencks, of Providence, R. I., assignor to himself, Geo. Kendall, and John Hendrick, of same place, for an "Improvement in sewing machines."

"I claim, 1st, the combination in a single-thread sewing machine of a perforating barbed needle, which is arranged obliquely to the feed movement of the cloth or material being sewed with a pair of nippers, or other equivalent device, which will, as the inclined needle is operating to assist in forming the stitch, retain and present the thread to the needle in a manner to allow the necessary loop to be formed, shortened, and drawn into or tight on the cloth, substantially as and for the purposes set forth. 2nd, the combination with

a barbed needle of the spring nippers, thread guide, and adjusting nipper closing bracket, when constructed, arranged, and operating substantially as and for the purposes set forth."

No. 24,974. DANFORTH JOHNSON, of Chicago, Ill., assignor to Benjn. B. Worden and Wm. Cadwell, of same place, for an "Improved clothes dryer."

"I claim the employment of flexible braces H, H, in combination with the freely sliding collar E on the spindle A, for the purpose herein specified."

No. 24,975. WM. JOHNSON, of Milwaukie, Wis., assignor to himself and Eibert Schumacher, of same place, for an "Improvement in bank locks."

"I claim, 1st, operating the regulator wheels or guard plates by the screw pins, which are susceptible of being changed in the holes of the plates, and in relation to each other, as herein set forth. 2nd, I claim the tapered indicators, stem, and beveled plate of the stem fitting into the tapered recesses, as and for the purposes set forth. 3rd, in combination with a series of regulator wheels or guard plates, operated as described, I claim the means for indicating the position of such plates, constructed and arranged as set forth. 4th, I claim the cock wheel, or toothed disk, in combination with the tumbler and the regulator wheels or guard plates, as described."

No. 24,976. ROBT. POOLE, of Baltimore, Md., assignor to himself and German H. Hunt, of same place, for an "Improvement in casting chilled plates."

"What I claim, is, making the chill for casting plates in sections, when said sections are secured to a bed plate in such a manner as to leave spaces between them, which are filled with sand or other yielding material, substantially in the manner and for the purpose described."

No. 24,977. JOHN B. POWELL, of Philadelphia, Pa., assignor to himself and Geo. B. Frick, of same place, for an "Improved machine for winding up clocks."

"Without confining myself to any specific arrangement of parts, I claim as my invention, and desire to secure by Letters Patent, the spring lever D, spring pawl or catch C, and ratchet wheel B, with the supplementary lever H, and permanent pin *e*, or their equivalents, when applied substantially in the manner set forth, to the winding up of clocks or other machines in which a spring or weight is used as a prime mover."

RE-ISSUES.

JOHN FAIRCLOUGH, of Louisville, Ky., for an "Improvement in balancing millstones." — Patented 21st December, 1858. — Re-issued 2nd August, 1859.

"I claim the employment or use of weights *i*, placed within boxes or recesses in the back of the stone, and arranged substantially as described, so that they may be adjusted vertically and more or less be used in each box or recess, to admit of the balancing of the stone or runner, both while in motion and at rest."

JAHAZIAH S. KING, of Raynham, Mass., for an "Improved nail machine."—Patented 20th October, 1857.—Re-issued 2nd August, 1859.

"I claim making cut nails in such a manner that each nail will be seized the instant after it is cut from the nail plate, and be compressively operated upon at the point thereof in the manner as herein specified, to bring the flat point of said nail to an equal-sided sharp point, or to substantially the same character of point that is ordinarily given to wrought nails."

HENRY E. PIERCE, of Charlemont, Mass., for an "Improved machine for matting the ends of match blocks."— Patented 10th January, 1854. — Re-issued 2nd August, 1859.

"I claim matting the ends of match blocks, by pressure of a roller or rollers, for the purpose set forth. And in this claim I wish to be understood that I do not confine myself to the precise arrangements of the parts herein described, but shall vary them at pleasure, while I attain the same ends by means substantially the same."

STEPHEN H. FIFT, of Morrisville, Vt., for an "Improved clothes dryer."—Patented 20th July, 1858. —Re-issued 2nd August, 1858.

"I claim the combination of the slotted perforated hub B, and slotted bored cap hub C, with the arms D, and braces E, connected with the hubs by wires as described, and the arrangement the same with the shaft A, collar F, and ratchet catch G, as specified."

GEORGE WATT, of Richmond, Va., for an "Improvement in ploughs."—Patented 9th February, 1858.—Re-issued 2nd August, 1859.

"I claim constructing mould board and land side of cylindrical surfaces of equal diameters intersecting along the cutting edge of the plow, in combination with the standard S, curving landward from the top of the mould board to a position nearly over the base of the landside, as herein set forth."

ADDITIONAL IMPROVEMENT.

GEORGE WATT, of Richmond, Va., for an "Improvement in plows." — Patented 9th February, 1858.—Additional improvement, dated 2nd August, 1859.

"I claim the combination of the eccentric roller *r*, beam B, notches *i*, and cuff *f*, substantially as set forth."

ALL FOREIGN and COLONIAL PATENT LAWS and RULES, being translations or copies of Official Communications, may be found in the following Numbers of this Journal, published at 2*d*. each, or 3*d*. free by post:—

A Free Library and Reading Room, in connection with the Office of the Commissioners of Patents, is open to the Public daily from 10 till 4 o'clock.

In addition to the Printed Specifications, Indexes, and other publications of the Commissioners, the Library includes a Collection of the leading British and Foreign Scientific Journals, and text-books in the various departments of science and art. A printed Catalogue of the Library is on sale.

Note.—The Commissioners' publications may be consulted daily in the Library of the British Museum; in the Library of the Society of Arts; and in the Free Libraries of the following Towns and Cities:—

Aberdeen (*Public Library Town House*).
Accrington (*Mechanics' Institution, Bank Street*).
Belfast (*Harbour Office, Corporation Square*).
Beverley (*Guildhall*).
Birmingham (*Birmingham and Midland Institute, Cannon Street*).
Bolton-le-Moors (*Public Library, Exchange Buildings*).
Bradford, Yorkshire (*Borough Accountant's Office, Corporation Buildings, Swain Street*).
Brighton (*Town Hall*).
Bristol (*City Library, King Street*).
Burnley (*Office of the Burnley Improvement Commissioners*).
Cambridge (*Free Library, Jesus Lane*).
Canterbury (*Municipal Museum, Guildhall Street*).
Carlisle (*Free Library, Police Office*).
Chester (*Town Hall, Northgate Street*).
Cork (*Royal Cork Institution, Nelson Place*).
Crewe (*Railway Station*).
Darlington (*Mechanics' Institute, Skinnergate*).
Dorchester.
Drogheda.
Dublin (*Royal Dublin Society, Kildare Street*).
Dundalk.
Falmouth (*Public Library, Church Street*).
Gateshead (*Mechanics' Institute*).
Gorton (*Railway Station*).
Glasgow (*Stirling's Library, Miller Street*).
Grimsby, Great (*Mechanics' Institution, Victoria Street*).
Hanley, Staffordshire Potteries (*Town Hall*).
Hartlepool, West (*Literary and Mechanics' Institution, Church Street*).

PATENT LAW AMENDMENT ACT, 1852.—All Specifications, Indexes, &c., printed by order of the Commissioners of Patents, are sold at the Great Seal Patent Office, 25, Southampton Buildings, Holborn.

THE PATENT LAW AMENDMENT ACTS (15 & 16 Vict., cap. 83; 16 Vict., cap. 5; and 16 & 17 Vict., cap. 115); with the Rules and Regulations made by the Commissioners of Patents for Inventions, and by the Lord Chancellor and the Master of the Rolls, under the Acts 15 and 16 Vict., c. 83, and 16 & 17 Vict., c. 115, accompanied by Specimen Forms of the Provisional Documents printed on sheets of the prescribed size. Price 6*d*.

THE CHRONOLOGICAL INDEX of PATENTS of INVENTION, from March 2, 1617 14 James I.), to September 30, 1852 (16 Vict.), 2 vols. Price 30*s.*

THE ALPHABETICAL INDEX of PATENTEES of Inventions for the above period. Price 20*s.*

THE SUBJECT-MATTER INDEX of PATENTS for the same period — *Second Edition*—to which is prefixed a Key of Terms and Phrases. 2 vols. Price 2*l.* 16*s.*

A Key to the *First Edition* of the above work is also published separately, and may be had on application.

THE CHRONOLOGICAL INDEXES of APPLICATIONS for PATENTS and PATENTS GRANTED from the 1st October to the 31st December, 1852, and from the 1st January to the 31st December, 1853, in one volume. Price 11*s.*

THE ALPHABETICAL INDEXES for the above periods, in one volume. Price 13*s.*

THE SUBJECT-MATTER INDEX, from 1st October to 31st December, 1852. Price 9*s.*

THE SUBJECT-MATTER INDEX, from 1st January to 31st December, 1853. Price 16*s.*

THE CHRONOLOGICAL INDEX of APPLICATIONS for PATENTS and PATENTS GRANTED from the 1st January to the 31st December, 1854. Price 6*s.*

THE ALPHABETICAL INDEX for the above period. Price 7*s.*

THE SUBJECT-MATTER INDEX for the above period. Price 16*s.* 6*d.*

THE CHRONOLOGICAL INDEX of APPLICATIONS for PATENTS and PATENTS GRANTED from the 1st January to the 31st December, 1855. Price 6*s.* 6*d.*

THE ALPHABETICAL INDEX for the above period. Price 7*s.* 6*d.*

THE SUBJECT-MATTER INDEX for the above period. Price 17*s.*

THE CHRONOLOGICAL INDEX of APPLICATIONS for PATENTS and PATENTS GRANTED from the 1st January to the 31st December, 1856. Price 6*s.* 6*d.*

THE ALPHABETICAL INDEX for the above period. Price 8*s.*

THE SUBJECT-MATTER INDEX for the above period. Price 18*s.* 6*d.*

THE ALPHABETICAL INDEX of APPLICATIONS for PATENTS and PATENTS GRANTED from the 1st January to the 31st December, 1857. Price 8*s.*

THE CHRONOLOGICAL INDEX for the above period. Price 6*s.* 6*d.*

THE SUBJECT-MATTER INDEX for the above period. Price 19*s.* 6*d.*

THE ALPHABETICAL INDEX of APPLICATIONS for PATENTS and PATENTS GRANTED, from the 1st January to the 31st December, 1858. Price 8*s.*

THE CHRONOLOGICAL INDEX for the above period. Price 6*s.*

THE REFERENCE INDEX of PATENTS, pointing out the Office in which each enrolled Specification of a Patent may be consulted; the Books in which Specifications, Law Proceedings, and other subjects connected with Inventions have been noticed; also such of the Specifications of Patents granted under the Act of 21 James I. as have been published by the authority of the Commissioners. Price 30*s.*

AN APPENDIX to the REFERENCE INDEX of PATENTS of INVENTION, containing Abstracts from such of the early Patents and Signet Bills as describe the nature of the invention, and which Patents have no enrolled Specifications. Price 4*s.*

AN INDEX to ALL INVENTIONS PATENTED in ENGLAND from 1617 to 1854 inclusive, arranged under the greatest number of heads, with parallel references to INVENTIONS and DISCOVERIES described in the scientific works of VARIOUS NATIONS, as classified by Professor Schubarth. By B. WOODCROFT.

The foreign works thus indexed form a portion of the Library of the Commissioners of Patents, where they may be consulted, or manuscript translations be had.

SOMMAIRE de toutes les INVENTIONS BREVETÉES en ANGLETERRE depuis 1617 jusqu'en 1854 inclusivement, arrangées d'après le plus grand nombre de rubriques, avec renvois aux INVENTIONS et DÉCOUVERTES décrites dans les ouvrages scientifiques de DIFFÉRENTES NATIONS, classés par le Professeur Schubarth. Par B. Woodcroft.

Les ouvrages étrangers ci-dessus font partie de la Bibliothèque de la Commission des Patentes, où l'on peut les consulter, et obtenir des traductions en manuscrit.

VERZEICHNISS aller in ENGLAND von 1617—1854 incl. PATENTIRTEN ERFINDUNGEN, unter vielfältige Titel gebracht, mit Hinweisungen auf ERFINDUNGEN und ENTDECKUNGEN die nach Prof. Schubarth's Klassificirung in den wissenschaftlichen Werken VERSCHIEDENER NATIONEN beschrieben sind. Von B. Woodcroft.

Die hier aufgeführten fremden Werke machen einen Theil der Bibliothek der Patent Commission aus, allwo sie nachgeschlagen oder schriftliche Uebersetzungen besorgt werden können.

REPERTORIO di tutte le INVENZIONI munite di LETTERE PATENTI in INGHILTERRA dal 1617—1854 inclusivo, poste in ordine sotto il piu gran numero di capi, con riferenze alle INVENZIONI e SCOPERTI descritti nelle opere scientifiche di DIVERSE NAZIONI, classate dal Professore Schubarth. Dal Sig. B. Woodcroft.

Le opere straniere quì indicate possono esser consultate nella Biblioteca dei Commissari delle Patenti, e traduzioni in manuscritto vi possono ottenersi.

B. WOODCROFT,
Superintendent of Specifications, &c.

SUPPLEMENT to the SERIES of LETTERS PATENT and SPECIFICATIONS of LETTERS PATENT for INVENTIONS recorded in the Great Seal Patent Office, and granted between the 1st March (14 Jac. I.) A.D. 1617, and the 1st October (16 Vict.) A.D. 1852; consisting for the most part of Reprints of scarce Pamphlets, descriptive of the early patented Inventions comprised in that Series. Edited by BENNET WOODCROFT, Superintendent of Specifications, etc. In one vol., price 9*s.* 6*d.*, or each Tract separately at the price affixed.

CONTENTS OF VOL. I.

1. Metallica; or, the treatise of Metallica, briefly comprehending the doctrine of diverse new metallical inventions, &c. By SIMON STURTEVANT. (*Letters Patent, dated 29th February*, 1611.) Price 1*s.* 4*d.*
2. A Treatise of Metallica, but not that which was published by Mr. Simon Sturtevant, upon his Patent, &c. By JOHN ROVINSON (*Letters Patent, granted A.D.* 1612.) Price 4*d.*
3. A Commission directed to Sir Richard Wynne and others to inquire upon oath whether NICHOLAS PAGE or Sir NICHOLAS HALSE was the first inventor of certaine kilnes for the drying of malt, &c. &c. (*Letters Patent, Nos.* 33 *and* 85, *respectively dated 8th April*, 1626, *and 23rd July*, 1635.) Price 2*d.*
4. DUD DUDLEY'S Metallum Martis; or iron made with pit-coale, sea-coale, &c. (*Letters Patent, Nos.* 18 *and* 117, *respectively dated 22nd February*, 1620, *and 2nd May*, 1638.) Price 8*d.*
5. Description of the nature and working of the patent Water-scoop Wheels invented by WILLIAM WHELER, as compared with the raising wheels now in common use. By J. W. B. Translated from the Dutch by Dr. Tolhausen. (*Letters Patent, No.* 127, *dated 24th June*, 1642.) Price 2*s.*
6. An exact and true definition of the stupendous Water-commanding Engine, invented by the Right Honourable (and deservedly to be praised and admired) EDWARD SOMERSET, Lord Marquis of WORCESTER, &c. &c. (*Stat.* 15 *Car. II. c.* 12. *A.D.* 1663.) Price 4*d.*
7. Navigation Improved; or the art of rowing ships of all rates in calms, with a more easy, swift, and steady motion than oars can. By THOMAS SAVERY. (*Letters Patent, No.* 347, *dated 10th January*, 1696.) Price 1*s.*
8. The Miner's Friend; or an engine to raise water by fire described, &c. By THOMAS SAVERY. (*Letters Patent, No.* 356, *dated 25th July*, 1698, *and Stat.* 10 & 11 *Will. III. c.* 31, *A.D.* 1699.) Price 1*s.*
9. Specimina Ichnographica; or a brief narrative of several new inventions and experiments, particularly the navigating a ship in a calm, &c. By JOHN ALLEN, M.D. (*Letters Patent, No.* 513, *dated 7th August*, 1729.) Price 8*d.*
10. A description and draught of a new-invented Machine for carrying vessels or ships out of or into any harbour, port, or river, against wind and tide, or in a calm, &c. By JONATHAN HULLS. (*Letters Patent, No.* 556, *dated 21st December*, 1736.) Price 8*d.*
11. An historical account of a new method for extracting the foul air out of ships, &c., with the description and draught of the machines by which it is performed, &c. By SAMUEL SUTTON, the Inventor. To which are annexed two relations given thereof to the Royal Society by Dr. Mead and Mr. Watson, (*Letters Patent, No.* 602, *dated 16th March*, 1744.) Price 1*s.*

DELIVERY OF LETTERS.—For the Great Seal Patent Office the initials are W. C., the District being the Western Central. In the direction of a Letter, these initials should be legibly written in a separate line, and should in all cases end the address, thus:—

The Commissioners of Patents,
Great Seal Patent Office,
25, Southampton Buildings,
London,
W.C.

In course of Publication, by Order of the Commissioners of Patents.

ABRIDGMENTS (in Classes, and Chronologically arranged) of all SPECIFICATIONS of PATENTED INVENTIONS, from the earliest enrolled to those published under the Act of 1852.

These books are of 12mo size, and as each is limited to inventions of one class only, they can be sold at prices sufficiently moderate to enable the humblest inventor to examine for himself whether his discovery has been previously patented or not.

At the foot of each abstract are given references to notices of the inventions in scientific and other works, and to the reports of law proceedings for infringements, &c. &c. &c.

The classes already published are,—

1. DRAIN TILES AND PIPES, price 6*d.*
2. SEWING AND EMBROIDERING, price 6*d.*
3. MANURE, price 6*d.*
4. PRESERVATION OF FOOD, price 6*d.*
5. MARINE PROPULSION, price 4*s.*
6. MANUFACTURE OF IRON AND STEEL, price 5*s.*
7. AIDS TO LOCOMOTION, price 1*s.*
8. STEAM CULTURE, price 2*s.*
9. WATCHES, CLOCKS, AND OTHER TIME-KEEPERS, price 1*s.* 6*d.*
10. FIRE-ARMS AND OTHER WEAPONS, AMMUNITION, AND ACCOUTREMENTS, price 6*s.* 6*d.*
11. PAPER.—PART I. MANUFACTURE OF PAPER, PASTEBOARD, AND PAPIER MÂCHÉ, price 3*s.*
12. PAPER.—PART II. CUTTING, FOLDING, AND ORNAMENTING; INCLUDING ENVELOPES, CARDS, PAPER-HANGINGS, &c., price 2*s.*
13. TYPOGRAPHIC, LITHOGRAPHIC, AND PLATE PRINTING, price 7*s.*
14. BLEACHING, DYEING, AND PRINTING YARNS AND FABRICS, price 9*s.* 6*d.*

The following are in the press:—

ELECTRICITY AND MAGNETISM: THEIR GENERATION AND APPLICATIONS.
PREPARATION OF FUEL, AND APPARATUS FOR ITS COMBUSTION.
MANUFACTURE AND APPLICATIONS OF INDIA RUBBER, GUTTA PERCHA, &c.; INCLUDING AIR, FIRE, AND WATER PROOFING.
PRODUCTION AND APPLICATIONS OF GAS.
STEAM ENGINES.
METALS AND ALLOYS.

B. WOODCROFT.

The above, and all other works published by the Commissioners of Patents, are now on sale at the Great Seal Patent Office, 25, Southampton Buildings, Holborn.

This Journal is published on the evenings of Tuesday and Friday, and will be forwarded, post free, to Subscribers. — Terms, 30*s.* per annum. — Subscriptions received at the Great Seal Patent Office, where also single copies, at twopence each, may be obtained.

THE

COMMISSIONERS OF PATENTS' JOURNAL.

By Authority.

(*Registered for transmission abroad.*)

No. 588. TUESDAY, AUGUST 23, 1859. Price 2d.

Notices to Proceed.

NOTICE is hereby given, that

898. BENJAMIN BAUGH, Manager of Thomas Clutton Salt's Enamel Works, Bradford Street, Birmingham, in the county of Warwick, has given notice at the Office of the Commissioners of his intention to proceed with his application for Letters Patent for the invention of "Certain improved arrangements for working fly presses by steam, water, or other power."

904. And ALFRED BOWER, of Liverpool, in the county of Lancaster, Cotton Broker, has given the like notice in respect of the invention of "Improvements in or applicable to the keels of navigable vessels."

905. And WILLIAM ROWAN, of the firm of John Rowan and Sons, of Belfast, in the county of Antrim, Engineers, has given the like notice in respect of the invention of "Improvements in spinning flax, hemp, and other fibrous materials."

906. And RICHARD ARCHIBALD BROOMAN, of 166, Fleet Street, in the city of London, E.C., Patent Agent, has given the like notice in respect of the invention of "Improvements in candle moulds."—A communication from Auguste Godchaux, residing at Paris.

907. WILLIAM SOUTHERN CLARK, of Aberdare, in the county of Glamorgan, Mining Engineer, has given the like notice in respect of the invention of "Improved means of loading ships or vessels with coal, and of separating or removing small coal therefrom."

909. And JOHN MARLAND, of Southport, in the county of Lancaster, has given the like notice in respect of the invention of "An improvement in the manufacture of cop tubes."

As set forth in their respective petitions, all recorded in the said office on the 11th day of April, 1859.

925. And HEINRICH ECKHORN, of No. 24, Cranbourne Street, Leicester Square, in the county of Middlesex, and of Bieberich, in the Duchy of Nassau, Manufacturer of Lamps, has given the like notice in respect of the invention of "Improving and regulating the production of light in lamps, to which he gives the name of 'Universal Lamp Regulator.'"

929. And ALFRED RICHARD JOHNSON, of Saint John's Wood, in the county of Middlesex, Gentleman, has given the like notice in respect of the invention of "An instrument for damping, severing, and affixing postage and other like stamps."

930. And JOHN AMBROSE COFFEY, of 4, Providence Row, Finsbury, in the county of Middlesex, Engineer, has given the like notice in respect of the invention of "Improvements in apparatus for heating liquids."

932. And JOHN LEE STEVENS, of No. 1, Fish Street Hill, in the city of London, Civil Engineer, has given the like notice in respect of the invention of "Improvements in the fire grates of locomotive, marine, and other furnaces."

As set forth in their respective petitions, all recorded in the said office on the 13th day of April, 1859.

936. And THOMAS BIRD, of the city of Manchester, in the county of Lancaster, Engineer, has given the like notice in respect of the invention of "Improvements in the application and use of a certain natural product or products in the manufacture of pickers for looms, drawing rollers for spinning machinery, cop tubes, and for steps and bushes generally where lubrication is required."

941. And EDWARD DOWLING, of Little Queen Street, Holborn, in the county of Middlesex, Scale Maker, has given the like notice in respect of the invention of "Improvements in parts of scales or weighing machines, and in balance weights used for those articles, which are also applicable for other purposes."

943. And Alexander McDougall, of Manchester, in the county of Lancaster, Chemist, has given the like notice in respect of the invention of "Improvements in coating metallic surfaces."

944. And Lindley John Higham, of New York, in the United States of America, Gentleman, now residing at Edmund Place, in the city of London, has given the like notice in respect of the invention of "Improvements in billiard tables."

As set forth in their respective petitions, all recorded in the said office on the 14th day of April, 1859.

---

952. And Henry Barrow, of Birmingham, in the county of Warwick, Saddler, has given the like notice in respect of the invention of "A new or improved fastening for fastening trunks, boxes, and articles of dress, and for such other purposes as the same is or may be applicable to."

955. And Luke Collier, of Rochdale, in the county of Lancaster, Machine Maker for Confectionary, has given the like notice in respect of the invention of "An improved feeding apparatus applicable to grain, loaf sugar, drugs, or other similar materials."

958. And John Hamilton, of No. 8, Exchange Square, Glasgow, in the county of Lanark, North Britain, Engineer, has given the like notice in respect of the invention of "Improvements in apparatus for regulating prime movers driven by water."

959. And Alfred Courage, of Bagillt, in the county of Flint, Smelter, has given the like notice in respect of the invention of "An improved method of obtaining the metallic particles contained in fumes or vapours from lead and other smelting works."

As set forth in their respective petitions, all recorded in the said office on the 16th day of April, 1859.

---

968. And Robert Warry, Armourer Sergeant, of the 3rd Depot Battalion, Chatham, has given the like notice in respect of the invention of "Improvements in breech-loading ordnance and its projectiles."

969. And William Prosser, of No. 24, Dorset Place, Dorset Square, in the county of Middlesex, Gentleman, has given the like notice in respect of the invention of "Improvements in apparatus employed in the production of light."

971. And John Whitaker, of Bedford Mill Iron Works, near Leigh, in the county of Lancaster, Agricultural Machine Maker, has given the like notice in respect of the invention of "Improvements in mowing machines."

972. And Joseph Seaman, of Linslade, in the county of Buckingham, Engineer, has given the like notice in respect of the invention of "Improvements in agricultural implements for working or cultivating the soil."

977. And John Freer, of Rothley, in the county of Leicester, Agricultural Implement Maker, has given the like notice in respect of the invention of "Improvements in machines for planting grain and seed, and an improved seed feeder and meter for planting machines."

As set forth in their respective petitions, all recorded in the said office on the 18th day of April, 1859.

987. And Isaac Dutton, of Tipton, in the county of Stafford, Whitesmith, and Robert Martin, of Dudley, in the county of Worcester, Coke Merchant, and Thomas Phillips, of Dudley, aforesaid, Coke Merchant, have given the like notice in respect of the invention of "A new or improved machinery for preventing accidents in coal or other mines by the drawing of skips or cages over their pullies."

As set forth in their petition, recorded in the said office on the 19th day of April, 1859.

---

994. And John Morris Johnson and Edmund Johnson, of Castle Street, Holborn, have given the like notice in respect of the invention of "Improvements in the production of ornamental surfaces suitable for advertisement tablets, plates for shop fronts, and for other uses."

995. And Alexander William Williamson, of University College, has given the like notice in respect of the invention of "Improvements in obtaining extracts from the liquorice root."

As set forth in their respective petitions, both recorded in the said office on the 20th day of April, 1859.

1007. And Edwin Lewthwaite, of Halifax, in the county of York, Watch and Clock Maker, and George Ambler, of Queen's Head, near Halifax aforesaid, Clock and Watch Maker, have given the like notice in respect of the invention of "Improvements in clocks, watches, chronometers, and other time keepers."

As set forth in their petition, recorded in the said office on the 21st day of April, 1859.

1031. And George Ward, of Blackburn, in the county of Lancaster, Gold Patent Thread Manufacturer, has given the like notice in respect of the invention of "Improvements in machinery or apparatus for making healds."

As set forth in his petition, recorded in the said office on the 25th day of April, 1859.

1082. And William Winstanley and Joseph Kelly, of Liverpool, in the county of Lancaster, Hydraulic Engineers, have given the like notice in respect of the invention of "Improvements in pumps and gearing and appliances for working the same."

As set forth in their petition, recorded in the said office on the 30th day of April, 1859.

1134. And William Edward Newton, of the Office for Patents, 66, Chancery Lane, in the county of Middlesex, Civil Engineer, has given the like notice in respect of the invention of "An improved steam gauge."—A communication from abroad by Anthoine Ernest Dupas, of New Orleans, in the United States of America.

1135. And William Edward Newton, of the Office for Patents, 66, Chancery Lane, in the county of Middlesex, Civil Engineer, has given the like notice in respect of the invention of "Certain improvements in fish hooks."—A communication from abroad, by Theodore Frederic Weil, of New Orleans, in the United States of America.

As set forth in his respective petitions, both recorded in the said office on the 5th day of May, 1859.

1295. And Alfred Vincent Newton, of the Office for Patents, 66, Chancery Lane, in the county of Middlesex, Mechanical Draughtsman, has given the like notice in respect of the invention of "Improved machinery, applicable to the manufacture of rivets, bullets, and other like articles."—A communication from abroad by Charles Bartholomew Allen, of Philadelphia, United States of America.
As set forth in his petition, recorded in the said office on the 25th day of May, 1859.

1327. And Edgar Breffit, of 61, King William Street, in the city of London, Glass Manufacturer, has given the like notice in respect of the invention of "Improvements in machinery or apparatus for the manufacture of hollow corks."

1334. And James Lee Norton, of Belle Sauvage Yard, Ludgate Hill, in the city of London, has given the like notice in respect of the invention of "Improvements in machines for stretching and drying fabrics, and in drying wool and other fibres."
As set forth in their respective petitions, both recorded in the said office on the 30th day of May, 1859.

1694. And Andrew Phillips, of Glasgow, in the county of Lanark, North Britain, Gentleman, has given the like notice in respect of the invention of "Improvements in weaving carpets, and in the machinery or apparatus to be used therein, parts of which machinery or apparatus are applicable to the weaving of other fabrics."
As set forth in his petition, recorded in the said office on the 18th day of July, 1859.

1738. And Joseph Gillott, of Birmingham, in the county of Warwick, Manufacturer, and John Morrison, of Birmingham aforesaid, Machinist, have given the like notice in respect of the invention of "New or improved machinery for the manufacture of the handles of penholders, which machinery or a part or parts thereof, may also be employed for manufacturing other cylindrical articles."
As set forth in their petition, recorded in the said office on the 26th day of June, 1859.

1765. And Joseph Wood, of York City, Surgical Instrument Maker, has given the like notice in respect of the invention of "An improved truss for hernia."
As set forth in his petition, recorded in the said office on the 30th day of July, 1859.

1777. And Thomas Goode Messenger, of High Street, Loughborough, in the county of Leicester, Horticultural Builder and Plumber, has given the like notice in respect of the invention of "Improvements in the construction of buildings or erections to be used for horticultural or other purposes."
As set forth in his petition, recorded in the said office on the 1st day of August, 1859.

1803. And Edward Barker Gowland, of Brecknock Street, Camden Town, in the county of Middlesex, has given the like notice in respect of the invention of "Improvements in pianofortes."
As set forth in his petition, recorded in the said office on the 5th day of August, 1859.

1817. And Edward Albert Suwerkrop, of Leith, in the county of Mid Lothian, Merchant, has given the like notice in respect of the invention of "Improvements in reaping and mowing machines."—Partly a communication from abroad by François Leroy, of San Francisco.
As set forth in his petition, recorded in the said office on the 6th day of August, 1859.

And notice is hereby further given, that all persons having an interest in opposing any one of such applications are at liberty to leave particulars in writing of their objections to such application, at the said Office of the Commissioners, within twenty-one days next after the date of the Gazette [and of the Journal] in which this notice is issued.

Patents Sealed.

List of Letters Patent which passed the Great Seal on the

22nd August, 1859.

521. Joseph Hine, of Clerkenwell, in the county of Middlesex, Fancy Cabinet Manufacturer, for an invention of "An improved joint for cabinet making, carpentry, and other constructive purposes."—Dated 26th February, 1859.

524. Francois Brignoles, residing at No. 3, Duke Street, Adelphi, London, county of Middlesex, for an invention of "The disinfection and rectification of alcohols by the separation of the essential and other oils from the alcohol."—A communication from Mr. St. Cyr Prieur, now residing in Avignon town, France.—Dated 28th February, 1859.

536. Edward Joseph Hughes, of the firm of Hughes and Son, Patent Agents, 123, Chancery Lane, London, for an invention of "Improvements in preserving animal food, poultry, game, fish, fruit, and other similar substances."—A communication from abroad by Edouard Gorges, of Paris.—Dated 1st March, 1859.

537. Thomas Cloake, of No. 6, Saville Row, Walworth, in the county of Surrey, Watch Maker, for an invention of "Stopping of the bodies and wheels of railway and other carriages."—Dated 1st March, 1859.

541. John Edwards, of Fenton, in the county of Stafford, Manufacturer, for an invention of "Improvements in stacking or holding biscuit, earthen, china, and glossed ware for firing."—Dated 1st March, 1859.

543. James Templeman, of Glasgow, in the county of Lanark, North Britain, Artificial Fuel Manufacturer, for an invention of "Improvements in the manufacture or production of artificial fuel."—Dated 1st March, 1859.

545. David Lichtenstadt, of No. 1, Henry Cottages, Park Road, Peckham, in the county of Surrey, Chemist, for an invention of "Converting certain vegetable substances into fibrous material for the manufacture of paper textile and other fabrics."—Dated 1st March, 1859.

550. Robert Hanham Collyer, of Alpha Road, in the county of Middlesex, Doctor of Medicine and Civil Engineer, for an invention of "A process of preparing materials for the manufacture of paper and a machine employed therein, which machine is applicable for crushing, grinding, bruising, and reducing various substances."—Dated 2nd March, 1859.

648. John Samuel Dawes, of Smethwick House, near Birmingham, Gentleman, for an invention of "A new or improved method or combination of arrangements for the better securing and collecting of night soil or town manure, and rendering it more valuable for agricultural purposes."—Dated 14th March, 1859.

1026. William Moxon, of Parliament Street, in the city of Westminster, Contractor, and Joseph Jeffrey Bennett, of Homer Terrace, Victoria Park, in the county of Middlesex, Civil Engineer, for an invention of "Improved apparatus for raising or lifting and lowering heavy bodies."—Dated 23rd April, 1859.

1437. Alfred Vincent Newton, of the Office for Patents, 66, Chancery Lane, in the county of Middlesex, Mechanical Draughtsman, for an invention of "Improvements in the manufacture of polishing wheels, sticks, and tools."—A communication from Thomas J. Mayall, of Roxbury, in the county of Norfolk, and state of Massachusetts, United States of America.—Dated 15th June, 1959.

Patents on which the Stamp Duty of £50 has been Paid.

(*To 20th August, 1859, inclusive.*)

18th August.

1937. Robert Jobson, of Wordsley, in the county of Stafford, Ironfounder, for an invention of "Improvements in apparatus for pouring iron or other metal into moulds."—Dated 19th August, 1856.

19th August.

1976. Marc Antoine François Mennons, of 21, Rue Napoleon, Montmartre (depart. de la Seine), in the empire of France, for an invention of "A new composition applicable to the coating or covering of metallic and non-metallic surfaces."—A communication.—Dated 25th August, 1856.

20th August.

1992. Alfred Vincent Newton, of the Office for Patents, 66, Chancery Lane, in the county of Middlesex, Mechanical Draughtsman, for an invention of "An improvement in breech-loading cannons and other ordnance."—A communication.—Dated 26th August, 1856.

FOREIGN PATENTS.

BELGIUM.*

List of Patents Delivered on the 11th August, 1859.†

(*Communicated by the Belgian Government.*)

(For previous List, see No. 585 of this Journal.)

7454. F. Barnett, represented by H. Biebuyck, of Brussels, for an imported invention of "An apparatus for catching flies."—Dated 22nd April, 1859.—(M. B. C. Lesage's French Patent, 15th July, 1858.)

7668. W. Clark, represented by J. Piddington, of Brussels, for an imported invention of "Improvements in safety pulleys for lowering boats from vessels."—Dated 20th June, 1859.—(English Patent, 12th April, 1859.)

7699. J. J. Burny, of Brussels, for "An instrument for removing corns, &c."—Dated 29th June, 1859.

7734. A. Dehaspe, of Braine-le-Comte, for "A machine for polishing grain and for removing the germ therefrom."—Dated 9th July, 1859.

7762. H. Louvigny, of Bilsen, for "Improvements in the manufacture of organs."—Dated 20th July, 1859.

7789. R. Romaine, represented by H. Biebuyck, of Brussels, for an imported invention of "Portable railways."—Dated 23rd July, 1859.—(English Patent, 14th January, 1859.)

7790. J. S. Chester, represented by E. Guillery, of Molenbeek St. Jean, for an imported invention of "Improvements in apparatus for priming fire-arms."—Dated 23rd July, 1859.—(J. S. Butterfield, American Patent, 11th December, 1855.)

7791. P. F. and N. Rolland, of Hensies, for "An electric printing telegraph."—Dated 25th July, 1859.

7792. H. J. Petit, of St. Josse-ten-Noode, for "Improvements in fixing gasmeters."—Dated 25th July, 1859.

7793. J. B. Perpète, represented by H. Biebuyck, of Brussels, for an imported invention of "Stationary steam-engines applicable to steam-boats."—Dated 25th July, 1859.—(French Patent, 11th July, 1859.)

* For the Belgian Patent Law, see Nos. 292 and 348 of this Journal.

† All Specifications of Patents which have been in force not less than six months, may be inspected or translations of them be had at the Library of the Great Seal Patent Office, where also translated Indexes may be consulted.

7794. John Cockerill and Co., represented by A. Joassart, of Seraing, for "A mode of moulding and casting cylinders of rolling-mills."—Dated 26th July, 1859.

7795. E. Lisbet, represented by E. Hardy, of Quaregnon, for an imported invention of "An apparatus for boring holes for mines in all kinds of rocks."—Dated 26th July, 1859.—(French Patent, 7th June, 1859.)

7797. J. Staal, of Brussels, for an imported invention of "An apparatus for closing vessels and recipients hermetically."—Dated 26th July, 1859. —(French Patent, 24th December, 1858.)

7798. F. Puls, represented by R. Culliford, of Brussels, for an imported invention of "Improvements in the treatment of hydrocarbonic compounds." — Dated 26th July, 1859. — (English Patent, 10th June, 1859.)

7800. T. J. Sloan, represented by H. Biebuyck, of Brussels, for an imported invention of "Improvements in opening and closing doors, shutters, &c." —Dated 27th July, 1859. —(French Patent, 5th July, 1859.)

7801. T. J. Sloan, represented by H. Biebuyck, of Brussels, for an imported invention of "A mode of opening folded doors."—Dated 27th July, 1859. —(French Patent, 29th January, 1859.)

7802. A. Gillis, represented by A. Auyt, of Brussels, for "A mixing apparatus for making chocolate."—Dated 27th July, 1859.

7803. F. Donny, of Ghent, for "Manufacture of safety-paper."—Dated 11th July, 1859.

7804. Ph. Van Dalsum-Michiels, of Ghent, for "Manufacture of drivers of buffalo leather for power looms."—Dated 28th July, 1859.

7805. A. Rasenfosse and L. Vogel, represented by D. Tassin, of Liége, for "Utilizing the residue of sheet iron after separating therefrom the tin covering the same."—Dated 29th July, 1859.

7806. L. Cherpitel, represented by O. Daillencourt, of Brussels, for an imported invention of "A system of photographic dioramas with animated and moveable effects."—Dated 28th July, 1859.— —(French Patent, 18th June, 1859.)

7807. L. S. De Leeman, represented by H. Biebuyck, of Brussels, for an imported invention of "Treating and applying an Indian plant called 'Piacova.'"—Dated 28th July, 1859. — (Dutch Patent, 22nd July, 1859.)

7809. H. Labin, represented by H. Biebuyck, of Brussels, for an imported invention of "A mechanism for keyed instruments and telegraphs."— Dated 28th July, 1859. — (French Patent, 9th June, 1859.)

7810. A. F. Le Mat, represented by H. Biebuyck, of Brussels, for an imported invention of "Improvements in guns."—Dated 20th July, 1859.— (French Patent, 20th July, 1859.)

7811. H. M. Paine, represented by H. Biebuyck, of Brussels, for an imported invention of "A motor." —Dated 28th July, 1859.—(English Patent, 18th January, 1859.)

7812. A. F. Le Mat, represented by H. Biebuyck, of Brussels, a Patent of Improvement for "Revolvers charged with grape shot."—Dated 28th July, 1859. — (Original Patent, 30th October, 1857.)

7813. W. Pugh, represented by H. Biebuyck of Brussels, a Patent of Improvement for "A rectilinear knitting frame for obtaining lists and lessenings."—Dated 28th July, 1859. —(Original Patent, 28th July, 1858.)

7814. P. J. Chantrel, represented by C. Wenseleers, of Brussels, for an imported invention of "A centrifugal apparatus for extracting the juice of beetroot."—Dated 29th July, 1859.—(French Patent, 28th May, 1859.)

7815. R. Mushet, represented by R. S. Kirkpatrick, of Ixelles, for an imported invention of "Improvements in the manufacture of cast steel, steel iron, and iron."—Dated 20th July, 1859.— —(English Patent, 24th January, 1859.)

7816. J. B. Denizot, represented by H. Biebuyck, of Brussels, for an imported invention of "A screw tube of smoking pipes."—Dated 30th July, 1859.—(French Patent, 7th October, 1857.)

7817. J. Aspinall, represented by H. Biebuyck, of Brussels, for an imported invention of "Improvements in machines for making bolts, nails, and rivets."—Dated 30th July, 1859.—(English Patent, 6th January, 1859.)

7819. F. Van T. Velt, of Brussels, for "A system of stoves of counter oxidated sheet iron."—Dated 1st August, 1859.

7820. J. Montgomery, represented by R. S. Kirkpatrick, of Ixelles, for an imported invention of "Improvements in the construction of hulls of steam-boats and other vessels."—Dated 1st August, 1859. — (English Patent, 17th January, 1859.

7821. J. W. Duncan, represented by O. Daillencourt, of Brussels, for an imported invention of "Improvements in electric telegraphs, and in the insulation of cables of telegraphs." —Dated 1st August, 1859.—(English Patent, 30th December, 1858.)

7822. T. C. Avery, represented by O. Daillencourt, of Brussels, for an imported invention of "Improvements in the construction of electric batteries." — Dated 1st August, 1859. — (French Patent, 21st July, 1859.)

7823. The Company of the Anzin Mines, represented by A. Cabany, of Mons, a Patent of Improvement for "Coke-kilns."—Dated 1st August, 1859. — (Original Patent, 18th January, 1859.)

7824. L. J. J. Ghaze, of Liége, a Patent of Improvement for "Breech-loading fire-arms."—Dated 1st August, 1859.—(Original Patent, 28th May, 1857.)

7825. A. Cosyns, of Couillet, for "A puddling furnace, worked by means of hot-air and forced currents of air."—Dated 1st August, 1859.

7826. C. A. de Jaer, of Liége, a Patent of Improvement for "Closing safety-lamps of miners." —Dated 1st August, 1859. — (Original Patent, 27th September, 1855.)

7827. J. B. Clavières, of Brussels, for an imported invention of "Rails and sleepers used in the construction of tramways."—Dated 2nd August, 1859.—(French Patent, 14th July, 1859.)

List of Specifications published during the week ending 19th August, 1859.

No.	Price.	Subject-Matter.
79	3*d.*	Exhibiting pictures through looking-glasses.
81	1*s.* 10*d.*	Carriage-wheel break.
82	6*d.*	Machinery for working pumps.
83	3*d.*	Shirts and shirt fronts.
84	4*d.*	Insulating electrical conducting wires.
85	3*d.*	Dentistry.
86	10*d.*	Promoting combustion and prevention of smoke in coal burning locomotives, &c.
87	1*s.* 6*d.*	Constructing supports for telegraphic wires, &c.
88	3*d.*	Rendering fabrics and substances non-inflammable.
89	11*d.*	Steam engines.
90	3*d.*	Apparatus for raising ladies' dresses.
91	1*s.* 1*d.*	Locomotive and traction engines.
92	6*d.*	Construction of boats and mode of propelling them.
93	3*d.*	Manufacture of rugs.
94	4*d.*	Preparing skins to be converted into leather, &c.
95	10*d.*	Fixing door and other knobs.
96	3*d.*	Machinery for paying out and recovering submarine telegraph ropes, &c.
97	7*d.*	Governors for steam and other motive power engines.
98	1*s.* 5*d.*	Steam engines, pistons, &c.
99	3*d.*	Fastenings for windows, shutters, doors, &c.
100	4*d.*	Metallic alloy.
101	5*d.*	Manufacture of cast steel.
102	3*d.*	Sluice valves.
103	3*d.*	Coating iron and steel with metals by electro-deposition.
104	5*d.*	Heat indicator for ovens, &c.
105	9*d.*	Spinning cotton and other fibrous materials.
106	7*d.*	Preventing accidents when raising or lowering skips, baskets, &c.
107	3*d.*	Construction of ships, &c.
108	6*d.*	Pistons for steam engines, &c.
109	3*d.*	Imparting motion to cots, cradles, &c.
110	3*d.*	Lawn mowing machines.
111	3*d.*	Wind musical instruments.
112	10*d.*	Travelling suspension rail, applicable as a bridge and lifting agent.
113	1*s.* 10*d.*	Railway signal apparatus.
114	6*d.*	Breech-loading fire-arms and cartridges.
115	1*s.* 10*d.*	Casks.
116	3*d.*	Instrument for teaching music.
117	9*d.*	Felting bodies of hats and bonnets.
118	3*d.*	Manufacture of warp lace.
119	3*d.*	Laying electric telegraphic wires in streets.
120	10*d.*	Traction and portable steam engines.
121	7*d.*	Feeding steam boilers with water.
122	4*d.*	Treating spun silk thread, &c.
123	3*d.*	Time measuring apparatus.
124	3*d.*	Waterproof drawers and napkins.
125	10*d.*	Sluice valves.
126	5*d.*	Obtaining carbonic acid gas.
127	10*d.*	Portable railway.
128	3*d.*	Substitute for stone for building purposes.
129	6*d.*	Upright celled boiler.
130	3*d.*	Inks for engraving and lithographic purposes.
131	1*s.* 4*d.*	Construction of a travelling suspension rail.
132	4*d.*	Manufacture of cast steel.
133	10*d.*	Capsules.
134	5*d.*	Manufacture of cast steel.
135	3*d.*	Machinery for printing and stencilling.
136	3*d.*	Letter boxes
141	7*d.*	Sewing machines.
144	4*d.*	Washing and drying wool, &c.
145	5*d.*	Manufacture of cast steel.
146	3*d.*	Machine for putting on, equalizing, and drying colors on paper, &c.
147	6*d.*	Furniture for window and other blinds.
151	7*d.*	Generating force.

*** Specifications will be forwarded by post on receipt of the amount of price and postage. Sums exceeding 5*s.* must be remitted by Post Office Order, made payable at the Post Office, High Holborn, to Mr. Bennet Woodcroft, Great Seal Patent Office.

Erratum in Journal of 19th August.

PATENT LAW AMENDMENT ACT, 1852.—All Specifications, Indexes, &c., printed by order of the Commissioners of Patents, are sold at the Great Seal Patent Office, 25, Southampton Buildings, Holborn.

THE PATENT LAW AMENDMENT ACTS (15 & 16 Vict., cap. 83; 16 Vict., cap. 5; and 16 & 17 Vict., cap. 115); with the Rules and Regulations made by the Commissioners of Patents for Inventions, and by the Lord Chancellor and the Master of the Rolls, under the Acts 15 and 16 Vict., c. 83, and 16 & 17 Vict., c. 115, accompanied by Specimen Forms of the Provisional Documents printed on sheets of the prescribed size. Price 6*d*.

Museum of Patents, South Kensington.

NUMBER of VISITORS for the Week ending 20th August, 1859.

Mornings - - - -	1507
Evenings - - - -	1462
Total - - -	2969

Since the opening of the Museum Free Daily (May 12, 1858,)—129,879.

THIS Museum is open to the public daily, free of charge. The hours of admission are from 10 A.M. to 6 P.M., and in the evenings of Monday, Tuesday, and Wednesday from 7 to 10 P.M.

All communications on the subject of the Museum to be addressed to the Superintendent,

B. WOODCROFT.

Great Seal Patent Office,
Southampton Buildings.

GALLERY OF PORTRAITS OF INVENTORS, DISCOVERERS, AND INTRODUCERS OF USEFUL ARTS.—This Collection, formed by Mr. Woodcroft, and first opened to public view in the Great Seal Patent Office in 1853, now constitutes a portion of the Patent Museum at South Kensington.

Presentations of original Portraits, Medallions, Busts, and Statues, in augmentation of the Collection, are hereby invited, and will on receipt be acknowledged in this Journal, and duly recorded in the next published Catalogue.

REAPING MACHINES.—The entire series of Specifications and Drawings on this subject to the end of 1853, together with an Appendix, prepared by B. Woodcroft, of the Patent Office, and published under the sanction of the Commissioners, may be obtained at the cost price of *2l. 3s. 11½d.*

FIRE-ARMS, PROJECTILES, &c.—The series of Specifications and Drawings on this Subject, from 15th May, 1718, to 31st December, 1853, with Alphabetical and Subject-matter Indexes, may be obtained at the cost price of *9l. 18s. 6½d.*

The Indexes, separately, price *3s.*

CATALOGUE of the LIBRARY of the GREAT SEAL PATENT OFFICE. Two vols. imp. 8vo. (Vol. I. Titles; Vol. II. Index.) Price *21s.*

COLONIAL PATENTS.—Information as to the Mode of obtaining Protection for Inventions in the Colonies; contained in Communications from the Governors, &c. of the different British Colonies in answer to the Application of Mr. W. J. CURTIS for a Patent. Price *1s.*

PATENT RIGHTS in the COLONIES.—Abstract of Replies to the Secretary of State's Circular Despatch of July 11, 1856, calling for Information as to the Form of the Application to be made by Persons desirous of obtaining Patent Rights in the Colonies, and the Expenses attendant on the Grant of such Patent Rights. Price *2s. 6d.*

In course of Publication, by Order of the Commissioners of Patents.

ABRIDGMENTS (in Classes, and Chronologically arranged) of all SPECIFICATIONS of PATENTED INVENTIONS, from the earliest enrolled to those published under the Act of 1852.

These books are of 12mo size, and as each is limited to inventions of one class only, they can be sold at prices sufficiently moderate to enable the humblest inventor to examine for himself whether his discovery has been previously patented or not.

At the foot of each abstract are given references to notices of the inventions in scientific and other works, and to the reports of law proceedings for infringements, &c. &c. &c.

The classes already published are,—

1. DRAIN TILES AND PIPES, price *6d.*
2. SEWING AND EMBROIDERING, price *6d.*
3. MANURE, price *6d.*
4. PRESERVATION OF FOOD, price *6d.*
5. MARINE PROPULSION, price *4s.*
6. MANUFACTURE OF IRON AND STEEL, price *5s.*
7. AIDS TO LOCOMOTION, price *1s.*
8. STEAM CULTURE, price *2s.*
9. WATCHES, CLOCKS, AND OTHER TIME-KEEPERS, price *1s. 6d.*
10. FIRE-ARMS AND OTHER WEAPONS, AMMUNITION, AND ACCOUTREMENTS, price *6s. 6d.*
11. PAPER.—PART I. MANUFACTURE OF PAPER, PASTEBOARD, AND PAPIER MÂCHÉ, price *3s.*
12. PAPER.—PART II. CUTTING, FOLDING, AND ORNAMENTING; INCLUDING ENVELOPES, CARDS, PAPER-HANGINGS, &c., price *2s.*
13. TYPOGRAPHIC, LITHOGRAPHIC, AND PLATE PRINTING, price *7s.*
14. BLEACHING, DYEING, AND PRINTING YARNS AND FABRICS, price *9s. 6d.*

The following are in the press:—

ELECTRICITY AND MAGNETISM: THEIR GENERATION AND APPLICATIONS.
PREPARATION OF FUEL, AND APPARATUS FOR ITS COMBUSTION.
MANUFACTURE AND APPLICATIONS OF INDIA RUBBER, GUTTA PERCHA, &c.; INCLUDING AIR, FIRE, AND WATER PROOFING.
PRODUCTION AND APPLICATIONS OF GAS.
STEAM ENGINES.
METALS AND ALLOYS.

B. WOODCROFT.

The above, and all other works published by the Commissioners of Patents, are now on sale at the Great Seal Patent Office, 25, Southampton Buildings, Holborn.

This Journal is published on the evenings of Tuesday and Friday, and will be forwarded, post free, to Subscribers.—Terms, *30s.* per annum.—Subscriptions received at the Great Seal Patent Office, where also single copies, at twopence each, may be obtained.

THE

COMMISSIONERS OF PATENTS' JOURNAL.

By Authority.

(Registered for transmission abroad.)

No. 589. FRIDAY, AUGUST 26, 1859. Price 2d.

Grants of Provisional Protection for Six Months.

NOTICE is hereby given that Provisional Protection has been allowed

1768. To ANTON BRUNO SEITHEN, of No. 6, Alpha Place, Caledonian Road, London, in the county of Middlesex, for the invention of "Improvements in cases or boxes, and in casings, hampers, baskets, and wrappers for holding bottles, jars, and other articles."

On his petition, recorded in the Office of the Commissioners on the 30th day of July, 1859.

1778. To ELIZABETH MERRELL, of Little George Street, Minories, in the city of London, Tin and Zinc Plate Worker, for the invention of "Improvements in apparatus for washing and cleansing."

On her petition, recorded in the Office of the Commissioners on the 1st day of August, 1859.

1800. To EDWARD JAMES CORDNER, of Derramore, in the county of Down, Ireland, Clerk, for the invention of "Improvements in the application of kites to the saving of life and property from shipwreck, and to other purposes."

On his petition, recorded in the Office of the Commissioners on the 4th day of August, 1859.

1808. To ROBERT THOMSON PATTISON, residing at Daldorch, in the county of Ayr, in Scotland, for the invention of "Improvements in dyeing certain woven fabrics."

On his petition, recorded in the Office of the Commissioners on the 5th day of August, 1859.

1822. To JOHN CUNNINGHAM, of Paisley, in the county of Renfrew, North Britain, Card Perforator, for the invention of "Improvements in and connected with Jacquard apparatus for weaving."

1824. To RICHARD ARCHIBALD BROOMAN, of No. 166, Fleet Street, in the city of London, E.C., Patent Agent, for the invention of "Improved means of preventing incrustations in steam boilers."—A communication from abroad, by Louis Serbat, of Saint Saulve, France.

1826. To LOUIS BERTRAND OLLIVIER, of No. 29, Boulevart St. Martin, Paris, in the empire of France, Gentleman, for the invention of "Improvements in closing or stoppering bottles, jars, and other receptacles."

1827. To BENJAMIN BAUGH, Manager of Salt's Patent Enamel Works, Bradford Street, Birmingham, in the county of Warwick, for the invention of "Certain improvements in the mode and apparatus for partially forming, and finishing the edges of certain description of vessels formed or raised from sheet iron or other metal."

1828. To JOHN HENRY JOHNSON, of No. 47, Lincoln's Inn Fields, in the county of Middlesex, and of No. 166, Buchanan Street, in the city of Glasgow, North Britain, Gentleman, for the invention of "An improved signal light, and in the apparatus employed in the production thereof."—A communication from abroad, by Messrs. Silas and Pegot Ogier, of Paris, in the empire of France.

1830. To GEORGE TOMLINSON BOUSFIELD, of Loughborough Park, Brixton, in the county of Surrey, for the invention of "Improvements in revivifying the scarlet color of woollen cloth, lace, and embroidery, in use for military and other garments and furniture."—A communication from abroad, by Messrs. Andrés Burdel and Chicard, of Paris.

1832. And to JOHN BRAZER BABCOCK, of No. 35, Milk Street, Boston, in the United States of America, for the invention of "Improvements in umbrellas and parasols."—A communication from Anthony G. Davis, residing at Waterton, Litchfield, Connecticut.

On their several petitions, recorded in the Office of the Commissioners on the 8th day of August, 1859.

1834. To NELSON KENWARD, of Sutton, in the county of Surrey, for the invention of "Improvements in constructing tubular steam boilers."

1836. To JOHN CANNON, of Billiter Street, in the city of London, Ship Broker, for the invention of "Improvements in washing machines."—A communication from abroad by Abiel Odell, of Bourmanville, in the county of Durham, Canada, Machinist.

1838. To CHARLES LOUIS JOSEPH DIERICKX, Director of the Mint, residing at the Mint, in the city of Paris, for the invention of "A new system of scales, to be used principally in the fabrication of coins."

1844. To WELBURN WILLIAMSON, of High Holborn, in the county of Middlesex, Engineer and Machinist, for the invention of "An improved machine or tool for drilling holes."

1846. And to JOHN HENRY JOHNSON, of No. 47, Lincoln's Inn Fields, in the county of Middlesex, and of No. 166, Buchanan Street, in the city of Glasgow, North Britain, Gentleman, for the invention of "Improvements in destroying noxious exhalations."—A communication from abroad, by Messrs. Silas and Pegot-Ogier, of Paris, in the empire of France.

On their several petitions, recorded in the Office of the Commissioners on the 9th day of August, 1859.

1850. To THOMAS ATO TEMPERTON, of the city of Manchester, in the county of Lancaster, Corn Merchant, for the invention of "Improvements in pipes for smoking tobacco."

1852. To GEORGE CAPPER, of Bidborough Street, New Road, in the county of Middlesex, for the invention of "Improvements in the permanent way of railways."

1854. And to JOHN JAMES SPEED the younger, of the city of Detroit, in the United States of America, Telegraph Engineer, for the invention of "Improvements in the manufacture of pipes, tubes, and hollow cylinders."

On their several petitions, recorded in the Office of the Commissioners on the 10th day of August, 1859.

1855. To RALPH HEATON the younger, of Birmingham, in the county of Warwick, Manufacturer, and GEORGE HEATON, of Birmingham aforesaid, Manufacturer, for the invention of "Improvements in coining machinery."

1857. To JOHN TALBOT PITMAN, of the American and European Patent Offices, No. 67, Gracechurch Street, London, for the invention of "A composition applicable to the lubrication of machinery and to various other uses."—A communication from abroad, by Horace Vaughn, of the city of Providence, in the state of Rhode Island, one of the United States of North America.

1858. To WILLIAM BOUCH, of Shildon, in the county of Durham, Engineer, for the invention of "Improvements in breaks, in buffers, and in couplings to be used on railways."

1859. To DAVID HULETT, of 55 and 56, High Holborn, London, Gas Engineer, and GEORGE PRUDDEN, of Shefford, Beds, Gas Engineer, for the invention of "Improvements in apparatus for the manufacture and distribution of gas, and in apparatus applicable for internal or external illumination."

1860. And to WARREN DE LA RUE, Manufacturer, and Dr. HUGO MÜLLER, both of 110, Bunhill Row, in the county of Middlesex, for the invention of "Improvements in treating Japan and other vegetable wax."

On their several petitions, recorded in the Office of the Commissioners on the 30th day of August, 1859.

1862. To WILLIAM CLARK, of 53, Chancery Lane, in the county of Middlesex, Engineer and Patent Agent, for the invention of "Certain improvements in oscillating engines."—A communication from abroad by Messrs. Mark Runkel, of New York city, and Frederick Franch, of San Francisco, in the state of California.

1863. To AUGUSTE EVAUX, of 206, Regent Street, London, for the invention of "Artificial marbles."

1864. To WILLIAM HENRY TOOTH, of No. 3, Spring Terrace, Wandsworth Road, in the county of Surrey, for the invention of "Improvements in the mode of cleaning or laying the dust of pavements, roads, or other surfaces."

1865. And to JAMES PHILP, of Camden Town, in the county of Middlesex, Gentleman, for the invention of "An improved hobby-horse or child's exerciser."

On their several petitions, recorded in the Office of the Commissioners on the 12th day of August, 1859.

1867. To DUGALD CAMPBELL, of No. 7, Quality Court, Chancery Lane, in the county of Middlesex, Consulting Chemist, for the invention of "Improvements in the preparation of oils for medicinal and other purposes."

1868. To JAMES BROWN, of No. 8, Exeter Place, Walham Green, in the county of Middlesex, Shirt Manufacturer, for the invention of "Improving false shirt fronts."

1870. To WILLIAM GREEN, of Kidderminster, WILLIAM FAWCETT, of Wolverley, and FRANCIS BEST FAWCETT, of Wolverley, all in the county of Worcester, Carpet Manufacturers, for the invention of "Improvements in the manufacture of rugs."

1871. To ROBERT CLEGG, of Islington, in the county of Middlesex, and RICHARD FELL, of Saint Ann's Place, Limehouse, in the county of Middlesex, for the invention of "Apparatus for obtaining aerated fresh water from salt water."

1872. To JOHN STUART, of Musselburgh, in the county of Mid Lothian, North Britain, and WILLIAM STUART, of the same place, Manufacturers, for the invention of "Improvements in nets for fishing, and for other purposes."

1873. To KARL BÜHRING, of 45, Saint Paul's Road, Camden Town, in the county of Middlesex, Gentleman, for the invention of "An improvement in obtaining spring power, and in its application to various purposes."

1874. To RICHARD IRELAND WATTS, of Plymouth, in the county of Devon, Merchant, JOHN OFFORD, of the same place, Gentleman, and JOHN ROBERTS THOMAS, also of the same place, Engineer, for the invention of "A method of condensing and consuming smoke, and other products of coals,

ores, and similar substances, and reducing them to useful materials."

1875. To HENRY THOMAS LAMBERT, of America Square, in the city of London, Ship Chandler, for the invention of "Improved apparatus to be adapted to ships' tackle or boats, for the purpose of facilitating the disengaging of ships' boats when lowered into the water."—A communication from abroad by Captain George Hall Carleton, of Camden, in the state of Maine, United States of America.

1876. To ELIAS SLOMAN, of Upper East Smithfield, in the county of Middlesex, for the invention of "An improved feed water and heating apparatus."—A communication from Gottfreyd May, resident at Magdeburch, in the kingdom of Prussia.

1877. To JAMES ROTHWELL ROSTRON, of Edenfield, in the county of Lancaster, for the invention of "Improvements in locomotive furnaces."

1878. And to COLIN MATHER, of Salford, in the county of Lancaster, Mechanical Engineer, for the invention of "Improvements in machinery for stretching, drying, and finishing fabrics."

On their several petitions, recorded in the Office of the Commissioners on the 13*th day of August*, 1859.

1879. To SAMUEL HARRISON, of No. 52, Stanhope Street, Clare Market, in the parish of Saint Clement Danes, county of Middlesex, for the invention of "Broiling of chops or any other kind of meat.',

1880. To JOHN JEYES, of Northampton, in the county of Northampton, Seed Merchant, for the invention of "An improvement in the manufacture of boots and shoes."

1881. To CHARLES KISKY, of King Street, Camden Town, in the county of Middlesex, Cabinet Maker, and WILLIAM JONES, of Howland Street, Fitzroy Square, in the same county, Builder, for the invention of "Improvements in the construction of sideboards."

1882. To CHARLES GLASSBOROW, of Girard Avenue, Philadelphia, in the United States of America, Piano Manufacturer, for the invention of "Improvements in pianos."

1833. To JOHN CHANTER, of Bow Road, Proprietor of Patents, and DAVID ANNAN, Engineer, of Bow, in the county of Middlesex, for the invention of "Improvements in apparatus for supplying air to furnaces."

1884. To EDWARD STONE, of No. 46, Lime Street, in the city of London, Merchant, for the invention of "Improvements in machinery for cutting veneers."—A communication from abroad, by John Ahsbohs, residing at New York, United States of America.

1885. And to JOHN POUPARD, of Stratford, in the county of Essex, for the invention of "A certain plastic combination to be used for black-leading stoves and other ironwork."

On their several petitions, recorded in the Office of the Commissioners on the 15*th day of August*, 1859.

1887. To HENRY BATCHELOR, of Newport, Monmouthshire, Engineer, for the invention of "Improvements in steam and other motive power engines."

1889. To WILLIAM GOSSAGE, of Widnes, in the county of Lancaster, Chemist, for the invention of "Improvements in the treatment of certain offensive liquids and of noxious gases liberated from such liquids."

1890. To JOHN COOPE HADDAN, of Bessborough Gardens, Pimlico, in the county of Middlesex, Civil Engineer, for the invention of "Improvements in wads for projectiles, and in projectiles to be used therewith."

1891. And to JOHN COOPE HADDAN, of Bessborough Gardens, Pimlico, in the county of Middlesex, Civil Engineer, for the invention of "Improvements in machinery or apparatus for rifling cannon."

On their several petitions, recorded in the Office of the Commissioners on the 16*th day of August*, 1859.

1893. To HENRY MEDLOCK, of Nos. 15 and 20, Great Marlborough Street, in the city and liberty of Westminster, Analytical Chemist, for the invention of "Improvements Portland and Roman cement, lime, and other similar kilns or furnaces."

1895. To RICHARD ARCHIBALD BROOMAN, of No. 166, Fleet Street, in the city of London, E.C., Patent Agent, for the invention of "Improvements in locks and keys."—A communication from abroad by Jules Emile Petit, of Paris.

1897. And to AUGUSTUS YOCKNEY, of Pockeredge, near Chippenham, in the county of Wilts, Gentleman, for the invention of "Improvements in refining and compounding oils or fatty matters with other substances for lubricating and other purposes."

On their several petitions, recorded in the Office of the Commissioners on the 17*th day of August*, 1859.

1899. To JAMES DRABBLE, of Orchard Works, Orchard Lane, in the parish of Sheffield, county of York, Merchant, and Manufacturer of Table Knives, for the invention of "An improvement in sewing machines."

1901. To HYAM JACOB HYAMS, of Holywell Street, in the city of Westminster, Gas Meter Maker, for the invention of "Improvements in the construction of wet gas meters."

1903. And to WILLIAM WILSON, of Glasgow, in the county of Lanark, North Britain, Brick Maker, for the invention of "Improvements in the manufacture or production of bricks, tiles, and other articles of earthenware, and in the machinery or apparatus employed therein."

On their several petitions, recorded in the Office of the Commissioners on the 18*th day of August*, 1859.

Patent on which the Stamp Duty of £50 has been Paid.

(*To* 24*th August*, 1859.)

2058. GEORGE ANDERSON, of Queen's Road, Dalston, in the county of Middlesex, Gas Engineer, for an invention of "Improvements in the combustion of tar and other similar matters in heating gas retorts, and in the consumption of smoke arising therefrom and from other fuels used therewith."—Dated 4th September, 1856.

FOREIGN PATENTS.

UNITED STATES OF AMERICA.

(Communicated by the Commissioner of Patents.)

LIST of PATENTS, with Claims annexed, issued from the United States Patent Office, for the week ending 9th August, 1859, and each bearing that date.

No. 24,978. H. O. AMES, of New Orleans, La., for an "Improvement in apparatus for heating evaporating pans."

"I claim the arrangement of the parallel evaporating pipes D, D, with their elbows, and collars, and screw nozzles *a*, *a*, passing through the bottom of the pan, and the parallel external supply and escape pipes B and C, with the nozzles *d*, *d*, and union couplings *l*, *l*, for making the connections with the nozzles *a*, *a*, substantially as herein described."

No. 24,979. JOHN ANDREWS, of Clinton, Mass., for an "Improvement in seeding machines."

"What I claim, is, the arrangement and combination of the vibrating bars or blocks (*g*), frame (*a*), axle (*d*), cam (*c*), and seed slide (*n*), as set forth, whereby the cam which operates the harrow, also moves the seed slide, and the harrow bars (*g*), have a horizontal vibration, and also a vertical play with the frame upon the axle (*d*)."

No. 24,980. JOHN ANDREWS, of Clinton, Mass., for an "Improvement in seeding machines."

"I claim, 1, the arrangement and combination of the blocks (*b*), circular plates (*g*), teeth (*f*), levers (*x*), and seed sliders (*p*), substantially as herein shown and described. 2, the arrangement and combination of the covering apron (*l*), bar (*d*), blocks (*b*), rod (*y*), and lever (*x*), as herein shown and described."

No. 24,981. FRANCIS ARMSTRONG, of New Orleans, La., for an "Improvement in brakes for railroad cars."

"I claim making the adjustment from the pull or the coupling, when actuating on distinctly detached parts, namely, the latch (*c*), and tongues (*t*), when constructed and operated as, or substantially as described. I also claim, in combination, the arms (*n*), bar (*r*), and levers (*m*), when arranged and operated substantially as described and for the purpose set forth."

No. 24,982. MOSES S. BEACH, of Brooklyn, N. Y., for an "Improvement in machinery to feed sheets of paper to printing presses."

"I claim, 1st, feeding sheets to the impression cylinders of printing presses by means of revolving arms, or scrapers *a*, operating in combination with rollers *b*, in the manner, substantially as described. 2nd, retaining the paper in connection with the impression cylinders of printing presses during the process of printing, by means of holders *f* and *g*, in the manner substantially as described. 3rd, detaching the paper from impression cylinders by means of deflectors *p* and *q*, operating substantially as described."

No. 24,983. GEO. W. BEARD, of Canton, Miss., for an "Improvement in cotton cultivators."

"What I claim, is, the peculiar shape given to the scrapers or cutters J, J, and their lateral and vertical adjustment, in combination with the adjustable plow beams C, C, when the same are all arranged, in the manner and for the purposes herein set forth."

No. 24,984. ELIJAH P. BEAUCHAMP, of Preston, Geo., for an "Improvement in cotton seed planters."

"What I claim, and desire to secure by Letters Patent, is, the arrangement of the box 1, axle 2, wheels 3, side pieces or frame 4, bolt 5, beam 6, stock 7, follower 8, furrow-opener 9, and brace 10, as described, for the purposes set forth."

No. 24,985. LAURENT BEAUDREAU, of Fon du Lac, Wis., for an "Improved shingle machine."

"I claim the relative arrangement for united operation of the intermediate circular revolving saw B, open reciprocating double carriage C, *c*, c^1, toothed clamps G, G^1, bars H, H^1, rollers *m*, m^1, springs I, I^1, inclined or curved guiding plates *n*, n^1, horizontal rocking cradles J, J^1, cams *r*, r^1 and S, S^1, shafts *t*, t^1, bars *u*, and hinged flaps or pawls *v*, v^1, v^2, v^3, all substantially in the manner and for the purpose herein described."

No. 24,986. PHILIP BETTLE, of London, England, for an "Improvement in watch cases."—Patented in England 18th November, 1857.

"I claim, first, the attachment of the inner case containing the movement of the outer case by means of pins or pivots, so that the movement case can be turned over to face the open or closed side of the outer case without being removed from the outer case. Second, attaching the pendant handle to the movement case, so that it forms one of the centres or pivots on which the watch turns in connection and combination with a pin or pivot, on the opposite side of the case. Third, the particular form and manner of constructing the pendant, and attaching the same to the inner or movement case herein-before described and shown in the accompanying drawings."

No. 24,987. WM. BILLINGHURST, of Rochester, N. Y., for a "Fishing reel."

"I claim the combination of the skelcton ring R, R, R, with the other parts of the reel, the whole being arranged in the manner and for the purpose substantially as set forth."

No. 24,988. EDMOND BLANCHARD, of Greenfield Mills, Md., for an "Improvement in composts."

"I claim, as a new article of manufacture, a fertilizing compost, composed of lime, chloride of sodium, wood ashes, charcoal, wheat, bran, chimney soot, and gypsum, combined in the proportions and manner herein described."

No. 24,989. E. BURROUGHS, of Rochester, N. Y., for an "Improvement in machines for cutting paper."

"I claim, 1st, the employment or use of the reciprocating and oscillating knife G, when arranged to operate substantially as and for the purpose set forth. 2nd, the knife G in connection with the cone of pulleys T attached to the shaft S, the hollow shafts *y*, *z*, with their respective gearing a^1, h^1, h^1, and a^{11}, $\bar{r}^1$, f^1, and the shaft R, with its gearing *v*, *w*, and the racks I, I, attached to the knife bar F by the rods H, H, the whole being arranged to operate substantially as set forth. 3rd, the arrangement of the shaft V with spring g^1, the arm *f*, cone of pulleys T, levers V, W, rack l^1, substantially as shown, for the purpose of automatically changing the movement of the knife from a descending to an upward movement. 4th, the clamp, formed of the vertical and horizontal plates *p*, *q*, when arranged as shown, so as to be adjusted by the screw *s* and pinion or worm wheel *r*, pinions *u*, *u*, and racks P, P, the latter serving in the capacity of both racks and guides, substantially as and for the purpose specified. 5th, attaching to the shaft F an index *b*, arranged to move over a graduated stationary plate *c* attached to the frame A, substantially as shown, for the purpose of enabling the operator to accurately adjust the paper beneath the knife."

No. 24,990. JOHN T. CAMPBELL, of Rockville, Ind., for an "Improved adding machine."

"I claim the arrangement of a series of wheels, provided with ten cogs or teeth, and carrying the ten numeric figures on their outward faces, in combination with the stationary plate containing like numeric figures, arranged on the circle surrounding each of the wheels in the series, substantially as described. And, in combination with the parts above claimed, arranged as described, I claim the stop bars Y, Y, and spring slides G, G, and oscillating arms or pawls F, F, with the cam *e*, *e*, the whole being constructed and arranged for joint operation, substantially as set forth."

No. 24,991. Walter Clark, of Palmyra, Ill., for an "Improvement in seed planters."

"What I claim, is, the arrangement of the reciprocating agitating rod *r* when passing through the adjustable seed-discharge opening in the side of the hopper with the frame F, wheels W, pins P, teeth *a*, *b*, *c*, hopper H, and adjustable slide S, the whole being constructed as and for the purpose set forth."

No. 24,992. W. Cogswell and C. A. Matthewson, of Ottawa, Ill., for an "Improvement in corn harvesters."

"We claim the circular cutter F and the reciprocating sickle *r*, with its stationary toothed plate *s*, in connection with movable bed or fingers *i*, the whole being placed on a mounted frame and arranged for joint operation, substantially as and for the purpose set forth."

No. 24,993. James P. Coonley, of Farmington, Mich., for an "Improvement in corn planters."

"What I claim as my invention, and desire to secure by Letters Patent, is, the arrangement of seeding rollers H, gear wheels *d*, *d*, slide plate I, lever *c*, adjustable teeth E, coverers F, and tracking gauge M, constructed and operated substantially as and for the purposes herein set forth."

No. 24,994. B. T. Currier, of Bath, Me., for an "Improvement in corn harvesters."

"What I claim, is, the arrangement and combination of the scythe-shaped cutters B^1, B^1, rods D, D^1, cranks E, E^1, adjustable frame J, and standards A, as and for the purposes herein shown and described."

No. 24,995. Edward Davidson, of Batesville, Ark., for an "Improvement in hoop fastenings for cotton bales, &c."

"I claim forming the socket of two parts, to admit of the same being opened to receive the bent or doubled and lapped ends of the bale hoop, and closed, to secure the ends of the hoop together, substantially as and for the purpose specified."

No. 24,996. Alva Goodrich De Wolfe, of Seymour, Conn., for an "Improvement in vulcanized gums."

"What I claim, is, the use of pulverized, vulcanized rubber gutta percha, or other vulcanized gum, in the manner and for the purpose herein."

No. 24,997. Chas. S. Dickinson, of Cleveland, O., for an "Improvement in centrifugal gun."

"I claim, 1st, the employment of lever C, provided with a collar, which surrounds shaft B, pivoted or hinged at *x*, and provided with a pin or rod I, when the same is used, substantially as and for the purpose specified. 2nd, operating lever C, in one direction, by means of rod D, and its connections through the centre of the shaft B, and in the other direction, by means of spring F, for the purpose of discharging the balls from the barrel, at the proper time substantially as set forth."

No. 24,998. Rudolph Dirks, of Philadelphia, Pa., for an "Improvement in seats for sleeping cars."

"I claim, first, the cushioned platform E, and the frame F, with its detachable cushion *f*, and movable legs *h*, in combination with the permanent partitions D, D, the said platform and frame being hinged together, and otherwise arranged, as set forth. Second, the boards G and K, adapted to and sliding in or against the partitions D, D, and arranged as specified, so as to form the foot and head boards for the couches. Third, the frame H, so hinged to the side of the car, and the frame I, so hinged to the frame H, that both frames may assume the positions illustrated in Figs. 1 and 2, in combination with the partitions D, D, and their sliding frames G. Fourth, forming the upper couch to the board L, hinged to the side of the car, and one or more boards M, hinged to the boards L, when arranged as set forth, in combination with the permanent partitions D, D."

No. 24,999. Zachariah Feagan, of Palmyra, Mo., for an "Improvement in hemp brakes."

"What I claim, is, the arrangement and combination of the stationary bars (L, L), finger guards (*o*, *o*), vibrating spring levers (E, E), and cams (D, D), the whole being constructed and operated, substantially in the manner and for the purpose set forth."

No. 25,000. Andrew Dougherty, of Brooklyn, N. Y., for an "Improvement in printing presses."

"What I claim, is, the combination of the inking apparatus at the side of the main cylinder of a press, with a carriage that can be moved from and towards the main cylinder, and with a stop, that controls the position of the carriage, the combination as a whole operating substantially as above set forth."

No. 25,001. Albert Eames, of Bridgeport, Conn., for an "Improved die for swaging bolt heads."

"What I claim as my invention, and desire to secure by Letters Patent, is, making dies for swaging bolt heads and other articles, in two or more parts, the part forming the bottom being fitted to and in the part forming the periphery, substantially as described, and the whole fitted to and secured within the drop, or equivalent therefor, as set forth. And I also claim, in combination with the die, the bottom of which is made separate from and inserted in the part forming the periphery, grooving the periphery of the part forming the bottom for the escape of air, substantially as described."

No. 25,002. J. P. Emswiler, of Knight's Town, Ind., for an "Improvement in sewing machines."

"I claim the combination of the slide (M), or its equivalent, arranged substantially as described, with the feeding mechanism, for the purpose of adjusting the bed to the feeding mechanism, for materials of various thicknesses, without changing the position of the feeding mechanism. And I also claim, in combination with the bobbin, arranged as described, to vibrate on the shuttle race, the longitudinal arched pressure spring, arranged substantially as described, for the purpose set forth."

No. 25,003. Moses G. Farmer, of Salem, Mass., for an "Improvement in windlasses."

"I claim the combination of the roller A, the ratchet wheel B, the retaining ratchet F, and the actuating ratchet D, with the lever C, and toggle joint E, so arranged that the thrusting power of the toggle joint E shall be wholly exhausted when the lever C is fully depressed, and the joint E brought into a straight line, which intersects the axis I, and the point of the actuating ratchet, which is in contact with a tooth of the wheel B. I claim the means herein described of permitting the backward motion of the roller A, viz., by causing the motion of the lever C to release, alternately, the actuating and retaining ratchets, through the agency of such means as the springs N, K, the projecting arms L, M, and the proper position of the collar J, substantially as herein described."

No. 25,004. Chester N. Farr, of Philadelphia, Pa., for an "Improvement in sewing machines."

"What I claim, is, the arrangement of the fulcrum slide *r*, stops *q* and *s*, and looping bar *p*, for regulating and adjusting the motions of the looper, as set forth. And in combination with said looping bar, adjusted as described, I claim the rocking lever O, fitting and acting as specified."

No. 25,005. Benaiah Fitts, of Worcester, Mass., for an "Improvement in governor valves."

"I claim the manner of mounting the valve, substantially as herein described, that is to say, resting or supporting the valve, as shown at M, and retaining it into its seat, as shown at N, for the purposes set forth."

No. 25,006. Perley F. Freeland, of Newark, Ill., assignor to V. R. David, of Morris, Ill., for an "Improvement in cultivators."

"What I claim, is, the arrangement of the tongue A, curved or segment bar B, beams E, E, with screw rod *c*, and pendants d^1, and shares F attached, substantially as and for the purpose set forth."

No. 25,007. Edwin Gomez, of New York, N. Y., for an "Apparatus for folding or wrapping papers."

"I claim the folders (*f*, *f*) formed with the lips (4, 4), and volutes (3, 3), in combination with the intermediate twisters (*i*, *i*), in the manner and for the purposes specified."

No. 25,008. Geo. P. Gordon and F. O. Degener, of New York, N. Y., for an "Improvement in printing presses."

"Claim.—1st, we claim combining with the tympan frame, the sheet holding and relieving nippers or grippers, for the purpose of holding the sheet, and for relieving the sheet, from the type, 2nd, we claim the combination of a cylinder

or segment of a cylinder, with its wheel bearers, the impression cylinder, roller pendants, and the racks or gearing. 3rd, we claim the frictionless roller, or its equivalent, in combination with the tympan frame, for the purpose of closing the tympan, and properly laying the sheet upon the form, in advance of the passage of the impression cylinder, or its equivalent. 4th, we claim operating the sheet holding and relieving grippers by or through the motion of the tympan. 5th, we claim attaching a tympan frame to an adjustable bed, in such a manner that they, at all times, shall retain their relative position towards each other, in the manner described. 6th, we claim hanging, hinging, or attaching the inking apparatus to the frame of the press, or to the press, in such a manner that it may be turned, swung, or set aside, so as to allow the workman to get at the form to make any necessary alterations, or to make the form ready, or for the purpose of using the bed as an imposing stone."

No. 25,009. Ralph Greenwood, of Altoona, Pa., for an "Improvement in fire-boxes of locomotive engines."

"I claim the midfeather C, when used in connection with a gas chamber D, and fire-box A, provided with openings e, f, g, h, the parts being arranged relatively with each other, to operate substantially as and for the purpose set forth. I further claim the two cylinders E, F, when applied to the orifices of the gas chamber and fire-box, and connected by a lever G, to operate simultaneously, as and for the purpose set forth."

No. 25,010. Leonard B. Griswold, of Pennfield, N. Y., for an "Improvement in potato diggers."

"I claim the employment of a rotating head or disc, having teeth or spurs arranged around an upright shaft, in a direction oblique to the axis thereof, in combination with the truck B, and driving wheels G, F, or their equivalents, for giving the required motion, substantially as and for the purpose set forth."

No. 25,011. W. D. Harrah and B. S. Baldwin, of Davenport, Iowa, for an "Improvement in seed planters."

"We claim, 1st, the combination and arrangement of the peculiarly constructed hopper F, f, f', f^2, f^3, regulating plate G, sliding frame H, slides h^2, pitmans b, edged leading wheels B, hinged seed tubes I, grooved covering wheels C, C, foot lever J, caster wheel D, and hand lever K, all substantially as and for the purpose herein described. 2nd, in combination with the hopper F, the arrangement of the foot lever J, and hinged bar i, when the latter is so hinged as to throw the points of the seed tube forward in their adjustment, or when the foot lever is depressed, substantially as and for the purpose described."

No. 25,012. Robert S. Harris, of Galena, Ill., for an "Improved water gauge for steam boilers."

"What I claim, is, the within specified manner of constructing and attaching the float stem to the boiler, whereby it is made to answer for carrying the float, and as an index for indicating the height of the water in the boiler, and, if desirable, as a trip for opening a valve for an alarm whistle, all in the manner and for the purpose herein described."

No. 25,013. James Harrison, jr., of New York, N. Y., for an "Improvement in sewing machines."

"I claim, 1, the switching lever (n) constructed and operated as herein set forth, for directing the thread to the beard or barb of the needle, and preventing the escape of the thread therefrom. 2nd, I claim controlling the feed and the switch by the raising or lowering of the needle, as set forth. 3rd, I claim rotating the needle, and carrying with it the thread, thus forming a twisted threaded loop, as described."

No. 25,014. Geo. R. Hay, of Berea, O., for an "Improved machine for cutting out wooden ware."

"What I claim, is, the rock shaft K, in combination with the hoop saw H, constructed and arranged as described, and operated by means of the pinion L, in the manner and for the purpose substantially as set forth."

No. 25,015. James Haynes, of Hollis, Me., for an "Improved wood saw frame."

"The parts which I claim as my invention are, the inclined plane, ratchet, and the nipper os strainer, as applied to the saw and frame, as described above and represented in the drawing accompanying these specifications."

No. 25,016. Stanislas Hoga, Wm. P. Piggott, and Septimus Beardmore, of Middlesex county, England, for an "Improved mode of generating and applying electric currents in telegraphing."

"We claim the application to telegraphic instruments of currents of electricity produced from metals or substances, arranged in the earth or in natural bodies of water, in the manner and for the properties and relations above described."

No. 25,017. Robt. Hooper, of Baltimore, Md., for an "Improvement in steam boilers."

"I claim, 1st, contracting that part of the boiler immediately above the fire flues, in combination with the widening and extending of that part which is beyond or in rear and above the end of the fire box, substantially as and for the purposes set forth. 2nd, forming a water circulating passage below, in rear, and above the fire box, and nearly or wholly isolating said passage from the fire box by means of a large space existing between the fire box and the partition walls of the said water circulating passage, substantially as and for the purposes set forth."

No. 25,018. Anthony Iske, of Lancaster, and Jacob B. Erb, of Conestoga Township, Pa., for an "Improved approach opening gate."

"We claim the arrangement of the platforms G, uprights H, to the lever J, with the connecting rod K, attached to the arm O, on the top of the slat Q, the groove b on the inside of the post B, for operating a series of cross slats, connected by pivots with the slats Q, R, as shown, when combined in manner set forth, or substantially the same."

No. 25,019. John W. Kingman, of Dover, N. H., for an "Improvement in machines for milking cows."

"I claim the teat cups or tubes partially covered at their upper ends with an elastic flange, substantially as described, which will yield for the insertion of the teat and gripe it so as to hold the cup upon the teat during the process of milking, and from a packing between edge of the cup and the teat which will be pressed against the teat by the external air when the internal air is exhausted, and in combination with the devices above claimed, I claim a vessel provided with an air pump and connected with said cup or cups by flexible tubes so arranged as to exhaust the air, and draw the milk from the cow, or other animal, substantially in the manner described."

No. 25,020. Ebenezer A. Lester, of Boston, Mass., for an "Improvement in railroad car wheels."

"I claim attaching the wheel D to its axle by means of the auxilliary hub E, with its recess f, and groove e, and the segmental ring H, or its equivalent, connected with the wheel, substantially as set forth."

No. 25,021. Theodore Lipshuts and Daniel C. Jones, of Balston Spa, N.Y., for a "Self-acting battery for scaring crows, &c."

"We claim the rising and falling box K, arranged with the slide g, and apertures p, and operating in combination with the dog J, and pulley E, substantially in the manner and for the purpose herein specified."

No. 25,022. Saml. W. Lowe, of Philadelphia, Pa., for an "Improvement in machines for milking cows."

"I claim the cup A, with its perforated diaphragm B, when constructed as described, to receive all the teats of the cow's bag, by having an opening in the diaphragm for each teat, and combined with an exhausting apparatus constructed substantially as herein described, and for the purpose set forth."

No. 25,023. Moses Marshall, of Lowell, Mass., for an "Improved device for making electro-magnetic currents constant or intermittent."

"I claim the spring g, so constructed and arranged, as to be insulated from or connected to the two ends of the helical wires, by springs l and k, or otherwise, essentially in the manner and for the purposes fully set forth."

No. 25,024. W. McElwee, of Shelbyville, Ind., for an "Improved kitchen safe."

"I claim the combination and arrangement of hollow posts B, with water cups D, arranged in the manner and for the purpose specified."

No. 25,025. E. McKenney, of Montgomery, O., for an "Improvement in seeding machines."

"I claim the arrangement and combination of the distributing disks L, levers N, check valves *q*, and buttons *u*, to operate together with the hammer *o*, and with the bell M, substantially as and for the purposes set forth."

No. 25,026. J. B. McMillan, of Tipton, Ind., for an "Improvement in seed planters."

"I claim the planting and covering apparatus, when constructed and arranged in the manner and for the purposes herein set forth."

No. 25,027. Adam Miller, of Mt. Pleasant, Iowa, for an "Improvement in underground draining machine."

"I claim the combination and arrangement of the mole with the drain protectors, as described, for the purpose of expeditiously and economically giving protection to the upper part of the ditch, and of disengaging the protectors from the mole plough, with facility after they are laid."

No. 25,028. Alexr. Miller, of Newbern, N. C., for an "Improvement in drivers for mill stones."

"I claim the employment or use of the friction rollers B, B, applied to the driver A, in connection with the plates C, C, or their equivalents, fitted in the recesses adjoining the eye of the stone or runner, for the purpose of forming proper bearing surfaces for the rollers, the whole being arranged, substantially as and for the purpose set forth."

No. 25,029. Saml. C. Moore, of Providence, R.I., for an "Improvement in hoops for skeleton skirts."

"I claim the corrugated sheet metal hoop for ladies skirts, described as a new article of manufacture."

No. 25,030. Oliver P. Moran, of Haynesville, Mo., for an "Improved device for holding together the panels of portable fences."

"I claim the arrangement of the notched projections, or projecting pieces of the upper and lower rails, in combination with the right angled notches *i*, *i*, in the end battens, substantially in the manner and for the purpose herein specified."

No. 25,031. Saml. Mowry, of Womelsdorf, Pa., for an "Improvement in cultivators."

"I claim the arrangement of the axles B^3, wheels B, stretch bars L, levers H, I, and L^3, frames M, wheel C, ratchet bar J, and cultivator bar P, the whole being constructed as described and set forth."

No. 25,032. A. A. Moss, of Philadelphia, Pa., for an "Improvement in hydro-carbon vapor apparatus."

"What I claim as new, and of my invention therein, and desire to secure by Letters Patent, is, the steam generator (A), and dryer (B), in combination with a distinct hydro-carbon vaporizer (C), the same being also connected with the retort (D), and the whole arranged together, so as to generate the steam and hydro-carbon vapor separately, and for their subsequent mingling and combination, substantially in the manner and for the purpose set forth and described."

No. 25,033. Matthew Mitchell, of Altona, Ill., for an "Improvement in corn planters."

"What I claim, is, the arrangement of the frame B, seats E and G, hoppers H, shoes S, and cutters N, with the device for operating them, in combination with the frame K, hung on the axle D, and with the slides operated as described, the whole being constructed and arranged substantially in the manner and for the purposes set forth."

No. 25,034. Don. J. Mozart, of Yellow Springs, O., for an "Improved arrangement of dead beat escapements."

"What I claim as my invention, and desire to secure by Letters Patent, is, the improved arrangement of the double 'scapers' G, G, with the star scape wheel E, or its equivalent, substantially as and for the purpose herein specified."

No. 25,035. Edward Norton, of Boston, Mass., for an "Improvement in skates."

"What I claim as my invention, and desire to secure by Letters Patent, is, the metal straps D and E, and the slotted plate J, and screw G, for tightening the skate to the foot, substantially as above shown."

No. 25,036. Marcus P. Norton, of Troy, N. Y., for an "Improvement in post marking stamps."

"What I claim, is, the blotter (J), connected or attached to the main part of any 'post office post marking stamp,' for the purpose of cutting and inking, blotting and effacing, so as to successfully cancel the frank, or postage stamp, of any letter, or any package, at the same time and operation of marking upon such letter or package the name of any post office, the year, the month, and the day of the month, substantially as and for the purpose herein set forth."

No. 25,037. Leonard Packard, of Galesburg, Ill., for an "Improvement in cultivators."

"I claim the arrangement of the beams P, the irons Z, Z^1, and the projection X, on the ends of the beam, the adjustable arms S, braces W, blades T, lifting rods 1, adjusting bar 3, lever 5, fulcrum 6, and hinged pole L, as described for the purposes set forth."

No. 25,038. J. J. Parker, of Marietta, O., for an "Improved egg-beater or churn."

"I claim the tube A, in combination with the band C, and grated bottom M, all constructed, arranged, and operating, substantially in the manner described."

No. 25,039. Horace Parkhurst, of De Kalb., Ill., for an "Improved clothes frame."

"I claim, the combination and arrangement of the standards A, the rails B, the head blocks C, the clasps E, the cords F, substantially as and for the purpose specified."

No. 25,040. Dubois D. Parmelee, of New York, N.Y., assignor to John A. Greene, of Beverly, Mass., for an "Improvement in mode of uniting solid substances."

"Having thus described my invention, what I claim as new, and desire to secure by Letters Patent, is, the method and process herein described, of uniting various substances or bodies of the same or different character and properties by the interposition between the surfaces of said substances or bodies to be united of one or more sheets or layers of india rubber and gutta percha separately, or when combined with the substances, such sheets or layers having previously been treated in the manner described, to produce the change specified herein, whereby on completion of said change a waterproof cement is obtained, which while it possesses the requisite rigidity and coherence to keep the bodies firmly and strongly united possesses a sufficient degree of elasticity to compensate for the expansion or contraction of the fibres of the bodies for the purposes substantially as set forth."

No. 25,041. Lawson G. Peel, of Webster county, Geo., for an "Improvement in corn planters."

"What I claim as my invention, and desire to secure by Letters Patent, is, the arrangement of the beam F, stock E, frame D, bolt *a*, hopper A, wheel B, and cylinder C, as described for the purposes set forth."

No. 25,042. Colwell P. Pool, of New Market, Ala., for an "Improvement in filing cotton gin saws."

"What I claim, is, the arrangement of the file case B, with the file holder *b*, and sleeves b^1, to operate in combination with the bar C, and with the slide E and ridge e^1, substantially in the manner and for the purpose specified."

No. 25,043. Wm. F. Pratt, of Bristol, Pa., for an "Improvement in sewing machines."

"What I claim, is, the construction of the thread case, with an angular projection *j*, extending across its center, and the construction of the slide ring or its equivalent, with a similar angular projection *l*, fitting to the said projection *j*, as described, and operating in combination therewith, in the manner substantially as herein specified, not only to prevent the turning of the thread case, but to check and control the loops in their passage over said case, thereby avoiding the use of separate thread controlling apparatus."

No. 25,044. James M. Quimby, Albert H. Brown, Geo. H. Renton, and James Criswell, of Newark, N. J., for an "Improved furnace for making iron direct from the ore."

"We claim, the arch (K), the hopper damper (E), the rods or bars (*o*, *o*, *o*, *o*,) arranged and operated substantially as described in the drawings. We also claim the dampers at the bottom of the tubes for discharging one or more tubes at the same time into one box or hopper as shown at fig. (2)."

No. 25,045. John B. Read, of Cold Spring, N.Y., for an "Improvement in apparatus for tanning."

"What I claim as my invention, and desire to secure by Letters Patent, is, an improved apparatus for tanning and other purposes, said apparatus consisting of one or a number of smooth porous or perforated surfaces of wood or other fixed material placed singly or in succession in open or closed vats or vessels, or arranged in pairs, so as to form closed hollow cases, upon which, skins or other substances to be operated upon, are to be smoothly stretched, and then the tannin or other fluids forced through them by hydrostatic or other pressure into the interior whence means of escape are provided as described within. I claim, also the use of tarpaulin, sheet metal, or other waterproof substances, in form of sheets to cover over the perforated parts of the cases not overlaid by the skins, &c., that the fluids used may be afforded no passage, except by percolating through the skins, &c."

No. 25,046. Chas. A. Robbe, of Augusta, Geo., for an "Improvement in gas retorts."

"What I claim, is, a gas generating chamber of a retort made in two parts when the said parts are constructed so as to lock together, and form a tight joint by the simple act of sliding one portion into gear with the other, substantially as herein set forth."

No. 25,047. Theodore B. Rogers, of Wethersfield, Conn., for an "Improvement in seed planters."

"What I claim, and desire to secure by Letters Patent, is, the arrangement of slides I, I^1, I^{11}, lever L, former G, floats H, adjustable pins E, and markers R, as described, for the purpose set forth."

No. 25,048. James Rue, of Englishtown, N. J., for an "Improvement in cultivators."

"I claim the arrangement of the loose draft pole G, bracket *f*, cultivator frame B, H, hinged rods *a*, b^1, devices *i*, *j*, *h*, bracket *d*, and pin *c*, all arranged and operating substantially in the manner and for the purposes herein described."

No. 25,049. Ezra D. Sargent, of Indianopolis, Ind., for an "Improvement in seats and couches for railroad cars."

"What I claim is, 1st, the side lounge G, or nurse couch, constructed and arranged as and for the purpose set forth; and, 2nd, its combination with the backs *a*, L, M, seats F, G, H, J, partitions P, brackets Z, and stops V, all arranged, constructed, and operated substantially as set forth in the foregoing specification."

No, 25,050. John Shaeffer, of Lancaster, Pa., for an "Improvement in grinding cylinders for apple mills."

"What I claim as my invention, and desire to secure by Letters Patent, are, the tangential, curved, longitudinal toothed cylinders A, B, as set forth and described."

No. 25,051. John P. Sherwood, of Fort Edward, N. Y., for an "Improvement in nail-plate feeders."

"What I claim as my invention, and desire to secure by Letters Patent, is, the employment of the stationary inclined plane N, and the tumbler O, having an inclined face *k*, in combination with the arms *m*, m^1, of the hollow shaft P of the plateholder, and with the feed screw and nut, and the driving cam D, or their equivalent, the whole operating together substantially as herein described to produce the several movements specified."

No. 25,052. Evan Skelly, of Plaquemine, La., for an "Improvement in apparatus for heating evaporating pans."

"I claim the employment, in an evaporating pan, of a conical steam heater, with a central opening and a passage around its exterior and under its bottom, substantially as herein described."

No. 25,053. N. B. Slayton, of Madison, Ind., for an "Improvement in securing artificial teeth."

"I claim, 1st, securing artificial teeth upon plates of gold or silver by means of an amalgam of gold or silver, or both combined with mercury, substantially as herein described for the purposes set forth. 2nd, I claim forming, by means of said amalgam, an outer flange or rim (*a*), covering and supporting the base of the teeth, substantially as and for the purposes set forth."

No. 25,054. Solomon P. Smith, of Crescent, N. Y., for an "Improvement in straw-cutters."

"What I claim as my improvement, and desire to secure by Letters Patent, is, the arrangement of a crank shaft M, pitman N, knee-jointed lever F, and knife O, with a straw box B and cutter block D, for conjoint use, as herein specified and shown by the annexed drawings."

No. 25,055. Abel Spencer, jr., of Southport, N. Y., for an "Improved mortising machine."

"I claim the frame (Fig. 2) made with cross heads, connected together by means of the jointed rods (J, J), and having those rods jointed at or nearly in line with the cutting edge of the chisel, and the mode of applying or using it, or any other manner substantially the same."

No. 25,056. La Fayette Stevens, of Elmira, N. Y., for an "Improved machine for tenoning blind slats."

"What I claim as my invention, and desire to secure by Letters Patent, is, constructing the cutter head with grooved checks *f*, clamping nuts *k*, and bearing studs *j*, whereby the plane cutter knives *g* are held in an oblique position with the plane of rotation, with the cutting edge of the operating one terminating in conjunction with that of the hollow hub *h*, and shoulder *e*, arranged and operating substantially as and for the purposes set forth. I also claim the combination and arrangement of the rest K with stationary and movable upper and lower jaws *o*, *p*, and gauge *q*, substantially in the manner and for the purpose described. I further claim the arrangement of devices for gauging the length of the slat, consisting of the automatic stop bolt *t*, as operated by inclined plane *u*, and lever *v*, to cause the carriage to stop alternately at the fixed stop gauge S and *w*, substantially as herein described."

No. 25,057. Stephen Stewart, of Philadelphia, Pa., for a "Burglars' alarm."

"I claim, and desire to secure by Letters Patent, the combination of the several parts A, B, C, D, E, F, G, H, I, J, K, L, M, N, and O, as described and arranged to operate substantially as and for the purposes set forth."

No. 25,058. Wm. A. Suddith and John F. Suddith, of Charlestown, Va., for an "Improved washing machine."

"We claim the hinged part of cylinder, as set forth in drawing at Figure 7."

No. 25,059. Geo. S. Tapley, of Bristol, Conn., for an "Improvement in sewing machines."

"I claim the movable cup *g*, and its appendages, for griping and automatically releasing the shuttle at intervals, substantially as specified. I also claim the construction and arrangement of the feed apparatus, as and for the purpose herein set forth."

No. 25,060. Horace Trumbull, of Jersey City, N. J., for an "Improvement in machines for washing and separating ores, after being pulverized."

"What I claim, is, the application to a rotary buddle or table, such as herein-above described, of vibrating brushes, when the same are arranged and operated essentially as herein-above specified."

No. 25,061. Otis Tufts, of Boston, Mass., for an "Improvement in elevators or hoisting apparatus for hotels, &c."

"1st, I claim, for the purpose of elevating, the combination of the screw and the passenger car, or platform. 2nd, I claim the construction of a screw for elevating, having stays or bearings at intervals, attached to the wall of a building or any fixed adjacent structure. 3d, I claim the construction of a nut, with a slot or opening in the back or side, to enable it to pass by the bearings or stays before referred to, and as herein before described. 4th, I claim constructing a nut or carriage, with wheels or rollers, running upon the thread of

the screw, substantially as described. 5th, I claim controlling the descending motion of elevators, or hoisting apparatus, by means of fluid retarders, constructed substantially as described. 6th, I claim regulating the action of fluid retarders by means of a fly-ball governor, or its equivalent, substantially as described. 7th, I claim the construction, arrangement, and operation of passenger cars, of an elevator or hoisting apparatus, substantially as described; that is, providing the platform with side walls and doors, or gates, said doors or gates being combined with suitable mechanism, arranged in relation to stationary cams or projections on the gallery floors, or any contiguous parts of the building, so as to open and close automatically, in the manner and for the purposes substantially as set forth. 8th, I claim opening and closing the doors of the galleries, or landings, automatically by means of cams or projections on the car, through a system of compound or multiplying levers, constructed and arranged, substantially as herein described, and for the objects herein set forth. 9th, I claim fastening and unfastening, automatically, the doors or gates of the car, by spring latches, or their equivalents, operated by cams or projections upon the gallery floors, or adjacent walls of the building, substantially as described. 10th, I claim fastening and unfastening, automatically, the doors or gates of the galleries or landings by spring latches, or their equivalent, operated by cams or projections upon the car, substantially as described. 11th, I claim the arrester a^1, in combination with the fluid retarder, for the objects and purposes set forth. 12th, I claim passing the shipping rods, and the cord or rod that operates the friction brake, through the car or platform, for the objects and purposes set forth."

No. 25,062. Wm. B. Twiford, of Chincoteaugue, Va., for an "Improvement in dumping wagen."

"I claim the three-sided four wheel open frame C, stationary crank axle B, and long wagon body D, when constructed and arranged for operating together, in the manner and for the purpose herein described."

No. 25,063. Felix Tylee, of Cleveland, O., for an "Improved spring bed bottom."

"I claim, 1st, the central support (C) when the same shall be constructed substantially in the manner and for the purpose herein set forth and described. I claim the combination and arrangement of upper slat (D), pin (*e*), supports (*f*, *f*), with central support (*c*), spring (*d*, *d*), and blocks (*a*, *a*), when all shall be constructed and arranged in relation to each other, as herein fully set forth and described."

No. 25,064. Lorenzo Tyler, of Havana, N. Y., for an "Improvement in machines for sowing fertilizers."

"What I claim as my invention, and desire to secure by Letters Patent, is, the arrangement of the frame A, hopper B, partition N, adjustable slide M, valve L, cylinder H, concave I, adjustable slide J, and flexible clasps K, the whole being constructed and operated as and for the purpose set forth."

No. 25,065. Geo. H. Van Vleck and Horace Tupper, of Buffalo, N. Y., for an "Improved hose coupling."

"We claim the arrangement on the thimble A^1, of the head C, with two or more screw threads D, having its upper end turned down, as described, and being provided with a projecting rim E, to operate in combination with the thimble A, and with the nut B, substantially as and for the purpose set forth."

No. 25,066. Amsey Warren, of Westport, Conn., for an "Improvement in cultivators."

"I claim the parting or deflecting bar D, hoes or shares E, E, F, G, and rake C, when applied to a suitable frame A, provided with wheels B, the whole being arranged and combined to operate as and for the purpose set forth."

No. 25,067. James F. Waterhouse, of Germantown, Pa., for an "Improvement in knitting machines."

"I claim, firstly, the application of a drum 5, or its equivalent, with detachable pegs to operate a series of independent thread guides, having independent springs when constructed and operating substantially as herein set forth and for the purposes specified. Secondly, the striker V, or its equivalent, constructed and arranged in respect to the thread guides, and operating substantially as specified, so as to control such of the thread guides as are not under the control of any of the pegs in the drum. Thirdly, moving the pegged drum, or its equivalent, at intervals, first in one direction and then in another, by means of the revolving disk 3, and its two inclined projections, in combination with the ratchet wheel 2. Fourthly, imparting a combined lateral and vertical reciprocating motion to the needle bars, by means of the devices herein described, or their equivalents."

No. 25,068. Jeptha Avery Wilkinson, of Brooklyn, N. Y., for a "Machine for receiving and piling paper."

"I claim, first, the accelerating bands p^1, p^2, and roller *o*, arranged and acting as set forth, to project the sheets of paper successively over each other, as they subside in the air, and in combination with the foregoing parts I claim the endless apron receiving such sheets, as specified. Second, I claim the retarding bands *q* and *s*, *s*, and q^2, in combination with the delivering bands p^1, p^2, for the purposes as specified."

No. 25,069. Jeptha Avery Wilkinson, of Brooklyn, N. Y., for an "Improvement in rotary presses."

"I claim first, the curved demi grab *c*, with the sliding clamp 6 and lip 5, for the purposes and as specified. Second, I claim the curved compositor's shield c^3, for the purposes and as specified. Third, I claim the arrangement of the proof cylinder B, and rollers C, *b*, for inking the type on the proof cylinder, as described and shown. Fourth, I claim the plate a^1 and roller b^2, for giving pressure in taking a proof from the types on the cylinder B, as set forth. Fifth, I claim the horizontal gudgeon a^3, and binding screw to secure the proof cylinder, and facilitate the correcting of the types, as set forth. Sixth, I claim the movable clamping segments *d*, at the heads of the type or proof cylinders, to secure the types in place, and also allow for the removal of portions thereof, as specified. Seventh, I claim revolving the type cylinders in a trough containing alkaline or other suitable solutions for washing the types, as specified. Eighth, I claim the apron *f*, for leading the paper into the press, and on which said paper lies while receiving the first impression against the cylinder K, thereby said feeding apron becomes also the tympan sheet, as set forth. Ninth, I claim a curved arch or bridge over which the paper or fibrous material passes to give direction thereto, and prevent buckling or twisting, as described and shown. Tenth, I claim corrugating or forming ribs on said curved bridge in diverging lines so as to spread the paper widthways as the same passes over the bridge, as specified. Eleventh, I claim the auxiliary frame F^1, hinged on to the main frame F, and carrying the upper inking apparatus, by the elevating of which both type cylinders are exposed to view or can be lifted out of their place for varying the composition, or otherwise, as set forth. Twelfth, I claim the manner herein specified of throwing off both impressions by raising the auxiliary frame F^1 and lowering the impression roller K, for the purposes and substantially as described and shown. Thirteenth, I claim, in a rotary printing press and endless tympan sheet, led off a sufficient distance and so fitted that the offset from the ink of the first impression does not again reach the paper until removed or sufficiently dry, so as not to produce blurring or offset on the paper, as specified. Fourteenth, I claim the arrangement of the ink rollers l^1, l^2, l^3, l^4, in the manner and for the purposes set forth, whereby the rollers l^1, l^2, act to supply the required amount of ink to the rollers l^3, l^4, that supply and work the ink on the cylinder (I or I^1), as specified. Fifteenth, I claim the arrangement of the ink rollers (i^1) and workers (k, k^1,) in their adjustable bearings (i^2, k^2), substantially as and for the purposes set forth."

No. 25,070. Eri Wills, of Augusta, Me., for an "Improvement in stump extractors."

"I claim the combination of the frame O, O, tongue P, and shaft A, with the wheels R, R, ratchet device H, G, I, levers F, F, and chain B, constructed and arranged in relation to each other as and for the purposes set forth."

No. 25,071. A. P. Winslow, of Cleveland, O., for an "Improvement in roofs for railroad cars."

"What I claim as my improvement, and desire to secure by Letters Patent, is, the plates D, caps F, and grooved rafters B, when arranged substantially as herein set forth, for the purpose described."

No. 25,072. J. F. Wisnewski, of Cincinnati, O., for an "Improvement in preparation of glycerine."

"I claim as my invention or discovery, and desire to secure by Letters Patent, is, the employment or use and introduction of the within-named chemicals in the relative quantities, manner, and combination herein described, for the purposes set forth."

No. 25,073. Edwd. F. Woodward, of Brooklyn, N. Y., for an "Improvement in skeleton skirts."

"What I claim as my invention, and desire to secure by Letters Patent, is, the sectional extension skirt when combined with and attached to the circular skirt, the whole being arranged and constructed in the manner and for the purpose set forth."

No. 25,074. Albert H. Wright, of Camden, N. J., for a "Composition of matter for ornamental purposes."

"I claim the composition of matter described, the same consisting of the clay and sulphur, with the emery, or its substitute, combined together, substantially as and for the purposes described."

No. 25,075. John K. Wright, of Philadelphia, Pa., for a "Machine for printing in different colors."

"I claim hanging the rollers used for printing separate colors and patterns on separate frames D, E, and constructing and arranging the said frames so that they may be adjusted independently of each other on the rails B, as and for the purpose herein set forth."

No. 25,076. Nathan Ames, of Saugus, Mass., assignor to himself and Ward McLean, of New York, N. Y., for an "Improvement in revolving stairs."

"I claim, 1st, arranging steps or stairs upon an endless belt, or in any manner equivalent, and placing them over rollers, substantially as described, so as to form a revolving flight of stairs, which may be used both as a common flight and as an elevator. 2nd, the triangular arrangement of the stairs, as shown substantially in Fig. 3, whereby an endless flight is made to pass around three rollers B, D, D, for the purpose described. 3rd, the double parallel arrangement, as shown substantially in Figs. 1 and 3, whereby ascending and descending flights are placed side by side. 4th, the use of auxiliary stationary steps or stairs, to operate in connection with the revolving stairs, substantially as and for the purpose set forth. 5th, the employment or use of rods or slots, to operate in connection with the slotted stairs, substantially as described, and for the objects specified."

No. 25,077. L. S. Baldwin and Lucius Parks, of Le Roy, N. Y., assignors to L. S. Baldwin aforesaid, for an "Improved construction of lightning rods."

"I claim the employment of a quadrangular tube of sheet metal with spiral fluted sides A, in combination with the straight central supporting rod B, substantially in the manner and for the purpose herein set forth."

No. 25,078. R. Eickemeyer, of Yonkers, N. Y., assignor to himself and E. Underhill, of same place, for an "Improvement in sewing machines."

"First, I claim the combination of the angular supporting plate F, with a needle applied and arranged to work through on opening in the angle of the said plate, and obliquely to both faces of the said plate, substantially as described, for the purpose of sewing obliquely through any substance supported in the angle of said plate. Second, I claim the combination of the angular supporting plate, the obliquely arranged needle, and a looper applied and operating so as in its movements to follow the angle of the said plat e, substantially as herein described. Third, I claim the combination of the looper *v*, *w*, constructed with a two pronged hook, and having a triple movement as described, with a stationary guide 25, applied and arranged relatively to the needle and the angular supporting plate, substantially as herein described. Fourth, I claim the arrangement of the feeding dog and presser, in a swinging frame I, so applied in combination with the angular supporting plate, as to provide for the introduction and removal of the hats to and from the machine, substantially as herein described. Fifth, though I do not claim broadly, the use of a sliding plate fitted to the bed, or work-plate of a sewing machine opposite to the feeding dog, yet, I claim the slide, fitted as described, to the angular plate F, opposite the feeding dog, with its face recessed behind the general surface of the plate, as shown in figure 7, and having applied to it a spring S, by which it is operated as described, in combination with the feeding dog, for the purpose herein set forth. Sixth, I claim the plate 26, with its lips 27, 28, applied substantially as described, in combination with the plate F."

No. 25,079. Asahel Elmer, of Shabbona Grove, Ill., assignor to Nathan Elmer and R. M. Prichard, of same place, for an "Improvement in portable capstan and crab."

"I claim, so combining with the truck wheels, or ground supports, a capstan and crab, and a flexible rigging, as that the power of the team that draws the apparatus and works the capstan, may be used for setting or anchoring the said crab and capstan, as well as to raise it up, reload it on the truck, and transport it from place to place, substantially as described."

No. 25,080. Isaac Godspeed, of Norwich, Conn., assignor to himself and Geo. A. Mansfield, of Boston, Mass., for an "Improvement in bomb lance."

"1st, I claim the compound wing herein described, consisting of wing proper (*a*), the lever (*f*), and the pin and slot at (*g*), the whole being combined, arranged, and operated substantially as herein set forth. 2d, I claim the constructing of a projectile having a prismatic shank with guiding wings of copper or any thin substance fixed to the exterior surfaces of the prism, in such a manner as to expand in coincident plates, substantially in the manner and for the purposes set forth."

No. 25,081. Louis Koch, of New York, N. Y., assignor to himself and H. Forstrick, of same place, for an "Improved railroad station indicator."

"I do claim as new, and desire to secure by Letters Patent, the apron or band K, with the names of the streets or stations on the line of the route marked thereon, attached to and working on rollers I, I, or a revolving plate, or stationary plate and revolving index, when said apron, plate, or index are operated from the running gear of the car, by suitable mechanism, to give the same a continuous movement, and simultaneous with that of the car, for the purpose herein set forth."

No. 25,082. Morris Pollak, of Hoboken, N. J., assignor to Morris Talkenan, Morris Pollak, and Solomon Weiner, of same place, for a "Double clasp hook for watch chains, &c."

"I claim the S shape or double clasp hook, formed by the disks *b*, *b*, and clasp jaws *d*, *d*, on the center pin *c*, that passes through the middle of the bent piece *a*, substantially as set forth."

Designs.

Robert Ham, of Troy, N. Y., assignor to Smith, Sheldon, and Co., of same place, for a "Design for parlor stoves."

"I claim the above described ornamental design for a parlor stove."

Elemir J. Ney, of Lowell, Mass., assignor to the Lowell Manufacturing Co., for a "Design for carpet patterns."

"I claim the design or pattern for carpets herein set forth."

Elemir J. Ney, of Lowell, Mass., assignor to the Lowell Manufacturing Co., for a "Design for carpet patterns."

"I claim the design or pattern for carpets herein set forth."

Isaac de Zouche, of St. Louis, Mo., for a "Design for parlor coal stoves."

"I claim the ornamental shape and configuration of the stove-plates and doors represented in the accompanying drawings."

Nathaniel E. Russell, of New York, N. Y., for a "Design for table forks."

"I claim the configuration of the neck and stem as shown and described, to form a new and original design for a table fork."

Disclaimer.

William Blake, of Boston, Mass., for an "Improvement in gas burners."—Patent dated 9th August, 1845.—Disclaimer filed 5th August, 1859.

"I hereby enter my disclaimer to that part of said burner which was set forth and claimed as the bell shape or mouth of the lower part of the inner case of said burner."

Extension.

William Blake, of Boston, Mass., for an "Improvement in gas burners,"—Patent dated 9th August, 1845.

"I claim the combining with the space (*d*, *d*,) directly beneath the orifices of discharge of the gas, and with the

supply or branch tubes *f*, *f*, an expansive chamber *e*, *e*, so as to operate in the manner and for the purpose herein-before set forth. I also claim, making the lower part of the inner case of the burner, with a bell-shaped opening or mouth, in the manner and for the purpose as above specified."

ADDITIONAL IMPROVEMENTS.

AMOS ADAMS RICHARDS, of Urbana, Ohio, for an "Improved lock." — Patented 15th February, 1859.—Additional improvement dated 9th August, 1859.

"I claim the arrangement of the spring *f*, collar *a*, ring *x*, screw *u*, brake wheel W, and arbor S, in the manner above described, so as to produce friction between the ring *x*, and wheel W, and arbor S, and also the arrangement of the brake K, indented flange W, and stem *a*, as above described, so as to prevent the revolution of the wheel W and arbor S, and ring *x*, and the external dial hand, substantially as above described."

FREDERICK YEISER, of Lexington, Ky., for an "Improvement in instrument for taking altitudes of the sun."—Patented 8th February, 1859.—Additional Improvement dated 9th August, 1859.

"I claim, in combination with the rotary bar E, the arrangement of the adjustable bar F, and dial plate R, and rotary cylinder H, and adjustable disk D, in connection with the bar K, and plates *a*, *a*, holding the lens and *e*, *e*, having on its face a small square 3, to receive the sun's image through the lens, in such relation to each other and to the rotary bar E, that it operates substantially as and for the purposes specified."

THE ALPHABETICAL INDEX for the above period. Price 7*s.* 6*d.*

THE SUBJECT-MATTER INDEX for the above period. Price 17*s.*

THE CHRONOLOGICAL INDEX of APPLICATIONS for PATENTS and PATENTS GRANTED from the 1st January to the 31st December, 1856. Price 6*s.* 6*d.*

THE ALPHABETICAL INDEX for the above period. Price 8*s.*

THE SUBJECT-MATTER INDEX for the above period. Price 18*s.* 6*d.*

THE ALPHABETICAL INDEX of APPLICATIONS for PATENTS and PATENTS GRANTED from the 1st January to the 31st December, 1857. Price 8*s.*

THE CHRONOLOGICAL INDEX for the above period. Price 6*s.* 6*d.*

THE SUBJECT-MATTER INDEX for the above period. Price 19*s.* 6*d.*

THE ALPHABETICAL INDEX of APPLICATIONS for PATENTS and PATENTS GRANTED, from the 1st January to the 31st December, 1858. Price 8*s.*

THE CHRONOLOGICAL INDEX for the above period. Price 6*s.*

THE REFERENCE INDEX of PATENTS, pointing out the Office in which each enrolled Specification of a Patent may be consulted; the Books in which Specifications, Law Proceedings, and other subjects connected with Inventions have been noticed; also such of the Specifications of Patents granted under the Act of 21 James I. as have been published by the authority of the Commissioners. Price 30*s*.

AN APPENDIX to the REFERENCE INDEX of PATENTS of INVENTION, containing Abstracts from such of the early Patents and Signet Bills as describe the nature of the invention, and which Patents have no enrolled Specifications. Price 4*s*.

AN INDEX to ALL INVENTIONS PATENTED in ENGLAND from 1617 to 1854 inclusive, arranged under the greatest number of heads, with parallel references to INVENTIONS and DISCOVERIES described in the scientific works of VARIOUS NATIONS, as classified by Professor Schubarth. By B. Woodcroft.

The foreign works thus indexed form a portion of the Library of the Commissioners of Patents, where they may be consulted, or manuscript translations be had.

Sommaire de toutes les Inventions brevetées en Angleterre depuis 1617 jusqu'en 1854 inclusivement, arrangées d'après le plus grand nombre de rubriques, avec renvois aux Inventions et Découvertes décrites dans les ouvrages scientifiques de différentes nations, classés par le Professeur Schubarth. Par B. Woodcroft.

Les ouvrages étrangers ci-dessus font partie de la Bibliothèque de la Commission des Patentes, où l'on peut les consulter, et obtenir des traductions en manuscrit.

Verzeichniss aller in England von 1617—1854 incl. patentirten Erfindungen, unter vielfältige Titel gebracht, mit Hinweisungen auf Erfindungen und Entdeckungen die nach Prof. Schubarth's Klassificirung in den wissenschaftlichen Werken verschiedener Nationen beschrieben sind. Von B. Woodcroft.

Die hier aufgeführten fremden Werke machen einen Theil der Bibliothek der Patent Commission aus, allwo sie nachgeschlagen oder schriftliche Uebersetzungen besorgt werden können.

Repertorio di tutte le Invenzioni munite di Lettere Patenti in Inghilterra dal 1617—1854 inclusivo, poste in ordine sotto il piu gran numero di capi, con riferenze alle Invenzioni e Scoperti descritti nelle opere scientifiche di diverse nazioni, classate dal Professore Schubarth. Dal Sig. B. Woodcroft.

Le opere straniere quì indicate possono esser consultate nella Biblioteca dei Commissari delle Patenti, e traduzioni in manuscritto vi possono ottenersi.

B. Woodcroft,
Superintendent of Specifications, &c.

In course of Publication, by Order of the Commissioners of Patents.

ABRIDGMENTS (in Classes, and Chronologically arranged) of all SPECIFICATIONS of PATENTED INVENTIONS, from the earliest enrolled to those published under the Act of 1852.

These books are of 12mo size, and as each is limited to inventions of one class only, they can be sold at prices sufficiently moderate to enable the humblest inventor to examine for himself whether his discovery has been previously patented or not.

At the foot of each abstract are given references to notices of the inventions in scientific and other works, and to the reports of law proceedings for infringements, &c. &c. &c.

The classes already published are,—

1. Drain Tiles and Pipes, price 6*d*.
2. Sewing and Embroidering, price 6*d*.
3. Manure, price 6*d*.
4. Preservation of Food, price 6*d*.
5. Marine Propulsion, price 4*s*.
6. Manufacture of Iron and Steel, price 5*s*.
7. Aids to Locomotion, price 1*s*.
8. Steam Culture, price 2*s*.
9. Watches, Clocks, and other Time-keepers, price 1*s*. 6*d*.
10. Fire-arms and other Weapons, Ammunition, and Accoutrements, price 6*s*. 6*d*.
11. Paper.—Part I. Manufacture of Paper, Pasteboard, and Papier Mâché, price 3*s*.
12. Paper.—Part II. Cutting, Folding, and Ornamenting; including Envelopes, Cards, Paper-hangings, &c., price 2*s*.
13. Typographic, Lithographic, and Plate Printing, price 7*s*.
14. Bleaching, Dyeing, and Printing Yarns and Fabrics, price 9*s*. 6*d*.

The following are in the press:—

Electricity and Magnetism: their Generation and Applications.
Preparation of Fuel, and Apparatus for its Combustion.
Manufacture and Applications of India Rubber, Gutta Percha, &c.; including Air, Fire, and Water Proofing.
Production and Applications of Gas.
Steam Engines.
Metals and Alloys.

B. Woodcroft.

The above, and all other works published by the Commissioners of Patents, are now on sale at the Great Seal Patent Office, 25, Southampton Buildings, Holborn.

This Journal is published on the evenings of Tuesday and Friday, and will be forwarded, post free, to Subscribers. — Terms, 30*s*. per annum. — Subscriptions received at the Great Seal Patent Office, where also single copies, at twopence each, may be obtained.

(*Registered for transmission abroad.*)

No. 590. TUESDAY, AUGUST 30, 1859. Price 2d.

Notices to Proceed.

NOTICE is hereby given, that

949. GEORGE ASHCROFT, of Cardiff, in the county of Glamorgan, Engineer, has given notice at the Office of the Commissioners of his intention to proceed with his application for Letters Patent for the invention of "Improvements in working presses and other hydraulic machines."

As set forth in his petition, recorded in the said office on the 15th day of April, 1859.

954. And JOHN GLASGOW and SAMUEL HAND, of the city of Manchester, in the county of Lancaster, have given the like notice in respect of the invention of "An improved variable circular motion, applicable to slotting, shaping, and planing machines or similar purposes."

As set forth in their petition, recorded in the said office on the 16th day of April, 1859.

967. And JOZÉ LUIS, of the British and Foreign Office for Patents, No. 1B, Welbeck Street, Cavendish Square, London, in the county of Middlesex, Patent Agent, has given the like notice in respect of the invention of "An improved machine for raising water."—A communication from abroad by M. Dupré, of No. 10, Rue Mogador, Paris, in the empire of France.

As set forth in his petition, recorded in the said office on the 18th day of April, 1859.

992. And QUIN BECK, of the firm of James Meharg and Co., of Belfast, in the county of Antrim, Manufacturers, has given the like notice in respect of the invention of "Improvements in stoves."—A communication from abroad by James Cherry, of Vermont, U.S.

As set forth in his petition, recorded in the said office on the 20th day of April, 1859.

1008. And EDWARD CLARK, of New York, in the United States of America, but now of Morley's Hotel, in the city of Westminster, Gentleman, has given the like notice in respect of the invention of "Improvements in sewing machinery."—A communication from abroad by Isaac Merritt Singer, of New York, aforesaid.

As set forth in his petition, recorded in the said office on the 21st day of April, 1859.

1020. And PIERRE LEONARD MARC DEBAIN, of Paris, France, Gentleman, has given the like notice in respect of the invention of "Improved means for transmitting motive power to ships, pumps, and other arrangements by which the displacement of fluids is effectuated."

1024. And RICHARD ARCHIBALD BROOMAN, of 166, Fleet Street, in the city of London, Patent Agent, has given the like notice in respect of the invention of "An improvement in the manufacture of woollen cloth."—A communication from Louis Victor Lemaignen, residing at Lisieux, France.

1025. And JOHN MARSHALL, junior, of Selby, in the county of York, Gentleman, has given the like notice in respect of the invention of "Improvements in filtering and depurating fluids."

As set forth in their respective petitions, all recorded in the said office on the 23rd day of April, 1859.

1036. And AUGUSTUS WILLIAM GADESDEN, of 56, Leman Street, Goodman's Fields, has given the like notice in respect of the invention of "Improvements in producing solutions of sugar."

1037. And EDWARD HUMPHRYS, of Deptford, has given the like notice in respect of the invention of "Improvements in steering apparatus."

1039. And HENRY COLUMBUS HURRY, of Wolverhampton, in the county of Stafford, Civil Engineer, has given the like notice in respect of the invention of "Improved means of and apparatus for obtaining motive power."

As set forth in their respective petitions, all recorded in the said office on the 25th day of April, 1859.

1045. And WILLIAM EDWARD NEWTON, of the Office for Patents, 66, Chancery Lane, in the county of Middlesex, Civil Engineer, has given the like notice in respect of the invention of "Improvements in the manufacture of nitric acid, and its application for the production of artificial nitrous or nitric salts."—A communication from abroad by Madame Lefebvre, of Paris, in the empire of France.

1048. And RICHARD ARCHIBALD BROOMAN, of 166, Fleet Street, in the city of London, E. C., Patent Agent, has given the like notice in respect of the invention of "Improvements in vulcanizing and colouring caoutchouc, and in the preparation of caoutchouc paints and colors." — A communication from abroad by Theophile Julien Laballe, of Paris.

1049. And RICHARD ARCHIBALD BROOMAN, of 166, Fleet Street, in the City of London, E. C., Patent Agent, has given the like notice in respect of the invention of "Improvements in steam boilers."—A communication from abroad by Theodore Nicolas Meynier and Louis Albert Le Bleu, of Paris.

1050. And JOHN HENRY JOHNSON, of 47, Lincoln's Inn Fields, in the county of Middlesex, and of 166, Buchanan Street, in the city of Glasgow, North Britain, Gentleman, has given the like notice in respect of the invention of "Improvements in machinery or apparatus for combing wool and other fibrous substances."—A communication from abroad by Cullen Whipple, of the city and county of Providence, in the state of Rhode Island, United States of America.

As set forth in their respective petitions, all recorded in the said office on the 26th day of April, 1859.

1061. And THOMAS LACEY, of Grafton Street, in the city of Westminster, Gas Engineer, has given the like notice in respect of the invention of "Improvements in gas regulators."

1062. And Sir THOMAS TASSELL GRANT, K.C.B., of 20, Chester Terrace, Regent's Park, in the county of Middlesex, has given the like notice in respect of the invention of "Improvements in ships' cooking apparatus."

As set forth in their respective petitions, both recorded in the said office on the 27th day of April, 1859.

1067. And ROBERT HARRINGTON, Watch Maker, of No. 3, Colonnade, Albany Road, in the parish of Camberwell, county of Surrey, has given the like notice in respect of the invention of "Improvements in umbrellas and parasols."

1072. And JOHN WHEAT, of Hinckley, in the county of Leicester, has given the like notice in respect of the invention of "Certain improvements in drilling machines employed for agricultural purposes."

As set forth in their respective petitions, both recorded in the said office on the 28th day of April, 1859.

1076. And WILLIAM CORBETT, of Clayton, near Manchester, in the county of Lancaster, and WILLIAM CARMONT, of the same place, Iron and Steel Manufacturers, have given the like notice in respect of the invention of "Certain improvements in the construction and arrangement of furnaces employed in the manufacture of iron and steel, and for other similar purposes."

1079. And EDGAR ANDREW PORTEUS, of 18, Warwick Square, Paternoster Row, Engraver and Printer, and WILLIAM HENRY BURKE, of 79, Cannon Street West, Manufacturer, have given the like notice in respect of the invention of "Improvements in printing and other presses."

As set forth in their respective petitions, both recorded in the said office on the 29th day of April, 1859.

1107. And WILLIAM CLARK, of 53, Chancery Lane, in the county of Middlesex, Engineer and Patent Agent, has given the like notice in respect of the invention of "Improvements in obtaining or extracting quinine and the principal organic alkalies." —A communication from abroad by Lalouel de Sourdeval, 22, Rue Bergère, Paris.

As set forth in his petition, recorded in the said office on the 3rd day of May, 1859.

1129. And WILLIAM CLARK, of 53, Chancery Lane, in the county of Middlesex, Engineer and Patent Agent, has given the like notice in respect of the invention of "Improvements in seed depositors or drills."—A communication from abroad by Louis Achille Pruneau, formerly Notary of Paris.

As set forth in his petition, recorded in the said office on the 5th day of May, 1859.

1259. And EUGÈNE PASQUIER, Mechanic, residing at Reims, Hinemar, Prolongée Street, Marne, in the empire of France, has given the like notice in respect of the invention of "Apparatus for drying wool and all filaceous matters."

As set forth in his petition, recorded in the said office on the 23rd day of May, 1859.

1318. And THOMAS WILSON, of Birmingham, in the county of Warwick, Engineer, has given the like notice in respect of the invention of "Improvements in breech loading fire arms and ordnance."

As set forth in his petition, recorded in the said office on the 28th day of May, 1859.

1440. And SIMON LEVY, of the city of Manchester, in the county of Lancaster, Cap Manufacturer, has given the like notice in respect of the invention of "Improvements in hats, caps, or coverings for the head."

1443. And JOZÉ LUIS, of the British and Foreign Office for Patents, No. 1B, Welbeck Street, Cavendish Square, London, in the county of Middlesex, Patent Agent, has given the like notice in respect of the invention of "An apparatus for regulating individually the pressure, expenditure, and light in gas burners."—A communication from abroad by Edward Ferguson, of No. 10, Rue Mogador, Paris, in the empire of France.

1444. And LÉON BARROUX, of No. 10, Rue Mogador, Paris, in the empire of France, has given the like notice in respect of the invention of "A new system of railroad, supported on iron soles with or without wood being used."

As set forth in their respective petitions, all recorded in the said office on the 16th day of June, 1859.

1500. And GEORGE TOMLINSON BOUSFIELD, of Loughborough Park, Brixton, in the county of Surrey, has given the like notice in respect of the invention of "Improvements in apparatus for winding thread of cotton or linen or other fibrous materials or sewing silk or similar articles upon bobbins or spools.'—A communication from abroad by Lawson C. Ives, of Hartford, Connecticut, United States of America.

As set forth in his petition, recorded in the said office on the 22nd day of June, 1859.

1572. And EDWIN ARCHER WOOD, of Victoria Terrace, Notting Hill, in the county of Middlesex, of the Peninsular and Oriental Steam Navigation Company, and MARTIN DADD ROGERS, of Bromley, in the county of Middlesex, Shipwright, have given the like notice in respect of the invention of "Improved apparatus for raising and lowering boats."

As set forth in their petition, recorded in the said office on the 1st day of July, 1859.

1601. And JOZÉ LUIS, of the British and Foreign Office for Patents, No. 1B, Welbeck Street, Cavendish Square, London, in the county of Middlesex, Patent Agent, has given the like notice in respect of the invention of "An apparatus for washing wool, manufactured or not, and all other matters."—A communication from abroad by Eugène Pasquier, No. 10, Rue Mogador, Paris, in the empire of France.

As set forth in his petition, recorded in the said office on the 6th day of July, 1859.

1749. And CHARLES WESLEY SMITH, of the town of Evans, county of Erie, and state of New York, Electrician, has given the like notice in respect of the invention of "Improvements in electric telegraphs, and in the apparatus connected therewith."

As set forth in his petition, recorded in the said office on the 28th day of July, 1859.

1774. And WILLIAM CAMPBELL, Machinist, and GEORGE WORSTENHOLM, Machinist, both of Birmingham, in the county of Warwick, have given the like notice in respect of the invention of "Certain improvements in machinery for the manufacturing of wrought nails, as also in the treatment of the iron from which such or other kinds of nails may be made."—Partly a communication from abroad by George William Allen, of Rhode Island, United States of America.

As set forth in their petition, recorded in the said office on the 1st day of August, 1859.

1840. And GEORGE TOMLINSON BOUSFIELD, of Loughborough Park, Brixton, in the county of Surrey, has given the like notice in respect of the invention of "A new and useful method of manufacturing the vulcanized compounds of vulcanizable gums."—A communication from abroad by John Murphy, of the city, county, and state of New York.

1843. And JOHN DYER BRYANT, of Rock, in the county of Cornwall, Merchant, has given the like notice in respect of the invention of "Improved superphosphate of lime."

As set forth in their respective petitions, both recorded in the said office on the 9th day of August, 1859.

1872. And JOHN STUART, of Musselburgh, in the county of Mid-lothian, North Britain, and WILLIAM STUART, of the same place, Manufacturers have given the like notice in respect of the invention of "Improvements in nets for fishing, and for other purposes."

As set forth in their petition, recorded in the said office on the 13th day of August, 1859.

1903. And WILLIAM WILSON, of Glasgow, in the county of Lanark, North Britain, Brick Maker, has given the like notice in respect of the invention of "Improvements in the manufacture or production of bricks, tiles, and other articles of earthenware, and in the machinery or apparatus employed therein."

As set forth in his petition, recorded in the said office on the 18th day of August, 1859.

And notice is hereby further given, that all persons having an interest in opposing any one of such applications are at liberty to leave particulars in writing of their objections to such application, at the said Office of the Commissioners, within twenty-one days next after the date of the Gazette [and of the Journal] in which this notice is issued.

Patents on which the Stamp Duty of £50 has been Paid.

(*To 27th August*, 1859, *inclusive.*)

26th August.

2006. BERNARD AUGUSTUS GRAUTOFF and CHARLES HENRY WILLIAM ALBRECHT, both of Lime Street Square, in the city of London, Merchants, for an invention of "Improvements in the construction of pressure and vacuum gauges."—A communication.—Dated 28th August, 1856.

2007. THOMAS WATSON, of the firm of Gerardin and Watson, of Poland Street, in the county of Middlesex, Pewterers, for an invention of "An improved beer-engine lever or lifter, and apparatus for fitting the same to counters."—Dated 28th August, 1856.

2102. CHARLES BROOK the younger, of Meltham Mills, near Huddersfield, in the county of York, for an invention of "An improvement in polishing or finishing yarns, threads, and woven fabrics."—Dated 9th September, 1856.

27th August.

2023. JOHN GREGORY, of Nelson Square, in the county of Surrey, for an invention of "An improved fish joint or method of connecting rails."—Dated 30th August, 1856.

FOREIGN PATENTS.

BELGIUM.*

List of Patents Delivered on the 18th August, 1859.†

(*Communicated by the Belgian Government.*)

(For previous List, see No. 588 of this Journal.)

7722. F. de Lannoy, of Koekelberg, for "A manometer."—Dated 6th July, 1859.

7730. M. C. Halleux, of Verviers, for "A system of moveable boxes for weaving, by means of various shuttles."—Dated 8th July, 1859.

7783. A. Prince, represented by A. Crooy, of Brussels, for an imported invention of "Improvements in ornamenting and illuminating glass surfaces." — Dated 22nd July, 1859. — (English Patent, 22nd December, 1858.)

7787. Mrs. Dewit, represented by C. Joterat-Jacquier, of Brussels, for "An apparatus for hardening caoutchouc for dental purposes."— Dated 23rd July, 1859.

7808. Eng. Delaire, represented by H. Biebuyck, of Brussels, for "An apparatus for heating and ventilating hot-houses."—Dated 28th July, 1859.

7828. J. H. Leroy, represented by H. Biebuyck, of Brussels, for an imported invention of "A smoke-consuming apparatus worked by exhaustion."—Dated 2nd August, 1859.—(French Patent, 27th May, 1857.)

7829. D. Edwards, represented by X. Raclot, of Brussels, for an imported invention of "Improvements in hydraulic apparatus, applicable as motors to all kinds of machines."—Dated 2nd August, 1859.—(English Patent, 16th June, 1859.)

7830. D. A. Woodward, represented by A. Anthoim, of Brussels, for an imported invention of "A solary chamber for obtaining photographs."—Dated 3rd August, 1859.—(French Patent, 21st October, 1857.)

7831. A. Demaret, of Brussels, for "A rotary steam engine."—Dated 4th August, 1859.

7832. F. A. Harel and Bonière, junr., represented by H. Biebuyck, of Brussels, for an imported invention of "A system of movement of rudders with double endless screws."—Dated 4th August. 1859.—(French Patent, 9th June, 1859.)

7833. J. E. de Bienville, represented by H Biebuyck, of Brussels, for an imported invention of "A mechanism for obtaining a perpetual movement." — Dated 4th August, 1859. — (French Patent, 27th July, 1859.)

7834. De Dorlodot, Brothers, of Brussels for "A system of rails with continuous wedges."— Dated 4th August, 1859.

7836. V. Cantillon, of Diest, for "A means of rendering beer inalterable and sparkling."—Dated 5th August, 1859.

7837. P. Lejeune-Chaumont, of Liége, a Patent of Improvement for "Breech-loading fire-arms of one single piece with metal projectiles."—Dated 5th August, 1859.

7838. L. Marquebreucq, of Deux-Acren, for "A system of bells with independent clappers." — Dated 7th August, 1859.

7839. Ch. Damien, represented by A. Depuichault, of Schaerbeek, for an imported invention of "A system of Venetian blinds with small chains."— Dated 5th August, 1859.—(French Patent, 22nd March, 1859.)

7840. R. Mushet, represented by R. S. Kirkpatrick, of Ixelles, for an imported invention of "A metallic alloy."—Dated 5th August, 1859.—(English Patent, 24th February, 1859.)

7841. J. H. Vallée, represented by J. Piddington, of Brussels, for "Improvements in the manufacture of candles with double wicks."—Dated 5th August, 1859.

7842. S. S. Bateson, represented by J. Piddington, of Brussels, for an imported invention of "Improvements in the means and apparatus for generating superheated steam."—Dated 5th August, 1859.—(French Patent, 29th July, 1859.)

7843. B. Andrede, represented by Ch. Halot, of Molenbeek St. Jean, for "An apparatus for reconveying the water used for condensing the water of serpentines and double bottoms of heating apparatus."—Dated 5th August, 1859.

7844. L. A. Binant, represented by O. Dardenne, of Liége, for an imported invention of "An article used for shaving, called 'napkin block.' "—Dated 5th August, 1859. — (French Patent, 1st July, 1859.)

7845. J. T. Trotter and J. F. Williams, represented by O. Daillencourt, of Brussels, for an imported invention of "Improvements in the manufacture of caoutchouc tissues or tissues composed of gum or other substances."—Dated 6th August, 1859. — (French Patent, 2nd August, 1859.)

7846. H. Dautribande and F. Thiry, of Huy for "A machine for making endless paper."— Dated 8th August, 1859.

7847. J. Huytens, of Ghent, for "An apparatus for pressing cramps."—Dated 5th August, 1859.

* For the Belgian Patent Law, see Nos. 292 and 348 of this Journal.

† All Specifications of Patents which have been in force not less than six months, may be inspected or translations of them be had at the Library of the Great Seal Patent Office, where also translated Indexes may be consulted.

7849. R. Mushet, represented by R. S. Kirkpatrick, of Ixelles, for an imported invention of "Improvements in the manufacture of cast steel."—Dated 8th August, 1859.—(English Patent, 24th February, 1859.)

7850. J. B. Nicklin, represented by R. Culliford, of Brussels, for "Improvements in heating locomotive or stationary engines."—Dated 8th August, 1859.

7851. J. B. de Bont, of Schaerbeek, for "Manufacture of lozenges."—Dated 8th August, 1859.

7852. L. B. Olivier, represented by O. Daillencourt, of Brussels, for an imported invention of "A mode of closing bottles."—Dated 8th August, 1859.—(French Patent, 11th March, 1859.)

7853. J. F. Devisscher and C. G. Massiquot, of Molenbeek St. Jean, for "An apparatus for cutting paper and pasteboard."— Dated 9th August, 1859.

7854. J. G. Chavanne, represented by H. Biebuyck, of Brussels, for an imported invention of "Using the extract of horse chestnuts for disincrustating steam-boilers." — Dated 9th August, 1859.—(French Patent, 4th July, 1859.)

7855. H. J. Kind, of Molenbeek St. Jean, for "A system of sounding by percussion."—Dated 9th August, 1859.

7856. T. Richardson, represented by A. Anoul, of Ixelles, for an imported invention of "Improvements in the manufacture of manure."—Dated 9th August, 1859. — (English Patent, 21st January, 1859.)

7857. Thibaut and Lanser, represented by J. H. Waltzing, of Arlon, for an imported invention of "A calorifere stove for drying-kilns, manufactories, buildings, apartments, &c."—Dated 9th August, 1859.—(French Patent, 30th June, 1859.)

7858. P. J. Crespin, of Verviers, for "A shuttle box applicable to all kinds of looms."—Dated 10th August, 1859.

7860. N. Saintard, represented by H. Biebuyck, of Brussels, a Patent of Improvement for "A railway break." — Dated 10th August, 1859.—(Original Patent, 4th August, 1859.)

7861. J. P. Farrar, represented by H. Biebuyck, of Brussels, for an imported invention of "Improvements in the manufacture of cast steel, malleable pig-iron, and in refining iron."—Dated 10th August, 1859. — (French Patent, 4th August, 1859.)

7862. C. L. J. Diericky, represented by X. Raclot, of Brussels, for "A balance for weighing planchets of coins."—Dated 10th August, 1859.

7863. D. Nefflier and P. Blandin, represented by J. de Saint-Germain, of Schaerbeek, for an imported invention of "A slide and cylinder for selling postage stamps." — Dated 10th August, 1859.—(French Patent, 12th April, 1859.)

List of Specifications published during the week ending 27th August, 1859.

No.	Price.	Subject-Matter.
137	6s. 7d.	Construction of steam vessels, boilers' gauges, engines, &c.
138	3d.	Apparatus for sowing seed.
140	3d.	Application of gas for signals, lighthouses, and ships at sea.
142	7d.	Locks.
143	7d.	Apparatus for collecting or picking up letters, papers, &c. to be printed.
149	7d.	Treating resinous substances, &c.
150	10d.	Machinery for slotting, mortising, tenoning, and cutting wood, iron, &c
152	3d.	Treatment and manufacture of silk waste.
153	2s. 9d.	Thrashing and dressing machine.
154	4d.	Preparation of food for cattle and horses.
155	10d.	Machinery for manufacturing bricks, tiles, &c.
156	10d.	Reaping machines.
157	3d.	Air pistols and guns.
158	3d.	Carding engines.
159	6d.	Stoppering jars and bottles.
160	4d.	Paper for bank notes, &c.
161	10d.	Core barrels for casting metal pipes or columns.
162	10d.	Apparatus for measuring and sorting silk, &c.
163	3d.	Machinery for forming spiral or purled wire.
164	3d.	Cooking apparatus.
165	3d.	Method of advertising.
166	6d.	Wheel skid or shoe.
167	10d.	Machinery for manufacturing lasts, boot trees, and clogs.
168	10d.	Apparatus for making cigarettes.
169	3d.	Machinery for manufacturing boots and shoes.
170	10d.	Construction of ships and vessels.
171	7d.	Table knives and sharpeners.
172	4d.	Soap.
173	3d.	Ploughing, tilling, and paring land.
174	3d.	Preventing incrustation in steam boilers, &c.
175	3d.	Preventing discoloration in gassing textile fabrics.
176	8d.	Application of springs to sashes, shutters, or doors.
177	6d.	Apparatus for measuring water and other liquids.
178	1s. 8d.	Machinery for spinning yarn, twine, ropes, and cordage.
179	7d.	Clasps or fastenings.
180	3d.	Lawn mowing machines.
181	8d.	Electric telegraphs, &c.
182	3d.	Producing pink shades on cotton fabrics or yarns.
183	3d.	Manure.
184	3d.	Manure.
185	10d.	Boots and shoes.
186	3d.	Machine for washing, wringing, and mangling.
187	3d.	Reticule muff.
188	3d.	Steam boilers.
189	7d.	Taps or stopcocks.
190	9d.	Propellers.
191	3d.	Spinning machines.
192	5d.	Regulating burner for gas.
193	10d.	Manufacture of artificial gums, teeth, &c.

List of Specifications—*continued.*

No.	Price.	Subject-Matter.
194	6*d.*	Warming apparatus for the feet.
195	3*d*	Manure.
196	3*d.*	Manufacture of bonnet fronts, ruches, ribbon trimmings, &c.
197	10*d.*	Chains
198	10*d.*	Machinery for rolling plates, bars, rods, and shafts.
199	3*d.*	Buckles.
200	3*d.*	Covering joinery work with metals or metallic alloys.
201	3*d.*	India rubber thread.
202	6*d.*	Umbrellas and parasols.
203	10*d.*	Distilling oil from coal tar and preserving timber.
204	3*d.*	Machinery for manufacturing corks and bungs.
205	11*d.*	Machinery for cutting files.
206	11*d.*	Atmospheric propulsion, &c.
208	7*d.*	Heating and ventilating buildings, &c.
209	10*d.*	Floating stages for repairing ships or other vessels.
210	4*d.*	Manufacture of cast steel and iron.
211	5*d.*	Manufacture of cast steel.
212	6*d.*	Pumps.
213	1*s.* 1*d.*	Air engines.
214	8*d.*	Manufacture of paper.
215	3*d.*	Bottles for medicines and poisons.
216	2*s.* 8*d*	Agricultural steam engines and implements.
217	1*s.* 1*d.*	Manufacture of iron and of gases for such and other uses.
218	1*s.* 6*d.*	Lanterns for signalling on board ships.
219	3*d.*	Permanent way of railways.
220	3*d.*	Ballasting and extinguishing fires on board ships.
221	7*d.*	Ploughs.
222	3*d.*	Stockings and socks.
223	10*d.*	Machinery for cutting and shaping wood.
224	3*d.*	Treatment of resin and resinous substances.
225	3*d.*	Machinery for the manufacture of bob bins, spools, and cop tubes.
226	3*d.*	Machinery for spinning.
227	10*d.*	Apparatus to facilitate respiration under water, &c.
228	3*d.*	Electric telegraphs.
229	3*d.*	Shirt fronts.
230	6*d.*	Cocks and valves.
231	3*d*	Barometer and thermometer dials.
232	3*d.*	Apparatus for generating and regulating gas, &c.
233	3*d.*	Escapement for time-keepers.
234	6*d.*	Life preserving vests.

*** Specifications will be forwarded by post on receipt of the amount of price and postage. Sums exceeding 5*s.* must be remitted by Post Office Order, made payable at the Post Office, High Holborn, to Mr. Bennet Woodcroft, Great Seal Patent Office.

Errata.

In Journal of 19th August.

After 1804, for "1804" read "1805."

In Journal of 26th August.

After 1860, for "30th" read "11th."
" " "1833" " "1883."

A Free Library and Reading Room, in connection with the Office of the Commissioners of Patents, is open to the Public daily from 10 till 4 o'clock.

In addition to the Printed Specifications, Indexes, and other publications of the Commissioners, the Library includes a Collection of the leading British and Foreign Scientific Journals, and text-books in the various departments of science and art. A printed Catalogue of the Library is on sale.

Note.—The Commissioners' publications may be consulted daily in the Library of the British Museum; in the Library of the Society of Arts; and in the Free Libraries of the following Towns and Cities:—

PATENT LAW AMENDMENT ACT, 1852.—All Specifications, Indexes, &c., printed by order of the Commissioners of Patents, are sold at the Great Seal Patent Office, 25, Southampton Buildings, Holborn.

THE PATENT LAW AMENDMENT ACTS (15 & 16 Vict., cap. 83; 16 Vict., cap. 5; and 16 & 17 Vict., cap. 115); with the Rules and Regulations made by the Commissioners of Patents for Inventions, and by the Lord Chancellor and the Master of the Rolls, under the Acts 15 and 16 Vict., c. 83, and 16 & 17 Vict., c. 115, accompanied by Specimen Forms of the Provisional Documents printed on sheets of the prescribed size. Price 6*d.*

THE CHRONOLOGICAL INDEX of PATENTS of INVENTION, from March 2, 1617 14 James I.), to September 30, 1852 (16 Vict.), 2 vols. Price 30*s.*

THE ALPHABETICAL INDEX of PATENTEES of Inventions for the above period. Price 20*s.*

THE SUBJECT-MATTER INDEX of PATENTS for the same period—*Second Edition*—to which is prefixed a Key of Terms and Phrases. 2 vols. Price 2*l.* 16*s.*

A Key to the *First Edition* of the above work is also published separately, and may be had on application.

THE CHRONOLOGICAL INDEXES of APPLICATIONS for PATENTS and PATENTS GRANTED from the 1st October to the 31st December, 1852, and from the 1st January to the 31st December, 1853, in one volume. Price 11*s.*

THE ALPHABETICAL INDEXES for the above periods, in one volume. Price 13*s.*

THE SUBJECT-MATTER INDEX, from 1st October to 31st December, 1852. Price 9*s.*

THE SUBJECT-MATTER INDEX, from 1st January to 31st December, 1853. Price 16*s.*

THE CHRONOLOGICAL INDEX of APPLICATIONS for PATENTS and PATENTS GRANTED from the 1st January to the 31st December, 1854. Price 6*s.*

THE ALPHABETICAL INDEX for the above period. Price 7*s.*

THE SUBJECT-MATTER INDEX for the above period. Price 16*s.* 6*d.*

THE CHRONOLOGICAL INDEX of APPLICATIONS for PATENTS and PATENTS GRANTED from the 1st January to the 31st December, 1855. Price 6*s.* 6*d.*

THE ALPHABETICAL INDEX for the above period. Price 7*s.* 6*d.*

THE SUBJECT-MATTER INDEX for the above period. Price 17*s.*

THE CHRONOLOGICAL INDEX of APPLICATIONS for PATENTS and PATENTS GRANTED from the 1st January to the 31st December, 1856. Price 6*s.* 6*d.*

THE ALPHABETICAL INDEX for the above period. Price 8*s.*

THE SUBJECT-MATTER INDEX for the above period. Price 18*s.* 6*d.*

THE ALPHABETICAL INDEX of APPLICATIONS for PATENTS and PATENTS GRANTED from the 1st January to the 31st December, 1857. Price 8*s.*

THE CHRONOLOGICAL INDEX for the above period. Price 6*s.* 6*d.*

THE SUBJECT-MATTER INDEX for the above period. Price 19*s.* 6*d.*

THE ALPHABETICAL INDEX of APPLICATIONS for PATENTS and PATENTS GRANTED, from the 1st January to the 31st December, 1858. Price 8*s.*

THE CHRONOLOGICAL INDEX for the above period. Price 6*s.*

Museum of Patents, South Kensington.

NUMBER of VISITORS for the Week ending 27th August, 1859.

Mornings - - - -	1354
Evenings - - - -	1467
Total - - -	2821

Since the opening of the Museum Free Daily (May 12, 1858,)—132,800.

THIS Museum is open to the public daily, free of charge. The hours of admission are from 10 A.M. to 6 P.M., and in the evenings of Monday, Tuesday, and Wednesday from 7 to 10 P.M.

All communications on the subject of the Museum to be addressed to the Superintendent,

B. WOODCROFT.

Great Seal Patent Office,
Southampton Buildings.

GALLERY OF PORTRAITS OF INVENTORS, DISCOVERERS, AND INTRODUCERS OF USEFUL ARTS.—This Collection, formed by Mr. Woodcroft, and first opened to public view in the Great Seal Patent Office in 1853, now constitutes a portion of the Patent Museum at South Kensington.

Presentations of original Portraits, Medallions, Busts, and Statues, in augmentation of the Collection, are hereby invited, and will on receipt be acknowledged in this Journal, and duly recorded in the next published Catalogue.

REAPING MACHINES.—The entire series of Specifications and Drawings on this subject to the end of 1853, together with an Appendix, prepared by B. Woodcroft, of the Patent Office, and published under the sanction of the Commissioners, may be obtained at the cost price of *2l.* 3*s.* 11½*d.*

FIRE-ARMS, PROJECTILES, &c.—The series of Specifications and Drawings on this Subject, from 15th May, 1718, to 31st December, 1853, with Alphabetical and Subject-matter Indexes, may be obtained at the cost price of *9l.* 18*s.* 6½*d.*

The Indexes, separately, price 3*s.*

CATALOGUE of the LIBRARY of the GREAT SEAL PATENT OFFICE. Two vols. imp. 8vo. (Vol. I. Titles; Vol. II. Index.) Price 21*s.*

COLONIAL PATENTS.—Information as to the Mode of obtaining Protection for Inventions in the Colonies; contained in Communications from the Governors, &c. of the different British Colonies in answer to the Application of Mr. W. J. CURTIS for a Patent. Price 1*s.*

PATENT RIGHTS in the COLONIES.—Abstract of Replies to the Secretary of State's Circular Despatch of July 11, 1856, calling for Information as to the Form of the Application to be made by Persons desirous of obtaining Patent Rights in the Colonies, and the Expenses attendant on the Grant of such Patent Rights. Price 2*s.* 6*d.*

In course of Publication, by Order of the Commissioners of Patents.

ABRIDGMENTS (in Classes, and Chronologically arranged) of all SPECIFICATIONS of PATENTED INVENTIONS, from the earliest enrolled to those published under the Act of 1852.

These books are of 12mo size, and as each is limited to inventions of one class only, they can be sold at prices sufficiently moderate to enable the humblest inventor to examine for himself whether his discovery has been previously patented or not.

At the foot of each abstract are given references to notices of the inventions in scientific and other works, and to the reports of law proceedings for infringements, &c. &c. &c.

The classes already published are,—

1. DRAIN TILES AND PIPES, price 6*d.*
2. SEWING AND EMBROIDERING, price 6*d.*
3. MANURE, price 6*d.*
4. PRESERVATION OF FOOD, price 6*d.*
5. MARINE PROPULSION, price 4*s.*
6. MANUFACTURE OF IRON AND STEEL, price 5*s.*
7. AIDS TO LOCOMOTION, price 1*s.*
8. STEAM CULTURE, price 2*s.*
9. WATCHES, CLOCKS, AND OTHER TIME-KEEPERS, price 1*s.* 6*d.*
10. FIRE-ARMS AND OTHER WEAPONS, AMMUNITION, AND ACCOUTREMENTS, price 6*s.* 6*d.*
11. PAPER.—PART I. MANUFACTURE OF PAPER, PASTEBOARD, AND PAPIER MÂCHÉ, price 3*s.*
12. PAPER.—PART II. CUTTING, FOLDING, AND ORNAMENTING; INCLUDING ENVELOPES, CARDS, PAPER-HANGINGS, &c., price 2*s.*
13. TYPOGRAPHIC, LITHOGRAPHIC, AND PLATE PRINTING, price 7*s.*
14. BLEACHING, DYEING, AND PRINTING YARNS AND FABRICS, price 9*s.* 6*d.*

The following are in the press:—

ELECTRICITY AND MAGNETISM: THEIR GENERATION AND APPLICATIONS.
PREPARATION OF FUEL, AND APPARATUS FOR ITS COMBUSTION.
MANUFACTURE AND APPLICATIONS OF INDIA RUBBER, GUTTA PERCHA, &c.; INCLUDING AIR, FIRE, AND WATER PROOFING.
PRODUCTION AND APPLICATIONS OF GAS.
STEAM ENGINES.
METALS AND ALLOYS.

B. WOODCROFT.

The above, and all other works published by the Commissioners of Patents, are now on sale at the Great Seal Patent Office, 25, Southampton Buildings, Holborn.

This Journal is published on the evenings of Tuesday and Friday, and will be forwarded, post free, to Subscribers.—Terms, 30*s.* per annum.—Subscriptions received at the Great Seal Patent Office, where also single copies, at twopence each, may be obtained.

THE

COMMISSIONERS OF PATENTS' JOURNAL.

By Authority.

(*Registered for transmission abroad.*)

No. 591. FRIDAY, SEPTEMBER 2, 1859. Price 2d.

Grants of Provisional Protection for Six Months.

NOTICE is hereby given that Provisional Protection has been allowed

1654. To THOMAS WRIGHT, of No. 9, George Yard, Lombard Street, in the city of London, Engineer, for the invention of "Improvements in the permanent way of railways, and in the means of preventing railway accidents thereon."

On his petition, recorded in the Office of the Commissioners on the 12*th day of July*, 1859.

1770. To HENRY JUSTINIAN NEWCOME, of Shenley, near Barnet, in the county of Herts, for the invention of "An apparatus for heating or warming buildings."

On his petition, recorded in the Office of the Commissioners on the 30*th day of July*, 1859.

1782. To EUGENE DE BASSANO, of Brussels, in the kingdom of Belgium, Gentleman, for the invention of "Improvements in the manufacture of artificial fuel, commonly called patent fuel."

On his petition recorded in the Office of the Commissioners, on the 1*st day of August*, 1859.

1802. To BENJAMIN TWEEDY, at present residing at Utrecht, in the kingdom of the Netherlands, Engineer, for the invention of "An improved mode of and apparatus for consuming smoke in locomotive and other engine furnaces, whereby coal can be used instead of coke."

On his petition, recorded in the Office of the Commissioners on the 5*th day of August*, 1859.

1812. To WILLIAM RICHARD DRAKE, of No. 46, Parliament Street, Westminster, in the county of Middlesex, Gentleman, for the invention of "An apparatus for conducting electricity in the sea, and for telegraphing and sounding in deep water."—A communication from abroad by Emile Schneider, of Ecole de droit Saint Petersburgh, in the empire of Russia.

On his petition, recorded in the Office of the Commissioners on the 6*th day of August*, 1859.

1848. To JOSEPH WAITE, of Cheltenham, in the county of Gloucester, Chemist, for an invention of "Improvements in making infusions for pharmaceutical purposes, which improvements are also applicable to other purposes of a similar nature."

On his petition, recorded in the Office of the Commissioners on the 9*th day of August*, 1859.

1856. To WILLIAM WHITE, of No. 34, North Audley Street, Grosvenor Square, for the invention of "A four-wheeled safety sociable carriage."

On his petition, recorded in the Office of the Commissioners on the 11*th day of August*, 1859.

1888. To JOHN HENRY GREAT REX, of Regent's Quadrant, in the county of Middlesex, Gentleman, for the invention of "Improvements in the construction of dwelling-houses or other buildings, for the purpose of facilitating the escape of the inmates in case of fire."

On his petition, recorded in the Office of the Commissioners on the 16*th day of August*, 1859.

1892. To JAMES SIDEBOTTOM, of Waterside, in the county of Derby, Cotton Spinner, for the invention of "Certain improvements in power looms for weaving."

1896. And to SEPTIMUS BEARDMORE, of No. 27, Albion Street, Hyde Park, London, Civil Engineer, for the invention of "Improvements in electric batteries."

On both their petitions, recorded in the Office of the Commissioners on the 17*th day of August*, 1859.

1898. To WESTON GRIMSHAW, of Lower Broughton, near the city of Manchester, Gentleman, and

Samuel Mason, junior, of the city of Manchester, Machinist, for the invention of "Improvements in machinery and apparatus employed in washing, bowking, bleaching, and preparing flax, and other substances."

1900. And to Adolphe Joseph Canu, of Paris, France, Civil Engineer, for the invention of "Improvements in machines for breaking or crushing stones, minerals, or other similar materials."

On both their petitions, recorded in the Office of the Commissioners on the 18th day of August, 1859.

1904. To Peter Salmon, of Glasgow, in the county of Lanark, Merchant, for the invention of "Improvements in locomotives, and in apparatus for warming trains of carriages connected thereto."

1905. To William Thomas Henley, Telegraph Engineer, of St. John Street Road, Clerkenwell, in the county of Middlesex, for the invention of "Improvements in machinery for the manufacture of ropes and cables, and for paying out and picking up submarine telegraph cables."

1906. To Swinton Boult, of Liverpool, in the county of Lancaster, Actuary, for the invention of "Improvements in the means of, or apparatus for retarding railway carriages."

1907. To John Jackson, of Worsley, in the county of Lancaster, Joiner, and Joseph Thorley, of the same place, Overlooker, for the invention of "Improvements in hoists for raising and lowering weights."

1908. To John Fowler, junior, Robert Burton, and David Greig, junior, all of Cornhill, in the city of London, Edward Ellis Allen, of Park Side, Knightsbridge, and William Worby, of Ipswich, for the invention of "Improvements in ploughs, cultivators, or tilling implements, and in machinery for giving motion to the same by steam power."

1909. And to Henry William Harman, of Manchester, in the county of Lancaster, Civil Engineer, for the invention of "Improvements in steam boilers, and in working the same, and in safety valves, and apparatus connected therewith."

On their several petitions, recorded in the Office of the Commissioners on the 19th day of August, 1859.

1911. To Edwin Hardon, of Stockport, in the county of Chester, Manufacturer, for the invention of "Certain improvements in looms for weaving."

1912. To William Finegan, of Belfast, in the county of Antrim, Ireland, Engineer, for the invention of "Improvements in apparatus for lubricating machinery."

1913. To David Grant, of Edinburgh, in the county of Mid-Lothian, North Britain, Gas Meter Manufacturer, for the invention of "Improvements in wet gas meters."

1914. To George William Petter and Thomas Dixon Galpin, both of Belle Sauvage Yard, Ludgate Hill, in the city of London, Printers and Co-partners, for the invention of "Improvements in printing presses."

1915. To William Aristides Vérel, of Macduff, in the county of Banff, Merchant, for the invention of "Improvements in the preparation of bones for manure."

1916. To Richard Archibald Brooman, of No. 166, Fleet Street, in the city of London, E.C., Patent Agent, for the invention of "Improvements in apparatus for preparing and spinning fibrous materials."—A communication from abroad by Felix Edmond Lemaire, residing at Paris.

1917. To Joseph Jepson Oddy Taylor, of Mark Lane, in the city of London, Naval Engineer, for the invention of "An improvement in the separation of silex and silicious matter from iron."

1918. To Henry Spratt, of the Royal Marine Barracks, Plymouth, in the county of Devon, Captain Royal Marines, for the invention of "Improvements in revolving pistols and other fire-arms."

1919. To the Honourable William Talbot, of the Army and Navy Club, Pall Mall, in the county of Middlesex, for the invention of "An improved cigar lighter."

1920. To Henry Parkes, of Birmingham, in the county of Warwick, for the invention of "Improvements in the manufacture of cylinders, and tubular or hollow bodies of copper, and alloys of copper or other ductile metals."

1921. To Edward Abbott, of Brunswick Square, in the county of Middlesex, Merchant, for the invention of "Improvements in ordnance and fire-arms."

1922. To Oliver Maggs, of Bourton, in the county of Dorset, for the invention of "Improvements in taps, cocks, or valves."

1923. And to Richard Sutton Harvey, of Lincoln, for the invention of "Improvements in apparatus for dusting vines, hops, and other plants and trees with sulphur, and other powder."

On their several petitions, recorded in the Office of the Commissioners on the 22nd day of August, 1859.

1925. To Paolino Francesco Cherpantieri de la Salle, of Nice, Italy, Musical Instrument Maker, for the invention of "A new method of arranging the keys on the fingerboards of pianos, organs, and other similar instruments."

1927. To Thomas Fry, of Liverpool, in the county of Lancaster, Gentleman, for the invention of "The application of enamelled slate to the new purpose of lining, panelling, or otherwise facing the internal or external walls of houses, public buildings, and edifices generally."

1929. To Oliver Maggs, of Bourton, in the county of Dorset, for the invention of "Improvements in apparatus for weaving straw, rushes, and other materials into fabrics."

On their several petitions, recorded in the Office of the Commissioners on the 23rd day of August, 1859.

Invention protected for Six Months by the Deposit of a Complete Specification.

NOTICE is hereby given that the Petition of

1942. MARTIN BILLING, of High Holborn, in the county of Middlesex, praying for Letters Patent for the invention of "An improved mode of ornamenting and finishing certain articles of hardware," was deposited and recorded in the Office of the Commissioners on the 26th day of August, 1859, and a complete specification accompanying such petition was at the same time filed in the said office.

NOTICE is hereby also given that the petition of

1944. MICHAEL JOHN STARK, of the city of Norwich, Chemist and Merchant, praying for Letters Patent for the invention of "Producing a new chemical or artificial manure from bones, and all such animal and fatty matters," was deposited and recorded in the Office of the Commissioners on the 26th day of August, 1859, and a complete specification accompanying such petition was at the same time filed in the said office.

Patents Sealed.

LIST of LETTERS PATENT which passed the Great Seal on the

31*st August*, 1859.

441. SAMUEL THOMAS COOPER, of Upper Clapton, Gentleman, for an invention of "Improvements in the use and application of artificial light."—Dated 17th February, 1859.

546. JOHN THOMSON CARTER, of Belfast, in the county of Antrim, Flax Spinner, for an invention of "Improvements in machinery for crushing, bruising, and preparing flax, hemp, and other fibrous materials requiring such treatment."—Dated 2nd March, 1859.

553. JOHN WILLIAM HARKER, of No. 24, Upper Barnsbury Street, Islington, and JOHN KINGSFORD FIELD, of Upper Marsh, Lambeth, for an invention of "Improvements in coating the bottoms of iron and other ships and vessels."—A communication from abroad by John Cooke Harker and Frederick Field, both of Chili.—Dated 2nd March, 1859.

554. ETIENNE ROCHE, of Marseille, town in the French empire, Manufacturer, for an invention of "Improvements in the manufacture of paper suitable for forming cigarettes, and for other purposes, and also improvements in the manufacture of cigars."—Dated 2nd March, 1859.

560. HENRY BROWN, of the firm of Henry Brown and Company, Woollen Manufacturers, of Galashiels, in the county of Selkirk, Scotland, for an invention of "Improvements in machinery for cutting and finishing the surfaces of woollen and other fabrics."—Dated 2nd March, 1859.

566. JAMES DALZIEL DOUGALL, of Glasgow, in the county of Lanark, North Britain, Gun Maker, for an invention of "Improvements in fire arms."—Dated 3rd March, 1859.

573. CHARLES FREDERICK DENNET, of Pall Mall, Gentleman, for an invention of "Improvements in bayonets."—Dated 4th March, 1859.

576. RICHARD ARCHIBALD BROOMAN, of 166, Fleet Street, in the city of London, E.C., Editor of the Mechanic's Magazine and Patent Agent, for an invention of "An improvement in boiler stays."—A communication from Jean Perrier, residing at Nimes, France.—Dated 4th March, 1859.

579. JOHN MACMILLAN DUNLOP, of the city of Manchester, in the county of Lancaster, Engineer, for an invention of "Improvements in machinery or apparatus for cleaning fibrous materials."—Dated 5th March, 1859.

582. FREDERICK WILLIAM PARKER, of Sheffield, in the county of York, Saw Maker, for an invention of "Improvements in sewing machines."—Dated 5th March, 1859.

588. RICHARD LEAKE and MATTHEW SYKES, both of Barnsley, in the county of York, for an invention of "Improvements in furnaces for consuming smoke and generating heat, parts of which improvements are applicable to furnaces generally."—Dated 5th March, 1859.

592. WILLIAM PALMER, of Long Eaton, in the county of Derby, Station Master, for an invention of "An improved railway carriage break, and coupling apparatus connected therewith."—Dated 7th March, 1859.

594. WILLIAM GOSSAGE, of Widnes, in the county of Lancaster, Chemist, for an invention of "Improvements in the treatment of certain ores of copper for the extraction of metals therefrom."—Dated 7th March, 1859.

595. JOHN ASPINALL, of Great Tower Street, in the city of London, Civil Engineer, for an invention of "Improvements in evaporating in vacuo."—Dated 7th March, 1859.

599. JOHN LOUIS JULLION and GORDON PIRIE, both of Stoneywood Works, Aberdeen, North Britain, Paper Makers, for an invention of "The manufacture of gelatine."—Dated 7th March, 1859.

601. ADAM BOOTH the elder, and ADAM BOOTH the younger, of the city of Manchester, in the county of Lancaster, Machine Makers, for the invention of "Improvements in machinery or apparatus for making or manufacturing tags for laces."—Dated 8th March, 1859.

603. GEORGE TWIGG, of Birmingham, in the county of Warwick, Manufacturer, for an invention of "An improved fusee-igniter for the use of smokers."—Dated 8th March, 1859.

610. JOHN ALLIN WILLIAMS, of Baydon, in the county of Wilts, Farmer, for an invention of "Improvements in machinery or apparatus for cultivating land by steam power."—Dated 9th March, 1859.

612. John Robinson Nicholson, of Redditch, in the county of Worcester, Doctor of Medicine, for an invention of "New or improved machinery to be used in the manufacture of needles, a part or parts of which said machinery may also be used for pointing pins and other like articles."—Dated 9th March, 1859.

626. Robert Hellard, Ironmonger, Taunton, Somerset, for an invention of "Improvements in reaping and mowing machines." — Dated 11th March, 1859.

645. Charles Henry Hurst, of Victoria Terrace, Royal Road, Kennington Park, in the county of Surrey, for an invention of "An improved wrench or spanner."—Dated 14th March, 1859.

653. To William Clark, of 53, Chancery Lane, in the county of Middlesex, Engineer and Patent Agent, for an invention of "Improvements in the apparatus of electric lamps or lights."—A communication from abroad by Victor Louis Marie Serrin, Civil Engineer, of Paris. — Dated 15th March, 1859.

657. William Robertson, of Dundee, in the county of Forfar, North Britain, Engineer, and James Guthrie Orchar, of the same place, Engineer, for an invention of "Improvements in weaving."—Dated 16th March, 1859.

706. William Colborne Cambridge, of Bristol, Agricultural Implement Maker, for an invention of "An improved construction of chain harrow." —Dated 19th March, 1859.

709. William Hudson, of Burnley, in the county of Lancaster, Machinist, and Christopher Catlow, of the same place, Overlooker, for an invention of "Certain improvements in looms for weaving."—Dated 21st March, 1859.

721. William Armand Gilbee, of No. 4, South Street, Finsbury, London, Patent Agent, for an invention of "An improved apparatus for stretching and polishing silk thread."—A communication from abroad by Messieurs Lyonnet and Prénat, of St. Etienne, France.—Dated 22nd March, 1859.

754. Hugh Rigby, of Salford, in the county of Lancaster, Engineer, for an invention of "Improvements in machinery or apparatus for obtaining motive power, applicable to hoists and all other purposes to which motive power can be applied." —Dated 25th March, 1859.

780. William Mossman, of No. 50, Cumming Street, Pentonville, in the parish of Clerkenwell, in the county of Middlesex, Manufacturing Stationer, for an invention of "Improvements in machinery applied to embossing or cutting presses for the better and more expeditious manner of manufacturing ornamental, cut out, and embossed work in paper, leather, parchment, cloth, foil, and other material."—Dated 29th March, 1859.

800. Alfred Vincent Newton, of the Office for Patents, 66, Chancery Lane, in the county of Middlesex, Mechanical Draughtsman, for an invention of "An improved governor for marine and other steam engines."—A communication from abroad by H. C. Sergeant, of the United States of America.—Dated 30th March, 1859.

818. William Edward Newton, of the Office for Patents, 66, Chancery Lane, in the county of Middlesex, Civil Engineer, for an invention of "Improvements in cricket bats."—A communication from abroad by Michael Doherty, of Boston, in the United States of America.—Dated 1st April, 1859.

830. Arthur Paget, of Loughborough, in the county of Leicester, Manufacturer, for an invention of "Improvements in machinery or apparatus for the manufacture of looped fabrics, and in the manner of constructing the same."—Dated 2nd April, 1859.

935. Jozé Luis, of the British and Foreign Office for Patents, No. 1 B, Welbeck Street, Cavendish Square, London, in the county of Middlesex, for an invention of "A new cooling apparatus for liquids, especially beer."—A communication from abroad, by Jean Louis Bandelot, of No. 10, Rue Mogador, Paris, in the empire of France.—Dated 14th April, 1859.

993. Job Wotton, of Birmingham, in the county of Warwick, Manufacturer, for an invention of "An improvement or improvements in raising or shaping metals."—Dated 20th April, 1859.

1060. James Holroyd, of Leeds, in the county of York, Clothfinisher, for an invention of "Improvements in machinery used for finishing woollen and other cloths."— Dated 27th April, 1859.

1410. Francis Puls, Chemist, of Roxburgh Terrace, Haverstock Hill, in the county of Middlesex, for an invention of "Improvements in the treatment of hydrocarbons."—Dated 10th June, 1859.

1420. Felix Alexandre Testud de Beauregard, of Paris, in the French empire, Civil Engineer, for an invention of "Certain improvements in generating steam, and in apparatus for obtaining power and in generating steam for other purposes."—Dated 11th June, 1859.

1497. Robert Smith, of Longridge, near Preston, in the county of Lancaster, Manufacturer, for an invention of "Improvements in apparatus applicable to looms for weaving fancy fabrics."—Dated 22nd June, 1859.

1521. Richard Hornsby, junior, of Spittlegate, Iron Works, Grantham, in the county of Lincoln, for an invention of "Improvements in ploughs, and in giving motion to agricultural implements by ploughs and other steam power."—Dated 24th June, 1859.

1561. Levi Lincoln Tower, of the state of Massachusetts, of the United States of America, for an invention of "A new and useful machine for dampening and wetting paper, &c."—A communication from John A. Lynch, a resident of Boston, of the said state of Massachusetts. — Dated 30th June, 1859.

1598. James Hall Nalder, of Alvescott, in the county of Oxford, Farmer, and Thomas Nalder, of Challow Works, in the county of Berks, Engineer and Agricultural Implement Manufacturer, for an invention of "Improvements in winnowing and dressing grain and seeds, and in the machinery or apparatus employed therein."— Dated 5th July, 1859.

Patent on which the Stamp Duty of £50 has been Paid.

(*To 31st August, 1859, inclusive.*)

29th August.

2016. James Blake and Francis Maxwell, both of Kitchen Street, Liverpool, in the county of Lancaster, Soap Manufacturers, for an invention of "Improvements in the manufacture of soap."—A communication.—Dated 30th August, 1856.

2037. James Apperly, of Dudbridge, near Stroud, in the county of Gloucester, Cloth Manufacturer, for an invention of "Certain improvements in the process of preparing cotton, wool, flax, and other fibrous substances for spinning, and in carding and preparing machinery."—Dated 2nd September, 1856.

2046. Edmund Pim Spiller, of Holborn Hill, in the city of London, Manufacturer, for an invention of "Improvements in the construction of chamber lamps."—Dated 3rd September, 1856.

31st August.

2038. Pierre Joseph Guyet, Engineer, of Paris, Town in the French empire, for an invention of "An improved method of stopping or retarding railway carriages and trains, and of warming the interior thereof."—Dated 2nd September, 1856.

THE CHRONOLOGICAL INDEX of PATENTS of INVENTION, from March 2, 1617 14 James I.), to September 30, 1852 (16 Vict.), 2 vols. Price 30*s.*

THE ALPHABETICAL INDEX of PATENTEES of Inventions for the above period. Price 20*s.*

THE SUBJECT-MATTER INDEX of PATENTS for the same period—*Second Edition*—to which is prefixed a Key of Terms and Phrases. 2 vols. Price 2*l.* 16*s.*

A Key to the *First Edition* of the above work is also published separately, and may be had on application.

THE CHRONOLOGICAL INDEXES of APPLICATIONS for PATENTS and PATENTS GRANTED from the 1st October to the 31st December, 1852, and from the 1st January to the 31st December, 1853, in one volume. Price 11*s.*

THE ALPHABETICAL INDEXES for the above periods, in one volume. Price 13*s.*

THE SUBJECT-MATTER INDEX, from 1st October to 31st December, 1852. Price 9*s.*

THE SUBJECT-MATTER INDEX, from 1st January to 31st December, 1853. Price 16*s.*

THE CHRONOLOGICAL INDEX of APPLICATIONS for PATENTS and PATENTS GRANTED from the 1st January to the 31st December, 1854. Price 6*s.*

THE ALPHABETICAL INDEX for the above period. Price 7*s.*

THE SUBJECT-MATTER INDEX for the above period. Price 16*s.* 6*d.*

THE CHRONOLOGICAL INDEX of APPLICATIONS for PATENTS and PATENTS GRANTED from the 1st January to the 31st December, 1855. Price 6*s.* 6*d.*

THE ALPHABETICAL INDEX for the above period. Price 7*s.* 6*d.*

THE SUBJECT-MATTER INDEX for the above period. Price 17*s.*

THE CHRONOLOGICAL INDEX of APPLICATIONS for PATENTS and PATENTS GRANTED from the 1st January to the 31st December, 1856. Price 6*s.* 6*d.*

THE ALPHABETICAL INDEX for the above period. Price 8*s.*

THE SUBJECT-MATTER INDEX for the above period. Price 18*s.* 6*d.*

THE ALPHABETICAL INDEX of APPLICATIONS for PATENTS and PATENTS GRANTED from the 1st January to the 31st December, 1857. Price 8*s.*

THE CHRONOLOGICAL INDEX for the above period. Price 6*s.* 6*d.*

THE SUBJECT-MATTER INDEX for the above period. Price 19*s.* 6*d.*

THE ALPHABETICAL INDEX of APPLICATIONS for PATENTS and PATENTS GRANTED, from the 1st January to the 31st December, 1858. Price 8*s.*

THE CHRONOLOGICAL INDEX for the above period. Price 6*s.*

A FREE LIBRARY and READING ROOM, in connection with the Office of the Commissioners of Patents, is open to the Public daily from 10 till 4 o'clock.

In addition to the Printed Specifications, Indexes, and other publications of the Commissioners, the Library includes a Collection of the leading British and Foreign Scientific Journals, and text-books in the various departments of science and art. A printed Catalogue of the Library is on sale.

NOTE.—The Commissioners' publications may be consulted daily in the Library of the British Museum; in the Library of the Society of Arts; and in the Free Libraries of the following Towns and Cities:—

Aberdeen (*Public Library Town House*).
Accrington (*Mechanics' Institution, Bank Street*).
Belfast (*Harbour Office, Corporation Square*).
Beverley (*Guildhall*).
Birmingham (*Birmingham and Midland Institute, Cannon Street*).
Bolton-le-Moors (*Public Library, Exchange Buildings*).
Bradford, Yorkshire (*Borough Accountant's Office, Corporation Buildings, Swain Street*).
Brighton (*Town Hall*).
Bristol (*City Library, King Street*).
Burnley (*Office of the Burnley Improvement Commissioners*).
Cambridge (*Free Library, Jesus Lane*).
Canterbury (*Municipal Museum, Guildhall Street*).
Carlisle (*Free Library, Police Office*).
Chester (*Town Hall, Northgate Street*).
Cork (*Royal Cork Institution, Nelson Place*).
Crewe (*Railway Station*).
Darlington (*Mechanics' Institute, Skinnergate*).
Dorchester.
Drogheda.
Dublin (*Royal Dublin Society, Kildare Street*).
Dundalk.
Falmouth (*Public Library, Church Street*).
Gateshead (*Mechanics' Institute*).
Gorton (*Railway Station*).
Glasgow (*Stirling's Library, Miller Street*).
Grimsby, Great (*Mechanics' Institution, Victoria Street*).
Hanley, Staffordshire Potteries (*Town Hall*).
Hartlepool, West (*Literary and Mechanics' Institution, Church Street*).
Hertford (*Public Library, Town Hall*).
Huddersfield (*Commissioners' Offices, No. 1, South Parade*).
Hull (*Mechanics' Institute, George Street*).
Ipswich (*Museum Library, Museum Street*).
Keighley (*Mechanics' Institute, North Street*).
Kidderminster (*Public Free Library, Public Buildings, Vicar Street*).
Kings' Lynn, Norfolk (*Stanley Library, Athenæum*).
Lancaster (*Mechanics' Institute, Market Street*).
Leamington Priors (*Public Library, Town Hall*).
Leeds (*Town Clerk's Office, Town Hall*).
Leicester (*Corporation Library, Town Hall*).
Limerick.
Liverpool (*Free Public Library, Duke Street*).
——— (*Royal Institution*).
London (*British Museum*).
——— (*Society of Arts, John Street, Adelphi*).
Macclesfield (*Useful Knowledge Society*).
Maidstone.
Manchester (*Chetham Hospital*).
——— (*Free Library, Camp Field*).
Montrose.
Newark, Nottingham (*Mechanics' Institute, Middle Gate*).
Newcastle-upon-Tyne (*Literary and Philosophical Society*).
Newport, Monmouth (*Commercial Room, Town Hall*)
Northampton.
Norwich (*Free Library, St. John's, Maddermarket*).
Nottingham (*Corporation Rooms, St. Peter's Church side*).
Oxford (*Public Free Library, Town Hall*).
Paisley (*Government School of Designs, Gilmour Street*).
Plymouth (*Mechanics' Institute, Princess Square*).

Shrewsbury (*The Public Museum, College Street*).
Southampton (*Corporation Library, Audit House*).
Stirling (*Burgh Library, Town House, Broad Street*).
Stockport (*Court House, Vernon Street, Warren Street*).
Sunderland (*Corporation Museum, Athenæum, Fawcett Street*).
Tiverton.
Wakefield (*Mechanics' Institution, Barston Square*).
Warrington (*The Museum and Library*).
Waterford (*Town Hall, The Mall*).
Wednesbury (*Board of Health Offices*).
Wexford (*Mechanics' Institute, Crescent Quay*).
Wigan.
Wolverhampton (*School of Practical Art, Darlington Street*).
Wolverton (*Railway Station*).
Yarmouth, Norfolk (*Public Library, South Quay*).
York (*Lower Council Chamber, Guildhall*).

The Commissioners' publications have also been presented to the following Public Offices, Seats of Learning, British Colonies, and Foreign States:—

Public Offices, Institutions, &c.

Admiralty, Department of the Surveyor of the Navy.
——— Steam Branch.
——— Deptford Dockyard.
——— Woolwich ditto.
——— Chatham ditto.
——— Sheerness ditto.
——— Portsmouth ditto.
——— Devonport ditto.
——— Pembroke ditto.
Artillery Institute, Woolwich.
Board of Trade, Whitehall.
Ordnance Office, Pall Mall.
——— Small Arms Factory, Enfield.
War Office, Pall Mall.
Government School of Mines, &c., Jermyn St., Piccadilly.
Dublin Castle, Dublin.
Rolls Office, Chancery (Four Courts), Dublin.
Office of Chancery, Edinburgh.
East India House, Military Stores, Leadenhall Street.
Incorporated Law Society, Chancery Lane, London.

Seats of Learning.

Cambridge University.
Trinity College, Dublin.
Queen's College, Galway.
University College, London.

British Colonies.

Malta.
Cape of Good Hope.
Mauritius.
India—Bengal.
North-West Provinces.
Madras.
Bombay.
Ceylon.
Victoria—Patent Office, Melbourne.
Parliamentary Library, Melbourne.
New South Wales.
South Australia.
Tasmania.
New Zealand.
Newfoundland.
Canada—Quebec.
Toronto.
New Brunswick.
Prince Edward Island.
Antigua.

Wurtemberg—Bibliothek des Musterlagers, Stuttgart.

PATENT LAW AMENDMENT ACT, 1852.—All Specifications, Indexes, &c., printed by order of the Commissioners of Patents, are sold at the Great Seal Patent Office, 25, Southampton Buildings, Holborn.

THE PATENT LAW AMENDMENT ACTS (15 & 16 Vict., cap. 83; 16 Vict., cap. 5; and 16 & 17 Vict., cap. 115); with the Rules and Regulations made by the Commissioners of Patents for Inventions, and by the Lord Chancellor and the Master of the Rolls, under the Acts 15 and 16 Vict., c. 83, and 16 & 17 Vict., c. 115, accompanied by Specimen Forms of the Provisional Documents printed on sheets of the prescribed size. Price 6*d*.

THE REFERENCE INDEX of PATENTS, pointing out the Office in which each enrolled Specification of a Patent may be consulted; the Books in which Specifications, Law Proceedings, and other subjects connected with Inventions have been noticed; also such of the Specifications of Patents granted under the Act of 21 James I. as have been published by the authority of the Commissioners. Price 30*s.*

AN APPENDIX to the REFERENCE INDEX of PATENTS of INVENTION, containing Abstracts from such of the early Patents and Signet Bills as describe the nature of the invention, and which Patents have no enrolled Specifications. Price 4*s.*

AN INDEX to ALL INVENTIONS PATENTED in ENGLAND from 1617 to 1854 inclusive, arranged under the greatest number of heads, with parallel references to INVENTIONS and DISCOVERIES described in the scientific works of VARIOUS NATIONS, as classified by Professor Schubarth. By B. WOODCROFT.

The foreign works thus indexed form a portion of the Library of the Commissioners of Patents, where they may be consulted, or manuscript translations be had.

SOMMAIRE de toutes les INVENTIONS BREVETÉES en ANGLETERRE depuis 1617 jusqu'en 1854 inclusivement, arrangées d'après le plus grand nombre de rubriques, avec renvois aux INVENTIONS et DÉCOUVERTES décrites dans les ouvrages scientifiques de DIFFÉRENTES NATIONS, classés par le Professeur Schubarth. Par B. Woodcroft.

Les ouvrages étrangers ci-dessus font partie de la Bibliothèque de la Commission des Patentes, où l'on peut les consulter, et obtenir des traductions en manuscrit.

VERZEICHNISS aller in ENGLAND von 1617—1854 incl. PATENTIRTEN ERFINDUNGEN, unter vielfältige Titel gebracht, mit Hinweisungen auf ERFINDUNGEN und ENTDECKUNGEN die nach Prof. Schubarth's Klassificirung in den wissenschaftlichen Werken VERSCHIEDENER NATIONEN beschrieben sind. Von B. Woodcroft.

Die hier aufgeführten fremden Werke machen einen Theil der Bibliothek der Patent Commission aus, allwo sie nachgeschlagen oder schriftliche Uebersetzungen besorgt werden können.

REPERTORIO di tutte le INVENZIONI munite di LETTERE PATENTI in INGHILTERRA dal 1617—1854 inclusivo, poste in ordine sotto il piu gran numero di capi, con riferenze alle INVENZIONI e SCOPERTI descritti nelle opere scientifiche di DIVERSE NAZIONI, classate dal Professore Schubarth. Dal Sig. B. Woodcroft.

Le opere straniere quì indicate possono esser consultate nella Biblioteca dei Commissari delle Patenti, e traduzioni in manuscritto vi possono ottenersi.

B. WOODCROFT,
Superintendent of Specifications, &c.

REAPING MACHINES.—The entire series of Specifications and Drawings on this subject to the end of 1853, together with an Appendix, prepared by B. Woodcroft, of the Patent Office, and published under the sanction of the Commissioners, may be obtained at the cost price of 2*l.* 3*s.* 11½*d.*

FIRE-ARMS, PROJECTILES, &c.—The series of Specifications and Drawings on this Subject, from 15th May, 1718, to 31st December, 1853, with Alphabetical and Subject-matter Indexes, may be obtained at the cost price of 9*l.* 18*s.* 6½*d.*

The Indexes, separately, price 3*s.*

CATALOGUE of the LIBRARY of the GREAT SEAL PATENT OFFICE. Two vols. imp. 8vo. (Vol. I. Titles; Vol. II. Index.) Price 21*s.*

SUPPLEMENT to the SERIES of LETTERS PATENT and SPECIFICATIONS of LETTERS PATENT for INVENTIONS recorded in the Great Seal Patent Office, and granted between the 1st March (14 Jac. 1.) A.D. 1617, and the 1st October (16 Vict.) A.D. 1852; consisting for the most part of Reprints of scarce Pamphlets, descriptive of the early patented Inventions comprised in that Series. Edited by BENNET WOODCROFT, Superintendent of Specifications, etc. In one vol., price 9*s.* 6*d.*, or each Tract separately at the price affixed.

CONTENTS OF VOL. I.

1. Metallica; or, the treatise of Metallica, briefly comprehending the doctrine of diverse new metallical inventions &c. By SIMON STURTEVANT. (*Letters Patent, dated 29th February*, 1611.) Price 1*s.* 4*d.*
2. A Treatise of Metallica, but not that which was published by Mr. Simon Sturtevant, upon his Patent, &c. By JOHN ROVINSON (*Letters Patent, granted A.D.* 1612.) Price 4*d.*
3. A Commission directed to Sir Richard Wynne and others to inquire upon oath whether NICHOLAS PAGE or Sir NICHOLAS HALSE was the first inventor of certaine kilnes for the drying of malt, &c. &c. (*Letters Patent, Nos.* 33 *and* 85, *respectively dated* 8*th April*, 1626, *and* 23*rd July*, 1635.) Price 2*d.*
4. DUD DUDLEY'S Metallum Martis; or iron made with pit-coale, sea-coale, &c. (*Letters Patent, Nos.* 18 *and* 117, *respectively dated* 22*nd February*, 1620, *and* 2*nd May*, 1638.) Price 8*d.*
5. Description of the nature and working of the patent Water-scoop Wheels invented by WILLIAM WHELER, as compared with the raising wheels now in common use. By J. W. B. Translated from the Dutch by Dr. Tolhausen. (*Letters Patent, No.* 127, *dated* 24*th June*, 1642.) Price 2*s.*
6. An exact and true definition of the stupendous Water-commanding Engine, invented by the Right Honourable (and deservedly to be praised and admired) EDWARD SOMERSET, Lord Marquis of WORCESTER, &c. &c. (*Stat.* 15 *Car. II. c.* 12. *A.D.* 1663.) Price 4*d.*
7. Navigation Improved; or the art of rowing ships of all rates in calms, with a more easy, swift, and steady motion than oars can. By THOMAS SAVERY. (*Letters Patent. No.* 347, *dated* 10*th January*, 1696.) Price 1*s.*
8. The Miner's Friend; or an engine to raise water by fire described, &c. By THOMAS SAVERY. (*Letters Patent, No.* 356, *dated* 25*th July*, 1698, *and Stat.* 10 *&* 11 *Will. III. c.* 31, *A.D.* 1699.) Price 1*s.*
9. Specimina Ichnographica; or a brief narrative of several new inventions and experiments, particularly the navigating a ship in a calm, &c. By JOHN ALLEN, M.D. (*Letters Patent, No.* 513, *dated* 7*th August*, 1729.) Price 8*d.*
10. A description and draught of a new-invented Machine for carrying vessels or ships out of or into any harbour, port, or river, against wind and tide, or in a calm, &c. By JONATHAN HULLS. (*Letters Patent, No.* 556, *dated* 21*st December*, 1736.) Price 8*d.*
11. An historical account of a new method for extracting the foul air out of ships, &c., with the description and draught of the machines by which it is performed, &c. By SAMUEL SUTTON, the Inventor. To which are annexed two relations given thereof to the Royal Society by Dr. Mead and Mr. Watson, (*Letters Patent, No.* 602, *dated* 16*th March* 1744.) Price 1*s.*

In course of Publication, by Order of the Commissioners of Patents.

ABRIDGMENTS (in Classes, and Chronologically arranged) of all SPECIFICATIONS of PATENTED INVENTIONS, from the earliest enrolled to those published under the Act of 1852.

These books are of 12mo size, and as each is limited to inventions of one class only, they can be sold at prices sufficiently moderate to enable the humblest inventor to examine for himself whether his discovery has been previously patented or not.

At the foot of each abstract are given references to notices of the inventions in scientific and other works, and to the reports of law proceedings for infringements, &c. &c. &c.

The classes already published are,—

1. Drain Tiles and Pipes, price 6*d.*
2. Sewing and Embroidering, price 6*d.*
3. Manure, price 6*d.*
4. Preservation of Food, price 6*d.*
5. Marine Propulsion, price 4*s.*
6. Manufacture of Iron and Steel, price 5*s.*
7. Aids to Locomotion, price 1*s.*
8. Steam Culture, price 2*s.*
9. Watches, Clocks, and other Timekeepers, price 1*s.* 6*d.*
10. Fire-arms and other Weapons, Ammunition, and Accoutrements, price 6*s.* 6*d.*
11. Paper.—Part I. Manufacture of Paper, Pasteboard, and Papier Mâché, price 3*s.*
12. Paper.—Part II. Cutting, Folding, and Ornamenting; including Envelopes, Cards, Paper-hangings, &c., price 2*s.*
13. Typographic, Lithographic, and Plate Printing, price 7*s.*
14. Bleaching, Dyeing, and Printing Yarns and Fabrics, price 9*s.* 6*d.*

The following are in the press:—

Electricity and Magnetism: their Generation and Applications.
Preparation of Fuel, and Apparatus for its Combustion.
Manufacture and Applications of India Rubber, Gutta Percha, &c.; including Air, Fire, and Water Proofing.
Production and Applications of Gas.
Steam Engines.
Metals and Alloys.

B. Woodcroft.

COLONIAL PATENTS.—Information as to the Mode of obtaining Protection for Inventions in the Colonies; contained in Communications from the Governors, &c. of the different British Colonies in answer to the Application of Mr. W. J. Curtis for a Patent. Price 1*s.*

PATENT RIGHTS in the COLONIES.—Abstract of Replies to the Secretary of State's Circular Despatch of July 11, 1856, calling for Information as to the Form of the Application to be made by Persons desirous of obtaining Patent Rights in the Colonies, and the Expenses attendant on the Grant of such Patent Rights. Price 2*s.* 6*d.*

The above, and all other works published by the Commissioners of Patents, are now on sale at the Great Seal Patent Office, 25, Southampton Buildings, Holborn.

This Journal is published on the evenings of Tuesday and Friday, and will be forwarded, post free, to Subscribers.—Terms, 30*s.* per annum.—Subscriptions received at the Great Seal Patent Office, where also single copies, at twopence each, may be obtained.

No. 592. TUESDAY, SEPTEMBER 6, 1859. Price 2d.

Notices to Proceed.

NOTICE is hereby given, that

1019. WILLIAM DICKS, of Leicester, Boot Manufacturer, and WILLIAM HOPWELL, also of Leicester, Machinist, have given notice at the Office of the Commissioners of their intention to proceed with their application for Letters Patent for the invention of "Improvements in machinery for making screws, and applying them in fixing the soles of boots and shoes."

As set forth in their petition, recorded in the said office on the 23rd day of April, 1859.

1035. And JAMES HOLMES, of Street, Somerset, Accountant, has given the like notice in respect of the invention of "Improvements in applying eyelet holes to boots and shoes and in binding boots and shoes."

As set forth in his petition, recorded in the said office on the 25th day of April, 1859.

1044. And WILLIAM MACKENZIE, Publisher, of Glasgow, county of Lanark, Scotland, has given the like notice in respect of the invention of "An improved method of printing impressions upon an enlarged or reduced scale, either from engraved plates, electrotypes, blocks, drawings, or other surfaces."

As set forth in his petition, recorded in the said office on the 26th day of April, 1859.

1053. And GEORGE PEARSON, of Bugbrook, near Weedon, in the county of Northampton, Contractor, has given the like notice in respect of the invention of "Improvements in apparatus for cutting and shaping trenails."

As set forth in their respective petitions, all recorded in the said office on the 27th day of April, 1859.

1068. And NICOLAS LIBOTTE, Mechanician, of 33, Boulevard St. Martin, Paris (empire of France), has given the like notice in respect of the invention of "A steam brake for mines, which may also be worked by hand."

1069. And NATHANIEL JOHN HOLMES, Gentleman, of Glasgow, county Lanark, Scotland, has given the like notice in respect of the invention of "Improvements in electric telegraphs and apparatus connected therewith."

1070. And EUGÉNE LARDENOIS, of Brussels, in the kingdom of Belgium, Merchant, has given the like notice in respect of the invention of "Improvements in the manufacture of pulp for paper, pasteboard, and other like articles."—A communication from Bonnet Frederic Brunel, residing in Brussels.

1071. And THOMAS CLARKE, of Hackney, in the county of Middlesex, Engineer, has given the like notice in respect of the invention of "Improvements in sheaves or pulleys for paying out and hauling in ropes, chains, and cables for communicating motion to machinery, and for other useful purposes."

As set forth in their respective petitions, all recorded in the said office on the 28th day of April, 1859.

1077. And JOHN WELLINGTON WELCH, of Manchester, in the county of Lancaster, Warp Sizer, has given the like notice in respect of the invention of "Improvements in sizing or dressing yarns or threads for weaving."

1078. And HENRY BOSSHARD, of Paris, in the empire of France, Engineer, has given the like notice in respect of the invention of "An improved mechanism for obtaining and imparting motive power."

1081. And THOMAS SMITH, of Bredfield, in the county of Suffolk, has given the like notice in respect of the invention of "Improvements in cultivating implements."

As set forth in their respective petitions, all recorded in the said office on the 29th day of April, 1859.

1085. And EDWARD FRANCIS, of Wrexham, in the county of Denbigh, Grocer, has given the like notice in respect of the invention of "Improved

apparatus applicable to the treatment of tea and other useful purposes."
As set forth in his petition, recorded in the said office on the 30th day of April, 1859.

1092. And THOMAS HALL ARROWSMITH, of Bolton, in the county of Lancaster, Cotton Spinner, has given the like notice in respect of the invention of "Improvements in carding engines."

1100. And DANIEL MOORE, of Brooklyn, in the state of New York, United States of America, has given the like notice in respect of the invention of "Improvements in machinery for rubbing or dressing types."
As set forth in their respective petitions, both recorded in the said office on the 2nd day of May, 1859.

1106. And THOMAS WILLIAM MILLER, of Her Majesty's Dockyard, in the parish of Portsea, in the county of Southampton, has given the like notice in respect of the invention of "Improvements in apparatus for and mode of generating steam and economizing fuel."

1115. And ROBERT MUSHET, of Coleford, in the county of Gloucester, Metallurgist, has given the like notice in respect of the invention of "An improvement in the manufacture of cast steel."
As set forth in their respective petitions, both recorded in the said office on the 3rd day of May, 1859.

1122. And HENRY TURNER, of Park Street, Mile End, Engineer, has given the like notice in respect of the invention of "Improvements in steam engines, and apparatus connected therewith."

1123. And JOSEPH FELIX ALLENDER, of Brierley Hill, in the county of Stafford, Manager of Works, and DANIEL ROWLEY, of Brierly Hill, aforesaid, Iron Roller, have given the like notice in respect of the invention of "Improvements in shears for cutting boiler plates and sheets, and for other like purposes."
As set forth in their respective petitions, both recorded in the said office on the 5th day of May, 1859.

1150. And ROBERT MUSHET, of Coleford, in the county of Gloucester, Metallurgist, has given the like notice in respect of the invention of "Improvements in puddling iron and steel."

1151. And ROBERT MUSHET, of Coleford, in the county of Gloucester, Metallurgist, has given the like notice in respect of the invention of "Improvements in the manufacture of iron."

1154. And WILLIAM EDWARD GEDGE, of the firm of John Gedge and Son, No. 4, Wellington Street, South, Strand, in the county of Middlesex, Patent Agents, has given the like notice in respect of the invention of "Improvements in the manufacture of steel."—A communication from abroad by Claude Joseph Perinel, of Fourvoiry Department, de l'Isère, in the empire of France, Ironmaster.
As set forth in their respective petitions, all recorded in the said office on the 7th day of May, 1859.

1161. And GEORGE GIBSON BUSSEY, of Dunn's Passage Factory, 485, New Oxford Street, in the county of Middlesex, Manufacturer of Leather Goods, has given the like notice in respect of the invention of "An improved contrivance for carrying cartridges and to facilitate using them."
As set forth in his petition, recorded in the said office on the 9th day of May, 1859.

1182. And HENRY CLARKE, of Wakefield, in the county of York, Corn Factor, has given the like notice in respect of the invention of "Improvements in balancing mill stones to the running as well as the standing state."—A communication from abroad by Thomas Narburgh, of St. Louis, Missouri, North America.

1183. And MICHAEL HENRY, of 84, Fleet Street, in the city of London, Patent Agent, has given the like notice in respect of the invention of "A mode of protecting the mariner's compass against local attraction."—A communication from abroad by Samuel C. Bishop, of New York, in the United States.
As set forth in their respective petitions, both recorded in the said office on the 11th day of May, 1859.

1197. And WILLIAM CLARK, of 53, Chancery Lane, in the county of Middlesex, Engineer and Patent Agent, has given the like notice in respect of the invention of "Certain improvements in knitting machines."—A communication from abroad by Mr. Jonas Bradley Aiken, of Manchester, in the county of Hillsborough and state of New Hampshire, in the United States of America, Manufacturer.
As set forth in his petition, recorded in the said office on the 13th day of May, 1859.

1251. And WILLIAM COLBORNE CAMBRIDGE, of Bristol, Agricultural Implement Maker, has given the like notice in respect of the invention of "Improvements in thrashing and winnowing machines."
As set forth in his petition, recorded in the said office on the 20th day of May, 1859.

1569. And NESSERWANJEE ARDASEER, British Subject of Bombay, East Indies, has given the like notice in respect of the invention of "An improved method of making steam boilers."
As set forth in his petition, recorded in the said office 1st day of July, 1859.

1617. And WILLIAM ROBINSON, of Wembdon, Bridgewater, in the county of Somerset, Brewer, has given the like notice in respect of the invention of "Improvements in cask washing machines."
As set forth in his petition, recorded in the said office on the 7th day of July, 1859.

1645. And HENRY DAVIES, of No. 13, Leicester Buildings, in King Street, Liverpool, in the county of Lancaster, has given the like notice in respect of the invention of "Improvements in the manufacture of soap."
As set forth in his petition, recorded in the said office on the 11th day of July, 1859.

1654. And THOMAS WRIGHT, of 9, George Yard, Lombard Street, in the city of London, Engineer, has given the like notice in respect of the invention of "Improvements in the permanent way of

railways, and in the means of preventing railway accidents thereon."
As set forth in his petition, recorded in the said office on the 12th day of July, 1859.

1661. And James Combe, of Belfast, has given the like notice in respect of the invention of "Improvements in machinery for hackling flax and other fibrous substances."
As set forth in his petition, recorded in the said office on the 13th day of July, 1859.

1718. And Joseph Hartley, of Romiley, near Stockport, in the county of Chester, Manager, has given the like notice in respect of the invention of "Improvements in machinery for regulating the velocity of steam and other engines."
As set forth in his petition, recorded in the said office on the 22nd day of July, 1859.

1778. And Elizabeth Merrell, of Little George Street, Minories, in the city of London, Tin and Zinc Plate Worker, has given the like notice in respect of the invention of "Improvements in apparatus for washing and cleansing."
As set forth in her petition, recorded in the said office on the 1st day of August, 1859.

1808. And Robert Thomson Pattison, residing at Daldorch, in the county of Ayr, in Scotland, has given the like notice in respect of the invention of "Improvements in dyeing certain woven fabrics."
As set forth in his petition, recorded in the said office on the 5th day of August, 1859.

1822. And John Cunningham, of Paisley, in the county of Renfrew, North Britain, Card Perforator, has given the like notice in respect of the invention of "Improvements in and connected with Jacquard apparatus for weaving."
As set forth in his petition, recorded in the said office on the 8th day of August, 1859.

1836. And John Cannon, of Billiter Street, in the city of London, Ship Broker, has given the like notice in respect of the invention of "Improvements in washing machines."—A communication from abroad by Abiel Odell, of Bourmanville, in the county of Durham, Canada, Machinist.
As set forth in his petition, recorded in the said office on the 9th day of August, 1859.

1856. And William White, of No. 34, North Audley Street, Grosvenor Square, has given the like notice in respect of the invention of "A four-wheeled safety sociable carriage."

1860. And Warren de la Rue, Manufacturer, and Dr. Hugo Müller, both of 110, Bunhill Row, in the county of Middlesex, have given the like notice in respect of the invention of "Improvements in treating japan and other vegetable wax."
As set forth in their respective petitions, both recorded in the said office on the 11th day of August, 1859.

1909. And Henry William Harman, of Manchester, in the county of Lancaster, Civil Engineer, has given the like notice in respect of the invention of "Improvements in steam boilers, and in working the same, and in safety valves, and apparatus connected therewith."
As set forth in his petition, recorded in the said office on the 19th day of August, 1859.

1944. And Michael John Stark, of the city of Norwich, Chemist and Merchant, has given the like notice in respect of the invention of "Producing a new chemical or artificial manure from bones, and all such animal and fatty matters."
As set forth in his petition, recorded in the said office on the 26th day of August, 1859.

And notice is hereby further given, that all persons having an interest in opposing any one of such applications are at liberty to leave particulars in writing of their objections to such application, at the said Office of the Commissioners, within twenty-one days next after the date of the Gazette [and of the Journal] in which this notice is issued.

Patents on which the Stamp Duty of £50 has been Paid.

(*To 3rd September*, 1859, *inclusive*).

1st September.

2068. William Smith Mitchell, of Cornhill, in the city of London, and Charles Martin Ernest Gärtner, of Lower Ashby Street, Northampton Square, in the county of Middlesex, Watchmakers, for an invention of "Improvements in the construction of watches."—Dated 5th September, 1856.

2076. Sidney Wesley Park and Edgar Stimpson Ells, both of the city of Troy, in the State of New York, United States of America, for an invention of "Improvements in machinery for knitting tubular ribbed fabrics."—Dated 6th September, 1856.

2nd September.

2054. Evan Leigh, of the city of Manchester, in the county of Lancaster, Mechanical Engineer, and George Peter Leigh, of the same place, Manager, for an invention of "Improvements in parts of machinery or apparatus used in preparing and spinning cotton and other fibrous substances."—Dated 4th September, 1856.

2070. Robert Wilson, of Patricroft, in the county of Lancaster, Engineer, for an invention of "Improvements in valves and in apparatus connected therewith."—Dated 5th September, 1856.

3rd September.

2062. Benjamin O'Neale Stratford, Earl of Aldborough, of Stratford Lodge, in the county of Wicklow, in Ireland, for an invention of "Improvements in aërial navigation, and in the apparatus connected therewith, parts of which are applicable to locomotion generally."—Dated 4th September, 1856.

2064. John Benjamin Dancer, of the city of Manchester, in the county palatine of Lancaster, Optician, for an invention of "Improvements in photographic cameras, and in the apparatus connected therewith."—Dated 5th September, 1856.

FOREIGN PATENTS.

UNITED STATES OF AMERICA.

(Communicated by the Commissioner of Patents.)

LIST of PATENTS, with Claims annexed, issued from the United States Patent Office, for the week ending 16th August, 1859, and each bearing that date.

No. 25,083. GILBERT L. BAILEY, of Portland, Me., for an "Improved machine for punching holes in leather."

"I claim, 1st, the arrangement and combination of the bed piece L, lever A, and hollow cutter C, provided with a standard D, connecting rod E, and treadle H, as and for the purpose set forth and described. 2nd, I do not claim an adjustable cutter bed as such; but I claim the arrangement as set forth, of the circular adjustable cutter bed D, in such a relative position to the cutter C, as to accomplish the object herein specified."

No. 25,084. WM. T. BARNES, of Buffalo, N. Y., for an "Improvement in sewing machines."

"I claim, 1st, working two needles vertically and alternately in the same hole in the bed plate, substantially in the manner and for the purpose herein set forth. 2nd, I claim the arrangement of springs 5 and 7, wedge 10, finger 6, spring 18, and stop 20, substantially in the manner herein specified. 3rd, I claim the arrangement of lever 13, slide 11, and lever 12, when said lever 12 is provided with points, is pivoted to slide 11, and made to operate substantially in the manner herein described. 4th, I claim the arrangement of the ratchet wheel *a*, serrated bar *c*, and ratchet *c*, with the spool, rod, and levers C, C^1, substantially as set forth."

No. 25,085. MELLEN BATTEL, of Albany, N. Y., for an "Improvement in steam generators."

"What I claim, is, the combination with the tubes C, C, extending downward through the tube sheet, or crown of the fire box, or downward into a flue, and upward through the water above the tube sheet, of the inner tubes D, D, applied in the manner herein described, for the purpose set forth."

No. 25,086. THEOPHILUS D. BERRY, of Lowell, Mass., for an "Improved clothes rack."

"What I claim as my invention, and desire to secure by Letters Patent, is, the construction of my clothes rack with divided center, or of two sections, each to consist of center piece A, slats F, braces H, and circumferential pieces E, united to each other, as described, when these two sections are combined with each other by plates C, so hinged as to allow the rack to be folded and opened, both vertically and circumferentially, in the manner described, to obtain by this divided center, a rack suitable for use, when folded closely, and circumferentially, for the purposes set forth."

No. 25,087. EZEKIEL BOOTH, of Troy, N. Y., for an "Improvement in sewing machines."

"I claim, first, the combination of an eye-pointed vibrating lever, and a looper, operating together, substantially in the manner and for the purpose set forth. Second, I claim the vibrating of the eye-pointed lever by a positive motion given to it by the rollers *t*, *t*, entirely, and as contradistinguished for the use of a spring of any kind, by which means, I ensure its reliable action, under its rapid motions, as set forth."

No. 25,088. MARO BRADLEY, of Dundee, Ill., for an "Improvement in horse rakes."

"I claim, in the construction of horse rakes, the use of the recessed metal bar *b*, spurs E, F, rods or shoes D, elastic bar I, lever J, slide rod K, and projection G, the whole being constructed and employed together in the manner and for the purpose substantially as herein described."

No. 25,089. JOHN DAVID BROWN, of Cincinnati, O., for an "Improved cabinet furniture."

"What I claim as my invention, and desire to secure by Letters Patent, is, the arrangement of the folding ends C, C^1, as set forth, and the flaps or leaves E, E^1, hinged on the inside, for the purpose herein substantially described."

No. 25,090. HENRY BURT, of Newark, N. J., for an "Improved door fastener."

"I claim a permanent door bolt, made with the fastening plate *b*, bolt case *a*, and bolt *c*, secured and operated as herein described."

No. 25,091. JOSEPH CALEF, of Buffalo, N. Y., for an "Improvement in the running gear of carriages."

"What I claim as my invention, and desire to secure by Letters Patent, is, the journal box E, constructed substantially as described, and combined with the friction rollers B (or slides W), for the purposes set forth. The combination of the axle A, journal box E, friction rollers (B, and equivalents,) and hub D, for the purposes set forth. The arrangement of the jointed braces L, M, N, in combination with the running gear of carriages, for the purposes set forth."

No. 25,092. WM. S. CARR, of New York, N. Y., for an "Improved watercloset."

"What I claim as my invention, and desire to secure by Letters Patent, is, regulating the action of the cock, or valve, in watercloset by the joint operation of the lever, and weight of water in the pan, substantially as specified, whereby the cock, or valve, is kept open until the weight of water in the pan, regulates the closing thereof. I also claim the construction of the valve *c*, with the balancing diaphragm 12, valve 10, and spring 13, as set forth."

No. 25,093. H. CHANCEY, of Perry, Geo., for an "Improvement in machines for dressing stone."

"What I claim, is, the arrangement of the pick, or hammer shafts N, N, adjustable shaft R, and adjustable traverse bar P, when combined or used in connection with the reciprocating carriage C, and laterally moving or adjustable bed U, in the manner and for the purpose herein set forth."

No. 25,094. ABRAM H. CLEAR, of Providence, R. I., for an "Improvement in pipe connections for steam boilers."

"I claim making the connections between the injection pipe or other similarly submerged pipe of a steam vessel, or any other vessel, with the side or exterior of the vessel, by means of a valve box situated within or between the inside and outside planking of the vessel fitted with a valve, capable of being operated by a screw, or its equivalent, by a person on or above the deck of the vessel, substantially as herein described."

No. 25,095. JOSEPH H. CLIFTON, of New Castle, Pa., for an "Improvement in manufacture of machine belting."

"What I claim, is, the process of manufacturing belting for machinery from fibrous materials, substantially as herein described."

No. 25,096. JOSEPH H. CLIFTON, of New Castle, Pa., for an "Improvement in belting for machinery."

"I claim, as a new article of manufacture, belting made of fibrous material, by the process herein set forth."

No. 25,097. EDWARD K. COLLINS, of Chili, N. Y., for an "Improvement in clover bolts."

"Claim.—The combination and arrangement of two bolts in clover machines, when said bolts have a counter and upward movement produced in the manner and for the purposes specified."

No. 25,098. THOS. S. COX, of La Fayette, Ind., for an "Improvement in the mole of drain ploughs."

"What I claim, is, the peculiar shape of the mole 'C,' by the forward movement of the mole 'C,' the earth is

carried from the bottom of the ditch, by means of the terra ducts 'B' from the point of the mole 'D' to the rear of the shank 'A,' and pressed more densely by the increased earth coming in contact with the convex end of the mole 'C' in rear of the shank 'A,' in such a manner as to make a better arch, and more durable than any heretofore made, leaving the bottom of the ditch almost entirely uncompressed, hence I do not claim anything, except the invention of the terra ducts, 'B,' ending in the convex on the top of the mole 'C.'"

No. 25,099. JOHN H. CRANE, of Charlestown, Mass., for an "Improved carpet sweeper."

"What I claim, is, the arrangement of the belt, rotating guides, and driven pulley, operating in combination with carpet sweepers, essentially as set forth."

No. 25,100. THOS. B. DE FOREST, of New York, N. Y., for an "Improvement in india rubber springs for railroad cars, &c."

"I claim, composing a spring of a series of blocks, or segments of circle of vulcanized india rubber, placed and held between two parallel plates, or equivalents, substantially as described; but this, I only claim, when the series of blocks are so arranged and held between the two parallel plates, that their contiguous faces shall not come in contact under light loads, but shall come into contact and give mutual support, as the load increases, substantially as and for the purpose specified."

No. 25,101. THOS. DOUGHERTY, of Macon, Geo., for an "Improvement in switches for railroads."

"What I claim, is, the combination and arrangement of the flat bars A, A, and the stationary bed plates C, C, provided with the guide rails D, D, in connection with the rails G, when constructed and operated, substantially as and for the purpose above set forth."

No. 25,102. EUGENE DUCHAMP, of St. Martinsville, La., for an "Improvement in self-releasing whiffle trees.

"What I claim, is, operating the two rods simultaneously by means of the slotted guards D, D, in combination with the boxes G, G, and lips *c*, *c*, in the manner and for the purposes herein specified."

No. 25,103. EUGENE DUCHAMP, of St. Martinsville, La., for an "Improvement attaching thills to vehicles."

"Claim:—The combination of the swivel coupling boxes E, having an elliptical slot through their ends, thill-irons, having fluked portions G, and hinged gates I, or their equivalents, substantially as herein shown and for the purpose specified."

No. 25,104. JACOB EDSOM, of Boston, Mass., for an "Improved carpet sweeper."

"I claim producing the motive power of the machine by means of a belt of rubber, or gutta percha, interposed and running between the pulley or roller *n*, and the surface to be swept or passed over, as set forth. I also claim, arranging the guiding wheel *i* upon the stationary hollow shaft, or bushing *k*, through which the axle of the brush-shaft passes as described, and for the purposes specified."

No. 25,105. ASAHEL ELMER, of Shabbona Grove, Ill., assignor to Nathan Elmer, Ruben M. Richard, of same place, for an "Improvement in mole plough."

"I claim, first, in combination with the adjustable block B on the plough beam, the scoring or leveling plough D in advance of it, substantially as and for the purpose described. 2d, I also claim, in combination with the plough beam and coulter, the swinging weighted crane, or lever, for preventing the careening of the plough, or for recovering its proper position after it has careened, substantially as described. 3rd, I also claim the combination of a forked coulter for cutting a wedge shaped or tapering slice over the coulter gash, with a pressing or driving device for forcing down said slice, and thus packing the coulter gash, as described. 4th, I also claim a mole or former, made of a series of conical-shaped sections, which increase in size, as they recede from the coulter, and which are so linked together as that they may move in a horizontal plane, but be comparatively rigid in a vertical plane, substantially as herein described and represented, and for the purpose set forth. 5th, I claim, in combination with the mole L, the scorer or shoe *m*, on its rear section or end, said scorer forming a groove or channel in the bottom of the finished drain, for admitting the water into it, the sides of the drain being so closely packed as to prevent the water from entering there, said scorer being constructed and arranged, as herein represented."

No. 25,106. D. R. ERDMANN, of Philadelphia, Pa., for an "Improved white lead apparatus."

"I claim a rotary cylinder C, arranged with double wire nettings *d*, in combination with a vat A, provided with a tube F, substantially in the manner and for the purpose herein specified."

No. 25,107. ALEXR. FOROT, of Paris, France, for an "Improvement in fabrics."

"I claim the manufacture of a new kind of fabric without weaving, composed simply of threads glued upon a base of paper or any suitable kind of material, such fabric being left plain or ornamental by embossing, or any other process, substantially as herein described."

No. 25,108. BENJN. FULGHUM, of Richmond, Ind., for an "Improved sawing machine."

"I claim, 1st, the combination and arrangement of the two frames B, C, placed one within the other, and arranged substantially as herein described, so as to admit of the saws being adjusted vertically, and also moved horizontally forward and back, for the purpose set forth. 2nd, the arrangement of the shafts g^1 and F, with their respective gearing f^1, *p*, and the pulley J, in connection with the two reciprocating frames B, C, whereby the saws are rotated and at the same time have a reciprocating motion communicated to them. 3rd, in combination with the two circular saws d^1, *w*, the inclined ways e^1, e^1, of the log carriage I, for the purpose set forth."

No. 25,109. H. P. GENGEMBRE, of Alleghany, Pa., for an "Improvement in manufacture of coal oils."

"What I claim as my invention, and desire to secure by Letters Patent, is, the continual progressive and gradual destructive distillation of coal or other bituminferous substance, for the purpose of obtaining therefrom the different products of distillation by means and with the use of the apparatus herein described, or their equivalent."

No. 25,110. CHAS. GOODYEAR, of New Haven, Conn., for an "Improvement in manufacture of porous rubber cloth."

"I claim as my invention, and desire to secure by Letters Patent, is, a new porous manufacture, pervious to air and water repellant, composed of a woven or equivalent fabric, and a thin porous coating of india-rubber or allied gum, substantially as described."

No. 25,111. CHAS. GOODYEAR, of New Haven, Conn., for an "Improvement in india-rubber fabrics."

"I claim as my said invention, and desire to secure by Letters Patent, is, the porous and water repellant manufacture, composed of a bat or fleece of cotton or other fibre, and india-rubber or allied gum, united and rendered porous, substantially as specified."

No. 25,112. JOSEPH GRUNWALD, of New York, N.Y., for an "Improvement in clasps for skeleton skirts."

"What I claim as my invention, and desire to secure by Letters Patent, is, the combination of the hoops or springs, with the tape by means of clasps, constructed substantially as described and represented by Figs. III, IV, and V, and for the purpose specified."

No. 25,113. JAMES HAMILTON, of New York, N.Y., for an "Improved cross-cut sawing machine."

"What I claim as my invention, and desire to secure by Letters Patent, is, the manner herein described of arranging the shaft *d* and its gear wheel *f*, and bevel gear *r*, in connection with the bevel gear *g*, and gear *s*, on the shaft 1, so that said shaft *d* can be changed to stand horizontally and give motion to the saw, whether the said saw and the gearing thereof be in a horizontal or vertical position, substantially as specified, thereby adapting one machine to be moved by hand, in felling trees, or sawing up logs, as set forth. I also claim, in combination with the aforesaid machine for sawing logs, the detachable frame *v*, buck *w*, and variable lever *x*, for holding smaller logs, while being sawed for fire wood, substantially as specified."

No. 25,114. A. HAMMOND, of Jacksonville, Ill., for an "Improvement in mole ploughs."

"What I claim as my invention, and desire to secure by Letters Patent, is, the shoe E, provided with a knife N, and projection L, when the same are arranged, and operate in the manner and for the purposes herein set forth."

No. 25,115. B. S. Healy, of Cohocton, N. Y., for an "Improvement in self-acting wagon brakes."

"Having thus described my improvements in wagon brakes, what I claim therein as new, and desire to secure by Letters Patent, is, the combination of a forked pole, arranged substantially as described, with the hounds, whereby the pole is free to slide in its forks, and operate the brakes, without moving the forks backward in the hounds. In combination with brakes pivoted to a fixed bar as described, I claim the brake blocks, arranged and connected with the brakes as set forth, whereby the friction of the wheels on the blocks, draws the brakes toward and causes them to press with greater force against the wheels."

No. 25,116. Wm. Henderson, of Baltimore, Md., for an "Improvement in car seats."

"What I claim as of my invention, and desire to secure by Letters Patent, is, 1st, the construction of a railway reclining chair or couch securely attached to the floor of the car, with the whole chair reversible, so as to face either end of the car substantially as described. 2nd, the mode of varying the height of the back of the chair, by making it in two pieces, and suspending the lower portion, substantially as described. 3rd, in combination with a chair reversible as aforesaid, I claim the double acting foot board, single reversing leg rest, and means for extending it by the action of the arms of the chair, substantially as herein described."

No. 25,117. Robt. Heneage, of Buffalo, N. Y., for "Improved hose coupling."

"I claim the arrangement of the screw sections B and C, and packing K, upon the cone extension A, as herein described."

No. 25,118. H. C. Hunt, of Ottumwa, Iowa, for an "Improved vise."

"What I claim as my invention, and desire to secure by Letters Patent is, in constructing a vise in such a manner that it will self-retain itself upon a table or bench, substantially in the manner herein set forth."

No. 25,119. John W. Huntley, of Lane's Creek, N. C., for an "Improvement in cotton seed planters."

"What I claim as new, and desire to secure by Letters Patent is, the vertical rotating toothed shaft H, in connection with the follower or gatherer J, placed within the hopper G, and arranged for joint operation substantially as and for the purpose set forth."

No. 25,120. Levi S. Ives, of Brooklyn, N. Y., for an "Improvement in mill stone bushes."

"I do claim, 1st, the placing, substantially as set forth, of a cylinder D, which contains the spindle collar B, blocks F, and the adjusting wedges G, within a cylinder M, secured within the centre of the bed stone, the cylinder D being allowed a vertical movement or play within the cylinder M, to admit of the vertical adjustment of the spindle, and consequently the runner or upper millstone, with but little friction, and keeping all the parts in position, so as to prevent their derangement. 2nd, the arrangement of the plates J, K, L, with the washer I and ring H, or their equivalent, in connection with the projections *d* on the inner side of the cylinder D, substantially as described, to prevent the casual turning of the blocks with the spindle. 3rd, the plate N, provided with the flanch O and the dome shaped cap P, provided with the flanch Q, in connection with the cap T and plate *g*: the above parts being attached, respectively to the cylinder D, spindle collar B, and driver R, to form an air and a dust chamber, substantially as and for the purposes set forth."

No. 25,121. H. R. Jerome, of Monroeville, O., for an "Improvement in mole ploughs."

"I claim, 1st, the arrangement of a beam, carrying a mole plough, with the front and rear standards of the front and rear propelling wheels, and with the adjusting device, substantially as and for the purposes set forth. 2nd, providing the coulter with a series of notches, and arranging the draught chain in one or other of said notches, and thus having the draught applied directly to the coulter, substantially as and for the purposes set forth. 3rd, the combination of a coulter which is elliptical in form in its transverse section, with a mould, which is conical at its front and rear ends, substantially as and for the purposes set forth."

No. 25,122. Wm. B. Johns, of the U. S. Army, for an "Improvement in apparatus for lighting gas burners."

"I claim giving the wrench staff the jointed sections E and F, so that a match inserted in the extreme section may illuminate the burner key while the gas is being turned on, and also serve as a torch to ignite the gas."

No. 25,123. Thos. J. Jolly, of Olean, Ind., for an "Improved washing machine."

"I claim as new and of my invention herein, and desire to secure by Letters Patent, the described arrangement and combination of the treadle I, sliding table C, and rotary rubber D, the whole being constructed and operating in the manner and for the purpose set forth."

No. 25,124. Morris L. Keen, of Roger's Ford, Pa., for "Improved machinery for manufacturing artificial fuel."

"Having thus fully described the nature of my invention, what I claim therein as new, and desire to secure by Letters Patent is,—1. The combination and arrangement of the mills, conveyors, mixing and heating cylinders, moulding and conveying apparatus, substantially in the manner and for the purpose herein described. 2. I also claim the combined use of the moulding apparatus, and of the tank or reservoir of water, for the purpose of receiving and moulding the heated and plastic material in said tank of water, for cooling the machinery and fuel, and for preventing the material from adhering to the machine, substantially as herein described. 3. I also claim the combination of the endless apron with the moulding apparatus, operating in a tank or reservoir of water, substantially in the manner and for the purposes described."

No. 25,125. Hazard Knowles, of New York, N. Y., for an "Improvement in clasps for fastening bands on cotton bales, &c."

"What I claim as my invention, and desire to secure by Letters Patent, is, the method of securing straps by means of a roller, substantially such as described, in combination with the wedge-formed mortise of the sleeve, which receives the strap, substantially as described."

No. 25,126. S. S. Langdon, of Cleveland, O., for an "Improved churn."

"Having thus fully described my invention, what I claim, and desire to secure by Letters Patent of the United States, is, the above described construction and arrangement of rotary churns, when the same are provided with the dash frame K, and chambers E, and the whole constructed, arranged, and operated substantially as set forth."

No. 25,127. Joel Lee, of Galesburgh, Ill., for an "Improvement in mole ploughs."

"What I claim, is, the two swords fitting closely together, the front one attached to the mole near the forward point, the rear sword pivoted near the rear point of the mould. Secondly, the lever, in combination with the swords, for operating or adjusting the front sword and the mould."

No. 25,128. John Magee, of Lawrence, Mass., for an "Improvement in stoves."

"I claim the arrangement of the pot grate A, the hot-air chamber F, the ring grate B, the register G, and the ash chamber H together, and with direct descending and base flues, substantially as specified."

No. 25,129. Joseph P. Markham, of Penfield, Mich., for an "Improved tuyere."

"I claim, first, the use of the indented valve K, in combination with the outlet passages H, constructed and arranged substantially as herein described, in such manner that by moving said valve back and forth underneath the outlet, it will admit the wind to or shut it off from said outlet, equally and gradually, on each side of the central tube I. Second, I claim the mode of making the loose nozzle J independent of the masonry for support by the use of the tube I, and its socket, in combination with the ribs G, G, G, G, and corresponding rebates, substantially as set forth."

No. 25,130. Rufus Maxwell, of Tucker County, Va., for an "Improved towel rack."

"I claim the construction of racks for endless towels with a slot *a*, *b*, and opening *c*, substantially as and for the purpose above described."

No. 25,131. Chas. H. McAleer, of Chambersburgh, Pa., for an "Improvement in binding apparatus for harvesters."

"I claim the apparatus or elevator for raising and compressing the gavel, constructed and operating in the manner substantially as described."

No. 25,132. Wm. Howard Mitchell, of San Francisco, Cal., for an "Improvement in rotary movement."

"I claim two or more reversed self-detaching pawls or catches working on opposite sides of the periphery of the ratchet wheel, by being attached to arms working in parallel lines and in the same direction, constructed and operating substantially as and for the purpose specified. I also claim the combination of the ratchet wheel R with the pawls or catches P and P^1, and flanges E, and the cross beam B, with parallel arms G, substantially for the uses and purposes set forth. I also claim the combination of the ratchet wheel with the flanged casing or flanges."

No. 25,133. Geo. I. Montjoy, and Joel B. Sawyer, of Houston, Texas, for an "Improved rotary steam engine."

"What we claim, is, the arrangement of the passages in the double elbow piece E, E^1, and the reversing cock or valve F, in combination with the passages in the stationary hollow shaft D, and its abutment H, the whole applied in connection with the cylinder, and its sliding pistons to operate substantially as herein described."

No. 25,134. Willis G. Murphy, of Seguin, Texas, for an "Improvement in seed planters."

"I claim, the arrangement of the beam (A), hopper (C), wheels (D), (J), H, and E, seeding wheel R and B, helve 14, plough (T), coverers (Q), and conductor V, as described, and for the purposes set forth."

No. 25,135. Rudolph A. Nathurst, and John L. Stewart, of Nashville, Tenn., for an "Improved safety rein for bridles."

"We claim, the connection of the choke strap with the common or ordinary driving reins, so as to act and serve for both purposes of driving and safety rein, substantially as described, and this we claim, whether it be temporary or permanently affixed to the bridle or halter whether a bit is used or not."

No. 25,136. Caesar Neumann, of New York, N.Y., for an "Improved skeleton skirt."

"I claim the combination of the jointed or hinged hoop supporters and a series of horizontal hoops, when arranged and operated in the manner described and for the purpose set forth."

No. 25,137. J. J. Parker, of Marietta, O., for an "Improvement in steam slide valve."

"I claim, placing the valves loosely on the hollow arms of the side pipe, and contracting the supply openings from the valves, substantially in the manner described for the purpose of employing the pressure of the steam, to keep the valves in contact with their seats as specified."

No. 25,138. John C. Pedrick, of Washington, D.C., for an "Improved ball furniture casters."

"I claim as my invention, and desire to secure by Letters Patent, is, inserting into a metal cup containing the ball of a caster, a separate anti-friction bearing *f*, against which the ball revolves, thereby lessening the friction of the ball in the metal cup or socket as described."

No. 25,139. Thos. E. Roberts, of Allamance, N.Y., for an "Improvement in trucks for railroad cars, &c."

"I claim, the construction and arrangement of the concave chilled plates B, and convex chilled plate C, with each other in the manner described, and their combinations with the self-oiling friction rollers G, O, H, for the purposes fully set forth."

No. 25,140. James H. Roome, of New York, N.Y., for an "Improvement in shears."

"What I claim, is, combining one limb C, D, of a pair of shears or other similarly operating hand cutting instrument, with its handle E, forming part of a separate lever E, G, and combining the said limb and handle with the other limb of the shears, by means of an arm *f*, attached to the said lever E, G, and operating on the rear portion D, of the first-mentioned limb, a link F connecting the said limb with the said lever, and a movable fulcrum connection *g*, *h*, between the said lever and the other limb, the whole operating substantially as described to cause the power of the said lever to increase as the shears close."

No. 25,141. Wm. N. Rowe, of Sharpsburgh, Md., for an "Improvement in carriage and wagon jacks."

"I claim, the adjustable sliding catch plate B, operating as described in combination with the grease box F and jack, as herein set forth and described."

No. 25,142. Jacob Rupertus, of Philadelphia, Pa., for an "Improvement in percussion pellet for fire-arms."

"I claim the employment for enclosing the detonating compound of a metal capsule, of spherical form, substantially as herein described."

No. 25,143. John Scheeper, of New York, N. Y., for an "Improvement in stoves."

"I claim the arrangement and combination of the fire chamber A, ovens B, C, D, and flues *k*, *l*, *l*, *q*, *q*, *n*, *n*, substantially as and for the purpose herein shown and described."

No. 25,144. Henry W. Shipley and Zohar Blair, of Mount Vernon, O., for an "Improvement in portable iron husk grist mills."

"What we claim as our improvement, and desire to secure by Letters Patent, is, the husk A and cup A^1, composed of lower and upper sections, the same being turned and fitted together as described, and supported upon a frame C, for the purpose of making the whole portable and complete in itself. We claim cementing the stone to the interior of the cup A, which also forms the upper husk, as specified. We claim the cup M, constructed and fitted substantially as described, and cementing the stone thereto, so that both will revolve together. We claim the bridge trees D and G, in combination with the husk A, cup A^1, and frame C, when arranged and operating substantially as set forth."

No. 25,145. Henry Soggs, of Columbus, Pa., for an "Improved butter worker."

"I claim, and wish to secure by Letters Patent the tray (*d*) with convex bottom and ends set on an inclined plane of rollers, working in combination with the cylinder (*a*), and ribs (*b*), for the purpose of working the milk and surpurfluous matter from the butter at the same time, leaving channels in said butter, thro' which the milk, &c. may escape."

No. 25,146. David Stoddart, of San Francisco, Cal., for an "Improvement in slide valves of steam engines."

"I claim, 1st, the employment of the elastic plate D, in combination with a cavity (*b*) and a balance frame C, substantially as and for the purpose herein shown and described. 2nd, the combination of an adjusting spring (*m*), and screw *n*, with the elastic plate D, substantially as and for the purpose herein shown and described."

No. 25,147. Wm. Mont Storm, of New York, N. Y., for an "Improved steam generator."

"Having now fully described my invention, what I claim, and desire to secure by Letters Patent, is, the plow or method of conveying water from a closed tank or reservoir to the heating surfaces of a steam generator, by capillary attraction, for the objects described. Second, I claim so constructing and locating the said supply tank, that the influence of the heat upon the water contained therein for 'feed,' while elevating its temperature, shall, in no case, bring it up to the steam generating or boiling point under the given pressure."

No. 25,148. Francis M. Strong and Thos. Ross, of Brandon, Vt., for an "Improvement in weighing scales."

"We claim as new, and desire to secure by Letters Patent, the arrangement of the bars C, D, of the larger platform B, as shown, to wit: one lever crossing the other at about right angles, so that the knife-edged bearings *b* of the foot pieces *a* of one lever will be at right angles to those of the other, and the lateral movement of the foot pieces on the bearings prevented. We further claim attaching the arms E, E, of the levers C, D, either separately or when connected direct to the beam G, and having the bar I of the scoop or smaller platform H rest on knife-edged bearings *k*, *k*, on the beam, substantially as and for the purpose set forth."

No. 25,149. B. F. Sturtevant, of Boston, Mass., for an "Improved blank for shoe pegging machines."

"What I claim as my invention, and desire to secure by Letters Patent as a new article of manufacture, is, a blank or strip of shoe pegs, cut around the log, substantially as described."

No. 25,150. N. G. Thom, of Cincinnati, O., for an "Improved machine for nicking and trimming heads of screws."

"What I claim as my invention, and desire to secure by Letters Patent, is, first, a revolving or rotating head, which revolves around a series of spindles, or blank-holders, with an intermittent or interrupted motion, carrying upon it the necessary apparatus and tools for shaving, nicking, and trimming, or otherwise finishing the heads of screw blanks. 2nd, in combination with the spindles or blank holders, I claim the annular cam *m*, having internal and external inclined surfaces, for the purpose of raising the spindle in the nicking process, and operating the grippers by acting upon the one rod *b*. 3rd, in combination with the spindles or blank holders, I claim the rod *d*, and spring *e*, or its equivalent, when such spring or equivalent is made to act upon the rod at required intervals to discharge the blank by being attached to some rotating or reciprocating portion of the machine. 4th, I claim the lever *r*, and the spring *n*, and catch *l*, or other mechanical equivalent, which acts upon the machine for the purpose of arresting one part while it releases another, substantially as described, and for the purpose set forth. 5th, I claim the arrangement of the spindles and driving shaft in such a manner, that while the spindles containing the blanks to be shaved and trimmed, are acted upon by the driving belt, the spindle containing the blank to be nicked is not acted upon, and the necessary tension is given the belt at all points in the revolution of the head, without the use of a binder, substantially as described. 6th, in combination with the wormwheel *w*, or its equivalent, for giving motion to the cams, I claim the cam Y, and tool cam *x*, when acted upon in such manner that the said cams remain stationary while the head revolves, or nearly so, and the cams revolve while the head is stationary, substantially for the purposes set forth. 7th, I claim finishing the heads of screw blanks, by an apparatus by which the necessary tools for finishing the head are revolved round the spindles or blank holders, whether such blank holders are stationary or otherwise."

No. 25,151. Andrew Turney, jr., of Fairfield, Conn., for an "Improvement in laying submarine telegraph cables."

"What I claim as my invention, and desire to secure by Letters Patent, is, the construction and use of an apparatus, consisting of two hollow cylinders (A and B), with longitudinal joints or hinges, and two disks or flanges (E and F) set obliquely to the cylinders, and a guide or regulating disk (G) to be attached to a telegraph cable, while the cable is being submerged to check the rapidity of the sinking, and to afford a constant strain on it in the direction of the vessel which is paying out the cable, to avoid kinks or festoons, when the whole is constructed, and made to produce the result, substantially as herein described."

No. 25,152. John Wagoner and Abram Severson, jr., of Guilderland Centre, N.Y., for an "Improved washing machine."

"What we claim, is, mounting the revolving platform K, and the pulleys and gearing P, Q, R, or their equivalents on the hinged platform M, and so arranging the whole, that when M is turned up, the driving belt O is slackened, and the whole lies within or by the side of the main frame, and when M is turned down the gravity of the tub, or equivalent vessel tightens O, and causes the several parts to operate without any labor in adjusting."

No. 25,153. Saml. Wethered, of Baltimore, Md., for an "Improvement in carding engines."

"I claim, 1st, a card clothed main cylinder for carding engines, which performs a lateral vibrating movement simultaneously with its revolution, substantially as and for the purposes set forth. 2nd, a card clothed 'fancy,' or upper cylinder, which is capable of performing a lateral vibration as it revolves, in combination with a laterally vibrating card clothed main cylinder, substantially as and for the purposes set forth."

No. 25,154. Julius Wehle, of New York, N.Y., for an "Improvement in hat measures."

"I claim, 1, the divided handle, in combination with the elastic oval strip A, for the purpose of contracting the said oval strip, substantially as described. 2, the scale D, secured to one of the handles, and passing through an incision of the other handle, in combination with the screw N, substantially as described, for the purpose set forth."

No. 25,155. F. B. Williams, of Freeport, Ill., for an "Improvement in horse power machine."

"What I claim, is, the arrangement and combination of the circular standard B, toothed rim B^1, ring C, pinions D, wheels E, pinion *e*, toothed ring G, and pinion H, to operate substantially as and for the purpose specified."

No. 25,156. Wm. S. Williams, of New York, N.Y., for a "Machine for bundling kindling wood."

"I claim, first, the feeding clumps *f*, and slides d^1, arranged and actuated in, substantially the manner and for the purposes set forth. Second, I claim the combination of the separating and dividing knife *h*, with the concave wood carrier h^2, to convey the wood to the bundling apparatus as specified. Third, I claim the sliding supports *g* 1, arranged and acting as set forth, to sustain the kindling wood, as fed into the machine, and keep it in place, as described and shown. Fourth, I claim the curved gatherers i^1, fitted and acting as set forth, to deliver the bundle of wood, and gather the next loose wood into a bundle, as specified. Fifth, I claim the conical gatherers *l* and m^1, to concentrate and compress the bundle of wood, as described and shown. Sixth, I claim the stationary plate *k*, and segments 15, in combination with the conical gatherer *l*, to sustain the wood, while acted upon, as specified. Seventh, I claim the plunger or press block *m*, acting to bring the ends of the bundle of wood level, as set forth. Eighth, I claim the vertical moving frame *o*, forming the receptacle for the wire, and the guide for the apparatus that wraps said wire around the bundle of wood, as set forth. Ninth, in combination with the frame *o*, I claim the chain 28, to wrap the wire around the bundle of wood, and the clump S^1, to hold the wire near the middle part thereof, as described and shown. Tenth, I claim the circular twisting jaws 30, moving in dovetails and acting when revolved by competent means, to twist the ends of the wires together in the manner and for the purposes specified. Eleventh, I claim the arrangement of the sliding and revolving shaft *t*, in combination with the twisting jaws 30, for the purposes as set forth. Twelfth, I claim the spring guides 25, to keep the wire straight while passed into the machine, in combination with the travelling jaw or clamp *p*, and with the shear 26, as described and shown."

No. 25,157. John Alexander, of Brooklyn, N.Y., assignor to himself and James Ritchie, of same place, for an "Improvement in patterns for moulding."

"I claim the employment or use of a 'former' C, with a pattern D, constructed of a plastic substance, and formed on or over the 'former' C, substantially as described, to produce molds in sand for the casting of hollow ware and other castings of the exact thickness required."

No. 25,158. Chas. Bradfield, of Philadelphia, Pa., assignor to C. Stewart, Bradfield, of same place, for an "Improvement in hanging the bodies of wheel vehicles."

"I claim, 1st, attaching the wheels C to the body A, by means of the arms *e*, secured to the traverse bars *d* of the shafts or arbors *b*, *b*, which are fitted into the flanches *a* and bearings *c*, *c*, of the plates B of the body A, and have springs D placed between their flanches *a* and traverse bars *d*, substantially as and for the purpose set forth. 2nd, attaching the thills E to the body A, by means of the bars G, fitted in the eyes *g*, and secured thereon at the desired hight, by set screws *h*, substantially as described."

No. 25,159. Calvin Fletcher, of Cincinnati, O., assignor to Addison C. Fletcher, of same place, for an "Improved apparatus for supplying furnaces with hot air."

"I claim the specific arrangement as herein before described, of the fan I, and the steam chambers A, communicating with the chambers B, C, together with the inlet steam pipe E, the cold air passages *a*, hot air pipes G, *l*, *l*, and the pipes F, for the discharge of the water of condensation, for the purposes set forth."

No. 25,160. Hiram L. Hall, of Beverly, Mass., assignor to the Beverly Rubber Company, of same place, for an "Improvement in restoring waste vulcanized rubber."

"I claim as my invention, and desire to have secured by Letters Patent, the restoring of waste vulcanized rubber or gutter percha, by the use of superheated steam, substantially in the manner and for the purpose above described."

No. 25,161. Miles B. Hand, of Handsboro', Miss., assignor to himself and Sheldon B. Hand, of same place, for an "Improvement in cotton presses."

"I claim the combination of the toggles C, C, and screws E, E, when the latter are connected to the driving or power shaft, or to a shaft connected therewith by means of universal joints H, H, substantially as and for the purpose set forth."

No. 25,162. JOHN J. LEHAYE, of Reading, Pa., assignor to himself and John Tucker, of Philadelphia, Pa., for an "Improved churn."

"I claim the vessel B, cylinder C, and reciprocating plunger E, adapted to and arranged in respect to each other substantially as herein set forth, in combination with the devices herein described, or their equivalents, for enlarging or contracting at pleasure the communication between the said cylinder and vessel, for the purpose specified."

No. 25,163. CAESAR NEWMANN, of New York, N. Y., assignor to Abraham Prince, of Boston, Mass., for an "Improved machine for making hooped skirts."

"What I claim, is, the combination of a series of twisting apparatus, with guide rods, for the purpose of forming a hoop skirt, substantially in the manner and for the purposes set forth. I also claim, in combination with the twisting apparatus, the elevating screw, and its appendages, and the mode of operating the same, as described. I also claim collapsing the guides to form different sized skirts, and to deliver the same, as specified."

No. 25,164. ROBT. POOLE, of Baltimore, Md., assignor to himself and German H. Hunt, of same place, for an "Improvement in 'the fifth wheel' of fire engines and other vehicles."

"What I claim is, hanging the pivoted fifth wheel of a steam fire engine or other heavy carriage to a bolster, when the latter plays within or over the axle of a vehicle, and is suspended to springs, which have their bearings or seats on said axle, substantially in the manner and for the purposes herein described."

No. 25,165. E. L. PRATT, of Philadelphia, Pa., assignor to himself and R. B. Fitts, of same place, for an "Improved meat safe."

"I claim a new article of manufacture, being a combined arrangement of a cover A, perforated with small holes at the upper part *d*, and a stove B, also perforated with small holes *f*, substantially as and for the purpose specified."

No. 25,166. JOHN B. WICKERSHAM and HENRY JENKINS, of Brooklyn, N. Y., assignor to the New York Wire Railing Company, for an "Improvement in iron fences."

"What we claim as our invention, and desire to secure by Letters Patent, is, constructing railings, fences, and other articles by metallic bars, intersecting each other, and united by a cast-iron ornament or connection, when one or more bars, running parallel or in one direction, pass through between two or more bars, running in another direction, substantially as specified."

No. 25,167. ARCHILAUS WILSON, of New York, N. Y., assignor to D. A. Heald, A. L. Wilmarth, C. T. Martin, and H. A. Hurlburt, for an "Improved mode of lighting gas by electricity."

"What I claim as my invention, and desire to secure by Letters Patent, is, combining with a gas or other burner metallic points, approaching but not coming in contact with each other, substantially as described, but this I only claim in combination with the inductive apparatus, substantially as described, for the purpose of effecting ignition by means of the electric discharge or spark, as specified. I also claim combining with a galvanic battery an inductive apparatus, or coil metallic points, and an electro magnet, for the purposes specified, and substantially as herein specified."

RE-ISSUES.

G. W. BISHUP, of New York, N. Y., for an "Improvement in breech-loading ordnance."—Patented 9th September, 1856. — Re-issued 16th August, 1859.

"I claim, combining the movable breech-pin with the bore of the cannon by means of movable locking or abutting pieces or segments, substantially such as described, and which, after the breech pin is inserted, are shifted and made to cross the joint of the breech pin and bore, to hold the breech pin against the force of the discharge, as set forth."

ALLAN CUMMINGS, of New York, N. Y., for an "Improvement in ash sifters." — Patented 8th March, 1859.—Re-issued 6th August, 1859.

"I claim the employment of a conical seive, or seive of an equivalent form, in combination with the two receptacles, one for the siftings, and the other for the substances sifted, substantially as and for the purpose described. I also claim the conical deflector for deflecting the substances to be sifted, and concentrating them, in combination with the spreader, substantially as described, whether the spreader be itself the seive, or employed with a seive below, as described. I also claim, in combination with the seive, the under conical surface of the deflector for preventing the escape of dust from the apparatus as described. And I also claim, in combination with the deflector, the spreader, the conical seive, and the receptacles for the siftings, and the substances sifted, substantially as and for the purpose specified."

RALPH J. FALCONER, of Washington, D. C., for an "Improved sash fastener." — Patented 31st August, 1858.—Re-issued 16th August, 1859.

"I claim extending the cap portion m^1 of the catch *m*, over and along the front edge of the catch plate *n*, to form a catch opening *x*, flush with the edge of the plate *n*, so that the window cannot be unfastened, without having the point of the hook *a* withdrawn entirely clear from the meeting rail of the upper sash, and out of the way of the bars, above when the lower sash is raised. Second, and, in combination with the catch *m*, hook *a*, and plate *e*, I claim the check a^1, or equivalent thereof, for the purposes herein above specified."

J. R. ROBINSON and H. S. ROBINSON, of Clinton, Mass., for an "Improvement in valve cocks."—Patented 31st August, 1858. — Re-issued 16th August, 1859.

"I claim, firstly, the method of constructing valves, valve cocks, and gates, substantially as specified, so that when the port or ports therein are uncovered, there shall be a straight passage or passages from the induction port or ports, in the valve chamber to the eduction port or ports in the same for the purposes described, whether the valves, in such valves, valve cocks and gates are made in one or more than one piece. And, secondly, making the valves in valves, valve cocks, and gates, in separate or detached pieces, substantially as and for the purposes described."

FRANCIS WOLLE, of Philadelphia, Pa., for an "Improvement in machines for making paper bags." — Patented 6th July, 1858.—Re-issued, 16th August, 1859.

"I claim, 1st, the combination of the creaser C, and lappers F, G, arranged and operating substantially in the manner and for the purpose herein described and set forth. 2nd, the folding of a lap in the manufacture of a bag of paper, or other material, by means of a creaser blade, and two rolling surfaces operating in combination with each other, substantially as herein described. 3rd, the revolving lapper shaft U, in combination with the creaser V, S, the feed roller M, and aprons *u*, *q*, substantially as herein described, the creaser being brought into operation on the lap during the intermission in the motion of the feed rollers."

CONRAD POPPENHUSEN, of New York, N.Y., assignee of L. Otto P. Meyer, of Newtown, Conn., for an "Improvement in treating caoutchouc and other vulcanizable gums."—Patented 4th April, 1854.—Re-issued 16th August, 1859.

"I claim the mode of operation or mode of procedure, substantially such as herein described, which said mode of operation consists in the employment of a pliable or flexible envelope, substantially such as herein described, or the equivalent thereof, applied by pressure to the hard compound of vulcanizable gum while in the green or plastic state, so as to insure the contact of such covering with the surface of the compound, and while thus covered or protected subjecting it to the vulcanizing heat, and when vulcanized stripping off such covering, the whole process being substantially such as specified."

CHRISTIAN SHUNK, of Canton, Ohio, for an "Improvement in refining iron in the hearth of a blast furnace."—Patented 17th May, 1859.—Re-issued 16th August, 1859.

"I claim the employment immediately before the tapping of the furnace of an auxiliary tuyere pipe or pipes within the hearth of the common blast furnace, when charged with

molten iron at such an inclination as to cause the blast of air to commingle with the particles of iron, and give to the whole mass in the hearth a spiral or rotary motion, substantially as described."

Design.

Garretson Smith and Henry Brown, of Philadelphia, Pa., assignors to Cox, Whitman, and Cox, of same place, for a "Design for stoves."

"We claim the design, configuration, and arrangement of the ornaments on the places, as described, forming a new stove design."

Extension.

Beriah Swift, of Washington, D. C., for an "Improvement in grinding mills."—Patented 16th August, 1845.

"I claim making the grinding teeth of mills in concentric rows projecting from the surface of the plates, so that the teeth of one plate shall run in the spaces between the teeth on the other and vice versa, in combination with the grooves or furrows running towards the periphery of the plates, through which the substances acted upon are carried outwards, whether these furrows be arranged radially according to what is technically termed the eight-quarter dress, or in any other manner leading from the inner to the outer range of teeth. And I also claim, in combination with the teeth arranged as expressed in the above claim, the breaking the teeth on a cylinder or cone, arranged substantially as herein described, and for the purpose specified."

List of Specifications published during the week ending 2nd September, 1859.

No.	Price.	Subject-Matter.
		1855 (*Disclaimer*).
2311	4*d.*	Extracting grease from woollen, cotton, and worsted waste.
		1859.
235	1*s.* 5*d.*	Furnaces.
236	7*d.*	Breech loading fire-arms and cartridges to be used therewith.
237	5*d.*	Construction of ships' blocks.
238	6*d.*	Improved method of driving centrifugal machines.
239	3*d.*	Coupling for railway carriages, &c.
240	3*d.*	Preparation of punch.
241	3*d.*	Straw and hay cutters.
242	7*d.*	Revolving fire-arms.
243	3*d.*	Currying leather.
244	3*d.*	Machinery for cleaning rice.
245	3*d.*	Improved metal for journey brasses.
246	6*d.*	Looms for weaving.
247	3*d.*	Pens and pen-holders.
248	3*d.*	Ships' rigging.
249	1*s.* 7*d.*	Machinery for preparing wool and other fibrous substances.
250	7*d.*	Construction and adaptation of rollers for drawing and compressing fibres, &c.
251	3*d.*	Biscuits.
252	8*d.*	Sewing machines.
253	3*d.*	Manufacture of prussiate of potash or soda, &c.
255	5*d.*	Construction of chimneys and chimney pots.
256	10*d.*	Propelling vessels.
257	3*d.*	Horse-shoes, &c.
258	9*d.*	Water-pressure engines, applicable to pumping machinery.
259	10*d.*	Breech-loading gun.
260	3*d.*	Furnaces.
261	3*d.*	Regulating the pressure of steam in steam boilers, &c.
262	8*d.*	Manufacture of knotter plates used in the manufacture of paper.
263	3*d.*	Obtaining, distributing, or applying electricity and magnetism.
264	3*d.*	Extracting copper from pyrites, residuum, &c.
265	10*d.*	Machinery for manufacturing screws, and tapping nuts for screws.
266	5*d.*	Operating ventilating valves or gas burners.
267	1*s.* 1*d.*	Inodorous closet for the separation of excrement to be used as manure.
268	3*d.*	Gas meters, regulators, and burners.
269	10*d.*	Machinery for moving vessels on slips.
270	4*d.*	Reducing ores and obtaining metals therefrom.
271	3*d.*	Elastic clasp.
272	5*d.*	Apparatus for guiding the pen or pencil in writing or drawing.
273	3*d.*	Self-acting apparatus for supplying and removing paper to letter-press printing machines.
274	10*d.*	Sewing machines.
275	3*d.*	Breech-loading and other fire-arms.
276	2*s.* 10*d.*	Transmitting motive power in machinery.
277	3*d.*	Heating or warming buildings.
278	1*s.*	Ventilating ships.
279	3*d.*	Extracting gold and silver from their ores.
280	3*d.*	Manufacture of hearthrugs.
281	9*d.*	Brake for railway carriages.
283	5*d.*	Hats.
284	6*d.*	Water gauge for steam boilers.
285	3*d.*	Mining apparatus, &c.
286	3*d.*	Percussion caps.
287	3*d.*	Pianofortes.
288	3*d.*	Barometers.
289	9*d.*	Sewing machines.
290	8*d.*	Expressing liquid from semi-fluid substances.
291	1*s.*	Raising sewage and other waters.
292	3*d.*	Producing metallic sulphates.
293	3*d.*	Treatment and application of bituminous matters, &c.
294	10*d.*	Machinery for grinding or pulverizing various substances.
295	7*d.*	Blowing machine.
296	11*d.*	Stereoscopic apparatus.
297	6*d.*	Drain pipes and tiles.
298	3*d.*	Ventilating mines.
299	3*d.*	Steam engine.
300	3*d.*	Breech-loading fire-arms.
301	4*d.*	Ornamenting surfaces.
302	7*d.*	Manufacture of eyes or fastenings for stair rods.
303	5*d.*	Curtain rings.
338	7*d.*	Treatment of charcoal.
351	3*d.*	Double-bottomed horse-shoes.

*** Specifications will be forwarded by post on receipt of the amount of price and postage. Sums exceeding 5*s.* must be remitted by Post Office Order, made payable at the Post Office, High Holborn, to Mr. Bennet Woodcroft, Great Seal Patent Office.

A FREE LIBRARY and READING ROOM, in connection with the Office of the Commissioners of Patents, is open to the Public daily from 10 till 4 o'clock.

In addition to the Printed Specifications, Indexes, and other publications of the Commissioners, the Library includes a Collection of the leading British and Foreign Scientific Journals, and text-books in the various departments of science and art. A printed Catalogue of the Library is on sale.

NOTE.—The Commissioners' publications may be consulted daily in the Library of the British Museum; in the Library of the Society of Arts; and in the Free Libraries of the following Towns and Cities:—

Aberdeen (*Public Library Town House*).
Accrington (*Mechanics' Institution, Bank Street*).
Belfast (*Harbour Office, Corporation Square*).
Beverley (*Guildhall*).
Birmingham (*Birmingham and Midland Institute, Cannon Street*).
Bolton-le-Moors (*Public Library, Exchange Buildings*).
Bradford, Yorkshire (*Borough Accountant's Office, Corporation Buildings, Swain Street*).
Brighton (*Town Hall*).
Bristol (*City Library, King Street*).

PATENT LAW AMENDMENT ACT, 1852.—All Specifications, Indexes, &c., printed by order of the Commissioners of Patents, are sold at the Great Seal Patent Office, 25, Southampton Buildings, Holborn.

THE PATENT LAW AMENDMENT ACTS (15 & 16 Vict., cap. 83; 16 Vict., cap. 5; and 16 & 17 Vict., cap. 115); with the Rules and Regulations made by the Commissioners of Patents for Inventions, and by the Lord Chancellor and the Master of the Rolls, under the Acts 15 and 16 Vict., c. 83, and 16 & 17 Vict., c. 115, accompanied by Specimen Forms of the Provisional Documents printed on sheets of the prescribed size. Price 6*d*.

Museum of Patents, South Kensington.

NUMBER of VISITORS for the Week ending 3rd September, 1859.

Mornings - - - -	1692
Evenings - - - -	1230
Total - - -	2922

Since the opening of the Museum Free Daily (May 12, 1858,)—135,642.

THIS Museum is open to the public daily, free of charge. The hours of admission are from 10 A.M. to 6 P.M., and in the evenings of Monday, Tuesday, and Wednesday from 7 to 10 P.M.

All communications on the subject of the Museum to be addressed to the Superintendent,

B. WOODCROFT.

Great Seal Patent Office,
Southampton Buildings.

GALLERY OF PORTRAITS OF INVENTORS, DISCOVERERS, AND INTRODUCERS OF USEFUL ARTS.—This Collection, formed by Mr. Woodcroft, and first opened to public view in the Great Seal Patent Office in 1853, now constitutes a portion of the Patent Museum at South Kensington.

Presentations of original Portraits, Medallions, Busts, and Statues, in augmentation of the Collection, are hereby invited, and will on receipt be acknowledged in this Journal, and duly recorded in the next published Catalogue.

REAPING MACHINES.—The entire series of Specifications and Drawings on this subject to the end of 1853, together with an Appendix, prepared by B. Woodcroft, of the Patent Office, and published under the sanction of the Commissioners, may be obtained at the cost price of 2*l.* 3*s.* 11½*d.*

FIRE-ARMS, PROJECTILES, &c.—The series of Specifications and Drawings on this Subject, from 15th May, 1718, to 31st December, 1853, with Alphabetical and Subject-matter Indexes, may be obtained at the cost price of 9*l.* 18*s.* 6½*d.*

The Indexes, separately, price 3*s.*

CATALOGUE of the LIBRARY of the GREAT SEAL PATENT OFFICE. Two vols. imp. 8vo. (Vol. I. Titles; Vol. II. Index.) Price 21*s.*

COLONIAL PATENTS.—Information as to the Mode of obtaining Protection for Inventions in the Colonies; contained in Communications from the Governors, &c. of the different British Colonies in answer to the Application of Mr. W. J. CURTIS for a Patent. Price 1*s.*

PATENT RIGHTS in the COLONIES.—Abstract of Replies to the Secretary of State's Circular Despatch of July 11, 1856, calling for Information as to the Form of the Application to be made by Persons desirous of obtaining Patent Rights in the Colonies, and the Expenses attendant on the Grant of such Patent Rights. Price 2*s.* 6*d.*

In course of Publication, by Order of the Commissioners of Patents.

ABRIDGMENTS (in Classes, and Chronologically arranged) of all SPECIFICATIONS of PATENTED INVENTIONS, from the earliest enrolled to those published under the Act of 1852.

These books are of 12mo size, and as each is limited to inventions of one class only, they can be sold at prices sufficiently moderate to enable the humblest inventor to examine for himself whether his discovery has been previously patented or not.

At the foot of each abstract are given references to notices of the inventions in scientific and other works, and to the reports of law proceedings for infringements, &c. &c. &c.

The classes already published are,—

1. DRAIN TILES AND PIPES, price 6*d.*
2. SEWING AND EMBROIDERING, price 6*d.*
3. MANURE, price 6*d.*
4. PRESERVATION OF FOOD, price 6*d.*
5. MARINE PROPULSION, price 4*s.*
6. MANUFACTURE OF IRON AND STEEL, price 5*s.*
7. AIDS TO LOCOMOTION, price 1*s.*
8. STEAM CULTURE, price 2*s.*
9. WATCHES, CLOCKS, AND OTHER TIMEKEEPERS, price 1*s.* 6*d.*
10. FIRE-ARMS AND OTHER WEAPONS, AMMUNITION, AND ACCOUTREMENTS, price 6*s.* 6*d.*
11. PAPER.—PART I. MANUFACTURE OF PAPER, PASTEBOARD, AND PAPIER MÂCHÉ, price 3*s.*
12. PAPER.—PART II. CUTTING, FOLDING, AND ORNAMENTING; INCLUDING ENVELOPES, CARDS, PAPER-HANGINGS, &c., price 2*s.*
13. TYPOGRAPHIC, LITHOGRAPHIC, AND PLATE PRINTING, price 7*s.*
14. BLEACHING, DYEING, AND PRINTING YARNS AND FABRICS, price 9*s.* 6*d.*

The following are in the press:—

ELECTRICITY AND MAGNETISM: THEIR GENERATION AND APPLICATIONS.
PREPARATION OF FUEL, AND APPARATUS FOR ITS COMBUSTION.
MANUFACTURE AND APPLICATIONS OF INDIA RUBBER, GUTTA PERCHA, &c.; INCLUDING AIR, FIRE, AND WATER PROOFING.
PRODUCTION AND APPLICATIONS OF GAS.
STEAM ENGINES.
METALS AND ALLOYS.

B. WOODCROFT.

The above, and all other works published by the Commissioners of Patents, are now on sale at the Great Seal Patent Office, 25, Southampton Buildings, Holborn.

This Journal is published on the evenings of Tuesday and Friday, and will be forwarded, post free, to Subscribers.—Terms, 30*s.* per annum.—Subscriptions received at the Great Seal Patent Office, where also single copies, at twopence each, may be obtained.

No. 593. FRIDAY, SEPTEMBER 9, 1859. Price 2d.

Grants of Provisional Protection for Six Months.

NOTICE is hereby given that Provisional Protection has been allowed

1806. To MARC ANTOINE FRANÇOIS MENNONS, of the British and Foreign Patent Offices, 39, Rue de l'Echiquier, Paris, in the empire of France, for the invention of "A system of columns or monuments to be employed as sentry boxes, branch post and other offices, telegraph and fire-engine stations."—A communication from Irénée Leÿs, residing at Amsterdam, Holland.

On his petition, recorded in the Office of the Commissioners on the 5th day of August, 1859.

1869. To ROBERT DAWSON CLEGG, of Islington, in the county of Middlesex, Gentleman, and THOMAS SAUNDERS, of Islington, in the said county, Mechanic, for the invention of "Improvements in locks."

On their petition, recorded in the Office of the Commissioners on the 13th day of August, 1859.

1926. To WILLIAM HENRY HILL, of Birmingham, in the county of Warwick, Manufacturer, for the invention of "An improvement in the manufacture of boxes or cases, and in fastenings for the same."

1928. To WILLIAM HOLLINS, of Glossop, in the county of Derby, Overlooker, and FREDERICK HYDE, of the same place, Mechanic, for the invention of "Improvements in power looms for weaving, part of which improvements is also applicable to other machines driven by power."

1930. And to THOMAS RICHARDSON, of New Bridge Street, Newcastle-on-Tyne, for the invention of "Improvements in treating copper ores."

On their several petitions, recorded in the Office of the Commissioners on the 23rd day of August, 1859.

1931. To GEORGE PEARSON, of the city of Manchester, in the county of Lancaster, Machinist, for the invention of "Improved machinery for manufacturing boots and shoes."

1933. To JOSEPH HENRY, of Bury, in the county of Lancaster, and JAMES EDWARD HYDE ANDREW, of Audenshaw, in the said county, Machinists, for the invention of "Improvements in looms for weaving."

1934. To JOHN BLAKE, of Accrington, in the county of Lancaster, Engineer, for the invention of "Improvements in steam and vacuum gauges."

1935. To DANIEL RUSSELL, of No. 1, Grove Cottage, Southampton Street, Camberwell, in the county of Surrey, and JONATHAN RUSSELL, of No. 6, Devonshire Terrace, Queen's Road, Peckham, in the county of Surrey, for the invention of "Improving the means of docking and lifting ships out of the water, for the purpose of examining and cleaning their bottoms, effecting any necessary repairs, fixing new screw propeller, rudder, raising sunken vessels, or anything else for which it is desirable to get at any portion of a vessel generally under water."

1936. To THOMAS BRIGGS, of Richmond Hill Works, Salford, in the county of Lancaster, Tarpauling and Oil Cloth Manufacturer, for the invention of "Improvements in the manufacture of tarpauling."

1937. To JAMES MURRAY, Knight, of Dublin, Doctor of Medicine, for the invention of "Improvements in the preparation and bottling or preserving of carbonated cod liver oil and other aerated liquids."

1938. And to CHARLES TIOT JUDKINS, of No. 22, Ludgate Street, in the city of London, Dealer in sewing machines, for the invention of "Improvements in sewing machines."

On their several petitions, recorded in the Office of the Commissioners on the 24th day of August 1859.

1939. To HENRY SMITH and THOMAS WOODHOUSE ASHBY, of Stamford, in the county of Lincoln, Agricultural Implement Makers, for the invention of "An improved construction of harrow."—A communication from abroad by Messrs. J. Pintus and Co., of Berlin, in the kingdom of Prussia.

1940. To LOFTUS PERKINS, of Francis Street, Gray's Inn Road, in the county of Middlesex, for the invention of "Improvements in mills."—A communication from abroad by James Bogardus, of Duane Street, New York.

1941. And to AMOS PIERCE CHAMBERLAIN, of New Orleans, in the United States of America, but at present residing in London, Engineer, for the invention of "Improvements in machinery or apparatus for cutting cork, part of which improvements is also applicable to cutting paper, caoutchouc, and other substances."

On their several petitions, recorded in the Office of the Commissioners on the 25th day of August, 1859.

1943. To JAMES FURRELL, of No. 5, Upper Phillimore Place, Kensington, in the county of Middlesex, Gentleman, for the invention of a "Lock protector, consisting of an adhesive shield or cover to be placed over the keyhole of a lock for the purpose of ensuring that any access to the interior of the lock shall be readily detected."

1945. To THOMAS BIRD, of the city of Manchester, in the county of Lancaster, Engineer, for the invention of "Improvements in castors."

1946. To JOHN MUIR HETHERINGTON, of Manchester, in the county of Lancaster, Machinist, for the invention of "Improvements in machinery or apparatus for carding cotton, wool, and other fibrous materials."

1947. To HERRMANN GRUNDT, of America Square, for the invention of "Improvements in life boats."

1948. To WALTER MACLELLAN, of Glasgow, in the county of Lanark, North Britain, Iron Merchant, for the invention of "Improvements in rolling or shaping iron for railway spikes and other purposes."

1949. And to CHARLES THOMAS BOUTET, of No. 12, Chenies Street, Tottenham Court Road, London, in the county of Middlesex, for the invention of "A new mechanical mill proper for milling every sort of grains, dried or torrefied, such as coffee and cocoa."

On their several petitions, recorded in the said Office of the Commissioners on the 26th day of August, 1859.

1950. To CHARLES HANSON, of Huddersfield, in the county of York, Watch Maker, for the invention of "An improvement in the chronometer escapement of a watch."

1951. To FRANCIS WRIGLEY, of Manchester, in the county of Lancaster, Consulting Engineer, for the invention of "Certain improvements in the construction of the permanent way of railways."

1952. To JAMES ROTHWELL ROSTRON, of Edenfield, in the county of Lancaster, for the invention of "Improvements in furnace bars."

1953. To WILLIAM HENRY BALMAIN, of St. Helens, in the county of Lancaster, Manufacturing Chemist, for the invention of "Improvements in the manufacture of glass, and other vitrified substances."

1954. To THOMAS CRAVEN, of Scarborough, in the county of York, Plumber, for the invention of "Improvements in ball cocks or valves."

1955. To GEORGE BELL, of South Inch Michael, in the county of Perth, North Britain, Farmer, for the invention of "Improvements in reaping and mowing machines."

1956. To JOHN HECKETHORN, of No. 32, Stanmore Street, Caledonian Road, in the county of Middlesex, for the invention of "Improvements in candles and wicks, also in lamps or candlesticks for using with the same."

1958. And to EMIL RETTIG, of New Cross, in the county of Kent, Merchant, for the invention of "Improvements in the form and construction of anchors."—Partly a communication from abroad by Ferdinand Martin, of Marseilles, in the French empire, Merchant.

On their several petitions, recorded in the Office of the Commissioners on the 27th day of August, 1859.

1960. To THOMAS MERITON, of No. 39, Pinnasberg, Saint Pauli, Hamburg, Engineer, for the invention of "Improvements in governors for regulating the speed of marine and other engines and machinery."

1961. To CHARLES KERMAN, of the Vulcan Iron Works, Millbrook, near Southampton, for the invention of "An apparatus to prevent the sinking of vessels through leakage, for lifting and floating vessels off when stranded, and for raising and floating sunken vessels."

1962. To JESSE RALPH HOWARTH, of Manchester, in the county of Lancaster, Finisher, for the invention of "Certain improvements in machinery or apparatus for calendering and finishing textile fabrics or other surfaces."

1963. To WILLIAM CLARK, of No. 53, Chancery Lane, in the county of Middlesex, Engineer and Patent Agent, for the invention of "Certain improvements in sewing and stitching by machinery."—A communication from abroad by Kasimir Vogel, of Chelsea, in the county of Suffolk, and state of Massachusets.

1965. To DAVID TODD, of Bridge-of-Weir, in the county of Renfrew, North Britain, Mill Manager, for the invention of "Improvements in machinery or apparatus for carding and treating or preparing fibrous materials."

1966. To BENJAMIN BAUGH, Manager of Salt's Patent Enamel Works, Bradford Street, Birmingham, in the county of Warwick, for the invention of "Certain improved machinery or mechanical arrangements for raising or giving form to articles formed of sheet metal, such as knobs, thimbles, ferules, and parts of umbrella and parasol furniture, button shells, and other such like small articles."

1967. And to GILBERT STANTON FLEMING, of 498, New Oxford Street, in the county of Middlesex, for the invention of "A head-rest, suitable for keeping the head in a comfortable position in travelling, sitting, or lying down.

On their several petitions, recorded in the Office of the Commissioners on the 29th day of August, 1859.

1969. To JOHN BOWEN BARNES, of Summer Lane, Birmingham, in the county of Warwick, and JOHN LOACH, Japanner, of Caroline Street, Birmingham as aforesaid, for the invention of "Certain improvements in oars for impelling boats, as also in the row-locks in which they work."

1971. To JAMES HARE, of Hamstead Road, Handsworth, near Birmingham, Music Smith, for the invention of "Improvements in piano fortes."

1975. To CHARLES CHAMBERS and JAMES CHAMBERS, of Archer Street, Westbourne Grove, in the county of Middlesex, Engineer, for the invention of "Improvements in apparatus for sawing staves and other forms of wood."

1977. And to ROBERT FRANCIS DRURY and ENSOR DRURY, of the firm of Drury, Brothers, the Don Tool Works, Sheffield, in the county of York, Machinists and Tool Makers, for the invention of "Improvements in vices."

On their several petitions, recorded in the Office of the Commissioners on the 30th day of August, 1859.

1979. To JAMES NUTTALL, of Todmorden, in the county of York, Cotton Spinner and Manufacturer, for the invention "Certain improvements in and applicable to machinery used in preparing and spinning cotton and other fibrous materials."

1981. To ROBERT BEVERLEY, of Leeds, in the county of York, Gas Meter Maker, for the invention of "Improvements in wet gas meters."

1983. To SAMUEL MIDDLETON, of Blackfriars Road, in the county of Surrey, Cordwainer, for the invention of "Improvements in the mode or method of uniting and otherwise manufacturing articles of leather, and such like materials, and in the apparatus and machinery connected therewith."

1985. To AUGUSTUS SMITH, of Brentwood, in the county of Essex, Manufacturer, for the invention of "Improvements in machinery for the preparation of cocoa nut fibre."

1991. And to JOHN CHATTERTON, of Devonshire Street, Islington, in the county of Middlesex, for the invention of "Improvements in the manufacture of tubes of gutta percha, and other substances capable of being moulded in a similar manner when in a plastic state, and also in coating wire and other cores with such substances."

On their several petitions, recorded in the Office of the Commissioners on the 31st day of August, 1859.

Invention protected for Six Months by the Deposit of a Complete Specification.

NOTICE is hereby given that the Petition of

2032. JOHN JAMES SIEBER, of 5, Baring Street, New North Road, London, in the county of Middlesex, praying for Letters Patent for the invention of "Improvements in power looms,"—a communication from abroad by Henry Honegger, of Thiengen, Grand Duchy of Baden,—was deposited and recorded in the Office of the Commissioners on the 6th day of September, 1859, and a complete specification accompanying such petition was at the same time filed in the said office.

Patents Sealed.

LIST of LETTERS PATENT which passed the Great Seal on the

8th September, 1859.

613. JOHN ERWOOD, of 132, Goswell Street, Clerkenwell, in the county of Middlesex, Paper Stainer, and JOSEPH SKERTCHLY, of Ashby-de-la-Zouch, in the county of Leicester, Engineer, for an invention of "Improvements in the manufacture of glass, sand, and emery papers and cloths, and other similar articles used for like purposes."—Dated 9th March, 1859.

621. JAMES YUILL, of Glasgow, in the county of Lanark, North Britain, Saddlers' Ironmonger, for an invention of "Improvements in saddle trees."—Dated 10th March, 1859.

623. HENRY LODGE, of Liverpool, in the county of Lancaster, Merchant, for an invention of "Improved means of protecting ships' batteries and other constructions or buildings from the effects of projectiles of various kinds."—Dated 10th March, 1859.

627. SAMUEL WHEATCROFT, of Brudenell Place, New North Road, county of Middlesex, Engineer, for an invention of "Improvements in the construction of goffering and rouching machines, in order to render them self-registering and self-indicating."—Dated 11th March, 1859.

629. FREDERICK CLARK, of Norland Square, in the county of Middlesex, Gentleman, for an invention of "An improved mode of and apparatus for cutting, drying, and preparing peat to be used as fuel, or for other purposes for which it may be usefully employed."—Dated 11th March, 1859.

635. JOHN THOMAS CALOW, of Staveley, in the county of Derby, Joiner, Cabinet Maker, and Carriage Builder, for an invention of "A compound action in cage machinery with the apparatus connected therewith, having a perforated shield for saving life and property in the event of a rope, band, or chain breaking, or the engineman drawing the cage too high at coal or other shafts where slides are applicable, which said invention is also applicable to hoisting or other lifting machines."—Dated 12th March, 1859.

636. JAMES THORNTON, of Liverpool, in the county of Lancaster, for an invention of "Improvements in machinery for the manufacture of bricks, tiles, and other similar articles."—Dated 12th March, 1859.

637. JOHN COURT, of Brompton Row, in the county of Middlesex, Gas Fitter, for an invention of "An improvement in nibs for gas burners."—Dated 12th March, 1859.

638. RICHARD ALLISON, of Birmingham, in the county of Warwick, Engineer, for an invention of "Improvements in apparatuses for boring and sinking."—Dated 12th March, 1859.

639. JAMES MACNAB, of the town and county of Linlithgow, North Britain, Designer, for an invention of "Improvements in telegraphing or signalling apparatus."—Dated 12th March, 1859.

640. RICHARD WALLER, of 50, Baker Street, Portman Square, in the county of Middlesex, Gentleman, for an invention of "Improvements in joining

leather, flexible and textile materials, for the production of boots and shoes, and articles of the like description, and harness, strapping, bags, sails, tent covers, portmanteaus, and such other articles, together with machinery and apparatus for that purpose."—Dated 14th March, 1859.

641. Richard Archibald Brooman, of 166, Fleet Street, in the city of London, E.C., Editor of the Mechanics' Magazine and Patent Agent, for an invention of "An improved method of treating wool and other fibres, in order to form threads." — A communication from Messieurs Tavernier and Vouillon, residing in Paris." — Dated 14th March, 1859.

644. David Joy, of Leeds, in the county of York, Engineer, for an invention of "Improvements in hydraulic engines and meters." — Dated 14th March, 1859.

649. Walter Langton, of 14, Wharf Belvedere Road, Lambeth, in the county of Surrey, for an invention of "Improvements in the manufacture of keys and wood fastenings used in constructing railways."—Dated 15th March, 1859.

668. James Clark, of Newton Heath, near Manchester, for an invention of "Improvements in the manufacture of fabrics in which compounds containing india rubber are used." — Dated 16th March, 1859.

670. Henry Bessemer, of Queen Street Place, New Cannon Street, in the city of London, for an invention of "Improvements in the manufacture of crank axles."—Dated 16th March, 1859.

722. William Weild, of the city of Manchester, in the county of Lancaster, Machinist, for an invention of "Improvements in machinery and arrangements for coating slips, sheets, rods, and bars of metal, and laths, rods and boards of wood, and similar articles formed of other substances, with paints, varnishes, and other like preparations, and drying the same."—Dated 22nd March, 1859.

753. William Clark, of 53, Chancery Lane, in the county of Middlesex, Engineer and Patent Agent, for an invention of "A machine for separating oats from their husks or chaff."—A communication from abroad by Léon Jean Emile Dupont, of Paris.—Dated 24th March, 1859.

772. Charles James Richardson, of No. 34, Kensington Square, and No. 9a, King St., Whitehall, both in the county of Middlesex, Architect, for an invention of "Improvements in apparatus to be applied to chimnies or flues of buildings for preventing downdraught or return smoke, for their insuring upward ventilation, and for reducing the quantity of smoke, or the blacks from the smoke passing into the atmosphere."—Dated 28th March, 1859.

778. Thomas Carr, of Bebington, in the county of Chester, Artificial Manure Manufacturer, for an invention of "Improvements in machinery for disintegrating artificial manures and various other substances."—Dated 29th March, 1859.

1042. Thomas Holt, of Lower Place, in the parish of Rochdale, and county of Lancaster, Engineer, and John Brown, of Oxford Street, Well Field, in the same parish and county, Agent, for an invention of "Improvements in apparatus or an improved apparatus for heating water for the supply of steam boilers, which improvements or apparatus are also applicable in some cases for the prevention of incrustation in steam boilers."—Dated 26th April, 1859.

1347. Alfred Suter, of 65, Fenchurch Street, in the city of London, for an invention of "A furniture castor to be used upon the feet of tables, seats, and all descriptions of furniture or other things." —Dated 31st May, 1859.

1454. Alfred Vincent Newton, of the Office for Patents, 66, Chancery Lane, in the county of Middlesex, Mechanical Draughtsman, for an invention of "Improvements in casting cylinders and tubes."—A communication from abroad by Freeborn Adams, of Somerville, in the state of Massachusetts, United States of America.—Dated 16th June, 1859.

1527. William Edward Newton, of the Office for Patents, 66, Chancery Lane, in the county of Middlesex, Civil Engineer, for an invention of "Apparatus for exhibiting stereoscopic pictures." —A communication from abroad, by J. Stuart Perry, of Newport, in the state of New York, United States of America.— Dated 25th June, 1859.

Patents on which the Stamp Duty of £50 has been Paid.

(*To 7th September*, 1859, *inclusive*).

6th September.

2087. Félix Estivant, in the name of the Society Estivant, Brothers, of Paris, in the empire of France, and of 45, Essex Street, Strand, London, for an invention of "Improvements in casting metal tubes."—Dated 8th September, 1856.

2095. William Petrie, of Woolwich, in the county of Kent, Civil Engineer, for an invention of "Improvements in the manufacture of sulphuric acid, and the apparatus employed therein, parts of which improvements are applicable to the manufacture of nitric, hydro-chloric, and other acids."—Dated 8th September, 1856.

7th September.

2093. Francis Mitchell Herring, of Basinghall Street, in the city of London, Manufacturer, for an invention of "Improvements in applying magnetic action to combs and brushes."—Dated 8th September, 1856.

2126. John Milnes, of Sutton Mill, in the parish of Kildwick, in the county of York, Overlooker, and William Thompson, of Sutton Mill, aforesaid, Mechanic, for an invention of "Improvements in looms for weaving."—Dated 11th September, 1856.

2130. Albert Demerit Bishop, of Hanover House, Maryon Road, Charlton, in the county of Kent, for an invention of "Improvements in derricks for raising sunken ships and other heavy bodies from below water, and moving heavy bodies from one place to another."—Dated 11th September, 1856.

FOREIGN PATENTS.

UNITED STATES OF AMERICA.

(Communicated by the Commissioner of Patents.)

List of Patents, with Claims annexed, issued from the United States Patent Office, for the week ending 23rd August, 1859, and each bearing that date.

No. 25,168. Peter Arneson, of Newark, N. J., for an "Improvement in machinery for forming hat bodies."

"I claim the arrangement and combination of the adjustable plates K, K, perforated apron C, case M, feed rollers L, L, and pickers D, O, substantially as and for the purpose herein shown and described."

No. 25,169. Albert Betteley, of Boston, Mass., for an "Improvement in shipper gear for pulleys."

"What I claim is, the combination of a brake lever, a friction roller, and an independent brake applied and operating together, and with a shipping apparatus, substantially in the manner and for the purpose as above set forth."

No. 25,170. R. F. Billings, of Portland, Me., for an "Improved bed bottom."

"I claim the arrangement and combination of the side rails A, A, boxes B, B, provided with the springs C, and hinged lids *d*, *d*, and the slats D attached to the lids *d* by the straps *g*, subtantially as and for the purpose set forth."

No. 25,171. A. Bingham, of Talladega, Fla., for an "Improved bed bottom."

"What I claim is, the arrangement and combination of the longitudinal slots C, rocking foot rail B, rising and falling hand rail F, and segment guides G, as and for the purpose herein shown and described."

No. 25,172. Seba Bogert, of New York, N. Y., for an "Improvement in finger rings."

"I claim an extension or divided finger ring, having its ends provided with a catch or fastening, substantially as and for the purpose set forth."

No. 25,173. Charles W. Brown, of Boston, Mass., for an "Improvement in grinding mills."

"What I claim is, first, regulating the adjustable stone of a grinding mill, that the stone may have a vertical adjustment, so as to grind finer or coarser at the same time, so that the pressure of the runner, with respect to the stationary stone, will be automatically equalized, and be raised and lowered to free itself of any foreign substance getting between the two stones by means of levers I, J, and vertical rod N, toggles *n*, *n*, sliding collar *m*, and weighted arms T, T, acting upon the movable bearing plate S, or the equivalents thereof, when the same are arranged and operate in the manner essentially as specified. Second, I claim the method herein set forth, for regulating the flow of the grain from the hopper M, by adjusting the same vertically, in the manner herein set forth. Third, I claim the dead eye L, arranged within the eye of the upper stone A, and capable of being raised or depressed with the spindle G, for the purposes and in the manner specified."

No. 25,174. C. P. Buckingham, of Mount Vernon, O., for an "Improvement in cut-off gear for steam engines."

"What I claim is, the employment of the tripper N, when constructed and arranged as shown, so as to be adjusted, and to trip both valves in combination with drops J, arms K, and lifters L, as herein set forth."

No. 25,175. Wm. Burnet, of New York, N. Y., for an "Inkstand."

"I claim the construction of an adjustable apparatus, made substantially as described, connected with the cover and flexible bottom of an inkstand, so that at whatever height (above the lower orifice of the funnel) the ink in the main reservoir may be, there shall always be a sufficiency and never an overflow in the funnel on opening the inkstand cover."

No. 25,176. J. Carl, of Grenada, Miss., for an "Improvement in grinding mills."

"I claim, 1st, the arrangement and combination of the pivoted lever (*a*), shaft B, stone C, and screws *d*, substantially as and for the purpose herein shown and described. 2nd, the employment of a hinged top bar (*g*) in combination with the shaft B, and stones C, D, as and for the purpose herein shown and described."

No. 25,177. H. M. Coombs and L. W. Nelson, of Portland, Oregon, for an "Improved washing machine."

"What we claim is, the construction of the clothes cylinder A, surrounded with air tubes, having orifices for discharging air into the water, in the manner substantially set forth, in combination with the drying and washing cylinder D, and fire chamber I, all arranged and combined in the manner and for the purposes herein above specified."

No. 25,178. Cyprian U. Crandall, James H. Crandall, and Hoza N. Hawkins, of Cameron, Ill., for an "Improvement in mole plough."

"What we claim is, the combination of the opening or ditching piece A, G, with the standard F, and peculiarly formed hinged follower or former, constructed and operating in the manner and for the purposes set forth."

No. 25,179. Elliott H. Crane, of Burr Oak, Mich., for a "Rat trap."

"What I claim is, the arrangement of platform *a*, spring C, strap *x*, spring *i*, and chuck *p*, with arms B, B, provided with projections *n*, *n*, spring H, and box A, provided with hanging door D, when the usual parts are combined and operated, substantially as and for the purpose specified."

No. 25,180. Horace H. Day, of New York, N. Y., for an "Improvement in manufacture of ribbed elastic cloth."

"What I claim is, the method substantially as herein set forth of manufacturing ribbed elastic cloth, that is to say, elastic cloth containing strands of rubber, by forming the strands of rubber upon the covering cloth, with which they are to be permanently attached, in contradistinction to forming the strands separately, and afterwards attaching the covering material to them. I also claim the method substantially as herein set forth, of spreading the gum upon the covering cloth, and dividing it into strands at one process, so that the two operations are effected simultaneously at different parts of the same apparatus."

No. 25,181. Lucius Dimock, of Hebron, Conn., for an "Improvement in machines for winding thread."

"What I claim is, the arrangement and combination with the guide A of two separate and distinct series of grooves (*b*, *c*,) having their channels cut on opposite angles, as and for the purpose herein shown and described."

No. 25,182. Joseph Ditto and Henry Van Bergen, of New York, N. Y., for an "Improvement in composition for cement roofing."

"What we claim is, the composition prepared and composed of the materials described, in the proportions set forth, for the purpose of forming cement for roofing purposes."

No. 25,183. Daniel Dodge, of Keeseville, N. Y., for an "Improvement in nail machines."

"I claim a griper having a reciprocating movement towards and from forging or pointing machinery, and opening automatically at the outer extremity of its stroke, so as to allow the introduction, feeding forward, or removal of the rod while it is in this position, but holding the rod fast at every other stage of its operation and while in any other position, substantially as herein described. And in combination with a so operating griper, I claim the employment of a

gauge and a cutter or cutters, operating in the within-described order of succession with respect to each other and the griper."

No. 25,184. SETH W. EELLS, of Mansfield, O., for an "Improvement in writing fluids."

"What I claim is, the manner of combining the above materials, so as to prevent the oxidation of the indigo and the other colouring ingredients, as above specified."

No. 25,185. EDGAR S. ELLS, of Troy, N. Y., assignor to C. G. KEENEY, of Manchester, Conn., for an "Improvement in knitting machines."

"What I claim is, the combination and arrangement of the lever *e*, arm *h*, pin *j*, and slot *k*, with the lever *l*, detent *n*, and springs *o* and *p*, substantially as and for the purposes described."

No. 25,186. JAMES J. ESSEX, of Newport, R. I., for an "Improvement in elastic bulb syringes."

"I claim so combining and arranging the bulb, air chamber, and delivery valve with each other, and with the flexible suction and delivery tubes, that the air chamber shall be above the delivery valve, and shall be and shall remain while in use upright or nearly so, and under the control of the hand which grasps and operates the bulb."

No. 25,187. ALBERT FICKETT, of Rochester, N.Y., for an "Improved belt fastening."

"I claim the combination of the links *l*, *l*, *l*, with the rivets *r*, *r*, *r*, said links being inserted in the ends of the belt, in the manner and for the purpose substantially as described."

No. 25,188. ELBRIDGE FOSTER, of Hartford, Conn., for an "Improved easy chair."

"I claim the application and insertion of the quadrant slide into the centre of each of the arms or scroll of the side rail, so as to be unseen when the back is up, in the manner as herein described. Also, the application of the spring adjustable and extension back centre leg, in the manner and for the purpose, substantially as herein set forth and described, the whole constituting a new article of manufacture."

No. 25,189. JAMES F. GAMBLE, of Concord, Pa., for an "Improved method of feeding the saw to the stuff in sawing machines."

"I claim moving the saw forward when cutting, whilst the lumber is held stationary, substantially as set forth."

No. 25,190. STACY A. GARRISON, of Union, N.Y., for an "Improved hub reamer."

"I claim as new, and desire to secure by Letters Patent, the arrangement and combination of the cutters *c*, *d*, and the arbor A, as and for the purpose herein shown and described."

No. 25,191. WM. GOODALE, of Clinton, Mass., for a "Machine for making paper bags."

"I claim, 1st, the pasting apparatus, consisting of the roller G, fitted to work in an opening in the bottom of a paste box, the spring H, or its equivalent, and the adjustable stopper *a*, all combined to operate substantially as herein described. 2nd, the combination of the continuously revolving measuring rollers I, I^1, and the intermittently revolving feed rollers J, J^1, operating substantially as and for the purpose herein described. 3rd, the drop N, operating in combination with the cutter B, and the feed rollers, substantially as and for the purpose herein specified. 4th, folding the paper around a plate Q, or flat piece of any material narrower than the bag itself, or of the same width as but shorter than the bag itself, substantially as herein specified. 5th, the folders R, R^1, applied and operating in combination with the inclined planes *l*, l^1, at the sides of the folding table C, substantially as and for the purpose herein set forth. 6th, the combination with the folding table, and with a plate Q, narrower than the bag to fold the bag upon, of one or more movable inclined planes l^1, and creasing blades U, operating substantially as herein described. 7th, the drop *z*, applied and operating substantially as and for the purpose herein described. 8th, the bar 21, applied to the vibrating roller frame, and operating in combination with the knock off *u*, substantially as and for the purpose herein set forth."

No. 25,192. CHAS. GOODYEAR, of New Haven, Conn., for an "Improvement in porous napped rubber fabrics."

"I claim a new porous manufacture or fabric, composed of a woven or other cloth, or equivalent therefor, and india rubber, or allied gum, rendered pervious to air and impervious to water, substantially as described, and with a face of flocks, clippings, or shearings of woolen or other fibres, or equivalents therefor, substantially as and for the purpose described."

No. 25,193. RENSSELAER D. GRANGER, of Philadelphia, Pa., for an "Improvement in cooking stoves."

"I claim placing across the upper flue of a cooking stove a hollow box-formed partition, communicating with the external air, the said partition having two openings arranged in respect to the boiler holes in the top plate, as herein set forth, and the said openings having their inner surfaces perforated, as and for the purpose specified."

No. 25,194. JOHN S. HAWKINS and REZIN HAWKINS, of Greenfield, Ind., for an "Improvement in harvesters."

"We claim the arrangement of the main frame and team shaft, in combination with the adjustable frame *d*, and hinged shoe or cutting apparatus T, constructed and operated in the manner substantially as described, for the purpose specified."

No. 25,195. THOS. R. HOPKINS, of Petersburgh, Va., assignor to himself and R. E. Robinson, of same place, for an "Improvement in screw presses."

"I claim the use in combination with a power screw of a press or other machine of two revolving nuts F, F, which are fitted to gear into the thread of said screw, and so arranged and operated upon in order to give motion to the screw, that the upper one remains stationary while the lower one revolves, and vice versa, substantially as and for the purposes set forth."

No. 25,196. ROBT. W. HILL, of Naugatuck, Conn., for an "Improvement in cooking apparatus."

"What I claim, is, the portable cooking or heating apparatus herein-before described, composed of the hot-air chamber A, and fire pit B, when provided with ports C, furnished with registers, with the partition (*c*), and draught apertures (*a*), the whole being constructed and arranged as specified."

No. 25,197. HERMANN HIRSCH, of Berlin, Prussia, for an "Improved marine propeller."

"I claim as my invention, the peculiar form and construction substantially as herein described of a propeller, whereby the centrifugal force obtained is made to co-operate with and increase the effect of the screw."

No. 25,198. HERMANN HIRSCH, of Berlin, Prussia, for an "Improvement in the construction of ships."

"I claim as my invention, the form and construction substantially as herein set forth of the hull of ships or vessels, whereby the possibility of breakage of keel is removed, and a normal form, giving a maximum of steadiness, without retardation of velocity, is imparted to the bottom."

No. 25,199. RICHD. M. HOE, of New York, N.Y., for an "Improvement in feeding paper to printing presses."

"I claim the combination of the feeding machanism cutting apparatus, and the printing machine, or their equivalents in the said combination, for feeding the paper from a roll to a printing machine, and cutting or partially cutting it into sheets as it passes along to be printed, as set forth. I also claim making the cutter so as to leave the several sheets united in certain places, substantially as described, in combination with the conducting tapes as described, or the equivalents thereof, so that the conducting tapes may pass around the cutter cylinder as set forth. And I also claim, in combination with the cutter cylinder, and the grooved cylinders substantially as specified, or the equivalents thereof, the employment of the two pressure rollers or their equivalent, as described, for keeping the sheet distended."

No. 25,200. CHAS. H. HUNTER, of Shelbyville, Ind., for an "Improvement in machines for weighing grain."

"What I claim, is, the combination of the scale beam or lever *g*, with bag holder H, secured to one end, and the standard *c*, E, with rack and pinion for elevating or depressing the scale beam, when the whole is constructed and arranged substantially as described for the purposes set forth."

No. 25,201. Obed Hussey, of Baltimore, Md., for an "Improvement in harvesters."

"What I claim therein, is, first the combination of the main ground wheel seat and platform, when hinged to the main frame, substantially as herein described. I also claim the raising and lowering of the entire frame, finger bar, and outside divider upon the two ground supports, in a horizontal position, by means of a lever and its connections therewith, operated by the driver from his seat, substantially as described and for the purpose set forth."

No. 25,202. Jacob Jenkins, of Lynn, Mass., for an "Improved mechanism for protecting the upper of a boot or shoe, while applying the sole."

"I claim the above described arrangement of a shoe jack (or mechanism for supporting the toe and heel parts of a boot or shoe), a guard or protector constructed essentially in manner as set forth, (the same being made to encompass the upper of a boot or shoe, or so much of it as extends above the bottom surface of the last), and a clamping contrivance for adjusting the protector to the contour of the shoe, the whole being made to operate together as and for the purpose set forth. I also claim the above-described application and arrangement of an adjustable guard to the protector, whereby the fitting of the outer sole to the insole and upper, is not only greatly facilitated, but is rendered certain of being fixed in its true and proper position."

No. 25,203. Walter W. Kelly, of Reedtown, O., for an "Improvement in scales."

"I claim the adjustable rack G, and platform H, constructed and arranged as described, in combination with the centre piece H^1, upon which the rack and platform are placed, so that either one can be used at pleasure, in the manner specified."

No. 25,204. W. R. Landfear, of Hartford, Conn., for an "Improved pegging machine."

"I claim, 1st, the employment, in combination with the bar A, of the vertically and laterally moving box C, having a plate D, awl (*h*), punch (*i*), and inclined face (*j*), arranged substantially as herein described and shown, so that on the descent of the plate D, the awl will enter the sole, and the inclined face (*j*) will, while the awl remains in the leather, shove the bar A along laterally, thus ensuring certainty and regularity of feed, and on the elevation of plate D the box C will be moved laterally by the spring (*l*), the awl will be carried over the point where a new hole is to be made, and the punch brought over the previously made peg hole, in readiness to drive home the peg on the next descent of the plate D. 2nd, the combination with the vertically and horizontally moving box C, of the spring (*l*), for giving a lateral movement to said box, and the adjusting screw *m*, for regulating the spaces between the peg holes, as herein shown and described. 3rd, the arrangement and combination with the bar A, of the adjustable elastic plate F, against which the peg block is pressed, said plate being adjusted by means of the screw (*p*), to suit any size of pegs, as herein shown and described."

No. 25,205. Dl. Long, of Dayton, O., for an "Improvement in sleeping berths for railroad cars."

"I claim the arrangement and combination of the jointed supporter (*i*, i^1, i^{11}, i^{111}, *m*, *n*, *r*), and hinged seat and back (A), with the folding berth (*g*, g^1), screen (*k*), and rest (*l*), all constructed and operating, so as to form two sleeping berths, substantially as herein described."

No. 25,206. Eugene Martin, of Waterbury, Conn., for an "Improvement in alloys."

"I claim the process, or mode of procedure, substantially such as herein described, as applied to the ingredients such as described, and for the purpose specified."

No. 25,207. John M. May, of Janesville, Wis., for an "Improvement in pumps."

"I claim cylinder B, in combination with part A, when constructed, arranged, and operated with piston C and pipe E, substantially as described, and for the purposes set forth. I also claim the screw D, when used for the purpose of fastening and unfastening the stationary part of the pump in the well or reservoir to any suitable substance, substantially as and for the purposes described. I also claim set screw N, in combination with notch O or projection P, or their equivalents, to form a catch or wrench for turning the screw D and pump nearly in the path of a horizontal circle, in fastening and unfastening the stationary part of the pump in the well or reservoir, substantially as described; the set screw N also serving to gauge the descent of the piston, and to protect the valves from injury, as set forth. I also claim the devices consisting of springs G, G, segment J, and lever H, when connected together substantially as described, and for the purposes set forth."

No. 25,208. John M. May, of Janesville, Wis., for an "Improvement in pumps."

"I claim the device for connecting together the cylinders, and regulating the stroke of the pump, in combination with the point or spike I, or its equivalent, when used in open wells; and claim said device in combination with rod H, when used in drilled wells, substantially as and for the purposes set forth. I also claim the collar F, and springs *g*, *g*, *g*, *g*, *g*, *g*, *g*, *g*, when used in combination with the pump, or with the eduction pipe, and arranged substantially as shown."

No. 25,209. Hippolyte Monier, of Paris, France, for an "Improvement in argand gas-burners."

"I claim the construction of the argand burner, with its grate *a*, and external tube *b*, of clay, porcelain, or other incorrodible refractory non-conducting material, and with the inner tube and stem of metal, the several parts being combined, substantially as herein described."

No. 25,210. Richd. Montgomery, of New York, N. Y., for an "Improvement in corrugated iron bridges."

"I claim, 1st, the combination of the corrugated arch A, B, with the corrugated arch M, N, constructed and arranged in relation to each other, substantially as described and shown. 2nd, the combination of the peculiarly-formed blocks C, and bed plates F, with the abutment ends of the arches A, B, and M, N, substantially as and for the purposes set forth. 3d, the combination of the blocks D, and bottom plates G, with the cross rails K, L, and arches A, B, and M, N, substantially as and for the purposes described."

No. 25,211. Benjn. F. Moore, of New York, N.Y., for an "Improvement in ladies' bustles."

"What I claim, and desire to secure by Letters Patent, is, an inflated bustle for ladies' dresses, formed with the projecting points or scallops *d*, *d*, in the manner and for the purposes specified."

No. 25,212. Daniel Murray, of Fairfield, N. C., for an "Improvement in the mode of measuring grain."

"I claim the arrangement of the arms *a* and *h*, in combination with the slides *b* and *f*, constructed and operating as described, and for the purposes set forth."

No. 25,213. Wm. Murray, of Baltimore, Md., for an "Improvement in stamping machines for crushing ores, &c."

"I claim, 1st, the combination of two or more stampers, arranged on the same radial line, with two or more semi-circular, inclined, revolving, lifting, and dropping cams, which move together, and with a central driving shaft, substantially as and for the purposes set forth. 2nd, providing the semi-circular, lifting, and dropping cams with a vertical joint, about midway between their terminating ends, and with an oblong vertical slot at their rear or highest ends, and attaching said ends by means of a set screw, or its equivalent, to the frame of the cams, so that the inclination of said cams may be adjusted, to lift the stampers to a greater or less hight, according to the force required to perform the operation of stamping, substantially as and for the purposes set forth."

No. 25,214. Richd. H. Osgood, of Columbus, O., for an "Improved reciprocating saw."

"I claim providing the upper edges of saw teeth, with notches *f*, *f*, Fig. 1, substantially as described and represented, for the purpose of assisting to clear the kerf of saw dust."

No. 25,215. John L. Pott, of Pottsville, Pa., for an "Improvement in hoisting apparatus."

"I claim the inclined drum M, revolving in a plane parallel, or nearly parallel, to the lines of hoisting rope, in combination with the guide pulleys Q, Q, on the cross head R, the latter being operated from the shaft of the drum, through the medium of the screw K, or its equivalent, substantially as and for the purpose herein set forth."

No. 25,216. JOHN B. QUIGLEY, of Trenton, N. J., for an "Improvement in tapping water mains."

"I claim the employment of the pivoted standards B, jaws C, adjustable beam D, adjustable swivel F, chain G, vertical sliding piece E, and ferrule K, when the above parts are arranged and combined as herein shown and described."

No. 25,217. THOS. ROBJOHN, of New York, N. Y., for an "Inkstand."

"I claim the arrangement and combination of the ring D, cover D^1, arm (*e*), slotted projection E, and diaphragm G, so that by pressing down ring D, the cover will open, and the ink rise, and by releasing the ring, the ink will fall, and the cover D^1 will close, as and for the purposes herein shown and described."

No. 25,218. CHAS. W. RUSSELL, of Philadelphia, Pa., for an "Improved method of shaping bonnets."

"I claim the within-described method of shaping bonnets, etc., by means of a cord, or its equivalent, which is wound over the several parts of the bonnet, and which is retained in its position by hooks *a* and *d*, or their equivalents, substantially as herein specified."

No. 25,219. CHAS. W. RUSSELL, of Philadelphia, Pa., for an "Improved machine for pressing bonnets."

"I claim the arrangement of the adjustable roller V, or its equivalent, in such relation to the chain or rope, which connects the treadle with the press lever D, that the direction in which the pressing iron acts can be controlled, substantially in the manner and for the purpose herein described."

No. 25,220. AUGUSTIN P. SAMUEL, of New York, N. Y., for an "Improvement in rotary engines."

"I claim the method of governing and working the pistons C, D, by connecting their piston rods K, K, through the roller holders L, L, and rollers M, M, directly with the eccentrated curve E, substantially as and for the purposes set forth. I also claim the combination and arrangement, substantially as described of the valves *a* and *b*, with and within the movable pistons C, D, whereby such valves *a*, *b*, are opened by the first motion of the piston rods K, K, and before any motion is given to the pistons C, D, so that a passage is given to the steam within such pistons, and the steam admitted on both sides thereof, for the purpose of producing an equilibrium of pressure on each side of such pistons before they are put in motion. I claim, also, the construction and arrangement as above described, of the packing rings *r*, *s*, acting against each other by inclined surfaces, the outer ring *s*, being conical or tapering on both sides, and the inner ring *r* being tapering only on one side towards the ring *s*, and the inner ring acting against the other by means of the spring *z*, or its equivalent, expanding it outward against the cylinder, and inward against the piston, for the purposes specified."

No. 25,221. HEZEKIAH B. SMITH, of Lowell, Mass., for an "Improved mortising machine."

"I claim the relative arrangement of the fulcrum B, lever E, connecting rod G, and table B, with each other, in the manner described, when combined with power mortising machines, for the purposes set forth."

No. 25,222. GEO. S. G. SPENCE, of Boston, Mass., for an "Improvement in stoves."

"I claim the use of the conical inverted cup B, combined with the chain (*f*), or its equivalent, in the manner and for the purpose set forth. I also claim the combination of the air deflector, with the fire place door register, and so as to operate therewith, and deflect the entering currents of air, upon or toward the ignited surface of the fuel, as described."

No. 25,223. ORANGE N. STODDARD, of Oxford, O., for an "Improvement in sewing machines."

"I claim the yielding metallic loop-cheek B, *b*, operating in combination with a grooved hook A, *a*, or its described equivalent, in the manner and for the purpose set forth."

No. 25,224. ZURIEL SWOPE, of Lancaster, Pa., for an "Animal trap."

"1st, I claim the sinking bottom N, constructed as described for closing the trap, when acting in combination with the spring *g*, and bait lever M, substantially as already specified. 2d, I claim the counter balance chamber H, constructed as described, and operating for the purpose of resetting the trap, as already set forth."

No. 25,225. H. K. SYMMES, of Newton, Mass., for an "Improvement in gas retorts."

"I claim the arrangement of the removable flues D, and valves E, in combination with retorts of double length, substantially as and for the purpose described."

No. 25,226. CHAS. TAYLOR, of Little Falls, N. Y., for a "Ticket holder for railroads, &c."

"I claim the eye E, spring clasp C, and spring hook B, in combination with the link D, or its equivalent, for the purpose herein described."

No. 25,227. STEPHEN R. WEEDEN, of Providence, R. I., for an "Improvement in preparation of candlewicks."

"I claim a plaited or braided candlewick *e*, saturated with a solution of acetate of lead, or other substance to aid combustion, and coated with a silicate, as and for the purpose set forth."

No. 25,228. J. W. WETMORE, of Erie, Pa., for an "Improvement in railroad chairs."

"I claim the T lip or jaw (as at *k*. *l*, *m*, or k^{111}, l^{111}, m^{111}) notching the web of the rail as at *e*, *e*, and through these notches, having the bottom of the jaw pass down and riveted or keyed under the base *g*, *h*."

No. 25,229. IRA WISEL, of Newbury, Minnesota, for an "Improvement in water wheels."

"I claim the peculiar form of the buckets in combination with the rest of the wheel."

No. 25,230. F. L. BUEL, of Manchester, Conn., assignor to C. G. Keeney, of same place, for an "Improvement in knitting machines."

"I claim attaching the mechanical device above set forth, to a knitting machine, namely, by the thread guide *b*, lever *c*, *e*, and arm *i*, substantially in the manner and for the purpose as described. 2nd, the arrangement of the lever *k*, connections *m*, *n*, frame *h*, and arm *i*, substantially as described, and for the purpose set forth."

No. 25,231. JONAS HINKLEY, of Clarksfield, O., assignor to himself and Frederick A. Wildman, of same place, for an "Improvement in sewing machines."

"I claim, first, the combination of the looper (H), and receiving spring hook (J), when arranged so as to operate in the manner and for the purpose set forth. Second, the combination of the deflecting hook (G), the looper (H), and the receiving hook (J), essentially as specified. Third, the lifting finger (K), or its equivalent, operating substantially as herein set forth. Fourth, the combination of the lifting finger (K) with the looper (H), and receiving hook (J), substantially as herein described. Fifth, the combination of the lifting finger, the deflecting hook (G), the looper and the receiving hook, arranged and operating substantially as described. Sixth, the combination of the arm (D^5), link (D^6), and lifting bar (D^4), with the vibrating bar (D^3), and feeding hand (D^7), for the purpose described."

No. 25,232. THOS. R. HOPKINS, of Petersburgh, Va., assignor to himself and R. E. Robinson, of same place, for an "Improvement in cam presses."

"I claim operating a press follower, or other part of a machine, which is required to give a gradual pressure by means of a combined agency of two differentially toothed disks D, D^1, which revolve at unequal speeds two sets of reverse acting cams *h*, *g*, and intermediate friction rollers E, or their equivalents, substantially as herein described."

No. 25,233. WM. LINTON, of Baltimore, Md., assignor to John Jones, of same place, for an "Improvement in machines for making clay pipes."

"I claim the two-sized permanent core or mandrel, in combination with the fixed die A and adjustable jaws C, D, constructed, arranged, and operating in the manner described for the purpose specified."

No. 25,234. Edwd. T. Steen, of San Francisco, Cal., assignor to himself and B. S. Nichols, of Sacramento, Cal., for an "Improvement in quartz mills."

"I claim the employment of stampers E, E^1, when the same are operated by means of steam cylinders H, H^1, which communicate by the cross passages e, e^1, the change of steam being effected by valve pistons J, J, operating on a working beam L, and operated by the pistons G, G^1, the whole being arranged and combined substantially in the manner herein described."

No. 25,235. Bernard Lauth, of Pittsburg, Pa., assignor to Jones and Lauth, of same place, for an "Improvement in the manufacture of iron."

"I claim a new article of manufacture made by rolling iron or steel in a cold state for hardening and adding strength to it, without injury to its fibre, and at the same time reducing it in size, as herein set forth."

Re-issues.

Hugh W. Collender, of New York, N. Y., for an "Improvement in billiard table cushions." — Patented 8th December, 1857.—Re-issued 23rd August, 1859.

"I claim composing cushions for billiard tables with a body or back of what is known as the soft compound of vulcanizable india rubber or allied gum, in combination with a facing of india rubber or allied gum, rendered less compressible by fibrous matter, or the equivalent thereof, substantially as described."

C. A. McEvoy, of Richmond, Va., for an "Improvement in railroad station indicators." — Patented 20th November, 1855.—Re-issued 23rd August, 1859.

"I claim presenting a movable sign or symbol to passengers of a R. R. car, so that both sides of said sign shall be visible and utilized as annunciators by passing each sign in turn through an opening of the case by the revolving of the drum to which the said signs are attached."

James Powell, of Cincinnati, Ohio, for an "Improvement in faucets."—Patented 22nd March, 1859.—Re-issued 5th July, 1859; again re-issued 23rd August, 1859.

"I claim, 1st, the valve stem H, formed with projecting flanges J and J^1, when confined to a rectilinear path, and operated by a cam or eccentric which engages with it at two opposite points, in the manner and for the purpose set forth. 2nd, the described arrangement and combination of the slotted head I, i, pivot c, socket E, and cam F, operating in the manner set forth to prevent lateral motion of the valve stem."

Designs.

James Bogle, of West Newton, Mass., assignor to himself and Daniel Bogle, of Dover, N. H., for a "Design for floor oil cloth."

"I claim the ornamental design for floor oil cloths, represented in the accompanying pattern."

James Bogle, of West Newton, Mass., assignor to himself and Daniel Bogle, of Dover, N. H., for a "Design for floor oil cloth."

"I claim the ornamental design for floor oil cloths, represented in the accompanying pattern."

Henry Hebbard, of New York, N. Y., for a "Design for spoon or fork handles."

"I claim the use of the ornamental devices on the obverse and reverse sides of the spoon, as herein-before described, for the purpose of ornamenting the handles of spoons, forks, and other articles of table cuttlery, whether made from silver or other metals."

Francis M. Strong and Thomas Ross, of Brandon, Vt., for a "Design for scales."

"We claim the configuration of the parts herein shown and described, to form a new and original design for the cases of what are known as the union scales."

Additional Improvements.

Moses Bales, of Big Plain, Ohio, for an "Improvement in mole plough."—Patented 15th February, 1859.—Additional Improvement dated 23rd August, 1859.

"I claim the employment of the cap (d) in combination with the mole (B), constructed and arranged substantially as and for the purposes set forth."

L. P. Harris, of Mansfield, Ohio, for an "Improvement in apparatus for evaporating saccharine juices."—Patented 18th January, 1859.—Re-issued 23rd August, 1859.

"I claim the application of partial transverse oblique partitions when applied to evaporating pans for the purpose of preventing a continuous transverse channels, when the said partitions shall be arranged substantially in the manner as herein fully set forth and described."

A Free Library and Reading Room, in connection with the Office of the Commissioners of Patents, is open to the Public daily from 10 till 4 o'clock.

In addition to the Printed Specifications, Indexes, and other publications of the Commissioners, the Library includes a Collection of the leading British and Foreign Scientific Journals, and text-books in the various departments of science and art. A printed Catalogue of the Library is on sale.

Note.—The Commissioners' publications may be consulted daily in the Library of the British Museum; in the Library of the Society of Arts; and in the Free Libraries of the following Towns and Cities:—

Aberdeen (*Public Library Town House*).
Accrington (*Mechanics' Institution, Bank Street*).
Belfast (*Harbour Office, Corporation Square*).
Beverley (*Guildhall*).
Birmingham (*Birmingham and Midland Institute, Cannon Street*).
Bolton-le-Moors (*Public Library, Exchange Buildings*).
Bradford, Yorkshire (*Borough Accountant's Office, Corporation Buildings, Swain Street*).
Brighton (*Town Hall*).
Bristol (*City Library, King Street*).
Burnley (*Office of the Burnley Improvement Commissioners*).
Cambridge (*Free Library, Jesus Lane*).
Canterbury (*Municipal Museum, Guildhall Street*).
Carlisle (*Free Library, Police Office*).
Chester (*Town Hall, Northgate Street*).
Cork (*Royal Cork Institution, Nelson Place*).
Crewe (*Railway Station*).
Darlington (*Mechanics' Institute, Skinnergate*).
Dorchester.
Drogheda.
Dublin (*Royal Dublin Society, Kildare Street*).
Dundalk.
Falmouth (*Public Library, Church Street*).
Gateshead (*Mechanics' Institute*).
Gorton (*Railway Station*).
Glasgow (*Stirling's Library, Miller Street*).
Grimsby, Great (*Mechanics' Institution, Victoria Street*).
Hanley, Staffordshire Potteries (*Town Hall*).
Hartlepool, West (*Literary and Mechanics' Institution, Church Street*).
Hertford (*Public Library, Town Hall*).
Huddersfield (*Commissioners' Offices, No. 1, South Parade*).
Hull (*Mechanics' Institute, George Street*).

PATENT LAW AMENDMENT ACT, 1852.—All Specifications, Indexes, &c., printed by order of the Commissioners of Patents, are sold at the Great Seal Patent Office, 25, Southampton Buildings, Holborn.

THE PATENT LAW AMENDMENT ACTS (15 & 16 Vict., cap. 83; 16 Vict., cap. 5; and 16 & 17 Vict., cap. 115); with the Rules and Regulations made by the Commissioners of Patents for Inventions, and by the Lord Chancellor and the Master of the Rolls, under the Acts 15 and 16 Vict., c. 83, and 16 & 17 Vict., c. 115, accompanied by Specimen Forms of the Provisional Documents printed on sheets of the prescribed size. Price 6*d*.

THE CHRONOLOGICAL INDEX of PATENTS of INVENTION, from March 2, 1617 14 James I.), to September 30, 1852 (16 Vict.), 2 vols. Price 30*s.*

THE ALPHABETICAL INDEX of PATENTEES of Inventions for the above period. Price 20*s.*

THE SUBJECT-MATTER INDEX of PATENTS for the same period — *Second Edition*—to which is prefixed a Key of Terms and Phrases. 2 vols. Price 2*l.* 16*s.*

A Key to the *First Edition* of the above work is also published separately, and may be had on application.

THE CHRONOLOGICAL INDEXES of APPLICATIONS for PATENTS and PATENTS GRANTED from the 1st October to the 31st December, 1852, and from the 1st January to the 31st December, 1853, in one volume. Price 11*s.*

THE ALPHABETICAL INDEXES for the above periods, in one volume. Price 13*s.*

THE SUBJECT-MATTER INDEX, from 1st October to 31st December, 1852. Price 9*s.*

THE SUBJECT-MATTER INDEX, from 1st January to 31st December, 1853. Price 16*s.*

THE CHRONOLOGICAL INDEX of APPLICATIONS for PATENTS and PATENTS GRANTED from the 1st January to the 31st December, 1854. Price 6*s.*

THE ALPHABETICAL INDEX for the above period. Price 7*s.*

THE SUBJECT-MATTER INDEX for the above period. Price 16*s.* 6*d.*

THE CHRONOLOGICAL INDEX of APPLICATIONS for PATENTS and PATENTS GRANTED from the 1st January to the 31st December, 1855. Price 6*s.* 6*d.*

THE ALPHABETICAL INDEX for the above period. Price 7*s.* 6*d.*

THE SUBJECT-MATTER INDEX for the above period. Price 17*s.*

THE CHRONOLOGICAL INDEX of APPLICATIONS for PATENTS and PATENTS GRANTED from the 1st January to the 31st December, 1856. Price 6*s.* 6*d.*

THE ALPHABETICAL INDEX for the above period. Price 8*s.*

THE SUBJECT-MATTER INDEX for the above period. Price 18*s.* 6*d.*

THE ALPHABETICAL INDEX of APPLICATIONS for PATENTS and PATENTS GRANTED from the 1st January to the 31st December, 1857. Price 8*s.*

THE CHRONOLOGICAL INDEX for the above period. Price 6*s.* 6*d.*

THE SUBJECT-MATTER INDEX for the above period. Price 19*s.* 6*d.*

THE ALPHABETICAL INDEX of APPLICATIONS for PATENTS and PATENTS GRANTED, from the 1st January to the 31st December, 1858. Price 8*s.*

THE CHRONOLOGICAL INDEX for the above period. Price 6*s.*

THE REFERENCE INDEX of PATENTS, pointing out the Office in which each enrolled Specification of a Patent may be consulted; the Books in which Specifications, Law Proceedings, and other subjects connected with Inventions have been noticed; also such of the Specifications of Patents granted under the Act of 21 James I. as have been published by the authority of the Commissioners. Price 30*s.*

AN APPENDIX to the REFERENCE INDEX of PATENTS of INVENTION, containing Abstracts from such of the early Patents and Signet Bills as describe the nature of the invention, and which Patents have no enrolled Specifications. Price 4*s.*

AN INDEX to ALL INVENTIONS PATENTED in ENGLAND from 1617 to 1854 inclusive, arranged under the greatest number of heads, with parallel references to INVENTIONS and DISCOVERIES described in the scientific works of VARIOUS NATIONS, as classified by Professor Schubarth. By B. WOODCROFT.

The foreign works thus indexed form a portion of the Library of the Commissioners of Patents, where they may be consulted, or manuscript translations be had.

SOMMAIRE de toutes les INVENTIONS BREVETÉES en ANGLETERRE depuis 1617 jusqu'en 1854 inclusivement, arrangées d'après le plus grand nombre de rubriques, avec renvois aux INVENTIONS et DÉCOUVERTES décrites dans les ouvrages scientifiques de DIFFÉRENTES NATIONS, classés par le Professeur Schubarth. Par B. Woodcroft.

Les ouvrages étrangers ci-dessus font partie de la Bibliothèque de la Commission des Patentes, où l'on peut les consulter, et obtenir des traductions en manuscrit.

VERZEICHNISS aller in ENGLAND von 1617—1854 incl. PATENTIRTEN ERFINDUNGEN, unter vielfältige Titel gebracht, mit Hinweisungen auf ERFINDUNGEN und ENTDECKUNGEN die nach Prof. Schubarth's Klassificirung in den wissenschaftlichen Werken VERSCHIEDENER NATIONEN beschrieben sind. Von B. Woodcroft.

Die hier aufgeführten fremden Werke machen einen Theil der Bibliothek der Patent Commission aus, allwo sie nachgeschlagen oder schriftliche Uebersetzungen besorgt werden können.

REPERTORIO di tutte le INVENZIONI munite di LETTERE PATENTI in INGHILTERRA dal 1617—1854 inclusivo, poste in ordine sotto il piu gran numero di capi, con riferenze alle INVENZIONI e SCOPERTI descritti nelle opere scientifiche di DIVERSE NAZIONI, classate dal Professore Schubarth. Dal Sig. B. Woodcroft.

Le opere straniere quì indicate possono esser consultate nella Biblioteca dei Commissari delle Patenti, e traduzioni in manuscritto vi possono ottenersi.

B. WOODCROFT,
Superintendent of Specifications, &c.

SUPPLEMENT to the SERIES of LETTERS PATENT and SPECIFICATIONS of LETTERS PATENT for INVENTIONS recorded in the Great Seal Patent Office, and granted between the 1st March (14 Jac. I.) A.D. 1617, and the 1st October (16 Vict.) A.D. 1852; consisting for the most part of Reprints of scarce Pamphlets, descriptive of the early patented Inventions comprised in that Series. Edited by BENNET WOODCROFT, Superintendent of Specifications, etc. In one vol., price 9*s.* 6*d.*, or each Tract separately at the price affixed.

CONTENTS OF VOL. I.

1. Metallica; or, the treatise of Metallica, briefly comprehending the doctrine of diverse new metallical inventions &c. By SIMON STURTEVANT. (*Letters Patent, dated 29th February*, 1611.) Price 1*s.* 4*d.*
2. A Treatise of Metallica, but not that which was published by Mr. Simon Sturtevant, upon his Patent, &c. By JOHN ROVINSON (*Letters Patent, granted A.D.* 1612.) Price 4*d.*
3. A Commission directed to Sir Richard Wynne and others to inquire upon oath whether NICHOLAS PAGE or Sir NICHOLAS HALSE was the first inventor of certaine kilnes for the drying of malt, &c. &c. (*Letters Patent, Nos.* 33 *and* 85, *respectively dated 8th April*, 1626, *and 23rd July*, 1635.) Price 2*d.*
4. DUD DUDLEY'S Metallum Martis; or iron made with pit-coale, sea-coale, &c. (*Letters Patent, Nos.* 18 *and* 117, *respectively dated 22nd February*, 1620, *and 2nd May*, 1638.) Price 8*d.*
5. Description of the nature and working of the patent Water-scoop Wheels invented by WILLIAM WHELER, as compared with the raising wheels now in common use. By J. W. B. Translated from the Dutch by Dr. Tolhausen. (*Letters Patent, No.* 127, *dated 24th June*, 1642.) Price 2*s.*
6. An exact and true definition of the stupendous Water-commanding Engine, invented by the Right Honourable (and deservedly to be praised and admired) EDWARD SOMERSET. Lord Marquis of WORCESTER, &c. &c. (*Stat.* 15 *Car. II. c.* 12. *A.D.* 1663.) Price 4*d.*
7. Navigation Improved; or the art of rowing ships of all rates in calms, with a more easy, swift, and steady motion than oars can. By THOMAS SAVERY. (*Letters Patent. No.* 347, *dated 10th January*, 1696.) Price 1*s.*
8. The Miner's Friend; or an engine to raise water by fire described, &c. By THOMAS SAVERY. (*Letters Patent, No.* 356, *dated 25th July*, 1698, *and Stat.* 10 *&* 11 *Will. III. c.* 31, *A.D.* 1699.) Price 1*s.*
9. Specimina Ichnographica; or a brief narrative of several new inventions and experiments, particularly the navigating a ship in a calm, &c. By JOHN ALLEN, M.D. (*Letters Patent, No.* 513, *dated 7th August*, 1729.) Price 8*d.*
10. A description and draught of a new-invented Machine for carrying vessels or ships out of or into any harbour, port, or river, against wind and tide, or in a calm, &c. By JONATHAN HULLS. (*Letters Patent, No.* 556, *dated 21st December*, 1736.) Price 8*d.*
11. An historical account of a new method for extracting the foul air out of ships, &c., with the description and draught of the machines by which it is performed, &c. By SAMUEL SUTTON, the Inventor. To which are annexed two relations given thereof to the Royal Society by Dr. Mead and Mr. Watson, (*Letters Patent, No.* 602, *dated 16th March* 1744.) Price 1*s.*

DELIVERY OF LETTERS.—For the Great Seal Patent Office the initials are W. C., the District being the Western Central. In the direction of a Letter, these initials should be legibly written in a separate line, and should in all cases end the address, thus:—

The Commissioners of Patents,
Great Seal Patent Office,
25, Southampton Buildings,
London,
W.C.

In course of Publication, by Order of the Commissioners of Patents.

ABRIDGMENTS (in Classes, and Chronologically arranged) of all SPECIFICATIONS of PATENTED INVENTIONS, from the earliest enrolled to those published under the Act of 1852.

These books are of 12mo size, and as each is limited to inventions of one class only, they can be sold at prices sufficiently moderate to enable the humblest inventor to examine for himself whether his discovery has been previously patented or not.

At the foot of each abstract are given references to notices of the inventions in scientific and other works, and to the reports of law proceedings for infringements, &c. &c. &c.

The classes already published are,—

1. DRAIN TILES AND PIPES, price 6*d.*
2. SEWING AND EMBROIDERING, price 6*d.*
3. MANURE, price 6*d.*
4. PRESERVATION OF FOOD, price 6*d.*
5. MARINE PROPULSION, price 4*s.*
6. MANUFACTURE OF IRON AND STEEL, price 5*s.*
7. AIDS TO LOCOMOTION, price 1*s.*
8. STEAM CULTURE, price 2*s.*
9. WATCHES, CLOCKS, AND OTHER TIME-KEEPERS, price 1*s.* 6*d.*
10. FIRE-ARMS AND OTHER WEAPONS, AMMUNITION, AND ACCOUTREMENTS, price 6*s.* 6*d.*
11. PAPER.—PART I. MANUFACTURE OF PAPER, PASTEBOARD, AND PAPIER MÂCHÉ, price 3*s.*
12. PAPER.—PART II. CUTTING, FOLDING, AND ORNAMENTING; INCLUDING ENVELOPES, CARDS, PAPER-HANGINGS, &c., price 2*s.*
13. TYPOGRAPHIC, LITHOGRAPHIC, AND PLATE PRINTING, price 7*s.*
14. BLEACHING, DYEING, AND PRINTING YARNS AND FABRICS, price 9*s.* 6*d.*

The following are in the press:—

ELECTRICITY AND MAGNETISM: THEIR GENERATION AND APPLICATIONS.
PREPARATION OF FUEL, AND APPARATUS FOR ITS COMBUSTION.
MANUFACTURE AND APPLICATIONS OF INDIA RUBBER, GUTTA PERCHA, &c.; INCLUDING AIR, FIRE, AND WATER PROOFING.
PRODUCTION AND APPLICATIONS OF GAS.
STEAM ENGINES.
METALS AND ALLOYS.

B. WOODCROFT.

The above, and all other works published by the Commissioners of Patents, are now on sale at the Great Seal Patent Office, 25, Southampton Buildings, Holborn.

This Journal is published on the evenings of Tuesday and Friday, and will be forwarded, post free, to Subscribers.—Terms, 30*s.* per annum.—Subscriptions received at the Great Seal Patent Office, where also single copies, at twopence each, may be obtained.

LONDON:
Printed by GEORGE E. EYRE and WILLIAM SPOTTISWOODE, Printers to the Queen's most Excellent Majesty.
Published at the Great Seal Patent Office, 25, Southampton Buildings, Holborn.

THE

COMMISSIONERS OF PATENTS' JOURNAL.

By Authority.

(*Registered for transmission abroad.*)

No. 594. TUESDAY, SEPTEMBER 13, 1859. Price 2d.

Notices to Proceed.

NOTICE is hereby given, that

1093. ANGE JUMELAIS, Householder, in the city of Paris, in the empire of France, has given notice at the Office of the Commissioners of his intention to proceed with his application for Letters Patent for the invention of "An apparatus yielding illimited power, so called 'French movement.'"

1094. And JAMES FERGUSON, of Kilmarnock, in the county of Ayr, North Britain, Tinsmith and Gas Fitter, and JAMES MCGAVENY, of Glasgow, in the county of Lanark, North Britain, Yarn Dresser, have given the like notice in respect of the invention of "Improvements in fasteners for shutters, and for similar uses."

1097. And JOHN BASFORD, of the Brick Yard, Oundle, in the county of Northampton, has given the like notice in respect of the invention of "An improvement in the apparatus used when expressing clay or brick earth through dies."

1102. And CHARLES NUTTALL, of Rochdale, in the county of Lancaster, Machinist, has given the like notice in respect of the invention of "Improvements in machinery or apparatus for grinding wire cards."

1103. And FREDERICK WILLIAM EMERSON, of 110, Fenchurch Street, in the city of London, has given the like notice in respect of the invention of "Improvements in treating ores to obtain a new metallic substance and its salts, and in the application of such matters, and also certain products of tungsten in dyeing, printing, and painting."

As set forth in their respective petitions, recorded in the said office on the 2nd day of May, 1859.

1114. And EDWARD WATKIN SCALE, of Merthyr Tydfil, in the county of Glamorgan, Gentleman, has given the like notice in respect of the invention of "Improvements in railway signals."

As set forth in his petition, recorded in the said office on the 3rd day of May, 1859.

1128. And EDWARD THOMAS HUGHES, of the firm of Hughes and Son, Patent Agents, 123, Chancery Lane, London, W.C., has given the like notice in respect of the invention of "Improvements in the manufacture of sheet iron."—A communication from abroad by David A. Morris, of Pittsburg, Pennsylvania, United States of America.

1131. And HENRY REYNOLDS, of Denmark Hill, in the county of Surrey, Gentleman, has given the like notice in respect of the invention of "Improvements in refining sugar and other saccharine substances."

As set forth in their respective petitions, both recorded in the said office on the 5th day of May, 1859.

1137. And WILLIAM KELLINGLEY, of No. 13, Mason Street, New Cross, Surrey, Carriage Builder, has given the like notice in respect of the invention of "Improvements in the mode of lubricating the journals of the axles of locomotive engines of carriages and machinery."

1140. And SAMUEL WRIGHT, of Sudbury, in the county of Suffolk, Gas Engineer, has given the like notice in respect of the invention of "An improved gas governor or regulator."

As set forth in their respective petitions, both recorded in the said office on the 6th day of May, 1859.

1149. And MICHAEL HENRY, of 84, Fleet Street, in the city of London, Patent Agent, has given the like notice in respect of the invention of "Improvements in the manufacture and construction of locks and fastenings."—A communication from abroad by Joseph Napoleon Rebour, residing at Paris, France.

As set forth in his petition, recorded in the said office on the 7th day of May, 1859.

1157. And JOHN RAMSBOTTOM, of Crawshaw Booth, near Rawtenstall, in the county of Lancaster, Machine Printer, has given the like notice in respect of the invention of "Certain improvements in machinery for printing fabrics."
As set forth in his petition, recorded in the said office on the 9th day of May, 1859.

1170. And MOSES DEFRIES, of Houndsditch, in the city of London, Manufacturer, has given the like notice in respect of the invention of "Improved apparatus for regulating the pressure of gas."

1174. And MICHAEL HENRY, of 84, Fleet Street, in the city of London, Patent Agent, has given the like notice in respect of the invention of "Improvements in heating and in supplying air, and in the apparatus employed therein, part of which improvements is also applicable to exhausting fluids."—A communication from abroad by Louis Cyrille Bureau, residing at Paris, in the French empire.

1176. And WILLIAM OLAND BOURNE, of the city and state of New York, United States of America, has given the like notice in respect of the invention of "Improvements in the means of and apparatus for separating metals, ores, and other substances of different specific gravities."
As set forth in their respective petitions, all recorded in the said office on the 10th day of May, 1859.

1185. And WILLIAM SPENCE, of 50, Chancery Lane, in the county of Middlesex, Patent Agent, has given the like notice in respect of the invention of "Improvements in knapsacks and other military equipments."—A communication from abroad by John Rider, of New York, United States.

1188. And JAMES BAGSTER LYALL, of Castle Frome, in the county of Hereford, Gentleman, and FREDERICK WILLIAM CAMPIN, of the Strand, in the county of Middlesex, Patent Agent, have given the like notice in respect of the invention of "Improvements in the saloon omnibus and other omnibuses, the wheels and springs whereof and mode of attaching them being applicable to other carriages."
As set forth in their respective petitions, both recorded in the said office on the 11th day of May, 1859.

1214. And SCHOFIELD CROWTHER SHEARD, Engineer, of Smethwick, in the county of Stafford, has given the like notice in respect of the invention of "Certain improvements in fire-bars, which bars are applicable to all furnaces where great heat and economy of fuel are required."
As set forth in his petition, recorded in the said office on the 16th day of May, 1859.

1223. And JOHN BROWN the younger, of the Rotherham Iron Works, Rotherham, in the county of York, Ironfounder, has given the like notice in respect of the invention of "Improvements in buffers, draw springs, and bearing springs."
As set forth in his petition, recorded in the said office on the 17th day of May, 1859.

1242. And ROBERT WILSON, of Patricroft, near the city of Manchester, Engineer, has given the like notice in respect of the invention of "Improvements in hydraulic machinery."
As set forth in his petition, recorded in the said office on the 20th day of May, 1859.

1257. And WILLIAM HENRY PERKIN, King David Fort, St. George-in-the-East, in the county of Middlesex, and MATTHEW GRAY, of the Dalmonach Print Works, Bonhill, Dumbartonshire, have given the like notice in respect of the invention of "Improvements in mordanting and dyeing fabrics of cotton and other vegetable fibres."
As set forth in their petition, recorded in the said office on the 21st day of May, 1859.

1278. And JAMES CRAIG FISHER, of No. 51, Cathedral Street, Glasgow, Manager of Cook's Patent Composition Company, has given the like notice in respect of the invention of "Improvements in preparing paints and varnishes."
As set forth in his petition, recorded in the said office on the 24th day of May, 1859.

1305. And WILLIAM HENRY NEVILL, of Llanelly, in the county of Carmarthen, Manufacturer, has given the like notice in respect of the invention of "Improvements in the manufacture of steel, and wrought iron."
As set forth in his petition, recorded in the said office on the 26th day of May, 1859.

1430. And GEORGE SMITH, of Manor Road, Saint Mary's, Newington, in the county of Surrey, has given the like notice in respect of the invention of "Improvements in hat bands."
As set forth in his petition, recorded in the said office on the 14th day of June, 1859.

1540. And ALFRED VINCENT NEWTON, of the Office for Patents, No. 66, Chancery Lane, in the county of Middlesex, Mechanical Draughtsman, has given the like notice in respect of the invention of "Improved machinery for cutting corks."—A communication from abroad by Edward Conroy, of Boston, in the United States of America.
As set forth in his petition, recorded in the said office on the 28th day of June, 1859.

1567. And BRIDGE STANDEN, of Salford, in the parish of Manchester and county of Lancaster, Chymist, has given the like notice in respect of the invention of "Improvements in the deodorizing and separation of fecal and putrescent organic matters, in the preparation or manufacture therefrom of a portable artificial manure or fertilising compound, and in apparatus to be employed in such preparation or manufacture."
As set forth in his petition, recorded in the said office on the 1st day of July, 1859.

1628. And JOHN HENRY JOHNSON, of No. 47, Lincoln's Inn Fields, in the county of Middlesex, and of No. 166, Buchanan Street, in the city of Glasgow, North Britain, Gentleman, has given the like notice in respect of the invention of "Improvements in moulding or shaping metals by pressure, and in

the machinery or apparatus employed therein."—A communication from abroad by Levi Dodge, of the United States of America.

As set forth in his petition, recorded in the said office on the 8th day of July, 1859.

1768. And Anton Bruno Seithen, of No. 6, Alpha Place, Caledonian Road, London, in the county of Middlesex, has given the like notice in respect of the invention of "Improvements in cases or boxes, and in casings, hampers, baskets, and wrappers for holding bottles, jars, and other articles."

1770. And Henry Justinian Newcome, of Shenley, near Barnet, in the county of Herts, has given the like notice in respect of the invention of "An apparatus for heating or warming buildings."

As set forth in their respective petitions, both recorded in the said office on the 30th day of July, 1859.

1812. And William Richard Drake, of No. 46, Parliament Street, Westminster, in the county of Middlesex, Gentleman, has given the like notice in respect of the invention of "An apparatus for conducting electricity in the sea, and for telegraphing and sounding in deep water."—A communication from abroad by Emile Schneider, of Ecole de Droit, Saint Petersburgh, in the empire of Russia.

As set forth in his petition, recorded in the said office on the 6th day of August, 1859.

1848. And Joseph Waite, of Cheltenham, in the county of Gloucester, Chemist, has given the like notice in respect of the invention of "Improvements in making infusions for pharmaceutical purposes, which improvements are also applicable to other purposes of a similar nature."

As set forth in his petition, recorded in the said office on the 9th day of August, 1859.

1896. And Septimus Beardmore, of No. 27, Albion Street, Hyde Park, London, Civil Engineer, has given the like notice in respect of the invention of "Improvements in electric batteries."

As set forth in his petition, recorded in the said office on the 17th day of August, 1859.

1915. And William Aristides Vérel, of Macduff, in the county of Banff, Merchant, has given the like notice in respect of the invention of "Improvements in the preparation of bones for manure."

1919. And the Honorable William Talbot, of the Army and Navy Club, Pall Mall, in the county of Middlesex, has given the like notice in respect of the invention of "An improved cigar lighter."

As set forth in their respective petitions, both recorded in the said office on the 22nd day of August, 1859.

1965. And David Todd, of Bridge-of-Weir, in the county of Renfrew, North Britain, Mill Manager, has given the like notice in respect of the invention of "Improvements in machinery or apparatus for carding and treating or preparing fibrous materials."

As set forth in his petition, recorded in the said office on the 29th day of August, 1859.

2032. And John James Sieber, of 5, Baring Street, New North Road, London, in the county of Middlesex, has given the like notice in respect of the invention of "Improvements in power looms."—A communication from Henry Honegger, of Thiengen, Grand Duchy of Baden.

As set forth in his petition, recorded in the said office on the 6th day of September, 1859.

And notice is hereby further given, that all persons having an interest in opposing any one of such applications are at liberty to leave particulars in writing of their objections to such application, at the said Office of the Commissioners, within twenty-one days next after the date of the Gazette [and of the Journal] in which this notice is issued.

Notices of Application for leave to enter a Disclaimer, &c.

In the matter of a Patent granted to Amory Fairbanks Sherman, of the city of Roxbury, in the county of Norfolk, in the state of Massachusetts, in the United States of America, but lately residing in Liverpool, in the county of Lancaster, Civil Engineer, for "Improvements in machinery for the manufacture of ropes, stands for ropes, and for other purposes," bearing date the 21st day of April, 1857, No. 1119.

Notice is hereby given, that Joseph Harger, of Oxton, in the county of Chester, Gentleman (assignee of the said Letters Patent, by virtue of an indenture bearing date the 27th day of September, 1858, and which deed was duly registered in the Great Seal Patent Office on the 14th day of October, 1858), has applied by petition to Her Majesty's Commissioners of Patents for Inventions, for leave to enter a Disclaimer and Memorandum of Alteration of certain parts of the Specification of the said Letters Patent.—Dated this 2nd day of September, 1859.

William Walker,
Agent for the Petitioner,
No. 44, Castle Street,
Liverpool.

In the matter of a Patent granted to Amory Fairbanks Sherman, of the city of Roxbury, in the county of Norfolk, in the state of Massachusetts, in the United States of America, but lately residing in Liverpool, in the county of Lancaster, Civil Engineer, for "Improvements in machinery for breaking, hatchelling, roving, spinning, and tarring hemp, flax, manilla, or any fibrous material or materials," bearing date the 6th day of June, 1857, No. 1598.

Notice is hereby given that Joseph Harger, of Oxton, in the county of Chester, Gentleman (assignee of the said Letters Patent, by virtue of an indenture bearing date the 27th day of September, 1858, and

which deed was duly registered in the Great Seal Patent Office on the 14th day of October, 1858), has applied by petition to Her Majesty's Commissioners of Patents for Inventions, for leave to enter a Disclaimer and Memorandum of Alteration of certain parts of the Specification of the said Letters Patent. —Dated this 2nd day of September, 1859.

WILLIAM WALKER,
Agent for the Petitioner,
No. 44, Castle Street,
Liverpool.

Patents on which the Stamp Duty of £50 has been Paid.

(*To 10th September, 1859, inclusive.*)

8th September.

2089. JOHN FOWLER, junior, of Havering, in the county of Essex, for an invention of "Improvements in machinery or apparatus for ploughing and tilling land by steam."—Dated 8th September, 1856.

2113. JOHN TAYLOR, of Spring Grove, Hounslow, in the county of Middlesex, for an invention of "An improvement in building walls."—Dated 10th September, 1856.

2129. ALEXANDER CHAPLIN, of Glasgow, in the county of Lanark, North Britain, Engineer, for an invention of "Improvements in ships or vessels." —Dated 11th September, 1856.

2149. CHRISTOPHER HILL, of the Great Western Railway, Chippenham Station, for an invention of "Improvements in the manufacture of lubricating matters."—Dated 13th September, 1856.

10th September.

2140. JOHN ELLIOTT, of Southampton, in the county of Hants, Architect and Civil Engineer, for an invention of "An improved apparatus for containing and supplying water, gas, and other fluids, applicable also as a fluid meter."—Dated 12th September, 1856.

2144. RICHARD PEYTON, of Birmingham, in the county of Warwick, Manufacturer, for an invention of "An improvement or improvements in the manufacture of metallic bedsteads and other articles for sitting, lying, and reclining upon."— Dated 13th September, 1856.

2150. SAMUEL CUNLIFFE LISTER, of Manningham, near Bradford, York, for an invention of "Improvements in preparing and spinning cotton, flax, and similar fibres."—Dated 13th September, 1856.

2165. GEORGE TOMLINSON BOUSFIELD, of Sussex Place, Loughborough Road, Brixton, in the county of Surrey, for an invention of "Improvements in power looms for weaving wire cloth."—A communication.—Dated 16th September, 1856

Extracts from the Report to Parliament of the Commissioners of Patents for the Year 1858.

THE Commissioners of Patents appointed under the Patent Law Amendment Act, 1852 (15 & 16 Vict. c. 83.), in compliance with the terms of the third section of that Act, make the following report of proceedings under and in pursuance of the same for the year 1858, in continuance of their report of proceedings for 1857.

The number of applications for provisional protection recorded within the year 1858 was 3,007; the number of Patents passed thereon was 1,954; the number of Specifications filed in pursuance thereof was 1,880; the number of applications lapsed or forfeited, the applicants having neglected to proceed for their Patents within the six months of provisional protection, was 1,047.

The Act 16 Vict. c. 5. enacts that all Letters Patent for invention to be granted under the provisions of the Patent Law Amendment Act, 1852, shall be made subject to the condition that the same shall be void at the expiration of three years and seven years respectively from the date thereof, unless there be paid, before the expiration of the said three years and seven years respectively, the Stamp duties in the schedule thereunto annexed, viz., 50*l.* at the expiration of the third year, and 100*l.* at the expiration of the seventh year.

Two thousand and forty-four Patents bear date between the 1st July 1855 and on the 30th June 1856; the additional Stamp duty of 50*l.* has been paid on 568 of that number; and 1,476 have become void by reason of nonpayment.

All the provisional, complete, and final Specifications filed in the Office upon the Patents granted under the Act have been printed and published in continuation, with lithographic outline copies of the drawings accompanying the same, and within three weeks of the respective dates of filing, according to the provisions of the Act 16 & 17 Vict. c. 115.

The provisional Specifications filed in the Office and lapsed and forfeited, have also been printed and published in continuation.

Printed certified copies of the Specifications filed in the office, as also certified copies of Patents, and of the Record Book of Assignments of Patents and Licences, with copies of such assignments and licences, have been sent, in continuation, to the Office of the Director of Chancery in Edinburgh, and the Enrolment Office of the Court of Chancery in Dublin, pursuant to the Act of 1852 and the Act of 16 & 17 Vict. c. 115.

The work of printing the Specifications of Patents under the old law, 12,977 in number, and dating from 1711 to 1852, having been completed, the Commissioners of Patents have directed short abstracts or abridgments of Specifications, grouped under the different heads of invention, to be prepared and published; for example, abridgments of the Specifications of Patents relating to the propulsion of vessels, commencing in the year 1618 and ending 1857, comprising nearly 1,000 inventions, have been published in three parts, making one small volume.

Abridgments relating to the following subjects of invention have also been published.—[*See last page of this Journal.*]

Other series are in the press, and it is intended to publish at the rate of six or eight series in each year, completing the work in eight or ten years.

These abridgments are sold at prices a little above the cost of printing and paper.

The following REPORT of the Commissioners of Patents on the subject of the building of a Patent Office and a Public Library has been transmitted to Her Majesty's Treasury.

TO THE LORDS COMMISSIONERS OF HER MAJESTY'S TREASURY.

The Right Honourable Frederic Lord Chelmsford, Lord High Chancellor of Great Britain, The Right Honourable Sir John Romilly, Master of the Rolls, Sir FitzRoy Kelly, Her Majesty's Attorney General, and Sir Hugh M'Calmont Cairns, Her Majesty's Solicitor-General, being four of the Commissioners of Patents for Invention under the said Act, report as follows:—

The 4th section of the said Act enacts, that "it "shall be lawful for the Commissioners of Her "Majesty's Treasury to provide and appoint from "time to time proper places or buildings for an "office or offices for the purposes of the said Act."

In pursuance of the requisition of the Lords Commissioners of Her Majesty's Treasury, dated in 1853, the Commissioners of Her Majesty's Board of Works provided certain offices for the Commissioners of Patents, being the ground-floor rooms of the Masters' offices in Southampton Buildings, Chancery Lane, theretofore occupied by Masters in Chancery, abolished under the Act 15 & 16 Vict. c. 80.; and an annual rent of 490*l.* is now paid out of the Fee Fund of the Patent Office to the Suitors' Fund of the Court of Chancery, for the hire of the same.

This arrangement was not considered to be permanent; no lease has been granted, and as these offices are now required for the occupation of the registrars and other officers of the Court of Chancery, due notice has been given to the Commissioners of Patents, requiring them to give up possession so soon as other suitable offices can be procured.

These offices were in 1853 sufficient in number and accommodation for the ordinary business of the office.

In the year 1855 the Commissioners of Patents established a free public library within their office, containing works of science in all languages, the publications of the Commissioners, and the works upon patented and other inventions published in the British colonies and in foreign countries.

This library has greatly increased and continues to increase, partly by purchases, but in a great measure by gifts and loans of valuable and useful books. It was resorted to at the first opening by inventors, engineers, and mechanics, as well as by barristers, solicitors, and agents engaged in patent business; it has become a collection of great interest and importance, and the number of readers has gradually so much increased that at this time convenient standing room cannot be found in the two small rooms within the office which can be appropriated to the library. It is the only library within the United Kingdom in which the public have access not only to the records of the patents and inventions of this country, but also to official and other documents relating to inventions in foreign countries, and this without payment of any fee.

A largely increased accommodation is urgently required.

No suitable building can be found in the immediate neighbourhood of Southampton Buildings, either to be rented or for purchase.

The new offices to be provided must be fire-proof, for the preservation of the original Specifications and other records of the office; the offices now occupied are fire-proof throughout.

The Commissioners of Patents are in possession of a collection of very valuable and interesting models of patented machines and implements, as also of portraits of inventors, many of them gifts, and others lent by the owners for exhibition. They are now exhibited daily, and gratuitously, in a portion of the Museum at Kensington assigned to the Commissioners of Patents for that purpose by the Lords of the Committee of Privy Council for Trade.

A museum of this nature necessarily increases, and the number of models now exhibited may be considered as forming only the foundation of a great national museum.

The great work of printing the old Specifications of Patents, with the drawings attached thereto, inrolled in Chancery under the old law, dating from 1623 to 1852, and 12,977 in number, was commenced in September 1853, and fully completed in July last (1858). All have been fully indexed in series and subjects, and the indexes printed and published. These prints of Specifications form about 900 volumes (450 imperial octavo volumes of drawings, and the like number of imperial octavo volumes of letter press). The indexes form seven imperial octavo volumes.

The cost of these valuable works has necessarily been great, amounting to 92,000*l.*

Notwithstanding this great outlay, the balance sheet of income and expenditure for the year 1857, prepared for the annual report of the Commissioners, and laid before Parliament, shows a surplus income from the commencement of the Act, 1st October, 1852, to the end of 1857, of 6,000*l.*

The balance sheet of income and expenditure for the year 1858, prepared, and shortly to be laid before Parliament, shows a surplus on the year of 5,900*l.*, thereby increasing the total surplus to 11,900*l.*

The work of printing the whole Specifications being completed, as above stated, the expenditure on that head ceases altogether, and, consequently, the surplus income of the current year (1859) is estimated at 21,600*l.*; adding this sum to the present available surplus of 11,900*l.*, and leaving a margin of 3,500*l.*, 30,000*l.* may be safely estimated as the sum available for building purposes at the end of the current year 1859.

The balance sheet of income and expenditure for the current year, 1859, is estimated as follows:—

Receipts.	£	s.	d.
Stamp Duties -	86,000	0	0
Sale of printed Specifications -	1,300	0	0
	£87,300	0	0

Payments.	£	s.	d.
Fees to the law officers - -	8,700	0	0
Ditto their clerks -	800	0	0
Salaries of officers and clerks - -	5,600	0	0
Compensations -	4,600	0	0
Current and incidental expenses -	7,500	0	0
Cost of stationery supplied to the Patent Office by Her Majesty's Stationery Office	700	0	0
Cost of purchase of books for library, and binding -	500	0	0
Rent of offices -	500	0	0
Letter-press printing, lithographer's bills for drawings, and estimated cost of paper supplied to the printer and lithographer by Her Majesty's Stationery Office	17,500	0	0
Expenses in respect of the Museum at South Kensington, and clerks' salaries for ditto	3,000	0	0
Revenue Stamp Duties - -	16,300	0	0
Balance or estimated Surplus Income of the current year 1859 -	21,600	0	0
	£87,300	0	0

The Act of 1853 (16 Vict. c. 5.) converted all the fees imposed by the Act of 1852 into Stamp duties, thereby passing the whole income of the office to the Consolidated Fund.

The expenditure of the office is estimated and voted annually by Parliament.

There is no appearance of diminution in the number of applications for Patents, and they may be safety estimated to continue for future years at 3,000 in each year.

This number will produce 86,000*l.* in Stamp duties, and adding thereto 1,300*l.* for the average annual proceeds of sales of printed Specifications, the future annual *gross* income may be taken at 87,300*l.* The gross income is, however, liable to a deduction of 16,300*l.* on account of *Revenue* Stamp duties, leaving the real available future income of the Patent office at 70,000*l.* per annum, or thereabouts.

The Patent Law Amendment Act, 1852, (15 & 16 Vict. c. 83.,) imposed certain *Revenue* Stamp duties upon Patents. These duties have hitherto produced 15,300*l.* per annum, and that sum has been charged against the office in the annual balance sheet of income and expenditure.

These duties are estimated in the balance sheet above set forth for the current year 1859 to produce 16,300*l.* or thereabouts.

The work of printing the old Specifications being completed, as above stated, the yearly future cost of the current Specifications, abstracts of Specifications, journals, indexes, &c., in letter-press printing, lithographic printing, and paper, will not exceed 17,500*l.* per annum, as contrasted with the average yearly expenditure on those three heads of 39,375*l.* within the years 1856-7-8.

The Commissioners of Patents are of opinion that it is not expedient, for the present at least, to propose to Parliament a reduction of the scale of Stamp Duty fees imposed by the Act of 1852.

They are of opinion that the fees paid upon the passing of a Patent are not too heavy; the large number of Applications (3,000 in each year) accounting for the large amount of income. Any material reduction in the amount of fees would undoubtedly tend to increase the number of useless and speculative Patents; in many instances taken merely for advertising purposes.

The *fee* Stamp duties and the *Revenue* Stamp duties are as follows:

	Fee Stamp Duties.	Revenue Stamp Duties.
	£ s. d.	£ s. d.
Within the first six months from the Petition for Provisional Protection to the filing of the Specification - - -	20 0 0	5 0 0
On the Patent at the expiration of the third year -	40 0 0	10 0 0
On the Patent at the expiration of the seventh year (The Patent is granted for fourteen years.)	80 0 0	20 0 0

There are 3,000 petitions for provisional protection presented in each year, or thereabouts. Of this number, 1,950 reach the Patent, and 550 Patents pay the 50*l.* additional Stamp duty required at the expiration of the third year; 1,450 Patents, or nearly three fourths of the whole, thereby becoming void. Probably not more than 100 of the surviving 550 will pay the 100*l.* additional Stamp duty required at the end of the seventh year.

Considering the beneficial results of the additional payment of 50*l.* in sifting useless Patents, the Commissioners are of opinion that it is not expedient to reduce the Amount, for the present at least, and so long as the surplus can be expended for the benefit of patentees and that Portion of the community which is principally interested in and connected with the practical application to public purposes of discoveries and improvements in science and art.

They are of opinion that the surplus income, calculated as before stated to amount to 30,000*l.* at the end of the current year 1859, and to increase in each succeeding year at the rate of 20,000*l.* per annum, may be beneficially applied in the purchase of ground in a central situation, and in the erection thereon of a sufficiently spacious fireproof building for the Patent offices and public free library attached thereto; and that the surplus fund may also be beneficially applied in the purchase of ground and the erection thereon of a permanent and spacious building for the Patent Office Museum, sufficient ground being taken for the extension of the building from time to time as may be required.

This is the more necessary inasmuch as models of the most interesting and valuable description lie scattered over the kingdom, in many instances constructed at a great expense, for legal and other purposes, for which the owners have no present use, and many of which occupy a space inconvenient to them. These models, or many of them, would, as the Commissioners confidently expect and believe, be presented or intrusted to them for exhibition in such museum, provided the public are allowed free access to it at all reasonable times.

The Patent office is the place of constant daily and hourly resort of patentees, agents, and all others concerned in obtaining Patents, and in ascertaining what discoveries and improvements have already been made. It should be conveniently placed with reference to the courts of law, the Government offices, and the offices of the attorney and solicitor general.

With respect, however, to the proposed new museum, the Commissioners of Patents are of opinion that the same reasons for a central position do not exist, and that it might be placed upon any spot easily accessible to the inhabitants of the metropolis, and that the place in which the models are now exhibited would be an eligible position, sufficient ground being there purchased or assigned for the purpose. A large space will be required for the building in the first instance, and a larger extent provided for its future extension; and sufficient ground cannot be found in the centre of the town for a building of the extent required, unless at an enormous cost.

The Commissioners are anxious to establish a library in conjunction with the museum, showing the Patents already granted by Foreign Governments, and those which from time to time are so granted; and from the facilities afforded by Foreign Governments the Commissioners have every reason to believe that this may be accomplished without difficulty.

These are the two objects which the Commissioners of Patents present to the consideration of the Lords Commissioners of Her Majesty's Treasury, and for which they are desirous to obtain their sanction:—

1st, the erection of a museum for the preservation and exhibition of the models, as above mentioned.

2d. The erection of suitable offices.

The latter of these objects ought properly to precede the former; but if the offices they at present hold in Southampton Buildings can be retained for the present, this object may be postponed till a convenient site can be obtained.

For the accomplishment of the former object a very favourable opportunity at present occurs, as the Lords of the Privy Council constituting the Committee of Trade are (as the Commissioners are informed) willing to allot to them a portion of the land recently purchased at South Kensington, sufficient in extent both for the purpose of the erection of the building now required, and to provide for the future extension of the museum.

The Commissioners of Patents therefore request that the Lords Commissioners of Her Majesty's Treasury will be pleased to sanction the application of a sufficient portion of the surplus now derived from the fees paid on Patents for the purpose of accomplishing the objects above mentioned, and that with this view their Lordships will be pleased to give the necessary directions to Her Majesty's Board of Works to obtain a proper site for the proposed new Patent Office and Library, to be selected with the approbation of the Commissioners of Patents and with the sanction of the Lords Commissioners of Her Majesty's Treasury, and also to prepare the necessary plans, elevations, and specifications for this purpose, also to be submitted to the Commissioners of Patents for their approval, and to make contracts for the building of the same when approved.

If their Lordships consent to these proposals, the Commissioners of Patents have to request that a sufficient sum for the purpose, so far as the same may be required for the year 1858-9, may be included in the estimate to be laid before Parliament in the present session for Patent Office expenses.

Rules and Regulations.

Clerks and Officers.

No additional Rules or Regulations were made under the Act, or additional clerks appointed within the year 1858.

The Commissioners have thought it expedient to lay before Parliament, in the Schedule to this Report, an account of Stamp duties in lieu of fees received under the provisions of the Act, with a balance sheet of their receipts and expenditure.

Schedule.

An Account of Stamp Duties received under the Act to substitute Stamp Duties for Fees (16 Vict. c. 5.), for the year 1858.

	£	s.	d.
3,007 petitions for grant of Letters Patent, at 5*l.* each	15,035	0	0
2,174 notices of intention to proceed with application, at 5*l.* each	10,870	0	0
50 notices of objection to the grant of Letters Patent, at 2*l.* each	100	0	0
1,954 warrants for Patents, at 5*l.* each	9,770	0	0
1,954 Patents sealed, at 5*l.* each	9,770	0	0
1,880 final Specifications filed at 5*l.* each	9,400	0	0

* The Act of 1852 in lieu of the old duties upon Patents imposed a Revenue Stamp duty of 5*l.* upon the warrant of the law officer, 10*l.* upon the certificate of payment of the progressive fee of 40*l.* at the expiration of the third year, and 20*l.* upon the certificate of payment of the fee of 80*l.* at the expiration of the seventh year of the Patent.

The Act of 1853 (16 Vict. c. 5.) converted all the fees imposed by the Act of 1852 into Stamp duties.

The *Revenue* Stamp duty account for the year 1858 is as follows:—

	£	s.	d.
1,954 warrants of the law officers for Patents, at 5*l.* each	9,770	0	0
558 Patents on which the progressive duty of 50*l.* has been paid at the end of the third year from their respective dates (10*l.* being *Revenue* Stamp duty and 40*l.* fee stamp duty), 558 at 10*l.* each	5,580	0	0
	£15,350	0	0

Dated 20th July, 1859.

List of Specifications published during the week ending 9th September, 1859.

No.	Price.	Subject-Matter.
		1849 (*Disclaimer*).
12,603	5*d.*	Machinery for preparing, combing, and hackling fibrous materials.
		1852 (*Disclaimer*).
14,256	4*d.*	Machinery for spinning, weaving, and selving.
		1859.
148	6*d.*	Machinery for spinning.
254	3*d.*	Machinery for the manufacture of envelopes and paper bags.
282	3*d.*	Furnaces or fire-places.
304	10*d.*	Power looms.
305	7*d.*	Leashing yarn or thread in the hank, and winding off the same.
306	3*d.*	Food for cattle.
307	6*d.*	Funeral carriage.
308	3*d.*	Hats.
309	6*d.*	Metallic pistons.
310	4*d.*	Manufacture of paper and artificial parchment, &c.
311	9*d.*	Machinery for washing rags and other materials for the manufacture of paper.
312	10*d.*	Locomotive steam engines.
313	3*d.*	Apparatus for manufacturing manure.
314	1*s.* 4*d.*	Looms for weaving.
315	3*d.*	Preparation of iron bars for sheet iron structures, &c.
316	3*d.*	Printing telegraph.
317	10*d.*	Locomotive steam engines, &c.
318	3*d.*	Raising liquids, and compressing and forcing fluids.
319	3*d.*	Envelopes, affixing postage stamps, &c.
320	6*d.*	Cooling worts and beer.
321	3*d.*	Shirts.
322	7*d.*	Registering the withdrawal of liquids from vessels.
323	3*d.*	Obtaining and applying spring power.
324	3*d.*	Registering apparatus for public vehicles.
325	7*d.*	Apparatus to facilitate working under water.
326	1*s.* 9*d.*	Apparatus for taking levels and measuring angles.
327	3*d.*	Ploughs.
328	10*d.*	Construction of vessels and screw propellers.
329	3*d.*	Manufacture of electro-magnetic cables, &c.
330	5*d.*	Preserving vegetable and animal substances.
331	3*d.*	Apparatus for corking and uncorking taps, bottles, &c.
332	8*d.*	Treatment of yarns or threads previously to dyeing.
333	7*d.*	Churns.
334	3*d.*	Apparatus for winding window blinds, &c.
335	3*d.*	Separating oily and fatty matters from various substances.
336	10*d.*	Breech-loading and other fire-arms.
337	3*d.*	Sizing woven fabrics.
339	3*d.*	Apparatus for finishing woollen and other cloths.
340	3*d.*	Pocket protector.
341	3*d.*	Atmospheric and hydraulic engine.
342	6*d.*	Machinery for spinning.

List of Specifications—*continued.*

No.	Price.	Subject-Matter.
343	1*s.* 9*d.*	Cranks for steam engines, &c.
344	3*d.*	Application of photography to engraving and printing.
345	3*d.*	Ovens.
346	1*s.* 1*d.*	Machinery for combing wool, &c.
347	7*d.*	Ventilating mines, &c.
348	3*d.*	Manufacture of paper and printing ink.
349	3*d.*	Machinery for sorting and numbering threads of silk, &c.
350	4*d.*	Lamps.
352	6*d.*	Apparatus for curing leucorrhœa, &c.
353	3*d.*	Agricultural implements, &c.
354	3*d.*	Portable tea testing apparatus.
355	6*d.*	Refining sugar.
356	9*d.*	Carriage ways.
357	10*d.*	Revolving shutters and blinds.
358	3*d.*	Protectors for tobacco plants.
359	10*d.*	Machinery for the manufacture of casks.
360	3*d.*	Stoves or fire-places.
361	8*d.*	Flower vases.
362	7*d.*	Coke ovens, &c.
363	3*d.*	Jacquard machines.
364	3*d.*	Castors.
366	3*d.*	Self-acting mules for spinning and doubling.
368	1*s.* 4*d.*	Apparatus for the manufacture of gas.
369	7*d.*	Steam boilers, &c.
371	3*d.*	Mashing and fermenting grain for the production of alcohol.
373	1*s.* 4*d.*	Railway carriages and waggons.
374	7*d.*	Door knobs, roses, &c.
375	3*d.*	Pneumatic inkstands, &c.
377	9*d.*	Apparatus for lifting sunken vessels, &c.
381	3*d.*	Implement for paring and ploughing land.
382	3*d.*	Method of and apparatus for decolourizing tea.
384	3*d.*	Coffins.
385	3*d.*	Brooms and brushes.
389	3*d.*	Machinery for clearing and cleaning land from weeds.
392	3*d.*	Building ships and other vessels.
395	10*d.*	Machinery for spinning, &c.
396	3*d.*	Manufacture of nuts, screw bolts, &c.
446	4*d.*	Treating and purifying gutta percha.

*** Specifications will be forwarded by post on receipt of the amount of price and postage. Sums exceeding 5*s.* must be remitted by Post Office Order, made payable at the Post Office, High Holborn, to Mr. Bennet Woodcroft, Great Seal Patent Office.

COLONIAL PATENTS.—Information as to the Mode of obtaining Protection for Inventions in the Colonies; contained in Communications from the Governors, &c. of the different British Colonies in answer to the Application of Mr. W. J. Curtis for a Patent. Price 1*s.*

PATENT RIGHTS in the COLONIES.—Abstract of Replies to the Secretary of State's Circular Despatch of July 11, 1856, calling for Information as to the Form of the Application to be made by Persons desirous of obtaining Patent Rights in the Colonies, and the Expenses attendant on the Grant of such Patent Rights. Price 2*s.* 6*d.*

THE CHRONOLOGICAL INDEX of PATENTS of INVENTION, from March 2, 1617 14 James I.), to September 30, 1852 (16 Vict.), 2 vols. Price 30*s.*

THE ALPHABETICAL INDEX of PATENTEES of Inventions for the above period. Price 20*s.*

THE SUBJECT-MATTER INDEX of PATENTS for the same period—*Second Edition*—to which is prefixed a Key of Terms and Phrases. 2 vols. Price 2*l.* 16*s.*

A Key to the *First Edition* of the above work is also published separately, and may be had on application.

THE CHRONOLOGICAL INDEXES of APPLICATIONS for PATENTS and PATENTS GRANTED from the 1st October to the 31st December, 1852, and from the 1st January to the 31st December, 1853, in one volume. Price 11*s.*

THE ALPHABETICAL INDEXES for the above periods, in one volume. Price 13*s.*

THE SUBJECT-MATTER INDEX, from 1st October to 31st December, 1852. Price 9*s.*

THE SUBJECT-MATTER INDEX, from 1st January to 31st December, 1853. Price 16*s.*

THE CHRONOLOGICAL INDEX of APPLICATIONS for PATENTS and PATENTS GRANTED from the 1st January to the 31st December, 1854. Price 6*s.*

THE ALPHABETICAL INDEX for the above period. Price 7*s.*

THE SUBJECT-MATTER INDEX for the above period. Price 16*s.* 6*d.*

THE CHRONOLOGICAL INDEX of APPLICATIONS for PATENTS and PATENTS GRANTED from the 1st January to the 31st December, 1855. Price 6*s.* 6*d.*

THE ALPHABETICAL INDEX for the above period. Price 7*s.* 6*d.*

THE SUBJECT-MATTER INDEX for the above period. Price 17*s.*

THE CHRONOLOGICAL INDEX of APPLICATIONS for PATENTS and PATENTS GRANTED from the 1st January to the 31st December, 1856. Price 6*s.* 6*d.*

THE ALPHABETICAL INDEX for the above period. Price 8*s.*

THE SUBJECT-MATTER INDEX for the above period. Price 18*s.* 6*d.*

THE ALPHABETICAL INDEX of APPLICATIONS for PATENTS and PATENTS GRANTED from the 1st January to the 31st December, 1857. Price 8*s.*

THE CHRONOLOGICAL INDEX for the above period. Price 6*s.* 6*d.*

THE SUBJECT-MATTER INDEX for the above period. Price 19*s.* 6*d.*

THE ALPHABETICAL INDEX of APPLICATIONS for PATENTS and PATENTS GRANTED, from the 1st January to the 31st December 1858. Price 8*s.*

THE CHRONOLOGICAL INDEX for the above period. Price 6*s.*

A Free Library and Reading Room, in connection with the Office of the Commissioners of Patents, is open to the Public daily from 10 till 4 o'clock.

In addition to the Printed Specifications, Indexes, and other publications of the Commissioners, the Library includes a Collection of the leading British and Foreign Scientific Journals, and text-books in the various departments of science and art. A printed Catalogue of the Library is on sale.

Note.—The Commissioners' publications may be consulted daily in the Library of the British Museum; in the Library of the Society of Arts; and in the Free Libraries of the following Towns and Cities:—

Aberdeen (*Public Library Town House*).
Accrington (*Mechanics' Institution, Bank Street*).
Belfast (*Harbour Office, Corporation Square*).
Beverley (*Guildhall*).
Birmingham (*Birmingham and Midland Institute, Cannon Street*).
Bolton-le-Moors (*Public Library, Exchange Buildings*).
Bradford, Yorkshire (*Borough Accountant's Office, Corporation Buildings, Swain Street*).
Brighton (*Town Hall*).
Bristol (*City Library, King Street*).
Burnley (*Office of the Burnley Improvement Commissioners*).
Cambridge (*Free Library, Jesus Lane*).
Canterbury (*Municipal Museum, Guildhall Street*).
Carlisle (*Free Library, Police Office*).
Chester (*Town Hall, Northgate Street*).
Cork (*Royal Cork Institution, Nelson Place*).
Crewe (*Railway Station*).
Darlington (*Mechanics' Institute, Skinnergate*).
Dorchester.
Drogheda.
Dublin (*Royal Dublin Society, Kildare Street*).
Dundalk.
Falmouth (*Public Library, Church Street*).
Gateshead (*Mechanics' Institute*).
Gorton (*Railway Station*).
Glasgow (*Stirling's Library, Miller Street*).
Grimsby, Great (*Mechanics' Institution, Victoria Street*).
Hanley, Staffordshire Potteries (*Town Hall*).
Hartlepool, West (*Literary and Mechanics' Institution, Church Street*).
Hertford (*Public Library, Town Hall*).
Huddersfield (*Commissioners' Offices, No. 1, South Parade*).
Hull (*Mechanics' Institute, George Street*).
Ipswich (*Museum Library, Museum Street*).
Keighley (*Mechanics' Institute, North Street*).
Kidderminster (*Public Free Library, Public Buildings, Vicar Street*).
Kings' Lynn, Norfolk (*Stanley Library, Athenæum*).
Lancaster (*Mechanics' Institute, Market Street*).
Leamington Priors (*Public Library, Town Hall*).
Leeds (*Town Clerk's Office, Town Hall*).
Leicester (*Corporation Library, Town Hall*).
Limerick.
Liverpool (*Free Public Library, Duke Street*).
——— (*Royal Institution*).
London (*British Museum*).

PATENT LAW AMENDMENT ACT, 1852.—All Specifications, Indexes, &c., printed by order of the Commissioners of Patents, are sold at the Great Seal Patent Office, 25, Southampton Buildings, Holborn.

THE PATENT LAW AMENDMENT ACTS (15 & 16 Vict., cap. 83; 16 Vict., cap. 5; and 16 & 17 Vict., cap. 115); with the Rules and Regulations made by the Commissioners of Patents for Inventions, and by the Lord Chancellor and the Master of the Rolls, under the Acts 15 and 16 Vict., c. 83, and 16 & 17 Vict., c. 115, accompanied by Specimen Forms of the Provisional Documents printed on sheets of the prescribed size. Price 6*d*.

THE REFERENCE INDEX of PATENTS' pointing out the Office in which each enrolled Specification of a Patent may be consulted; the Books in which Specifications, Law Proceedings, and other subjects connected with Inventions have been noticed; also such of the Specifications of Patents granted under the Act of 21 James I. as have been published by the authority of the Commissioners. Price 30*s.*

AN APPENDIX to the REFERENCE INDEX of PATENTS of INVENTION, containing Abstracts from such of the early Patents and Signet Bills as describe the nature of the invention, and which Patents have no enrolled Specifications. Price 4*s.*

AN INDEX to ALL INVENTIONS PATENTED in ENGLAND from 1617 to 1854 inclusive, arranged under the greatest number of heads, with parallel references to INVENTIONS and DISCOVERIES described in the scientific works of VARIOUS NATIONS, as classified by Professor Schubarth. By B. WOODCROFT.

The foreign works thus indexed form a portion of the Library of the Commissioners of Patents, where they may be consulted, or manuscript translations be had.

SOMMAIRE de toutes les INVENTIONS BREVETÉES en ANGLETERRE depuis 1617 jusqu'en 1854 inclusivement, arrangées d'après le plus grand nombre de rubriques, avec renvois aux INVENTIONS et DÉCOUVERTES décrites dans les ouvrages scientifiques de DIFFÉRENTES NATIONS, classés par le Professeur Schubarth. Par B. Woodcroft.

Les ouvrages étrangers ci-dessus font partie de la Bibliothèque de la Commission des Patentes, où l'on peut les consulter, et obtenir des traductions en manuscrit.

VERZEICHNISS aller in ENGLAND von 1617—1854 incl. PATENTIRTEN ERFINDUNGEN, unter vielfältige Titel gebracht, mit Hinweisungen auf ERFINDUNGEN und ENTDECKUNGEN die nach Prof. Schubarth's Klassificirung in den wissenschaftlichen Werken VERSCHIEDENER NATIONEN beschrieben sind. Von B. Woodcroft.

Die hier aufgeführten fremden Werke machen einen Theil der Bibliothek der Patent Commission aus, allwo sie nachgeschlagen oder schriftliche Uebersetzungen besorgt werden können.

REPERTORIO di tutte le INVENZIONI munite di LETTERE PATENTI in INGHILTERRA dal 1617—1854 inclusivo, poste in ordine sotto il più gran numero di capi, con riferenze alle INVENZIONI e SCOPERTI descritti nelle opere scientifiche di DIVERSE NAZIONI, classate dal Professore Schubarth. Dal Sig. B. Woodcroft.

Le opere straniere quì indicate possono esser consultate nella Biblioteca dei Commissari delle Patenti, e traduzioni in manuscritto vi possono ottenersi.

B. WOODCROFT,
Superintendent of Specifications, &c.

REAPING MACHINES.—The entire series of Specifications and Drawings on this subject to the end of 1853, together with an Appendix, prepared by B. Woodcroft, of the Patent Office, and published under the sanction of the Commissioners, may be obtained at the cost price of 2*l.* 3*s.* 11½*d.*

FIRE-ARMS, PROJECTILES, &c.—The series of Specifications and Drawings on this Subject, from 15th May, 1718, to 31st December, 1853, with Alphabetical and Subject-matter Indexes, may be obtained at the cost price of 9*l.* 18*s.* 6½*d.*

The Indexes, separately, price 3*s.*

CATALOGUE of the LIBRARY of the GREAT SEAL PATENT OFFICE. Two vols. imp. 8vo. (Vol. I. Titles; Vol. II. Index.) Price 21*s.*

SUPPLEMENT to the SERIES of LETTERS PATENT and SPECIFICATIONS of LETTERS PATENT for INVENTIONS recorded in the Great Seal Patent Office, and granted between the 1st March (14 Jac. I.) A.D. 1617, and the 1st October (16 Vict.) A.D. 1852; consisting for the most part of Reprints of scarce Pamphlets, descriptive of the early patented Inventions comprised in that Series. Edited by BENNET WOODCROFT, Superintendent of Specifications, etc. In one vol., price 9*s.* 6*d.*, or each Tract separately at the price affixed.

CONTENTS OF VOL. I.

1. Metallica; or, the treatise of Metallica, briefly comprehending the doctrine of diverse new metallical inventions &c. By SIMON STURTEVANT. (*Letters Patent, dated 29th February*, 1611.) Price 1*s.* 4*d.*
2. A Treatise of Metallica, but not that which was published by Mr. Simon Sturtevant, upon his Patent, &c. By JOHN ROVINSON (*Letters Patent, granted A.D.* 1612.) Price 4*d.*
3. A Commission directed to Sir Richard Wynne and others to inquire upon oath whether NICHOLAS PAGE or Sir NICHOLAS HALSE was the first inventor of certaine kilnes for the drying of malt, &c. &c. (*Letters Patent, Nos.* 33 *and* 85, *respectively dated* 8*th April*, 1626, *and* 23*rd July*, 1635.) Price 2*d.*
4. DUD DUDLEY'S Metallum Martis; or iron made with pit-coale, sea-coale, &c. (*Letters Patent, Nos.* 18 *and* 117, *respectively dated* 22*nd February*, 1620, *and* 2*nd May*, 1638.) Price 8*d.*
5. Description of the nature and working of the patent Water-scoop Wheels invented by WILLIAM WHELER, as compared with the raising wheels now in common use. By J. W. B. Translated from the Dutch by Dr. Tolhausen. (*Letters Patent, No.* 127, *dated* 24*th June*, 1642.) Price 2*s.*
6. An exact and true definition of the stupendous Water-commanding Engine, invented by the Right Honourable (and deservedly to be praised and admired) EDWARD SOMERSET. Lord Marquis of WORCESTER, &c. &c. (*Stat.* 15 *Car. II. c.* 12. *A.D.* 1663.) Price 4*d.*
7. Navigation Improved; or the art of rowing ships of all rates in calms, with a more easy, swift, and steady motion than oars can. By THOMAS SAVERY. (*Letters Patent. No.* 347, *dated* 10*th January*, 1696.) Price 1*s.*
8. The Miner's Friend; or an engine to raise water by fire described, &c. By THOMAS SAVERY. (*Letters Patent, No.* 356, *dated* 25*th July*, 1698, *and Stat.* 10 *&* 11 *Will. III. c.* 31, *A.D.* 1699.) Price 1*s.*
9. Specimina Ichnographica; or a brief narrative of several new inventions and experiments, particularly the navigating a ship in a calm, &c. By JOHN ALLEN, M.D. (*Letters Patent, No.* 513, *dated* 7*th August*, 1729.) Price 8*d.*
10. A description and draught of a new-invented Machine for carrying vessels or ships out of or into any harbour, port, or river, against wind and tide, or in a calm, &c. By JONATHAN HULLS. (*Letters Patent, No.* 556, *dated* 21*st December*, 1736.) Price 8*d.*
11. An historical account of a new method for extracting the foul air out of ships, &c., with the description and draught of the machines by which it is performed, &c. By SAMUEL SUTTON, the Inventor. To which are annexed two relations given thereof to the Royal Society by Dr. Mead and Mr. Watson, (*Letters Patent, No.* 602, *dated* 16*th March* 1744.) Price 1*s.*

Museum of Patents, South Kensington.

NUMBER of VISITORS for the Week ending 10th September, 1859.

Mornings - - - -	1466
Evenings - - - -	1566
Total - - -	3032

Since the opening of the Museum Free Daily (May 12, 1858,)—138,674.

THIS Museum is open to the public daily, free of charge. The hours of admission are from 10 A.M. to 6 P.M., and in the evenings of Monday, Tuesday, and Wednesday from 7 to 10 P.M.

All communications on the subject of the Museum to be addressed to the Superintendent,

B. WOODCROFT.

Great Seal Patent Office,
Southampton Buildings.

GALLERY OF PORTRAITS OF INVENTORS, DISCOVERERS, AND INTRODUCERS OF USEFUL ARTS.—This Collection, formed by Mr. Woodcroft, and first opened to public view in the Great Seal Patent Office in 1853, now constitutes a portion of the Patent Museum at South Kensington.

Presentations of original Portraits, Medallions, Busts, and Statues, in augmentation of the Collection, are hereby invited, and will on receipt be acknowledged in this Journal, and duly recorded in the next published Catalogue.

ALL FOREIGN and COLONIAL PATENT LAWS and RULES, being translations or copies of Official Communications, may be found in the following Numbers of this Journal, published at 2*d.* each, or 3*d.* free by post:—

Austria, No. 291.
Bavaria, No. 262.
Belgium, Nos. 292 and 348.
Baden, and Petty States of Germany, No. 325.
Canada, No. 279.
Cuba, No. 498.
Dutch West Indies, No. 322.
France, No. 228.
Greece, No. 325.
Germany, No. 435.
Hanover, No. 231.
India, Nos. 240, 348, and 552.
Mexico, No. 496.
Netherlands, No. 289.
New South Wales, No. 386.
Prussia, Nos. 313 and 329.
Parma, Piacenza, and Guastalla, No. 321.
Portugal, No. 325.
Poland, No. 335.
Roman States, No. 319.
Russia, Nos. 334 and 508
Sardinia, Nos. 233 and 235.
Saxony, No. 236.
Sicilies (the Two), No. 316.
Spain, No. 323.
Sweden, Nos. 327 and 354.
Victoria, Nos. 186 and 359.
Wurtemberg, No. 314.

In course of Publication, by Order of the Commissioners of Patents.

ABRIDGMENTS (in Classes, and Chronologically arranged) of all SPECIFICATIONS of PATENTED INVENTIONS, from the earliest enrolled to those published under the Act of 1852.

These books are of 12mo size, and as each is limited to inventions of one class only, they can be sold at prices sufficiently moderate to enable the humblest inventor to examine for himself whether his discovery has been previously patented or not.

At the foot of each abstract are given references to notices of the inventions in scientific and other works, and to the reports of law proceedings for infringements, &c. &c. &c.

The classes already published are,—

1. DRAIN TILES AND PIPES, price 6*d.*
2. SEWING AND EMBROIDERING, price 6*d.*
3. MANURE, price 6*d.*
4. PRESERVATION OF FOOD, price 6*d.*
5. MARINE PROPULSION, price 4*s.*
6. MANUFACTURE OF IRON AND STEEL, price 5*s.*
7. AIDS TO LOCOMOTION, price 1*s.*
8. STEAM CULTURE, price 2*s.*
9. WATCHES, CLOCKS, AND OTHER TIMEKEEPERS, price 1*s.* 6*d.*
10. FIRE-ARMS AND OTHER WEAPONS, AMMUNITION, AND ACCOUTREMENTS, price 6*s.* 6*d.*
11. PAPER.—PART I. MANUFACTURE OF PAPER, PASTEBOARD, AND PAPIER MÂCHÉ, price 3*s.*
12. PAPER.—PART II. CUTTING, FOLDING, AND ORNAMENTING; INCLUDING ENVELOPES, CARDS, PAPER-HANGINGS, &c., price 2*s.*
13. TYPOGRAPHIC, LITHOGRAPHIC, AND PLATE PRINTING, price 7*s.*
14. BLEACHING, DYEING, AND PRINTING YARNS AND FABRICS, price 9*s.* 6*d.*

The following are in the press:—

ELECTRICITY AND MAGNETISM: THEIR GENERATION AND APPLICATIONS.
PREPARATION OF FUEL, AND APPARATUS FOR ITS COMBUSTION.
MANUFACTURE AND APPLICATIONS OF INDIA RUBBER, GUTTA PERCHA, &c.; INCLUDING AIR, FIRE, AND WATER PROOFING.
PRODUCTION AND APPLICATIONS OF GAS.
STEAM ENGINES.
METALS AND ALLOYS.

B. WOODCROFT.

The above, and all other works published by the Commissioners of Patents, are now on sale at the Great Seal Patent Office, 25, Southampton Buildings Holborn.

This Journal is published on the evenings of Tuesday and Friday, and will be forwarded, post free, to Subscribers.—Terms, 30*s.* per annum.—Subscriptions received at the Great Seal Patent Office, where also single copies, at twopence each, may be obtained.

THE

COMMISSIONERS OF PATENTS' JOURNAL.

By Authority.

(*Registered for transmission abroad.*)

No. 595. FRIDAY, SEPTEMBER 16, 1859. Price 2d.

Grants of Provisional Protection for Six Months.

NOTICE is hereby given that Provisional Protection has been allowed

1993. To JOHN ANDERSON SIMPSON, of Liverpool, in the county of Lancaster, Hat Manufacturer, for the invention of "Improvements applicable to hats and other coverings for the head."

1995. To THOMAS AVELING, of Rochester, in the county of Kent, for the invention of "Improvements in locomotive engines."

1997. And to ROBERT HANHAM COLLYER, of 8, Alpha Road, Regent's Park, in the county of Middlesex, Doctor of Medicine and Philosophy, for the invention of "Improvements in preparing materials for the manufacture of paper."

On their several petitions, recorded in the Office of the Commissioners on the 1st day of September, 1859.

1999. To JULIAN BERNARD, of the Albany, Piccadilly, in the county of Middlesex, Gentleman, for the invention of "Improvements in the manufacture or production of boots and shoes, in the machinery, apparatus, and means employed in such manufacture."

2001. To WILLIAM BROWN the younger, of the town and county of Selkirk, North Britain, Manufacturer, and SIMEON BATHGATE, of the same place, Engineer, for the invention of "Improvements in machinery or apparatus for grinding or sharpening the card teeth of carding engines for carding fibrous materials."

2003. To WILLIAM FEARN, of the British Pail Company, of Leeds, in the county of York, for the invention of "An improved construction of buoys."

2005. To STRANGMAN DAVIS GOFF, HENRY DAVIS, SAMUEL STRANGMAN, and EDWARD STRANGMAN, of the firm of Davis, Strangman, and Co., Waterford, Ireland, Brewers, for the invention of "An improved method of, and apparatus for, drying malt, corn, and other articles."

2007. And to EDWIN BUTTON, of Smith's Terrace, Chelsea, in the county of Middlesex, Engraver, for the invention of "Improved apparatus for raising sunken vessels."

On their several petitions, recorded in the Office of the Commissioners on the 2nd day of September, 1859.

2011. To JOSEPH FRIOU, of No. 74, Newman Street, Oxford Street, in the county of Middlesex, Chemist, for the invention of "Detaching instantly the locomotives from railway carriages, and also for detaching instantly the harness from horses that run away when attached to any carriage."

2013. To HENRY ROBERT LOUIS SCHRAMM, Engineer, residing at Breslau, kingdom of Prussia, for the invention of "A new process for pressing and separating simultaneously the fibres and pellicles contained in the constituant matters of the beet-root, sugar, beer, grains, alcohol, potatoes, beets, and other similar substances."

2015. To WALTER NEILSON, of Glasgow, in the county of Lanark, North Britain, Engineer, for the invention of "Improvements in steam hammers."

2017. To JAMES CHARLES NIXON, of the firm of Messrs. Danks and Nixon, of the town and county of the town of Nottingham, Furnishing Ironmongers and Domestic Range and Closet Manufacturers, for the invention of "Improvements in kitchen ranges, with combined steamer and hot closets, for cooking, warming, drying, or other purposes."

2019. To CHRISTIAN SCHIELE, of North Moor Foundry, Oldham, in the county of Lancaster, for the invention of "Improvements in weighing machines."

2021. And to BERNARD LAUTH, late of Pittsburg, Pennsylvania, but now residing at Manchester, in

the county of Lancaster, Mechanician, for the invention of "Improvements in the manufacture of rollers or cylinders for calico printers, and of tubes of copper and brass, or mixtures of those metals."

On their several petitions, recorded in the Office of the Commissioners on the 3rd day of September, 1859.

2023. To WILLIAM BUSH, of Dulwich, in the county of Surrey, Chemist, for the invention of "Manufacturing granulated seidleitz powder."

2025. To JOHN WILLIAM PARKER FIELD, of No. 233, High Holborn, in the county of Middlesex, Gun Manufacturer, for the invention of "Improvements in breech loading fire arms."

2027. To VICTOR TOMELL, of No. 294, King's Road, Chelsea, in the county of Middlesex, for the invention of "Improvements in the manufacture of yeast."

2029. And to ALFRED VINCENT NEWTON, of the Office for Patents, No. 66, Chancery Lane, in the county of Middlesex, Mechanical Draughtsman, for the invention of "Improvements in weighing machines."—A communication from abroad by John Howe, junior, and Frank E. Howe, both of New York, and Francis Miles Strong and Thomas Ross, both of Brandon, county of Rutland, and state of Vermont, United States.

On their several petitions, recorded in the Office of the Commissioners on the 5th day of September, 1859.

2031. To RICHARD KELLY GELDARD, of Plymouth, in the county of Devon, Pharmaceutical Chemist, for the invention of "Improvements in the method of, and apparatus for making pharmaceutical or other infusions."

2033. To FRANÇOIS JULES MANCEAUX, of Paris, in the empire of France, Manufacturer, for the invention of "Improvements in cartridges."

2035. And to JAMES STEWART, of No. 66, Tottenham Court Road, in the county of Middlesex, for the invention of "Improvements in piano-forte action."

On their several petitions, recorded in the Office of the Commissioners on the 6th day of September, 1859.

2037. To JAMES JOHN LYONS, of London, in the county of Middlesex, Engineer, for the invention of "Improvements in the manufacture of sugar."

2039. To GEORGE LAWRENCE, of York Road, Battersea, in the county of Surrey, Gentleman, for the invention of "Improvements in the construction of wheeled vehicles."

2041. To WILLIAM JEAN JULES VARILLAT, of Rouen, in the empire of France, Manufacturer, for the invention of "An apparatus indicating the level of water in steam caldrons or boilers."

2043. To JAMES PRESCOTT JOULE, of Manchester, in the county of Lancaster, Fellow of the Royal Society, for the invention of "Improvements in apparatus for refrigerating and condensing steam or other vapours, which said improvements are applicable to refrigerating or heating liquids."

2045. To ALFRED VINCENT NEWTON, of the Office for Patents, No. 66, Chancery Lane, in the county of Middlesex, Mechanical Draughtsman, for the invention of "Improvements in the manufacture of ladies' hooped skirts."—A communication from abroad by William Sparks Thomson, of New York, in the United States of America.

2947. And to EDWARD THOMAS HUGHES, of the firm of Hughes and Son, Patent Agent, No. 123, Chancery Lane, London, W. C., for the invention of "Improvements in machinery or apparatus for forging metals."—A communication from abroad by Ernest Dams, of 7, Rue des Moulins, Paris, in the empire of France.

On their several petitions, recorded in the Office of the Commissioners on the 7th day of September, 1859.

Inventions protected for Six Months by the Deposit of a Complete Specification.

NOTICE is hereby given, that the petition of

2072. MARC ANTOINE FRANÇOIS MENNONS, of the British and Foreign Patent Offices, 39, Rue de l'Echiquier, Paris, in the empire of France, praying for Letters Patent for the invention of "An improved arrangement of piston packing, principally applicable to hydraulic apparatus,"—a communication from Casimer and Celestin Dabbine, residing at Verduno, Sardinian States,—was deposited and recorded in the Office of the Commissioners on the 12th day of September, 1859, and a complete specification accompanying such petition was at the same time filed in the said office.

And Notice is also hereby given, that the petition of

2073. MARC ANTOINE FRANÇOIS MENNONS, of the British and Foreign Patent Offices, 39, Rue de l'Echiquier, Paris, in the empire of France, praying for Letters Patent for the invention of "Improvements in the construction of hydraulic pumps,"—a communication from Louis Laurent Bequemie, residing in Paris,—was deposited and recorded in the Office of the Commissioners on the 12th day September, 1859, and a complete specification accompanying such petition was at the same time filed in the said office.

Patents Sealed.

LIST of LETTERS PATENT which passed the Great Seal on the

15th September, 1859.

660. ISAIAH ASH, of Number 17, Great Bridport Street, Blandford Square, in the county of Middlesex, Locksmith, for an invention of "Improvements in the construction of locks and latches."—Dated 16th March, 1859.

664. WILLIAM AVERY, of Birmingham, in the county of Warwick, Engineer, for an invention of "Improvements in machinery for the manufacture of screws."—Dated 16th March, 1859.

671. Thomas William Miller, of Her Majesty's Dockyard, Portsmouth, for an invention of "Improvements in blocking or securing ships and other vessels whilst being removed, examined, or repaired."—Dated 16th March, 1859.

672. Coleman Defries, of the firm of Jonas Defries and Sons, Houndsditch, for an invention of "Improvements in lamps."—Dated 17th March, 1859.

676. Richard Archibald Brooman, of 166, Fleet Street, in the city of London, E.C., Patent Agent, for an invention of "Treating barley so as to obtain new alimentary substances therefrom."—A communication from Pierre Marmay, residing at Riom, France.—Dated 17th March, 1859.

678. Andrew George Hutchinson, of West Derby, in the county of Lancaster, Builder, for an invention of "Improvements for counteracting damp in buildings."—Dated 17th March, 1859.

679. Ph. Larochette Ainé, of Paris, in the empire of France, for an invention of "Improvements in machinery for brewing."—Dated 17th March, 1859.

681. Arthur Warner, of 31, Threadneedle Street, in the city of London, and William Henry Tooth, of Sumner Street, Southwark, in the county of Surrey, for an invention of "Improvements in the manufacture of iron."—Dated 17th March, 1859.

684. William Bowers Taylor, of Ballymena, in the county of Antrim, in Ireland, Gentleman, for an invention of "Certain improvements in or applicable to looms for weaving."—Dated 18th March, 1859.

90. Robert Mushet, of Coleford, in the county of Gloucester, Metallurgist, for an invention of "A new or improved metallic alloy."—Dated 18th March, 1859.

691. Robert Mushet, of Coleford, in the county of Gloucester, Metallurgist, for an invention of "An improvement in the manufacture of cast steel."—Dated 18th March, 1859.

692. Albert Louis Thirion, Pastor of Asche en Refail, Province de Namur, kingdom of Belgium, for an invention of "Improvements in water, wind, steam, and hand mills."—Dated 18th March, 1859.

693. Charles Lambert, of Sunk Island, in the county of York, Farmer, for an invention of "Improvements in corn and seed drills."—Dated 18th March, 1859.

694. John Wallace Duncan, of Grove End Road, St. John's Wood, and James Eglington Anderson Gwynne, of Hanover Terrace, Regent's Park, both in the county of Middlesex, Gentleman, for an invention of "Improvements in or connected with apparatus for the generation, application, and condensation of steam, part of which apparatus or arrangements is applicable to other purposes."—Dated 18th March, 1859.

696. William Bruce Gingell, of 37, Corn Street, in the city of Bristol, Architect, for an invention of "Improvements in the form of metal bars used for the stiles, rails, heads, and sills of window sashes, casements, and other lights."—Dated 19th March, 1859.

700. John Walter Hart, of 60, St. Mary-Axe, in the city of London, Gentleman, for an invention of "An apparatus for the destruction of flies and other insects."—A communication from abroad, by Frederick Barnett, residing at Paris, in the empire of France.—Dated 19th March, 1859.

702. James Howden and Alexander Morton, of Glasgow, in the county of Lanark, North Britain, Engineers, for an invention of "Improvements in apparatus for obtaining and regulating motive power."—Dated 19th March, 1859.

703. Robert Mushet, of Coleford, in the county of Gloucester, Metallurgist, for an invention of "An improvement or improvements in the manufacture of cast steel."—Dated 19th March, 1859.

707. William Haggett, of Sherborne, in the county of Dorset, Architect and Surveyor, for an invention of an "Improved method of treating metals and other materials to increase their strength."—Dated 21st March, 1859.

712. Joseph Roberts, of Staley Bridge, in the county of Chester, Engineer, for an invention of "Improvements in packings for pistons."—Dated 21st March, 1859.

713. Sigismond Leoni, of Saint Paul Street, in the county of Middlesex, Manufacturer, for an invention of "Improvements in the manufacture of useful and ornamental articles, surfaces, and works, parts of articles and parts of machinery or apparatus from talc and other silicates of magnesia, and from the same combined with other substances."—Dated 21st March, 1859.

714. Joseph Bickerton, of Oldham, in the county of Lancaster, Machinist, for an invention of "Improvements in opening and securing window sashes."—Dated 21st March, 1859.

717. William Rhodes, of Wade Street, Thornton Road, Bradford, in the county of York, Whitesmith, for an invention of "Certain improvements in fire-proof safes."—Dated 21st March, 1859.

727. Daniel Lancaster Banks, of Kennington, in the county of Surrey, Engineer, for an invention of "Improvements in suspension rail or road ways, and in machinery or apparatus connected therewith."—Dated 22nd March, 1859.

736. William Adamson, of the Patent Slip, Wellington Quay, Newcastle-on-Tyne, for an invention of "Improvements in apparatus for propelling vessels."—Dated 23rd March, 1859.

790. Walter Brown, of Bolton le Moors, in the county of Lancaster, Clog Manufacturer, for an invention of "Improvements in manufacturing clog soles, and in the machinery employed therein."—Dated 30th March, 1859.

792. John Wilson Hadwen, of Kebroyd Mills, in the parish of Halifax, and West Riding of the county of York, Cotton Spinner, for an invention of "A new art or manufacture for converting certain kinds of silk waste into yarns or threads."—Dated 30th March, 1859.

795. Thomas Downs Shipman, of Toronto Canada West, North America, for an invention of "Improvements in apparatus for stamping and printing."—Partly a communication from abroad by Mr. Kendell, of Canada aforesaid.—Dated 30th March, 1859.

802. John Lacy, Cotton Spinner, and Samuel Simpson and Henry Smith, Managers, all of Travis Holme Mill, Walsden, near Todmorden, in the county of Lancaster, for an invention of "Certain improvements in machinery for preparing and spinning cotton and other fibrous materials."—Dated 31st March, 1859.

805. Thomas Ivory, of Edinburgh, Advocate, for an invention of "Improvements in rotary engines."—Dated 31st March, 1859.

806. Thomas Ivory, of Edinburgh, Advocate, for an invention of "Improvements in steam boilers and furnaces for the same."—Dated 31st March, 1859.

857. Nicolas Libotte, Mechanician, of 33, Boulevard St. Martin, Paris (empire of France), for an invention of "An improved safety apparatus to be applied to cages in the drawing of coals."—Dated 5th April, 1859.

942. William Sinnock, of Brompton, in the county of Kent, Ropery Engineer, for an invention of "Improvements in submarine and subterranean electric telegraph cables, and in machinery for the manufacture thereof."—Dated 14th April, 1859.

1028. William Stevenson, of Johnstone, in the county of Renfrew, North Britain, Manager to George Houston and Company, for an invention of "Improvements in spinning, doubling, and manufacturing cotton and other fibrous materials."—Dated 25th April, 1859.

1038. William Edward Newton, of the Office for Patents, 66, Chancery Lane, in the county of Middlesex, Civil Engineer, for an invention of "Improvements in sewing machines."—A communication from abroad by Robert Halsted Morford and Anthony Denton Morford, of New York.—Dated 25th April, 1859.

1162. Alfred Vincent Newton, of the Office for Patents, 66, Chancery Lane, in the county of Middlesex, Mechanical Draughtsman, for an invention of "An improved construction of lamp."—A communication from abroad by William Henry Racey, of St. Augustine, St. John's County, state of Florida, in the United States of America.—Dated 9th May, 1859.

1180. Thomas Peter Bennett, of Gilnow Mills, near Bolton-le-Moors, in the county of Lancaster, Manager, for an invention of "Certain improvements in or applicable to carding engines."—Dated 11th May, 1859.

1493. Alexander Parkes, of Birmingham, in the county of Warwick, for an invention of "Improvements in the manufacture of cylinders and tubes of copper and alloys of copper."—Dated 21st June, 1859.

1647. William Edward Newton, of the Office for Patents, 66, Chancery Lane, in the county of Middlesex, Civil Engineer, for an invention of "Improvements in magneto-electric machines."—A communication from abroad by George W. Beardslee, of Flushing, state of New York, in the United States of America.—Dated 11th July, 1859.

1687. William Morris Smith, of Northampton, Gentleman, for an invention of "The construction of fare boxes for the prevention of fraud on the part of drivers, conductors, &c."—A communication from abroad by J. B. Slawson, of New Orleans, in the state of Louisiana, in the United States of America.—Dated 16th July, 1859.

Patents on which the Stamp Duty of £50 has been Paid.

(*To 14th September, 1859, inclusive.*)

10th September.

2115. Stephen White, of Newlands Street, Everton, Liverpool, in the county of Lancaster, Gentleman, for an invention of "An improved method and apparatus for the distillation of certain oils or oily substances from the petroleum, commonly called earth oil, found in certain districts in the Birman empire, and an improved method of purifying the oils or oily substances so obtained."—Dated 10th September, 1856.

2124. Pier Alberto Balestrini, of Brescia (Italy), for an invention of "Improvements in protecting and laying telegraphic wires."—Dated 11th September, 1856.

12th September.

2059. John Montagu Hayes, of Southsea, in the county of Hampshire, Captain, R.N., for an invention of "An improvement in the construction of cartridges for fire-arms."—Dated 4th September, 1856.

2142. Edward Green, of Wakefield, in the county of York, Engineer, for an invention of "Improvements in scrapers employed to cleanse boiler tubes and flues, for economizing fuel."—Dated 13th September, 1856.

2147. Frederic Ducimetière Monod, Chemist, of Marseille, Town in the French empire, for an invention of "Improvements in the manufacture of chlorine."—A communication.—Dated 13th September, 1856.

2159. Stanislas Chodzko, Chemist, of Paris, in the French empire, for an invention of "Improvements in the manufacture of manure, and the apparatus employed therein."—Dated 15th September, 1856.

13th September.

2157. George Cranstoun Trotter Cranstoun, of Chirnside Bridge, in the county of Berwick, North Britain, Paper Maker, George Young, of Dunse, in the county of Berwick, North Britain, Plumber, and John Lovell, of Chirnside Bridge, in the county of Berwick, North Britain, Paper Maker, for an invention of "Improvements in the application of steam for producing a boiling action in bleaching and other manufacturing processes."—Dated 15th September, 1856.

14th September.

2174. David Crichton, of the city of Manchester, in the county of Lancaster, Machinist, and James Cathcart, of the same place, Mechanician, for an invention of "Improvements in looms for weaving."—Dated 17th September, 1856.

2200. Archibald Templeton, of 7, Skinner Street, in the city of London, and John Lawson, of Glasgow, for an invention of "Improvements in the manufacture of pile fabrics."—Dated 19th September, 1856.

2202. William Young, of Queen Street, Cheapside, in the city of London, Lamp Manufacturer, for an invention of "Improvements in furnaces, fireplaces, and stoves."—Dated 19th September, 1856.

2294. John Holman, of the Western Clubs, Topsham, for an invention of "Improvement in ships' rudders."—Dated 1st October, 1856.

FOREIGN PATENTS.

AUSTRIA.*

List of Patents which were Delivered, Prolonged, or became Void during the Month of June, 1859.†

(Communicated by the Austrian Government.)

Patents Delivered.

1. Ferdinand Teirich, of Vienna, for "A peculiar system of induction for telegraph lines, whereby the intermediate stations require no special batteries."—1 year.—(Secret.)—Dated 2nd June, 1859.

2. Simon Marth, of Vienna, for "Improvements in copying presses with an eccentric pressure."—1 year.—(Secret.)—Dated 2nd June, 1859.

3. Maximilian Brady and Johann Barwitzius, of Vienna, for "Puzzle locks of portemonnaies and pocket-books."—1 year.—(Secret.)—Dated 2nd June, 1859.

4. Jacob Steinschneider, of Pesth, for "Improvements in the manufacture of all kinds of mattresses."—1 year.—(Secret.)—Dated 2nd June, 1859.

5. Ernest de Caranza, of Paris, represented by Friedrich Rödiger, of Vienna, for "Improvements in apparatus and processes for the manufacture of gas."—1 year.—(Secret.)—Dated 2nd June, 1859.

6. Jacques Louis Lemaire, of Paris, represented by Cornelius Kasper, Vienna, for "A mould for making cigarets or so-called 'cigarotype.'"—1 year.—(Secret.)—Dated 4th June, 1859.

7. Johann Zeh, of Rustendorf, near Vienna, for "Improvements in locomotives."—1 year.—(Public.)—Dated 4th June, 1859.

8. Elias Horowitz, of Pesth, for "Improvements in economical kitchen ranges, stoves, and roasting pipes."—1 year.—(Secret.)—Dated 4th June, 1859.

9. Adolph Kux, of Prague, for "A peculiar construction of centrifugal machines for extracting and washing the juice of beetroot."—1 year.—(Secret.)—Dated 4th June, 1859.

10. Carl Austerlitz, of Vienna, for "Powder for destroying moths."—1 year."—(Secret.)—Dated 4th June, 1859.

11. Johann Nadler, of Pesth, for "Improvements in the manufacture of animal and unfattened glue in a liquid and inodorous state, and being applicable to the treatment of all kinds of articles, such as paper, leather, silk, velvet, &c."—1 year.—(Secret.)—Dated 4th June, 1859.

12. Adolph Kux, of Prague, for "A peculiar process for obtaining juice of a high degree in working beetroot juice by means of centrifugal apparatus."—1 year.—(Secret.)—Dated 8th June, 1859.

13. Carl Pietroni, of London, represented by Franz Gossleth, of Triest, for "Manufacture of soap by means of steam combined with neutral alkali and yellowish resin."—15 years.—(Secret.)—Dated 8th June, 1859.

14. Samuel Leporis, of Pesth, for "Peculiar kitchen ranges fired by coke."—1 year.—(Secret.)—Dated 8th June, 1859.

15. Josua and Paul Kuhn, of Butschowitz, Moravia, for "Improvements in cloth employed in pressing the juice of beetroot by means of hydraulic presses in the manufacture of sugar."—1 year.—(Secret.)—Dated 8th June, 1859.

16. Theodor Nikolaus Meynier, of Paris, represented by Georg Märkl, Vienna, for "An apparatus for washing coals and ores."—1 year.—(Public.)—Dated 8th June, 1859.

17. Eduard Pessier, of Valenciennes, France, represented by A. Martin, Vienna, for "Using alcohol in the manufacture of sugar for the purpose of separating strange substances from the sugar juice after its being distilled."—1 year.—(Public.)—Dated 8th June, 1859.

18. Friedrich Paget, of Vienna, for "Improvements in purifying, clarifying, and discolouring resin and resinous substances."—1 year.—(Secret.)—Dated 8th June, 1859.

19. Boyer and Co., of Ludwigshafen, represented by Aug. Schmidt, Vienna, for "Improvements in apparatus for heating by means of damp air."—4 years.—(Secret.)—Dated 9th June, 1859.

20. Dr. Gustav Bischof, of Bonn, represented by Dr. Heinrich Kern, Vienna, for "Improvements in his Patent process for extracting copper from sulphurous and oxidated copper ores without using acids."—5 years.—(Secret.)—Dated 9th June, 1859.

21. J. C. Schröder, of Berlin, represented by A. Martin, Vienna, for "A peculiar process for obtaining crystallized sugar from molasses of beetroot sugar, and from molasses of India sugar."—5 years.—(Secret.)—Dated 9th June, 1859.

22. Friedrich Eduard Schoch, of Vienna, for "Construction of a combined furnace for the manufacture of gas by utilizing at the same time the waste heat for heating purposes."—2 years.—(Secret.)—Dated 10th June, 1859.

23. Thomas Stregzek, of Vienna, for "A peculiar mode of covering buildings by means of metal sheets, being also applicable to tile and shingle roofs."—1 year.—(Secret.)—Dated 10th June 1859.

* For the Austrian Patent Law, see No. 291 of this Journal.

† In the case of inventions patented in other states as well as in Austria, the Specifications (whether described as "public" or not) may in most cases be consulted, or translations of them be had, at the Library of the Commissioners' Office.

24. Samuel Grünbaum, of Ofen, for "A peculiar lining for protecting garments from perspiration."—1 year.—(Secret.)—Dated 10th June, 1859.

25. Carl Emanuel Welz, of Leitomischl, for "A peculiar electro-magnetic writing telegraph."—1 year.—(Public.)—Dated 14th June, 1859.

26. Joseph de Cente, of Wiener Neustadt, for "Improvements in the composition and manufacture of compound stones of various shapes, such as wheels, gimblets, files, whetstones, &c., whereby they obtain a hardness which is superior to that of steel files."—3 years.—(Secret.)—Dated 14th June, 1859.

27. Alexander Franz W. Chelm Iertschek, of Kronstadt, for "An artificial mode of drying glue and other products."—1 year.—(Secret.)—Dated 16th June, 1859.

28. Johann Timmel, of Vienna, for "An improved apparatus of wood and glass pipes, and process for obtaining vinegar."—1 year.—(Public.)—Dated 16th June, 1859.

29. Johann Schuberth, of Vienna, for "Improvements in his Patent pins and tacks for upholsterers, saddlers, &c."—1 year.—(Secret.)—Dated 16th June, 1859.

30. Fanin Gregor, of Raab, for "A peculiar mode of fastening buttons of men's dresses."—1 year.—(Secret.)—Dated 16th June, 1859.

31. Moriz Weber, of Vienna, for "A safety-valve with double cylinders, applicable to all steam boilers."—1 year.—(Secret.)—Dated 16th June, 1859.

32. Moriz Weber, of Vienna, for "An apparatus for uncoupling railway carriages, both their auxiliary chains being maintained and let loose."—1 year. (Secret.)—Dated 16th June, 1859.

33. Moriz Weber, of Vienna, for "A peculiar construction of locomotives for heavy good-trains."—1 year.—(Secret.)—Dated 16th June, 1859.

34. Moriz Weber, of Vienna, for "A safety-chain for raising heavy loads horizontally and vertically, and for drums of whims and couplings."—1 year.—(Secret.)—Dated 17th June, 1859.

35. Theodor Nikolaus Meynier, of Paris, represented by Georg Märkl, Vienna, for "Improvements in steam generators of stationary engines and locomotives."—1 year.—(Public.)—Dated 17th June, 1859.

36. Matthäus Muchowitz, of Vormarkl, Carinthia, for "A process for obtaining simple essence of sugar or honey vinegar, from syrup of sugar and from honey."—5 years.—(Secret.)—Dated 19th June, 1859.

37. Louise Jenny Pamela Branchu, of Paris, represented by Cornelius Kasper, Vienna, for "A peculiar process for obtaining nitric acid, and for applying the same to the construction of artificial pits of saltpetre."—1 year.—(Secret.)—Dated 19th June, 1859.

38. Friedrich Von Lössl and Johann Greiner, of Linz, and Wilhelm Dürschmidt, of Boudry, Switzerland, for "A self propeller for inland navigation."—2 years.—(Public.)—Dated 19th June, 1859.

39. Johann Christoph Endris, of Vienna, for "Improvements in the manufacture of gas, and in preparing the materials for gas-lights."—2 years. (Secret.)—Dated 19th Juue, 1859.

40. Moriz Fröhlich and Enoch Bloch, of Brünn, for "Improvements in the manufacture of pressed yeast."—3 years.—(Secret.)—Dated 21st June, 1859.

41. Carl Elbertzhagen, of Wittkowitz, Moravia, for "A peculiar method of manufacturing the links and similar parts of suspension bridges."—2 years.—(Secret.)—Dated 21st June, 1859.

42. Joseph Zane, of Venice, for "A machine for clarifying water, especially that of artesian wells."—1 year.—(Secret.)—Dated 21st June, 1859.

43. Theresia Preshel, of Vienna, for "Improvements in phosphor matches."—1 year.—(Secret.)—Dated 21st June, 1859.

44. Léon Isidor Molinos and Charles Pronnier, of Paris, represented by Cornelius Kasper, Vienna, for "A system of generating steam applicable to locomotives, stationary and movable boilers and engines."—1 year.—(Secret.)—Dated 22nd June, 1859.

45. Eugen Lemercier, of Paris, represented by A. Martin, Vienna, for "A machine for manufacturing foot coverings, articles of saddlery, and leather, by means of screws of copper, iron, and other metals and their alloys."—1 year.—(Public.)—Dated 22nd June, 1859.

46. Octav Hofmann, of Pesth, for "A rotary steam engine."—1 year.—(Public.)—Dated 22nd June, 1859.

47. Philipp Bauer, of Pesth, for "Improvements in suspending men's dresses."—1 year.—(Secret.)—Dated 22nd June, 1859.

48. Reinhold Von Reichenbach, of Vienna, for "A process for smelting iron and steel from ores."—1 year.—(Secret.)—Dated 23rd June, 1859.

49. Alois Eder, of Vienna, for "Improvements in his patent lounging sofas."—1 year.—(Secret.)—Dated 23rd June, 1859.

50. Hiram Hutchinson, of the United States, represented by Adolph Kolaczek, Vienna, for "Printing and fixing relief figures and designs of caoutchouc or similar resin on linen, cotton, silk, or other fabrics, and also on felt, leather, &c., by means of engraved cylinders."—2 years.—(Secret.)—Dated 23rd June, 1859.

51. Dr. Wilhelm Braubach, of Giessen, represented by Friedrich Aschermann, Vienna, for "So-called 'economical mineral varnish' for colouring and preserving wood and iron, for waterproofing tissues and paper, for painting houses and floors."—1 year.—(Secret.)—Dated 23rd June, 1859.

52. Hermann Hirsch, of Berlin, represented by Georg Märkl, Vienna, for "A so-called 'normal vessel.'"—5 years.—(Public.)—Dated 25th June, 1859.

53. J. H. F. Prillwitzer, of Berlin, represented by Georg Märkl, Vienna, for "A peculiar construction of elastic springs."—1 year.—(Public.)—Dated 25th June, 1859.

54. Friedrich Wiese, of Vienna, for "A combined Bramah and Chubb lock, which cannot be opened without the right key."—1 year.—(Public.)—Dated 25th June, 1859.

55. Ludwig Heuberger, of Vienna, for "Peculiar trusses."—1 year.—(Secret.)—Dated 25th June, 1859.

56. Friedrich Wiese, of Vienna, for "Improvements in Chubb's locks, whereby they cannot be picked."—1 year.—(Public.)—Dated 29th June, 1859.

57. Ferdinand Neiber and Heinrich Breiber, of Vienna, for "Apparatus for filling cigarets."—1 year.—(Public.)—Dated 29th June, 1859.

58. Michael Kohl, of Ottakring, for "Improvements in machines for the manufacture of all kinds of conical wire-springs."—1 year.—(Secret.)—Dated 29th June, 1859.

2. Patents Prolonged.

1. Rudolph Schifkorn, for "Improvements in rigid iron girders."—8th and 9th years.—(Public.)—Dated 29th May, 1852.

2. Gustav Fritsche, for "Decomposing kitchen salt by means of silicate for the manufacture of soda."—3rd year.—(Secret.)—Dated 29th November, 1857.

3. Franz Podany, for "Improvements in the manufacture of veneers for floors and other articles of joinery."—2nd year.—(Secret.)—Dated 31st May, 1858.

4. Theodosia von Papara, for "A key-board for pianofortes, whereby fingering may be practised."—5th year.—(Public.)—Dated 5th September, 1855.

5. Theodosia von Papara, for "A key-board, whereby the playing on pianos is facilitated."—5th year.—(Public.)—Dated 4th October, 1855.

6. Ignaz Holzknecht, for "Improvements in grinding."—3rd year.—(Public.)—Dated 22nd May, 1857.

7. Moriz Topolansky and Eduard Penecke, for "Improvements in their patent machine for cleaning and sorting corn, and for destroying weevils."—2nd year.—(Secret.)—Dated 29th May, 1858.

8. Theodosia von Papara, for "Improvements in her patent key-board for pianofortes, whereby fingering may be practised."—2nd year.—(Public.) Dated 19th February, 1859.

9. Franz Langhof, for "Improvements in railway buffers."—5th year.—(Public.)—Dated 31st May, 1855.

10. Carl Löwe and Joseph Gmeionböck (Carl Adler, assignee), for "Improvements in their patent machine for making wooden pins."—3rd year.—(Secret.)—Dated 30th May, 1857.

11. Nathan Schönwald (Samuel Weiss, assignee), for "A kind of soap."—3rd year.—(Secret.)—Dated 7th June, 1857.

12. Franz Fritcsek, for "Improvements in painting wooden and metal objects, and in protecting the latter from being worm-eaten."—2nd year.—(Secret.)—Dated 18th June, 1858.

13. Joseph Gross, for "Improvements in fastening buttons of men's dresses."—2nd year.—(Secret.)—Dated 5th July, 1858.

14. Carl Gangloff, for "A moveable concentric saw for cutting boards."—2nd year.—(Secret.) Dated 10th July, 1858.

15. E. H. Fiedler, for "A process for obtaining starch from every kind of corn, and especially from maize."—5th year.—(Secret.)—Dated 17th May, 1855.

16. Ludwig Hölbling, for "Artificial manure."—2nd year.—(Secret.)—Dated 3rd June, 1858.

17. Franz Sartori, for "Improvements in the manufacture of fire-proof bricks."—2nd year.—(Secret.)—Dated 24th June, 1858.

18. Simon Marth (Joseph Hornier, assignee), for "Improvements in the manufacture of washing machines with undulated grooves."—6th year.—(Public.)—Dated 7th June, 1854.

19. Simon Schwarz, for "Stuffing furniture."—2nd year.—(Secret.)—Dated 17th June, 1858.

20. Georg Schwab, for "Improvements in his Patent iron furniture, staircases, and railings."—2nd year.—(Secret.)—Dated 8th July, 1858.

21. Michael Schmid, for "Improvements in his Patent kitchen ranges and stoves."—4th year.—(Secret.)—Dated 13th June, 1856.

22. Katharine Behm, for "A peculiar substance for glueing articles of joinery."—2nd year.—(Secret.)—Dated 15th June, 1858.

23. Friedrich Müller, for "A flux for iron smelting and blast furnaces."—3rd year.—(Secret.)—Dated 20th June, 1857.

24. Georg Krüger, for "A peculiar drawing-room table."—6th year.—(Secret.)—Dated 17th June, 1854.

25. Wilhelm Skallitzky, for "Obtaining plastic (raised) letters of any metal sheets."—2nd year.—(Public.)—Dated 18th June, 1858.

26. Alois Widemann (Gustav Memel, assignee), for "A peculiar apparatus and process for roasting coffee."—2nd year.—(Secret.)—Dated 18th June, 1858.

3. Patents which have become Void.*

1. Wilhelm Hodges, for "Improvements in machines for knitting plain and figured hosiery articles with raised stripes."—Dated 23rd April, 1856; expired 23rd April, 1859.

2. Joseph Picko and Theresia Kirchlehner, for "An improved double printing machine for shawls and garments of wool, silk, calico, &c."—Dated 21st August, 1857; disclaimed 28th March, 1859.

3. The Heirs of Bartholomäus Cassoni, for "Improvements in the manufacture of magnesia."—Dated 4th April, 1858.—Cancelled for want of novelty on the 2nd June, 1859.

4. Johann Pichler, for "Improvements in the manufacture of grease for carriages."—Dated 22nd April, 1857; expired 22nd April, 1859.

5. Jacob Woracek and Robert Schelzel, for "Making the interior fittings of jewel cases of plaster."—Dated 3rd May, 1857; expired 3rd May, 1859.

6. Friedrich Rödiger, for "A calculating machine."—Dated 22nd May, 1851; expired 22nd May, 1858.

7. Johann Christoph Endris, for "Improvements in clarifying and discolouring vegetable

* The Specifications of these Patents may be consulted in the original language, or translations be had at the Public Free Library.

sugar juice."—Dated 18th February, 1857; expired 18th February, 1859.

8. Johann Christoph Endris, for "Improvements in lubricating axles of locomotives and railway carriages."—Dated 10th May, 1857; expired 10th May, 1859.

9. L. J. Denis, for "Improvements in machines for washing wool."—Dated 17th July, 1857; cancelled 8th June, 1859, in consequence of not having been worked.

10. Rudolph Gustav Wiester, for "Ornamenting harness of varnished leather by means of gold or silver seams."—Dated 5th January, 1858; expired 5th January, 1859.

11. Johann Zeh, for "A chemical process for clarifying natural rock-naphtha, so as to be applied immediately to technical purposes."—Dated 2nd December, 1853; expired 2nd December, 1858.

12. Alexis Zuppinger, for "Improvements in his Patent spindle for spinning and twisting cotton, flax, silk, and wool."—Dated 2nd December, 1853; expired 2nd December, 1858.

13. Ernst Ferdinand and Wilhelm Lieber, for "A cylinder-press for pressing beetroot juice in sugar-works."—Dated 9th December, 1853; expired 9th December, 1858.

14. Friedrich Eck, for "A machine for purifying clay or loam."—Dated 9th December, 1853; expired 9th December, 1858.

15. Heinrich Daniel Schmid, for "An improved balance for weighing locomotives, for ascertaining the pressure on each axle, and for equally distributing the weight, so as to regulate thereby the tension of the springs."—Dated 22nd December, 1853; expired 22nd December, 1858.

16. Theodor von Gilgenheimb, for "A machine for sowing and dunging at the same time."—Dated 14th December, 1855; expired 14th December, 1858.

17. Theodor von Gilgenheimb, for "A machine for roasting the soil and burning roots of newly tilled grounds."—Dated 24th December, 1854; expired 24th December, 1858.

18. Johann Riegl, for "Hair-oil."—Dated 24th December, 1854; expired 24th December, 1858.

19. Leopold Feiwel, for "An improved construction of moveable kitchen ranges of sheet-iron"—Dated 26th December, 1854; expired 26th December, 1858.

20. Bernhard Fürth, for "Manufacture of safety matches free from phosphor, with or without sulphur, and of friction surfaces."—Dated 3rd December, 1855; expired 3rd December, 1858.

21. Alois Scherer (F. J. Lindner, assignee), for "Improvements in the manufacture of grease for carriages."—Dated 7th December, 1855; expired 7th December, 1858.

22. Max Drucker, for "Dyeing cotton and linen articles, so as to obtain a solid lustre."—Dated 19th December, 1855; expired 19th December, 1858.

23. Ignaz Bachrach (Salomon Nimhin, assignee), for "A hand printing press, with continuous rollers of colours, for public offices."—Dated 24th December, 1855; expired 24th December, 1858.

24. Franz Brodesser and Stephen Schimbel, for "Constructing ship mills, so as to rest two wheels (placed diagonally) on the same ship."—Dated 27th December, 1855; expired 27th December, 1858.

25. Louis Swogetins Ky, for "Applying a new pressing apparatus to hydraulic oil presses, whereby roasted seed-flour and oil-cakes may be obtained at the same time."—Dated 6th December, 1856; expired 6th December, 1858.

26. Franz Xaver Semsch and Anton Reichhard, for "A harrow for removing moss from meadows."—Dated 9th December, 1856; expired 9th December, 1858.

27. Franz Fischer, for "Manufacture of a fireproof composition for bricks from magnesite or or other talc minerals containing no lime or potash, such as talc, talc-slate, and serpentine."—Dated 9th December, 1856; expired 9th December, 1858.

28. Carl and Eduard Kühn, for "Improvements in obtaining red oxide of iron (rouge) for polishing metals."—Dated 24th December, 1856; expired 24th December, 1858.

29. Johann Bürk and Friedrich Kollmar, for "An apparatus applicable to watches, whereby watchmen may be duly controlled."—Dated 30th December, 1856; expired 30th December, 1858.

30. Ludwig Vergottini, for "Improvements in obtaining the fibre of sportium jurceum and of mulberry twigs for the manufacture of tissues and paper."—Dated 1st December, 1857: expired 1st December, 1858.

31. Arnim Früh, for "An instrument called 'Semeiomelodion.'"—Dated 1st December, 1857; expired 1st December, 1858.

32. Anton Jagerndorfer, for "Improvements in the manufacture of pressed yeast."—Dated 3rd December, 1857; expired 3rd December, 1858.

33. Felix von Mizerski, for "An apparatus for protecting food contained in vessels from adulteration and putrefaction."—Dated 3rd December, 1857; expired 3rd December, 1858.

34. Mathias Hofherr, for "A peculiar construction of whims, whereby the draught is equally distributed on all motors."—Dated 11th December, 1857; expired 11th December, 1858.

35. Carl Oskar Kriegl, for "A new kind of porcelain saggars."—Dated 11th December, 1857; expired 11th December, 1858.

36. Franz Zantedeschi and Ludwig Borlinetto, for "Improvements in the manufacture of innoxious matches, which cannot be lighted by common friction."—Dated 11th December, 1857; expired 11th December, 1858.

37. Sommermeyer and Co., Emil Baars, and Carl Keck, for "Manufacture of iron safes."—Dated 14th December, 1857; expired 14th December, 1858.

38. Octav Hofmann, for "Applying external double steam cylinders with a peculiar action to locomotives."—Dated 14th December, 1857; expired 14th December, 1858.

39. Eugen Vincenzi, for "A new system of reducing the Jacquard cards to one third of their

usual size, of substituting paper stripes for pasteboard, and of moving the designs in every direction by means of a new arrangement of the pedals."—Dated 15th December, 1857; expired 15th December, 1858.

40. Joseph Bossi, for "A machine for cleaning and sorting grits of bruised wheat."—Dated 16th December, 1857; expired 16th December, 1858.

41. Wilhelm Pittner, for "Elastic arm and necklaces of any metal."—Dated 16th December, 1857; expired 16th December, 1858.

42. Ferdinand Scheithauer, for "Improvements in double printing machines for dresses and paperhangings with any number of colours."—Dated 16th December, 1857: expired 16th December, 1858.

43. Moriz Diamant, for "Means of preparing the fibres of most reed plants used in upholstery so as to protect them from vermin."—Dated 21st December, 1857; expired 21st December, 1858.

44. Johann Paul, for "Obtaining grease for lubricating carriages from resin or other distilled oils."—Dated 21st December, 1857; expired 21st December, 1858.

45. Joseph Ceruti, for "A system of inodorous fixed and moveable closets."—Dated 25th December, 1857; expired 25th December, 1858.

46. Joseph Ceruti, for "Peculiar fountains applied to gas chandeliers."—Dated 25th December, 1857; expired 25th December, 1858.

47. Wilhelm Samuel Dobbs, for "A pressure ventilator for obtaining a compressed blast."—Dated 24th December, 1857; expired 24th December, 1858.

48. Ignaz Horaczek, for "So-called 'economical Bukowine tallow-candles with plaited wicks.'"—Dated 26th December, 1857; expired 26th December, 1858.

49. Ignaz Horaczek, for "So-called 'economical Bukowine soap."—Dated 26th December, 1857; expired 26th December, 1858.

50. Simon Löwy, Moriz Schwarz, and Johann Koppenstein, for "Obtaining glue from animal, vegetable, and mineral substances which have not been used thereto till now."—Dated 27th December, 1857; expired 27th December, 1858.

51. Leopold Bäckl, for "Improvements in machines for sorting and cleaning wheat, barley, grits, &c."—Dated 27th December, 1857; expired 27th December, 1858.

52. Martin Tourschik, for "Metal clarinets."—Dated 31st December, 1857; expired 31st December, 1858.

53. Heinrich Wilhelm Jentzsch, for "Improvements in tallow candles and soap."—Dated 21st January, 1851; expired 21st January, 1859.

54. Dr. Ignaz Wildner Maithstein, for "Improvements in kitchen ranges."—Dated 27th April, 1851; expired 27th April, 1855.

55. Giorgio Enrico Armenia Gaddum, for "Improvements in his Patent method of carding all kinds of silk waste."—Dated 21st January, 1852; expired 21st January, 1859.

56. Carl Berchtold, for "A machine for harvesting corn."—Dated 24th June, 1856; disclaimed 19th June, 1859.

57. Michael Tastl, for "Improvements in repeating pendulum-clocks with weights and long pendulums."—Dated 1st January, 1858; expired 1st January, 1859.

58. Otto Baumann, for "A self-acting apparatus for raising liquids by means of expanded elastic fluids."—Dated 16th February, 1858; expired 16th February, 1859.

59. Otto Baumann, for "A peculiar mode of covering centrifugal machines."—Dated 22nd February, 1858; expired 22nd February, 1859.

BELGIUM.*

List of Patents Delivered on the 1st September, 1859.†

(*Communicated by the Belgian Government.*)

(For previous List, see No. 590 of this Journal.)

7835. Edouard Van Maele, of Thielt, for "Applying a vegetable substance to the manufacture of paper."—Dated 5th August, 1859.

7848. Jean Baptiste Lacroix, of Wavre, for "A system of pumps."—Dated 8th August, 1859.

7864. H. A. Bonneville, of St. Josse-ten-Noode, for an imported invention of "A system of columns for the service of public roads."—Dated 8th August, 1859.

7865. J. J. Russell, represented by J. Piddington, of Brussels, for an imported invention of "Improvements in apparatus for heating and welding the edges of metal plates employed in the manufacture of cylinders."—Dated 12th August, 18 59—(English Patent, 16th February, 1859.)

7867. E. Darrien, of Liége, for "A steam hammer."—Dated 8th August, 1859.

7868. E. Darrien, of Liége, for "A system of eccentrics with a variable length of stroke, applicable to expansion gears."—Dated 9th August, 1859.

7869. C. J. Boutet, represented by J. Sainthill, of Brussels, for an imported invention of "Mills for grinding coffee and other grains."—Dated 11th August, 1859.—(French Patent, 31st May, 1859.)

* For the Belgian Patent Law, see Nos. 292 and 348 of this Journal.

† All Specifications of Patents which have been in force not less than six months, may be inspected or translations of them be had at the Library of the Great Seal Patent Office, where also translated Indexes may be consulted.

7870. C. MARTIN, of Pepinster, for "Improvements in machines for carding and combing wool."—Dated 12th August, 1859.

7871. C. FLEURY, of La Bronck-Forêt, for "A kind of syrup for preventing beer brewed in summer from becoming bad."—Dated 12th August, 1859.

7872. REGUILÉ-DELHEZ, represented by D. Tassin, of Liége, for "A balance with double compensating beams."—Dated 13th August, 1859.

7873. H. J. WARLOMONT, of Liége, for "A system of utilizing the waste heat of zinc furnaces."—Dated 17th August, 1859.

7874. J. LECLERCQ, of Housse, for "Breech-loading lever pistols loaded with Lefaucheux' cartridges."—Dated 12th August, 1859.

7875. P. J. JARRE, represented by J. Piddington, of Brussels, for an imported invention of "A system applicable to guns, rifles, pistols, and other fire-arms."—Dated 13th August, 1859. — (French Patent, 21st April, 1859.)

7876. J. GUYET, represented by J. Piddington, of Brussels, for an imported invention of "A turbine which may be combined with a threefold action, and which may be used as a counter and motor."—Dated 13th August, 1859.—(French Patent, 2nd August, 1859.)

7877. A. C. J. VAN LANGENHOVE, represented by J. Duvivier, of Brussels, a Patent of Improvement for "Applying colza straw to the manufacture of paper."—Dated 13th August, 1859.—(English; Pavy's Original Patent, 7th May, 1859.)

7878. J. A. WILKINSON, represented by A. Anoul, of Ixelles, for an imported invention of "Improvements in printing presses."—Dated 13th August, 1859.—(American Patent, 10th June, 1859.)

7879. L. RIGOLIER, represented by D. de Vos-Verraert, of Brussels, a Patent of Improvement for "A system of breaks."—Dated 16th August, 1859.—(Original Patent, 15th September, 1858.)

7880. J. B. VANGINDERTAELEN, of St. Josse-ten-Noode, for "A freezing apparatus with a continuous rotary motion, whereby liquids or gases may be brought to any temperature."—Dated 16th August, 1859.

7881. J. GIBBS, represented by J. Smets, of Brussels, for an imported invention of "Improvements in the manufacture of brushes, brooms, covers of floors, &c."—Dated 17th August, 1859.—(English Patent, 8th July, 1859.)

7882. R. DAELEN, represented by G. Neuhaus, for "A machine for rolling cylindrical plates of steam boilers."—Dated 18th August, 1859.

7883. J. T. FAY, represented by A. Crooy, of Brussels, for an imported invention of "Means of obtaining and applying motive power."—Dated 18th August, 1859.—(English Patent, 3rd August, 1859.)

7884. J. F. MIGUEL, represented by C. Wenseleers, of Brussels, a Patent of Improvement for "Trusses."—Dated 18th August, 1859.—(Original Patent, 31st May, 1859.)

7885. A. ALBERT, of Molenbeek St. Jean, for "Improvements in burners of lamps burning mineral oils."—Dated 19th August, 1859.

7887. M. RUNKEL, represented by O. Daillencourt, of Brussels, for an imported invention of "Improvements in oscillating steam engines."—Dated 19th August, 1859.—(American Patent, 12th April, 1859.)

7888. F. WORMS DE ROMILLY and L. J. F. MARGUERITTE, represented by O. Daillencourt, of Brussels, for an imported invention of "A mode of defecating sugar-juice, and of completely saturating the defecating agent."—Dated 19th August, 1859.—(French Patent, 4th July, 1859.)

7889. E. WANTERS and ED. MYERS, of Brussels, for "A system of counters for registering the flow of gas, water, and beer." — Dated 20th August, 1859.)

7890. DEVISSCHER and MASSIGNOT, of Molenbeek St. Jean, a Patent of Improvement for "Apparatus for cutting paper and pasteboard."—Dated 22nd August, 1859. — (Original Patent, 9th August, 1859.)

7891. X. A. F. RIBAIL and J. C. GOSSET, represented by A. Crooy, of Brussels, for an imported invention of "An apparatus for distributing steam by means of an elliptical movement."—Dated 22nd August, 1859. — (French Patent, 3rd August, 1858.)

7892. H. CRICHTLEY and S. ELSTON, represented by A. Crooy, of Brussels, for an imported invention of "Improvements in metallic pistons."—Dated 22nd August, 1859.—(French Patent, 18th August, 1859.)

7893. E. E. ALLEN, represented by J. Smets, of Brussels, for an imported invention of "Improvements in stereoscopes." — Dated 22nd August, 1859.—(French Patent, 19th August, 1859.)

7894. J. PETIT, represented by J. Smets, of Brussels, for an imported invention of "Lever locks." — Dated 22nd August, 1859. — (French Patent, 13th July, 1859.)

7895. F. E. LEMAIRE, represented by J. Smets, of Brussels, for "A continuous spindle." — Dated 22nd August, 1859.—(French Patent, 26th May, 1859.)

7896. J. C. F. LHÔTE, represented by J. Smets, of Brussels, a Patent of Improvement for "An apparatus for manufacturing and mixing Selters and other gaseous waters."—Dated 22nd August, 1859.—(Original Patent, 6th September, 1858.)

7897. VOUILLON and TAVERNIER, represented by J. Smets, of Brussels, a Patent of Improvement for "Treatment of all kinds of filamentous substances."—Dated 22nd August, 1859.—(Original Patent, 12th March, 1859.)

7898. F. A. STOLLE and E. SEIDLER, represented by J. Smets, of Brussels, for "An economical and smoke-consuming apparatus for heating steam-boilers."—Dated 23rd August, 1859.

7899. J. SILVERCRUYS, of Brussels, for "A safety belt used in the medical treatment of lunatics."—Dated 23rd August, 1859.

7900. P. VANDENWEGHE-LEFÈVRE, of Bruges, for "Rocking scales."—Dated 24th August, 1859.

7901. CH. VANDEZANDE, of Louvain, for "A mordant for dyeing." — Dated 24th August, 1859.

PRUSSIA.*

List of Patents Delivered and Annulled between the 1st June and 31st August, 1859.

(*Communicated by the Minister of Commerce and Public Works.*)

1. Patents Delivered.

1. Robert Rudolph Werner, of Berlin, for "A rotary steam-engine."—5 years.—Dated 1st June, 1859.
2. F. Martini, of Rothenburg, near Cönnern, for "A furnace for the manufacture of tar from peat and other fossils."—5 years.—Dated 4th June, 1859.
3. F. Andreas Siemenroth, of Custrin, for "A peculiar construction of sounding posts of stringed instruments." — 5 years. — Dated 11th June, 1859.
4. S. Elster, of Berlin, for "A peculiar apparatus for obtaining a steady water level in gas meters and other apparatus." — 5 years. — Dated 7th July, 1859.
5. Mentzel, of Berlin, for "A peculiar instrument for measuring the density of wool on the backs of sheep."—5 years.—Dated 16th July, 1859.
6. Caspar Post, of Eilpe, near Hagen, for an imported invention of "Means of fastening skates." —5 years.—Dated 8th August, 1859.
7. W. Spindler, of Berlin, for "A new red dyeing substance." — 5 years. — Dated 22nd August, 1859.
8. Richard Lauckner, of Aue, Saxony, for "An apparatus in wool cards for taking off the slubs." —5 years.—Dated 26th August, 1859.

2. Patents Annulled.

1. A. Facilides and Wiede, of Plauen, for an imported invention of "A mechanical apparatus in spinning machines for assembling broken thread." —Dated 3rd April, 1858. — Annulled 1st June, 1859.
2. Kühne, of Halberstadt, for "An apparatus for extracting beetroot sugar." — Dated 10th April, 1858.—Annulled 10th June, 1859.
3. Friedrich Schmidt, of Hagen, for "A blast furnace."—Dated 15th October, 1857.—Annulled 8th July, 1859.
4. J. H. F. Prillwitz, of Berlin, for an imported invention of "A loom for weaving plush." — Dated 4th June, 1858. — Annulled 19th July, 1859.

* For the Prussian Patent Law, see Nos. 313 and 329 of this Journal.

UNITED STATES OF AMERICA.

(*Communicated by the Commissioner of Patents.*)

List of Patents, with Claims annexed, issued from the United States Patent Office, for the week ending 30th August, 1859, and each bearing that date.

No. 25,236. Edmund Belling, of New York, N.Y., for an "Improvement in lozenge machines."

"I claim the combination of a revolving or reciprocating knife with the lower part of a press, and operated simultaneously with the same, in the manner and for the purpose, substantially as described."

No. 25,237. Abraham Andrews and Harrison Kalbach, of Berneville, Pa., for an "Improved horizontal water wheel."

"We claim the curved concave buckets having curved or eccentrically formed tops and bottoms, in combination with a spiral water way or chamber underneath, and arranged within a box A, substantially as herein described and represented."

No. 25,238. Douglas Bly, of Rochester, N.Y., for an "Improvement in artificial legs."

"I claim, 1st, the combination of the segment of rubber B, or its equivalent, with the foot F and leg A, in the manner and for the purpose substantially as described. Secondly, I claim connecting the foot to the leg by means of the cord C, or its equivalent, thereby dispensing with all joints, bolts, hinges, and metal straps, and the friction and noise to which they give rise."

No. 25,239. John C. Boyd, of Boston, Mass., for an "Improvement in elastic hose tubing."

"I claim as a new article of manufacture, the hose made of flexible tubes, the same consisting of a woven fabric of cotton, hemp, or other fibrous materials, lined with, or fastened to a layer or sheet of vulcanized india rubber or gutta percha, or of any other waterproof composition, and the whole secured by rivets, substantially as described."

No. 25,240. Wm. Boyd, of New Orleans, La., for an "Improvement in iron ties for cotton bales."

"I claim in combination with the splits, the use of a key having wings at each end, to form the lock to the tie, when made and arranged as and for the purpose set forth."

No. 25,241. Jehu Brainerd and W. H. Burridge, of Cleveland, O., for an "Improvement in tanning."

"What we claim, is, the improvement in tanning herein set forth, consisting in the immersion of the skins and hides in a tan liquor made from the digestion of the before mentioned plants, and the accompanying treatment of the skins and hides by their immersion in the preparing liquid, the whole process being conducted in the manner set forth, whereby the valuable properties of the plants may be preserved for use, and this we claim, whether the above described tan liquor be used separately or in connection with other subjects containing tannin."

No. 25,242. Henry Brevoort, of San Francisco, Cal., for an "Improvement in gold amalgamators."

"I claim the drag, having upon its lower surface or shoe, the combination of the blocks of rubbing surfaces (*o*) and channels (*i*), the two being arranged reciprocally in the manner herein described. I also claim combining with a revolving drag (F, a pan (A), whose bottom is inclined, and has the form of a circular trough, as represented in the drawing,

so as to collect the mercury in mass. I also claim combining an amalgating pan and revolving drag with a galvanic battery, arranged in such manner that its poles are extended into the mass of material in the pan, and that the parts of the material are subjected in succession to the action of the galvanic current. I also claim the employment of a solution of the nitrate of mercury, in connection with a galvanic battery and a friction amalgamator containing mercury, substantially as herein set forth."

No. 25,243. HENRY BREVOORT, of San Francisco, Cal., for an "Improvement in quartz crushing machines."

"I claim the relative arrangement and combination of the curved grinding shoes (E^1, E^1,) having their front edges beveled and inclined backwards from their outer corners, and caused to revolve as described, so as to gather in and return the coarser fragments towards the centre of the series, substantially as herein set forth. I also claim the arrangement and combination of a series of grinding shoes (E^1), with their front edges curved or inclined backwards, as described, with a corresponding inner series of reducing shoes (E), so that the coarser fragments are redelivered in an inward direction to the reducing shoes, while the grinding and outward movement of the fine particles proceed continuously, substantially as herein set forth."

No. 25,244. WM. BRIGGS, of Norristown, Pa., for an "Improvement in gun lock."

"I claim constructing the stock A and breech of barrel D so as to be susceptible of and united to each other by the tang or breech pin C and tapering screw-pin E, and the spring hammer guard H and trigger P, arranged and combined with stock A, essentially in the manner and for the purposes fully set forth."

No. 25,245. B. S. CHURCH, of Manhattanville, N. Y., for an "Improved water meter."

"I claim, 1st, the arrangement of drum A with the chamber B and buckets C, as described, in combination with the trough G and the air chamber D, and operating substantially as and for the purpose set forth. 2nd, the arrangement and combination of the trough G, the pipe H, the chamber I, the air chamber D, and the drum A, to operate substantially as and for the purpose herein specified."

No. 25,246. H. S. CLARK, of Wyalusing, Pa., for an "Improvement in carriage springs."

"I claim the arrangement and combination of the U-shaped leaves B, B, with the elliptical springs A, A, as herein shown and described, so that the extremities of the leaves B, B, will approach each other, and will be secured to the centres of the springs A, A, as specified."

No. 25,247. F. J. CRISSEY, of Leesburg, Va., for an "Improvement in washing machines."

"I claim the arrangement of frame E, supports *i*, *i*, upright shaft D, rollers B, B, supports *c*, *c*, *c*, and collar G, in combination with the bottom of the tub, when the parts shall be constructed and arranged in relation to each other, as herein substantially set forth."

No. 25,248. ADDISON CROSBY, of Fredonia, N. Y., for an "Improved valve for steam engines."

"I claim the employment, as an induction or eduction valve in a steam engine, of a rolling or oscillating valve composed of two segments, having their faces *a*, *a*, eccentric to its axis of oscillation and with an opening *d* between the segments, substantially as herein described."

No. 25,249. HORACE H. DAY, of New York, N. Y., for an "Improvement in elastic cloth."

"I claim the new elastic cloth, herein described, consisting of stockinet cloth, elastic gum, and flock combined, substantially as herein set forth, so that the elastic gum is covered on one side by the stockinet and on the other by the flock, the said elastic cloth being a new manufacture."

No. 25,250. SAML. DE VAUGHAN, of Washington, D. C., for an "Improved scroll sawing machine."

"1, I claim the vertical plates *g* and guide blocks *h*, plates *m*, and m^1, and guide arm *i*, for the purpose of a compound guide, as set forth. 2, I claim the manner of operating link *k* on bearing *u*, in combination with block *h* and guide arm *i*, for the purpose set forth."

No. 25,251. JOHN ANDERSON FALK, ANDW. JOHNSON, and G. A. ERICKSON, of Altona, Ill., for an "Improvement in harvesters."

"We claim the arrangement of the wheel H, which is provided with the pin *a*, near its periphery with the bar *i* and pulley S, the same being constructed in the manner set forth, for the purpose of operating the band which drives the endless belt K, substantially as described."

No. 25,252. THEODORE F. FRANK, of Ischua, N. Y., for an "Improvement in opthalmic vapor apparatus."

"I claim the opthalmothological vapor bath, constructed and operating as herein-before described, for producing medicated vapor."

No. 25,253. ALBERT FULLER, of Cincinnati, O., for an "Improvement in faucet."

"I claim encasing an elastic plug valve in the above-described metallic shield, for the purposes set forth."

No. 25,254. QUINCY A. GILMORE, of New York, N. Y., for an "Improved machine for cutting and screening bituminous limestone or asphalte."

"I claim, first, the rotary cylinder or drum *a* carrying kives or cutters *b*, *b*, substantially of the form described, arranged in rows either with or without the raised bands, substantially as represented, or in rows parallel or oblique to the axis of the cylinder for cutting asphalte, sometimes known under the name of bituminous limestone, substantially as described. Second, I also claim the application of the machine as a whole, substantially as described, to the purpose of cutting and screening asphalte or bituminous limestone."

No. 25,255. A. GOLAY, of Mobile, Ala., for an "Improvement in cord guides for sewing machines."

"I claim the arrangement and combination with the adjustable plate D, of the groove (*f*), and guides (*c*, *d*, *e*,) substantially as herein shown and described, so that the cord may be guided and conducted between two or more thicknesses of cloth, as set forth."

No. 25,256. ELIAS GRAHAM and ISAAC N. PATTON, of Elizabeth Town, Ky., for an "Improvement in flour bolts."

"We claim the combination of the wedged sliding ribs C, with the rods and screws, for adjusting the same, in the manner and for the purposes herein set forth."

No. 25,257. JONATHAN H. GREEN, of Christianburg, Iowa, for an "Improved billiard cue tip."

"I claim a tip or point, for billiard or bagatelle cues, made of any compound herein described, so as to dispense with the external application of chalk or other substance to the point of the cue."

No. 25,258. BENJN. L. GRIFFITH, of Reading, Pa., for an "Improved hollow grate bar for steam boilers."

"I claim two or more tubes C, attached to a hollow boxes D, connected to the fire-box, by means of hollow perforated screw plugs G, and arranged in sets, to complete the grate, as and for the purpose herein set forth."

No. 25,259. HENRY GROSS, of Tiffin, O., for an "Improvement in breech-loading fire-arm."

"I claim, 1st, giving the chamber its longitudinal motion upon a bed piece, which remains fixed during such motion, and in revolving, carries with it the chamber, substantially as specified. 2nd, the roller *r*, or its equivalent, upon the check piece, and its combination with the groove *g*, *d*, substantially as and for the purpose set forth. 3d, the double eccentric head of the level L, when connected with the chamber and bed piece, substantially as described. 4th, the adjustable bearing piece for the eccentric g^1 of lever L."

No. 25,260. ALBERT W. HALE, of New York, N.Y.. for an "Improved fastening for hooped skirts."

"I claim the method of connecting and fastening the ends of the hoop B, by means of the caps A, one part of such cap, with the end of the hoop, forming a point or extension *b*, to enter a recess *a*, in the cap, on the other end of the hoop, and such cap also furnishing the recess to receive the said points or extension of the other end of the hoop, when the hoop and cap are bent in the manner and for the purpose described."

No. 25,261. Wm. H. Hammond, of New York, N.Y., for an "Improved escapement for chronometers"

"I claim the employment of the hollow semi-cylinder on the vibrating lever, substantially as described, in combination with the escapement wheel, and the balance and verge, as set forth. And I also claim, in combination with the escapement, substantially such as described, or any equivalent therefor, the employment of the holding spring, substantially as and for the purpose specified."

No. 25,262. James Harrison jr., of New York, N.Y., for an "Improvement in sewing machines."

"I claim, 1st, the combination of the frame or feeding lever (*j*), bar (*m*), spring (*o*), and regulating screw (*p*), all constructed and operated as described, with the needle and needle frame (*i*), for carrying the mechanism for rotating the needle, as described. 2dly, I claim the adjustable bar or band (z^1), affixed to the lever or frame J, in combination with the frame (*i*), or its equivalent, for controlling the upward movement of the feed lever, as described; and, 3rdly, I claim the bar or band (z^1), in combination with the bar (*m*), screw (*p*), spring (*o*), and lever (*j*), as and for the purposes set forth."

No. 25,263. Royal Hatch, of Strafford, Vt., for an "Improved bed bottom."

"I claim the arrangement of a central supporting bar F, with a sacking E, both provided with double loops *d*, and attached respectively to the bedstead, as and for the purpose set forth."

No. 25,264. Alexr. Hay, of Philadelphia, Pa., for an "Improvement in springs for railroad cars, &c."

"I claim as a new article of manufacture, the construction of vulcanized india rubber springs, in which the threads, or warp, or fabric out of which they are formed, is made non-elastic before it is woven or knit, substantially as described. 2nd, in combination with india rubber springs to be acted on by tension or stretching, I claim the tubes A, A, with their flanges, substantially as described, for the purpose set forth. 3rd, in combination with the springs operating as described, I claim the supporter P with the opening F, in each end, and holes B, B, B, for tightening the spring when constructed and operated substantially as set forth."

No. 25,265. Milo A. Holcomb, of Granby, Conn., for an "Improved metallic razor strop."

"I claim a razor strap made of polished steel, of the requisite degree hardness, when possessing a sufficient degree of flexibility to enable the angle which its surface forms with the edge of the razor to be lessened to the desired extent, in the manner and for the purpose as herein specified."

No. 25,266. Daniel Hussey, of Nashua, N. H., for an "Improvement in machinery for winding warps upon the beam."

"I claim the peculiar combination for maintaining uniformity of wind or surface speed of wind on the yarn beam, the same consisting of the friction wheels G, F, the lifter rack K, the pinion *l*, and the compound motion mechanism, or their mechanical equivalents, the whole being applied to the yarn guide roller and the mechanism for adjusting the yarn beam, substantially in manner and so as to operate as specified."

No. 25,267. Joseph Kalbach and Isaac Kalbach, of Bernville, Pa., for an "Improvement in furnaces for smelting zinc ores."

"We claim as our invention is, constructing the crucible with a detachable bottom, and connecting it to the arch by the cylinder or collar, and to the bed plate by the rings or annular plates, whereby we are enabled to empty the crucible at its bottom, and to remove the entire crucible through the bottom or the arch of the heat chamber as may be required, the whole being arranged and susceptible of being used, as herein set forth."

No. 25,268. Eleazer B. Knight, of Malden, N.Y., for an "Improvement in machines for holding stones."

"I claim providing the stone holding machine with the suspending arms (*c*, *c*,) plates (*j*) and (*n*), rod (*i*), and adjusting bolts (*k*, *k*), or their equivalents, whereby said machine may be readily adjusted vertically, and also horizontally, in the arc of a circle, substantially as described, and for the purposes specified."

No. 25,269. Charles Livingston, of Redwood City, Cal., for an "Improved wind mill."

"I claim the cowl D with tubes *j*, *g*, and wheel B, combined and arranged for joint operation, substantially as and for the purpose set forth."

No. 25,270. Isaac Mallory, of Etna, N. Y., for an "Improved chute for horizontal water wheels."

"I claim constructing and arranging the scroll within the penstock, so that it can be turned so as to partially close the orifice for the admission of water upon the buckets, and to thereby regulate the flow of water for any head or for any quantity of water, essentially as above specified."

No. 25,271. E. E. Marcy, of New York, N. Y., for an "Improvement in curing and treating caoutchouc."

"I claim the improved process of curing india rubber by combining india rubber with the sulphuret of lead and carbonate of lead, or the protoxide of lead, in the manner herein-before described, and without the use of free sulphur in combination with the rubber, or with said compound, and the exposure of these compounds to steam or water at the temperature herein-before indicated, and in the mode pointed out."

No. 24,272. E. E. Marcy, of New York, N. Y., for an "Improvement in curing and treating caoutchouc."

"I claim the improved process of curing india rubber by combining it with the sulphuret of zinc and the hyposulphite of zinc, in the manner herein-before described, and subjecting the compound to steam or water at the temperature stated, without the use of free sulphur, in combination with said compound, substantially as described."

No. 25,273. E. E. Marcy, of New York, N. Y., for an "Improvement in curing and treating caoutchouc."

"I claim the improved process of curing india rubber and producing an improved article of india rubber, by combining india rubber with the hyposulphite of zinc, in the manner herein-before described, and without the use of free sulphur in combination with the rubber, or with said compound, and the exposure of this compound to steam or water, at the temperature herein-before stated, and in the mode pointed out."

No. 25,274. R. D. Nesmith, of Franklin, N. H., for "Improvement in machines for picking millstones."

"I claim the spring Q upon rod P, provided with head I, for limiting the extent of its action upon the picks, as arranged with the inclined plane T, and cam F, and the operating parts with which they are connected, in the manner and for the purpose specified."

No. 25,275. Saml. Nowlan, of New York, N, Y., for an "Improvement in apparatus for manufacturing illuminating gas."

"I claim the gas exhaust and expelling wheel, interposed between the retort and the condenser, constructed and arranged so as to operate substantially in the manner and for the purposes specified."

No. 25,276. John H. Pein, of Haboken, N. J., for an "Improvement in apparatus to photograph on uneven surfaces."

"I claim photographing on vases or on other uneven solids by means of an apparatus substantially as herein described, and in the manner substantially as set forth."

No. 25,277. Edmund Queru, of New York, N. Y., for an "Improvement in gelatinizing oils."

"I claim the jellification of castor oil by means of the process herein-before described."

No. 25,278. Chas. H. Raymond, of Southington, Conn., for an "Improvement in tinman's machine."

"I claim the movable and adjustable stand M, and its revolving box L, when combined with shaft I, cap plate E, and screw J, in the manner described, and for the purposes fully set forth."

No. 25,279. CHAS. B. SAWYER, of Fitchburgh, Mass., for an "Improved furnace and ventilator."

"I claim providing the fire pot with a series of small holes or openings *e*, substantially as and for the purposes set forth."

No. 25,280. EDWARD L. SEYMOUR, of New York, N. Y., for an "Improved ore concentrator."

"I claim, 1st, the rotating sieve in combination with the bellows or their equivalents, operated by the act of rotation of the former, substantially as described. 2nd, the application of two or more rotary sieves, combined with such an arrangement of 'waste tubes' *e*, that the refuse of the upper sieve shall be led to constitute the supply or feed of the sieve next below it as described. 3rd, I claim rendering the receiving mouths of the 'waste tubes' *e*, e^1, e^{11}, adjustable as described, and for the reason given. 4th, I claim the use of the closed chambers or 'traps' *y*, y^1, y^{11}, below the sieves, as described and for the purposes explained."

No. 25,281. PHILO B. SHELDON, of Prattsburg, N. Y., for a "Composition for destroying insects injurious to fruit trees."

"I claim combining and employing the ingredients herein described in substantially the method and proportions set forth, for the purpose of destroying borers and other insects on fruit trees."

No. 25,282. J. H. SHIPMAN, of Yorkville, N. Y., for a "Letter file."

"I claim the arrangement of the movable hinged guards B, in combination with the metal back A, and points *b*, substantially as and for the purpose described."

No. 25,283. WM. H. SMITH, of Newport, R. I., for an "Improved hose coupling."

"I claim the new article of manufacture or hose coupling described, made by combining the open spiral flange *a* with a screw D, as set forth."

No. 25,284. JAMES SPEAR, of Philadelphia, Pa., for an "Improvement in stove urns."

"I claim the combination of the register in the base of the urn, with the ornamental receptacle for the cup, constructed in the manner and for the purpose described."

No. 25,285. A. L. SPERRY, of Auburn, Ind., for an "Improvement in churns."

"I claim the arrangement of the hook *i* and button *k*, to operate in combination with the dasher D and breaker frame E, in the manner and for the purpose herein specified."

No. 25,286. HENRY D. STOVER and J. W. BICKNELL, of Boston, Mass., for an "Improved rotary planing cutter."

"We claim the adjustable revolving guard J, as constructed and connected adjustably to the cutter head, carried by and having all its movements to effectually protect the operator from mutilation, and to hold down the material receiving shape, essentially in the manner fully set forth."

No. 25,287. PETER SWEENEY, of Buffalo, N.Y., for an "Improvement in stone saws."

"I claim the employment of two plates A, A, in combination with the dish form cutter C, arranged substantially as and for the purpose herein shown and described."

No. 25,288. JOSEPH SWEOTZER, of Bideford, Me., for an "Improvement in shingles."

"I claim this fluting of the shingles."

No. 25,289. GEO. TAYLOR and GEO. H. BURGER, of Worthington, O., for an "Improved auger for cutting round tenons."

"We claim the arrangement and combination of the spring E with the shank D and tube A, substantially as herein shown and described, whereby the plug C is rendered self-adjusting, as set forth."

No. 25,290. JOSEPH B. THOMPSON, of Warrenton, Geo., for an "Improved feed-water apparatus for steam boilers."

"I claim the exterior water chamber G, communicating with the supply tank B by pipe *a*, and with the boiler A by force pump P and pipe *b*, and provided with a valve J, as set forth, in combination with the peculiarly constructed floats C, rods E and I, and lever F, operating as and for the purpose specified."

No. 25,291. WM. H. THOSS, of San Francisco, Cal., for an "Improvement in fire-plating iron."

"I claim preparing the iron after it has been cleansed with dilute acid, by immersion in a solution of borax, and after being dried, passing it through the molten copper maintained at the required heat in a furnace constructed substantially as herein described, with a roof to concentrate the heat over the basin of molten copper, and with an aperture at one side to insert the iron to be plated, and a corresponding one on the opposite side to receive the iron as it is drawn from the copper plated, substantially as described and for the purposes specified."

No. 25,292. WM. A. VERTREES, of Winchester, Mo., for an "Improvement in hemp brakes."

"I claim constructing the rocking breaker frame of hemp or flax breakers, in the manner described, and operating it by means of a slotted pitman, in such manner as that while the vibratory motion is communicated from the prime motor to the breakers by machinery, yet they fall on the hemp or flax with a free stroke or flail motion, substantially as hereinbefore described."

No. 25,293. NATHL. WATERBURY, of Fon du Lac, Wis., for an "Improved shingle machine."

"I claim, 1st, the reciprocating bolt carriage D, tilting beds J, J, circular saw I, and sliding jaws G, G, arranged relatively with each other as shown and operated respectively by the cam C, cam ratchets K, K, and pendents *o*, *o*, belt *t*, and levers and weights J^1, J^{11}, substantially as and for the purpose set forth. 2nd, in connection with the reciprocating bolt carriage D, saw I, and tilting beds J, J, the bars L, L, provided with inclined slots *p*, *q*, and connected with the frames d^1, d^{11}, of the jaws F, G, by means of the pins *r*, fitting in said slots for the purpose of elevating the bolts during their return movement, as described. 3rd, the employment or use of the cam ratchets K, K, attached to the framing A, in connection with the pendents *o*, *o*, attached to the reciprocating bolt frame D, arranged substantially as shown for automatically tilting the beds J."

No. 25,294. PETER L. WEIMER, of Lebanon, Pa., for an "Improved machine for coiling metal pipe."

"1st, I claim the coiling cylinder E, with the peculiar shaped groove, constructed and arranged as herein fully described and specified. 2nd, I claim the arrangement of the two guide wheels M, triangular piece K, and shafts L, when used in combination with the coiling cylinder, and for the purpose as herein fully described and specified. 3rd, I also claim the movable plate F, and jack screws G, for the purpose of adjusting the guide wheel shafts L to any angle required."

No. 25,295. ASA WHEELER, of Brattleboro', Vt., for an "Improvement in skates."

"I claim the arrangement and combination of the adjustable heel piece F, heel case D, stock E, screw H, and front straps C, as and for the purpose herein shown and described"

No. 25,296. JOHN M. WHITE, of New York, N.Y., for an "Improved feed water heater for steam boilers."

"What I claim as my invention is the arrangement of the division chamber *c*, supply and discharge pipes F and G, and heating pipes *b*, *b*, 1, placed within the exhaust pipe B, as described, in combination with the relief pipe H, by which, when necessary, the water may be passed directly to the boiler, without being passed through the heating pipes *b*, *b*, 1."

No. 25,297. ABUER WHITELEY, of Springfield, O., for an "Improvement in harvesters."

"I claim, first, so arranging the mechanism of the automatically operating door or shutter for preventing, scattering, and admitting the gavels to be discharged at regular intervals, as to permit the attendant to increase the intervals of time for the discharge of the gavels, where the grain is thin upon the ground, substantially as described. Secondly, the combination of the rake *q*, with the door or shutter R, for discharging the gavel at the time the door or shutter is opened for the purpose, whether it is at regular intervals, or less frequently, substantially as described."

No. 25,298. JEPTHA AVERY WILKINSON, of Brooklyn, N.Y., for "Shears for separating paper."

"I claim, first, separating paper, or other material, by the joint operation of a revolving shear, and a stationary surface, when said stationary surface is so formed and placed as gradually to approach the path described by the shear in its revolution, and compress the said paper, or other material, on to the edge of said revolving shear, in the manner and substantially as specified. Second, I claim the elastic roller or rollers *e*, *e*, in combination with the stationary shear E, and revolving shear *c*, on the cylinder D, whereby the paper is passed through and separated progressively, as at two operations, as set forth. Third, I claim the arrangement of the shaft carrying the rollers *e*, *e*, the springs 12, and cams 10, for elevating the rollers, and preventing traction on the paper, as set forth."

No. 25,299. FRANK C. BROWN, of Philadelphia, Pa., assignor to W. Brown, of same place, for an "Improvement in turnouts for railways."

"I claim the addition of grooves on the circumference of the car wheels, as now constructed, with a single flange and tread, and the placing of curved bars at turnouts on the track of the road, to enter and operate on such grooves, for the purpose of changing the direction of cars, substantially as and for the purpose herein set forth."

No. 25,300. SETH BOYDEN, of Newark, N. J., Assignor to himself and H. H. Jacques, of same place, for an "Improvement in machinery for hardening hat bodies."

"I claim, 1st, the employment of a cloth M, or its equivalent, in combination with a cone E, in the manner and for the purpose, substantially as herein shown and described. 2, the arrangement and combination of the frame I, shaft J, eccentrics (h^1), rods (*i*), tubes (*j*), arms (*l*), shaft K, eccentrics (*p*), rods (*q*), bars (L), and cloth (M), substantially as herein shown and described, so that the cloth M will be operated with a compound movement, as set forth."

No. 25,301. WM. P. GOOLMAN, of Dublin, Ind., assignor to himself and S. B. Morris and Wm. Hollingsworth, of same place, for an "Improvement in rotary harrows."

"I claim, 1st, the described application of friction rollers between rotary concentric harrows to elevate oppo sides of the respective harrows, in the manner and for the purposes set forth. 2nd, the reversible arm F, arranged between concentric harrows A and B, to change the direction of the rotation of the said harrows, as explained. 3rd, the reversible bent spindle C, adapted in the manner set forth, to correspond with the relative obliquity of two concentric harrows. 4th, the described arrangement of the friction rollers *e*, e^1, and adjustable washer *g* on the arm F, operating in the manner set forth, to vary the relative obliquity of the harrow."

No. 25,302. Daniel G. GREENE, of North Bridgewater, Mass., assignor to himself and Wm. Nash, of South Weymouth, Mass., for an "Improvement in wrenches."

"I claim the combination of the movable jaw B, inclined shoulders U, with the pawl H and inclined shoulders V, and enlarged hole J, and ratchet teeth H, said parts being constructed and arranged to operate in relation to each other in the manner and for the purposes set forth."

No. 25,303. MICHAEL IRION, of Utica, N. Y., assignor to himself and Jacob Heidel, of Oneida county, N. Y., for an "Improvement in shears."

"I claim the combination of the cutting plates C, C^1, the circular punch D, and the circular die E to receive the punch, and surrounded by a cutting edge as described, in connection with a pair of movable jointed arms, the whole so combined and arranged to operate in the manner as hereinbefore more fully set forth."

No. 25,304. GEO. MARLOW and MICHAEL RALPHE' of Cincinnati, O., assignors to A D. Brown, W. C. Valette, and Geo. Marlow, of same place, for an "Improvement in lamps."

"We claim, 1st, the described arrangement of the separate cup-formed back reflector J, upon the inside of the door K, in the described combination with an open-backed parabolic or conical reflector I, constructed as set forth. 2nd, the described arrangement of glazed doors M and M^1, hinged vertically to the front angles of the lantern, and adapted in the manner set forth, to be fixed either in front of the lantern or against one or other of its sides, for the purpose explained."

No. 25,305. THEODORE MARSCHALL, of New York N. Y., assignor to Lighte and Bradbury's, of same place, for an "Improvement in pianoforte actions."

"I claim the spring-supporting post K, M, N, O, when used in the described combination with a stud L, separate and distinct from the moving parts to detain the hammer at any determined height, while the jack descends sufficiently to re-engage beneath the hammer but."

No. 25,306. E. L. PRATT, of Philadelphia, Pa., assignor to himself and R. B. Fitts, of same place, for an "Improvement in churns."

"1st, I claim, in combination with the rotary case or body (A) of a churn a diaphragm or piston (C), adapted both to the move upon and be moved by a screw shaft (D), or its equivalent, placed horizontally in the said case as described, the said diaphragm (C) and shaft (D) being constructed and combined together as herein set forth. 2nd, I also claim the series of perforations (*o*, *o*), through the diaphragm or piston (C), in combination with the movable perforated adjusting disk or plate (*n*), or their equivalent, the same operating together in the case (A), substantially as and for the purpose set forth and described."

No. 25,307. WM. F. PRATT, of East Bridgewater, Mass., assignor to the E. Carver Company, of same place, for an "Improvement in cotton gins."

"I claim the use of a naked or unshielded auger or cleaver, operating in the end of the ginning roll of a cotton gin, at or near the centre thereof, substantially in the manner and for the purpose described."

No. 25,308. ALLEN SHERWOOD, of Auburn, N.Y., assignor to E. P. Senter, A. H. Goss, Wm. Hills, and Ameretta Sherwood, of same place, for an "Improvement in grain binding mechanism."

"I claim, first, the combination of the shield F, and lever I, both removable and located at one side of the delivery portion of the platform, so that the shield shall protect the lever from the cut material, and form one side of an open ended grain receiver (the fence E forming the other side thereof), where the grain is deposited previous to being bound up as described. I also claim in combination with the raker's stand B, and binder's seat C, the shield F, and lever L, so arranged as that the raker from his stand may sweep the cut grain into the receiver and the binder from his seat, reach beyond the receiver to catch the lever L, as set forth. I also claim in combination with the grain receiver the inclined ledges G, H, under which the wire is passed, so as not to catch or interfere with the entrance of the grain therein as set forth. I also claim the slot and flanges in the shield I, said flanges serving as a guide for properly bringing down the foot of the lever to insert the wire in the twisting wheel as set forth. I also claim in combination with the lever L, the clamp *s*, located in close proximity to the handle *r*, so that the binder as he draws up the gavel may check the paying out of the wire, and thus bring it tightly around the bundle as set forth. I also claim the combination of a removable shield and lever (F, L,) on the platform with a removable twisting mechanism on the faence or side of the platform G, for the purpose of adapting an ordinary hand delivery mowing machine into a self-binder or vice versa, without in any manner altering the parts which enables it to be so changed, except to attach or detach them as set forth."

No. 25,309. DANIEL DODGE, of Keeseville, N.Y., for an "Improvement in nail machines."

"I claim, the combination of an anvil B, and fixed die C, or other equivalent fixed surfaces, a roller E, hammer F, G, and a vibrating guide I, the whole operating substantially as herein described. And I also claim the operation of a hammer in combination with the roller E, and anvil B, by means of an eccentric on the roller shaft, and a universal joint at the connection of the hammer with the connecting rod of the eccentric substantially as herein described."

RE-ISSUES.

MICHAEL A. DIETZ, of Brooklyn, N.Y., for an "Improvement in lamps."—Patented 3rd May, 1859.—Re-issued 30th August, 1859.

"I claim combining the deflector with the chimney band, by mechanical devices, so as to retain the former in its proper relative position without the use of solder."

HENRY EHRENFELD, of New York, N.Y., for an "Improved device for converting reciprocating into intermittent rotary motion."—Patented 21st June, 1859.—Re-issued 30th August, 1859.

"I claim, 1st, arranging the lever C, and dog B, in combination with the grooved wheel A, or its equivalent, in such a manner that said lever and dog act on the wheel without a connection to the center or hub of the wheel, substantially as and for the purpose specified. 2nd, in combination with the lever C, dog B, and wheel A, I claim the arrangement of the groove *d*, or its equivalent in the hub of the wheel substantially as and for the purpose specified. 3rd, I claim arranging the lever C with the dog B, permanently attached to it in such a manner that the direction of said lever, when it is in its place, makes an angle of 90 degrees, or nearly so, with a line drawn from the center of the wheel through the dog, substantially as herein specified."

SIDNEY S. HOGLE, of Cleveland, Ohio, for an "Improvement in harrows."—Patented 7th March, 1857.—Re-issued 30th August, 1859.

"I claim causing the points of the teeth of a rotating harrow to descend deeper into the ground on one side of their axis of rotation than they do upon the opposite of the same, for the purpose of enabling the dragging force which may be exerted upon said harrow to impart a positive rotary motion thereto, without the aid of gearing wheels."

ARCHIBALD G. SHAVER, of Hartford, Conn., for an "Eraser and pencil sharpener."—Patented 8th March, 1859.—Re-issued 30th August, 1859.

"I claim, first, the curved blade eraser, as above specified, forming on one side a convex surface, substantially as and for the purposes set forth. I also claim, in combination therewith, the pencil sharpener and pointer, as described."

DESIGNS.

JEAN BAPTISTE VIROLET, of New York, N. Y., assignor to John W. Hoyt, of same place, for a "Design for floor oil cloth."

"I claim the combination and arrangement of figures and devices herein specified and represented in the accompanying photographic impression to form an ornamental pattern or design for a floor oil cloth."

HENRY G. THOMPSON, of New York, N. Y., assignor to the Hartford Carpet Manufacturing Co., for a "Design for a carpet pattern."

"I claim the configuration of the design hereunto annexed when made by being inwrought into Three Ply Ingrain, or other carpeting in the form similar to the drawings accompanying this specification."

HENRY G. THOMPSON, of New York, N. Y., assignor to the Hartford Carpet Manufacturing Co., for a "Design for a carpet pattern."

"I claim the configuration of the design hereunto annexed when made by being inwrought into Three Ply Ingrain or other carpeting in the form similar to the drawings accompanying this specification."

HENRY G. THOMPSON, of New York, N. Y., assignor to the Hartford Carpet Manufacturing Co., for a "Design for a carpet pattern."

"I claim the configuration of the design hereunto annexed when made by being inwrought into Three Ply Ingrain or other carpeting in the form similar to the drawings accompanying this specification."

HENRY G. THOMPSON, of New York, N. Y., assignor to the Hartford Carpet Manufacturing Co., for a "Design for a three ply carpet pattern."

"I claim the configuration of the design hereunto annexed when made by being inwrought into three ply ingrain or other carpeting in the form similar to the drawings accompanying this specification."

ADDITIONAL IMPROVEMENT.

DOUGLAS B. JORDAN, of Cumberland, R. I., for an "Improvement in mode of oiling journals."—Patented 15th March, 1859.—Additional Improvement dated 30th August, 1859.

"I claim, 1, the hinging the dish or bucket G to the rod J, as shown, for the purpose set forth. 2, the dish or bucket G, in combination with the several parts marked C, D, E, F, and I, for the purposes set forth and described."

In course of Publication, by Order of the Commissioners of Patents.

ABRIDGMENTS (in Classes, and Chronologically arranged) of all SPECIFICATIONS of PATENTED INVENTIONS, from the earliest enrolled to those published under the Act of 1852.

These books are of 12mo size, and as each is limited to inventions of one class only, they can be sold at prices sufficiently moderate to enable the humblest inventor to examine for himself whether his discovery has been previously patented or not.

At the foot of each abstract are given references to notices of the inventions in scientific and other works, and to the reports of law proceedings for infringements, &c. &c. &c.

The classes already published are,—

1. DRAIN TILES AND PIPES, price 6*d*.
2. SEWING AND EMBROIDERING, price 6*d*.
3. MANURE, price 6*d*.
4. PRESERVATION OF FOOD, price 6*d*.
5. MARINE PROPULSION, price 4*s*.
6. MANUFACTURE OF IRON AND STEEL, price 5*s*.
7. AIDS TO LOCOMOTION, price 1*s*.
8. STEAM CULTURE, price 2*s*.
9. WATCHES, CLOCKS, AND OTHER TIMEKEEPERS, price 1*s*. 6*d*.
10. FIRE-ARMS AND OTHER WEAPONS, AMMUNITION, AND ACCOUTREMENTS, price 6*s*. 6*d*.
11. PAPER.—PART I. MANUFACTURE OF PAPER, PASTEBOARD, AND PAPIER MÂCHÉ, price 3*s*.
12. PAPER.—PART II. CUTTING, FOLDING, AND ORNAMENTING; INCLUDING ENVELOPES, CARDS, PAPER-HANGINGS, &c., price 2*s*.
13. TYPOGRAPHIC, LITHOGRAPHIC, AND PLATE PRINTING, price 7*s*.
14. BLEACHING, DYEING, AND PRINTING YARNS AND FABRICS, price 9*s*. 6*d*.

The following are in the press:—

ELECTRICITY AND MAGNETISM: THEIR GENERATION AND APPLICATIONS.
PREPARATION OF FUEL, AND APPARATUS FOR ITS COMBUSTION.
MANUFACTURE AND APPLICATIONS OF INDIA RUBBER, GUTTA PERCHA, &c.; INCLUDING AIR, FIRE, AND WATER PROOFING.
PRODUCTION AND APPLICATIONS OF GAS.
STEAM ENGINES.
METALS AND ALLOYS.

B. WOODCROFT.

The above, and all other works published by the Commissioners of Patents, are now on sale at the Great Seal Patent Office, 25, Southampton Buildings Holborn.

This Journal is published on the evenings of Tuesday and Friday, and will be forwarded, post free, to Subscribers.—Terms, 30*s*. per annum.—Subscriptions received at the Great Seal Patent Office, where also single copies, at twopence each, may be obtained.

No. 596. TUESDAY, SEPTEMBER 20, 1859. Price 2d.

Notices to Proceed.

NOTICE is hereby given, that

1138. FREDERICK ANGERSTEIN, of Kennington, in the county of Surrey, Esquire, ROBERT CLEGG, of Islington, in the county of Middlesex, Gentleman, and GEORGE THORRINGTON, of Egham, in the said county of Surrey, Lighterman, have given notice at the Office of the Commissioners of their intention to proceed with their application for Letters Patent for the invention of "Improvements in apparatus for obtaining motive power."

As set forth in their petition, recorded in the said office on the 6th day of May, 1859.

1146. And JULIEN COMBE, of No. 23, Rue du Champs de Mars, in the city of Paris, in the empire of France, Gentleman, formerly a Colonel in the French army, has given the like notice in respect of the invention of "An improved plantoforme or apparatus for measuring the hoofs of horses, for the purpose of forming their shoes."

As set forth in his petition, recorded in the said office on the 7th day of May, 1859.

1164. And EDWARD THOMAS HUGHES, of the firm of Hughes and Son, Patent Agents, No. 123, Chancery Lane, London, W. C., has given the like notice in respect of the invention of "Improvements in obtaining motive power."—A communication from abroad by Aimé François Lapène, of Paris, in the empire of France.

1165. And THOMAS GREEN, junior, of Old Broad Street, in the city of London, has given the like notice in respect of the invention of "Improvements in apparatus applicable to steam boilers, to obtain greater security against explosion."

As set forth in their respective petitions, both recorded in the said office on the 9th day of May, 1859.

1169. And WILLIAM WILKINSON and CHARLES WHITLEY, of the city of Manchester, in the county of Lancaster, have given the like notice in respect of the invention of "Improvements in buttons and fastenings for garments, harness, and other similar purposes, and in the method of securing the same."

As set forth in their petition, recorded in the said office on the 10th day of May, 1859.

1187. And JAMES LEADBETTER, of Leeds, in the county of York, Brazier, and JAMES RHODES, of Armley, near Leeds, in the same county, Water Rate Collector, have given the like notice in respect of the invention of "Improvements in pumps."

As set forth in their petition, recorded in the said office on the 11th day of May, 1859.

1190. And JOHN SAXBY, Engineer, of Brighton, Sussex, has given the like notice in respect of the invention of "Improvements in the mode of securing the rails on railways."

1191. And RICHARD ARCHIBALD BROOMAN, of 166, Fleet Street, in the city of London, E.C., Editor of the Mechanics' Magazine and Patent Agent, has given the like notice in respect of the invention of "Improvements in machinery for solidifying, pressing, and moulding."—A communication from abroad by Felix Dehaynin, residing at Paris.

1192. And ANDRÉ PROSPER ROCHETTE, of Brighouse, in the county of York, has given the like notice in respect of the invention of "An improvement in the manufacture of soft soap."

1193. And THOMAS RIDLEY OSWALD, of Sunderland, Ship Builder, has given the like notice in respect of the invention of "Improvements in building ships and other vessels."

As set forth in their respective petitions, all recorded in the said office on the 12th day of May, 1859.

1196. And THOMAS SCOTT, of Rouen, in the empire of France, Engineer, has given the like notice in

respect of the invention of "An improved surface condenser and refrigerator."

1205. And JOSHUA TAYLOR BEALE, of Greenwich, in the county of Kent, Engineer, and THOMAS NESHAM KIRKHAM, of Upper Halliford, in the county of Middlesex, Civil Engineer, have given the like notice in respect of the invention of "Improvements in the preparation of colors for dyeing and printing."

As set forth in their respective petitions, both recorded in the said office on the 13*th day of May,* 1859.

1208. And MATTHEW LEAHY, of 53, Hereford Road, Westbourne Park, in the county of Middlesex, Civil Engineer, has given the like notice in respect of the invention of "Improvements in apparatus for facilitating the draught of carriages."

1212. And EDWIN MAW, of the Doncaster Iron Works, Yorkshire, has given the like notice in respect of the invention of "Improvements in the construction of buildings made of iron or other metals."

1213. And JOHN CHATTERTON, of 7, Devonshire Street, Islington, in the county of Middlesex, has given the like notice in respect of the invention of "Improvements in covering wires and other metal conductors for telegraphic purposes."

As set forth in their respective petitions, all recorded in the said office on the 14*th day of May,* 1859.

1219. And GEORGE ALLCRAFT, of Upper Thames Street, in the city of London, has given the like notice in respect of the invention of "Improvements in pressure gauges."—A communication from abroad by John Allcraft, of Bedford Street, New York.

As set forth in his petition, recorded in the said office on the 16*th day of May,* 1859.

1227. And JAMES NASMYTH, of Surrey Street, Strand, in the city of Westminster, Engineer, has given the like notice in respect of the invention of "Improved apparatus for obtaining and applying motive power."

As set forth in his petition, recorded in the said office on the 17*th day of May,* 1859.

1229. And ROBERT ROMAINE, late of Canada West, but now of Chapel Street, Bedford Row, in the county of Middlesex, Gentleman, has given the like notice in respect of the invention of "Improvements in the means of applying steam power to the cultivation of the soil."

1232. And SAMUEL NORTON EVANS, of Chapel Yard, North Street, Wolverhampton, in the county of Stafford, Commission Agent, has given the like notice in respect of the invention of "Improved mechanism for preventing accidents at mines from overwinding."

1237. And JOHN HENRY JOHNSON, of No. 47, Lincoln's Inn Fields, in the county of Middlesex, and of No. 166, Buchanan Street, in the city of Glasgow, North Britain, Gentleman, has given the like notice in respect of the invention of "Improvements in lubricating certain portions of machinery." — A communication from abroad by Michael Bonière the younger, of Paris, in the empire of France, Manufacturer.

1239. And JAMES CHILDS, of Windsor House, Putney, in the county of Surrey, has given the like notice in respect of the invention of "Improvements in hardening and vulcanizing compounds of sulphur with india rubber and gutta percha."

As set forth in their respective petitions, all recorded in the said office on the 18*th day of May,* 1859.

1245. And ROBERT VALENTINE LEACH, of Taibach, in the county of Glamorgan, and of Devizes, in the county of Wilts, Tin Plate Manufacturer, has given the like notice in respect of the invention of "Improvements in the manufacture of iron and in the machinery connected therewith."

As set forth in his petition, recorded in the said office on the 20*th day of May,* 1859.

1262. And ROBERT VALENTINE LEACH, of Briton Ferry, in the county of Glamorgan, and of Devizes, in the county of Wilts, Tin Plate Manufacturer, and THOMAS WILLIAM WILLETT, of Pont Neath, Vaughan, in the county of Brecon, Civil Engineer, have given the like notice in respect of the invention of "Improvements in the manufacture of tin plates and terne or leaded plates, and in the apparatus connected therewith."

As set forth in their petition, recorded in the said office on the 23*rd day of May,* 1859.

1346. And JOHN JAMES LUNDY, of the city of Manchester, in the county of Lancaster, and of Leith, North Britain, Colour and Varnish Manufacturer, has given the like notice in respect of the invention of "Improvements in cartridges and gun-wads for facilitating the loading and lubricating of fire-arms."

As set forth in his petition, recorded in the said office on the 31*st day of May,* 1859.

1407. And MICHAEL JOHN HAINES, of Dursley, in the county of Gloucester, Strap Maker, has given the like notice in respect of the invention of "Improvements in the manufacture of driving straps or bands."

As set forth in his petition, recorded in the said office on the 10*th day of June,* 1859.

1419. And ALFRED VINCENT NEWTON, of the Office for Patents, 66, Chancery Lane, in the county of Middlesex, Mechanical Draughtsman, has given the like notice in respect of the invention of "An improvement in fire-arms." — A communication from abroad by Charles Theodore Pierson, of New York, in the United States of America.

As set forth in his petition, recorded in the said office on the 11*th day of June,* 1859.

1489. And EDWARD GWYN, of Islington, in the county of Middlesex, Gas Engineer, has given the like notice in respect of the invention of "Improvements in breech-loading fire-arms."—A communication from abroad by Henry Gross, residing in Ohio, U. S. A.

As set forth in his petition, recorded in the said office on the 21*st day of June,* 1859.

1683. And CHRISTOPHER POTTINGER, of Anstruther, in the county of Fife, North Britain, Boat Builder, has given the like notice in respect of the invention of "Improvements in machinery or apparatus for dredging or excavating, and for driving piles."
As set forth in his petition, recorded in the said office on the 16th day of July, 1859.

1731. And WILLIAM EDWARD NEWTON, of the Office for Patents, No. 66, Chancery Lane, in the county of Middlesex, Civil Engineer, has given the like notice in respect of the invention of "Improvements in extracting oil from coal and other substances yielding pyrogenous oils."—A communication from abroad by Franklin W. Willard, of New York, in the United States of America.
As set forth in his petition, recorded in the said office on the 25th day of July, 1859.

1742. And JOHN DAVIES, of Tetbury, in the county of Gloucester, Machinist, has given the like notice in respect of the invention of "A new or improved self-adjusting ventilating apparatus."
As set forth in his petition, recorded in the said office on the 27th day of July, 1859.

1930. And THOMAS RICHARDSON, of New Bridge Street, Newcastle-on-Tyne, has given the like notice in respect of the invention of "Improvements in treating copper ores."
As set forth in his petition, recorded in the said office on the 23rd day of August, 1859.

1937. And JAMES MURRAY, Knight, of Dublin, Doctor of Medicine, has given the like notice in respect of the invention of "Improvements in the preparation and bottling or preserving of carbonated cod liver oil and other aerated liquids."
As set forth in his petition, recorded in the said office in the 24th day of August, 1859.

1951. And FRANCIS WRIGLEY, of Manchester, in the county of Lancaster, Consulting Engineer, has given the like notice in respect of the invention of "Certain improvements in the construction of the permanent way of railways."
As set forth in his petition, recorded in the said office on the 27th day of August, 1859.

2001. And WILLIAM BROWN the younger, of the town and county of Selkirk, North Britain, Manufacturer, and SIMEON BATHGATE, of the same place, Engineer, have given the like notice in respect of the invention of "Improvements in machinery or apparatus for grinding or sharpening the card teeth of carding engines, for carding fibrous materials."

005. And STRANGMAN DAVIS GOFF, HENRY DAVIS, SAMUEL STRANGMAN, and EDWARD STRANGMAN, of the firm of Davis, Strangman, and Co., Waterford, Ireland, Brewers, have given the like notice in respect of the invention of "An improved method of, and apparatus for, drying malt, corn, and other articles."
As set forth in their respective petitions, both recorded in the said office on the 2nd day of September, 1859.

2015. And WALTER NEILSON, of Glasgow, in the county of Lanark, North Britain, Engineer, has given the like notice in respect of the invention of "Improvements in steam hammers."

2017. And JAMES CHARLES NIXON, of the firm of Messrs. Danks and Nixon, of the town and county of the town of Nottingham, Furnishing Ironmongers, and Domestic Range and Closet Manufacturers, has given the like notice in respect of the invention of "Improvements in kitchen ranges with combined steamer and hot closets, for cooking, warming, drying, or other purposes."
As set forth in their petitions, recorded in the said office on the 3rd day of September, 1859.

2072. And MARC ANTOINE FRANÇOIS MENNONS, of the British and Foreign Patent Offices, No. 39, Rue de l'Echiquier, Paris, in the empire of France, has given the like notice in respect of the invention of "An improved arrangement of piston packing, principally applicable to hydraulic apparatus."—A communication from Casimir and Celestin Dabbène, residing at Verduno, Sardinian States.

2073. And MARC ANTOINE FRANÇOIS MENNONS, of the British and Foreign Patent Offices, 39, Rue de l'Echiquier, Paris, in the empire of France, has given the like notice in respect of the invention of "Improvements in the construction of hydraulic pumps."—A communication from Louis Laurent Bequemie, residing in Paris.
As set forth in his petitions, recorded in the said office on the 12th day of September, 1859.

And notice is hereby further given, that all persons having an interest in opposing any one of such applications are at liberty to leave particulars in writing of their objections to such application, at the said Office of the Commissioners, within twenty-one days next after the date of the Gazette [and of the Journal] in which this notice is issued.

Patents on which the Stamp Duty of £50 has been Paid.

(*To 17th September*, 1859, *inclusive.*)

16th September.

2175. JOHN BARBER, of the city of Manchester, in the county of Lancaster, Engraver to Calico Printers, for an invention of "Improvements in machinery or apparatus for mill and other engraving, punching, dividing, and ruling rollers, either for hand or machine engraving, and an improved maundril used in mill, eccentric, and other machinery employed in engraving rollers for printing and embossing calicoes and other fabrics."—Dated 17th September, 1856.

17th September.

2203. EDWARD FINCH, of Bridge Works, Chepstow, Engineer, for an invention of "Improvements in the construction of wrought iron masts, bowsprits, yards, booms, gaffs, and spars, and in rigging ships."—Dated 19th September, 1856.

2206. JOHN UNDERWOOD and FREDERIC VALENTINE BURT, of Fish Street Hill, in the city of London, Stationers and Printers, for an invention of "The manufacture of copying inks for printing."—Dated 19th September, 1856.

2218. William Taylor, residing at Woodhall Cottage, Shipborne, Tunbridge, for an invention of "Improvements in the conversion of cast iron into steel and malleable iron."—Dated 22nd September, 1856.

2253. Samuel Calley, of Brixham, in the county of Devon, Ship Owner, for an invention of "Improved composition and compositions for coating or covering surfaces, particularly the bottoms of ships and vessels." — Dated 25th September, 1856.

Patent on which the Stamp Duty of £100 has been Paid.

17th September.

120. George Collier, of Halifax, in the county of York, Mechanic, for an invention of "Improvements in the manufacture of carpets and other fabrics."—Dated 1st October, 1852.

FOREIGN PATENTS.

BELGIUM.*

List of Patents Delivered on the 8th September, 1859.†

(*Communicated by the Belgian Government.*)

(For previous List, see No. 595 of this Journal.)

7733. J. T. Dupuy, represented by H. Biebuyck, of Brussels, for an imported invention of "A lithographic and lithochromic press."—Dated 9th July, 1859.—(P. D. Vate's French Patent, 22nd August, 1857.)

7796. Alph. Lambert, represented by F. Anthoine, of Brussels, for an imported invention of "A kind of spring petticoats."—Dated 26th July, 1859.—(French Patent, 29th January, 1859.)

7818. F. P. and F. G. Broermann, represented by Ch. Houtekiet, of Brussels, for "Spring bottoms of beds."—Dated 30th July, 1859.

7859. J. H. Gerdoneck, of Antwerp, for "A system of rocking scales."—Dated 10th August, 1859.

7902. C. Mahillon, of Molenbeek St. Jean, for "A system of cornets à piston."— Dated 25th August, 1859.

7903. J. Rodelet, of Liége, for "Basins of puddling furnaces with circulation of water."—Dated 26th August, 1859.

7904. G. Paulussen and J. Heiliger, of Liége, for "A beer-pump worked by atmospheric pressure."—Dated 19th August, 1859.

7906. A. Lebegge-Derynck, of Ghent, for "A machine for splitting leather."—Dated 25th August, 1859.

7907. Gits and Co., represented by X. Raclot, of Brussels, for "A furnace for reducing animal charcoal."—Dated 26th August, 1859.

7908. N. D. Maillard, represented by A. Crooy, of Brussels, for an imported invention of "Improvements in compasses."—Dated 26th August, 1859.—(English Patent, 4th August, 1859.)

7909. J. Dale, represented by H. Biebuyck, of Brussels, for an imported invention of "Improvements in concentrating caustic alkalis."—Dated 26th August, 1859.—(English Patent, 24th February, 1859.)

7910. Ch. Glassborow, represented by H. Biebuyck, of Brussels, for "Improvements in pianofortes."— Dated 26th August, 1859.— (French Patent, 20th August, 1859.)

7911 E. F. Fossey, represented by H. Biebuyck, of Brussels, for an imported invention of "Improvements in blast engines."—Dated 26th August, 1859.—(French Patent, 20th August, 1859.

7912. J. J. Salmon and P. B. Moreels, represented by D. Hérode, of Schaerbeek, for "Manufacture of hygienic mattresses of horn shavings."—Dated 27th August, 1859.

7913. A. Callès, of Ixelles, a Patent of Improvement for "Apparatus for heating and ventilating."—Dated 27th August, 1859.—(Original Patent, 10th March, 1857.)

7914. C. Rabatel, represented by X. Raclot, of Brussels, for "Economical constructions of lithogenic brickwork, and pise of earth, and other mineral substances."—Dated 27th August, 1859.

7915. W. Moseley, represented by X. Raclot, of Brussels, for an imported invention of "Fountain penholders."—Dated 27th August, 1859.—(French Patent, 3rd August, 1859.)

7916. H. P. Burt, represented by A. Crooy, of Brussels, for an imported invention of "A mechanism for facilitating the removal by hand of railway carriages."—Dated 27th August, 1859.—(English Patent, 10th February, 1859.)

7917. J. C. Ashwell, represented by a A. Crooy, of Brussels, for an imported invention of "Improvements in wheels of railway carriages."—Dated 27th August, 1859.—(English Patent, 2nd August, 1859.)

7918. M. Parmentier, of Brussels, for "A system of railway chairs of rolled iron for superseding the pins, cramps, and screw rings in Vignoles' rails."—Dated 27th August, 1859.

7920. A. Berger, of Jemmapes, for "Improvements in the manufacture of matches for mining operations."—Dated 26th August, 1859.

* For the Belgian Patent Law, see Nos. 292 and 348 of this Journal.

† All Specifications of Patents which have been in force not less than six months, may be inspected or translations of them be had at the Library of the Great Seal Patent Office, where also translated Indexes may be consulted.

7922. Ch. Schinz, represented by H. Biebuyck, of Brussels, for "Glass-smelting furnaces."—Dated 29th August, 1859.

7923. A. C. Gérard, represented by H. Biebuyck, of Brussels, a Patent of Improvement for "A moveable horse gin with a variable speed, applicable to agricultural and industrial purposes."—Dated 29th August, 1859.—(Original Patent, 13th October, 1858.)

7924. G. W. Beardslee, represented by A. Anoul, of Ixelles, for an imported invention of "Improvements in electro-magnetic machines."—Dated 29th August, 1859. — (English Patent, 11th July, 1859.)

7925. Th. Wright, reprerented by J. Piddington, of Brussels, for an imported invention of "Improvements in the permanent way and stock of railways."—Dated 29th August, 1859.—(French Patent, 24th August, 1859.)

7926. F. Bangert, of Floreffe, a Patent of Improvement for "Using powdered or granular pyrites in the manufacture of sulphuric acid."—Dated 29th August, 1859. — (Original Patent, 26th May, 1859.)

7927. F. Knickenberg, of Brussels, a Patent of Improvement for "A system of towing boats on canals and rivers."—Dated 30th August, 1859.—(Original Patent, 10th December, 1858.)

7928. Antheunis Brothers, of Overbonlaere-lez-Grammont, a Patent of Improvement for "A machine for ranging matches to be manufactured in their frames."—Dated 31st August, 1859.—(P. G. Antheunis' Original Patent, 18th November, 1858.)

Erratum in Journal of 16th September.

For "No. 2947" read "2047."

List of Specifications published during the week ending 16th September, 1859.

No.	Price.	Subject-Matter.
365	3*d.*	Steaming printed yarns.
367	7*d.*	Fire-arms.
370	4*d.*	Bleaching and purifying sugar, &c.
372	7*d.*	Breech-loading fire-arms, and cartridges for the same.
376	7*d.*	Self-acting railway switch.
378	7*d.*	Steering apparatus.
379	5*d.*	Safety blinker.
380	3*s.* 1*d.*	Looms for weaving narrow fabrics.
383	6*d.*	Hansom cabs.
386	2*s.* 11*d.*	Apparatus for the manufacture of paper.
387	3*d.*	Pen for writing in duplicate.
388	5*d.*	Instruments for crushing sugar, &c., and mixing solid and liquid matters.
390	5*d.*	Pianofortes.
391	6*d.*	Beer engines.
393	9*d.*	Jacquard apparatus applicable to power looms.
394	6*d.*	Changing or reversing motion.
397	3*d.*	Manufacture of bobbins and spools.
398	10*d.*	Cooking apparatus.
399	1*s.* 4*d.*	Raising and lowering ships along inclined slips.
400	6*d.*	Refrigerators for cooling beer and worts.
401	6*d.*	Book slides.
402	3*d.*	Fire-arms and ordnance.
403	3*d.*	Revivifying the scarlet colour of woollen cloth, &c.
404	10*d.*	Machinery for breaking and preparing flax and other fibres.
405	3*d.*	Separating and recovering wool from mixed fabrics.
406	6*d.*	Breech-loading fire-arms.
407	3*d.*	Sewing machines.
408	3*d.*	Coffins.
409	1*s.* 3*d.*	Steam boilers, &c.
410	4*d.*	Ornamenting English passe-partouts for photographic pictures, &c.
411	6*d.*	Reducing and rolling steel and iron wire &c.
412	1*s.* 1*d.*	Working railway signals and switches.
413	6*d.*	Obtaining light from gases.
414	3*d.*	Manufacture of soap.
415	3*d.*	Discharging and conveying sewage or water, &c.
416	3*d.*	Dress caps.
417	3*d.*	Manufacture of cigars.
418	4*d.*	Manufacture of steel, iron, and cast steel.
419	8*d.*	Application of waste heat from puddling furnaces.
420	3*d.*	Life raft.
421	5*d.*	Brace buckles, loops, and braces.
423	3*d*	Joining wire for telegraphic and other purposes.
424	5*d.*	Preventing the oscillation of railway carriages.
425	3*d.*	Varnish for ships' bottoms.
426	11*d.*	Apparatus for arresting the ascent or descent of mine skips or cages.
427	10*d.*	Machinery for making bricks, tiles, &c.
428	6*d.*	Apparatus for nursing infants.
429	10*d.*	Weighing and dynamic machines.
430	3*d.*	Apparatus for supporting the womb.
431	7*d.*	Mowing machine.
433	3*d.*	Machinery for making bricks.

*** Specifications will be forwarded by post on receipt of the amount of price and postage. Sums exceeding 5*s.* must be remitted by Post Office Order, made payable at the Post Office, High Holborn, to Mr. Bennet Woodcroft, Great Seal Patent Office.
